

## APPENDIX 1

### Consultation on the West Berkshire Local Plan Review 2022-2039 under Regulation 18

#### CONTENTS

	Page no
1. Bodies and persons consulted	1
2. Keeping people informed	2
3. Scope and content of the LPR – February 2018	2
4. Regulation 18 Consultation – November 2018	2
5. Town/parish councils and Neighbourhood Planning Groups stakeholder events February 2020	3
6. Emerging Draft LPR – December 2020	3
7. Consultation on evidence base and supporting documents	33

#### Annexes

- A LPR Scoping consultee notification letter
- B LPR Scoping Report Consultation Statement
- C Regulation 18 consultation (November 2018) consultee notification letter
- D Regulation 18 (November 2018) Consultation Statement
- E Town/Parish Councils and Neighbourhood Planning Groups Stakeholder Events February 2020
- F Emerging Draft LPR (December 2020) consultee notification letter
- G Emerging Draft LPR consultation responses - Introduction Context Vision and Objectives
- H Emerging Draft LPR consultation responses - SP policies
- I Emerging Draft LPR consultation responses - Site allocations
- J Emerging Draft LPR consultation responses - DC policies
- K Emerging Draft LPR consultation responses - Appendices

## 1. Bodies and Persons Consulted

Opportunities for statutory bodies, other organisations and local residents and businesses to be involved in the preparation of the Local Plan is provided by Regulation 18 of the 2012 Regulations.

Regulation 18 (2) (a) specifies that ‘specific consultation bodies’ that the Council consider may have an interest in the context of the Local Plan should be notified of its intended preparation and invited to make representations on what it ought to contain. The ‘specific consultation bodies’ that were notified and invited to make comment on the LPR are as set out in Appendix A of the [Statement of Community Involvement](#) (SCI). These bodies are all included on the Council’s Planning Policy consultation database.

Regulation 18 (2) (b) specifies that other ‘general consultation bodies’ that the Council considers appropriate be notified of the subject of a Local Plan and invited to make representations on what it ought to contain. These are defined in Regulation 2 (1) of the 2012 Regulations as:

- Voluntary bodies some or all of whose activities benefit any part of West Berkshire;
- Bodies representing the interests of different racial, ethnic or national groups in West Berkshire;
- Bodies representing the interests of different religious groups in West Berkshire;
- Bodies representing the interests of disabled persons in West Berkshire;
- Bodies representing the interests of business in West Berkshire.

The various ‘general consultation bodies’ consulted on the LPR are also listed in Appendix A of the SCI.

Regulation 18 (2) (c) requires the Council to consider which residents and persons carrying on business in the District are appropriate to be notified of the subject of the LPR and invited to make representations on what it ought to contain. The Council’s Planning Policy consultation database contains a list of all those individuals who have expressed an interest and/or made comment during plan preparation. Each individual has been notified of subsequent consultations. There are approximately 2000 “active<sup>1</sup>” individuals, organisations and businesses on the Planning Policy consultation database.

Bodies and persons on the Planning Policy consultation database have been notified and invited to comment on draft documents published at particular stages of plan preparation – as detailed in subsequent sections. The method of notification has primarily been by email or letter when no email address is available. Copies of documents have not been provided as a matter of course but the notification has advised:

- Where documents can be viewed and downloaded from the Council’s website;
- Where paper copies of documents can be viewed; and
- Email, telephone and postal contact details to obtain further information.

---

<sup>1</sup> “active” consultees are those who have confirmed that they wish to be kept in contact regarding the plan making process since 2017 when the Planning Policy consultation database was last reviewed.

## **2. Keeping People Informed**

We keep people informed about the overall progress of the LPR in a variety of ways, such as e-mail updates to those on the Planning Policy consultation database and updates on our web based Planning Policy blog. We also produce a LPR bulletin, distributed via email. This provides updates on key milestones, factual updates on the LPR and links to finding further information.

Officers have also met with parish and town councils on request to provide updates on the progress of the LPR and to answer questions. These meetings have included ones with Bradfield, Bucklebury, Holybrook, Newbury, Shaw-cum-Donnington, Stanford Dingley and Thatcham Councils.

## **3. Scope and content of the LPR – February 2018**

Between 12<sup>th</sup> February and 26<sup>th</sup> March 2018 the Council invited comments from the public on the proposed scope and content of the LPR by publishing a Local Plan Review Scoping Report. Comments were also invited on the accompanying Sustainability Appraisal (SA) Scoping Report. All of the bodies and persons included on the Planning Policy consultation database were notified by email or letter and invited to comment. The notification letter is attached in Annex A.

The consultation documents were published on the Council's website and were also available to view at the Council's Market Street offices in Newbury.

In all, there were 81 respondents to the consultation with some respondents commenting on all questions and others only commenting on those questions of specific interest to them. The detailed feedback received and information on the next steps the Council would take are contained within the LPR Scoping Report Consultation Statement which is included in Annex B.

## **4. Regulation 18 Consultation – November 2018**

The Council undertook a second round of consultation between 9<sup>th</sup> November and 21<sup>st</sup> December 2018 seeking views on its proposed:

- Vision for the Local Plan Review
- Revision of the existing spatial areas
- Methodology for reviewing the existing settlement hierarchy
- Criteria for the settlement boundary review
- Update of the assessment of existing Local Plan policies

This took into account revised national policy as set out in the revised National Planning Policy Framework that was published in July 2018 and the revisions made to parts of the National Planning Policy Guidance.

All of the bodies and persons included on the Planning Policy consultation database were notified by email or letter and invited to comment. The consultation document was published on the Council's website and was available to view at the Council's offices in Market Street, Newbury. The notification letter is attached in Annex C

In all there were 123 respondents to the consultation with some commenting on all questions and others only commenting on those questions of specific interest to them.

There were 438 comments made in total. A consultation statement was published in June 2019 setting out the feedback received and the next steps the Council would follow and this is set out in Annex D.

## **5. Town/Parish Councils and Neighbourhood Planning Groups Stakeholder Events - February 2020**

In February 2020 the Council undertook a series of stakeholder events with town/parish councils and neighbourhood development plan groups across the District as follows:

- Monday 10 February at 10.00 in the Calcot Centre, Tilehurst
- Wednesday 12 February at 10.00 in the Council Chamber
- Thursday 13 February at 10.00 at Croft Field Centre, Hungerford

The Council sought feedback on the following:

- **Settlement Hierarchy Review** - feedback on the desktop audit of the services and facilities in each of their settlements in order to validate or correct the collated data. They were also asked to comment through a questionnaire on the relative use, accessibility and importance of the facilities and services available and those that should be improved to help sustain the settlement in the future. All councils and neighbourhood planning groups, including those that could not attend the events, were sent the desktop audits and questionnaire along with guidance notes to aid completion. The information and comments were then used in the various stages of the assessment methodology to inform the final scoring, ranking, and categorisation of the settlements into the settlement hierarchy, reflecting their role and function in the District. Further details are set out in the [Settlement Hierarchy Review Topic Paper](#) (Nov 2020);
- **Settlement Boundary Review (SBR)** - the criteria for reviewing settlement boundaries and how this work would be taken forward in conjunction with the groups themselves. This was followed up after the meeting with further written advice and maps showing existing boundaries to encourage community involvement. As far as possible the Council used the results from this exercise as a clear community steer for the way forward. Further details are set out in the [Settlement Boundary Review Background Paper](#) (Dec 2022); and
- **Housing and Economic Land Availability Assessment (HELAA)** – feedback on the assessment of sites that were submitted to the Council as part of the Housing and Economic Land Availability Assessment (HELAA).

The invitation to the stakeholder events and the follow up email seeking further comments are set out in Annex E.

## **6. Emerging Draft LPR consultation – December 2020**

In December 2020 the Council published the emerging draft version of the LPR for public consultation from 11<sup>th</sup> December 2020 to 5<sup>th</sup> February 2021. All of the bodies and persons included on the Planning Policy consultation database were notified by email or letter and

invited to comment. The notification letter is attached in Annex F. The consultation document was published on the Council’s website and was also available to view at the Council’s offices in Market Street, Newbury.

Individual Responses were received from over 700 organisations and individuals making a total of 2265 separate comments. The detailed feedback received is contained in Annexes G-K.

The main changes made to the LPR as a result of the consultation on the Emerging Draft LPR are set out in the table below. Where relevant, these include amendments as a result of changes to the evidence base and updated national guidance. Other changes have also been made to the LPR since the Emerging Draft version was published, but where these relate to matters of clarification, editorial changes or factual changes they are not listed below.

<b>Emerging Draft LPR Policy/Section</b>	<b>No of responses</b>	<b>Comments on substantive issues raised and changes made</b>
Introduction & Background	37	Detailed issues only which are picked up in Appendix G
Context	16	Detailed issues only which are picked up in Appendix G
Vision	28	Detailed issues only which are picked up in Appendix G
Strategic Objectives	31	Housing Objective amended to ensure that the LPR delivers on the vision of prioritising the delivery of housing of different types, sizes and tenures to meet local needs.
<b>Development Strategy: Our place based approach</b>		
Background	18	Detailed issues only which are picked up in Appendix H
Spatial Areas	17	Some objections to the combining of The Eastern Area and the Eastern Urban Area. In strategic planning terms the existing Eastern Area is now very small and is very difficult to plan for in isolation. This has since created challenges in delivery. In reality, combining the two existing spatial areas is more practical and gives the Council more flexibility in strategic planning terms.
SP1 Spatial Strategy	75	Amendment to the reference to neighbourhood plans to reflect the position of sites being allocated in 'some' NPAs. Main changes reflect Policy SP20 and new SP22 Town and District Centres. A significant addition to the policy refers to the rural economy, Rural Service Centres and Service Villages. The reference to new allocations within the Cold Ash NDP has been deleted, as well as allocations for Tilehurst and Burghfield and in the North Wessex Downs AONB NPAs following comments from Parish Councils. Reference made to the addition of a new DM policy relating to the separation of settlements around Newbury and Thatcham.
SP2 North Wessex Downs AONB	39	Generally supportive comments received. Requests that the Policy should be more consistent with NPPF by including the term 'great weight' in conserving and enhancing the scenic beauty of the AONB. Opposing comments that conservation of

	<p>natural beauty should not be only “primary consideration. Tackling climate change is highly important in AONB, as it will affect the landscape more permanently and generally than any major forms of development”.</p> <p>Policy makes clear that, in accordance with Section 85 of the Countryside and Rights of Way Act 2000, the primary purpose of AONB designation is ‘to conserve and enhance the natural beauty of the area’ and is the primary consideration in assessment of all development proposals. SP5 details LPR’s approach to climate change.</p> <p>Several comments requiring a balanced approach to development by meeting government set housing targets whilst also rigorously applying AONB rules. Comments that the district needs more green space retained in urban areas, more sensitive and landscape appropriate development in the rural areas and a gentle flow from urban to rural environments. However, further comments that the policy is too restrictive in refusing major development in AONB unless exceptional circumstances as it prevents villages evolving and puts pressure on other areas of the district. For villages to remain or become viable, residential development, tourism and new rural business must be accommodated in the LPR.</p> <p>Comments noted. SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. This is set within a national planning policy context and should be read alongside all other policies in the LPR. Development proposals and planning applications will be judged against all relevant policies. Other policies explain in detail the Council’s approach to the distribution of housing, economic development and the response to climate change.</p> <p>The policy is clear that the AONB will have appropriate and sustainable growth that conserves and enhances its special landscape qualities. It also makes clear that development should respond positively to the local context, conserving and enhancing local distinctiveness and sense of place and that future development will support its local communities and the rural economy.</p> <p>The North Wessex Downs AONB covers 74% of the District and the Council considers a specific policy is justified. It is notable that both Natural England and the North Wessex Downs AONB are both supportive of this approach.</p> <p>In light of increasing housing needs, comments that a greater allowance should be made for development in the AONB. For SP2 to be justified, Wey Planning Ltd for Neville Baker Estate (lpr1276) consider it essential to include a specific maximum housing requirement or target for the AONB to be line with NPPF. The policy does not set out a housing figure for the AONB. The Council’s overall approach across the whole district to identifying land for allocation is set out in Policy SP1 and SP3. Sites proposed for allocation are detailed in Policies SP13 to 15. A Housing Background Paper will be published alongside the Proposed Submission LPR. The NPPF is clear that the scale and extent of development in AONBs should be</p>
--	---

		<p>limited and that planning permission for major development should be refused except in exceptional circumstances. The Landscape Sensitivity and Capacity Assessments that have been undertaken on sites in the AONB are published on the Council's website. In Designated Neighbourhood Areas where NDPs are allocating sites, then assessment would be undertaken as part of the NDP process. Several sites are specifically promoted through the HELAA and as AONB covers 74% of district, the Council needs to consider promoting sites for economic growth across less sensitive parts of the AONB. The Council's strategic approach to employment land will be set out in Policy SP20 of the Proposed Submission LPR. Sites allocated as part of the plan making process, whether through the LPR or NDP, will undergo a rigorous site assessment and sustainability appraisal. Thatcham Town Council (lpr1389) comments that it's unclear why maintaining remoteness is an objective for WBC in regards to AONB. Loss of accessible countryside and right-of-way access has a profound effect on residents, health and well-being should be considered more important. Strong sense of remoteness, tranquillity and dark night skies, particularly on the open downland are some of the defining and special landscape qualities of the North Wessex Downs AONB. As a nationally designed landscape the policy is clear that that the AONB will have appropriate and sustainable growth over the plan period which conserves and enhances these qualities.</p>
SP3 Settlement hierarchy	50	<p>Amendments to the policy and supporting text have addressed consultee comments associated with infill or changes of use in Rural Service Centres and Service Villages (through the deletion of the reference to 'other development' and 'other minor development'). The supporting text was updated in relation to AWE.</p>
SP4 AWE	21	<p>The policy has been extensively reworded based on Emergency Planning's comments.</p> <p>Mixed support for Policy. Many comments recommending the Council wait for the outcome of the Judicial Review that the proposed extension of the DEPZ was subjected to as the reasoning behind the ONRs decision is vague, unclear and justified by factors which do not appear to be appropriate. The outcome of the Judicial Review was to support the position of the Council.</p> <p>Comments from the Office for Nuclear Regulation (ONR) (lpr1966) that ONR land use planning processes may apply to some developments within LPR. If the Local Authority is within an ONR consultation zone then for ONR to have no objections to such developments confirmation is required from relevant Council emergency planners that developments can be accommodated within any emergency plan required under the Radiation (Emergency Preparedness and Public Information) Regulations 2019; and that the developments do not pose an external hazard to the site. Further to this, the LPR must be updated to remove an incorrect reference to ONRLUP-NS-001</p>

		<p>Land Use Planning and the Siting of Nuclear Installations and also to include the OCZ for AWE Aldermaston as 5km. Noted and appropriate changes made. AWE (lpr2292) comment the Policy needs express support for development at AWE A and AWE B. As they're not DEAs, a policy for alternative bespoke designation should be created in recognition of the sites' importance to the local economy and to national security for consistency with the Local Plan CS Policy CS9(b) and the NPPF. Also recommend that, based on the Radiation (Emergency Preparedness and Public Information) Regulations 2019, Outline Planning Zone (OPZ) should be used instead of OCZ. Due to the unique nature of the employment at AWE, the Council is not able to assign it as a DEA. However, the Council is aware of the unique status of this significant employer and is proposing a separate policy to support the development of AWE A and AWE B, reference DM33. The term OCZ is one provided by ONR in relation to development management purposes and OPZ in REPPIR for emergency planning purposes. Environment Agency (lpr1658) request the addition of Environmental Permitting Regulations 2016 (EPR). Both sites generate radioactive wastes and the minimisation and disposal of these wastes is regulated under EPR permits, regulated by the Environment Agency. Comments noted and changes made.</p> <p>Despite comments from Green Park Reading (lpr2032), the statement non-residential development would be unlikely to have a significant impact on the offsite emergency plan cannot be substantiated and therefore changes cannot be made. Especially since under certain circumstances some employment can be changed to residential under permitted development rights.</p>
<b>Our environment &amp; surroundings</b>		
<p>SP5 Responding to Climate Change</p>	<p>43</p>	<p>Mixed support. Many comments do not agree with requirement for all development to achieve the highest viable levels of energy efficiency, recommending policy simply require conformity with the Building Regulations that are in force at the time of development.</p> <p>WBC declared a Climate Change Emergency in 2019 and District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform next stages of Local Plan. Proposed Submission LPR Policy SP5 and DM4 will be the key policy tools to achieve carbon reduction in new homes built within the District. Main policies for tackling climate change have been developed by consultants and potential costs have been tested for their impact on viability. Policy SP5 sets out overall strategic approach to the topic while DM4 sets out very clear targets and standards to be met in development.</p> <p>Several comments wish to see policy strengthened. Comment new local plans should reflect the need to go beyond carbon neutrality in new developments and should positively encourage developments whose main purpose is to combat</p>

		<p>climate change, e.g., renewable energy projects. Suggest these should be part of essential infrastructure of the District to build better sustainable communities and be partially funded by CIL contributions. The Council considers the policy, and other relevant LPR policies, clear in their intent to tackle climate change through sustainable development. Placing the burden of net carbon positive on new development to compensate for past and present excesses in not considered equitable. The achievement of carbon neutrality will be a product of many plans as part of wider strategy to address the climate emergency. LPR should be read as a whole. Measures to increase the adoption of retrofitting energy efficiency measures for existing housing stock may be explored in subsequent Local Plan Documents and other government policy programs. The Sustainability Statement and any subsequent conditions applied at the planning application stage and subsequently enforced along with Building Regulations, will ensure the policy is complied with. Government guidance and policy has been constantly updated in recent years. The Government is in the process of consulting on a Future Homes Standard hoping to be passed into legislation in 2024. An interim change to the Building Regulations occurred in June 2022. Council disagrees with suggestions there is an inherent incompatibility between development and the conservation and enhancement of biodiversity. The policies in the Local Plan that complement the Climate Change policy are intended to ensure development is sustainable and deliver biodiversity net gain. Proposed sites selected for allocation in sustainable locations have been subject to a robust process of assessment including a Sustainability Assessment taking account of the NPPF.</p>
SP6 Flood Risk	28	<p>The policy has been strengthened to include reference to Natural Flood Management (NFM). The Environment Agency also identified that some of the sites which are proposed for allocation would need to be subject to a Level 2 Strategic Flood Risk Assessment. This has now taken place.</p>
SP7 Design Principles	32	<p>The policy has been amended to clarify that the National Design Guide provides the framework for the policy. Further detail is then provided in the supporting text.</p>
SP8 Landscape Character	24	<p>Comments that the policy needed to be revised to distinguish between the hierarchy of international, national and locally designated sites (as per paragraph 171 of the NPPF) and identify those landscapes that are valued (as per paragraph 170). There is no definition of 'valued landscape' in the NPPF and the Council has adopted an evidence based approach. Policy slightly amended for clarity.</p>
SP9 Historic Environment	24	<p>Amendments have been made to the policy to more accurately reflect the wider proactive strategy the Council is adopting towards the conservation and enjoyment of the historic environment. The supporting text has been clarified to set out the programme of CAAs the Council intends to undertake. The policy has been amended to more accurately reflect the</p>

		'balanced judgement' approach to non-designated heritage assets as set out in the NPPF. Policy has also been amended to include enabling development which was originally contained as part of DC1.
SP10 Green Infrastructure	34	The definition of GI has been clarified. The policy has been updated to refer to the Green Infrastructure Framework currently being produced by Natural England. The policy has been strengthened with regard to long term maintenance requirements for major applications. Policy also strengthened in relation to PROW.
SP11 Biodiversity and geodiversity	34	A number of amendments have been made to the LPR in order to strengthen the policy protection to the water environment within the District. With regards to the hierarchy of sites, the policy and supporting text have been updated to better reflect paragraph 175 of the NPPF. With regards to the mitigation hierarchy the policy has amended to better reflect paragraph 179 of the NPPF. Reflecting its passage into the Environment Act 2021, Biodiversity Net Gain, has been moved to the start of the policy. The supporting text gives further information and clarifies that net gain has to be measurable against the recognised biodiversity accounting metric. Clarification is now provided on the type of assessment that should support a planning application. The supporting text has been amended to provide more detail on SACs in and outside the District and also amended in respect of nutrient neutrality to make clear the Council's approach is set out in Policy DM6 and that a more detailed Supplementary Planning Document will be produced.
<b>Delivering housing</b>		
SP12 Approach to Housing Delivery	83	<p>A number of planning agents, on behalf of landowners or developers have argued for a higher housing requirement, raising the issues of meeting Reading's need, increasing delivery of affordable homes and supporting economic growth. Some agents questioned the use of a range for the housing requirement and felt the upper end should be a minimum figure.</p> <p>On the supply side the main issues raised were the over-reliance on large strategic sites which can be slow to deliver and the size of the windfall allowance, with agents generally arguing that it was too high and individuals and local and parish councils feeling it was not high enough.</p> <p>It is not considered that a change in approach is required. The NPPF expects authorities to follow the standard method to assess need, and it is considered that a housing requirement that is slightly higher than the LHN, demonstrating that the assessed need can be met, is appropriate. The use of a range to express the requirement introduces some flexibility.</p> <p>With regard to housing land supply, the Council approach is for a mix of sites, the strategic sites which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites (including brownfield sites within settlement boundaries) that</p>

		<p>can deliver housing sooner. The windfall allowance is considered appropriate; it is a modest one based on past delivery on small sites. This also introduces some flexibility. Though the Council needs to be able to demonstrate that the housing requirement can be met in a plan-led fashion rather than relying on brownfield land to come forward at the appropriate time, larger sites within settlement boundaries that do come forward will further boost supply.</p> <p>The policy has been updated to take account of the 2022 Local Housing Need and the updated housing supply position.</p>
SP13 Sites allocated for residential and mixed-use development in Newbury and Thatcham	56	Some of the sites proposed for allocation in the emerging draft LPR have been removed due to changing circumstance such as revised national guidance on ancient woodland, concerns around deliverability, and the decision not to allocate sites within settlement boundaries.
SP14 Sites allocated for residential development in Eastern Area	41	<p>The supporting text has been updated to recognise that if the DEPZ around AWE is reviewed and the emergency planning arrangements reviewed, then future reviews of the Local Plan will consider if a strategic allocation in the Grazeley area would be suitable.</p> <p>Some of the sites proposed for allocation in the emerging draft LPR have been removed, due to development of sites being rolled forward from the current Local Plan being at an advanced stage of construction, and also because of the AWE Burghfield DEPZ. The development potential for two of the allocations has also been reduced following the completion of landscape sensitivity and capacity assessment.</p>
SP15 Sites allocated for residential development in North Wessex Downs AONB	32	Some of the sites proposed for allocation in the emerging draft LPR have been removed due to development of sites being rolled forward from the current Local Plan being at an advanced stage of construction.
SP16 Sandford strategic site allocation	40	Concern about the number of dwellings and the impact on the countryside, local roads and services in general. Warren Rd of particular concern. Lack of infrastructure provision to cope with housing. The landscape is highly valued and the site and woodlands are considered to have high ecological value and should not be developed
SP17 North East Thatcham Strategic Site Allocation	446	In response to the large number of objections to this site covering a range of issues important to local people, but largely around the environmental impact of the proposal and the impact on local infrastructure, the Council has taken the decision to reduce the number of dwellings on the site and to allocate it for 1500 dwellings for delivery over the plan period. This still enables a strategic level of development which can provide onsite community facilities. It is noted, that compared to a higher number of dwellings, this option may not deliver all of the education provision originally envisaged on the site, or the additional improvements to community infrastructure within

		Thatcham.
SP18 Housing type and mix	13	<p>Comments received that NDPs should be able to set a different housing mix requirement locally. Flexibility has been introduced into the Policy where developments will be expected to reflect this mix, however, rigid application of these requirements may not be appropriate in all cases.</p> <p>The Policy has been amended to require all new dwellings to meet the higher accessibility standards under Part M4 (2) of the Building Regulations.</p>
SP19 Affordable Housing	30	<p>Reference to affordable housing remaining at an affordable price for future generations of eligible households has been included in the final paragraph of the Policy and explained in more detail in the supporting text. The tenure split in the proposed policy has been amended to reflect the requirement to deliver First Homes. Policy has been amended to acknowledge the different circumstances relating to affordable housing provision on proposed C2 residential care developments and their specific operational characteristics. Additional text added at end of supporting text of Policy SP19 to also show specific support for affordable community led housing schemes.</p>
<b>Fostering economic growth &amp; supporting local communities</b>		
SP20 Strategic approach to economic development and hierarchy of centres	35	<p>Policy redrafted to take into account updated evidence (taking account of Covid and Brexit) and to reflect NPPF requirements. In addition, the text relating to town centres has been removed and a new standalone policy created to address town and district centres - Proposed Submission LPR Policy SP22.</p>
SP21 Sites allocated for economic development	92	<p>Policy amended to reflect new site allocations and DEAs. Some Reg. 18 sites had to be removed due to their location within the DEPZ and landscape impact. New allocations are set out within SP21 to assist in meeting the updated identified need for industrial land (ELR, 2022). As a result of identifying site allocations, and to guide future development on the allocated site, each site has a new site specific policy Policy ESA 1-6.</p>
SP22 Transport	27	<p>Comments generally supportive with suggestions to improve. Comments requesting definition of active travel and sustainable travel. Active travel relates to travel requiring physical effort, walking, cycling or wheeling (e.g. use of scooters or wheelchairs) and horse riding. Sustainable travel relates to that which minimises negative social, environmental and climate impacts of travel.</p> <p>Policy amended to minimise impact of all travel on environment in accordance with Climate Emergency and Environment Strategy.</p> <p>The Council published its Local Cycling &amp; Walking Investment Plan (June 2021) to guide future active travel related investment. The LTP Active Travel strategy will be reviewed when refreshing Local Transport Plan (LTP). New micro-mobility technologies, e.g., electric bicycles, to be encouraged</p>

	<p>as they emerge. The Council actively seeks secure and covered cycle parking as part of workplace travel and have provided such with GWR. Several queries into whether the Active Travel Plan is separate from the LTP. Yes, Active Travel Strategy is a supporting document of the current LTP, the main role of the strategy is to outline in detail how Active Travel related policies of the LTP will be delivered. Supporting text amended to emphasis separation of the two documents and LTP and supporting strategies to be reviewed.</p> <p>The Council, with GWR, are improving passenger facilities and car parking at Theale station aiming to make it a Park &amp; Rail site, serving areas of west Reading.</p> <p>Comments on limited transport options available to rural parts of the district. The Council recently published a Bus Services Improvement Plan (Oct 2022) outlining its intentions to develop bus services in WB, including rural areas where there is no/ very minimal bus service.</p> <p>West Berkshire Green Exchange (lpr1557) requests consideration be given to parking and power infrastructure and electric vehicle charging points for household parking and development of rapid charging hubs in suitable locations. Should include the potential future fuel hydrogen in plans. EVCP and infrastructure provision is actively sought for in DM processes, especially DM42. The Council is currently developing guidance outlining the requirements developers will be expected to provide. The Government now requires new homes and buildings to install EVCP as part of English Building Regulations. Alternative fuels, .e.g, Hydrogen, may develop during the course of the plan and will be covered in imminent review of the Council's LTP.</p> <p>Proposed growth outlined in draft Local Plan seeks to manage demand for travel by making best use of existing highway networks, capacity enhancements largely confined within existing network, combined with measures to develop and encourage sustainable and active travel choices. Comments requiring a full traffic modelling analysis to inform development, many specifically relating to NET, considering the impact of extra demand in addition to underlying growth rates. Highways England (lpr1333) expect to see an assessment of potential impacts from sites (close to the A34/M4 at Newbury and Thatcham and the M4 in the Eastern Area) on the strategic road network (SRN). Smaller sites individually may not have a significant impact on the SRN but collectively there may be significant impact without mitigation measures. These must avoid adverse and harmful impacts on health and well-being, including air quality degradation or noise pollution, which would conflict with DM5. Comments that to predict traffic profile for 2037 is too uncertain so must consider a range of scenarios. The Highway Design Guidance, should form part of the evidence base. It is currently in draft form and will be shared as part of the evidence base as soon as possible. Engagement has commenced with National Highways. The impact of the Local Plan proposals on the Strategic Highway Network, particularly in relation to the M4</p>
--	--

		12 & 13 junctions and the A34 in the Newbury area, will be fully assessed and provided to National Highways. The detailed transport modelling undertaken as part of the Transport Assessment, including WB Strategic Transport Model and the local Thatcham VISSIM model, will outline impact of proposed Local Plan growth on the local highway network concerning potential travel patterns, destinations and modes of travel. Proposed growth (including increased capacity from the NET site and Smart Motorway) and overall background traffic growth is considered in future years transport modelling scenarios comprising of both the main strategic sites and the cumulative growth of proposed smaller sites. Masterplanning work for the main strategic sites will include identifying appropriate highway and non-highway sustainable / active travel mitigation packages that will be required to accommodate planned growth, in accordance with Department for Transport WebTag guidance.
SP23 Infrastructure requirements and delivery	12	Appendix 5 of the Emerging Draft LPR has been deleted. The Draft IDP was published on Council's website on October 2021 which includes a schedule of infrastructure requirements, including those for health and education, blue infrastructure and drainage schemes. The Draft IDP will be published alongside the Regulation 19 Local Plan Review.
<b>Sites allocated for residential development</b>		
Sites allocated in Newbury & Thacham	3	Detailed issues only which are picked up in Appendix H
Sites allocated in the Eastern Area	1	Detailed issues only which are picked up in Appendix H
RSA1 The Kennet Centre, Newbury	14	The allocation has been removed due to flood risk. As the site lies within the settlement boundary there is already a presumption in favour of development as set out in Policy SP1.
RSA2 Land north of Newbury College, Monks Lane, Newbury	5	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development.
RSA3 Land at Bath Road, Speen, Newbury	5	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. To reflect the fact that the site lies within the Nutrient Neutrality Zone for the River Lambourn SAC, a Habitats Regulations Assessment will be required to accompany any future planning application. This will be supported by an appropriate Nutrient Neutrality Assessment and Mitigation Assessment. Mitigation required will need to be operational and in place prior to any nutrient pollution being discharged. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA4 Land at Coley Farm, Stoney Lane, Newbury	9	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. A Construction and Operations Management Plan (COMP)

		required to safeguard the oil pipeline running through the site. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA5: Land adjoining New Road, Newbury	7	The allocation has been removed due to the adverse impact on the surrounding Ancient Woodland.
RSA6 Land off Greenham Road and New Road, South East Newbury	5	The site is currently allocated in the Housing Site Allocations DPD which forms part of the existing Local Plan. It is acknowledged that two of the parcels of land which make up the site have now been built out and so these will be removed from the LPR. The allocation is however being retained across the remaining part of the site that has not yet been built out. The policy has been amended accordingly.
RSA7 Land at Lower Way, Thatcham	7	Policy strengthened to address concerns about potential adverse impacts on the Kennet and Lambourn Floodplain SAC and Thatcham Reedbeds SSSI. The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA8 Land at Poplar Farm, Cold Ash	4	The allocation has been removed because it is not considered deliverable at this time.
RSA9 St Gabriel's Farm, The Ridge, Cold Ash	3	The allocation has been removed because development on the site is under construction.
RSA10 Stoneham's Farm, Long Lane, Tilehurst - Site A	4	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP. Addition of buffer of at least 15m to the ancient woodland. Allocation boundary revised to exclude part of the landscape buffer to the north for clarity.
RSA11 Stoneham's Farm, Tilehurst - Site B	4	The allocation has been removed because development on the site is under construction.
RSA12 72 Purley Rise, Purley on Thames	5	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. A large part of the site is not considered appropriate for development this is reflected in the amount of the site allocated as required landscape buffer. In the interests of clarity, the Council has adjusted the boundary of the allocated site to remove the landscape buffer.
RSA13 Land adjacent to Junction 12 of M4, Bath Road, Calcot	4	The allocation has been removed because development on the site is under construction.
RSA14 Land adjacent to Bath	3	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development.

Road and Dorking Way, Calcot		Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA15 Land between A340 and The Green, Theale	5	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. A Construction and Operations Management Plan (COMP) required to safeguard the oil pipeline running through the site. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP. Ecological Impact Assessment now required. Policy also makes clear that the required landscape buffer in the western part of the site will be retained outside of the settlement boundary for Theale.
RSA16 Whitehart Meadow, Theale	25	Following landscape evidence, which was obtained in part due to comments from the AONB and Natural England, the housing number has been amended from 100 to 40. The policy includes a list of criteria, and includes specific criterion to limit the impact on the landscape. Criteria added in relation to buffer to watercourse and need for FRA; a detailed water supply strategy; an ecological assessment; and provision of walking and cycling routes. Since the consultation on the emerging draft LPR, other detailed criteria have also been included in the policy to guide the development.
RSA17 Former Theale Sewage Treatment Works, Theale	23	Following landscape evidence, which was obtained in part due to comments from the AONB and Natural England, the housing number has been amended from 70 to 60. The policy includes a list of criteria, and includes specific criterion to limit the impact on the landscape. Criteria added in relation to buffer to watercourse and need for FRA; a detailed water supply strategy; and an ecological assessment. Since the consultation on the emerging draft LPR, other detailed criteria have been included in the policy to guide the development.
RSA18 Land adjoining Pondhouse Farm, Clayhill Road, Burghfield Common	8	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Further clarification given to the buffer zone to the watercourse and also buffer to Ancient Woodland, Policy strengthened to clarify the requirements in relation to footpath and cycle links.
RSA19 Land to the rear of The Hollies Nursing Home, Reading Road and Land opposite 44 Lamden Way, Burghfield Common	7	The allocation has been removed due to objections from Emergency Planning on grounds of public safety.
RSA20 Land north of A4 Bath Road, Woolhampton	6	The policy has been amended to require an archaeological desk based assessment. The policy now requires that an integrated water supply and drainage strategy is provided in advance of development.
RSA21 Land east of Salisbury Road, Hungerford	4	The allocation has been removed because development on the site is under construction.

RSA22 Land adjoining Lynch Lane, Lambourn	10	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. A housing phasing plan will be required to ensure development does not outpace delivery of essential network upgrades to the East Shefford Sewage Treatment Works. To reflect the fact that the site lies within the Nutrient Neutrality Zone for the River Lambourn SAC a Habitats Regulations Assessment will be required to accompany any future planning application. This will be supported by an appropriate Nutrient Neutrality Assessment and Mitigation Assessment. Mitigation required will need to be operational and in place prior to any nutrient pollution being discharged
RSA23 Land at Newbury Road, Lambourn	7	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. The policy also includes a criterion to reflect the fact that the site lies within the Nutrient Neutrality Zone for the River Lambourn SAC.
RSA24 Land off Stretton Close, Bradfield Southend	2	The allocation has been removed because development on the site is under construction.
RSA25 Land North of Southend Road, Bradfield Southend	11	The housing number has been amended to 20 based on reassessing the development potential, landscape impact and relationship with the adjacent housing site. Since the consultation on the emerging draft LPR, detailed criteria have been included in the policy to guide the development.
RSA26 Land at Chieveley Glebe, Chieveley	20	The policy now requires the development design and layout to be further informed by a Heritage Impact Assessment. Since the consultation on the emerging draft LPR, detailed criteria have been included in the policy to guide the development.
RSA27 Pirbright Institute Site, Compton	7	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Policy amended to make clear the former east/west public footpath through the site should be reinstated and the adjacent line of trees and remnants of the hedgerow should be retained. If feasible, access for residents to Compton Primary School and/or The Ilsleys Primary School should also be provided.
RSA28 Land west of Spring Meadows, Great Shefford	9	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Since the consultation on the emerging draft LPR, detailed criteria have been included in the policy to guide the development.
RSA29 Land off Charlotte Close, Hermitage	9	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Green infrastructure requirements clarified to adopt a more strategic approach to the provision of GI in conjunction with the two other allocations in this part of Hermitage. Development design now seeks opportunities to open up the culvert and contribute to biodiversity net gain. Strengthened requirements in relation to foot and cyclepath linkages. To reflect the fact that the site lies within the Nutrient Neutrality Zone for the River Lambourn SAC a Habitats Regulations

		Assessment will be required to accompany any future planning application. This will be supported by an appropriate Nutrient Neutrality Assessment and Mitigation Assessment. Mitigation required will need to be operational and in place prior to any nutrient pollution being discharged. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA30 Land to the south east of the Old Farmhouse, Hermitage	9	The policy now requires that an integrated water supply and drainage strategy is provided in advance of development. Green infrastructure requirements clarified to adopt a more strategic approach to the provision of GI in conjunction with the two other allocations in this part of Hermitage. Development design now seeks opportunities to open up the culvert and contribute to biodiversity net gain. Strengthened requirements in relation to foot and cyclepath linkages. Amended to introduce some flexibility with regards to access. To reflect the fact that the site lies within the Nutrient Neutrality Zone for the River Lambourn SAC a Habitats Regulations Assessment will be required to accompany any future planning application. This will be supported by an appropriate Nutrient Neutrality Assessment and Mitigation Assessment. Mitigation required will need to be operational and in place prior to any nutrient pollution being discharged. Mineral Safeguarding Area so criterion added requiring consideration of Policy 9 of the MWLP.
RSA31 Land adjoining The Haven, Kintbury	20	Detailed issues only which are picked up in Appendix I
RSA32 New Stocks Farm, Paices Hill, Aldermaston	5	Detailed issues only which are picked up in Appendix I
RSA33 Long Copse Farm, Enborne	5	A large part of the site is not considered appropriate for development which is reflected in the amount of the site allocated as required landscape buffer. In the interests of clarity, the Council has adjusted boundary of the allocated site to remove the landscape buffer. Policy also amended to require an ecological impact assessment, to clarify the criterion on the buffer to the Ancient Woodland to be informed by an assessment, and to be considerate of the M+WLP.
<b>Development Management Policies</b>		
All DC policies amended to DM policies for the Proposed Submission LPR		
DC1 Development in the countryside	21	Policy has been amended to cover residential development in the countryside only. This is in the interests of clarity. Proposed Submission LPR Policy DM35 will set out the Council's approach to sustaining a prosperous rural economy. Policy SP1 has been amended to highlight the principle that proposals to strengthen and diversify the rural economy will be encouraged.  Policy should be read in conjunction with SP1 which sets out overall spatial strategy of the District. SP1 amended so proposals to strengthen and diversify the rural economy

		<p>encouraged, particularly where they are located in or adjacent to Rural Service Centres and Service Villages identified in the settlement hierarchy. Existing small and medium sized enterprises within the countryside will be supported in order to provide local job opportunities and maintain the vitality of smaller rural settlements and their communities.</p> <p>In the context of SP1, DC16 and supporting text make clear that rural exception schemes can allow for a proportion of market housing where this enables the closing of a funding gap (which must be evidenced) and where the market homes are integrated with the affordable homes to form a single scheme.</p> <p>Policies SP5, 7, 8 and DC3 make clear that all development, regardless of its location, should contribute to West Berkshire becoming and staying carbon neutral by 2030. Even if a development is carbon neutral or better it should still confirm with other relevant policies in the Plan.</p> <p>Proposed DM35 will set out the Council's approach to sustaining a prosperous rural economy, focusing on previously developed land (PDL) and the supporting text amended to reflect this.</p> <p>Criterion I has worked well to date and the Council considers it provides both flexibility and an appropriate balance. Development in the countryside is strictly limited, particularly for residential development and the policy is clear that proposals must not harm or undermine the existing relationship of a settlement within the open countryside.</p>
DC2 Health and wellbeing	13	<p>Comments received generally supportive of the policy with specific suggestions as to how it could be improved. Most of these are more appropriately dealt with by other policies. As far as defining and quantifying what is an unacceptable impact on health, the policy makes clear that a Health Impact Assessment will need be prepared in accordance with guidance from Public Health England. The supporting text makes clear that Health Impact Assessments will consider the likelihood, significance and duration of both the potential positive and negative impacts of proposals and will identify what will be monitored, how and by whom. They will also take into account the cumulative impacts of development.</p>
DC3 Building Sustainable Homes and Businesses	30	<p>Broadly supportive of approach and principles. Concerns that the policy is not ambitious enough considering climate crisis and, following the publication of the 2019/20 "Future Homes Standard" consultation, should review the requirement to deliver the HQM, to rely on the latest nationally adopted standards/ requirements/ innovations instead, for future proofing. Comments that renewable energy should be a separate DM policy. Reservations on enforcement of Policy. The Council is using the powers it has to tackle the issues of climate change and the policy has been revised with new standards. The Proposed Submission LPR policy will be generally supportive of renewable energy schemes subject to and according to their proposed location and goes a long way to meet up-to-date requirements. The Council is aware of the</p>

		challenges in putting the new policies into practice and is looking at ways to ensure they are delivered satisfactorily.
DC4 Environmental nuisance and pollution control	10	Comments generally supportive. Many comments objected to the lack of policy on reducing lighting pollution to preserve the AONB's dark skies and protect biodiversity. The Policy was expanded to require that every planning stage reasonably avoids the negative impacts of light pollution on wildlife and residents, with Lighting Appraisals carried out for proposed developments that include outdoor lighting using guidance from the Institute of Lighting Professionals (ILP) (or similar body), national guidance and British Standards. Policy was revised to ensure adverse impacts on health and quality of life arising from noise from new development is mitigated and minimised. The Woodland Trust (lpr1012) raised concerns that Ancient Woodland is greatly at risk from ammonia pollution so the supporting text of Policy DM15 was amended to include specific requirements that additional screening is needed to demonstrate that there will be no deterioration or impacts on Ancient Woodland as a result of the contributions from ammonia-emitting developments.
DC5 Water quality	9	Policy amended to require proposals which are not connecting to the sewer network and which are within 500 metres of a SSSI to carry out an assessment. Policy amended to require proposals for built development to be at least ten metres away from the top of the bank of the nearest watercourse or main river providing or retaining a natural or semi-natural habitat buffer. Supporting text has been included to provide further information and justification. Policy amended so that special regard is given to the River Kennet and River Lambourn to support the improvement of their status and overall health. Supporting text has been amended in relation to Sustainable Drainage Systems to ensure that the policy is consistent with paragraphs 174 and 183 of the NPPF. Policy has been amended to clarify that proposals within the hydrological catchment of the River Lambourn SAC or River Test will be required to demonstrate nutrient neutrality.
DC6 Water resources	11	The title of the policy has been amended to include 'wastewater' to provide greater clarity. The supporting text has been strengthened to provide the justification for the higher water efficiency standard. Policy amended to highlight that where upgrades to water supply and waste water networks are required, consideration should be given to the phasing of development. Such as change will ensure that the policy has greater regard to paragraph 174 (criteria 3) of the NPPF.
DC7 Air Quality	7	The supporting text has been amended regarding the impact that green infrastructure can have in relation to air quality. The policy has been updated to provide greater clarity and reflect Planning Practice Guidance. Strong support received in the comments, particularly in relation to opposing development where air pollution affects schools. Thatcham Town Council (lpr1415) comment that the Policy must reflect odour nuisance and its assessment based

		on recurring odour issues from the Sewage Works in Thatcham Lower Way. The LPR should be regarded as a whole for approach to odour, including DM5 Environmental Nuisance and Pollution Control and DM30 Residential Amenity policies. Further objections on monitoring methodology of Air Quality Assessments in the Thatcham Air Quality Management Area (AQMA) redirected to the West Berkshire Local Air Quality Management Annual Status Report 2021, to demonstrate Thatcham AQMA is being regularly monitored and contains measures to improve air quality within the area (including the A4).
DC8 Conservation Areas	11	Generally supportive comments. Concerns from Historic England (lpr1584) and West Berkshire Heritage Forum (lpr91) that Policy does not discuss Conservation Area Appraisals (CAA) therefore flaws in evidence base of LPR and the active programme of conservation. Suggestions that voluntary contributions not enough for CAA and the funding should be committed. Policy amended and Council recognises importance as part of strategy to maximise opportunities for conservation and enjoyment of historic environment. The Council is undertaking a phased programme of CAAs, in partnership with the West Berkshire Heritage Forum, with a priority list of Conservation Areas (CAs). As a result of funding ,CAA for Newbury town centre is due to be complete by 2023 and CAAs for Thatcham and Hungerford will follow. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers. Proposals for developments will be determined in accordance with Policy SP9. Certain criterion removed as agreed not necessary.
DC9 Listed Buildings	10	Majority of comments received supportive. Policy SP9 states that development which would lead to substantial harm, or loss to the significance of a listed building or its setting will not be permitted nor will a development that would lead to less than substantial harm to the significance of a listed building or its setting. As set out in supporting text, The Council agrees an up-to-date, 'whole-building' approach is needed for energy efficiency measures to be suitable, robust, well integrated, properly coordinated and sustainable. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers and Historic England agrees.
DC10 Non-designated Heritage Assets	13	Comments generally supportive. Policy amended to include commons features both relating to its use by commoners and relict monuments that have survived due to lack of development. Canal & River Trust (lpr888) state the canal should be considered as a non-designated heritage asset, agreed and Policy amended to include built elements of the Kennet & Avon Canal not already on the National Heritage List for England. Policy amended to include structures and earthworks found along historic routeways and supporting text to expand to include landscape features that add local character and distinctiveness to the landscape. Proposals for

		developments will be determined in accordance with Policy SP9, amended to make clear that where development is proposed a balanced judgment will be made regarding scale of harm or loss and the significance of heritage asset. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers.
DC11 Registered Parks and Gardens	12	Majority of comments received supportive. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers and Historic England agrees.
DC12 Registered Battlefields	8	Majority of comments received supportive. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers and Historic England agrees.
DC13 Assets of Archaeological Importance	7	Majority of comments received supportive. The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers and Historic England agrees.
DC14 Trees, woodland and hedgerows	26	The policy has been tightened and more detail provided for ancient woodlands.
DC15 Entry level exception schemes	10	New national policy has been published (Written Ministerial Statement on First Homes) which replaces paragraph 72 of the National Planning Policy Framework. Entry-level exception sites have therefore been replaced with First Homes exception sites.
DC16 Rural Exception Housing	11	Majority of comments supportive. Englefield Estate Office (lpr1538) suggests alternative methods to local housing needs surveys, noted but they are a well-established tool which provide a clear way to assess local housing needs. It is agreed that the need to consider local character and the AONB is covered elsewhere in the plan and as the plan should be read as a whole. Repetitive text deleted.
DC17 Self and custom build	12	The Council has proposed residential allocations in the LPR that will include an element of self-build (North East Thatcham and Purley Rise). It is not considered necessary to have site allocations specifically for self- and custom-build housing.
DC18 Specialised housing	10	Policy amended to clarify that the need implies locally identified need in the whole District. Amendments to Policy and supporting text to confirm delivery of specialist care housing as part of the mix on the strategic housing allocations in the Local Plan and from other large housing sites where feasible.
DC19 Gypsies, Travellers and Travelling Showpeople	12	Policy updated to respond to GTAA refresh 2021. Criteria added to safeguard existing authorised sites, and outline where sites could be directed to, and list of criteria updated to be consistent with other policies in terms of requirements. Reference made to the preparation of a specific DPD in the policy.

DC20 Retention of mobile home parks	6	Comments received support Policy. There is a need to ensure that these sites which currently provide low-cost accommodation continue to provide affordable accommodation.
DC21 Residential use of space above shops and offices	8	<p>Policy updated to state developments are above non-residential units, deleting 'shops'.</p> <p>Comments supportive of policy. Issues of cycle parking and bin storage commented upon are covered in accordance with Policies DM42 and DM44 (and the supporting text of policy DM31) and Policy SP7. Policy amended to reflect the National policy and legislation requirements that planning applications for the conversion of non-residential space to residential use must comply with so standards are clear.</p>
DC22 Housing Related to Rural Workers	9	<p>Educational and institutional establishments have been removed from the policy, and a new policy written for such establishments in the countryside. The term 'business' has been inserted to replace 'enterprise' to be consistent with the NPPF and other LPR policies.</p> <p>Generally supportive comments. Lucy White Planning for Bradfield College (lpr1156) objects to the ambiguous nature of the Policy regarding the provision of staff accommodation as the Policy applies to schools and colleges in rural areas but does not clarify whether all other policy criteria would be applied in which case Bradfield College objects further. The policy attempts to place elements of Local Plan policy ENV27 (Development on existing institutional and educational sites in the countryside) into the policy on housing for rural workers, as it is recognised that schools in the countryside have a housing stock for staff and schemes for new staff accommodation. It is agreed that some ambiguities have resulted in the merging of such policies. DM38 (development on existing educational and institutional sites in the countryside) has been included in the Submission Version, and would replace Local Plan policy ENV27. Therefore, educational and institutional establishments have been removed from this Policy.</p> <p>Councillor Tony Vickers (lpr619) require amendment ensuring that new housing in this category remains occupied by a working family in perpetuity if employee retires or dies by re-housing the employee's family. It is difficult for planning policy and decision makers to require re-homing of an employee's dependent family. However, supporting text amended that applicants should detail planning permission whether it is possible thus allowing existing residence to be used for incoming rural worker. Upon comments, the importance of the horse racing industry is recognised, supporting text amended to include 'similar land based rural enterprise' but Policy should be read in conjunction with Proposed Submission Policy DM37.</p>
DC23 Conversion and/or re-use of Existing Redundant and Disused	12	The Policy has been clarified to refer to 'conversion of existing redundant and disused buildings' only. Added vehicular access to be suitable in landscape terms. Supporting text amended to strengthen approach to such development.

Buildings in the Countryside to Residential Use		<p>Mixed support for the policy. Concerns that the Policy should be more flexible to re-use buildings not structurally sound in their entirety, requests to preserve/ restore and reuse structures in the countryside that reflect the local character and to remove eyesores. Comments that structures being proved genuinely redundant or disused is ambiguous. The purpose of criterion a) (was i) in the Emerging Draft LPR) is to ensure the policy is applicable to buildings capable of conversion, rather than needing significant building works to enable the habitation of the building, in line with the NPPF. The supporting text provides detail on the policy's purpose and is explicit in its intention not to apply to buildings that have an adverse visual/landscape impact e.g., large agricultural sheds. It makes clear that not all buildings will be suitable for conversion and or reuse, due to their location, condition or appearance. A case officer must be satisfied that the building is genuinely redundant or disused and the Council will take account of all circumstances to judge this. It further outlines that the policy does not allow for the development of derelict buildings, and such residential development would be considered under Policy DM1. Some comments requesting clarity on the meaning of 'substantial rebuilding'. In this context its ordinary meaning of 'extensive'. The extent to which proposals are considered 'substantial' will vary depending on the scale and type of building affected and the relative extent of the works required. Supporting text strengthened to reflect this. Made clear that Policy should be read in conjunction with other policies and LPR is in line with NPPF.</p>
DC24 Replacement of Existing Dwellings in the Countryside	8	<p>Supporting text strengthened to consider design and impact on landscape. Supporting text strengthened to consider climate resilience.</p> <p>Comments generally supportive. Comments suggesting the policy should provide more positive encouragement to the enhancement of sustainability (ie energy needs and provision, carbon neutrality) and design creativity where the landscape allows. Policy and supporting text amended refer to SP7 and SP5 with sustainable technologies, positive action and resilience to climate change. North Wessex Downs AONB (lpr1615) comment the Policy is not restrictive enough on replacement dwelling size as the AONB is sensitive to changes in building mass/bulk. The Council has, through Housing Site Allocations DPD, moved towards examining the overall design, including scale, mass and bulk. This is considered to allow applicants and their designers, and the decision maker, greater flexibility in considering the impact of a replacement dwelling on the landscape than purely looking at a numerical size increase. Supporting text of proposed submission amended to align with changes to DM28, referencing key components of proportionality and stating that disproportionate replacement dwellings will not be allowed. The NPPF make clear, in regards to replacement dwellings in the countryside, the need for good design of development and the importance of responding to local character and distinctiveness, reflecting the identity of local surroundings.</p>

		The replacement of existing dwellings in the countryside is an important local issue in West Berkshire and the policy will continue to provide a framework for decision making on this matter. The Policy is therefore consistent with the NPPF and all criterion are necessary.
DC25 Extension of residential curtilages in the countryside	8	<p>Insertion of specific landscape features to be maintained, to aid in conserving and enhancing local character.</p> <p>Comments generally supportive. Policy amended to refer to public rights of way, instead of public footpaths, and supporting text amended to specify the countryside in opening paragraph to reflect Policy name. Although no specific guidance is given, the NPPF refers to the need to recognise the intrinsic character and beauty of the countryside and protect and enhance valued landscapes such as the AONB (para 170). The acceptability of such proposals will therefore depend upon the impact on the surroundings and the impact of each proposal will be considered individually as each will be expected to have no harm on the setting or wider landscape. The policy criteria seek to ensure that any adverse impact on character and local distinctiveness are avoided. Comments referring to the overall carbon footprint of a property should be considered in conjunction with other relevant policies such as SP5 and SP7.</p>
DC26 Sub-division of Existing Dwellings in the Countryside	8	<p>All comments supportive except Fowler Architecture and Planning (lpr1807). The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers. Comments that wording should be changed to 'existing building' but the NPPF published in July 2021 has not incorporated this change and refers to 'residential building'.</p> <p>Comments that require consideration of accessibility principles is inconsistent with NPPF. The NPPF does allow subdivision in the countryside, but this does not prevent other factors coming in to the assessment of a scheme (and also does not override the statutory status of the development plan as a starting point for decision making). The NPPF also seeks 'accessible services' and for land to be available in the right places (para 8) whilst the whole of section 9 in the NPPF is about promoting sustainable transport. It is therefore still considered consistent with the NPPF to consider accessibility in a development plan policy for West Berkshire. Minor criterion amended.</p>
DC27 Residential extensions	8	<p>Comments supportive. Some comments more appropriately covered by other policies. The policy gives applicants, agents, interested parties and decision makers clear criteria under which a household extension would be assessed against, thus creating a level of certainty in what is expected from extensions. It is important to consider the original dwelling, particularly for dwellings outside of any defined settlement boundary. An extension has the potential to dominate the character and appearance of a dwelling and of its locality, and when in the countryside, lead to an overdevelopment and being disproportionate especially as extensions upon extensions can have the same affect. It is not considered that</p>

		<p>the policy precludes well designed extensions. The assessment depends very much on the particular circumstances of the dwelling, whether it has been extended previously, its plot, and its surroundings, as well as whether it lies within any designated areas (AONB or Conservation Area). These factors and the proposal would fall into the balance of considerations when determining a planning application. It is agreed that the policy cannot be used to assess permitted development schemes which are subject to prior approvals in their entirety. Only neighbour amenity can be considered (should a neighbour object) and supporting text amended to reflect this. No major changes.</p>
DC28 Residential annexes	7	<p>All comments supportive except Fowler Architecture and Planning (lpr1807). The Council considers that a targeted DM policy is necessary to guide development, and to provide clear and transparent advice to developers and DM officers. Para 11.85 of the supporting text of the Proposed Submission LPR makes it clear that some types of annex benefit from permitted development rights. Minor criterion amended.</p>
DC29 Residential space standards	11	<p>Mixed support for the Policy from comments. Concerns there is no evidence or justification for requiring internal space policies, suggestions Policy is deleted for greater flexibility to maximise the number of sites that are developable as well as extending consumer choice to more households based on affordability. The supporting evidence will be updated to strength the proposed policy and demonstrate that the policy is both needed and viable. Measurement of dwellings permitted in WB since the adoption of the Core Strategy show a significant proportion do not meet the nationally described space standard (NDSS). This is the case across the District but is particularly notable for the conversion of residential annexes and for town centre development. The WB whole plan viability assessment has concluded that development across the District can comply with the NDSS (alongside other policies set out in the Local Plan) and remain viable. Sovereign Housing Association Ltd. (lpr2170) broadly support Policy but note eight additional components to be achieved are already set out in the NDSS which could cause confusion should the NDSS be revised during the Plan Period. Policy amended to avoid repeating the national policy, instead new dwellings and conversion should comply with the NDSS as set out in the Technical Housing Standard (2015). Tetlow King Planning Ltd for Aster Group (lpr2356) comment that requiring future development to comply with 'any subsequent Government standard' is inappropriate as it is unknown and viability is untested which would be needed before the local plan could require applicants to comply with such a standard. It is agreed that future standards cannot be predicted and would need to be introduced in the local plan. Supporting text amended to reflect this. Further comments recommend that the Council reviews the local plan viability assessments with regard to these matters in accordance with the PPG tests which require that where a need for the standards is identified, local planning authorities should justify inclusion of a policy,</p>

		<p>taking account of need, viability and timing as blanket application of the NDSS may undermine viability of development schemes. National policy recognises the importance of high standards of housing design to improve health and wellbeing which this policy complies with by requiring new homes to have appropriate space for occupants, enabling a good quality of life and healthy lifestyle. The Council is starting with meeting the appropriate space standards.</p>
DC30 Residential amenity	8	<p>Comments generally supportive. Queries into parking availability for flats, case by case flexibility and standard amenity requirements. The Policy provides guidance for outdoor amenity space for flats. There is no distinction between town centre locations and out of centre locations, as the local environment (e.g. proximity to public green spaces) may affect the amount of open space provided as part of a development. Parking does not count in the amenity space calculation. Furthermore, balconies, where they do provide high quality space (e.g. Newbury Racecourse) may be counted as outdoor amenity space. Adequate provision of amenity space can vary between properties, particularly where there is already a garden space which is smaller than what the policy is trying to achieve. As the policy applies to flats as well as houses it is considered appropriate to keep the guide for sizes in the supporting text. The Policy is primarily aimed at ensuring that new developments do not have an adverse impact on neighbouring properties, and ensure that there is adequate private amenity (garden) space and a source of natural light seeking to provide a high standard of amenity for existing and future users of land and buildings, and includes particular criteria for the designer and decision maker to consider. The recommended garden distance is a long established method of seeking to achieve a distance of 21 metres between windows, to avoid overlooking. The policy is only a starting point, if there are justified grounds on which criteria cannot be complied with, evidence should be provided and the decision maker will then make a judgement on the acceptability of the scheme.</p>
DC31 Designated Employment Areas	16	<p>Policy amended to strengthen safeguarding and to more clearly reflect uses within DEAs. In addition, text relating to Theale rail-road transfer facility has been removed and a new standalone policy created for this site - Proposed Submission LPR Policy DM43.</p> <p>Mixed support for the Policy. Several sites are suggested for either inclusion, exclusion or adaption as DEAs. All site assessments can be found in the HELAA and the site selection process is documented within the SA/SEA published alongside the Regulation 19 consultation. The conclusions of the DEA review work and Landscape Sensitivity and Capacity Assessment will be published alongside the Regulation 19 consultation. Policy amended to update rebranded Lambourn Business Park and to recognise the current local Development Order for Greenham Business Park as commented by Savills</p>

		<p>on behalf of Lambourn Business Park (lpr2106) and Pro Vision on behalf of Greenham Trust Ltd (lpr2369) respectively. To inform the LPR, the Council uses landscape sensitivity and capacity assessments to understand impact of development on areas. A clear definition of 'small scale commercial' requested in relation to policy. This Policy relates to DEAs, their role and function as well as the uses permitted within these areas. They are locations across the District designated for business development, and for the purposes of the LPR business development relates to offices, industry, storage and distribution uses. Comments on proposals resulting in loss of employment floorspace not being permitted, query into office buildings to residential development conversions. Supporting text amended to highlight that where necessary and appropriate planning conditions may be imposed to restrict changes of use on new development in order to maintain the supply of space/land.</p>
<p>DC32 Supporting the Rural Economy</p>	<p>16</p>	<p>Policy redrafted to better reflect the strategic aims of the approach to employment in rural areas and outside of Designated Employment Areas; in subsuming elements of deleted DC33 (PDL in the countryside), and removing reference to farm diversification which will be a new stand alone policy. Reference to 'enterprise' amended to 'business' to reflect NPPF and consistent with approach throughout the LPR. Addition of accessibility in the supporting text to reflect NPPF and in consideration of the rural nature of the District with opportunities to deliver environmental benefits.</p> <p>Mixed support for Policy from comments. No specific policy is required for development in the settlement boundary of market towns as it is broadly supported. The policy does not restrict the change of use away from residential. It would be for the decision maker to balance up the loss of housing with the benefit to the rural economy, and when considering SP12 which states that there should be no net losses from the existing housing stock, unless there is a reasoned justification. Concern from Savills on behalf of Englefield Estate (lpr542) that Policy not in line with NPPF and detailed criteria may prejudice suitable development being delivered in rural areas, specifically inflexible in requiring a long-term contribution to sustaining the whole enterprise. Similar comments from Fowler Architecture and Planning (lpr1801) who comment the policy should be deleted. It is recognised that the NPPF supports the rural economy, though specifically through the conversion of existing buildings and well-designed new buildings. Some restrictions are therefore placed on development types, and it's appropriate the Policy seeks to manage their impact whilst supporting the rural economy in line with the LPR's landscape-led approach. DM35 focuses on particular issues important to ensure development is sustainable and appropriate in terms of location and impact on the landscape and character of the site and area. The policy would replace Core Strategy policy CS10. Important that the applicant demonstrates enterprise sustainability and for the long term consequences on the rural economy to avoid</p>

		potentially unsuccessful buildings being left and converted inappropriately for the location (e.g. residential). A business plan or documentation to show that the business is viable would be of use in demonstrating such a contribution. The supporting text updated to reflect this. It is considered that the policy is positively supporting businesses in rural areas, and is flexible in its approach which is necessary as the transition away from EU- based rules for agriculture and forestry businesses continues.
DC33 Redevelopment of previously developed land in the countryside	9	The policy has been deleted. It has been amalgamated into Policy DM35 (Sustaining a Prosperous Rural Economy), which covers the redevelopment of land in the countryside for economic purposes. It was considered that a DM policy approach to the rural economy, in terms of new and redeveloped buildings would be better placed under one policy, and reduce any perceived confusion for users of the Plan.
DC34 Equestrian/racecourse industry	9	Further clarifications made in relation to the horseracing industry. Further detail provided in the supporting text with regards to the 'necessity' test. Title amended to Equestrian and Horseracing Industry.  Generally supportive comments. In response to comments that nationally the industry is referred to as the 'horse industry', the policy title is amended to Equestrian and Horseracing Industry. Comments that suitability and necessity tests should be clarified to ensure development brings benefit not harm. Necessity test supporting text updated with additional criteria so that proposals for redevelopment or change of use must demonstrate the absence of harm to the horseracing industry through the loss of the existing facility. Lambourn NDP Group (lpr1714) and Jockey Club Estates (lpr1907) comment more evidence required for consideration of businesses associated with the racing industry as do demands for suitable housing for racing staff. Whilst this policy sets out the Council's approach specifically to equestrian development, proposals for related development such as those providers of goods and services to the industry will be considered in accordance with Policy DM35. The LPR should be read as a whole. Further evidence on the contribution that the industry makes to the character of the area is available in the Landscape Character Assessment (2019). Supporting text amended to recognise the strong role of the horseracing industry in the district and past investments enhancing Lambourn's status within the industry. Comments concerning the increase in non-racing related events at Newbury Racecourse impacting neighbouring residents. When considering development proposals in support of events unrelated to horseracing industry, neighbourhood amenity will be considered and supporting text amended to reflect this.
DC35 Transport infrastructure	16	Comments generally supportive of Policy. Supporting text amended to be supportive of initiatives to develop and deliver a link from Newbury with the Hermitage to Hampstead Norreys active travel route. Policy and supporting text amended to include references to equestrian travel and the Kennet & Avon

		<p>towpath where appropriate. For the '15-minute neighbourhood' concept, supporting text amended so proposals to consider the need to reduce travel and, where possible, services and facilities located within an acceptable walking/ cycling distance of new places of employment or residences. Policy strengthened to reflect its contribution to addressing the climate emergency. The Council is supportive of a standardised approach to electric vehicle charging points provision, as is recognised in the supporting text that provision of EVCPs and infrastructure is now mandated as part of English Building Regulations. The Council is developing its own guidance to outline the requirements that developers will be expected to provide. Supporting text amended to reflect Ten Point Plan for a Green Industrial Revolution (November 2020) bringing forward the ban of sale of new petrol, diesel and most hybrid cars to 2030. The Council is aware of the issues surrounding electric scooters and that they may potentially, in time, become legal on the local highway network and will be undertaking a review of its Local Transport Plan following the LPR, likely considering the role of new technologies. Hermitage Parish Council (lpr1814) request a review of the traffic situation in Hermitage. Issues raised more appropriately dealt with by WBC's Traffic and Road Safety Team or via highways network management processes. Local highway, traffic management and safety issues would be considered as part of the Development Management process should further applications come forward. Any such required improvement identified through this process must be in accordance with this policy. Transport modelling has incorporated the combined impact of proposed new development through the plan period and detailed transport work for each development (where applicable) will come forward at the planning application stage. It is recognised many rural parts of the district have no or very minimal bus service. Due to difficulty in providing cost-effective transport in rural areas, the Council has encouraged and supported community transport and recently published a Bus Service Improvement Plan. This outlines that Demand Responsive Transport options are being investigated for rural areas where there are no bus services (e.g. between Hungerford and Lambourn).</p>
<p>DC36 Parking and Travel Plans</p>	<p>15</p>	<p>Mixed support in comments for Policy. Many comments that travel planning requires a separate policy due to its importance to spatial planning of new developments. The important role travel planning has to influence people's travel choices and behaviour is recognised, a separate policy for Travel Planning will be included in the Proposed Submission LPR.</p> <p>Comments objecting to inflexible and unrealistic car parking standards for households based on unrealistic current lifestyles and direct and indirect encouragement of car ownership and usage threatening net zero carbon target. And that there is no justification for excluding garages larger than the British Standard counting as parking spaces. Residential parking standards developed as part of the Council's Housing</p>

		<p>Site Allocations DPD, underpinned by a robust evidence base. Then considered at a Public Examination in front of a Planning Inspector in 2016. The Inspector concluded that the standards presented were sound, and were formally adopted by the Council in 2017.</p> <p>Suggestions that requirements for the most common forms of non-residential development should be given e.g. office and retail, considering existing car parks and the impact from occupants of the proposed development on vehicle numbers. It is recognised that the current non-residential standards are based on maximum standards and are now out of date. A set of new non-residential standards or guidance relating to how the LPA will approach their assessment will be developed in due course. Applicants must provide evidence to demonstrate whether there is sufficient existing spare car parking capacity that would be able to accommodate extra demand.</p> <p>Comments that there is no guidance from the Council on 'Electric Vehicle Charging Points for new development' and that the policy must be flexible to changes in technology. Provision of EV charging points and infrastructure is now mandated as part of English Building Regulations. The Council is currently developing its own guidance to outline the requirements that developers will be expected to provide. Proposals for charging points on the Strategic or Primary Road Network will be considered further as part of the review of the Council's Local Transport Plan, commencing in 2022.</p> <p>Guidance on the design and layout of car parking will be covered in the Council's emerging Highways Design Guide for Residential Development.</p> <p>The areas covered by the Zones in the residential parking standards have been reviewed to inform the Proposed Submission LPR. Whether an application is an exception case will be determined on a case-by-case basis.</p>
<p>DC37 Public open space</p>	<p>14</p>	<p>Comments received supportive. For many comments the Policy and the supporting text should be read in detail and in conjunction with other policies SP10, SP11 and DM15 and the Planning Obligations Supplementary Planning Document. SP10 Green Infrastructure amended in response to comments by the Mid and West Berkshire Local Access Forum (lpr1892) and British Horse Society (lpr881) that active travel should be encouraged to reduce car use and non-motorised active travel, including by horse, must be preserved and maintained, including public rights of way. Development proposals to take into account existing access network within and around the site. Opportunities to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. Additional connections and status upgrades to the existing rights of way network will be supported. Suggestions to include within policy the needs of dog owners were considered too specific. If appropriate additional guidance may be developed at a later date. Fowler Architecture and Planning (lpr1811)</p>

		comment the function and value of Accessible Natural Greenspace (ANG) in urban and rural areas should be recognised as a separate typology of open space that provides informal recreation in a natural environment where biodiversity enhancement is a key principle. Supporting text amended to include ANG.
DC38 Promotion of FTTP (fibre to the premises)	11	<p>Policy title amended to Digital Infrastructure to reflect changing technology.</p> <p>Comments supportive. Suggestion that it would be beneficial to support a wide range of fast internet and fibre to the premises (FTTP) should be mandatory in new developments. Through the Berkshire Digital Infrastructure Group, the Berkshire Unitary Authorities have set-out a “Connected Berkshire Vision and Strategy” to ensure that over 95% of households and business have access to full fibre coverage (providing Gigabit capable connectivity) and to eliminate all 4G poor coverage areas by 2025. The NPPF states Local Planning Authorities should support the expansion of electronic communications networks including full fibre broadband connections and have a crucial role in the deployment of fibre infrastructure as set out in the Government’s guidance ‘Digital and telecoms: resources for local authorities’. The guidance comments that local authorities can help to create incentives for future investment in digital infrastructure in their area by ensuring Local Plans effectively support it. To do this Local Plans can outline how planning policies will support the rollout of fixed and mobile infrastructure.</p>
DC39 Local shops, farm shops and community facilities	12	<p>Policy redrafted to more clearly reflect the policy requirements and the uses considered.</p> <p>Majority of comments received supportive. Several comments that current thresholds for local shops to provide to are too high and policy must define how the support for local shops increases with the number of dwellings, and phasing as well as reflecting the needs of the adjacent communities. A strategic approach must be defined that relates to developments that are on the scale of a new town. Strategic sites within the LPR have a site specific policy which sets out the detail in relation to the infrastructure provision for the site for example SP16 and SP17. Larger sites to be masterplanned and include necessary infrastructure to meet the needs of the proposed development, obsolete components of the policy therefore deleted and supporting text amended to clarify the policy relates to provision and retention of local community facilities in both new and existing communities. Suggestions that developers must provide more generous and flexible allocation of land for community facilities and provide it earlier in the build. Developer contributions are sought on most new development within the District. These contributions are sought in order to provide for additional facilities and infrastructure demands as a result of new development. Policy SP23 of the Emerging Draft LPR sets out the planning policy approach for infrastructure requirements and delivery. A new</p>

		policy is to be created on farm diversification in the Proposed Submission version.
<b>Appendices</b>		
Appendix 1 Monitoring & Delivery	2	Appendix to be provided in Proposed Submission LPR
Appendix 2 Evolution of the LPR	2	Appendix to be deleted
Appendix 3 Settlement Boundary Review	37	<p>Comments taken forward as part of the SBR.</p> <p>Comments generally supportive though concerns raised that settlement boundaries threatened the AONB and boundaries were elasticated to expand to further development, conflicting with current policies, principles and the community. The settlement boundary review criteria set out the general principles followed when defining a boundary and give guidance as to what would usually be included and what would usually be excluded. This makes clear that sites allocated through the LPR will be included within the boundary. Settlement boundaries have been drawn up through co-operation with parish/town councils and neighbourhood planning groups. The Council gave all town/parish councils and neighbourhood planning groups across the District an opportunity to undertake an initial review of boundaries, in February and March 2020 and again in March and April 2021, alongside the requests submitted by residents and other developers for small extensions to boundaries in some settlements. Maps of individual settlements showing finalised new settlement boundaries will be set out in a Settlement Boundary Review Background Paper which will be published as part of the evidence base for the Proposed Submission LPR. The Council has taken a landscape led approach to the drawing of settlement boundaries. In relation to specific concerns about the proposed allocation at North East Thatcham, sites allocated through the LPR will be included within the boundary and are only allocated through the plan led process after a thorough site assessment and sustainability appraisal. For North East Thatcham the site assessment included a Landscape Sensitivity Assessment which is published as part of the evidence base for the LPR and which will provide context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals, therefore it is not possible to draw the settlement boundary any tighter at this stage. As the LPR progresses the boundary will be amended accordingly. A Landscape and Visual Impact Assessment (LVIA) will be to be required undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development,</p>

		design and layout of the site.
Appendix 4 AWE Policy Development Category Examples	2	The Appendix to be included in the Proposed Submission LPR will set out the land use planning consultation zones
Appendix 5 Critical Infrastructure Schedule of the IDP	6	Appendix to be deleted
Appendix 6 Existing Designated Employment Areas	4	A list of existing Designated Employment Areas (DEAs) was provided as part of the Emerging Draft Regulation 18 Local Plan Review (LPR) (Appendix 6) and will be updated to include new DEAs as listed in Policy SP21.
Appendix 7 Residential Parking Zones	2	Detailed issues only which are picked up in Appendix K
Appendix 8 How policies applied in NP context	1	Appendix to be provided in Proposed Submission LPR
Appendix 9 Schedule of policies to be superseded/ deleted	4	Issues raised covered in other areas of the LPR
Appendix 10 Glossary	2	The Proposed Submission LPR will include a glossary

All the detailed changes made to the Emerging Draft LPR can be found in the 'Tracked Changes' document which was published alongside the Proposed Submission LPR 2022-2039 when it was published for formal consultation on 20<sup>th</sup> January 2023.

Where changes had been made to the LPR, the SA/SEA was reviewed to see if the outcomes of the assessments had changed. This is detailed at the appropriate place within the SA/SEA Environmental Report which was published alongside the Proposed Submission LPR.

## 7. Consultation on Evidence Base and Supporting Documents

Where relevant, documents prepared as part of the [evidence base](#) have been subject to a specific consultation with technical experts, statutory bodies and other stakeholders as appropriate. Further details are set out in the individual documents themselves which are available on the Council's website.

## West Berkshire Local Plan Review to 2036

### Consultation on the West Berkshire Local Plan Review to 2036 Scoping Report and the Sustainability Appraisal (SA) Scoping Report

The purpose of this letter is to let you know that West Berkshire Council is reviewing its Local Plan to cover the period up to 2036. We have outlined our approach to the review in a Scoping Report. This sets out that the purpose of the reviewed Local Plan will be to assess the future levels of need for new homes and employment land and other land uses up to 2036 and to provide an appropriate basis for housing, employment land and infrastructure provision over that period.

At the same time, we also have to prepare a Sustainability Appraisal (SA) to accompany the Review. The SA process provides a means of translating sustainability objectives for the area into sustainable planning policies and should reflect global, national, regional and local sustainability problems and issues. It involves a series of stages by which the content of the emerging Local Plan Review is appraised against a series of sustainability objectives. The first stage of this is a SA Scoping Report which sets out the scope and overall level of detail of the SA. It also sets out our sustainability objectives.

We would welcome your feedback on our proposals and so comments are invited on both documents. Your comments should be submitted during the six week consultation period, running from Monday 12<sup>th</sup> February to 5pm on Monday 26<sup>th</sup> March 2018. They can be made:

**Online:** using the Council's Local Plan Consultation Portal

<http://consult.westberks.gov.uk/portal>

This is the easiest and most efficient way to make your representations.

or by **Representation Form:** available electronically on the Council's website <http://info.westberks.gov.uk/article/localplanreview2036> and through all libraries in the District and in hard copy at West Berkshire Council Offices, Market Street, Newbury, RG14 5LD between the hours of 8:30am and 5:00pm on Mondays to Thursdays and 8:30am and 4.30pm on Fridays. Completed representation forms can be returned:

- by email [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk); or
- by post to the Planning Policy Team, Development and Planning, West Berkshire District Council, Market Street, Newbury. RG14 5LD

All comments must be received by **5pm on Monday 26<sup>th</sup> March 2018**. Please note that all comments will be made available to the public to view and cannot be treated as confidential.

If you have any queries relating to this consultation, please do not hesitate to contact the Planning Policy Team at [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk) or 01635 519111.

Regards

Gary Lugg, Head of Development and Planning

*You have been sent this letter because you are either a statutory consultee, have previously made representations on the Local Plan or have asked to be kept informed. If you no longer wish to be contacted please let us know.*

## West Berkshire Local Plan Review (LPR) to 2036

### Scoping Report Consultation Statement

October 2018

#### Introduction

Between February and March 2018 the Council invited comments on the proposed scope and content of the Local Plan Review to 2036 (LPR). Comments were also invited on the accompanying Sustainability Appraisal (SA) Scoping Report

This statement sets out a summary of the comments received to this consultation, the Council's response and sets out the next steps in taking the LPR forward.

#### Local Plan Review Scoping Report

In all, there were 81 respondents to the consultation on the LPR scoping report with some respondents commenting on all questions and others only commenting on those questions of specific interest to them. A summary of the respondents' comments to each question is provided here, together with a summary of the Council's response, with the full comments provided in Appendix A.

#### **Q1 – Do you agree with the proposed scope of the review of the Local Plan? If not please tell us why and give reasons for your answer.**

*(Comments received = 56)*

The majority of respondents agreed with the proposed scope of the review and were clear in the need for it to be comprehensive and based on an up to date evidence base. They were also in agreement of the need to review the Council's housing requirement and spatial strategy, settlement hierarchy, development management policies and existing settlement boundaries consistent with the requirements of existing and emerging national planning policy.

There was a concern from a few respondents that the Scoping Report lacked sufficient evidence and context and that a further body of work should therefore be produced to enable more meaningful and constructive responses from stakeholders. The need for the Council to re-examine its approach once the revised NPPF and NPPG were published was also stressed. Housing need for instance will have to be assessed using the government's standard method contained in the revised NPPF. The need for the Council to work in cooperation with neighbouring authorities was also highlighted, especially if the revised NPPF confirms the need for Statements of Common Ground.

The length of the plan period was raised by a few respondents from the development industry. The review will need to plan for at least 15 years from its adoption and is

intended to cover the period to 2036. As the review is not anticipated to be adopted before the end of 2020 however, they felt that consideration should be should be given to adopting a plan with an end date of 2041.

One respondent from the development industry requested the Council provide greater clarity as to the extent of the review in dealing with a strategy for housing delivery in the short to medium term. They were not clear whether the scope of the review was to identify non-strategic sites as well as strategic sites. Another respondent also emphasised the need for there to be a clear distinction between strategic and local policies and that in order to achieve this, consideration should be given to preparing two separate plans, albeit in parallel and co-terminus. Some respondents highlighted specific concerns within their remit that will be considered further as the Review progresses and which will be taken forward through the development of particular policies such as the needs of the racehorse and equestrian industry. Some statutory consultees also drew attention to various requirements and other guidance that will need to be considered as the review progresses. One parish council expressed its disappointment that there was no real emphasis on likely changes to the way that people live their lives and their changing aspirations such as the impact that electric and possibly autonomous vehicles may have.

Some in the development industry highlighted the need for clarification around the approach the Council will take to housing in rural areas, particularly the need to achieve a good mix of smaller sites and the need to identify opportunities for villages to grow and thrive.

Other issues raised are considered under later questions.

**Q2 – Do you agree with the draft strategic objectives we have identified in Appendix 1? If not please tell us why and give reasons for your answer.**

*(Comments received = 56)*

Overall there was general agreement with the revised strategic objectives. As part of that support though there were a number of requests for the clarification of certain definitions and also suggestions for revised wording and the inclusion of specific issues. The importance of ensuring the objectives are consistent with those contained in other Council plans and strategies was stressed.

The inclusion of a vision for the Review was thought to be a useful as it would help set the objectives in context.

Several responses expressed concern that the objectives did not distinguish between urban and rural areas. It was felt that specific mention of rural communities would be helpful and would encourage the provision of housing and support economic growth in rural areas.

The need for the objectives to be written in order to deliver and manage growth over the plan period was highlighted, whether that be moving towards a low carbon economy, fostering economic growth, or the encouragement of leisure activities.

There was some discussion, particularly from the development industry about ranking of the objectives. Two developers felt that there should be a ranking of what they felt were the most valuable objectives (i.e. housing, climate change and sustainable and quality development), whilst a third felt there should be ranking that is reflective of the overarching objectives of the planning system.

Finally, there was also some overlap with issues considered in more detail under other questions such as:

- the need for an appropriate evidence base particularly for economy and green infrastructure;
- the need to meet the objectively assessed need over the Western Berkshire Housing Market Area;
- the need for the allocation of development sites of varying sizes;
- the need to meet the housing needs of key workers and other particular groups;
- to consider development needs and the provision of infrastructure in parallel. There was a feeling that the pressure on existing infrastructure was being overlooked and that infrastructure identified in the Infrastructure Delivery Plan has not delivered.

**Q3 - Do you think our existing spatial strategy (as set out in the Core Strategy) is the most appropriate for development to 2036? If not please tell us why and give reasons for your answer.**

*(Comments received = 47)*

The majority of respondents stated that they thought the existing spatial strategy had worked well and that it would continue to be the most appropriate approach for development up to 2036 in West Berkshire. With one exception, this included all parish councils and neighbourhood planning groups. The parish council that disagreed argued for further consideration to be given to garden villages where it felt that infrastructure needs and a community sense of place could be considered more holistically. The development industry highlighted the fact that the spatial strategy would need to be altered in order to accommodate a new settlement and were divided as to whether this was a good idea.

The capacity of the Eastern Urban Area to accommodate more growth was questioned, particularly the tension that exists between the need for development in the area and its location on the edge of the AONB. The role of Thatcham was also raised, with the expectation that following a period of restraint in the current plan, there was now an opportunity to plan for a period of growth.

There were some respondents who felt that whilst the spatial approach itself was acceptable in principle, the Council will need to re-examine the settlement hierarchy which supports it, in more detail, in order to establish the role and function of each settlement in each area. Specific concerns were raised, from both the development industry and some local communities that certain settlements were not now in the right category. Another suggested that a new category of 'principal rural service centres' could be introduced whilst others thought that smaller villages and the rural

areas themselves should also be included. The relationship that some settlements on the edge on the District have with settlements in adjoining authorities was also raised.

It was generally considered that a review of settlement boundaries for all settlements will be an important part of the Review and that this process should then be used to inform the overall spatial strategy for the District. A couple of respondents from the development industry felt the Council needed more evidence before it could make any decisions. Overall, the development industry felt the Council needed to be more flexible in its approach to rural settlements, particularly to those which currently sit below the current hierarchy. There were also suggestions from a few site promoters that more development, particularly in smaller villages, would help prevent the further loss of rural services.

#### **Q4 – Do you agree that dividing the District into different geographical areas is still the most appropriate way to deliver the spatial strategy?**

*(Comments received = 41)*

The majority of respondents, including parish councils and statutory consultees, stated that they felt dividing the district into geographical areas is still an appropriate mechanism to deliver the spatial strategy. They outlined that this approach is an effective way to meet housing need and it also takes into account the distinctive features and characteristics of the district, which allows policies to be focused and relevant rather than taking a broad brush approach. One parish council disagreed with this approach however, and responded stating that a more district wide approach should be adopted, but that the different characteristics of the district should be recognised among other equally important factors. One statutory consultee highlighted the need to carry out the sequential test for fluvial flood risk when considering the location of development.

Some of the development industry considered the geographical areas were appropriate as a broad objective but that it would need to be balanced against an amended settlement hierarchy. Some respondents took this further and felt that a more sophisticated method of assessing sustainability should be applied, and highlighted the settlement hierarchy itself as a more appropriate way to deliver the spatial strategy. The relationship between the spatial areas and the settlement hierarchy was strongly emphasised, with many highlighting the important role the settlement hierarchy plays in identifying sustainable locations for development. It was felt by some in the development industry that geographical areas would ensure that the supply of housing land in the district would not be over reliant on a small number of large scale strategic sites but allowed for an even spread of sites across the district. There was support from a landowner for retaining Newbury and Thatcham as a distinct area, and others stated that overlapping policies which subdivide requirements across areas should be avoided to ensure transparency. A couple of respondents from the development industry felt the Council needed more evidence before it could make any decisions.

One landowner stated that dividing the district into geographical areas imposed arbitrary boundaries and distributing the housing requirement accordingly sits uncomfortably with the more strategic approach to planning which is emerging. It was outlined that geographical areas has the potential to lead to parochial decisions and compromise opportunities for sustainable patterns of growth. One of the responses from the development industry felt the Council had a tendency to apply these artificial boundaries too rigidly in plan making and decision-taking and that flexibility was required, especially with regard to allocating housing figures for each spatial area.

Potential growth at Grazeley raised concern among some respondents who felt that such growth should not restrict the growth of other sites within that spatial area. Specific concern was also raised by landowners as to how a new settlement would fit into the mechanism of dividing the district into geographical areas. The specific need to identify land in rural areas and on smaller sized sites, as set out within the draft NPPF was set out in the responses of some site promoters. The relationship that some settlements on the edge on the District have with settlements in adjoining authorities was also raised.

**Q5 – Do you think there is a realistic opportunity for a large scale development to the south of Reading which could have the potential to be incorporated into the overall spatial strategy for the District? Please give reasons for your answer.**

*(Comments received = 49)*

Comments were divided on this issue. The majority of respondents who considered that there was potential for development in this area were cautious and felt it was dependent on a number of issues which would need to be resolved, some of which were potentially significant. These included the impact on infrastructure, especially the transport network; the amount of infrastructure that development would require; environmental constraints; AWE constraints; impact on green space and the impact on potential mineral sites.

Local communities who felt that would be directly affected by such a development in this area were not in favour of the proposal, citing similar concerns to those identified above.

Whilst acknowledging that development in this location could be seen as a strategic opportunity for authorities in the Western Housing Market Area some respondents felt that the area south of Reading has little, if any, functional relationship with the remainder of West Berkshire and that development in this location would serve to meet the needs of other authorities, namely Reading and Wokingham rather than West Berkshire. Others also felt that it would also undermine the viability and vitality of the existing settlement hierarchy in the District. At the same time, the risks of delivering through such a large strategic site were highlighted by those in the development industry, in particular the long lead in period for such a development. The need for the Plan to be flexible and to include a range of smaller sites across the

District which would be able to deliver at an earlier stage in the plan period was also emphasised by many in the industry.

**Q6 – Do you agree with our assessment of existing planning policies? Please give reasons for your answer. What do you think works well at the moment and what do you think we could do better? Please clearly identify the policy area or specific policy as a sub-heading.**

*(Comments received = 56)*

The majority of respondents agreed with the Council's aim to assess existing planning policies, including where there will be clarification for development management purposes (such as Core Strategy CS4). Some site promoters said that there was not enough information to be able to make an assessment of policies. Some respondents highlighted specific concerns within their remit that will be considered further as the Review progresses and which will be taken forward through the development of particular policies. This includes the needs of the racehorse and equestrian industry, flooding, heritage assets, transport, water infrastructure, sport and recreation, community/cultural facilities, the Kennet and Avon Canal, and the expansion of Theale rail terminal.

There was general consensus that appropriate extensions to sustainable settlements may be a way forward. Some respondents, notably from the general public, were concerned with a settlement boundary review, and were keen to ensure a balance is retained between smaller villages and the main towns in the District. The housing number going forward needs to be based on up-to-date evidence, and would need to include greenfield sites.

New Greenham Park and the Atomic Weapons Establishment were keen to see a new policy or amendment to CS9 to reflect the strategic importance of both areas of employment.

There was a suggestion that there should be a review of all site allocations in the Housing Site Allocations DPD, including a review of sites which have not been delivered. One respondent was concerned that the delay in delivering sites such as Sandleford was having the effect of developers submitting schemes for unallocated land outside of settlement boundaries (e.g. North Newbury).

Other comments received focus on including a policy for the redevelopment of redundant rural buildings, similar to Local Plan Policy ENV20; the clarification of green infrastructure; expanding Local Plan Policy ENV27 to include residential institutions for elderly care; that Core Strategy Policy CS16 should recognise any public benefits of development through flood risk management and mitigation; for Core Strategy CS6 to take into account the changes to the definition of affordable housing outlined in the NPPF; and for a review of retail centres to take into account available evidence.

**Q7 – Are there any other policy issues that you think should be considered as part of the review of the Local Plan? If so, what are they and tell us why you think they should be included.**

*(Comments received = 56)*

There was a wide range of responses to this question, and a common theme of responses related to the need for policies on health and wellbeing and sports and recreation, for elderly people's accommodation/extra care accommodation, and for community and cultural facilities. In terms of community and cultural facilities this focused on not only the protection but also the provision of such facilities, including churches, community halls, cinemas, theatres, pubs and music halls. One respondent suggested that development with any kind of community benefit should be allowed.

In terms of housing growth Thatcham should now be considered as a suitable location for allocations. There is a suggestion of allocating omission sites or 'back up' sites in the event where sites are not delivering the houses as envisaged, or there are other factors which influence the progress (e.g. economics). One respondent considered that the allocation of sites should concentrate on infilling and brownfield sites before greenfield sites. A respondent commented that there should be consideration of the 20% of housing allocations on sites less than 0.5 hectares, as per the revised NPPF. Similar to the respondents to question 6 there was consideration of the extension of sustainable settlements and the allocation of 'semi-rural' sites, and for the inclusion of a policy akin to former Local Plan Policy ENV20 for rural businesses.

Infrastructure was highlighted by respondents, with a statutory consultee encouraging a policy on water supply and wastewater. Footpaths, street lighting, health provision and educational establishments were also highlighted. Conversely, one respondent commented that if the housing and industry is planned correctly then leisure, health and cultural facilities will naturally develop.

When considering landscape, biodiversity and heritage there was comment that there should be a strengthening of policy on light pollution and the governance of external lighting, particularly in the AONB; that there should be a protection of irreplaceable habitats such as ancient woodland, and of watercourses; there should be a definitive definition of 'Green Infrastructure', which should encompass 'Blue Infrastructure'; and that there should be consideration of further detail of heritage assets.

When considering human health an internal consultee noted that a priority of the Council is for the protection and improvement of local air quality. Therefore, updating the policy for pollution and noise in line with new guidance is needed, rather than relying on the now deleted planning policy guidance notes.

There were queries about the duty to cooperate and taking on unmet need from surrounding authorities; housing affordability; and whether West Berkshire Council aim to boost the supply of housing when looking at the SHMA and Government target figures.

## **Sustainability Appraisal Scoping Report**

*(comments received = 207)*

The Scoping Report contained ten questions primarily relating to the quality of data contained with the report. In all, there were 27 respondents to the consultation on the local plan review scoping report with some respondents commenting on all questions and other only commenting on those questions of specific interest to them. A summary of the respondents' comments to each question is provided here, with the full comments provided in Appendix B.

There was an overall consensus that the baseline information was adequate with some exceptions relating to the age of some data and the paucity of data on green infrastructure, tourism and recreation, and the racehorse/equestrian industry. There were many useful suggestions to tighten up the evidence.

Overall there was general agreement with the key sustainability issues and objectives identified. A number of refinements were suggested from statutory bodies and 'tourism' proposed as an addition. Ranking the objectives was not seen as helpful.

There was some overlap with the issues raised under the Local Plan Review Scoping Report, including:

- the timescale of the Review;
- the justification for any large scale development to the south of Reading;
- an endorsement of cross boundary working;
- favouring large site allocations in and around urban areas as the most "sustainable locations" and in contrast;
- the benefits of allocating smaller sites adjacent to smaller sized settlements as a potential strategy for aiding housing delivery and supporting sustainable development in rural areas;
- the need for a settlement boundary review;
- a greater commitment to fulfil the unmet housing need from neighbouring authorities, especially Reading;
- the need for an overall vision to provide context and sense of direction;
- the weight to be given to the draft and final versions of the revised NPPF;
- the need to present housing numbers by spatial area;
- the provision of housing for younger people and affordable housing;
- the provision of necessary infrastructure with the developments, including implications of electric/zero carbon technological developments.

## **Summary of Council Response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR). The Council will need to prepare the Review to conform to the revised national policy in the NPPF published

on 24th July 2018. Detailed comments made will be taken forward in the development of the spatial strategy and both strategic and local policies as appropriate.

It is encouraging to see that there is general agreement with the proposed scope of the Review. The importance of an adequate, up to date and relevant evidence base is acknowledged as is the need to undertake the LPR in close cooperation with our neighbouring authorities.

The Council agrees that the inclusion of an overarching Vision would be particularly helpful and assist in setting the Strategic Objectives in context.

The general agreement amongst respondents with the draft strategic objectives is welcomed. It is acknowledged that they are broad and wide ranging and that is some overlap between them. In this context some definitions, such as culture and heritage, are also used in their broadest sense. The strategic objectives apply across the whole of the District, in both urban and rural areas. Although some respondents proposed a ranking of the objectives the Council does not consider, in the interests of sustainable development, that that would be appropriate.

The objective on housing is to ensure that the assessed need for market and affordable housing up to 2036 will be met. Housing need will be assessed using the government's standard method contained in the revised NPPF and PPG. This assessment will use the most up to date household projections as a starting point and the resultant need figure is considered to represent the minimum requirement to be included within the Local Plan Review to 2036. This figure will supersede the OAN in the 2016 Berkshire SHMA. The LPR will set out the strategy to meet this revised requirement. It will consider both strategic and non-strategic growth opportunities to meet the need over the plan period, including housing in rural areas of the District. The HELAA will provide evidence of growth opportunities in the area and will identify sites that have potential for development to inform the spatial strategy. Most of the sites that will be included were submitted through the Call for Sites (December 2016 to March 2017), through which agents and the public were invited to submit sites that they considered developable.

The LPR will contain a housing trajectory as required by national policy, although a trajectory can only represent a point in time and will be subject to review through the Annual Monitoring Report.

The support given to the continuation of the existing spatial strategy is welcomed but the capacity of the Eastern Urban Area to accommodate future growth is an issue which requires further consideration. The Council will therefore review the character of and evidence it has for the existing spatial areas and consider whether it can introduce flexibility by reviewing boundaries.

A review of the spatial distribution of development across the District will also be done through a review of the settlement hierarchy and settlement boundaries. The Council intends to consult on both the methodology for the settlement hierarchy and criteria for the review of settlement boundaries in Nov/Dec 2018. It is intended that all settlement boundaries are reviewed as part of the Local Plan Review.

The four Western Berkshire authorities are committed to meeting the housing requirement across the Western Housing Market Area. To this end the Councils have agreed a Memorandum of Understanding which states that the four authorities will continue to work together to ensure that local plans in the area set out policies and proposals that collectively provide for the full housing needs of the area, including unmet need in Reading.

The Council acknowledges that large new settlements are not without their problems and in seeking to identify land for new homes national policy notes the importance of identifying a mix of sites across the District. Should development be considered appropriate at Grazeley, given the strategic nature of the site, any development would be delivered in partnership with Wokingham Borough Council. Reading Borough Council would also be involved in the process. It would require comprehensive masterplanning to ensure that it was delivered in the most sustainable way and part of this would involve a detailed transport assessment of the existing network. Given that such a large scale development would likely impact significantly on the existing network, developer contributions from the development would go directly to funding any improvements required. A detailed assessment of the green infrastructure would also be required, including the identification of any suitable alternative greenspace (SANG). There would be a need for extensive consultation with AWE Burghfield and the Office for Nuclear Regulation (ONR) to ensure that any development was compatible the facility at AWE Burghfield and delivered in conformity with the Detailed Emergency Planning Zone (DEPZ).

### **The next steps**

Following an analysis of the responses received on both the Local Plan Review and SA Scoping Reports the Council will now:

- Create a vision for how West Berkshire should look in 2036 which will provide the context for the Strategic Objectives
- Finalise the Strategic Objectives
- Consider the overall strategy for the pattern and scale of development across the District. As part of this we will:
  - review the existing strategy and identify the direction we intend to take at both a strategic and local level in accordance with the revised NPPF;
  - review the character of and evidence we have for the existing spatial areas and whether we can introduce flexibility by reviewing boundaries. We will set this out in a topic paper which we will consult upon in November/December 2018;
  - review the spatial distribution of development across the District. This will include:

- consideration of how we meet the need for housing and employment land to 2036 through a review of the settlement hierarchy and settlement boundaries. We will firstly look at producing a methodology for the review of the settlement hierarchy and also produce criteria for a review of settlement boundaries which we will consult upon in November/December 2018;
  - analysis of sites being promoted for development through the HELAA and, as part of this, the identification of potential broad locations for development. In June/July 2019 we will publish a list of all sites that have been submitted to us for consideration and invite comments on the suitability of those sites for development.
- Continue to update the evidence base to inform the Review. Where appropriate we will publish updated documents for information when we undertake further public consultation in November/December 2018.

### Responses received to the Local Plan Review Scoping Report (February 2018)

**Q1: Do you agree with the proposed scope of the review of the Local Plan? If not please tell us why and give reasons for your answer.**

Number of responses received: 56

Respondent	Response
<b>Internal</b>	
Archaeology Team West Berkshire Council	Broadly agree
Public Transport Team West Berkshire Council	I agree with the proposed scope of the review of the Local Plan and note that it is not the purpose of this review to change or remove policies that seek to support the delivery of sustainable development.
<b>Statutory consultees</b>	
Hampshire County Council	We agree with the proposed scope of the review of the Local Plan.
Stratfield Mortimer Parish Council	<p>The proposed scope of the review seems to cover all the areas most directly linked to the planning process. However, there seems to be no real emphasis on likely changes to the way that people live their lives and their changing aspirations.</p> <p>For example, there is now general recognition that before the end of the plan period electric vehicles and possibly autonomous vehicles will form a majority of the vehicle on the roads. This will have a major impact on how people will carry out day to day tasks and on the required transport infrastructure, and hence such factors should be considered in the roll forward of the LDP.</p> <p>Of course, nobody can accurately forecast future developments but in many areas the direction of travel is clear and these should be examined for their impact on planning policy. If this is not done there is a danger, to quote an old adage, that the Generals will be fighting the last war.</p>
Newbury Town Council	<p>The current position of the Town Council on the direction that Newbury should take over the Plan period is represented by the Draft Newbury Town Plan 2019-36, recently approved by the Town Council for consultation by the public and West Berkshire Council. After the consultation ends on 18th March, a final version will be adopted.</p> <p>The Newbury Town Plan is the Town Council's recommended replacement for ADPP2 (with regard to Newbury) in the present Local Plan.</p>

Respondent	Response
Thatcham Town Council	Yes
Holybrook Parish Council	Holybrook Parish Council agree with the proposed scope of the review of the local plan and believe that the report has value.
Pangbourne Parish Council	It covers all the main policy issues so I agree with its scope
Burghfield Parish Council	Yes
Burghfield NDP Group	Yes
Environment Agency	This question is not within our remit to answer but we welcome the opportunity to comments on the local plan policies and objectives at an early stage in the local plan process. We also expect to be consulted on the local plan evidence base such as the Strategic Flood Risk Assessment (SFRA) the flood risk sequential test and the water cycle study.
Historic England	<p>The scope of the Local Plan Review will naturally be wide, but as the Government’s advisers on the historic environment, we have confined our comments to our remit, and are pleased to make the following general and specific comments. The National Planning Policy Framework (NPPF) makes it clear that the conservation and enhancement of the historic environment is an integral part of sustainable development and sets out a number of specific requirements for the historic environment in local plans. Local plans should:</p> <ul style="list-style-type: none"> <li>• set out a positive strategy for the conservation and enjoyment of the historic environment [126];</li> <li>• include strategic policies to deliver the conservation and enhancement of the historic environment [156];</li> <li>• contain a clear strategy for enhancing the natural, built and historic environment [157];</li> <li>• identify land where development would be inappropriate, e.g. for its environmental or historic significance [157];</li> <li>• be based on adequate, up-to-date and relevant evidence about the historic environment [158 and 169].</li> </ul> <p>It should be noted that the definition of “historic environment” in the NPPF is wide-ranging, encompassing more than just the built environment: “All aspects of the environment resulting from the interaction between people and places through time, including all surviving physical remains of past human activity, whether visible, buried or submerged, and landscaped and planted or managed flora.”</p> <p>Although the last of the requirements above, an adequate, up-to-date and relevant evidence base to underpin the strategy and policies of the Local Plan is really the starting point. When gathering evidence, it is important to bear in mind that this is not simply an exercise in setting out known sites but, rather, in understanding the value to society (i.e. the significance) of sites both known (such as those on the National Heritage List for England, see <a href="http://www.HistoricEngland.org.uk/listing/the-list">www.HistoricEngland.org.uk/listing/the-list</a>) and potential, without which an understanding of the sometimes subtle qualities of the local distinctiveness and character of the local area may be easily lost. In particular:</p> <ul style="list-style-type: none"> <li>• In some cases, it might be necessary to identify heritage assets outside a local authority area, e.g. where there are likely to be setting impacts caused by potential development proposals within that area.</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• Some asset types are not currently well-recorded. The Register of Parks and Gardens of Historic Interest in England, for example, is thought to represent only around two-thirds of sites potentially deserving inclusion.</li> <li>• Evidence gathering can help identify parts of a locality that may be worthy of designation as a Conservation Area, or may merit local listing.</li> <li>• Assessing the likelihood of currently unidentified heritage assets being discovered, particularly sites of historic and/or archaeological interest, will help to future proof the plan.</li> </ul> <p>It may be helpful to collate this information within a Heritage Topic Paper to draw together the evidence prepared and the subsequent implications and actions required.</p> <p>What historic environment evidence does the Council have in addition to the National Heritage List for England, Historic England’s Heritage at Risk Register and the Berkshire Historic Environment Record? Conservation Area Character Appraisals? Historic Landscape Characterisation? Is there a list of locally important heritage assets? Has the Council undertaken a survey of grade II buildings at risk? Is there an Extensive Urban Survey and/or Urban Archaeological Database. Are there any bespoke studies such as archaeological assessments or Tall Buildings studies?</p> <p>We will expect the Council to have an adequate, up-to-date and relevant historic environment evidence base and to demonstrate in the Local Plan how that historic evidence base has informed and influenced the Plan’s policies and site allocations.</p> <p>If the evidence base for the historic environment is weak, the Council may need to commission proportionate research, for example:</p> <ul style="list-style-type: none"> <li>• detailed historic characterisation work assessing the impact of a proposal for a major urban extension or rural development;</li> <li>• visual impact assessments, considering the potential impact of allocations upon the setting of important heritage assets;</li> <li>• seeking the views of the local community about what they value about the historic environment of their local area (NPPF, Paragraph 155); and/or</li> <li>• an appropriate archaeological assessment to consider whether heritage assets with archaeological potential are likely to be present in areas where the HER indicates that there has been little or no previous investigation.</li> </ul> <p>Work in putting together Local Plans will often generate new evidence of the state and significance of the historic environment. Documents, such as historic landscape characterisations, strategic environmental assessments, conservation area appraisals, economic development studies and those supporting supplementary planning documents and local listing assessments, will often contain new evidence.</p> <p>Local planning authorities will find it useful to collect this information and make it publicly available, including through the Historic Environment Record. The information can be invaluable in improving plan-making and decision-making in the future and is of significant public benefit in furthering the understanding of our surroundings and our past.</p> <p>The evidence base for the historic environment may also assist with the preparation of the following:</p> <ul style="list-style-type: none"> <li>o assessments developed to meet the goal of achieving economic, social and environmental gains jointly and simultaneously;</li> <li>o the Sustainability Appraisal which accompanies the Local Plan; and</li> </ul>

Respondent	Response
	<p>o appropriate indicators for monitoring the delivery of the Plan</p> <p>As regards the required positive strategy for the conservation and enjoyment of the historic environment, the NPPF advises that, in developing this strategy, local planning authorities should take into account:</p> <ul style="list-style-type: none"> <li>● the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;</li> <li>● the wider social, cultural, economic and environmental benefits that conservation of the historic environment can bring;</li> <li>● the desirability of new development making a positive contribution to local character and distinctiveness; and</li> <li>● opportunities to draw on the contribution made by the historic environment to the character of a place.</li> </ul> <p>We consider that the positive strategy for the conservation and enjoyment of, and the clear strategy for enhancing, the historic environment required by the NPPF, is not a passive exercise but requires a plan for the maintenance and use of heritage assets and for the delivery of development including within their setting that will afford appropriate protection for the asset(s) and make a positive contribution to local character and distinctiveness.</p> <p>This strategic approach can inform all aspects of the planning system by recognising and reinforcing the historic significance of places. As part of a sound conservation strategy, policies for local housing, retail and transport, for example, may need to be tailored to achieve the positive improvements in the historic environment that the NPPF expects (NPPF, paragraph 8).</p> <p>We also consider that the positive and clear strategy should comprise recognition throughout the Plan of the importance of the historic environment, of the historic environment's role in delivering the Plan's vision and the wider economic, social and environmental objectives for the Plan area, and of the potential impacts of the Plan's policies and proposals on the historic environment.</p> <p>Consequently, the local plan might need to consider the inter-relationship of the objectives for the historic environment with the following issues of local importance:</p> <ul style="list-style-type: none"> <li>● Building a strong, competitive economy – How might the plan conserve and enhance the quality of the historic environment in order to encourage tourism, help create successful places for businesses to locate and attract inward investment? What opportunities are there for heritage-led regeneration?</li> <li>● Ensuring the vitality of town centres and villages – What role can the historic environment play in increasing the vitality and attractiveness of town and village centres?</li> <li>● Supporting a prosperous rural economy – What opportunities does the reuse or adaptation of traditional buildings provide for supporting the rural economy or providing homes for local people? What potential is there for new heritage-led tourism initiatives?</li> <li>● Promoting sustainable transport – How might new or improved roads and other transport infrastructure be delivered in a manner which also conserves the historic environment of the area? Could the introduction of sustainable transport initiatives offer related opportunities for heritage through improving street/ traffic management or public realm enhancement at the same time?</li> <li>● Delivering a wide choice of high quality homes – How might the plan encourage adaptive reuse of historic buildings? How might new residential developments best be integrated into historic areas?</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>● Requiring good design – How might the defining characteristics of each part of the plan area be reinforced in the approach to design?</li> </ul> <p>In formulating the strategy we consider it is advisable and often necessary to consider the following factors:</p> <ul style="list-style-type: none"> <li>• How the historic environment can assist the delivery of the positive strategy and the economic, social and environmental objectives for the plan area (NPPF, paragraphs 126 and 132 and Sections 66 and 72 of the Planning (Listed Buildings &amp; Conservation Areas) Act 1990);</li> <li>• How the plan will address particular issues identified during the development of the evidence base, including heritage at risk and the reuse of buildings;</li> <li>• The location, design and use of future development and how it can contribute to local identity and distinctiveness;</li> <li>• The interrelationship between conservation of heritage assets and green infrastructure, landscape, regeneration, economic development, transport works, infrastructure planning, tourism, social and cultural assets, town centres and climate change mitigation/adaptation (NPPF, paragraph 126);</li> <li>• The means by which new development in and around designated heritage assets might enhance or better reveal their character and significance (NPPF, paragraph 137);</li> <li>• The means by which new development in Conservation Areas and within the setting of heritage assets might enhance or better reveal their significance (NPPF, paragraph 137);</li> <li>• How Historic Environment Records and local lists might assist in identifying and managing the conservation of non-designated heritage assets;</li> <li>• How the archaeology of the plan area might be managed;</li> <li>• The possible role for CIL and/or s106 in delivery of required infrastructure;</li> <li>• Whether master plans or design briefs need to be prepared for significant sites where major change is proposed;</li> <li>• What implementation partners need to be identified in order to deliver the positive strategy;</li> <li>• What indicators should be used to monitor the heritage strategy's effectiveness; and,</li> <li>• In order to deliver an effective strategy for the conservation of the historic environment, is there a need for the plan to include Development Management Policies and where appropriate specific policies for specific assets or specific areas within the plan area? (Further comments on this matter are set out later in this letter)</li> </ul> <p>The National Planning Policy Framework requires, in paragraph 126, local planning authorities to set out in their local plans a "positive strategy for the conservation and enjoyment of the historic environment". Paragraph 157 of the Framework requires local plans to contain a "clear strategy for enhancing the.....historic environment" and paragraph 156 requires local plans to contain strategic policies "to deliver.....the conservation and enhancement of the.....historic environment".</p> <p>We consider the words "positive", "enhancing" and "deliver" are significant, and we believe that the Plan (and Council) should be proactive in the conservation and enhancement of the historic environment. National Planning Practice Guidance states "Such a [positive] strategy should recognise that conservation is not a passive exercise", whilst paragraph 9 of the NPPF explains that "pursuing sustainable development involves seeking positive improvements in the</p>

Respondent	Response
	<p>quality of the built, natural and historic environment”. Conservation is certainly not a stand-alone exercise satisfied by stand-alone policies that repeat the NPPF objectives.</p> <p>We therefore look to local plans to contain commitments to positive measures for the historic environment e.g. a programme of completing and reviewing conservation area appraisals, the implementation of Article 4 Directions where the special interest of a conservation area is being lost through permitted development, the completion of a list of locally important heritage assets or a survey of grade II buildings at risk.</p> <p>The Council should assess whether or not it should identify any areas where certain types of development might need to be limited or would be inappropriate due to the impact that they might have upon the historic environment (NPPF, Paragraph 157). This might include, for example, tall buildings within identified sensitive view corridors.</p> <p>The plan will be the starting point for decisions on planning applications, and neighbourhood plans are only required to be in general conformity with the strategic policies of the Local Plan (NPPF, paragraph 184). Consequently, sustainably managing the historic environment is best achieved by identifying clear strategic policies to deliver the conservation and enhancement of the historic environment, as also required by paragraph 156 of the National Planning Policy Framework. We will therefore look to the Local Plan Review to contain a strategic policy for the conservation and enhancement of the historic environment.</p> <p>We encourage the inclusion in local plans of specific development management policies setting out the requirements of development proposals and providing a clear indication of how a decision maker should react to a development proposal affecting a heritage asset or assets as required by paragraph 154 of the NPPF, particularly in the following circumstances:</p> <ul style="list-style-type: none"> <li>● Those areas where Development Management Policies are necessary to amplify a general, overarching, Strategic Policy for the historic environment – for instance, to deal with particularly distinctive or important historic environment features or significance (this would be particularly relevant for the Local Plan Review);</li> <li>● Those areas where further clarity would be useful – for instance, how the Council will determine applications affecting archaeological remains of less than national importance;</li> <li>● Those areas where Development Management Policies may be necessary to address the local circumstances of the Plan area - for example, to clarify the approach to development within an Archaeological Notification Area, or to protect or enhance important views and vistas;</li> </ul> <p>This policy or policies should include criteria for assessing the potential impact of development proposals on the significance of all relevant heritage assets: designated assets such as listed buildings, Scheduled Monuments, conservation areas and Registered Historic Parks and Gardens, and non-designated assets, such as those of local significance (as identified on local lists), archaeological deposits (as identified on the Berkshire Historic Environment Record) and historic landscapes (as identified in the West Berkshire Historic Landscape Character Assessment).</p> <p>The policy or policies should identify those particular characteristics of each type of heritage asset that should be protected or enhanced through development proposals. Further advice on considerations for heritage assets in development management policies is set out in an appendix to this letter.</p>

Respondent	Response
	<p>The development management policy or policies should reflect the requirement in paragraph 132 of the NPPF that any harm or loss of a heritage asset should require clear and convincing justification, most often in the form of public benefits. In accordance with paragraphs 132 -135 of the NPPF, the more important the asset, the greater the weight that should be given to its conservation – the greatest weight should be given to designated heritage assets of the highest significance, then other designated assets, then non-designated assets (including archaeological remains, except those that are demonstrably of equivalent significance to designated heritage assets, which should be considered subject to the policies for designated heritage assets).</p> <p>We would expect the development management policy or policies to set out what is required of applicants e.g. “Applications which affect, or have the potential to affect, heritage assets will be expected to;</p> <p>i) describe the significance of the asset and its setting, using appropriate expertise; at a level of detail proportionate to its significance and sufficient to understand the potential impact of the proposal; using appropriate references such as the Historic Environment Record and, if necessary, original survey (including, for assets of archaeological interest, an appropriate desk-based assessment and, where necessary, a field evaluation); and</p> <p>ii) to set out the impact of the development on the heritage assets and a suggested mitigation that is proportionate to the impact and the significance of the heritage asset, including where possible positive opportunities to conserve and enjoy heritage assets as well as recording loss and advancing knowledge.</p> <p>Where development is permitted that would result in harm to or loss of the significance of a heritage asset, developers will be required to record and advance understanding of the significance of that asset, in a manner appropriate to its importance and the impact, and to make that evidence publicly accessible.”</p> <p>The NPPF requires the positive strategy for the conservation and enjoyment of the historic environment to include heritage assets most at risk through neglect, decay or other threats.</p> <p>It should be noted that outside London the Register does not include grade II listed secular buildings at risk, and that other heritage assets may become at risk during the life of the Local Plan. We therefore suggest including wording within local plans along the lines of:</p> <p>“The Council will monitor buildings or other heritage assets at risk through neglect, decay or other threats, proactively seeking solutions for assets at risk through discussions with owners and willingness to consider positively development schemes that would ensure the repair and maintenance of the asset, and, as a last resort, using its statutory powers”.</p> <p>We have produced a revised Good Practice Advice Note: 1: “The Historic Environment in Local Plans”, available on the Historic England website: (<a href="http://historicengland.org.uk/images-books/publications/gpa1-historic-environment-local-plans/">http://historicengland.org.uk/images-books/publications/gpa1-historic-environment-local-plans/</a>) which provides advice on the matters considered above.</p> <p>As regards site allocations, whatever the potential sources of land for development, Historic England will expect the selection of sites to be allocated for housing (or any development) to be based on, inter alia, full and proper consideration of the potential impacts of development on the historic environment; in particular on heritage assets and their setting, and the need to conserve and enhance those assets. This will require the use of a comprehensive historic environment</p>

Respondent	Response
	<p>evidence base as explained earlier in this letter, including specific studies to understand the significance of assets that may be affected.</p> <p>We have prepared specific advice on The Historic Environment and Site Allocations in Local Plans, <a href="http://www.historicengland.org.uk/images-books/publications/historic-environment-and-site-allocations-in-local-plans/">http://www.historicengland.org.uk/images-books/publications/historic-environment-and-site-allocations-in-local-plans/</a>. Advice on the setting of heritage assets is given in Historic England’s Good Practice Advice in Planning Note 3: The Setting of Heritage Assets (<a href="http://www.historicengland.org.uk/images-books/publications/gpa3-setting-of-heritage-assets/">http://www.historicengland.org.uk/images-books/publications/gpa3-setting-of-heritage-assets/</a>).</p> <p>We will expect the Council to demonstrate how the historic environment has influenced its choice of sites (including those for gypsies and travellers), and to set out detailed overriding justification if it proposes the allocation of any sites that would have an adverse impact on a heritage asset or assets.</p>
Sport England	Yes, carrying out a review will focus where any additional work is required
Highways England	<p>Highways England has been appointed by the Secretary of State for Transport as a strategic highway company under the provisions of the Infrastructure Act 2015 and is the highway authority, traffic authority and street authority for the strategic road network (SRN). The SRN is a critical national asset and as such works to ensure that it operates and is managed in the public interest, both in respect of current activities and needs as well as in providing effective stewardship of its long-term operation and integrity. In the case of West Berkshire this relates to the M4 and A34.</p> <p>We would be concerned if any material increase in traffic were to occur on the SRN as a result of planned growth in West Berkshire without careful consideration of mitigation measures. It is important that the DPD provides the planning policy framework to ensure development cannot progress without the appropriate infrastructure in place.</p> <p>When considering proposals for growth, any impacts on the SRN will need to be identified and mitigated as far as reasonably possible. In general we will support a local authority proposal that considers sustainable measures which manage down demand and reduces the need to travel. Infrastructure improvements on the SRN should only be considered as a last resort.</p> <p>I have included below link to the M4 J3-12 Smart motorway project, where you can find more information and sign up for updates:  <a href="http://roads.highways.gov.uk/projects/m4-junctions-3-12-smart-motorway/">http://roads.highways.gov.uk/projects/m4-junctions-3-12-smart-motorway/</a></p> <p>For background, you may be interested to read “<i>The Strategic Road Network Planning for the Future</i>” which is a guide to working with Highways England on planning matters. Savills (UK) Ltd for Thames Water Utilities Ltd	No objection
<b>General consultation bodies</b>	

Respondent	Response
Theatres Trust	Yes
Mid & West Berks Local Access Forum	We recommend close liaison with Local Transport Plans and Active Travel Plans because the infrastructure to encourage Active Travel (ie non-motorised travel for utility & recreational purposes) needs to be recognized and incorporated into Local Development Plans.
British Horse Society	<p>Yes. The Society is pleased to see that it is proposed to include reference to the Equestrian / Racehorse industry (often referred to the Horse Industry) in the new plan. We believe this is an important aspect to the West Berks community and hope a robust policy will be developed in the new plan to ensure the equestrian economy and community flourishes in West Berks.</p> <p>We have often referred other local authorities to the existing West Berks Local Plan as a good example of recognizing the value of the horse industry in their areas.</p> <p>As the BHS Access &amp; Bridleways officer for West Berks, I have to constantly argue for inclusion of provision for horses when new paths &amp; routes are being proposed. This should be automatic unless it is a completely urban environment where horses are unlikely to need access. This is particularly so when dealing with Council's Highways depts.</p> <p>Walking and cycling strategies do not cover equestrian needs and often impinge on them. An assessment of equestrian needs should be made to ensure that the horse industry can thrive.</p>
Reading Gospel Hall Trust	Broadly, yes
<b>Other stakeholders</b>	
Robert Wallace	Not exactly thinking outside the box but I guess you have to start somewhere
David Lister	Yes
David Parry	This whole exercise worries me as it appears to be based on a study of housing needs before the referendum for leaving the EU. That potentially changes the housing demand with changes to immigration policy, but until it is all resolved then nobody knows the projected population numbers and hence housing demand to 2036!
William Graham	Yes
Neil Richardson	Appears to cover main areas of concern but not enough information on need for large scale development south of Reading.
Christopher Gent	We agree with the scope of the plan
<b>Landowners, site promoters and developers</b>	

Respondent	Response
Barton Willmore for Graham Child	<p>As an overall observation we would note that the Scoping Report lacks sufficient evidence and context. Consequently, we would expect to see a further body of work produced prior to the next consultation, to enable more meaningful and constructive responses from stakeholders. We note the Council's intention for this to be a Local Plan Review, rather than a new Local Plan in its entirety, however it is not considered sufficient evidence has been supplied to accurately assess how this may come to fruition, with regard to existing policies.</p> <p>Notwithstanding the above, our client is in broad support of the scope of the review of the Local Plan, as highlighted at paragraph 3.2 in the Scoping Report. In particular our client notes that the current adopted Development Plan consists of planning policies which are not reflective of the most up to date evidence of need. For example the housing requirement of 10,500 contained within the Core Strategy is based on the now revoked South East Plan requirement of 525 dwellings per annum. This is inconsistent with the requirements of paragraph 47 of the National Planning Policy Framework 2012 (NPPF) which requires local authorities to:</p> <p><b><i>“use their evidence base to ensure their Local Plan meets the full, objectively assessed needs for market and affordable housing, in the housing market area...”</i></b></p> <p>It is noted that the Draft Revised National Planning Policy Framework was published on 5th March, however this also states at paragraph 11, that:</p> <p><b><i>“b) strategic plans should, as a minimum, provide for objectively assessed needs for housing and other development, as well as any needs that cannot be met within neighbouring areas...”</i></b></p> <p>Our client also notes that although the Council produced their Housing Site Allocations Development Plan Document (HSA DPD) in May 2017, this does not supersede the Core Strategy and therefore does not take account of the most up to date evidence of need, instead the HSA DPD sits as a daughter document to the Core Strategy.</p> <p>As a consequence our client notes that a Local Plan and associated policies which reflect a national policy compliant housing requirement is long overdue and welcomes the Local Plan Review, insofar as it seeks to specifically address this issue, inter alia. Our client notes however that the most up to date assessment of need is considered to be the Berkshire (including South Bucks) Strategic Housing Market Assessment (SHMA) 2016. However, we note that this document is yet to be tested at a Local Plan Examination and may indeed require updating itself.</p> <p>Our client would suggest therefore that the planned review of existing policies should not simply be taken in relation to whether they accord with national policy, but also whether they accord with the objectively assessed need, insofar as they allow sufficient sites to be brought forward.</p> <p>In line with the above, our client wishes to invite the Council to consider their land at Pangbourne Hill which is available in the short to medium term to deliver circa 41 homes, straddling the currently defined development boundary of Pangbourne. The site accords with the Council's current spatial strategy, however its delivery is affected by the restrictions imposed by policy C1 of the HSA DPD. It is considered that this may not be an isolated case and the Council should therefore look holistically at the policies and settlement boundaries across the district, to ensure sustainable sites able to contribute to the Districts housing requirement.</p> <p>Given our client's site is located within the North Wessex Downs AONB, to assist the Council with regard to the technical suitability of their site, these representations are accompanied by a landscape opportunities and constraints plan.</p>

Respondent	Response
	<p>Moreover, from these conclusions a capacity plan has been constructed, to ensure that the figures quoted are an accurate representation of achievability and to demonstrate to the Council how many dwellings the site is realistically able to accommodate.</p>
Barton Willmore for Sulham Estate	<p>Our initial comment which we request is noted throughout these representations is that the Scoping Report lacks sufficient evidence and context. As such, before confirming support to any element of the Local Plan Review, we would require more information as to the Council's understanding of the issues and options within the District. Consequently, we would expect to see a further body of work produced prior to the next consultation, to enable more meaningful and constructive responses from stakeholders. We note the Council's intention for this to be a Local Plan Review, rather than a new Local Plan in its entirety. However, it is not considered that sufficient evidence has been supplied to accurately assess how this will be prepared with regard to existing policies.</p> <p>Notwithstanding the above, we are supportive of an update to the Council's existing Development Plan. In particular, we note that the current adopted Development Plan consists of planning policies which are not reflective of the most up to date evidence of need. For example, the housing requirement of 10,500 contained within the Core Strategy is based on the now revoked South East Plan requirement of 525 dwellings per annum. This is inconsistent with the requirements of paragraph 47 of the National Planning Policy Framework 2012 (NPPF) which requires local authorities to:</p> <p><b><i>"use their evidence base to ensure their Local Plan meets the full, objectively assessed needs for market and affordable housing, in the housing market area..."</i></b></p> <p>It is noted that the Draft Revised National Planning Policy Framework was published on 5th March, however this also states at paragraph 11, that:</p> <p><b><i>"b) strategic plans should, as a minimum, provide for objectively assessed needs for housing and other development, as well as any needs that cannot be met within neighbouring areas..."</i></b></p> <p>Whilst we note that the Council have recently prepared and adopted their Housing Site Allocations Development Plan Document (HSA DPD) (May 2017), this does not supersede the Core Strategy and therefore does not take account of the most up to date evidence of need.</p> <p>Consequently, we welcome this Local Plan Review and the opportunity this affords the council to develop a plan that is compliant with national housing policy. With this in mind, we note that the most up to date assessment of need is considered to be the Berkshire (including South Bucks) Strategic Housing Market Assessment (SHMA) 2016. However, we note that this document is yet to be tested at a Local Plan Examination and may indeed require updating itself.</p> <p>The Council's awareness of accurate and fully up to date levels of need is instrumental to the review of existing policies. We would therefore suggest that the planned review of existing policies should not simply be taken in relation to whether they accord with national policy, but also whether they accord with the Council's responsibility in national policy to, as a minimum provide for objectively assessed needs.</p> <p>With this in mind, these representations and suite of supporting documents present the benefits of our client's site, land at Hall Place Farm Tilehurst, as a sustainable location for residential development of up to 80 dwellings which is deliverable with the short to medium term and able to make a positive contribution to West Berkshire meeting its housing needs.</p>

Respondent	Response
	<p>Despite the sustainable location of the site which is very well positioned in terms of local schools and public transport links, its delivery would be affected by the restrictions imposed by policy C1 of the HSA DPD as it is outside the settlement boundary. Within this in mind, we suggest that the Council take a holistic approach to reviewing settlement boundaries as these could be restricting the delivery of sustainable sites which could contribute to the housing requirement.</p> <p>In addition to Land at Hall Place Farm falling beyond the settlement boundary, the site is also within the North Wessex Downs AONB. Accordingly, there representations are supported by a Landscape Capacity Assessment which concludes that the parcel has the potential to accommodate residential development due to the influence of existing suburban fringe characteristics including the built form within the site and the existing settlement edge which is adjacent.</p>
Bewley Homes	<p>Whilst we agree with the scope of the review it is essential that the evidence base is both robust and up to date. When calculating future housing need for the borough regard should be had to the changing national guidance including any implication arising from the standard methodology and determine whether these are robust and fit for purpose when planning for future dwelling requirements in West Berkshire.</p> <p>It is also recognised that the Housing Market Area is very large and that there are relationships between authorities both within the HMA and beyond that could have implications on future housing need within the borough. It is a requirement that West Berkshire Council engages in discussions with adjoining authorities to be aware of any implications this has on housing need.</p>
Mark Carter for Mr R.L.A. Jones	<p>The Respondent welcomes the Review, and the scope of it, which includes a review of the overall housing requirements, the existing spatial strategy for the District, and a review of all existing housing allocations. However given that the new Local Plan will cover a further 10 year period from 2026 to 2036 it should be explicitly stated that new housing site allocations will be needed to meet the future levels of housing need. The Respondent has an interest in land at welcomes further housing sites in Lambourn including that previously identified as LAM007 “land between Folly Road, Rockfel Road and Stork House Drive”.</p>
Carter Jonas for Hermitage Farms	<p>Hermitage Farms owns land on the edge of Hermitage, as shown on the plans attached. On behalf of Hermitage Farms, we agree that the main purpose of the Local Plan Review should be to assess the future levels of need for new homes and employment land and other land uses to 2036 and to provide an appropriate basis for housing, employment land and infrastructure provision over that period.</p> <p><u>Housing Need</u></p> <p>Paragraph 47 of the NPPF requires Local Plans to meet the full, objectively assessed needs (OAN) for market and affordable housing in the housing market area. The presumption in favour of sustainable development within the NPPF (paragraph 15) sets out that plans should be based on meeting the need identified in full, where it is sustainable to do so. The housing requirement should deal with economic growth forecasts, affordability and comply with its obligations under the duty to cooperate.</p>

Respondent	Response
	<p>Hermitage Farms consider that in order to meet the full extent of job growth forecast the Council should be aiming to achieve the upper end of the housing requirement identified in the West Berkshire Strategic Housing Market Assessment (SHMA).</p> <p>Furthermore, the housing target required should be a minimum requirement to support the aims and objectives of paragraph 47 of the NPPF to ‘significantly boost the supply of housing’.</p> <p>Where a Council is unable to meet all of its own identified housing need, it is required by legislation (the 2011 Localism Act) and Policy (NPPF paragraphs 178-182) to work with adjoining local authorities to consider where any shortfall can be met. West Berkshire may therefore be required to meet some of the housing need of neighbouring authorities.</p>
Fisher German for Mr Musgrave and Begley	Agree
Gladman Developments	<p>Gladman welcomes the Council’s intention to review the Local Plan for West Berkshire and notes the ambition for this to cover a wide range of issues.</p> <p>Gladman consider that it is essential that a comprehensive review of the West Berkshire Local Plan is undertaken. This is particularly important because the existing Core Strategy and Housing Site Allocations pursue a strategy that was prepared at a time when the housing requirement for the District was determined through regional planning. It is crucial that local authorities keep their local plans up-to-date<sup>6</sup> and that the objectively assessed development needs of the area are planned for in full.</p> <p>The timeframe for the new Local Plan’s preparation will necessitate the careful consideration of the Government’s emerging revisions to the National Planning Policy Framework. It is therefore highly likely that these forthcoming changes will further influence the scope and content of the new West Berkshire Local Plan.</p>
Hallam Land Management	<p>These representations have been prepared on behalf of Hallam Land Management Limited (HLM) and Wilson Enterprises Limited (WEL). HLM and WEL jointly control land south of Reading, in the vicinity of Grazeley. Previous representations to West Berkshire, Wokingham and Reading have highlighted the eminent suitability of this location for a new settlement. Whilst the land controlled by HLM and WEL falls predominantly in Wokingham Borough, the proposal itself spans the District boundaries and requires all three Authorities to be committed to working in partnership to produce a Comprehensive Masterplan and coordinated Infrastructure Delivery Plan. HLM and WEL remain committed to working alongside the three Authorities to achieve this objective.</p>
Richard Nevill for The Chilton Estate	<p><u>Housing Need</u></p> <p>It is most important in regard to the provision of housing that the Council should review the numbers carefully so it ensures that sufficient land is provided for the period to be covered by the Local Plan taking into account the Government’s statements on housing numbers and the requirement of a 5 year land supply in accordance with the provisions of the NPPF.</p>

Respondent	Response
	<p><u>Site Allocation Sizes</u></p> <p>There has been a Ministerial statement which specifies the treatment of small sites in relation to the provision of social housing and contributions. This is to encourage smaller sites to be brought forward for development. We consider it essential that support for smaller sites is included in the Local Plan in order to offer product diversity and to involve smaller builders and developers in the development process.</p>
Nexus Planning for Croudace	<p>The Scoping Report sets out the scope of the review at Chapter 3 but suggests that the purpose of the Local Plan Review will be to:</p> <p>“assess the future levels of need for new homes (including market, affordable and specialist housing and Gypsy and Traveller Accommodation) and employment land and other land uses up to 2036 and to provide an appropriate basis for housing employment land and infrastructure provision over that period”.</p> <p>The West Berkshire District Local Plan was adopted in 2002 and was intended to cover the period 1991 - 2006. A number of policies were duly saved, but were intended to be in place only until 2012. The adopted Local Plan is therefore substantially out-of-date.</p> <p>The West Berkshire Core Strategy was adopted in July 2012, following a protracted examination in public. It covers the period 2006 – 2026. It allocates strategic sites and contains, at Policy CS1, a housing requirement of at least 10,500 new homes between the period 2006 and 2026, equivalent to some 525 dwellings per annum. This figure was derived from the housing requirement for the District contained within the now revoked South East Plan Regional Spatial Strategy.</p> <p>The National Planning Policy Framework (the Framework) sets out at paragraph 47 that it is a Government objective: ‘To boost significantly the supply of housing...’</p> <p>In doing so, local planning authorities (‘LPA’s’) are required to use their evidence base to meet the full, objectively assessed need (‘OAN’) for market and affordable housing in the housing market area, as far as it is consistent with the policies set out in the Framework.</p> <p>It was acknowledged by the Council during the course of the examination that the proposed housing requirement did not represent the full objectively assessed need for housing as required by the Framework at Paragraph 47. Nonetheless, the Inspector recommended adoption of the Plan subject to main modifications which make it clear that:</p> <ol style="list-style-type: none"> <li>i. The 10,500 housing figure is expressed as a minimum and not a ceiling;</li> <li>ii. An early review of housing provision on the basis of a new SHMA, produced within three years in cooperation with the other authorities in the HMA (i.e by July 2015).</li> </ol> <p>The Council has since chosen to prepare and adopt the Housing Site Allocation DPD (HSA DPD). However, the HSA DPD has a limited scope in identifying sites to meet the remaining part of the ‘at least’ 10,500 housing requirement from the Core Strategy, as well as additional sites to meet the first part of its OAN. As a consequence, the Council does not have a Framework compliant housing target embedded within a Development Plan, and based on the latest version of the Council’s Local Development Scheme, it will be more than 8 years following adoption of the Core Strategy before it does so.</p> <p>Against that background, it is imperative that a comprehensive review of the Local Plan is carried out, to include a Framework compliant housing requirement and allocations to meet that need over the Plan period. We therefore broadly</p>

Respondent	Response
	<p>support the scope of the review as set out at Section 3 of the Scoping Report.</p> <p>The Council will however be aware that the Government recently consulted on potential changes to the NPPF including amendments in terms of plan making. This incorporates proposed changes to the tests of soundness, including amendments to the 'positively prepared' test to emphasise the role of Plans in meeting objectively assessed needs for housing.</p> <p>Paragraph 29 also states that in order to demonstrate effective and on-going joint working, strategic plan-making authorities should prepare and maintain one or more statements of common ground, documenting the cross boundary matters being addressed and progress in cooperating to address these. Paragraph 36 goes on to set out the soundness tests and proposes a strengthening of both the 'positively prepared' and 'effective' soundness tests in particular so that local plans are (a) informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated; and (b) based on effective joint working on cross-boundary strategic matters, as evidenced by a statement of common ground.</p> <p>The scope of the review should be amended to make it clear that the Council will have regard to the emerging changes to the NPPF where applicable.</p>
Nexus Planning for Pangbourne Beaver Properties	<p>These representations have been prepared by Nexus Planning in response to the West Berkshire Local Plan Review to 2036 Scoping Report. They are submitted on behalf of Pangbourne Beaver Properties Ltd (PBP Ltd) who own and manage land and properties in Pangbourne. PBP Ltd support local businesses and traders who operate from within the village and wish to see them continue to thrive and prosper. In order for the village to maintain its vitality it is important that an appropriate amount of new housing to be provided for the village.</p> <p>The Council will be aware that PBP Ltd have secured planning permission for and undertaken, or facilitated, a range of developments within the village. These are all well designed developments that have contributed to the vitality and attractiveness of the village. These have included:</p> <p>Formosa Place on Pangbourne Hill (4 detached houses with a prominent frontage) Fernbrook on Reading Road (refurbishment and conversion of five flats in listed building) Shepard Place on Reading Road (16 houses and flats, including affordable units)</p> <p>Redevelopment of Bridge Garage for Bentley dealership (refurbishment and redevelopment of garage)</p> <p>Land to the west of Pangbourne Hill (35 houses and flats including affordable units)</p> <p>Pangbourne is a large village with a population of around 3,000. It lies on the south bank of the River Thames and benefits from good transport linkages by road and rail up and down the Thames valley. The centre of Reading is 7 miles to the east. Pangbourne has an excellent range of shops including many independent traders that are encouraged by PBP Ltd. It also has a good range of community facilities including a primary School and a range of leisure facilities. Pangbourne railway station provides an excellent service to Oxford, Reading and central London. Pangbourne village is therefore a highly sustainable location that services the village itself and its hinterland.</p> <p>In order to maintain the vitality of the village PBP Ltd wish to ensure that the West Berkshire Plan to 2036 makes provision for additional housing land to be allocated on land that they own to the north of Pangbourne Hill. Their land will allow for development of an appropriate scale for the village.</p>

Respondent	Response
	<p>The Scoping Report sets out the scope of the review at Chapter 3 and indicates that the purpose of the Local Plan Review will be to:</p> <p>“assess the future levels of need for new homes (including market, affordable and specialist housing and Gypsy and Traveller Accommodation) and employment land and other land uses up to 2036 and to provide an appropriate basis for housing employment land and infrastructure provision over that period”.</p> <p>The West Berkshire District Local Plan was adopted in 2002 and was intended to cover the period 1991-2006. A number of policies were duly saved, but were intended to be in place only until 2012. The adopted Local Plan is therefore substantially out-of-date.</p> <p>The West Berkshire Core Strategy was adopted in July 2012, following a protracted examination in public. It covers the period 2006 – 2026. It allocates strategic sites and contains, at Policy CS1, a housing requirement of <i>at least</i> 10,500 new homes between the period 2006 and 2026, equivalent to some 525 dwellings per annum. This figure was derived from the housing requirement for the District contained within the now revoked South East Plan Regional Spatial Strategy. The National Planning Policy Framework (the Framework) sets out at paragraph 47 that it is a Government objective: ‘To boost significantly the supply of housing...’</p> <p>In doing so, local planning authorities (‘LPA’s) are required to use their evidence base to meet the full, objectively assessed need (‘OAN’) for market and affordable housing in the housing market area, as far as it is consistent with the policies set out in the Framework.</p> <p>It was acknowledged by the Council during the course of the examination that the proposed housing requirement did not represent the full objectively assessed need for housing as required by the Framework at Paragraph 47. Nonetheless, the Inspector recommended adoption of the Plan subject to modifications which make it clear that:</p> <p>The 10,500 housing figure is expressed as a minimum and not a ceiling;</p> <ul style="list-style-type: none"> <li>• An early review of housing provision on the basis of a new SHMA, produced within three years in cooperation with the other authorities in the HMA (i.e by July 2015).</li> </ul> <p>The Council has prepared and adopted the Housing Site Allocation DPD (HSA DPD). However, the HSA DPD has a limited scope in identifying sites to meet the remaining part of the ‘at least’ 10,500 housing requirement from the Core Strategy, as well as additional sites to meet the first part of its OAN. As a consequence, the Council does not have a Framework compliant housing target embedded within a Development Plan, and based on the latest version of the Council’s Local Development Scheme, it will be more than 8 years following adoption of the Core Strategy before it does so.</p> <p>The Council is therefore urged to rapidly press ahead with the preparation of a new Local plan that makes appropriate housing allocations; and which takes account of the other representations in this document.</p>
Origin3 for Sandtrend	<p>These representations to the West Berkshire Local Plan Review Consultation (March 2018) have been prepared by Origin3 on behalf of Sandtrend Ltd in relation to their site at Land West of Wantage Road, Shaw-cum-Donnington, Newbury. A Site Location Plan is attached. These representations focus on the soundness of the Local Plan Review</p>

Respondent	Response
	<p>(LPR) spatial strategy and objectively assessed housing need (OAHN). The key themes running through these representations are as follows:</p> <ul style="list-style-type: none"> <li>• The OAHN should be revised upwards to take account of the latest SHMA (2016) and to account for Reading Borough’s unmet need;</li> <li>• A clear strategy to deliver OAHN should be set out through the LPR;</li> <li>• The LPR should test and explore the strategic and non-strategic growth opportunities within the West of Berkshire Spatial Framework Plan, including growth opportunities north of Newbury;</li> <li>• The Council’s delivery strategy should comprise a robust mix of sites for delivery within the short, medium and longer term;</li> </ul> <p>Sandtrend’s site at Land West of Wantage Road, Shaw-cum-Donnington, Newbury should be allocated to deliver up to 200 new homes to ensure market and affordable housing delivery in the shorter term.</p> <p>The tests of soundness for local plans and policies are set out in NPPF paragraph 182.</p> <p>West Berkshire Council will also need to consider emerging national policy which is expected to be in place later this year. Namely updates to the NPPF which are currently being consulted on (March 2018).</p> <p>Due to the short timeframe remaining on the current plan period (up to 2026) and acknowledging that the Core Strategy was adopted in 2012, a fully comprehensive review of existing development plan policies is now required as a minimum. This is particularly important in light of recent updates to national policy (Town and Country Planning Regulations 2017 (Regulation 10A) which stipulate a Local Plan Review (LPR) must be <u>completed</u> every five years, starting from the date of adoption.</p> <p>At West Berkshire, the need to review the OAHN is particularly pertinent as the existing housing requirement and spatial strategy underpinning the Core Strategy (2012) is based on the now revoked pre-NPPF South East Plan. The existing OAHN is therefore based on evidence pre-NPPF and as such does not account for the significant boost in new homes required by the Government or emerging updates to national policy.</p> <p>Through this LPR process West Berkshire will therefore need to establish the OAHN for the new plan period based on up to date evidence in the Berkshire Strategic Housing Market Assessment (SHMA) and taking into account updates to national policy and the introduction of a Standardised OAHN Methodology. The OAHN will also need to account for unmet need at Reading Borough following a Memorandum of Understanding between the Council’s. This is covered in greater detail in Section 3 of these representations.</p> <p>The principle of a comprehensive LPR is supported. We do however request that the Council provide greater clarity as to the extent of the Review in dealing with a strategy for housing delivery in the short to medium term. It is not understood whether the Scope of this LPR is to identify non-strategic sites as well as strategic sites. In order to be considered positively prepared in the context of the NPPF paragraph 182 the Council should provide a clear strategy to meet OAHN. The NPPF paragraph 47 requires local planning authorities to:</p> <p><i>“identify and update annually a supply of specific deliverable sites sufficient to provide five years’ worth of housing with an additional buffer of 5%... and... identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15.”</i></p>

Respondent	Response
	<p>This LPR should therefore include a housing trajectory identifying a range of suitable strategic and non-strategic sites for housing delivery across the whole of the plan period. This should account for the cumulated under delivery to date and the uplift in OAHN in the short term. These points are covered in more detail in Section 3.</p> <p>Through the LPR housing trajectory and delivery strategy, the Council will also need account for a sufficient buffer to boost housing supply and ensure that there is a robust strategy in place to deal with any potential delays to the plan being adopted.</p> <p>The Council's Local Development Scheme anticipates adoption in November 2020 meaning the plan period will have only fifteen years to run (up to 2036). Any unforeseen delays to adoption would risk the LPR not being considered positively prepared in the context of the NPPF, as emerging updates to the NPPF require <i>“strategic policies to look ahead to a minimum 15 year period from adoption to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure”</i>.</p> <p>We therefore support the Council's intentions to undertake a comprehensive Review of the Local Plan however urge the Council to ensure there is a sufficiently robust housing delivery strategy in place to account for any unforeseen setbacks to the timescales for adoption.</p>
Pegasus Planning Group for Donnington New Homes	<p><i>Response relates to land adjacent to Land at Smitham Bridge Road, Hungerford</i></p> <p>Yes – the proposed scope of the review is wide ranging, and covers all relevant areas. It will ensure that the Local Plan to 2036 is consistent with national policy, especially now that the Draft Revised NPPF has been released for consultation. It will also allow the alteration and addition of polices where it is considered necessary.</p>
Pegasus Planning Group for Donnington New Homes	<p><i>relates to land adjacent to Long Lane, Newbury</i></p> <p>Yes – the proposed scope of the review is wide ranging, and covers all relevant areas. It will ensure that the Local Plan to 2036 is consistent with national policy, especially now that the Draft Revised NPPF has been released for consultation. It will also allow the alteration and addition of polices where it is considered necessary.</p>
Pegasus Planning Group for Wasing Park Estate	<p>Paragraph 3.2 confirms that the scope of the review will involve a review of the adopted DPD policies to ensure consistency with national policy, and the introduction of new policies in response to recent changes in national planning policy and guidance. The Local Plan Review will need to align with and take account of the Draft Revised National Planning Policy Framework (NPPF) which is currently out for consultation.</p>
Pro Vision for Rivar	<p>The Scope and Content of the Local Plan Review will need to be comprehensively reviewed (and therefore subjected to further consultation) in the light of the revisions to the NPPF and PPG. In particular, consideration will need to be given to matters such as:</p> <ul style="list-style-type: none"> <li>• The determination of housing need. This will need to be based on the Standardised Methodology. The Plan should however recognise that this establishes the minimum number of houses needed. n circumstances where the standardised methodology produces an annualised need which is lower than past levels of housing provision (as may be the case), and mindful of the Government's objective of significantly boosting the supply of housing, consideration should</li> </ul>

Respondent	Response
	<p>be given to adopting a higher figure, having regard to, inter alia, market signals.</p> <ul style="list-style-type: none"> <li>• Viability Assessment. The Plan will need to be informed by an assessment of viability to ensure that the burden of developer contributions and affordable housing is not of a scale that will make development unviable.</li> <li>• There will need to be a clear distinction between Strategic and Local Policies. To achieve this, consideration should be given to preparing two separate Plans, albeit in parallel and co-terminus.</li> <li>• Small Sites. The draft NPPF requires that at least 20% of sites identified for housing in the Plan should be small sites of less than 0.5ha, to assist with early delivery, achieving a good mix of sites and supporting small and medium housebuilders (such as Rivar).</li> <li>• Rural housing. The Plan will need to identify opportunities for villages to grow and thrive.</li> </ul> <p>Rivar are concerned that a new settlement south of Junction 11 of the M4 would undermine the delivery of the well-established spatial strategy of distributing growth to support the existing settlement hierarchy. That strategy remains the most appropriate. The new settlement option appears to be being justified on the grounds that it would accommodate a substantial proportion of the housing need of neighbouring authorities (albeit within the same broadly defined Housing Market Area). In our view such an approach is contrary to the draft NPPF which makes it clear that cross border strategic matters should deal with housing requirements and distribution that cannot be met in neighbouring areas. There is no evidence that the scale of development contemplated south of Junction 11 cannot be accommodated elsewhere within West Berkshire and the neighbouring local authority areas.</p> <p>Plan period. The Plan is not programmed to be adopted before the end of 2020. It is, based on past performance, very likely to be later. 15 years is the minimum period a LPA should plan for. Therefore, consideration should be given to adopting a plan end date of 2041.</p>
Pro Vision for Audley Group	Audley Group supports the review of the Local Plan and comments under other questions about the scope of the review.
Pro Vision for Rootes Trustees	<p>The Scope and Content of the Local Plan Review will need to be comprehensively reviewed (and therefore subjected to further consultation) in the light of the revisions to the NPPF and PPG. In particular, consideration will need to be given to matters such as:</p> <ul style="list-style-type: none"> <li>• The determination of housing need. This will need to be based on the Standardised Methodology. The Plan should however recognise that this establishes the minimum number of houses needed. In circumstances where the standardised methodology produces an annualised need which is lower than past levels of housing provision (as may be the case), and mindful of the Government's objective of significantly boosting the supply of housing, consideration should be given to adopting a higher figure, having regard to, inter alia, market signals.</li> <li>• Viability Assessment. The Plan will need to be informed by an assessment of viability to ensure that the burden of developer contributions and affordable housing is not of a scale that will make development unviable.</li> <li>• There will need to be a clear distinction between Strategic and Local Policies. To achieve this, consideration should be given to preparing two separate Plans, albeit in parallel and co-terminus.</li> <li>• Small Sites. The draft NPPF requires that at least 20% of sites identified for housing in the Plan should be small sites of</li> </ul>

Respondent	Response
	<p>less than O.Sha, to assist with early delivery, achieving a good mix of sites and supporting small and medium developers.</p> <ul style="list-style-type: none"> <li>• Rural housing. The Plan will need to identify opportunities for villages to grow and thrive.</li> </ul> <p>The Rootes Trustees are concerned that a new settlement south of Junction 11 of the M4 would undermine the delivery of the well-established spatial strategy of distributing growth to support the existing settlement hierarchy. That strategy remains the most appropriate. The new settlement option appears to be being justified on the grounds that it would accommodate a substantial proportion of the housing need of neighbouring authorities (albeit within the same broadly defined Housing Market Area). In our view such an approach is contrary to the draft NPPF which makes it clear that cross border strategic matters should deal with housing requirements and distribution that cannot be met in neighbouring areas. There is no evidence that the scale of development be contemplated south of Junction 11 cannot be accommodated elsewhere within West Berkshire and the neighbouring local authority areas.</p> <p>Plan period. The Plan is not programmed to be adopted before the end of 2020. It is, based on past performance, very likely to be later. 15 years is the minimum period a LPA should plan for. Therefore, consideration should be given to adopting a plan end date of 2041.</p>
Pro Vision for Greenham Trust	<p>These representations are made by Pro Vision on behalf of the Greenham Trust Ltd (the Trust). The Trust owns Greenham Business Park as well as other property within West Berkshire and the neighbouring districts. It is a charitable organisation, with profits being used to support good causes throughout the region. It is, therefore, a key local stakeholder and will be keen to engage with further stages of the review process.</p> <p>The Trust generally supports the scope of the Local Plan Review and makes more specific comments in response to the proceeding consultation questions.</p>
Provision for Cala Group and Wates Developments	<p>The Scope and Content of the Local Plan Review will need to be comprehensively reviewed (and therefore subjected to further consultation) in the light of the revisions to the NPPF and PPG. In particular, consideration will need to be given to matters such as:</p> <ul style="list-style-type: none"> <li>• The determination of housing need. This will need to be based on the Standardised Methodology. The Plan should however recognise that this establishes the minimum number of houses needed. In circumstances where the standardised methodology produces an annualised need which is lower than past levels of housing provision (as may be the case), and mindful of the Government's objective of significantly boosting the supply of housing, consideration should be given to adopting a higher figure, having regard to, inter alia, market signals.</li> <li>• Viability Assessment. The Plan will need to be informed by an assessment of viability to ensure that the burden of developer contributions and affordable housing is not of a scale that will make development unviable.</li> <li>• There will need to be a clear distinction between Strategic and Local Policies. To achieve this, consideration should be given to preparing two separate Plans, albeit in parallel and co-terminus.</li> <li>• Small Sites. The draft NPPF requires that at least 20% of sites identified for housing in the Plan should be small sites of less than O.Sha, to assist with early delivery, achieving a good mix of sites and supporting small and medium developers.</li> <li>• Rural housing. The Plan will need to identify opportunities for villages to grow and thrive.</li> </ul>

Respondent	Response
	<p>CALA Homes and Wates Developments are concerned that a new settlement south of Junction 11 of the M4 would undermine the delivery of the well-established spatial strategy of distributing growth to support the existing settlement hierarchy. That strategy remains the most appropriate. The new settlement option appears to be being justified on the grounds that it would accommodate a substantial proportion of the housing need of neighbouring authorities (albeit within the same broadly defined Housing Market Area). In our view such an approach is contrary to the draft NPPF which makes it clear that cross border strategic matters should deal with housing requirements and distribution that cannot be met in neighbouring areas. There is no evidence that the scale of development be contemplated south of Junction 11 cannot be accommodated elsewhere within West Berkshire and the neighbouring local authority areas.</p> <p>Plan period. The Plan is not programmed to be adopted before the end of 2020. It is, based on past performance, very likely to be later. 15 years is the minimum period a LPA should plan for. Therefore, consideration should be given to adopting a plan end date of 2041.</p>
Tetlow King Planning for Rentplus UK	<p>We represent Rentplus UK Ltd, an innovative company providing affordable rent to buy housing for working people aspiring to home ownership with an accessible route to achieve their dream through the rent - save - own model. The Rentplus model addresses the primary barrier to home ownership – the lack of a mortgage deposit – through a combination of a secure rented period at an affordable rent (whichever is the lower of 80% of open market rent, including any service charge, or Local Housing Allowance), giving time to save, and a 10% gifted deposit to enable tenants to buy their own home in 5, 10, 15 or 20 years. In this way it extends the opportunity of home ownership to families who are otherwise unable to afford it and to do so within a timeframe to suit their circumstances.</p> <p>We agree with the proposed scope of the Review.</p>
Thakeham Homes	<p>Thakeham are a housebuilder based in Sussex, with a proven track record of delivering high quality, sustainable schemes across Surrey, Sussex and Hampshire.</p> <p>We wish to make representations based on the duty of West Berkshire to cooperate with neighbouring authorities to meet the housing need within the HMA. The draft plan fails to demonstrate how it will meet the Objectively Assessed Need (OAN) within the HMA and the Government standardised methodology figure and we consider that the plan cannot be considered sound until such times as this duty has been satisfactorily discharged.</p> <p>Duty to Cooperate</p> <p>The National Planning Policy Framework (NPPF) duty to cooperate requires that Local Planning Authorities (LPAs) demonstrate evidence of having effectively cooperated to plan for issues with cross-boundary impacts, including the delivery of housing development to meet the full OAN for the area:</p> <p>“Local planning authorities will be expected to demonstrate evidence of having effectively cooperated to plan for issues with cross-boundary impacts when their Local Plans are submitted for examination. This could be by way of plans or policies prepared as part of a joint committee, a memorandum of understanding or a jointly prepared strategy which is presented as evidence of an agreed position. Cooperation should be a continuous process of engagement from initial thinking through to implementation, resulting in a final position where plans are in place to provide the land and infrastructure necessary to support current and projected future levels of development.” NPPF 2012, Paragraph 181</p>

Respondent	Response
	<p>The NPPF requires Local Plans to seek to deliver “the unmet requirements of neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development” NPPF 2012, Paragraph 182</p> <p>We support the Council in its efforts to collaborate with other authorities in the Western Berkshire Housing Market Area (Bracknell Forest Borough Council, Reading Borough Council and Wokingham Borough Council).</p> <p>We note that the Council in conjunction with the authorities mentioned above have produced the West of Berkshire Spatial Planning Framework (December, 2016). The report notes that Berkshire Strategic Housing Market Assessment identifies that between 2013 and 2016 the area needs to deliver in the region of 65,665 new dwellings to deal with population growth, affordability, market factors, sustaining and improving economic growth and the impact of the continued growth of London. This means finding land for just under 3,000 homes per year’.</p> <p>Although the Spatial Planning Framework has acknowledged there are cross border issues there is no clear strategy on how to overcome the issues. Therefore, as the Local Plan progresses we would expect to see further cooperation and positive engagement between the Council and neighbouring authorities to ensure that a clear and transparent housing strategy, supported by a robust evidence base has been agreed between parties, detailing how the identified OAN for the HMA will be met and how any unmet need across the HMA will be addressed in full. This is encouraged further by the proposed introduction of the requirement in the NPPF for local planning authorities within a housing market area to produce a Statement of Common Ground as set out in the Government’s recent consultation document.</p> <p>The current Spatial Strategy outlined in Policy CS1 in the Core Strategy provides a housing figure of at least 10,500 net additional dwellings and associated infrastructure over the period 2006 – 2026 (525 dpa). However, the Berkshire SHMA (2016) provides an OAN figure of 665 dpa between 2013 and 2036 which is in line with the Government’s Standardised methodology figure. Although this figure cannot be applied retrospectively, it does mean that the Local Plan Review will need to be based on the standardised methodology, which has been brought into the draft revised NPPF (March 2018) as a statement of intent for its introduction in Spring 2018. Therefore, as the plan progresses we would expect to see a higher OAN for the District which would be in line with the Government’s objective.</p> <p>It is essential that the emerging Local Plan acknowledges the Government’s ambitions to significantly boost the supply of housing and seek to deliver the full housing requirement of the district to comply with national policy, particularly paragraph 47 of the NPPF.</p> <p>We fully support the steps that the Council has already taken to engage in initial discussions with neighbouring authorities. As the plan progresses we would expect to see further co-operation between the authorities in relation to housing on an on-going basis in order to ensure that the duty to cooperate has been sufficiently discharged.</p>
Turley for Commercial Estates Group	It is considered that this high-level scope is broadly appropriate and we would stress the necessity for the Local Plan Review to be comprehensive and supported by extensive new evidence.
Turley for Berfeld	We do not agree with paragraph 3.3. The scope of the Local Plan Review is broad and wide-ranging. The Council’s current Development Plan is based on the Core Strategy that was prepared prior to the introduction of the National Planning Policy Framework in March 2012. It is therefore appropriate to give this Local Plan review the broadest possible

Respondent	Response
	<p>basis for reviewing existing policies to ensure that they are in accordance with current and emerging national policy and guidance, and other evidence based documents that should rightfully inform the Local Plan.</p> <p>With this in mind, it may well be necessary to change or remove policies however they currently accord with national policy as national policy is currently undergoing significant change. The Council should not restrict itself unnecessarily at this stage of their Local Plan review.</p>
Turley for A2dominion Housing Group	<p>We are writing on behalf of A2 Dominion, who has land interests within Streatley in West Berkshire. These representations seek to respond to the Local Plan Review Scoping Report and Sustainability Appraisal Scoping Report consultation to assist in the evolution of the new Local Plan. In particular these representations address the role of Streatley in the settlement hierarchy.</p> <p>Streatley is not specifically identified within the settlement hierarchy for the District (albeit benefits from a settlement boundary) as defined by Policy ADPP1 of the Core Strategy despite the evident opportunities for the delivery of sustainable development discussed below. We consider that the role of Streatley should be explored further in order to understand the opportunities that it provides to contribute towards meeting the projected housing needs to 2036.</p> <p>The adopted Development Plan was based upon the adopted/ emerging planning context at the time of its preparation and the associated evidence base to support the spatial strategy. As the emerging Local Plan progresses, some of the evidence base which underpinned the Core Strategy and Housing Site Allocations DPD will be at least 10 years old and cannot be considered transferable to considering the spatial strategy to 2036. The evidence base needs to be re-visited to ensure that the new Local Plan is positively prepared and based on the most appropriate strategy (paragraph 182 of the Framework). This is particularly relevant given the Inspector's Report to the Core Strategy acknowledges that at the time of adoption the Plan was not meeting the full OAN for the District and that an early review would be required. This reinforces the need for WBC to update the evidence base to inform the spatial objectives between 2026 -2036 and consider both its own housing needs and those of the wider Housing Market Area to which the District has strong functional relationships through the Duty-to-Cooperate.</p> <p>It is considered necessary to review all policies contained within the adopted Development Plan to ensure both consistency with national policy and that they will remain applicable to shaping and guiding development to 2036 in accordance with paragraph 154 of the Framework.</p> <ul style="list-style-type: none"> <li>• The introduction of additional development management policies in response to the review of the saved development management policies not replaced by the Core Strategy or the Housing Site Allocations DPD</li> </ul> <p>Given a number of the Local Plan policies (2001-2006) have been saved since 2006 and form part of the adopted Development Plan, these policies need to be reviewed as part of the new Local Plan given they were only originally intended for the period to 2006. All these saved policies should be replaced as part of the new Local Plan.</p> <ul style="list-style-type: none"> <li>• The introduction of new policies in response to recent changes in national planning policy and guidance</li> </ul> <p>WBC need to ensure that any implications on the plan making process and the preparation of associated policies arising from the changes to national planning policy and guidance are fully considered at the appropriate time.</p>

Respondent	Response
Turley for North East Thatcham Consortium	<p>The North East Thatcham Consortium comprises A2Dominion; Donnington New Homes, Ptarmigan and Gully Farm and these representations are made jointly and severally on behalf of the Consortium members.</p> <p>The Consortium generally agrees with the Council’s proposed scope of the Local Plan Review for the following reasons and subject to the following comments.</p> <ul style="list-style-type: none"> <li>• <i>A review of the existing Core Strategy strategic objectives</i></li> </ul> <p>The Core Strategy was adopted in 2012 based upon the existing and emerging planning policy context at the time. Furthermore, in a number of cases, the evidence upon which Core Strategy was based was prepared some time before its adoption. By the time the Local Plan Review progresses, parts of the evidence base which underpinned the Core Strategy will be at least 10 years old. Furthermore, by the time the Local Plan Review progresses, the national planning policy context will have shifted. The Core Strategy was adopted shortly after the publication of the National Planning Policy Framework in 2012, whereas the revised National Planning Policy Framework (currently published for consultation in draft) is expected to be in place later in 2018.</p> <p>With regards to the planned provision for housing it is evident from the Core Strategy Inspector’s Report that the Core Strategy did not meet the full objectively assessed need in West Berkshire (para 41. The Inspector also anticipated the need for an early review of housing provision on the basis of updated evidence of housing need which accounted for needs in full across the Housing Market Area (HMA) within which West Berkshire is located.</p> <p>It is therefore fundamental that the strategic objectives contained in the Core Strategy (paragraph 3.8) are reviewed in order to ensure that the objectives of the Local Plan Review are able to respond to updated evidence and shifts in national planning policy.</p> <p>It is also essential that the Core Strategy strategic objectives are reviewed as they relate to the Core Strategy plan period (2006 – 2026). In contrast the Local Plan Review will need to plan for at least 15 years from its adoption and at present is proposed to cover the period to 2036. On that basis, the strategic objectives set out in the Local Plan Review will need to be capable of responding to updated evidence regarding the period to 2026 as well as the period between 2026 and 2036. This will be particularly relevant to the Core Strategy objective on Housing Growth (strategic objective 2) which relates to the delivery of “at least 10,500 homes across West Berkshire between 2006 – 2026.” It is of note that the latest published Strategic Housing Market Assessment (SHMA) for West Berkshire identifies a need for 665 new dwellings a year on average for the period 2013 to 2036. This equates to a total need for in excess of 15,000 dwellings and represents a level of need which notably exceeds that currently provided for within the Core Strategy. The SHMA identifies a considerably greater need across the Western Berkshire HMA (the administrative areas of West Berkshire, Reading, Wokingham and Bracknell Forest), with some 2,855 homes per annum identified as being needed over the same period (over 65,000 homes in total).</p> <p>The Local Plan Review must take full account of the significant scale of identified housing need in the authority and across the area with which it shares strong housing market relationships.</p> <ul style="list-style-type: none"> <li>• <i>A review of the existing spatial strategy for the District</i></li> </ul>

Respondent	Response
	<p>The Consortium considers that it is reasonable for the preparation of the Local Plan Review to include a review of the existing spatial strategy for the District (section 4 of the Core Strategy) to ensure that this reflects the most recent evidence and national planning policy.</p> <ul style="list-style-type: none"> <li><i>A review of all the existing Core Strategy and Housing Site Allocations DPD policies to ensure their continued consistency with national policy</i></li> </ul> <p>The Consortium considers that it is reasonable to review of all the existing Core Strategy and Housing Site Allocations DPD policies to ensure their continued consistency with national policy as part of the Local Plan Review. The Consortium considers that it is essential that this review is undertaken in relation to the policies and appendices of the Local Plan 1991 – 2006 (adopted 2004) which the Council continues to apply for the reasons explained below.</p> <ul style="list-style-type: none"> <li><i>The introduction of additional development management policies in response to the review of the saved development management policies not replaced by the Core Strategy or the Housing Site Allocations DPD</i></li> </ul> <p>The Council's website (<a href="http://info.westberks.gov.uk/article/28783">http://info.westberks.gov.uk/article/28783</a>) suggests that 23 policies and 5 appendices of the Local Plan 1991 – 2006 continue to be applied. Those policies were only intended to be used in relation to the period to 2006 and the Consortium considers that much will have changed (both in circumstance and evidence) since those policies were prepared.</p> <p>The Consortium therefore considers that it is essential that the preparation of the Local Plan Review includes an assessment of all of the parts of the Local Plan 1991 – 2006 which the Council continues to apply. This assessment should consider the extent to which the policies or appendices are necessary, justified by evidence and fit for purpose in a plan period which extends to 2036.</p> <p>Furthermore, the Consortium considers that the Local Plan Review should be used as an opportunity to replace any remaining parts of the Local Plan 1991 – 2006 which the Council continues to apply. Should that not occur then this could lead to a situation where development being determined in 2036 is to have regard to policies adopted more than 30 years ago in 2004. This is not considered to represent an effective strategy.</p> <p>The Local Plan Review should replace all of the retained policies of the Local Plan 1991 – 2006 in order to provide an up to date, transparent, effective and easily accessible planning policy context in West Berkshire.</p> <ul style="list-style-type: none"> <li><i>The introduction of new policies in response to recent changes in national planning policy and guidance</i></li> </ul> <p>The Consortium considers that it is reasonable for the Local Plan Review to be prepared on the basis that new policies may be included in response to changes in national planning policy and guidance.</p>
Joy Schlaudraff	<p>Yes, definitely.</p> <p>The planning system, though there for control, which is good, is too bureaucratic and needs to be simpler, for simple applications, to make them as easy as possible for both council and applicant.</p> <p>There should be some system, which identifies ANY and ALL land which can, or could, be built on, at some time, so that there is less uncertainty and money-making in the whole thing.</p>

Respondent	Response
	<p>The system needs to be enabled, so that people wanting to develop their land can be given simple free information, as to where on their land the council would be happy to consider housing or other development. The information should be volunteered from the council, not the other way about.</p> <p>This would end all the unnecessary waiting and expense, and enable development in general, albeit under the control of the council. Which is right.</p>
West Waddy for Gerald Palmer Eling Trust	<p>Yes. Paragraph 3.1 states that <i>'the review will be wide ranging.'</i> This is supported. In particular, it is important that the review includes the settlement boundaries which have not been reviewed since they were defined on the West Berkshire Local Plan 1991- 2006 Proposals Map. These boundaries are therefore seriously out of date and need reviewing to enable sufficient development to take place in rural areas to satisfy local housing need. The settlement boundary review is also required to make the new Local Plan consistent with the National Planning Policy Framework (NPPF) which emphasises the importance of maintaining the vitality of rural communities, (NPPF para 17 &amp; 55). Indeed, this is further emphasised in the proposed revisions to the NPPF, issued for consultation in March 2018, which state that <i>'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Plans should identify opportunities for villages to grow and thrive, especially where this will support local services,'</i> (NPPF Proposed revisions para 80). To enable this to happen it is essential that the settlement boundaries of rural communities are reviewed.</p> <p>There is also a long standing Council commitment to review settlement boundaries. Paragraph 2.42 of the Core Strategy adopted in July 2012, stated that: <i>'The Core Strategy will be followed by a Site Allocations Development Plan Document. This will include details of any additional housing allocations, reviews of settlement and town centre boundaries, plus policies for development management.'</i> The subsequent Site Allocations DPD also contained a commitment that: <i>'all settlement boundaries, including those below the settlement hierarchy, will be reviewed through the new Local Plan,'</i> (para 1.35).</p> <p>There is, therefore, now a pressing need for settlement boundaries to be reviewed in order to bring them up to date; to enable sufficient housing to be provided in rural areas; to accord with Government policy and to comply with the Council's previous commitments.</p>
Woolf Bond Planning for Donnington New Homes	<p>National Planning Policy Framework (NPPF) and the Tests of Soundness</p> <p>The NPPF sets out the principal components to be included in local plans. Paragraph 182 requires that in order to be "sound" a Development Plan Document ('DPD') should be <u>positively prepared</u>, <u>justified</u>, <u>effective</u> and <u>consistent with national policy</u>.</p> <p>In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.</p> <p>Effective means the document must be deliverable, flexible and be able to be monitored. The positive preparation test requires plans to objectively assess development and infrastructure requirements from neighbouring authorities.</p> <p>For the reasons set out in this paper there are a number of potential matters that we recommend are addressed in future iterations of the emerging Plan.</p>

Respondent	Response
	<p>We agree with the proposed scope of the Local Plan review. It acknowledges the need to review the Council's housing requirement and spatial strategy, development management policies and existing settlement boundaries consistent with the requirements of existing and emerging national planning policy.</p>
<p>Woolf Bond Planning for Donnington New Homes</p>	<p>Our client's interests relate to land located at Copyhold Farm, Kiln Drive, Curridge. The site extends to a total 4.16ha and is suitable for housing development comprising up to approximately 125 no. dwellings in a location adjoining the settlement of Curridge. The site is of a size such that it could also be supported by community uses such as public open space, a children's play area or allotments. The site is an available, suitable and deliverable site, with no constraints to bringing the land forward for development at an early stage during the emerging plan period. A Site Location Plan is submitted in support of these representations, alongside the requisite form.</p> <p>The NPPF sets out the principal components to be included in local plans. Paragraph 182 requires that in order to be "sound" a Development Plan Document ('DPD') should be <u>positively prepared, justified, effective and consistent with national policy</u>.</p> <p>In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.</p> <p>Effective means the document must be deliverable, flexible and be able to be monitored. The positive preparation test requires plans to objectively assess development and infrastructure requirements from neighbouring authorities.</p> <p>For the reasons set out in this paper there are a number of potential matters that we recommend are addressed in future iterations of the emerging Plan.</p> <p>We agree with the proposed scope of the Local Plan review. It acknowledges the need to review the Council's housing requirement and spatial strategy, development management policies and existing settlement boundaries consistent with the requirements of existing and emerging national planning policy.</p>
<p>Woolf Bond Planning for JJP Land</p>	<p>The NPPF sets out the principal components to be included in local plans. Paragraph 182 requires that in order to be "sound" a Development Plan Document ('DPD') should be positively prepared, justified, effective and consistent with national policy.</p> <p>In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.</p> <p>Effective means the document must be deliverable, flexible and be able to be monitored. The positive preparation test requires plans to objectively assess development and infrastructure requirements from neighbouring authorities.</p> <p>For the reasons set out in this paper there are a number of potential matters that need to be addressed in future iterations of the emerging Plan.</p>

## Summary of responses

The majority of respondents agreed with the proposed scope of the Review and were clear in the need for it to be comprehensive and based on an up to date evidence base. They were also in agreement of the need to review the Council's housing requirement and spatial strategy, settlement hierarchy, development management policies and existing settlement boundaries consistent with the requirements of existing and emerging national planning policy.

There was a concern from a few respondents that the Scoping Report lacked sufficient evidence and context and that a further body of work should therefore be produced to enable more meaningful and constructive responses from stakeholders. The need for the Council to re-examine its approach once the revised NPPF and NPG were published was also stressed.

A number of respondents raised issues regarding the overall housing requirement for the Local Plan Review. Some planning agents noted that the current plan was not reflective of the most up to date evidence on housing need and felt a national policy compliant housing requirement is long overdue. The requirement to engage with other authorities both within and beyond the HMA was considered to have implications on future housing need. The need for a clear strategy to meet this need, with sufficient buffer to boost housing supply and ensure that there is a robust strategy to deal with any potential delays to the plan being adopted was expressed.

With regard to the standard methodology the comment was made that consideration should be given to adopting a higher figure, mindful of the government's objective of significantly boosting the supply of housing.

One respondent from the development industry requested the Council provide greater clarity as to the extent of the Review in dealing with a strategy for housing delivery in the short to medium term. They were not clear whether the scope of the Review was to identify non-strategic sites as well as strategic sites. Another respondent also emphasised the need for there to be a clear distinction between strategic and local policies and that in order to achieve this, consideration should be given to preparing two separate plans, albeit in parallel and co-terminus.

The issue of rural housing was raised, with respondents emphasising the need to identify opportunities for villages to grow and thrive.

One planning agent was making the case that a new settlement option would be contrary to the draft NPPF as cross border strategic matters should deal with the requirements and distribution that cannot be met in neighbouring areas, and there was no evidence that the scale of development contemplated south of Junction 11 could not be accommodated elsewhere within West Berkshire and the neighbouring local authority areas. The concern was that such an approach would undermine the delivery of the established spatial strategy of distributing growth to support the existing settlement hierarchy.

Support for a mix of sites to assist delivery in the short, medium and long term was expressed with smaller sites supported to offer product diversity and to involve smaller builders and developers.

The requirement for a minimum 15 year period from adoption was raised as an issue with regard to the end date of the Local Plan Review. As the Review is not anticipated to be adopted before the end of 2020 it was felt that consideration should be should be given to adopting a plan with an end date of 2041 rather than 2036.

Some respondents highlighted specific concerns within their remit that will be considered further as the Review progresses and which will be taken forward through the development of particular policies such as the needs of the racehorse and equestrian industry. Some statutory consultees also drew attention to various

requirements and other guidance that will need to be considered as the Review progresses. One parish council expressed its disappointment that there was no real emphasis on likely changes to the way that people live their lives and their changing aspirations such as the impact that electric and possibly autonomous vehicles may have.

## **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR). Detailed comments made will be taken forward in the development of the spatial strategy and both strategic and local policies as appropriate.

It is encouraging to see that there is general agreement with the proposed scope of the Review. The importance of an adequate, up to date and relevant evidence base is acknowledged as is the need to undertake the LPR in close cooperation with our neighbouring authorities.

The Council will need to prepare the Review to conform to the revised national policy in the NPPF published on 24th July 2018.

The draft Strategic Objectives included in the Scoping Report have been reviewed in light of the responses received and changes will be made where appropriate. It is agreed that the inclusion of an overall Vision would help set the context for the Review.

The objective on housing is to ensure that the assessed need for market and affordable housing up to 2036 will be met. Housing need will be assessed using the government's standard method contained in the revised NPPF and PPG. This assessment will use the most up to date household projections as a starting point and the resultant need figure is considered to represent the minimum requirement to be included within the Local Plan Review to 2036. This figure will supersede the OAN in the 2016 Berkshire SHMA. The LPR will set out the strategy to meet this revised requirement. It will consider both strategic and non-strategic growth opportunities to meet the need over the plan period, including housing in rural areas of the District. The HELAA will provide evidence of growth opportunities in the area and will identify sites that have potential for development to inform the spatial strategy. Most of the sites that will be included were submitted through the Call for Sites (December 2016 to March 2017), through which agents and the public were invited to submit sites that they considered developable.

The LPR will contain a housing trajectory as required by national policy, although a trajectory can only represent a point in time and will be subject to review through the Annual Monitoring Report.

The Housing Site Allocations DPD reviewed the settlement boundaries of settlements within the settlement hierarchy. It is intended that all settlement boundaries are reviewed as part of the Local Plan Review. This will also include a review of the settlement boundary criteria.

## Responses received to the Local Plan Review Scoping Report (February 2018)

**Q2: Do you agree with the draft strategic objectives we have identified in Appendix 1? If not please tell us why and give reasons for your answer.**

Number of responses received: 56

Respondent	Response
Internal	
Archaeology Team West Berkshire Council	<p>We feel that Objective 6 Culture and 7 Heritage lack clarity – they seem to overlap but it’s not clear what Culture is or what heritage is. Suggested wording as regards the archaeology service’s mission statement - <i>Protecting, preserving and promoting West Berkshire’s historic environment resource for the benefit of those who live, work and visit here.</i></p> <p>Culture Manager ... suggests these draft objectives:</p> <p><b>6. Culture</b>            To promote culture (the arts in all forms and including library services) as fundamental to improved well-being and a thriving and sustainable local economy (including the visitor economy).</p> <p><b>7. Heritage</b>            To promote the understanding, preservation and presentation of West Berkshire’s historic landscape and archaeological resource for people who live in, work in and visit West Berkshire.</p>
Public Transport Team West Berkshire Council	<p>I broadly agree with the Draft Strategic Objectives identified in Appendix 1, although in respect of:</p> <p>Objective 4 Economy, I would request this be amended to read:</p> <p>“To facilitate and support a strong, diverse and sustainable economic base across the District, including through the designation of land in accessible locations for employment purposes to allow provision of suitable workplaces and in turn fostering a range of local job opportunities.”</p> <p>Objective 5, I would request this be amended to read:</p>

Respondent	Response
	<p>“To enhance the accessibility, vitality and viability of town, district and local centres in West Berkshire as places for shopping, leisure and community activities, coupled with employment commensurate with the size and nature of the established settlement.”</p>
Minerals and Waste Team West Berkshire Council	<p>1. <i>Climate Change</i> Climate change appears to have been narrowly interpreted to include only policy relating to flooding. However, it may be more appropriate to consider a wider interpretation of climate change in policy, including such as in policy CS15 (i.e. greenhouse gas emissions), and as has been done in the Minerals and Waste Local Plan (Policy 25 – Climate Change).</p> <p>3. <i>Sustainable and Quality Development</i> The minerals and waste team supports the intent to clarify linkages with these policies and the Minerals and Waste Local Plan going forward (it is suggested the most applicable policy in the Minerals and Waste Local Plan with which to make linkages is Policy 26 – Public Health, Environment and Amenity). It is important that both plans are consistent in their approach to policy issues for the application of policy in decision making.</p> <p>4. <i>Environment</i> Draft policy 8 in the Minerals and Waste Local Plan Preferred Options would, in part, seek to safeguard potential, planned and existing minerals associated infrastructure, including rail sites from non-mineral development. Other types of development which require a rail to road link would not be safeguarded under this draft policy. Therefore, as is indicated in the Scoping Report, further consideration would be required as to whether safeguarding of the non-minerals infrastructure is required and how this would be achieved in policy terms.</p> <p>7. <i>Heritage</i> and 9. <i>Transport</i> It is suggested that the Local Plan should also consider clarifying linkages with these policies and the corresponding policies in the Minerals and Waste Local Plan (Biodiversity and Geodiversity, Landscape, Protected Landscapes, Historic Environment and Transport and Flooding) going forward. It is important that both plans are consistent in their approach to policy issues for the application of policy in decision making.</p>
<b>Statutory consultees</b>	
Hampshire County Council	We agree with the draft strategic objectives.
Bracknell Forest Borough Council	We welcome Objective 2 Housing ‘ <i>Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographic and health profile of the District.</i>

Respondent	Response
Wiltshire Council	<p>Thank you for consulting Wiltshire Council on your Local Plan Review Scoping Report and SA Scoping Report.</p> <p>We welcome the objective included in your Local Plan Review Scoping Report to meet your objectively assessed need over the Western Berkshire Housing Market Area.</p> <p>As we have a cross boundary relationship it is encouraging to see that the Wiltshire Core Strategy and Minerals and Waste Core Strategies are included in the PPP section of your SA Scoping Report.</p> <p>As you are aware, we are also reviewing our Local Plan. We agree that the preparation of our Local Plans will require close liaison and continued consultation as details emerge, especially as we share cross boundary features such as the North Wessex Downs AONB, the Kennet &amp; Avon Canal and the A4.</p> <p>At this stage we have no further comments to make. Please continue to keep us informed of your plans progress.</p>
Newbury Town Council	<p>Our principal comments relate to the Strategic Objectives in the Scoping Report. The numbering is ours, and does not indicate priority.</p> <ol style="list-style-type: none"> <li>1. We appreciate the need to meet so far as possible the housing development targets set by the Strategic Housing Market Assessment. We fully support the objectives for affordable and social housing. However, the latter objectives will require firm action by the Planning Authority, for which the support of the Inspectorate will be necessary and should be sought.</li> <li>2. Particular attention is needed to the housing requirements of key workers, for whom suitable housing types and tenures should be devised and constructed.</li> <li>3. West Berkshire Council has standards for parking and amenity space for houses, but not living space. In consequence, some spatially very limited accommodation is being put forward by developers. Is this desirable? The only relevant Strategic Objective refers vaguely to “Sustainable and Quality Development”. The Local Plan should have some perspective on the matter, perhaps with reference to the rules for public accommodation drawn up some years ago in London, or some other criteria. See <a href="https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/524531/160519_Nationally_Described_Space_Standard____Final_Web_version.pdf">https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/524531/160519_Nationally_Described_Space_Standard____Final_Web_version.pdf</a>.</li> <li>4. We welcome the objective to provide additional employment land. However, further measures will be needed to encourage new businesses, enable existing businesses to grow, and attract new businesses from outside. A list of steps to this effect is described in the Town Plan, but in summary, they include additional employment land, flexible rental and</li> </ol>

Respondent	Response
	<p>planning terms (for example by a Local Development Order), provision of Incubation Hubs and Accelerator Hubs, and integration with the higher education institutions in West Berkshire. Given such measures, West Berkshire can benefit from the substantial opportunities represented by the Oxford-Cambridge Corridor and the Smart City Cluster.</p> <p>5. Addressing these opportunities will require greater focus on business development than West Berkshire Council appears to deploy at present. Business development actions previously identified in the Newbury Vision have not been implemented. We suggest that the Strategic Objective “Economy” should be rephrased “Business Development”. We recommend that WBC employs more resources to deliver these opportunities, and that the activities of the Executive in this regard are more widely communicated than at present.</p> <p>6. Whatever Local Plan is approved, it can at present be overridden by Permitted Development Rights on commercial property. Unremitting pressure should be exercised through political channels to secure the reversal of this disruptive Government policy. The Government has advised that the remedy of an Article 4 Direction is available and not burdensome; we recommend that whether this is in fact the case is tested by the Planning Authority.</p> <p>7. At present, the policy and planning effort of West Berkshire Council is focussed overwhelmingly on housing development, and in responding to proposals from developers for housing. The infrastructure implications are relegated to a separate plan. We do not agree. Spatial planning for infrastructure should occur at the same priority as for housing and business, and should therefore be part of the Local Plan itself, as otherwise the housing allocation will crowd out other requirements. These include extension of:</p> <ul style="list-style-type: none"> <li>• primary, secondary and higher education;</li> <li>• public open space;</li> <li>• medical services;</li> <li>• age support, in particular day care centres and care homes;</li> <li>• road and rail transport links;</li> <li>• cultural, leisure and sporting facilities.</li> </ul> <p>8. Given the population growth from new housing and the expected strong proportionate increase in the older population, the Local Plan should include an assessment of changes in population size and profile during the Plan period. Social infrastructure planning across the District should be based on those assessments.</p> <p>9. West Berkshire Council’s present support for leisure and culture is mainly limited to the assets which it owns directly. We recommend that an audit is carried out of the cultural, leisure, and sporting assets of the District, and a view on how they is developed, in order to prepare a policy for tourism. The absence of such a policy for West Berkshire has resulted in (for instance) lack of a policy for visitor information or for the tourist coach trade. Leisure, culture, and tourism are the</p>

Respondent	Response
	<p>second business interest of West Berkshire after commerce and industry. Officer support and Executive attention should in our submission be directed to developing them, in partnership with Town and Parish Councils.</p> <p>10. In the longer term, consideration should be given as whether West Berkshire should provide a hub or hubs for major cultural, leisure, and sporting events, by the provision of a major concert hall, conference venue, and/or sporting arena, together with the appropriate visitor accommodation. If so, space should be reserved accordingly.</p> <p>11. West Berkshire has a good record in providing and supporting public open spaces, in collaboration with Parish Councils, and in conditioning such space with major developments. However, it seems to us that the policy framework for this is unclear. How is such space, scattered across the District, to be protected? What steps are needed to ensure that they are all maintained to a common standard in the public interest?</p> <p>12. The Town Plan contains detailed proposals for development of road and rail transport, prepared after consultation with the portfolio holder for transport. In particular, we draw attention to the lack of a junction connecting the two north-south trunk roads through Newbury. We support West Berkshire Council's plans for pedestrian and cycle links and are prepared to provide funding and other resources to achieve them.</p> <p>13. The Town Plan's section on education was drawn up after consultation with the portfolio holder for education. We recommend involvement of business in a possible business-sponsored Free School and/or University Technical College. Vocational education should be developed according to the needs of local business. In addition, West Berkshire does not contain any institutions of University standard. To retain more young people for higher education in West Berkshire, we suggest that Universities in nearby cities be approached with the aim of locating one or more campuses or business schools in the District. Space should be reserved for these purposes.</p> <p>14. No Strategic Objectives are stated for the Environment, other than the mitigation of climate change. It is suggested that the Local Plan should include specific objectives for air and water quality and biodiversity, in which Parish Councils could have a principal role. Strategic Objectives should also be given for recycling, which is a West Berkshire Council function.</p> <p>15. We are largely content with West Berkshire Council's policies and actions on heritage. We would point out, however, that local listing is currently entirely dependent on volunteers, and contingency plans should be made in case the present arrangements should fail at some point.</p> <p>16. The Strategic Objectives make no reference to health and well-being, other than under the heading of Housing. As pointed out above, health and well-being have a consequence for spatial planning which should be considered. Health</p>

Respondent	Response
	<p>disparities and variations between areas and communities should be studied, and may well be found to have planning implications.</p> <p>17.The Strategic Objectives make no specific reference to the North Wessex Downs Area of Outstanding National Beauty. In the light of recent planning cases, we suggest that applications should be permitted on the AONB which support development of the rural economy and the personal amenity of current residents, as these pay for maintenance of the AONB in its present state. The present policy is too based on the premise that there should be no change.</p>
Streatley Parish Council	<p>Regarding the Strategic Objectives as outlined in Appendix 1, Streatley Parish Council agrees with them as being most appropriate. The only one we would recommend strengthening would be number 8: Green Infrastructure and Healthy Living. We believe it is increasingly important that our green environment receives even more protection than at present. The AONB is a very precious asset for the district and for future generations and should be enhanced rather than simply maintained as the NPPF requires.</p>
Thatcham Town Council	Yes
Holybrook Parish Council	<p>The draft strategic objectives, as identified in your appendix 1, are a good starting point and the Parish Council support, in particular sustainable development and green infrastructure. However, the draft objectives fail to adequately address some of the main issues faced by many of urban communities within the district. It is disappointing that general infrastructure has not been included as the existing structures are already at saturation point and this needs to be urgently addressed.</p>
Pangbourne Parish Council	<p>Suggest re-title of Climate Change and Sustainability:</p> <p>If these objectives are in order of importance, I would suggest that “Combating Climate Change” needs more context. As a small district authority seeking to combat a complex global problem, whatever WBC does in, for example, “minimising demand for energy”, (especially given its ambitious housing targets and residents’ heavy reliance on private transport) can never be more than the slightest pinprick in the hide of an elephant. It’s potentially more productive to focus on those issues where you can have an effect on the ground – which is why I would team this objective up with sustainability. The Sustainability Appraisal Scoping Report (pp17-22) succinctly summarises the key issues for WBC and the three other Councils in the West of Berkshire and offers a broad indication of how they should be approached, demonstrating how WBC and the other authorities can make a long-term contribution to combating climate change.</p> <p>Economy:</p> <p>This one should be next in priority order. A “strong, diverse and sustainable economic base” within easy reach of London is arguably the biggest single factor which has made the Thames Valley the prosperous and expanding area it is today.</p>

Respondent	Response
	<p>Sustaining this economic strength over the next twenty years, however, will not be easy. The bulk of new investment will remain in the service sector where some big structural and technological changes are currently in train. New retail investment is not an unmixed blessing in so far as it creates winners and losers – for example, the on-going decline of the Kennet Centre area in Newbury as the big brands have moved their focus to the other end of the town centre. Multiple retailing has now largely gone ex-growth in terms of job creation and the future will be dominated by the big on-line operators, albeit with opportunities for small specialists in suitable locations. Over the past decade economic insecurity has become a fact of life for many households – even in the Thames Valley – whether in the form of zero-hours contracts, premature retirement or below-inflation pay increases – all of which are affecting their spending decisions. The short term outlook for business and consumer spending is uncertain, which may well make it harder to attract the new investment we need to sustain our growth.</p> <p>Housing:</p> <p>A strong local economy tends to attract inward migration which affects the location, price and quality of the new homes and the infrastructure required to support development. According to the joint West of Berkshire Spatial Planning Framework, achieving the development targets for the four authorities in the Berkshire Strategic Housing Market Assessment over the period 2013 to 2036 means an additional 65,600 houses to be built, or nearly 3,000 a year, roughly one third of which will be built on land not yet allocated for development. The spin-off in new jobs and investment will obviously be very significant, but the underlying economy still needs to be strong. As a recent study by the IFS has concluded, “Areas seeing lots of new developments aren’t guaranteed strong economic growth. And growth doesn’t necessarily rely on large-scale property development.” The economy ultimately drives the property market, not vice versa.</p> <p>Town, district and local centres:</p> <p>While the exodus of banks and building societies has left a few gaps in these centres, a relatively high level of local business optimism has ensured that many are now occupied by small, specialist retailers whose main complaint is the burden of business rates. Contrary to popular belief, however, the IFS study quoted above concluded that there is no relationship between changes in local authorities’ business rates tax bases and local economic growth. The strength of the local economy is the main influence on the success of high street businesses.</p> <p>No comment on the remaining objectives.</p>
Stratfield Mortimer Parish Council	<p>It is understood that the draft strategic objectives are derived from many sources, some of which are effectively mandatory. As such they cannot be argued with. However, the wording of the draft objectives is not always very clear. For instance, what does ‘a strong network of multi-functional green infrastructure which provides benefits for health, the environment and enhances the overall quality of life of sustainable communities.’ actually mean? Rewording the objectives in plain English would make them more accessible.</p>

Respondent	Response
	<p>Additionally, but far more importantly, there seems to be no objective(s) which reach the heart of the matter as to what individuals are hoping the resulting policies and hence developments will deliver. What seems to be lacking is a sense of what West Berks will look like/feel like in 2036-50. If you do not have a dream how can you have a dream come true? If there was a vision element then the how and why of many of the more detailed elements becomes more obvious.</p> <p>As an example central government commissions a happiness survey each year and is committed to trying to increase the nation's happiness. Does not planning policy have a part to play in that? Perhaps more pertinently there is no mention of community in any of the objectives. Surely a spirit or sense of community underpins what makes a successful town, village or District. We suggest there should be one or more objectives focussing on that aspect of planning.</p> <p>There also seems to be no real recognition of health and wellbeing in the objectives. There is passing reference to healthy living in the context of green infrastructure but nothing more substantial than that. Surely the health of the residents of West Berks must be a major objective. This is especially so when there has been a marked change in policy in the recent past to now emphasise the 'joined up provision' of health and social care.</p> <p>As far as the individual draft objectives are concerned our comments are, (in addition to the request for more plain English):-</p> <p><b>1. Climate Change</b></p> <p>To mitigate and adapt to the effects of climate change and minimise demand for energy and other resources. This objective is very far reaching and could raise expectations beyond what is possible. For instance, taking this at face value, the blanket minimisation of energy demand could lead to the banning of all cars. As such we believe that a 'reasonableness' clause needs inserting.</p> <p><b>2. Housing</b></p> <p>Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographic and health profile of the District.</p> <p>This is an example of where future change is being considered but in rather a passive way. In reality what does responding to the changing demographic and health profile of the District really mean? If it means to provide more dwellings suitable for an ageing population, why not say so. Equally why not consider other coming changes as well as the ageing population?</p> <p><b>3. Sustainable and Quality Development</b></p> <p>To ensure provision of sustainable developments of high quality design, construction and efficiency (including land use) which contribute to an attractive, safe and accessible environment for all.</p>

Respondent	Response
	<p>We would very much support the general thrust of this objective and feel that its successful implementation could go a long way toward reconciling the need for more houses and the natural reluctance of existing residents to see their local environment altered for the worse.</p> <p>The phrase “ while using land efficiently with higher density housing” would be a lot clearer than ‘and efficiency (including land use)’.</p> <p>Many people will consider that there is an inherent contradiction in this objective. Could they not consider that developments of higher densities do not necessarily and contribute to an attractive, safe and accessible environment?</p> <p><b>4. Economy</b></p> <p>To facilitate and support a strong, diverse and sustainable economic base across the District, including the provision of employment land which provides for a range of local job opportunities.</p> <p>Again this is a very worthwhile objective which perhaps should be tempered with words such as ‘while respecting the local environment’</p> <p><b>5. Town Centres</b></p> <p>To enhance the vitality and viability of town, district and local centres in West Berkshire as places for shopping, leisure and community activities.</p> <p>Once again while supporting the objective we feel there ought to be some caveat(s) attached or would this objective allow some very unfriendly neighbour development?</p> <p><b>6. Culture</b></p> <p>Together with other partners, to develop and promote the cultural distinctiveness and heritage of the area to ensure it makes a positive contribution to the future wellbeing and sustainability of West Berkshire’s economy and communities. This is a laudable new objective but it is not clear what culture actually means in this context, and, as it is new, some examples of what it would mean in planning terms would be useful.</p> <p>It also seems that heritage is brought into this objective and not into other objectives but heritage also has its own objective. This does seem a trifle odd.</p> <p><b>7. Heritage</b></p> <p>To conserve and enhance the local distinctive character and identity of the built, historic and natural environment in West Berkshire's towns, villages and countryside.</p> <p>Further to the previous comment should Heritage now include non-physical elements as it is mentioned in the cultural objective?</p> <p><b>8. Green Infrastructure and Healthy Living</b></p>

Respondent	Response
	<p>To ensure that West Berkshire contains a strong network of multi-functional green infrastructure which provides benefits for health, the environment and enhances the overall quality of life of sustainable communities.</p> <p>This is a very laudable objective. However, none of the objectives cover the wider issues of biodiversity. There is mention of multi-functional green infrastructure giving benefits to the environment, but there are many other elements which go towards a much more complete package of biodiversity improvements. Indeed it might be that there should be a separate objective for improving biodiversity.</p> <p><b>9. Transport</b></p> <p>To make provision for transport networks that support sustainable growth in West Berkshire and to promote low emission transport choices.</p> <p>While supporting this objective should it not also be linked to other non-transport issues that reduce the need to make journeys? For instance the provision of high speed broadband and the provision of local employment and facilities that reduce the frequency and length of trips?</p> <p><b>10. Infrastructure</b></p> <p>To ensure that infrastructure needs (physical and social) arising from the growth in West Berkshire are provided to support and keep pace with development in accordance with the detail set out in the Infrastructure Delivery Plan. This objective is welcomed but, unfortunately, the existing Infrastructure Delivery Plan does not seem to have been delivered. If this is likely to be the case in the future, (for reasons outside WBC's control?), should other objectives or policies not be introduced which recognise this ever widening gap and approach the problem from a different angle?</p>
Burghfield Parish Council	Yes. You could emphasise an important point by inserting the words “energy efficiency and” after “including” at the beginning of line 2 under “3. Sustainability and Quality Development”.
Burghfield NDP Group	Yes. You could emphasise an important point by inserting the words “energy efficiency and” after “including” at the beginning of line 2 under “3. Sustainability and Quality Development”.
Historic England	Turning now to the Scoping Report, we welcome and support, in principle, Strategic Objective 7 for Heritage. However, we would prefer it to refer to the significance and special interest of heritage assets (what it is that makes them important).
Sport England	Yes
Savills (UK) Ltd for Thames Water	No objection
Environment Agency	We are pleased to see objectives for climate change, Green Infrastructure and Infrastructure in general.

Respondent	Response
	<p>As part of the 'Green Infrastructure and Healthy Living' objective the conservation and enhancement of watercourses and their riverbank habitats need to be included here as 'blue infrastructure.'</p> <p>As part of the 'Infrastructure' objective we would expect to see sewage treatment infrastructure covered with any impact on receiving watercourses from discharge from these sewage treatment works taken into consideration. We do not want to see any deterioration of the water quality in watercourses as a result of the proposed growth and the increase in flows to sewage treatment works.</p> <p>An additional objective should be about fluvial flood risk management. Another objective should be about pollution prevention and water quality including surface water and ground water quality protection.</p>
<b>General consultation bodies</b>	
Theatres Trust	<p>Yes - In particular we welcome the identification of 'Culture' as a strategic priority in line with both the current and draft revised versions of the NPPF. It must be ensured that the objective covers culture in a broad sense, relating not just to West Berkshire's cultural heritage which makes it distinct but also to the area's facilities which contribute to the cultural well-being of local people and attract people to the area such as theatres, cinemas and pubs.</p> <p>We also recommend that the scope of 'Town Centres' is amended to refer to cultural uses alongside "shopping, leisure and community activities" to better accord with definitions provided by the NPPF.</p>
Mid & West Berks Local Access Forum	Yes. We particularly endorse inclusion of objective 8 'Green Infrastructure & Healthy Living' as an objective but emphasize that the provision of off-road paths and public open space for informal air & exercise of the human population should be an important component.
British Horse Society	Yes but Objective 8 'Green Infrastructure and Healthy Living' must recognize the needs of equestrian activities and needs if the equestrian economy is to thrive in West Berks.
Reading Gospel Hall Trust	Yes
<b>Other stakeholders</b>	
Robert Wallace	<ol style="list-style-type: none"> <li>1. - NO - I doubt W Berks CC can do anything to affect Climate change</li> <li>2. Yes THE BIGGEST CHALLENGE we face</li> <li>3. Yes</li> <li>4. Not much you can do about it directly</li> </ol>

Respondent	Response
	5. Yes - a major challenge 6. Tough to do in a time of cuts 7. OK 8. OK 9. Another major problem 10 OK
Christopher Gent	We agree with the draft objectives
Neil Richardson	Housing – Assessed Need. The requirements of particular groups such as FTBs, older people and self – builders need to be taken into account.
David Lister	Yes
William Graham	Yes
<b>Landowners, site promoters and developers</b>	
Barton Willmore for Sulham Estate	<p>On behalf of our client, we consider that draft strategic objectives seem to form an appropriate basis for the foundation of the review to the Local Plan. In particular we consider that the following draft strategic objective is of great significance:</p> <p><i>“Together with other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographics and health profile of the District.”</i></p> <p>We support the delivery of housing to meet the housing needs across the District and consider that this should be achieved through the allocation of a range of sites with a preference for those in sustainable locations and well related to existing settlements. In addition to meeting the housing needs across the plan period, we also note the importance of the council maintaining an up to date Five Year Housing Land Supply. We suggest that the allocation of smaller to medium sites which are able to deliver in the short to medium term is instrumental in complimenting the larger allocations which will deliver later in the plan period and ensuring that there is a consistent delivery of needed homes. Our client’s site at Hall Place Farm is very well placed to serve this role and, on this basis should be considered for allocation.</p>
Barton Willmore for Graham Child	On behalf of our client, we consider that the draft strategic objectives appear to cover the most pertinent points that require consideration. In particular, we support the objective in relation to housing which states the following:

Respondent	Response
	<p><i>“Together with other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographics and health profile of the District.”</i></p> <p>We support the delivery of housing to meet the housing needs across the District and consider that this can be achieved through the allocation of a range of sites. With regard to meeting the assessed need to 2036, our client would highlight the need to also achieve the required 5 year housing land supply. In this regard our client would draw the Council’s attention to small/medium sized sites which have the ability to deliver housing in the short term and benefit the Council’s 5 year housing land supply. Our client would again highlight that their site at Pangbourne Hill is fits into this category and should be considered for allocation.</p>
Bewley Homes	<p>Engagement should not be limited to those authorities within the West Berkshire Housing Market Areas. Effective and on going joint working between strategic plan making authorities and relevant bodies is integral to the production of a positively prepared and justified strategy.</p>
Boyer Planning for Spitfire Bespoke Homes	<p>Spitfire generally support strategic objective 2 (Housing) of the West Berkshire Local Plan Review to 2036 where it states that the Council will work with the other Berkshire authorities within the Western Berkshire Housing Market Area to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. Spitfire also support the objective to provide a mix of house sizes, types and tenures, through a variety of delivery methods.</p> <p>However, in relation to strategic objective 2, Spitfire make the following key points:</p> <p><b>i) The Local Plan Review has been substantially delayed &amp; the associated consequences for the Council’s housing land supply position</b></p> <p>The Council’s existing spatial strategy is set out in the 2012 Core Strategy. Policy CS 1 (Delivering New Homes and Retaining the Housing Stock) of this document states:</p> <p>‘An update of the Strategic Housing Market Assessment (SHMA) (so that it accords with the requirements of National Planning Policy Framework, paragraph 159) will be undertaken within <u>3 years of the adoption of the Core Strategy</u>. This will be carried out in co-operation with neighbouring authorities within the Housing Market Area. If the updated SHMA indicates that housing provision within the District needs to be greater than currently planned, a review of the scale of housing provision in the Core Strategy will be undertaken’ (<u>Our emphasis</u>).</p> <p>Despite the clear requirement for the Core Strategy housing requirement to be reviewed within 3 years of the plan’s adoption in 2012 and the publication of the Berkshire SHMA over two years ago, it is only now that the Council has</p>

Respondent	Response
	<p>progressed to the earliest possible consultation stage relating to a new Local Plan. This has resulted in underlying under-delivery against the defined subsequent objectively assessed housing need (OAHN). In addition, it has resulted in the Council becoming subject to a housing land supply shortfall, contrary to the requirements of NPPF paragraph 47. This housing land supply deficit was confirmed at the 2017 public inquiry relating to a proposal for up to 401 dwellings at Land adjacent to Hilltop, Oxford Road, Donnington, Newbury (PINS Ref. APP/W0340/W/16/3143214), where the Inspector stated:</p> <p><u>'On that basis, the main parties agree that a five-year supply of deliverable housing sites cannot be demonstrated.</u> The relevant policies for the supply of housing therefore attract less weight and the National Planning Policy Framework (the Framework) paragraphs 49 and 14 are engaged<sup>18</sup>. The presumption in favour of sustainable development in paragraph 14 of the Framework is agreed to apply' (<u>Our emphasis</u>) (paragraph 19).</p> <p>It follows that the Council's continued delay in producing a new Local Plan has resulted in a 'planning by appeal' approach whereby sites not identified in a plan-led manner have come forward to fill unmet housing need shortfalls. Given the continued delay in reviewing the Local Plan and the associated consequences of this delay (i.e. a housing land supply deficit), it follows that this Local Plan Review must proceed at the earliest opportunity and allocate sites of varying scales and in a mix of geographic locations to ensure that necessary future needs are met and appropriate flexibility is built into the plan to provide the greatest possible opportunity to meet challenging housing requirements in the future.</p> <p><b>ii) A minimum housing requirement</b></p> <p>In March 2018, the Government published a draft NPPF for consultation incorporating policy proposals previously consulted on in the Housing White Paper and the 'Planning for the right homes in the right places' consultations.</p> <p>In launching the draft NPPF, the Prime Minister referred to the decades of housing under-delivery that have occurred and the social inequality issues resulting from the shortage of housing in the country:</p> <p>'The causes and manifestations vary from place to place but the impact is all too clear: in much of the country, housing is so unaffordable that millions of people who would reasonably expect to buy their own home are unable to do so. Others are struggling even to find somewhere to rent.</p> <p>...</p> <p>The root cause of the crisis is simple. For decades this country has failed to build enough of the right homes in the right places.</p> <p>So the shortage of housing in this country reinforces inequality. It prevents social mobility and stops people fulfilling their</p>

Respondent	Response
	<p>potential. It creates and exacerbates divisions between generations and between those who own property and those who do not’.</p> <p>In a supporting Ministerial Statement, the Secretary of State (‘SoS’) for Housing, Communities and Local Government (Sajid Javid) stated:</p> <p>‘The Government has made it clear that we need to get our country building. At Budget 2017 we set out reforms to enable us to achieve 300,000 homes built each year by the middle of the next decade. The Housing White Paper, published in February last year, set out our plans’.</p> <p>Paragraph 36 of the draft NPPF goes onto state:</p> <p>‘Strategic and local plans are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are ‘sound’ if they are:</p> <p>a) Positively prepared – provides a strategy which will, as a minimum, meet as much as possible of the area’s objectively assessed needs (particularly for housing, using a clear and justified method to identify needs); and is informed by agreements with other authorities, so that <u>unmet need from neighbouring areas is accommodated where it is practical to do so</u> and is consistent with achieving sustainable development;’ (<u>Our emphasis</u>)</p> <p>The housing requirement to be met across the District is to be clearly expressed as a minimum figure. It follows that the emerging plan offers the opportunity to generate significant flexibility within the developable land supply so to ensure housing needs are met over the plan period. It follows that the challenging emerging housing requirement must be expressed as an absolute minimum. We consider that the draft strategic objective relating to housing should reflect this. It follows that there is a need to insert substantial flexibility into the emerging plan in order to meet such challenging housing targets. Any failure to not allocate a level of growth substantially above this minimum figure would fail the positively prepared, effective and justified tests of soundness.</p> <p><b>iii) Meeting Unmet Needs from Adjoining Local Planning Authorities</b></p> <p>Alongside meeting its own OAHN, the District is also bound by the positive preparation test of soundness requiring the District to accommodate unmet need from neighbouring authorities where it is practical to do so. Policy H1 of the Pre-Submission Draft Reading Borough Local Plan issued for consultation in November 2017 stated:</p> <p>‘Provision will be made for at least an additional 15,433 homes (averaging 671 homes per annum) in Reading Borough for the period 2013 to 2036.</p>

Respondent	Response
	<p>The Council will continue to work with neighbouring authorities within the Western Berkshire Housing Market Area to ensure that the shortfall of 644 dwellings that cannot be provided within Reading will be met over the plan period.'</p> <p>It follows that the West Berkshire Local Plan should make a contribution towards the unmet housing need of Reading Borough, given its close geographical relationship and the acknowledgement in Reading Borough's Local Plan that it's OAHN cannot be met inside its tight administrative boundary (paragraphs 4.4.3 and 4.4.4). This places a requirement upon the District to plan for a yet higher level of housing growth.</p>
Mark Carter for Mr R.L.A. Jones	<p>The Respondent welcomes the Strategic Objectives and particularly Objective 2 "Housing" to ensure that the need for housing is met up to 2036 and also that a mix of housing will be provided. However it should be explicitly stated that the need for new housing will be met through the identification and allocation of new housing sites (or sites to replace already allocated housing sites that have not come forward.</p>
Deloitte for Green Park Business Park	<p>The National Planning Policy Framework (2012) sets out a presumption in favour of sustainable development. It encourages the use of previously developed land promoting mixed use development in locations that are, or can be made sustainable.</p> <p>Policy CS 9 of the West Berkshire Core Strategy 2006-2026 (Core Strategy) directs major office development to West Berkshire's town and district centres and then sequentially edge and out of town locations, including Protected Employment Areas.</p> <p>The Core Strategy highlights that 14% of West Berkshire's population works in Reading and identifies opportunities to invest in transport services at Green Park by "improving sustainable transport links to Reading through joint working, particularly bus, cycle and pedestrian routes along the A4 corridor and the proposed new station". West Berkshire work with Reading Borough Council on joint transport activities "particularly related to the need to deliver sustainable transport solutions to reduce and manage the growth of congestion around the A4 and the M4 and surrounding transport corridors".</p> <p>The Scoping Report seeks to identify future levels of housing and employment land need as well as other land uses and infrastructure provision for West Berkshire, up to 2036. GPR welcomes the Local Plan Review, and its efforts to identify such strategic issues that need to be addressed by the Local Plan over the period up to 2036. It is important to ensure that there is an up to date evidence base for employment land by ensuring the Economic Market Area and Economic Development Needs Assessment remain relevant. Part of this approach is ensuring that any future Local Plan strategy for housing and employment is reflective of the needs of the area.</p> <p>Green Park provides an important employment and residential location for West Berkshire and Reading.</p> <p>GPR, therefore, supports the Draft Strategic Objectives set out in Appendix 1 of the Report, in particular No.2 Housing to</p>

Respondent	Response
	<p>ensure the assessed need for housing is met. It identifies a variety of delivery methods and there should be recognition in the drafting of the Plan and spatial strategy which underpins it, of the sustainable role of development of employment and residential uses at Green Park can provide. This is particularly in the context of the new railway station at Green Park and the choice of transport modes that will be available from 2019/2020.</p> <p>GPR is also supportive of Objective 4 'Economy', which seeks to facilitate and support a strong, diverse and sustainable economic base provision of employment land. The Objective looks to identify future employment land in order to provide for a range of local job opportunities. This will be integral to a thriving West Berkshire economy and the wider Thames Valley area, which is fast developing as a key business destination just outside of London.</p> <p>To assist West Berkshire with its review of future employment land, GPR request that the Council continues to recognise Green Park as a key employment area in the Local Plan Review. We ask for this to be done in tandem with the continued investment and enhancement of sustainable transport and highways infrastructure improvements. This is because the Park set to become an enhanced regional centre with the onset of the new railway station due to be delivered by March 2020, which will have an impact in strengthening its role as a key housing and employment hub. It is important that West Berkshire Council and Reading Borough Council aspirations are aligned to ensure that provision of infrastructure in the wider Reading area is considered as a whole.</p>
Fisher German for Mr Musgrave and Begley	<p>Largely agreed, but it is considered that the rural area should be supported further, by providing adequate housing which meets the needs of both the District's urban and rural communities over the lifetime of the plan.</p> <p>Suggested rewording:</p> <p><b>2. Housing</b></p> <p>Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographic and health profile of the District including urban and rural communities.</p>
Gladman Developments	<p>It is considered essential that the strategic objectives must represent an appropriate balance between the economic, social and environmental objectives of the planning system in order to shape a local plan that can promote a sustainable pattern of development. The objectives contained within Appendix 1 of the Scoping Report have the potential to achieve this goal and it will be important that any associated vision, strategy and policy wording fully supports the sustainable growth potential of the area over the plan period.</p>
Hallam Land Management	<p>We fully support the Strategic Objectives as set out in Appendix 1 and have no further comments</p>

Respondent	Response
Nexus Planning for Pangbourne Beaver Properties	<p>The draft strategic objectives at Appendix 1 cover a range of issues, but we note that the second of those deals with Housing and states that:</p> <p>“Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographic and health profile of the District”.</p> <p>This objective is supported.</p>
Nexus Planning for Croudace	<p>The draft strategic objectives at Appendix 1 cover a range of issues, but we note that the second of those deals with Housing and outlines that:</p> <p>“Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. To provide a mix of house sizes, types and tenures, through a variety of delivery methods and respond to the changing demographic and health profile of the District”.</p> <p>Croudace Homes has no objection to the Strategic Policies as set out.</p>
Pegasus Planning for Donnington New Homes	<p>Yes – these are all valuable objectives to work towards when reviewing the Plan. However, some of the Strategic Objectives are more valuable than others, and should be given greater weight. These are climate change (specifically flood mitigation in new development), housing, sustainable and quality development, and green infrastructure.</p>
Pegasus Planning Group for Donnington New Homes	<p>Yes – these are all valuable objectives to work towards when reviewing the Plan. However, some of the Strategic Objectives are more valuable than others, and should be given greater weight. These are housing, sustainable and quality development (specifically accessible homes for older people), culture (specifically tourism), green infrastructure and healthy living (specifically the provision of green infrastructure with new development), and infrastructure (specifically community uses).</p>
Pegasus Planning for Wasing Park Estate	<p>It would be useful for the strategic objectives to include reference to supporting economic growth in rural areas and encouraging diversification, where appropriate.</p> <p>It is considered that the strategic objectives should recognise the importance of sustainable economic development in the rural areas. The Draft Revised National Planning Policy Framework (NPPF) was published for consultation from 5th March until 10th May 2018. Paragraphs 84 and 85 of the Draft Revised NPPF make clear the importance of the rural economy. The West Berkshire Local Plan Review should therefore facilitate a prosperous rural economy, and particularly</p>

Respondent	Response
	<p>the aims and objectives of the Wasing Estate Plan, which is currently being produced by the Wasing Estate (see Question 8 below). Paragraph 84 requires planning policies and decisions to enable:</p> <p>“a) the sustainable growth and expansion of all types of business in rural areas, both through conversion of existing buildings and well designed new buildings;  b) the development and diversification of agricultural and other land-based rural businesses;  c) sustainable rural tourism and leisure developments which respect the character of the countryside; and  d) the retention and development of accessible local services and community facilities, such as local shops, meeting places, sports venues, open space, cultural buildings, public houses and places of worship.”</p> <p>Paragraph 85 continues that; “Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found outside existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable (for example by improving the scope for access on foot, by cycling or by public transport). The use of previously developed land and sites that are well-related to existing settlements should be encouraged where suitable opportunities exist.”</p> <p>Paragraph 85 suggests that local authorities should adopt an even more flexible approach when assessing the accessibility credentials of local commercial/business and community needs in rural areas. It accepts that sites for these uses may have to be found outside the existing settlements, in locations that are not well served by public transport.</p> <p>It is considered that the Local Plan Review Strategic Objectives includes specific reference to the rural economy, diversification and sustainability of the rural areas.</p>
Pro Vision for Rivar	<p>Generally, consideration should be given to restructuring the objectives to demonstrate that the three overarching objectives of the planning system (set out in the draft NPPF at Paragraphs 8 and 9) will be delivered, taking local circumstances into account. We would comment on each of the 10 draft objectives as follows:</p> <ul style="list-style-type: none"> <li>• Climate Change. The objective should not be to minimise the demand for energy (which implies restricting growth). It should be to move to a low carbon economy.</li> <li>• Housing. The objective should be to ensure that a sufficient number and range of homes is provided to meet the assessed local need. Unless a joint spatial strategy is prepared with the other LPA's within the broadly defined HMA (which we would not support), it is not appropriate to consider the housing needs of a wider area. Only if the assessed housing need of neighbouring authorities cannot be accommodated, should cross border strategic planning be considered.</li> <li>• Sustainable and Quality Development. Agreed.</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• Economy. The objective should be to foster sustainable economic growth, to include making provision of sufficient employment land to meet assessed needs.</li> <li>• Town Centres. The objective should recognise that Town Centres should be allowed to grow and change, and to include a diverse mix of uses (including housing, offices and live/work) that reinforces their individual sense of place.</li> <li>• Culture. Agreed.</li> <li>• Heritage. Agreed.</li> <li>• Green Infrastructure and Healthy Living. Agreed (although the definition of multi-functional greenspace needs to be reviewed - see below).</li> <li>• Transport. Agreed .</li> <li>• Infrastructure. Agreed.</li> </ul>
Pro Vision for Audley Group	<p>We observe that this objective should be more explicit about the various components of the objectively assessed housing need over the plan period, especially meeting the needs of a growing elderly population (and given that the council’s latest SHMA specifically distinguishes this type of housing need from conventional housing – see response to Q7 below). It should more closely reflect the National Planning Policy Framework (NPPF), for example:</p> <p>Paragraph 7: one of the three strands of ‘sustainable development’ is the “social role”, which includes “providing the supply of housing required to meet the needs of present and future generations”. Implicit within this national objective, is planning for the needs of the ageing population.</p> <p>Paragraph 17: The “Core planning principles” include “Every effort should be made objectively to identify and then meet the housing, business and other development needs of an area, and respond positively to wider opportunities for growth”.</p> <p>Paragraph 50: “Deliver a wide choice of high quality homes” including planning for “the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes”.</p> <p>Paragraph 159: “Local planning authorities should have a clear understanding of housing needs in their area” and should “address the need for all types of housing, including affordable housing and the needs for different groups in the community”, which includes “older people”.</p> <p>The importance of planning to meet the objectively assessed needs of specific groups is reflected in the proposed changes to the NPPF published earlier this month, for example, paragraph 62:</p> <p><i>“Within this context, policies should identify the size, type and tenure of homes required for different groups in the community (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers<sup>21</sup>, people who rent their homes and people wishing to commission or build their own homes)”.</i></p> <p>This National Policy reflects the urgent and growing need for more specialist accommodation for older people. National Planning Practice Guidance refers to:</p>

Respondent	Response
	<p><i>“The need to provide housing for older people is critical given the projected increase in the number of households aged 65 and over accounts for over half of the new households (Department for Communities and Local Government Household Projections 2013)(NPPG Paragraph: 021 Reference ID: 2a-021-20160401). This ‘critical need’ is highlighted in the West Berkshire Sustainability Report, also published for consultation. This states that</i></p> <p><i>“Future demographics indicate that the population of the area as a whole is projected to rise to over 166,000 by 2036. Significantly, the population of over 65s is forecast to grow by over 59% in the period 2016-2036 and the over 85s by 148% over the same period. This is above the national average and will call for a much increased demand for suitable housing, health care services and facilities for the elderly. The increased prevalence of those with long term illnesses and disability (closely linked to an ageing population) living longer along with a desire for independence, will have the similar effect. Equally, the need to take more personal control of health and wellbeing, including obesity, should increase demand for green infrastructure and health facilities. A key challenge has been identified to explore any link between the District Health profiles and air quality” (SA Scoping Report Table 2; page 17).</i></p> <p>Paragraph 65 of the Draft Revised NPPF should also be noted. This addresses the relationship between the provision of affordable housing in major developments and the provision of “specialist accommodation” such as “purpose-built accommodation for the elderly”.</p> <p>In the above context it is proper that the revised Local Plan should make explicit provision for increasing the supply of specialist accommodation for older people. A recent Committee Report publication by HCLG – ‘Housing for Older people’ - makes some important recommendations in relation to the preparation of Local Plans (<i>Housing for Older People</i>, Second Report of Session 2017-19; Communities and Local Government Committee (5 Feb 2018)). Paragraph 122 states:</p> <p><i>“We believe that older people should be able to choose from a wide choice of housing which can accommodate their needs and preferences. This will include, across the social and private sectors, smaller, or better designed, general needs housing, accessible housing, specialist housing, including retirement homes and extra care housing, and cohousing. To enable them to make this choice, and move to a home which better suits their needs, the guidance required under the Neighbourhood Planning Act 2017 should recommend that:</i></p> <p><i>Local authorities produce and publish a strategy explaining how they intend to meet the housing needs of older people in their area, including the scale and mix of housing and the tenures needed, and setting out the evidence relating to current housing need.</i></p> <p><i>Local Plans should, based on an assessment of local need, identify a target proportion of new housing to be developed for older people and identify suitable well-connected sites, close to local amenities. They should identify a range of different types of housing, including accessible homes, extra care housing and smaller mainstream homes to be built. The number of homes developed against this target should be published each year.</i></p>

Respondent	Response
	<p><i>There should be greater collaboration within local authorities between planning, social care, health and housing teams, particularly on the production of Local Plans. Local authority planning, health and social care teams should work together to assess the savings to health and social care budgets which may arise from additional specialist housing in their area and consider this in the context of negotiations over planning charges.</i></p> <p><i>Local authorities should be more receptive to private developers who wish to build housing for older people in their area, and appreciate the potential health and wellbeing benefits leading to reduced need to health and social care services to be gained”.</i></p> <p>It is important that the revised Local Plan positively plans for delivering an appropriate range of specialist accommodation to offer genuine options for independent living, for example with specific site allocations for C2 use rather than housing sites which may be capable of accommodating C2 use (which could otherwise be priced out by conventional C3 market housing values) and does not burden schemes with obligations including affordable housing.</p> <p>It is now widely recognised that traditional nursing homes provide only a limited answer to the challenge of an ageing population and Local Plans need to be more positive in supporting the full range of modern specialist care options. (Please also note our comments under Question 7 regarding National Planning Policy Guidance and the definition of specialist elderly accommodation).</p> <p>Secondly, we observe that the draft objectives do not explicitly cover the rural areas of the district. It would be appropriate to include an objective to sustain rural communities i.e. support development that contributes to the social, economic, and environmental interests of the rural communities, recognising the positive and valuable contribution that can be made to that objective by the elderly population as part of socially cohesive and inclusive communities.</p> <p>Development needs and opportunities in the countryside are often very different to the urban areas, but the draft objectives do not make any such distinction. The appropriate spatial strategy is to continue to direct growth towards the existing hierarchy of settlements, but the plan should also explicitly support and manage sustainable development in the rural areas, recognising as in the case of Audley (and other providers) that older persons accommodation and care villages already exist in these locations. These institutions can and do make a significant contribution to the prosperity of the rural economy, both through the staff they employ from the local area and the local supply chain businesses, and the residents and their visitors who make use of local services and facilities. This economic and social activity should not be underestimated, and is in line with the requirements of national policy, which includes a need to:</p> <p><i>“support economic growth in rural areas in order to create jobs and prosperity by taking a positive approach to sustainable new development.”</i></p>

Respondent	Response
	<p>And</p> <p><i>“promote the retention and development of local services and community facilities in villages, such as shops, meeting places, sports venues, cultural buildings, public houses and places of worship”. NPPF para 28</i></p> <p>This theme is carried forward and expanded in the Revised Draft NPPF. Draft paragraph 85 states:</p> <p><i>“Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found outside existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable (for example by improving the scope for access on foot, by cycling or by public transport). The use of previously developed land and sites that are well-related to existing settlements should be encouraged where suitable opportunities exist.</i></p>
<p>Pro Vision for Greenham Trust</p>	<p>The Trust wishes to make the following observations about the draft objectives to ensure that the Revised Local Plan is based on a strong foundation for promoting sustainable development.</p> <p>Draft Objective 3 – Sustainable and Quality Development is currently drafted as</p> <p><i>“To ensure provision of sustainable developments of high quality design, construction, and efficiency (including land use) which contribute to an attractive, safe and accessible environment for all”.</i></p> <p>To ensure that this is consistent with national policy, it would be appropriate for this definition to be expanded to clarify that good design is also about ensuring that developments function well (i.e. are fit for purpose), are affordable i.e. not overburdened with design requirements, and deliverable, and can be readily adapted to meet changing needs in the future (NPPF paragraph 58 and repeated at paragraph 126 of the Draft Revised NPPF published in March 2018).</p> <p>Objective 4 – Economy is drafted as</p> <p><i>“To facilitate and support a strong, diverse, and sustainable economic base across the District, including the provision of employment land which provides for a range of local job opportunities”.</i></p> <p>The Trust generally supports this objective. As well as supporting the provision of employment land, It would, however, be appropriate to expand this definition to include explicit support for making effective use of the District’s existing employment areas (of which Greenham Business Park is one of the most significant areas). This would be consistent with Objective 7 of the Sustainability Appraisal Scoping Report:</p> <p><i>“To promote and improve the efficient of land use” and national policy (NPPF 17 [eighth bullet] and paragraph 111, and Chapter 11 of the Draft Revised NPPF).</i></p>

Respondent	Response
Pro Vision for Rootes Trustees	<p>Generally, consideration should be given to restructuring the objectives to demonstrate that the three overarching objectives of the planning system (set out in the draft NPPF at Paragraphs 8 and 9) will be delivered, taking local circumstances into account. We would comment on each of the 10 draft objectives as follows:</p> <ul style="list-style-type: none"> <li>• Climate Change. The objective should not be to minimise the demand for energy (which implies restricting growth). It should be to move to a low carbon economy.</li> <li>• Housing. The objective should be to ensure that a sufficient number and range of homes is provided to meet the assessed local need. Unless a joint spatial strategy is prepared with the other LPA's within the broadly defined HMA (which we would not support), it is not appropriate to consider the housing needs of a wider area. Savills for Englefield Estate	<p>The draft strategic objectives need to recognise the rural nature of the majority of the District, and therefore the need to support an economically, socially and environmentally strong countryside. A strategic objective should be added thus:</p> <p>“Countryside. To promote and support the vitality of the countryside within the District as a place to live and work”</p>
Joy Schlaudraff	<p>Yes, but not all together. There should be more strategic objectives, to identify, and develop wherever possible, small sites up to 50 houses, which are falling through the gap in semi-rural sites, or rural sites, which have become semi-rural, but have not been officially identified as such. There are numerous opportunities to develop suitable sites, and this would help solve the housing crisis. The problem is there is no specific guidance on this in planning policy, only that which says why development can't be built, and not on why it can. This has a prejudicial effect.</p> <p>All land which can be developed, should be developed to its maximum potential and sensitively according to character and appearance. This is common sense</p>
Turleys for Commercial Estates Group	<p>We consider that the draft strategy objectives are broadly correct, with the exception of Objective 2 'Housing'. As we explain in detail in relation to the following question, we do not consider that it is appropriate for the Council to preclude the possibility of having to address unmet housing needs from outside of the identified West of Berkshire HMA.</p>
Turleys for Berfeld	<p>We comment as follows on the draft strategic objectives:</p> <ol style="list-style-type: none"> <li>1. Climate change: the existing strategic objective 1 in the Core Strategy states: “To exceed national targets for carbon dioxide emissions reduction and deliver the District’s growth in a way that helps to adapt to and mitigate the impacts of climate change.” In our view, this strategic objective should be similarly focussed on growth, as that is where opportunities to address climate change effects will be available; and to remind the residents of West Berkshire that this Local Plan is principal document for managing and delivering growth up to 2036.</li> <li>2. Housing: the existing strategic objectives 2 and 3 of the Core Strategy deal with Housing Growth and Housing Needs respectively. Not only does this imply recognition of the need to achieve growth, but also uses more positive language to</li> </ol>

Respondent	Response
	<p>achieve this objective. The absence of growth is noted and regrettable and should be included. Similarly, the previous objective to promote sustainable communities is also absent and creates a less positive tone for this very important objective. We consider that the Council should revisit this objective to include growth and ensure that positive language is included that reflects the opportunity that growth can deliver. The first bullet point under paragraph 157 of the NPPF states that Local Plans should “plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this Framework”.</p> <p>The language of the NPPF in relation to meeting housing need is also more wide-ranging and specific than that used by the Council. Paragraph 159 includes the requirement to “address the need for all types of housing”, which the Council should incorporate in its objective.</p> <p>8. Green Infrastructure and Healthy Living: We support this objective and the implicit recognition that green infrastructure can contribute to healthy lifestyles and a better quality of life. It should not, however, be limited to “sustainable communities”, but to all existing and future residents of West Berkshire, whether they are deemed to meet the current definition of sustainability or not.</p> <p>10. Infrastructure: infrastructure needs are not limited to physical and social categories, there is also a need for environmental infrastructure to enhance the environment. This could include flood relief works that provide environmental benefits. Infrastructure needs are also not exclusively linked to growth. We recognise that growth does mean additional infrastructure investment and provision, but there are also existing communities that would benefit from infrastructure delivery, possibly linked to growth.</p> <p>Paragraph 156 of the NPPF sets out the strategic priorities for plan making, and includes references to infrastructure at bullet point 3 and 4, as follows:</p> <ul style="list-style-type: none"> <li>• “the provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat);</li> <li>• the provision of health, security, community and cultural infrastructure and other local facilities”</li> </ul>
Turleys for North East Thatcham Consortium	<p>The Consortium generally agrees with the Council’s proposed scope of the Local Plan Review for the following reasons and subject to the following comments.</p> <p>Draft strategic objective 2 relates to housing. The objective states <i>“Together with the other Berkshire authorities within the Western Berkshire Housing Market Area, to ensure that the assessed need for market and affordable housing will be met across the District.”</i> Whilst the Consortium generally supports that approach, it should be amended in order to ensure that the “full” objectively assessed needs of the area are met. This ensures consistency with the wording in paragraph 47 of the Framework (2012).</p>

Respondent	Response
	<p>The objective also seeks: <i>“To provide a mix of house sizes, types and tenures”</i>. The Consortium agrees that along with the overall number of homes to be provided it is of equal importance that the range of homes to be provided recognises and responds to the needs of present and future generations. This must recognise the needs arising within West Berkshire but in addition to ensuring that effective cooperation results in the delivery of the <i>numerical</i> housing requirements of the Western Berkshire Housing Market Area, the Consortium is also mindful that the cooperation should extend to the type of housing.</p> <p>The Berkshire SHMA concludes that with regards to market housing across the West Berkshire HMA 62% of housing needed will require more than 3 bedrooms<sup>4</sup>. Across all housing tenures (including affordable) the SHMA suggests that in the order of 55% housing will need to be of this size in the HMA and that the mix identified should be used to inform strategic Local Authority District-wide policies and inform the ‘portfolio’ of sites which are considered through its local plan process.</p> <p>In preparing its new Local Plan, Reading Borough Council has already acknowledged (in the Pre- Submission Local Plan of November 2017) that housing delivery, particularly on sites in the centre of the Borough, will largely be made up of smaller dwellings. Reading Borough Council has identified that this will need to be considered in the wider housing market area and their Pre-Submission Local Plan (November 2017) states that:</p> <p><i>“Reading is likely to provide a significantly greater proportion of smaller dwellings than its neighbours in the Western Berkshire HMA. This may mean that some rebalancing across the HMA is appropriate, with other authorities potentially providing a greater proportion of larger family accommodation.”</i> (paragraph 4.4.12)</p> <p>The objective should recognise the important role that West Berkshire has in meeting the needs of households not accommodated in Reading, or other parts of the HMA in this regard. This should specifically acknowledge an objective to meet the needs of family households whose needs are not being met in other parts of the HMA.</p> <p>Strong support is provided to the facilitation and support of a strong, diverse and sustainable economic base in the District as prescribed through draft strategic objective 4. The Consortium considers that the Council should acknowledge the inherent link between the delivery of new housing and the maintenance of a <i>“strong, diverse and sustainable economic base across the District, including the provision of employment land which provides a range of local job opportunities.”</i> The provision of new housing provides the opportunity to retain and attract new residents of working age who are able to contribute towards supporting the maintenance and growth of the economy and it is therefore critical that policies on both key aspects in the draft Local Plan Review are fully integrated.</p>

Respondent	Response
	<p>This will also have an important spatial dimension. The Consortium comments that attempts to focus new housing development around significant employment generating locations, such as the Colthrop Industrial Estate, provide the opportunity to support sustainable transport patterns and allow increased opportunities for residents to live close to their place of work. In addition this will protect and enhance the attractiveness of the area to employers by ensuring that their workforce requirements can be met.</p> <p>The Consortium also strongly supports the need to enhance the vitality and viability of centres in West Berkshire under draft strategic objective 5. It is readily apparent that this remains an important consideration with the Consortium noting that the regeneration of Thatcham town centre was identified as an ‘opportunity’ in the Core Strategy 2012 with that aspiration embedded within Area Delivery Plan Policy 3. Whilst the need for regeneration was clearly established in the Core Strategy in 2012 there has not been any significant progress in achieving the aspiration and regeneration of Thatcham town centre. It should therefore remain a priority for investment and regeneration.</p> <p>The vitality and viability of individual centres is fundamentally linked to their changing population and the quality of their infrastructure. This in turn is influenced by the support given to a centre’s capacity to grow in terms of its housing stock as well as its employment base. The Core Strategy directed a low level of development to Thatcham, in both proportionate (8.6% of needs) and absolute terms (900 homes or 45 homes per annum). The Consortium considers that the Local Plan Review provides an opportunity to realise and support a number of long held aspirations through the adoption of a more pro-active approach to enabling Thatcham’s future growth and regeneration.</p> <p>Directing an increased level of new housing to Thatcham would increase the resident population of the town; support a more mixed and inclusive community and therefore create opportunities to increase and capture local expenditure. In turn this will provide increased impetus for investment in Thatcham and the realisation of the town centre’s regeneration.</p> <p>The Consortium notes that draft strategic objective 10 is framed in a way which requires infrastructure needs arising from growth in West Berkshire to support and keep pace with development. The Consortium agrees with the principle of this objective but strongly suggests that the Council establishes a positive and proactive means of ensuring that this infrastructure can be provided to ensure the effectiveness of the Local Plan Review. The Consortium considers that this approach is fundamental to the achievement of sustainable development. The Consortium considers that the matter of infrastructure delivery is particularly pertinent to Thatcham where housing requirements have been constrained in recent years due to the existing education capacity at the town.</p> <p>As part of the Examination in to the Housing Site Allocations DPD, the Council produced a note titled ‘Overview of Thatcham infrastructure constraints’ which stated:</p>

Respondent	Response
	<p><i>“Thatcham has accommodated high rates of growth in recent times which has led to a substantial increase in the dwelling stock of the town in a short space of time placing high demand on infrastructure, services and facilities. <u>To address this development pressure and to address concerns raised through the consultations on both the Core Strategy and the Thatcham Vision, the focus through the Core Strategy was on regeneration to ensure that the infrastructure, services and facilities of Thatcham improve and it becomes a more self-contained market town.</u> This need was expressed very strongly in all of the consultation exercises completed during the Thatcham Vision project. The Thatcham Vision formed part of the evidence base for the Core Strategy.”</i></p> <p><i>“The Core Strategy Inspector set out in para 64 of the Inspector’s Report (CD/01/16) that ....”Whilst Thatcham is an urban area closely related to Newbury, it is reasonable for the Council to consider that it is not part of the sub-regional hub. The Council also took into account the fact that Thatcham had seen considerable housing growth in recent years. It wants the focus to be on regeneration and renewal of facilities rather than further growth. These reasons resulted in the rejection of Thatcham as a location for a strategic site and provision for only a modest proportion of the growth apportioned to all urban areas.”</i></p> <p><i>“He then went on to say in paragraph 65 that “.....the approach in the Plan is a justified local choice made by the Council.”</i></p> <p><i>“In the context of paragraphs 64 and 65, the Inspector’s comments in paragraph 67 that “In any overall review to accommodate more housing, Thatcham would be a location to be considered again.....” The Council does not disagree with this comment but without a holistic approach to planning and delivering improvements to the infrastructure, further housing development would be premature and exacerbate pressure on services and facilities.”</i></p> <p>The Consortium notes that whilst the Core Strategy restricted housing delivery at Thatcham as this would <i>“be premature and exacerbate pressure on services and facilities”</i> and put the focus on <i>“regeneration to ensure that the infrastructure, services and facilities of Thatcham improve”</i>, the Core Strategy did not set out a clear mechanism as to how those improvements would be achieved. In short, the Council identified education capacity at Thatcham as a critical issue, but the level of development planned at the town through the Core Strategy would have been unable to significantly increase capacity.</p> <p>The Local Plan Review must take a sufficiently positive view as to how infrastructure provision and the accommodation of needs can be realised in parallel. In Thatcham for example where the provision of new housing will be a pre-requisite of supporting the regeneration of the town, a strategic view must be taken of the full infrastructure needs associated with growth to ensure that they can be addressed and delivered.</p>

Respondent	Response
	<p><i>The directing of additional development towards Thatcham would enable the provision of a range of infrastructure which would serving the needs of the development, also provide opportunities for the delivery of strategic new educational facilities to address current infrastructure deficiencies and serve the existing and future community.</i></p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>No. There is a significant omission in the strategic objectives in that the one relating to housing provision (Objective 2) makes no reference to rural communities. The adopted Core Strategy has a Strategic Objective relating to this matter which states that,</p> <p><i>'To secure provision of affordable and market housing to meet local needs in both urban <b>and rural areas</b> of the District. To provide homes in a way that <b>promotes sustainable communities</b>, providing a mix of house sizes, types and tenures to meet identified needs, and respond to the changing demographic profile of the District.'</i></p> <p>Some elements of this wording are included in draft strategic objective 2, but the reference to both 'urban and rural areas of the district' and promoting 'sustainable communities' are omitted. This needs to be added in as enabling rural communities to grow and thrive should be a key objective to reflect the policy advice contained in both the current NPPF and the proposed revisions to it as set out in the response to question 1.</p>
Woolf Bond Planning for Donnington New Homes	<p>We refer to draft strategic objective no. 2 (Housing) and make the following key points:</p> <p><u>Need for Housing in West Berkshire</u> The existing Core Strategy housing requirement provides for a lower housing requirement when compared to the objectively assessed housing need figure identified in the 2016 Berkshire SHMA. We therefore suggest that it is important that this <b>Local Plan Review allocates sites of varying scales and in a mix of geographic locations</b> to enable necessary future needs to be met and in turn secure appropriate flexibility to be built into the plan to provide the greatest possible opportunity to meet challenging housing requirements in the future.</p> <p><u>A minimum housing requirement</u> In March 2018, the Government published a draft revised NPPF for consultation incorporating policy proposals previously consulted on in the Housing White Paper and the 'Planning for the right homes in the right places' consultations.</p> <p>In launching the draft revised NPPF on the 5th March 2018, the Prime Minister referred to the decades of housing under delivery that have occurred and the social inequality issues resulting from the shortage of housing in the country:</p> <p>'The causes and manifestations vary from place to place but the impact is all too clear: in much of the country, housing is so unaffordable that millions of people who would reasonably expect to buy their own home are unable to do so. Others are struggling even to find somewhere to rent.</p> <p>...</p>

Respondent	Response
	<p><b>The root cause of the crisis is simple. For decades this country has failed to build enough of the right homes in the right places.</b></p> <p><b>So the shortage of housing in this country reinforces inequality. It prevents social mobility and stops people fulfilling their potential. It creates and exacerbates divisions between generations and between those who own property and those who do not’.</b></p> <p>In a supporting ministerial statement, the Secretary of State (‘SoS’) for Housing, Communities and Local Government (Sajid Javid) stated:</p> <p>‘The Government has made it clear that we need to get our country building. At Budget 2017 we set out reforms to enable us to achieve 300,000 homes built each year by the middle of the next decade. The Housing White Paper, published in February last year, set out our plans’.</p> <p>Paragraph 36 of the draft NPPF goes onto state:</p> <p>‘Strategic and local plans are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are ‘sound’ if they are:</p> <ol style="list-style-type: none"> <li><b>1. Positively prepared – provides a strategy which will, as a <u>minimum</u>, meet as much as possible of the area’s objectively assessed needs (particularly for housing, using a clear and justified method to identify needs); and is informed by agreements with other authorities, so that <u>unmet need from neighbouring areas is accommodated where it is practical to do so</u> and is consistent with achieving sustainable development;’ (Our emphasis)</b></li> </ol> <p>We recommend that the housing requirement to be met across the District is to expressed as a minimum figure. It follows that the emerging plan offers the opportunity to generate significant flexibility within the developable land supply so to ensure housing needs are met over the plan period. It follows that the challenging emerging housing requirement should be expressed as a minimum. We consider that the draft strategic objective relating to housing should reflect this. It follows that there is a need to insert substantial flexibility into the emerging plan in order to meet challenging housing targets.</p> <p><u>Meeting Unmet Needs from Adjoining Local Planning Authorities</u></p> <p>Alongside meeting its own objectively assessed housing need, the District is also bound by the positive preparation test of soundness requiring the District to accommodate unmet need from neighbouring authorities where it is practical to do so. Paragraph 4.45 of the draft Reading Borough Local Plan issued for consultation in May 2017 stated:</p> <p>‘Delivering the level of housing set out in policy H1 will mean that there is a shortfall of 943 dwellings when considered against Reading’s need. This will need to be accommodated elsewhere within the Western Berkshire Housing Market</p>

Respondent	Response
	<p>Area. The other three authorities within the HMA recognise that there will be issues with Reading's ability to accommodate its need within its own boundaries, and this issue is set out within the West of Berkshire Spatial Planning Framework to which the four authorities have signed up<sup>62</sup>. There will be continuing dialogue on this matter between the affected authorities which will inform the Pre-Submission Draft of the Local Plan. Where agreement is reached, it will be for individual authorities' Local Plans to specify where development will be located' (paragraph 4.4.5).</p> <p>It follows that the West Berkshire Local Plan may need to make a contribution towards the unmet housing need of Reading Borough, given its close geographical relationship and the acknowledgement in Reading Borough's Local Plan that its objectively assessed housing need cannot be met inside its tight administrative boundary. We also note that due to Reading Borough's tightly constrained urban nature the majority of new residential stock being permitted is for apartment led schemes. This has resulted in an imbalance in dwelling mix terms, especially when one considers that 60% of Reading's need for market housing is for 3 and 4 bedroom properties in the market sector (see Table 107 of the 2016 Berkshire SHMA)</p> <p>The above considerations place a requirement upon the District to potentially plan for a level of housing growth above West Berkshire's own need and a greater proportion of family sized residential dwellings.</p>
Woolf Bond Planning for Donnington New Homes	<p>We refer to draft strategic objective no. 2 (Housing) and make the following key points: Need for Housing in West Berkshire</p> <p>The existing Core Strategy housing requirement provides for a lower housing requirement when compared to the objectively assessed housing need figure identified in the 2016 Berkshire SHMA. This has resulted in an imbalance in dwelling mix terms, especially when one considers that 60% of Reading's need for market housing is for 3 and 4 bedroom properties in the market sector (see Table 107 of the 2016 Berkshire SHMA)</p> <p>The above considerations place a requirement upon the District to potentially plan for a level of housing growth above West Berkshire's own need and a greater proportion of family sized residential dwellings.</p>
Woolf Bond Planning for JJP Land	<p>We refer to draft strategic objective no. 2 (Housing) and make the following key points:</p> <p>The Local Plan Review has been substantially delayed &amp; the associated consequences for the Council's housing land supply position</p> <p>The Council's existing spatial strategy is set out in the 2012 Core Strategy. Policy CS 1 (Delivering New Homes and Retaining the Housing Stock) of this document states:</p> <p>'An update of the Strategic Housing Market Assessment (SHMA) (so that it accords with the requirements of National Planning Policy Framework, paragraph 159) will be undertaken within 3 years of the adoption of the Core Strategy. This will be carried out in co-operation with neighbouring authorities within the Housing Market Area. If the updated SHMA indicates that housing provision within the District needs to be greater than currently planned, a review of the scale of housing provision in the Core Strategy will be undertaken' (Our emphasis).</p> <p>Despite the clear requirement for the Core Strategy housing requirement to be reviewed within 3 years of the plan's adoption in 2012 and the publication of the Berkshire Strategic Housing Market Assessment over two years ago, it is only now that the Council has progressed to the earliest possible consultation stage relating to a new Local Plan. These facts have resulted in underlying under delivery against defined subsequent objectively assessed needs for housing. In addition, it has resulted in the Council becoming subject to a housing land supply shortfall, contrary to the requirements of NPPF paragraph 47. This housing land supply deficit was confirmed at the 2017 public inquiry relating to a proposal for</p>

Respondent	Response
	<p>up to 401 no. dwellings at Land adjacent to Hilltop, Oxford Road, Donnington, Newbury (PINS Ref. APP/W0340/W/16/3143214), where the Inspector stated:</p> <p>‘On that basis, the main parties agree that a five-year supply of deliverable housing sites cannot be demonstrated. The relevant policies for the supply of housing therefore attract less weight and the National Planning Policy Framework (the Framework) paragraphs 49 and 14 are engaged<sup>18</sup>. The presumption in favour of sustainable development in paragraph 14 of the Framework is agreed to apply’ (Our emphasis) (paragraph 19).</p> <p>It follows that the Council’s continued delay in producing a new Local Plan has resulted in a ‘planning by appeal’ approach whereby sites not identified in a plan led manner have come forward to fill unmet housing need shortfalls. Given the continued delay in reviewing the Local Plan and the associated consequences of this delay (i.e. a housing land supply deficit), it follows that this Local Plan Review must proceed at the promptest possible rate and allocate sites of varying scales and in a mix of geographic locations to ensure that necessary future needs are met and appropriate flexibility is built into the plan to provide the greatest possible opportunity to meet challenging housing requirements in the future.</p> <p>A minimum housing requirement</p> <p>In March 2018, the Government published a draft revised NPPF for consultation incorporating policy proposals previously consulted on in the Housing White Paper and the ‘Planning for the right homes in the right places’ consultations.</p> <p>In launching the draft revised NPPF on the 5th March 2018, the Prime Minister referred to the decades of housing under delivery that have occurred and the social inequality issues resulting from the shortage of housing in the country:</p> <p>‘The causes and manifestations vary from place to place but the impact is all too clear: in much of the country, housing is so unaffordable that millions of people who would reasonably expect to buy their own home are unable to do so. Others are struggling even to find somewhere to rent.</p> <p>...</p> <p>The root cause of the crisis is simple. For decades this country has failed to build enough of the right homes in the right places. So the shortage of housing in this country reinforces inequality. It prevents social mobility and stops people fulfilling their potential. It creates and exacerbates divisions between generations and between those who own property and those who do not’.</p> <p>In a supporting ministerial statement, the Secretary of State (‘SoS’) for Housing, Communities and Local Government (Sajid Javid) stated:</p>

Respondent	Response
	<p>'The Government has made it clear that we need to get our country building. At Budget 2017 we set out reforms to enable us to achieve 300,000 homes built each year by the middle of the next decade. The Housing White Paper, published in February last year, set out our plans'. Paragraph 36 of the draft NPPF goes onto state:</p> <p>'Strategic and local plans are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are 'sound' if they are:</p> <p>a) Positively prepared – provides a strategy which will, as a minimum, meet as much as possible of the area's objectively assessed needs (particularly for housing, using a clear and justified method to identify needs); and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;' (Our emphasis)</p> <p>The housing requirement to be met across the District is to be clearly expressed as a minimum figure. It follows that the emerging plan offers the opportunity to generate significant flexibility within the developable land supply so to ensure housing needs are met over the plan period. It follows that the challenging emerging housing requirement must be expressed as an absolute minimum. We consider that the draft strategic objective relating to housing should reflect this. It follows that there is a need to insert substantial flexibility into the emerging plan in order to meet such challenging housing targets. Any failure to not allocate a level of growth substantially above this minimum figure would fail the positively prepared, effective and justified tests of soundness.</p> <p>Meeting Unmet Needs from Adjoining Local Planning Authorities Alongside meeting its own objectively assessed housing need, the District is also bound by the positive preparation test of soundness requiring the District to accommodate unmet need from neighbouring authorities where it is practical to do so. Policy H1 of the Pre-Submission Draft Reading Borough Local Plan issued for consultation in November 2017 stated:</p> <p>'Provision will be made for at least an additional 15,433 homes (averaging 671 homes per annum) in Reading Borough for the period 2013 to 2036. The Council will continue to work with neighbouring authorities within the Western Berkshire Housing Market Area to ensure that the shortfall of 644 dwellings that cannot be provided within Reading will be met over the plan period.'</p> <p>It follows that the West Berkshire Local Plan should make a contribution towards the unmet housing need of Reading Borough, given its close geographical relationship and the acknowledgement in Reading Borough's Local Plan that its objectively assessed housing need cannot be met inside its tight administrative boundary (paragraphs 4.4.3 and 4.4.4). This places a requirement upon the District to plan for a yet higher level of housing growth.</p>
WYG for Donnington New Homes	Donnington New Homes support the proposed Draft Strategic Objectives as set out at Appendix 1. We particularly welcome objective 2, which seeks to ensure that the assessed need for market and affordable housing up to 2036 will be met across the District. Objectives 8 (GI and Healthy Living), 9 (Transport) and 10 (Infrastructure) are also welcome. The

Respondent	Response
	proposals for Sandleford Park South, as described in greater detail at Appendix A and below, will help deliver these objectives through the delivery of up to 500 homes, associated infrastructure and open space.

## Summary of responses

Overall there was general agreement with the revised strategic objectives. As part of that support though there were a number of requests for the clarification of certain definitions and also suggestions for revised wording and the inclusion of specific issues. The importance of ensuring the objectives are consistent with those contained in other Council plans and strategies was stressed.

The inclusion of a vision for the Review was thought to be a useful as it would help set the objectives in context.

Several responses expressed concern that the objectives did not distinguish between urban and rural areas. It was felt that specific mention of rural communities would be helpful and would encourage the provision of housing and support economic growth in rural areas.

The need for the objectives to be written in order to deliver and manage growth over the plan period was highlighted, whether that be moving towards a low carbon economy, fostering economic growth, or the encouragement of leisure activities.

There was some discussion, particularly from the development industry about ranking of the objectives. Two developers felt that there should be a ranking of what they felt were the most valuable objectives (ie. housing, climate change and sustainable and quality development), whilst a third felt there should be ranking that is reflective of the overarching objectives of the planning system.

Finally, there was also some overlap with issues considered in more detail under other questions such as:

- the need for an appropriate evidence base particularly for economy and green infrastructure;
- the need to meet the objectively assessed need over the Western Berkshire Housing Market Area;
- the need for the allocation of development sites of varying sizes;
- the need to meet the housing needs of key workers and other particular groups;
- to consider development needs and the provision of infrastructure in parallel. There was a feeling that the pressure on existing infrastructure was being overlooked and that infrastructure identified in the Infrastructure Delivery Plan has not delivered.

The key points raised on the individual objectives can be summarised as follows:

### *Objective 1: Climate Change (7 responses)*

- The Council cannot influence climate change.

- Concerns about the deliverability of the Objective – suggested ways of overcoming this include providing more context to demonstrate how combatting climate change can be achieved (eg. combine with Objective 3).
- The Objective should seek to move to a low carbon economy rather than minimise the demand for energy which implies restricting growth.
- The Objective should be focused on growth as this is where opportunities to address climate change will be available. Reference should be made to the Local Plan being the principle document for managing and delivering growth up to 2036.
- Narrow interpretation of climate change in Appendix 2 – policies listed under Objective 3 such as CS15 will also help to mitigate against the effects of climate change.

*Objective 2: Housing* (21 responses)

- Support for the allocation of various site promoted in the call for sites held last year.
- Sites of varying scales should be allocated. Larger allocations likely to deliver towards the end of the plan period.
- Recognition required of particular groups and the different types of accommodation needed, eg. self-builders, older persons.
- Council cannot demonstrate a five year supply of housing due to delays in the review of the Local Plan.
- The housing requirement should be expressed as a minimum.
- Unmet needs of neighbouring authorities should be accommodated.
- Cross border strategic planning should only be considered if the assessed needs of neighbouring authorities cannot be met.
- Objective makes no reference to rural communities or promoting sustainable communities
- Explicitly state that that the need for new housing will be met through the allocation of new housing sites.
- The economy drives the property market.
- Clarification required on the meaning of ‘responding to the changing demographic and health profile of the district’.
- Objective should include recognition of need to achieve growth and to promote sustainable communities
- Council should acknowledge link between the delivery of new housing and the maintenance of a strong, diverse and sustainable economic base.

*Objective 3: Sustainable and Quality Development* (8 responses)

- For reasons of clarity the objective should be re-phrased to refer to ‘...while using land efficiently with higher density housing’.
- Inclusion of reference to energy efficiency.
- High density developments do not contribute to attractive, safe and accessible environments.
- Expand objective to clarify that good design is also about developments functioning well, are affordable (not overburdened by design constraints), deliverable, and can be readily be adapted to meet changing needs.

*Objective 4: Economy* (4 responses)

- The Council cannot influence this objective.
- Include references to the designation of land in accessible locations, the need to respect the local environment, and the diversification and sustainability of the rural economy.

- The reference to the provision of employment land should be expanded to include support for the effective use of the District's existing employment areas.
- The Objective should seek to foster economic growth and ensure that there is the provision of sufficient employment land to meet assessed needs.
- Greater focus required on business development so to enable the growth of existing business, new business. The Objective should therefore be re-named 'Business Development'.
- The Local Plan strategy for employment must reflect the needs of the area.
- Green Park should be recognised as a key employment area.
- Consider the use of Article 4 Directions to restrict the loss of offices to residential under permitted development.
- Consider draft policy 8 of the Minerals and Waste Preferred Options which seeks to safeguard potential, planned, and existing minerals associated infrastructure.

#### Objective 5: Town Centres (4 responses)

- The strength of the local economy is the main influence on the success of high street businesses.
- Include references to accessibility and cultural uses.
- Re-word the objective to ensure that unfriendly neighbouring development does not take place.
- The Objective should recognise that town centres should be allowed to grow, change, and include a diverse mix of uses (that include housing, offices, live/work units) that reinforces their individual sense of place.

#### Objective 6: Culture (4 responses)

- Objective difficult to achieve in a time of cuts.
- Objective should also cover facilities that contribute to cultural well-being, eg. theatres, cinemas, and pubs.
- Definition of culture required.
- Questioned why heritage referenced when it has its own Objective (7).
- Consideration of the provision of hubs for major cultural, leisure and sporting events.

#### Objective 7: Heritage (4 responses)

- Definition of heritage required.
- Questioned whether non-physical elements should also be included.
- Inclusion of reference to the significance and special interest of heritage assets.
- Consider clarifying linkages with those in the Minerals and Waste Local Plan. Both plans should be consistent in their approach to policy issues for the application of policy in decision making.

#### Objective 8: Green Infrastructure and Healthy Living (10 responses)

- Objective needs strengthening by ensuring the environment is protected and the AONB enhanced.
- Biodiversity not covered.

- Inclusion of reference to blue infrastructure.
- Recognise the needs of the equestrian industry in order to enable the equestrian economy to thrive.
- The objective should not be limited to 'sustainable communities', and should instead cover all existing and future residents regardless of whether they meet the definition of sustainability or not.
- The definition of multi-functional green space needs reviewing.
- Policy framework for supporting open spaces unclear.

#### Objective 9: Transport (4 responses)

- The Objective should be linked to other non-transport journeys that reduce the need to travel, high speed broadband and provision of local employment.
- Consider clarifying linkages with those in the Minerals and Waste Local Plan. Both plans should be consistent in their approach to policy issues for the application of policy in decision making.

#### Objective 10: Infrastructure (4 responses)

- Existing infrastructure overlooked – capacity concerns, some communities would benefit from infrastructure linked to growth, infrastructure identified in the Infrastructure Delivery Plan has not delivered.
- The Local Plan Review must consider accommodation needs and the provision of infrastructure in parallel.
- Current policy is too focused on housing and not infrastructure.

### **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR).

The Council agrees that the inclusion of an overarching Vision would be particularly helpful and assist in setting the Strategic Objectives in context.

The general agreement amongst respondents with the draft Strategic Objectives is welcomed. It is acknowledged that they are broad and wide ranging and that is some overlap between them. In this context some definitions, such as culture and heritage, are also used in their broadest sense. The Objectives apply across the whole of the District, in both urban and rural areas. Although some respondents proposed a ranking of the Objectives the Council does not consider, in the interests of sustainable development, that would be appropriate.

Minor clarifications will be made to individual Objectives in response to some of the detailed comments made.

### Responses received to the Local Plan Review Scoping Report (February 2018)

**Q3: Do you think our existing spatial strategy (as set out in the Core Strategy) is the most appropriate for development to 2036? If not please tell us why and give reasons for your answer.**

Number of responses received: 47

Respondent	Response
<b>Internal</b>	
Public Transport Team, West Berkshire Council	<p>The existing Spatial Strategy represents a good basis for development. It is important that the opportunity of reducing out-commuting and the need to travel - through the provision, development and retention of local employment opportunities in sites that are accessible by public transport, cycling and walking, and through enabling and encouraging home-working – remains at the forefront in determining proposals for development.</p> <p>It is equally important that any extensions to or infill development within, established urban areas, rural service centres and service villages (as identified in the District Settlement Hierarchy and reflected in Area Delivery Plan Policy 1) are appropriately and sensitively integrated into those established settlements, and specifically including the construction, extension or adaptation as appropriate of sustainable transport links so as to provide logical through routes connecting the development areas without requiring substantial deviation.</p>
<b>Statutory consultees</b>	
Stratfield Mortimer Parish Council	<p>The spatial strategy seems to be just a roll forward of the existing strategy. It seems apparent, from the volume of objections to the current manifestation of the strategy, that it does not accord with the wishes of the public even if it does provide the requisite amount of development. We suggest that a different approach should at least be given serious consideration. In particular a lot of the opposition to new development seems to arise from the lack of infrastructure, of many types, that is provided. Could this not be overcome, at least in part, by the greater promotion of Garden Villages? It is our understanding that such developments are only allowed where infrastructure is part of the package.</p> <p>This also picks up on the aspects of our serious concern for the lack of an objective related to communities. There is a danger that, by simply adding development to existing communities, you alter the very nature of that community. Clearly this is most obvious when development is added to small communities. But at what stage does a rural service centre morph into a small town because of more and more development and what effect does that have on its sense of</p>

Respondent	Response
	<p>community? A well-designed Garden Village, on the other hand, could be encouraged to develop its own community ethos as it is developed.</p> <p>In essence we are suggesting a strategy which does not just take what exists at present and adds bits and pieces. Rather it takes a more holistic approach to the whole District and examines the best way forward that will meet the aspiration of current residents, while at the same time meeting the legitimate demand for new development.</p>
Aldermaston Parish Council	<p>Aldermaston Parish Council asks that you review the status of Aldermaston Village as we believe recent changes may make it unable to meet the criteria of a service village.</p> <p>These changes include reduction of the bus service and closure of the post office.</p>
Thatcham Town Council	Yes
Streatley Parish Council	<p>Streatley Parish Council believes that the existing spatial strategy set out in the current Core Strategy is still the most appropriate. It was completed after extensive research and consultations, plus inspector hearings in 2008-2012 and nothing much has changed to warrant any further extensive (and expensive) review.</p> <p>The current settlement hierarchy in particular is still very appropriate. The distinction between urban, rural service centres, service villages and other villages is clear, well understood and accepted. The Parish Council strongly believes that the current status of Streatley as a village should be maintained. Nothing has changed since the previous evaluation and consultation except perhaps that its status has further worsened by the elimination of the Thames Travel public bus service. Streatley still has no shops, no Post Office, no bank, no medical surgery and no public transport (other than volunteer transport). Most residents are obliged to travel by car for these services to neighbouring larger settlements such as Goring, Woodcote, Pangbourne or Wallingford.</p> <p>Although Goring is relatively close, it is still not possible for many residents (particularly the old and young) to walk there, and it is in a different County and Local District with different priorities and policies, and a very different historical and development background.</p> <p>Furthermore, Streatley remains a very environmentally sensitive small village within the beautiful Goring Gap area. It is within the North Downs AONB and borders another AONB. It has extensive National Trust lands which overlook the village as well as an area of Special Scientific Interest, again overlooking the village. It also has an historic and now rare village layout with green animal grazing fields bordering the High Street in the middle of the village.</p>
Holybrook Parish Council	<p>Holybrook agree that the existing spatial strategy and dividing the District into different geographical areas are the most appropriate ways to deliver the spatial strategy. However, Holybrook, alongside Tilehurst and Purley, is considered to be urban. Therefore, much of the proposed development will be concentrated in these areas.</p>
Pangbourne Parish Council	<p>The spatial strategy is sound and fit for purpose. The relatively recent development of a collaborative approach by the four West of Berkshire authorities – WBC, Reading, Wokingham and Bracknell Forest – should result in an agreed optimum locational plan for future housing and infrastructure (Spatial Planning Framework). I particularly support the following vision statement (p.2):</p>

Respondent	Response
	<p>“It is intended to develop a collaborative model for the successful delivery of high quality new and expanded communities with appropriate infrastructure rich provision that is of benefit to the existing and new residents of the area. New and expanded communities will be in locations which are less disruptive to the amenities and interests of our existing residents. They will provide a high standard of amenity and development which will give high priority to the natural environment. New transport infrastructure will be integrated and involve high levels of investment in modern public transport systems. The collaborative approach will also seek to attract ongoing funding from developers and match funding and investment from government agencies to enable the timely delivery of both development and the associated infrastructure.”</p>
Burghfield Parish Council	Yes. It worked well in relation to the current Local Plan and I see no reason to change it.
Burghfield NDP Steering Group	Yes. It worked well in relation to the current Local Plan and we see no reason to change it.
Environment Agency	<p>We are pleased to see that the existing spatial strategy in the Core Strategy document covers Green Infrastructure, biodiversity and wildlife corridors. However you will need to consider the avoidance of fluvial flood risk when considering the location of development and settlements in your spatial strategy in order to be compliant with national planning policy. Paragraph 101 of the National Planning Policy Framework (NPPF) says:</p> <p>“The aim of the Sequential Test is to steer new development to areas with the lowest probability of flooding.”</p> <p>This needs to be applied to your spatial strategy when considering the location of all new development. This includes housing, transport links, retail, hospitals, schools, offices and land safeguarded for future development.</p>
Savills for Thames Water	We have no objection to the existing special strategy.
<b>General consultation bodies</b>	
British Horse Society	It seems appropriate from an equestrian point of view.
Theatres Trust	Yes
<b>Other stakeholders</b>	
Robert Wallace	No - it's out of date - people live and travel widely across and beyond the County boundaries - the division into "Urban" and "rural" communities has all but disappeared and will be long gone by 2026
David Lister	The Spatial Strategy makes no reference to extra land for education needs. The Kennet secondary school in Thatcham is already over-subscribed and unable to serve West Thatcham. The spatial strategy must at least address the capacity needs on schools and determine whether further land is required for their extension or replacement.

Respondent	Response
William Graham	Yes
Christopher Gent	We believe that the spatial strategy is appropriate
<b>Landowners, site promoters and developers</b>	
Barton Willmore for Graham Child	<p>Our client considers that the Core Strategy Policy ADPP1 was prepared at a time when the spatial portrait of the District may have looked different, prior to subsequent development that has taken place. Whilst the spatial strategy is therefore not disagreed with in principle, our client would highlight the need to identify the role and function of each settlement, to ensure the appropriateness of the spatial strategy. We note that the need for this information is discussed at paragraph 5.4 of the scoping report. We do not consider that sufficient evidence has been gathered to assess the baseline situation, in accordance with the Sustainability Appraisal, in order to answer this question comprehensively at the current time. In addition, we consider that the spatial strategy should also be informed by a review of the boundaries of each settlement, in order to facilitate sustainable development and ensure that the growth of Urban Areas, Rural Service Centres and Service Village is not unduly restricted during the plan period. Imperatively, as the adopted West Berkshire Core Strategy (2006-2026) notes at paragraph 4.38 <i>“The North Wessex Downs AONB covers 74% of West Berkshire...”</i>. Moreover in relation to Pangbourne the Core Strategy notes at paragraph 4.41 that:</p> <p><i>“Small scale extensions in keeping with the existing character and pattern of the development and in line with Pangbourne’s role as a rural service centre will help address issues of local housing need and provide opportunities for local people to buy a home in the village.”</i></p> <p>It is therefore clear that given the area it occupies, the AONB should be appropriately reviewed, particularly at settlement edges, to ensure that sustainable sites that do not have a detrimental impact on the wider setting of the AONB can come forward. It is further clear that the strategy has previously considered small scale extensions at Pangbourne a suitable strategy in this regard. The Council should note that this strategy was employed to deliver the Core Strategy housing requirement only, and it should therefore now be re-visited again in light of the new and increased housing need within West Berkshire. In this regard our client would highlight that their land at Pangbourne Hill straddles the development boundary of Pangbourne (Rural Service Centre) and should be considered as a suitable allocation, to contribute to the District’s housing need.</p> <p>We note that the North Wessex Downs AONB washes over Pangbourne. Consequently, we have had due regard to the test associated with paragraph 116 of the NPPF 2012. Referring to designated areas, which include Areas of Outstanding Natural Beauty, paragraph 116 states:</p> <p><b><i>“Planning permission should be refused for major developments in these designated areas except in exceptional circumstances and where it can be demonstrated they are in the public interest. Consideration of such applications should include an assessment of:</i></b></p> <ul style="list-style-type: none"> <li data-bbox="667 1284 1973 1342">• <b><i>The need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy;</i></b></li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• <b><i>The cost of, and scope for developing elsewhere outside the designated area, or meeting the need for it in some other way; and</i></b></li> <li>• <b><i>Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be ”</i></b></li> </ul> <p>The definition of ‘major’ developments, for the purpose of paragraph 116, is not clearly defined, however in any event we submit that our client’s site would not be considered ‘major’ development for this test. Notwithstanding this, we have considered the associated bullet points and consider that:</p> <ol style="list-style-type: none"> <li>1. there is/will be a need for development within the District and more specifically a need for housing within Pangbourne as one of the areas for development focus;</li> <li>2. as Pangbourne is washed over by the AONB, there is no opportunity to develop in this location without developing within the designated area; and as we have demonstrated via the submitted Landscape Appraisal and associated Opportunities and Constraints Plan the development of the site will not result in any detrimental effect on the environment or landscape.</li> </ol> <p>In addition, and for clarity, we note the draft NPPF (March 2018) replicates the above wording at paragraph 170.</p>
Barton Willmore for Sulham Estate	<p>Whilst we do not disagree with the spatial strategy in principle, this should be viewed in the context of when the strategy was originally prepared and the subsequent development which has taken place that may have changed the spatial context of the District. It should also be viewed in the context of National Policy which has changed since the spatial strategy was adopted and includes the need to boost significantly the supply of housing (NPPF, Paragraph 47). The spatial strategy identifies Newbury, Thatcham and the Eastern Urban Area which includes Tilehurst, Calcot &amp; Purley on Thames as ‘Urban Areas’ which offer a wide range of services. On behalf of our client, we consider that given the sustainable nature of the existing Urban Areas, opportunities should be explored for development on sites which adjoin settlement boundaries. This should include sites which are currently within the AONB.</p> <p>With this in mind, our client’s site, Land at Hall Place Farm Tilehurst, provides the opportunity to accommodate in the region of 80 new homes within a sustainable location adjoining the Eastern Urban Area. The site has low landscape sensitivity as its landscape character is heavily influenced by its urban fringe location and the surrounding ancient woodland to the north and west which shields views of the site from the wider AONB. As such, subject to a sensitive and high-quality design and an appropriate landscaping strategy, the site presents an important opportunity to deliver sustainable development.</p> <p>We note that paragraph 115 of the NPPF attaches great weight to conserving landscape and scenic beauty in Areas of Outstanding Natural Beauty and our client is fully supportive of this position. Nevertheless, due to the overall low character sensitivity of the site, we do not consider that the delivery of this development would compromise the conservation of the landscape and scenic beauty of the wider AONB. As such, we do not consider that the allocation of this site for residential development would conflict with national policy.</p> <p>Further to Paragraph 115 of the NPPF, in relation to development within Areas of Outstanding Natural Beauty, paragraph 116 of the NPPF states the following:</p>

Respondent	Response
	<p><b>“Planning permission should be refused for major developments in designated areas except in exceptional circumstances and where it can be demonstrated they are in the public interest. Consideration of such applications should include an assessment of:</b></p> <ul style="list-style-type: none"> <li>• <b>The need for the development, including in terms of any national considerations, and the impact of permitting it or refusing it, upon the local economy</b></li> <li>• <b>The cost of, and scope for, developing elsewhere outside the designated area, or meeting the need for it in some other way</b></li> <li>• <b>Any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be ”</b></li> </ul> <p>It is important to note that we do not consider the proposed delivery of up to 80 dwellings in this location to constitute major development in the context paragraph 116 of the NPPF. This is due to the site adjoining the Reading Urban Area conurbation.</p> <p>Nevertheless, should the view be taken that the proposal would constitute a major application in the context of paragraph 116 of the NPPF, we consider that the site can meet the assessment set out in the bullet points above. Firstly, in relation to need, there is a recognition at National Policy level of the need to deliver more housing, particularly in the south east and particularly in sustainable locations. As such, there is a clear need for this development to come forward.</p> <p>Secondly, in relation to delivering elsewhere outside of the designated area, we note that the Council’s existing spatial strategy directs development towards the Eastern Urban Area. It is noted that there are increasingly limited opportunities to deliver within the Eastern Urban Area due to previous development and existing allocations. It is also noted that 74% of the borough is covered by the AONB. As such, in informing their emerging spatial strategy, the Council need to look at the opportunity to deliver housing development in sustainable locations which directly adjoin the settlement and are well related to existing infrastructure and services.</p> <p>Thirdly, in relation to a detrimental effect on the landscape, as set out within the Landscape Capacity Assessment which accompanies these representations, overall the site has low landscape sensitivity and the potential to accommodate residential development due to urbanising features including the settlement edge and existing built form within the site.</p>
Bewley Homes	<p>We do not agree that the Spatial Strategy should be based on the four spatial areas. It applies generalisations to areas without considering the role and function of individual settlements and their ability to accommodate growth.</p> <p>In the current Local Plan the East Kennet Valley area was allocated relatively low growth to reflect the more limited services and poorer transport links. In the example of Woolhampton which falls within this area, it is considered that an assessment of its characteristics and services would demonstrate that it is a location that could accommodate growth.</p> <p>Further consideration should be given to the individual character, facilities and transport connectivity of settlements and their ability to deliver more growth. This is explained in more detail in Question 4.</p>
Boyer Planning for Spitfire Bespoke Homes	<p>The Council’s current spatial strategy (to 2026) as set out in the Core Strategy Policy ADPP1 provides a settlement hierarchy for West Berkshire, having regard to the role and function of the settlement. As a small village, Beenham is not included in the current settlement hierarchy.</p>

Respondent	Response
	<p>Spitfire are concerned that it is the Council's intention to continue to adopt this approach to 2036 by building on the existing settlement pattern and use of a hierarchy of settlements as the focus for development.</p> <p>Spitfire support the Council's intention to re-examine the current role and function of each of the individual settlements, although a review of Beenham, which offers limited services, is unlikely to be ranked in the revised settlement hierarchy. Spitfire consider that it is essential that the future sustainability of each settlement is considered as part of the settlement hierarchy review. For smaller settlements, like Beenham, which have limited facilities, without some housing growth to support improved and new social and community infrastructure, the smaller villages will continue to suffer and any remaining community infrastructure (like Beenham Primary School) will be at risk of closure.</p> <p>As such, it is essential that West Berkshire plan for housing growth in smaller villages like Beenham to improve the sustainability of the village for the future.</p> <p>Allowing further growth in smaller villages like Beenham is consistent with paragraph 80 of the draft NPPF which highlights the importance of plans needing to identify opportunities for villages to grow:</p> <p>'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Plans should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.</p> <p>For the above reasons, Spitfire suggest that a sustainable residential extension of Beenham, including 3.19ha of land to the south of Back Lane should be identified in the emerging Local Plan. The site could be delivered inside a 5 year period and therefore soon after the adoption of the plan.</p>
Mark Carter for Mr R.L.A. Jones	<p>The Respondent considers that the existing spatial strategy is the most appropriate for the District.</p> <p>In particular re affirmation that Lambourn is a "rural service centre" that can accommodate further (housing) development including the Respondent's site previously identified as LAM007 "land between Folly Road, Rockfel Road and Stork House Drive, Lambourn".</p> <p>Lambourn still has a range of services and reasonable public transport provision which also serve the requirements of surrounding communities and these should be reinforced.</p> <p>Although there is much discussion about the role of surrounding Districts in meeting housing need these Districts are already heavily constrained and are unlikely to contribute. West Berkshire should be looking to meet its own (housing) needs within its boundaries.</p>
Carter Jonas for Hermitage Farms	<p>The NPPF sets out a presumption in favour of sustainable development. Whilst it is accepted that the larger settlements and growth areas such as Newbury will receive the majority of the forecasted growth, the Local Plan Review should seek to allow more housing and employment opportunities on the edge of smaller settlements in West Berkshire, on a proportionate basis, to promote the rural economy and to ensure the local services and facilities are maintained and to improve levels of affordability in rural areas.</p> <p>There are sustainable settlements located in West Berkshire which are not constrained by planning restrictions such as Green Belt and environmental constraints such as areas prone to flooding. Furthermore, smaller sustainable settlements</p>

Respondent	Response
	<p>such as Hermitage contain local facilities. To support these existing services and facilities and to improve the availability of affordable housing provision of new homes is needed in smaller settlements.</p> <p>Hermitage is considered to be a highly sustainable location for new residential and employment development. It would be able to connect into existing infrastructure and would make a significant contribution to the viability and vitality of Hermitage.</p> <p>The sites are either immediately adjacent to or in close proximity to Hermitage. Hermitage benefits from a range of services including a primary school, two public houses, general store and post office, garden centre and a number of light industrial units. The village has a good vehicle access to the M4 motorway and the A34 and there is a regular bus services into Newbury. Appropriate design and landscaping would ensure that development is physically and visually well contained and does not adversely affect the character and appearance of the AONB. There are no known constraints which would impact on the availability, suitability or achievability of development of the sites.</p> <p>Hermitage Farms would encourage amendments to the current spatial strategy to allow for more flexibility in delivering new homes and employment sites in some of the more sustainable villages which have a wide range of local shops, services and community facilities, which are not constrained by environmental or landscape designations and where deliverable sites exist adjacent to the village, such as at Hermitage.</p> <p>This strategy would make a significant contribution to housing and employment needs within West Berkshire. New housing development would ensure that sites are allocated which can contribute to the five year housing land supply. Hermitage Farms note that a significant proportion of the planned housing will be delivered on strategic sites. Large strategic sites and new settlements (such as the one being promoted at Grazeley) will require significant infrastructure provision before any homes can be built. This strategy should be balanced with a strategy which allocates smaller sites adjacent to villages. Sites such as those identified within Appendix 1 &amp; 2 require much less investment in infrastructure and can be bought forward quickly and easily, contributing to and sustaining the Councils five year housing land supply.</p>
The Chilton Estate	<p><u>Rural Service Centres and Villages</u></p> <p>The policies of the Plan should reflect the need to keep these settlements alive and thriving by encouraging small scale development in villages and larger ones of up to 100 dwellings in Rural Service Centres where people wish to live and where young people are being priced out of the market.</p>
Fisher German LLP for Mr Musgrave and Begley	<p>The existing spatial strategy is not considered to be the most appropriate strategy.</p> <p>Agree to a certain extent, that most development will be within or adjacent to the settlements included in the settlement hierarchy, and related to the transport accessibility of the settlements, their level of services and the availability of suitable sites for development.</p> <p>However, whilst it is laudable to aim for the majority of development to take place on previously developed land it is inevitable that green field land will be required to meet the increasing housing needs. As such it is considered that the statement should be omitted given it is unlikely to be met.</p>

Respondent	Response
	<p>The Strategy focusses most development to the urban areas. Clearly some of the most suitable locations for development will be in accessible locations in and around the urban area, however development, particularly affordable housing, the provision of jobs, social and community facilities is required to help sustain, enhance and make both the area's towns and villages more self-supporting places to live and work.</p> <p>The Council should recognise that some villages have experienced the loss of vital services such as shops and pubs in recent years and that changing the current strategy of relative restraint in the rural area could increase the population and change the age profile of rural villages.</p> <p>It should also be acknowledged that an increase in activity and spending power would support existing vulnerable village services and facilities, possibly leading to new provision. In addition, a range of development sizes in the rural villages would be likely to bring with them a range of types and sizes of housing, which would provide more choice for existing residents wanting to stay within a village but down-size.</p> <p>As such rural service centres and service villages have a role to play in accommodating growth which can play a role in enhancing or maintaining the vitality of villages.</p> <p>The above is even more important to consider when the OAN for West Berkshire has been increased from 525 dpa to 665 dpa, an increase of 140dpa. The rural areas have capacity in a number of the settlements to accommodate these increases.</p> <p>In addition, it is clear that the neighbouring authority of Reading Borough Council is unable to meet its own housing need. The West of Berkshire Spatial Planning Framework, states that: <b><i>“This will help meet needs across the Western Berkshire HMA, helping to deliver housing for areas which can't meet all of their needs within their own boundaries. In particular it is already clear that Reading with its tight urban boundaries will find it difficult to accommodate its Objectively Assessed Need (OAN) for housing identified in the SHMAA.”</i></b></p> <p>At this stage it is understood that West Berkshire, Wokingham and Bracknell Forest Council's will need to accommodate approximately 1,000 homes of Reading's unmet needs. The initial response from West Berkshire however has been dismissive of this stating it is too early in the Plan making process itself to understand if it can accommodate this unmet need, however a Memorandum of Understanding signed by the four Western Berkshire HMA authorities that Reading's unmet need will be accommodated in the HMA. The breakdown of where this should be met within the HMA is not identified, but it is anticipated that West Berkshire, as the much larger of the authorities, will need to accommodate much of this.</p> <p>It is therefore even more imperative that the new spatial strategy considers the suitability of each of the settlements in the District for growth, including the rural areas, as these are areas that are able to proportionately grow and enhance their services and facilities without adversely impacting on them.</p>
Gladman Developments	<p>A range of spatial strategy options will need to be tested as part of the preparation of the new Local Plan for West Berkshire. The existing Core Strategy advocates an approach that seeks to direct development based on the existing settlement pattern, focussing growth in areas depending on their role and function within the settlement hierarchy. Gladman are of the view that development should continue to be directed in accordance with a settlement hierarchy,</p>

Respondent	Response
	<p>ensuring that meaningful levels of growth are planned to enable and support the sustainability of a wide range of communities and settlements. The Council's evidence base will need to carefully consider the needs of settlements and communities across the District in setting a strategy that supports the current and future needs of communities whilst fully realising the areas sustainable economic growth potential. Gladman therefore welcome the Council's intention to reexamine the current role and function of all individual settlements across the District as part of the process of reviewing the Local Plan.</p>
Hallam Land Management	<p>Whilst the current settlement hierarchy continues to be relevant, there is no flexibility in the current strategy for development opportunities beyond urban extensions and infill. The inflexibility of this approach is neither justified or practical if the Council is genuinely committed to delivering the most sustainable pattern of growth within the District and it is imperative therefore that the strategy also accommodates the opportunity to consider the potential for a new settlement proposal and specifically the new community proposals south of Reading.</p>
Nexus Planning for Pangbourne Beaver Properties Ltd	<p>The Scoping Report notes that Core Strategy Policy ADPP1 sets out the current spatial strategy for delivery of growth within West Berkshire, seeking to strike a balance between:  “protection of the District’s environmental assets and improving the quality of life for all, ensuring that necessary change and development is sustainable in the interests of future generations”.</p> <p>That strategy adopts a hierarchy of settlements that states:  “Most development will be within or adjacent to the settlements included in the settlement hierarchy set out below, and related to the transport accessibility of the settlements (especially by public transport, cycling and walking) their level of services and the availability of suitable sites for development. The majority of development will take place on previously developed land.”</p> <p>The Council suggests in the Scoping Report that the emerging Local Plan would continue to build on the existing settlement pattern, using the hierarchy of settlements as the focus for development. PBP Ltd broadly support this approach.</p> <p>It goes on to suggest that the current role and function of all individual settlements would be re- examined to ensure the settlements identified in each category remain the most appropriate.</p> <p>The policy designates Pangbourne as a Rural Service Centre, along with Burghfield Common, Hungerford, Lambourn, Mortimer, and Theale. Of these six villages only four (Hungerford, Pangbourne, Mortimer and Theale) benefit from a railway station. Given the increasing importance of the railway system and proximity to railway stations for future sustainable transport it is considered that the status of these four settlements that have a railway station should be elevated by designating them as <u>Principle Rural Service Centres</u>. This designation should then facilitate policies that would allow for appropriate amounts of housing to be directed to these villages.</p>
Nexus Planning for Croudace Homes	<p>The Scoping Report notes that Core Strategy Policy ADPP1 sets out the current spatial strategy for delivery of growth within West Berkshire, seeking to strike a balance between:  “protection of the District’s environmental assets and improving the quality of life for all, ensuring that necessary change</p>

Respondent	Response
	<p>and development is sustainable in the interests of future generations”.</p> <p>As part of that strategy a hierarchy of settlements has been outlined which includes Thattham as one of three ‘Urban Areas’ in the top tier of the hierarchy, along with Newbury, and the Eastern Urban Area (Tilehurst, Calcot &amp; Purley on Thames). This, the Council suggests, allows urban development to be maximised and a combination of strategic urban extensions and smaller sites for housing to be identified.</p> <p>It is the opinion of Croudace Homes that ADDP1, in so far as it relates to the broad distribution and location of new housing, shows a high degree of consistency with the relevant policies of the Framework. In particular, Croudace Homes fully supports the identification of Thattham as an ‘Urban Area’ in the top tier of the settlement hierarchy reflecting its status as one of the most sustainable settlements in the District to accommodate strategic levels of housing growth.</p> <p>The Council suggests in the Scoping Report that the emerging Local Plan would continue to build on the existing settlement pattern, using the hierarchy of settlements as the focus for development. Croudace Homes therefore supports this approach. It goes on to suggest that the current role and function of all individual settlements would be re-examined to ensure the settlements identified in each category remain the most appropriate.</p> <p>In that context, the Council will be aware that Thattham is allocated for growth of around 900 dwellings under Policy ADPP3 of the Core Strategy, compared to approximately 1,400 dwellings in the Eastern Urban Area (ADPP4) and 5,400 dwellings at Newbury (ADPP2). The Core Strategy Inspector provides useful guidance in terms of the growth potential at Thattham when he states that:</p> <p>“65. The Council’s focus on Newbury and the modest level of provision made at Thattham is not the only approach that could have been pursued. Additional development at Thattham might be able to contribute to some of the infrastructure improvements and other changes the Council seeks. In the light of the planned review of housing provision, the approach to Thattham may need to be reviewed if additional housing has to be accommodated in the District”.</p> <p>66. The Council accepts that the policy for Thattham should acknowledge that the delivery of planned provision will include greenfield sites adjoining the settlement. This is necessary for effectiveness in subsequent delivery. The Council also accepted that one consequence of the policy for Thattham is that, compared with Newbury, local needs will be addressed far less effectively...”</p> <p>4.6 In formulating the Core Strategy spatial policies, the level of growth at Thattham was debated. The Council’s policy for relatively modest growth, despite its Main Urban Area status, was influenced by the fact that Thattham had seen considerable growth in recent years, with the focus being on regeneration and renewal. The Core Strategy Inspector concluded that:</p> <p>“65.... For the present, the approach in the Plan is a justified local choice made by the Council.</p> <p>67. In any overall review to accommodate more housing, Thattham would be a location to be considered again for additional housing, consistent with its position at the top tier of the settlement hierarchy”.</p> <p>The policy position at Thattham at that time was not based upon a definitive infrastructure constraint; it was based upon a ‘local choice’ with the Inspector acknowledging that another strategy for higher growth at Thattham would have, and indeed may be equally appropriate.</p>

Respondent	Response
	<p>It should also be noted that this policy position was established when preparing the Core Strategy in 2009/2010. Nearly a decade has elapsed since the decision was made to give Thatcham a period of consolidation. In that time, Thatcham has seen very modest levels of housing growth, indeed the HSA DPD includes only a single allocation at Thatcham - land at Lower Way, allocated for approximately 85 dwellings.</p> <p>The level of growth at Thatcham is in stark contrast to the other settlements within the top tier of the settlement hierarchy where growth has been substantial. A contrast which is even more stark when the approved development for up to 400 dwellings on Land adjacent to Hilltop, Oxford Road, Donnington, Newbury (APP/W0340/W/16/3143214) is taken into account.</p> <p>Given its position in the settlement hierarchy, its high level of sustainability, the lack of growth over the life of the Core Strategy and comments made by the Appeal Inspector, it is clear that that Thatcham should be expected to accommodate a substantial level of growth within the emerging local Plan. With limited capacity with settlement boundaries (as evidenced through the HSA DPD), this must include sustainable greenfield sites on the edge of the settlement. In that regard, it should be noted that there are no technical issues that would preclude growth at Henwick Park and Croudace Homes consider that it should be allocated for development comprising at least 225 dwellings in the emerging Plan to help meet development needs.</p>
Origin3 Ltd for Sandtrend Ltd	<p>We support the Council's strategy to deliver housing through a combination of strategic urban extensions and smaller sites, which should be identified within a housing trajectory through this LPR process.</p> <p>The adopted Core Strategy spatial strategy applies a three tier settlement hierarchy prioritising and directing growth to Urban Areas (Newbury, Thatcham and the Eastern Urban Area). Rural Service Centres and Service Villages are identified as the next two tiers to accommodate a lesser level of growth commensurate to the scale of the towns and villages.</p> <p>We support the principle of the existing spatial strategy in directing growth to key Urban Areas as they are generally the most sustainable locations to locate new housing, close to existing services, facilities and transport hubs.</p> <p>Newbury is the largest town in West Berkshire with a wide range of employment opportunities, services and facilities. The recent electrification of the rail line between Newbury and Reading will further facilitate faster, direct connectivity to Reading. Newbury therefore remains the most suitable location to direct new growth in West Berkshire.</p> <p>Shaw-cum-Donnington is located immediately north of Newbury and the built environment and road connections are contiguous with Newbury. It therefore forms part of the wider urban area. This should be clarified within the settlement hierarchy, particularly so in light of the recent grant of planning permission at appeal for 401 dwellings at Hilltop in March 2017, directing growth to the north of the town towards Donnington (Application Ref. 14/02480/OUTMAJ).</p> <p>We support the Council's objective to deliver new housing through a combination of urban development, strategic urban extensions and smaller sites to ensure a balanced delivery across the plan period.</p> <p>The existing spatial strategy puts a lot of reliance on delivery at two key strategic sites in Newbury at Sandleford Park (2,000 dwellings) and Newbury Racecourse (1,500 dwellings). Sandleford Park in particular has not delivered at</p>

Respondent	Response
	<p>anticipated rates to date which was a contributing factor to West Berkshire recently being unable to demonstrate a five year supply of deliverable housing sites.</p> <p>Strategic sites can deliver significant benefits in terms of mixed-use development land and infrastructure however they inevitably take significantly longer to come forward. It is understood that the existing Core Strategy housing allocation at Sandleford Park will realistically be developed towards the latter part of the plan period. Opportunities for a new strategic development at Grazely would be of a similar timeframe, if not longer.</p> <p>It is therefore key that the LPR identifies a balanced mix of housing sites to meet OAHN across the plan period particular for years 0-5 and years 6-10, as required by the NPPF.</p> <p>We support the Council's objective to maximise urban development where possible however point out that many of these opportunities have been explored at length through the Core Strategy and Site Allocations Development Plan Documents (DPDs) meaning development at Greenfield sites on the edge of settlements will inevitably be required in the right locations to balance supply.</p> <p>Urban extensions provide one of the most sustainable and appropriate ways of delivering housing, being able to provide a range of housing and crucially, being able to meet local affordable housing need. They allow new homes to be provided in the most appropriate locations taking into account housing need and connectivity (in locations that do not exacerbate existing congested routes), as well as being able to provide significant contributions towards local infrastructure.</p>
Pegasus Planning Group Ltd for Donnington New Homes (re. Long Lane, Newbury)	<p>Yes – the gradual expansion of existing towns and villages through the allocation of appropriately sized sites adjacent to the settlement boundaries is the most appropriate strategy for development to 2036. This strategy is the most appropriate for a number of reasons. Developing new homes on the edges of existing settlements means that existing infrastructure can be utilised and improved. Roads, schools, hospitals/surgery's, shops and other infrastructure already exist, and new development can contribute towards this infrastructure through developer contributions, providing benefits for existing and new residents alike.</p> <p>The prior existence of infrastructure, means that such developments can be built out much more quickly than larger, strategic sites. These strategic sites will require infrastructure to be built from the ground up, which takes time and may delay housing delivery. This means that they contribute towards increasing housing land supply in the short term, alleviating immediate pent-up housing need.</p>
Pegasus Planning Group Ltd for Donnington New Homes (re. Smitham Bridge, Hungerford)	<p>Yes – the gradual expansion of existing towns and villages through the allocation of appropriately sized sites adjacent to the settlement boundaries is the most appropriate strategy for development to 2036. Respondent	Response
	delay housing delivery. This means that they contribute towards increasing housing land supply in the short term, alleviating immediate pent-up housing need.
Pro Vision for Rootes Trustees	<p>Generally, yes. A spatial strategy based on supporting the existing settlement hierarchy will continue to promote a sustainable pattern of growth. In the context of West Berkshire, it is demonstrably the best way to meet the three overarching planning objectives - the economic objective, the social objective and the environmental objective. The existing hierarchy does however need to be reviewed. We would, for example question the capacity of the Eastern Urban Area to continue to be a focus for further growth.</p> <p>The existing spatial strategy provides an appropriate framework for identifying opportunities for villages to grow to help support local services and facilities (in accordance with Paragraph 80 of the draft NPPF) and to identify an appropriate supply of small sites.</p> <p>It follows that we can see no justification for considering an alternative spatial strategy that concentrates a substantial proportion of the District's housing growth in a new settlement.</p>
Pro Vision for Cala Group Ltd and Wates Developments Ltd	<p>Generally, yes. A spatial strategy based on supporting the existing settlement hierarchy will continue to promote a sustainable pattern of growth. In the context of West Berkshire, it is demonstrably the best way to meet the three overarching planning objectives - the economic objective, the social objective and the environmental objective. The existing hierarchy does however need to be reviewed. We would, for example question the capacity of the Eastern Urban Area to continue to be a focus for further growth.</p> <p>Hungerford has a range of facilities and services, meeting the requirements of both the rural hinterland and the wider area. It has one of only two town centres identified in West Berkshire's adopted Core Strategy, reflecting the range of facilities and services it provides for the surrounding area. Therefore, the settlement should be elevated in the hierarchy and categorised as an Urban Area where development will be focussed, rather than as a Rural Service Centre.</p> <p>The existing spatial strategy provides an appropriate framework for identifying opportunities for villages to grow to help support local services and facilities (in accordance with Paragraph 80 of the draft NPPF) and to identify an appropriate supply of small sites.</p> <p>It follows that we can see no justification for considering an alternative spatial strategy that concentrates a substantial proportion of the District's housing growth in a new settlement.</p>
Pro Vision for Rivar	<p>Generally, yes. A spatial strategy based on supporting the existing settlement hierarchy will continue to promote a sustainable pattern of growth. In the context of West Berkshire, it is demonstrably the best way to meet the three overarching planning objectives - the economic objective, the social objective and the environmental objective. The existing hierarchy does however need to be reviewed. We would, for example question the capacity of the Eastern Urban Area to continue to be a focus for further growth.</p> <p>The existing spatial strategy provides an appropriate framework for identifying opportunities for villages to grow to help support local services and facilities (in accordance with Paragraph 80 of the draft NPPF) and to identify an appropriate supply of small sites.</p>

Respondent	Response
	It follows, that we can see no justification for considering an alternative spatial strategy that concentrates a substantial proportion of the District's housing growth in a new settlement.
Savills for Englefield Estate	<p>We have no specific comment on the current spatial strategy and the settlement hierarchy upon which this is based. However, we note that there is an opportunity to consider strategic growth, in the form of a new settlement, which would not conform to the current spatial strategy. This spatial strategy therefore needs to be amended to allow for this (see response to Question 5). However, even if the new Local Plan were to support the development of a new settlement, this would not negate the need for appropriate and sustainable new development at the existing settlements in the District, in accordance with the existing spatial strategy. As such a continuation of the existing spatial strategy, based upon the settlement hierarchy set out in Core Strategy policy ADPP1, is supported. Notwithstanding this, the spatial strategy should include provision for a sustainable level of development in rural areas where this would support an economically, social and environmentally strong countryside in line with our response to Q2.</p> <p>It should also be noted that the Local Plan Review will need to take account of emerging national guidance (the Revised NPPF) and that this may have implications for the spatial strategy – e.g. 'entry level exception sites' in rural areas.</p>
Joy Schlaudraff	<p>In the main, yes. Nothing else would work, in general. But for smaller sites, NO. These should be allowed wherever they fit – because they are small!</p>
Turley for A2dominion Housing Group	<p>We agree that the Local Plan Review should direct the majority of development to settlements at the higher end of the settlement hierarchy. However, given the scale of need to 2036, we consider that opportunities should be explored at other settlements, commensurate with their scale. Such a solution may provide opportunities to meet a specific need in an area, address local affordability issues or help to maintain the vitality of the settlement.</p> <p>Furthermore, in relation to Streatley, A2Dominion consider that the Local Plan Review should be prepared on an understanding of the true sustainability of the existing settlement. In this regard, we note that the proximity of some settlements in West Berkshire to settlements within neighbouring authorities, such as Streatley (West Berkshire Council) has implications for the accessibility of those settlements to local facilities. For example, we note that Streatley shares facilities with Goring (in South Oxfordshire District) and that the two are functionally and operationally related. Goring and Streatley are positioned on the Oxfordshire - Berkshire border albeit in the main (apart from in planning terms) they are considered as a single identity. This is most apparent through the Goring and Streatley railway station providing train services between Reading and Oxford and we understand that Streatley provides allotment provision for residents of Goring as the need arises. Facilities in Goring are easily accessible from Streatley.</p> <p>Goring is located 300m to the east of Streatley and easily accessible on foot where a significant number of local facilities are provided and which benefit the existing residents of Streatley, with the two settlements operating interdependently. For context within the South Oxfordshire Core Strategy (2012), Goring is identified as a larger village (Policy CSS1) - a second tier settlement within the hierarchy and therefore acknowledged to be a sustainable location for development. The Settlement Assessment Background Paper (March 2011) identifies the following facilities within Goring: primary school,</p>

Respondent	Response
	<p>doctors, dentist, public park, village hall, 5 + retail shops, pub, bar, pharmacy, Post Office, frequent bus services, railway station providing services between Oxford and Reading.</p> <p>The emerging SODC Local Plan continues to maintain that Goring is a larger village.</p> <p>Core Strategy policy ADDP1</p> <p>With regard to WBC, the settlement hierarchy for the adopted Development Plan is set out at ADDP1. Streatley is not identified as an Urban Area, Rural Service Centre or Service Village. Instead, Streatley is a smaller village with a settlement boundary and defined by Policy ADPP1 as a location where only infill development is considered appropriate. We do not support this position given the proximity of Streatley to a range of local facilities.</p> <p>The Settlement Hierarchy (2012) sets out that Streatley was considered as part of the initial settlement hierarchy study from 2008 and was assessed as a rural settlement given it was assessed as having '7 or more local facilities/ services'. As part of the 2012 assessment, a re-assessment of the settlements within the District was undertaken to reflect comments on the methodology. One such comment raised by the West Berkshire LDF Working Group considered the proximity to settlements such as Tadley and Goring (page 11), which is relevant to our comments relating to the settlement of Streatley. The assessment concluded the following:</p> <p>"Consideration of proximity to Goring and Tadley:</p> <p>There were comments received that there should be more consideration of cross border interaction, particularly the effects that Reading, Goring and Tadley have on settlements in West Berkshire. Previously in this report account has been taken of proximity by road to Newbury and Reading. The result being that some settlements received minor scores while most did not receive any additional points. Close proximity to the towns of Goring and Tadley, located outside the District boundaries, would be beneficial to those settlements located in the north east and south east of the District and in very close proximity to Goring or Tadley, yet it is considered that these towns are not significant enough to have any major impacts on the majority of settlements in the District."</p> <p>Given the continued identification of Goring with the SODC adopted and emerging Local Plans as a larger village where new development is considered appropriate given the sustainability of the settlement, and the relationship that this has with Streatley, we consider that it is essential for the West Berkshire settlement hierarchy to have regard to the presence of these nearby services. The 2012 Assessment did not consider the interrelationship between Goring and Streatley and in our view that would have resulted in Streatley being given a significantly higher settlement score than was recorded within the Assessment.</p> <p>By way of an example, Streatley scored O against distance with only Reading or Newbury (major urban areas) being considered as providing higher order goods. Whilst this is not directly comparable to Goring, Goring itself does provide a range of facilities within a short distance of Streatley that improve its sustainability with the facilities benefitting residents of Streatley (i.e. the supermarket and station) resulting in a lower requirement to travel further afield by car than other identified service villages or rural service centre identified within ADDP1. This is equally applicable to cycling opportunities where the assessment considered cycle routes and proximity to facilities. Streatley itself is on a cycle route with facilities within Goring accessible on foot or via cycle within 300m. Significant weight should also be attached to the proximity of Streatley to Goring station. This should be considered as part of any updated spatial strategy.</p>

Respondent	Response
	<p>Streatley delivers a number of local facilities which when considered in combination with Goring, the settlement benefits from a range of local facilities which are within walking distance of the settlement (albeit within two different local authority areas). On this basis, we consider that Streatley should be considered at least a service village when assessed against the Core Strategy settlement hierarchy, but with characteristics of a Rural Service Centre. This is reflective of the positioning of Goring with the SODC settlement hierarchy as a larger village.</p> <p>Given the opportunities are being considered elsewhere (as cited at paragraph 5.8 of the Scoping Report) on account of the requirements by the Framework for 'potential cross boundary joint working opportunities' (paragraph 157 of the Framework), this is equally applicable Streatley which should be more robustly considered through the emerging evidence base to the Local Plan Review.</p>
Turley for North East Thatcham Consortium	<p>The existing spatial strategy set out in section 4 of the Core Strategy acknowledges that <b>“Not all development can be accommodated within the District’s urban areas”</b>. The Consortium considers that will remain the case and as such it is essential that the spatial strategy for the Local Plan Review acknowledges this and provides the ability for development to be delivered outside of existing urban areas.</p> <p>The Consortium agrees that the spatial strategy should be underpinned by a settlement hierarchy based upon the existing and future role and function of settlements within West Berkshire. The Consortium considers that the majority of growth should take place at (within and adjacent to) the urban areas at the higher end of the hierarchy.</p> <p>On that basis, the Consortium agrees that most development will take place in Newbury, Thatcham and in the settlements in the east of the District close to Reading.</p> <p>The Consortium considers that the access to services and facilities of these areas and the opportunities they provide to reduce out-commuting and the need to travel is an appropriate basis to support the spatial strategy. It is equally apparent that the support for higher levels of provision within these larger settlements will be critical in supporting the delivery of infrastructure needs (physical and social) which are of significant importance in ensuring that these urban areas remain vital and viable.</p> <p>It is apparent that over the Core Strategy period the urban areas have been contributing a proportionately significant level of housing provision, in accordance with the existing spatial strategy. Thatcham, for example, has broadly delivered against the requirement set through the Core Strategy with provision only 20 dwellings lower than the requirement over the last nine years for which monitoring data is available (2008/09 – 2016/17). As referenced in the preceding question, however, the level of housing provision directed at Thatcham when compared to Newbury for example, was notably and deliberately modest.</p> <p>Whilst this was at least in part justified on the basis of the level of development previously seen in Thatcham it is evident that over the Core Strategy period the policies restricting development at the town means that it is no longer the context against which the Local Plan Review is based.</p> <p>The Council’s latest evidence of housing need (SHMA 2016) confirms that there will need to be a boosting of supply from the levels which have been provided over the Core Strategy plan period to date (500 homes per annum; 2006 – 2017). Following the existing spatial strategy the urban areas at the top of the hierarchy will need to individually and collectively</p>

Respondent	Response
	<p>elevate the levels of homes being delivered to ensure housing needs are met sustainably. It is noted that the in the Inspector's Report on the Core Strategy, the Inspector specifically referenced that: <b><i>“Additional development at Thatcham might be able to contribute to some of the infrastructure improvements and other changes the Council seeks. In the light of the planned review of housing provision, the approach to Thatcham may need to be reviewed if additional housing has to be accommodated in the District.”</i></b></p> <p>The Core Strategy spatial strategy included a specific section on Thatcham. This recognised its identification as one of the four urban areas and the specific issues facing the town. The Consortium agrees that support should continue to be given to the aspiration of regenerating Thatcham town centre. This continues to be important both in terms of its role in serving its local population but also the surrounding rural areas and in recognition of the fact that there has been limited progress in this regard over the Core Strategy period to date.</p> <p>In addition, the Consortium also supports the continuation of a strategy which seeks to see Thatcham becoming a more self-contained settlement which provides a more range of job opportunities and encouraging residents to shop and socialise locally. The Consortium considers that the delivery of new infrastructure at Thatcham will be fundamental to the achievement of this objective to ensure that the needs of current and future generations of residents are met. This is particularly the case given the Council's acknowledgement of the education capacity issues at Thatcham.</p> <p>Whilst this vision for Thatcham is supported, it is apparent that the approach taken in the Core Strategy to essentially restrain growth through the limited provision of housing has inhibited its realisation. The Consortium considers that the Core Strategy spatial strategy and approach to Thatcham was one of restraint, reflecting the Council's concerns regarding infrastructure capacity at the town and a perception that it had seen considerable housing growth in recent years. In accordance with the Core Strategy the scale of development in the town has been modest. The Council has, however, acknowledged the sustained need to address infrastructure shortcomings, particularly in relation to education. In establishing a new spatial strategy for the District, the Consortium therefore considers that this should be underpinned by the aspiration of addressing the infrastructure issues at Thatcham and providing a situation whereby the opportunities to regenerate the town centre are maximised. The town is also well-placed to build upon its existing role as a key commercial centre, both as a localised office market and a more prominent strategic industrial location. The latter has been supported by the more recent development of modern, better quality industrial space, as acknowledged within the Council's economic evidence.</p> <p>The Core Strategy spatial strategy also acknowledged the high quality environment. The Consortium considers that this should also inform the spatial strategy for the Local Plan Review, particularly in relation to the large amount of the District which falls within the North Wessex Downs Area of Outstanding Natural Beauty.</p> <p>The Core Strategy spatial strategy set out in Area Delivery Policy 1 indicated that <b><i>“The majority of development will take place on previously developed land”</i></b>. The Council will need to consider whether such opportunities exist in order to inform the Local Plan Review and even if such sites are available, it will be necessary for the Council to consider in a holistic manner whether they would be the most appropriate solution to achieve sustainable development. Alternative solutions may provide the opportunities for large scale development whilst delivering significant levels of new infrastructure.</p>

Respondent	Response
	<p>The Core Strategy spatial strategy acknowledged the presence of the AWE facilities at Aldermaston and Burghfield. The Consortium considers that it is essential that this also informs the strategy for the Local Plan Review and the associated cooperation between West Berkshire Council and Wokingham Borough Council regarding development near the border of the two authorities.</p>
Turley for Berfeld Limited	<p>We consider that the spatial strategy should ensure that sufficient homes are provided in locations where people wish to live. There are some sustainability benefits from focusing new homes within or adjacent to existing settlements, but the concept of sustainability is complex and broad. It has many facets and restricting new development to locations that are within or adjacent to existing settlements does not allow for developments that are not in this situation to come forward, even if they are sustainable.</p> <p>There is also little recognition of the potential for technological change over the period of the Local Plan to 2036. Within that period, it is highly likely that sustainable electric vehicles will become prevalent, and improved technology will also mean people are less likely to need to access towns to access services. Technological change will challenge current interpretations of sustainable development and the Council should ensure there is sufficient flexibility in the wording of its policy to allow for this change.</p> <p>We therefore consider that it is appropriate to focus development on existing settlements, but to also ensure that there is flexibility built into the policy to allow for the consideration of development that is capable of achieving sustainability outside of a normative and narrow interpretation.</p>
Turley for Commercial Estates Group	<p>The existing spatial strategy has been surpassed by events, such as the publication of the Berkshire (including South Bucks) Strategic Housing Market Area Assessment (SHMA), as well as cross-boundary issues that have arisen. As such, it is considered that the emerging Spatial Strategy should be revised such that it accords with an up-to-date evidence base and responds effectively to prevailing planning issues. This may result in the existing strategy being carried forward but it would be premature to make that decision prior to the evidence being produced and thoroughly reviewed.</p> <p>Accordingly, we maintain that the Core Strategy Review should make provision for an evidence-based review of the existing settlement hierarchy established at Policy ADPP1. This will be necessary to establish a robust spatial strategy, particularly as the existing typology may no longer be entirely consistent within the context of a cross-boundary approach being pursued through the West of Berkshire Spatial Framework.</p> <p>However, it is nevertheless clear that the greater part of future development should be directed towards settlements at the higher-end of the hierarchy, with these being generally the more sustainable development locations such as Newbury, Thatcham and the Eastern Urban Area.</p> <p>It is also clear that effective forward planning in West Berkshire will require that a diversity of sites are allocated for development, so as to maximise opportunities for achieve sustainable development, whilst further planning for new infrastructure and additional services. This is of particular relevance adjacent to the existing or consented development, where that infrastructure is already in place / planned for and new development can be both supported by it and can help to enhance / grow that provision.</p> <p>With respect to the Duty to Cooperate, we agree that the preparation of a West of Berkshire Spatial Planning Framework</p>

Respondent	Response
	<p>provides a suitable mechanism for planning on a cross-boundary basis, within this respective part of the SHMA area. However, we caution that (in drawing from this non-statutory document) it will be important for the Local Plan process to provide robust evidence to justify the decisions that have been reached, including if these decisions have been reached collaboratively, as part of the SPF.</p> <p>The importance of a robust approach on this matter has been clearly demonstrated through the recent West Oxfordshire Local Plan Examination in Public (EiP), where key decisions were taken through non-statutory processes under the auspices of the 'Oxfordshire Growth Board'. The EiP served to highlight the importance of ensuring that non-statutory (and cross-boundary) decision making-processes are supported by an appropriate and robust evidence base. Likewise, non-statutory decisions (regarding, for example, the distribution of housing growth) to be reconciled with the findings of a (statutory) Local Plan's Sustainability Appraisal.</p> <p>It is positive that the West of Berkshire Spatial Framework and the Local Plan Review Scoping Report (at paragraph 5.7) recognises the continued importance of cooperation and cross-boundary issues between West Berkshire, Wokingham, Reading and Bracknell Forest. However, we express concern that Local Plan Review's focus on the West of Berkshire Spatial Framework, shall effectively serve to preclude or downgrade cooperation with authorities situated to the east. This is concerning in itself, but particularly so as cross-boundary housing and economic issues are not self-contained within the Western HMA.</p> <p>Accordingly, the West of Berkshire authorities (including West Berkshire) should not seek to preclude the potential requirement to accommodate at least part of the significant quantum of need, which may not be effectively met within the boundaries of the authorities to the east.</p> <p>Furthermore, we are also concerned that there is a risk that the Local Plan Review will reflect the limitations of the SHMA (and indeed the Western Berkshire Economic Development Needs Assessment, 2016), with respect to analysing the impacts of major planned investments in economic infrastructure. Indeed, the SHMA (at paragraph 5.50) explains that it does not account for;</p> <p>"competitive position of Berkshire and South Buckinghamshire in terms, for example of specific infrastructure investment, which might have both positive or negative impacts on inward investment and business growth; for example, the introduction of services on Crossrail, or the provision of a western rail access to Heathrow" (SHMA para 5.50).</p> <p>Such economic investments will invariably impact upon the dynamics of the regional economy and housing markets. We therefore consider that it is essential for the Local Plan Review to be based on robust evidence, which evaluates the implications of the infrastructure investments described. If the Plan is not informed by such an analysis, we would consider that there is a risk of it failing to properly address the housing pressures and affordability issues that may arise.</p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>The current spatial strategy as set out in the Core Strategy builds on the existing settlement pattern, and this is generally supported. However, the settlement hierarchy set out in paragraph 5.2 of the Scoping Report (February 2018) only relates to the larger settlements of:</p> <ol style="list-style-type: none"> <li>1. Urban Areas;</li> <li>2. Rural Service Centres;</li> </ol>

Respondent	Response
	<p>3. Service Villages.</p> <p>No reference is made to the many villages below the settlement hierarchy which have got defined settlement boundaries, such as Hampstead Norreys.</p> <p>The generally urban focus is further emphasised by paragraph 5.3 which states: <b><i>'In this context, urban development is maximised and a combination of strategic urban extensions and smaller sites for housing have also been identified for development.'</i></b></p> <p>This urban focus needs to be counterbalanced by a similar emphasis on the need to also support vibrant rural communities. For example, Hampstead Norreys, is a vibrant village with a primary school; community shop; sports pitches; village hall; church; and public house. The future of these facilities depends on a mixed community in which all age groups are represented. There is therefore the need for some additional housing to satisfy local needs, including those who have a local connection or need to work in the village, and thereby ensure that young people and families will continue to have the opportunity to live there.</p>
Woolf Bond Planning for Donnington New Homes	<p>Area Delivery Plan Policy 1 (Spatial Strategy) of the current 2012 Core Strategy provides:  'Below the settlement hierarchy there are two additional types of area where there will be more limited development, including affordable housing for local needs:</p> <ul style="list-style-type: none"> <li>• <b>smaller villages with settlement boundaries - suitable only for limited infill development subject to the character and form of the settlement',</b></li> </ul> <p>It follows that under the existing spatial strategy, the Core Strategy does not provide for the ability to extend smaller villages with defined settlement boundaries. We consider there would be strong benefit in changing this approach and explicitly identifying sustainable and appropriate extensions to smaller villages in certain locations in the District. We refer to three parts of the emerging draft NPPF that support and advocate such an approach:  Paragraph 80 refers to the importance of plans needing to identify opportunities for villages to grow:  'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Plans should <b>identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'</b>.</p> <p>The above statement is not specific to any given size of village, it simply requires that sustainable development should be promoted in rural areas and plans should identify opportunities for such settlements to grow. It follow that any <b><u>decision to continue to exclude the ability to extend smaller villages with boundaries (as per the existing spatial strategy) would fail the 'consistent with national policy' test of soundness.</u></b></p> <p>Paragraph 118 goes onto state:  'Planning policies and decisions should:  <b>d) promote and support the development of under-utilised land and buildings, especially if this would help to meet identified needs for housing where land supply is constrained and available sites could be used more</b></p>

Respondent	Response
	<p><b>effectively (for example converting space above shops, and building on or above service yards, car parks, lock-ups and railway infrastructure)36;'</b></p> <p>The approach advocated at paragraph 80 of the draft NPPF is further supported by paragraph 118 that specifically acknowledges the benefits of promoting and supporting the development of under-utilised land. One such under utilised sustainable development opportunity exists at our client's site at Ashmore Green Farm (discussed in further detail below). Further, paragraph 69 refers to the need for 20% of housing in new local plans to be 'small sites':</p> <p>'Small sites can make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites local planning authorities should:</p> <p><b>a) ensure that at least 20% of the sites identified for housing in their plans are of half a hectare or less';</b></p> <p>The above acknowledges the important role smaller sized sites can play in new Local Plans and their importance in adding to the diversity in the types of housing sites allocated to contribute towards challenging housing targets. Whilst not strictly a small site on the basis of its site area, our client's site by forming a capacity of up to 30 no. dwellings (net 29) can justifiably be described as a small site and would add to the overall diversity of housing sites if allocated in the future plan.</p> <p>Ashmore Green forms a settlement well related to two of the District's 'Urban Areas' (Newbury and Thatcham) that are home to a wide range of services and form the focus for the majority of development in the existing plan. The village is located under 1 mile from the edge of Thatcham and is home to a bus service (No. 41) that provides regular connections to the 'Urban Areas'. In addition, the settlement is located approximately half a mile away from the 'Service Village' of Cold Ash. In addition unlike much of the District, the settlement is located outside the nationally protected North Wessex Downs Area of Outstanding Natural Beauty.</p> <p>Our client's site adjoins the Ashmore Green settlement area and forms land already home to a series of large buildings that have not been in an active use for a long period of time, over 20 years. It follows that our client's site represents one of the most sustainable locations in helping to meet the District's housing requirements, through delivering smaller sites to aid in immediate housing delivery. It forms a natural extension to the settlement boundary and offers the potential to have positive impacts upon the character and appearance of the wider locality. In addition, by forming a potential smaller site from land that is redundant, it specifically complies with emerging NPPF policy referenced above.</p> <p>For the above reasons we are of the strong view that an <b><u>extension to Ashmore Green should occur and accordingly the subject 1.5ha site, forming land adjoining Ashmore Green should be identified in the emerging plan as a housing allocation.</u></b> The site could be delivered inside a 5 year period and therefore soon after the adoption of the plan.</p>
Woolf Bond Planning for JJP Land	<p>Area Delivery Plan Policy 6 (The East Kennet Valley) of the current 2012 Core Strategy indicates:</p> <p>'The two identified rural service centres of Burghfield Common and Mortimer will be the focus of development in this area',</p> <p>The acceptable scale of development around Burghfield Common is confirmed through the allocation of sites within the Council's Housing Site Allocations Local Plan (2017). Policy HSA15 allocates land adjoining Pondhouse Farm, Burghfield</p>

Respondent	Response
	<p>Common for approximately 100 dwellings with policy HSA16 allocating land to the rear of The Hollies, Burghfield Common for approximately 60 dwellings.</p> <p>It follows that under the existing spatial strategy, the Core Strategy enables multiple sites of around 100 dwellings to be allocated on the edge of Burghfield Common. We consider the emerging plan needs to retain the ability of sustainable rural service centres like Burghfield Common to accommodate further growth.</p> <p>Allowing further growth at Burghfield Common is consistent with paragraph 80 of the emerging draft NPPF which highlights the importance of plans needing to identify opportunities for villages to grow:</p> <p>'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Plans should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.</p> <p>Our client considers that there is currently an anomaly regarding the settlement boundary for Burghfield Common through its exclusion of the established residential developments off Rowan Way and Caxton Gate. These are the largest established residential schemes within West Berkshire which adjoin a settlement rather than are incorporated within. Given the number of dwellings on these developments and its clear linkage to the settlement boundary of Burghfield Common, these dwellings should be incorporated within it. The consistency of the character of these residential areas with Burghfield Common village reinforce our view that these dwellings must be included within the settlement boundary. Through including the established residential area off Rowan Way and Caxton Gate within Burghfield Common's settlement boundary results in our clients' land at Brook House Farm being a logical addition to the settlement. Our clients scheme for 40 dwellings is consistent with the scale of schemes which the Council has allocated to the village through their Housing Site Allocations Local Plan.</p> <p>For the above reasons we are of the strong view that an extension to Burghfield Common should occur and accordingly the subject 2.9ha site, forming land at Brook House Farm should be identified in the emerging plan as a housing allocation. The site could be delivered inside a 5 year period and therefore soon after the adoption of the plan.</p>
Woolf Bond Planning for Donnington New Homes	<p>Area Delivery Plan Policy 1 (Spatial Strategy) of the current 2012 Core Strategy provides:</p> <p>'Below the settlement hierarchy there are two additional types of area where there will be more limited development, including affordable housing for local needs:</p> <ul style="list-style-type: none"> <li>• <b>smaller villages with settlement boundaries - suitable only for limited infill development subject to the character and form of the settlement'</b>,</li> </ul> <p>It follows that under the existing spatial strategy, the Core Strategy does not provide for the ability to extend smaller villages with defined settlement boundaries. We consider there would be strong benefit in changing this approach and explicitly identifying sustainable and appropriate extensions to smaller villages in certain locations in the District. We refer to two parts of the emerging draft NPPF that support and advocate such an approach:</p> <p>Paragraph 80 refers to the importance of plans needing to identify opportunities for villages to grow:</p>

Respondent	Response
	<p>'To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Plans should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby'.</p> <p>The above statement is not specific to any given size of village, it simply requires that sustainable development should be promoted in rural areas and plans should identify opportunities for such settlements to grow. It follows that any <b><u>decision to continue to exclude the ability to extend smaller villages with boundaries (as per the existing spatial strategy) would fail the 'consistent with national policy' test of soundness.</u></b></p> <p>Further, paragraph 69 refers to the need for 20% of housing in new local plans to be 'small sites':  'Small sites can make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites local planning authorities should:</p> <ol style="list-style-type: none"> <li><b>a) ensure that at least 20% of the sites identified for housing in their plans are of half a hectare or less';</b></li> </ol> <p>The above acknowledges the important role smaller sized sites can play in new Local Plans and their importance in adding to the diversity in the types of housing sites allocated to contribute towards challenging housing targets. Whilst not strictly a small site on the basis of its site area, our client's site by forming a capacity could be described as a small site if allocated for a mix of residential and associated uses and would add to the overall diversity of housing sites if allocated in the future plan.</p> <p>Curridge forms a settlement located close to the District's largest 'Urban Area' (Newbury) that is home to a wide range of services and forms the focus for the majority of development in the existing plan. In addition, Curridge benefits from a primary school and the settlement is located in close proximity to the 'Service Village' of Hermitage and the Strategic Road Network in the form of the M4 motorway.</p> <p>Our client's site adjoins the Curridge settlement area on its southern and eastern boundaries and provides the opportunity to adjoin the two parts of the village in a holistic plan led manner. This could include associated community uses that could form a focal point and pedestrian access between the two presently detached parts of the settlement. It follows that our client's site represents one of the most sustainable locations in helping to meet the District's housing requirements. It forms a natural extension, to join the two separate settlement boundary areas of Curridge. In addition, it could be considered to form a potential smaller site and therefore complies with emerging NPPF policy referenced above.</p> <p>For the above reasons we are of the strong view that an <b><u>extension to Curridge should occur and accordingly the subject 4.16ha site, forming land adjoining Curridge should be identified in the emerging plan as a housing allocation.</u></b> The site could be delivered inside the 5 year period and therefore soon after the adoption of the plan.</p>
WYG for Donnington New Homes	<p>Donnington New Homes support West Berkshire's proposal to continue to build on the existing settlement pattern which will continue to use a hierarchy of settlements as the focus for development. Adopted Core Strategy Policy ADPP1 designates Newbury as an urban area with a wide range of services and the focus for the majority of development. A southern extension to Sandford Park would support this approach and also support the provisions of paragraph 5.3 and 5.7 of the consultation document.</p>

## Summary of responses

The majority of respondents stated that they thought the existing spatial strategy had worked well and that it would continue to be the most appropriate approach for development up to 2036 in West Berkshire. With one exception, this included all parish councils and neighbourhood planning groups. The parish council that disagreed argued for further consideration to be given to garden villages where it felt that infrastructure needs and a community sense of place could be considered more holistically. The development industry highlighted the fact that the spatial strategy would need to be altered in order to accommodate a new settlement and were divided as to whether this was a good idea.

The capacity of the Eastern Urban Area to accommodate more growth was questioned, particularly the tension that exists between the need for development in the area and its location on the edge of the AONB. The role of Thatcham was also raised, with the expectation that following a period of restraint in the current plan, there was now an opportunity to plan for a period of growth.

There were some respondents who felt that whilst the spatial approach itself was acceptable in principle, the Council will need to re-examine the settlement hierarchy which supports it, in more detail, in order to establish the role and function of each settlement in each area. Specific concerns were raised, from both the development industry and some local communities that certain settlements were not now in the right category. Another suggested that a new category of 'principal rural service centres' could be introduced whilst others thought that smaller villages and the rural areas themselves should also be included. The relationship that some settlements on the edge on the District have with settlements in adjoining authorities was also raised.

It was generally considered that a review of settlement boundaries for all settlements will be an important part of the Review and that this process should then be used to inform the overall spatial strategy for the District. A couple of respondents from the development industry felt the Council needed more evidence before it could make any decisions.

Overall, the development industry felt the Council needed to be more flexible in its approach to rural settlements, particularly to those which currently sit below the current hierarchy. There were also suggestions from a few site promoters that more development, particularly in smaller villages, would help prevent the further loss of rural services.

## Council response

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR).

The support given to the continuation of the existing spatial strategy is welcomed but the capacity of the Eastern Urban Area to accommodate future growth is an issue which requires further consideration. The Council will therefore review the character of and evidence it has for the existing spatial areas and consider whether it can introduce flexibility by reviewing boundaries. A review of the spatial distribution of development across the District will also be done through a review of the settlement hierarchy and settlement boundaries. The Council intends to consult on both the methodology for the settlement hierarchy and criteria for the review of settlement boundaries in Nov/Dec 2018.

### Responses received to the Local Plan Review Scoping Report (February 2018)

#### Q4: Do you agree that dividing the District into different geographical areas is still the most appropriate way to deliver the spatial strategy?

Number of responses received: 41

Respondent	Response
<b>Internal</b>	
Archaeology Team West Berkshire Council	Generally yes, but Character studies should also be factored in, especially if these do not align with the geographical areas – eg Historic Environment Character Zoning documents <a href="http://info.westberks.gov.uk/index.aspx?articleid=30418">http://info.westberks.gov.uk/index.aspx?articleid=30418</a>
Public Transport Team West Berkshire Council	I agree that dividing the District into the four main geographical areas as reflected in section 4.7 of the Spatial Strategy remains the most appropriate way to deliver the strategy, as this approach – coupled with the associated Area Delivery Plan Policies – takes into account the distinctive features of these distinguishable areas of the District
<b>Statutory consultees</b>	
Stratfield Mortimer Parish Council	Because of the arguments put forward in the previous answer a more District wide approach should be adopted. This becomes even more imperative when working with adjacent planning authorities on potential developments that cross district boundaries. That is not to say that recognition of the different characteristics of different part of the Districts should not be recognised, rather that should just be one consideration amongst many equally important factors.
Streatley Parish Council	Streatley Parish Council agrees that the 4 geographic areas for the district are still most appropriate, especially the AONB.
Hermitage Parish Council	Yes. This is the only question that Hermitage PC is confident to answer.
Pangbourne Parish Council	Yes because it continues to build on the existing settlement pattern.
Burghfield Parish Council	Yes. It worked well in relation to the current Local Plan and I see no reason to change it.
Burghfield NDP Steering Group	Yes. It worked well in relation to the current Local Plan and we see no reason to change it.
Environment Agency	This question is not within our remit. However our advice to you is to carry out the sequential test for fluvial flood risk when considering the location of development.

Respondent	Response
Sport England	Yes, it allows responses/actions to be focused and relevant to specific areas, rather than a broad brush policy approach which may not always be appropriate.
Savills for Thames Water	Yes
<b>General consultation bodies</b>	
British Horse Society	It seems appropriate from an equestrian point of view.
<b>Other stakeholders</b>	
Christopher Gent	The division of the District into different geographic areas is a good idea as it enables an assessment of whether an appropriate balance has been achieved between development and countryside and affords a focus on whether there is sufficient infrastructure in each area.
William Graham	Yes
Neil Richardson	These seem to be appropriate but likely to be affected by large scale development south of Reading?
Robert Wallace	No as above
<b>Landowners, site promoters and developers</b>	
Barton Willmore for Graham Child	Our client notes at paragraph 5.6 that the Scoping Report suggests that the geographical areas “...reflect the distinct characteristics of the different parts of the District”. However as part of the Local Plan Review the Scoping Report explains that the Council “...propose to re-examine whether this continues to remain the most appropriate way to deliver the spatial strategy to 2036”. We would submit therefore that the baseline evidence is required before concluding that this is the most appropriate way to deliver the spatial strategy.
Barton Willmore for Sulham Estate	On behalf of our client, we support the Council’s intention within the Local Plan Review Scoping report to re-examine whether the geographical areas continue to remain the most appropriate way to deliver the spatial strategy. Without seeing the Council’s methodology, evidence base or eventual conclusions for this is it not possible to provide detailed comments. Nevertheless, we consider that this review is an important part of providing a holistic approach to meeting needs throughout the District.
Bewley Homes	We do not agree that dividing the Borough into geographical areas is an appropriate way to deliver the spatial strategy. A more sophisticated test should be applied assessing the sustainability of individual settlements.

Respondent	Response
	<p>The historic 'geographical area' approach is considered too blunt a tool, which can allow the overlooking of settlements which offer a range of local services, and regular public transport links to employment centres both within the Borough and further afield.</p> <p>Following a settlement hierarchy approach, setting out the most sustainable towns and villages, with individual settlements assessed would be a more appropriate and allow housing to be allocated flexibly across the Borough. Woolhampton, for example is an established built up area identified as a 'Service Village' that is within the East Kennet Area. The village is served by a range of day to day services and facilities and has good access to both passenger transport services and local road networks. Details of the level of services provided are set out under Question 7. The settlement also falls outside of the North Wessex Area of Outstanding Natural Beauty landscape designation which restricts development across much of the Borough.</p>
Boyer Planning for Spitfire Bespoke Homes	Spitfire do not object to this approach but note that any potential growth at Grazeley should not restrict growth of other sites, particularly where this supports early and sustainable residential growth in villages in line with the draft NPPF.
Mark Carter for Mr R.L.A. Jones	<p>As with Question 3 above the Respondent considers that the existing method of examining the four main geographical areas of the District is the most appropriate way to examine future policies (and also the settlement hierarchy within those areas) is the most appropriate for the District.</p> <p>Within the North Wessex Downs Area of Outstanding Natural Beauty Lambourn still has a range of services and reasonable public transport provision which also serve the requirements of surrounding communities and these should be reinforced.</p> <p>Although there is much discussion about the role of surrounding Districts in meeting housing need these Districts are already heavily constrained and are unlikely to contribute. West Berkshire should be looking to meet its own (housing) needs within its boundaries.</p>
Fisher German for Mr Musgrave and Begley	The division of the District into geographical areas is not considered to be the most appropriate strategy. It is considered that development should be directed to settlements within the settlement hierarchy. For example, 60% to the urban areas, 25% to the rural service centres, and 15% to the service villages.
Gladman Developments	Gladman support the Council's proposal to re-examine whether the approach of establishing four geographical areas (Newbury and Thatcham, The Eastern Area, North Wessex Downs and East Kennet Valley) continues to be the most appropriate way of delivering the spatial strategy.
Hallam Land Management	Planning development within the confines of District boundaries is not an effective way to plan sustainable growth and West Berks along with its partners in the Western Berkshire Housing Market Area should be applauded for the work they have completed to date in considering opportunities across the Housing Market Area. Dividing the District into different geographical areas, imposing arbitrary boundaries and distributing the housing requirement accordingly sits uncomfortably with the more strategic approach to planning which is emerging and has the potential to lead to parochial decisions and compromise opportunities for sustainable patterns of growth. It is our view, therefore, that as part of the

Respondent	Response
	Local Plan Review a very different approach should be adopted with the West Berkshire Local Plan forming an integral part of the Western Berkshire Strategic Plan as opposed to being wholly District focused and compartmentalised into smaller parcels.
Nexus Planning for Croudace	<p>The District is currently divided into four main geographical areas as follows:</p> <ul style="list-style-type: none"> <li>• Newbury and Thatcham;</li> <li>• The Eastern Area – including the Eastern Urban Area;</li> <li>• North Wessex Downs AONB;</li> <li>• The East Kennet Valley.</li> </ul> <p>Given their geographical proximity and functional relationship as the largest and most sustainable settlements within the District, Croudace Homes considers that combining Thatcham and Newbury into a single distinct area remains an appropriate strategy for delivering growth.</p> <p>There is a rationale for retaining the remaining areas in their current form as reflection of the different geographical areas of the District. Croudace Homes would therefore have no objection to retaining these areas as set out.</p>
Nexus Planning for Pangbourne Beaver Properties	<p>The District is currently divided into four main geographical areas as follows:</p> <ul style="list-style-type: none"> <li>• Newbury and Thatcham;</li> <li>• The Eastern Area – including the Eastern Urban Area;</li> <li>• North Wessex Downs AONB;</li> <li>• The East Kennet</li> </ul> <p>The North Wessex Downs AONB washes over the village of Pangbourne. The Core strategy states:</p> <p>“4.38 The North Wessex Downs AONB covers 74% of West Berkshire and makes a significant contribution to the uniqueness of the District. The settlement pattern will be maintained as both distinctive and ancient with a small and dispersed population within villages and small towns that have a strong sense of identity. The AONB will have appropriate sustainable growth throughout the plan period to support the local communities and rural economy.”</p> <p>It also states:</p> <p>“4.41 Pangbourne will remain an accessible thriving village community in an attractive and accessible setting within the AONB and will serve as a rural service centre for the surrounding villages. Small scale extensions in keeping with the existing character and pattern of development and in line with Pangbourne’s role as a rural service centre will help address issues of local housing need and provide opportunities for local people to buy a home in the village. The thriving district centre will continue to provide a good range of retail and leisure facilities, in the form of shops, pubs and restaurants. The diverse range of retail and leisure outlets will also help to form an important tourism base. <i>4.42 The service villages will continue to meet the needs of their residents and surrounding communities for facilities and services. Some small-scale development will have taken place to meet local needs, support the rural economy and sustain local facilities.</i>”</p>

Respondent	Response
	The four geographical areas are appropriate as a broad objective but this needs to be balanced against the amended settlement hierarchy that is proposed in para 4.4 above.
Pegasus Planning Group for Donnington New Homes	<p>Yes – this will ensure that homes are spread evenly across the District to most effectively meet housing need, and will ensure that the supply of housing land in the District is not over reliant on a small number of large-scale strategic sites which will concentrate development in certain areas of the District.</p> <p>Dividing the District into several geographical areas will allow the correct scale and style of development to be delivered in different areas across the District, given the distinct characteristics of each of the areas in question. Newbury and Thatcham are heavily developed, urban areas, and the focus of the highest density development in the district. The Eastern Area is a mix of more open, rural areas and urban, built-up areas such as Calcot, Purley on Thames and Tilehurst, whilst the North Wessex Downs Area of Natural Beauty is a predominantly open and rural area with very little development, aside from a few rural service centres and service villages. The East Kennet Valley is also predominantly rural, but includes some large employment sites such as AWE Aldermaston and Burghfield, which can restrict residential development given their associated risks. Given these differences, it is prescient to plan for each of them individually.</p>
Pegasus Planning Group for Donnington New Homes	<p>Yes – this will ensure that homes are spread evenly across the District to most effectively meet housing need, and will ensure that the supply of housing land in the District is not over reliant on a small number of large-scale strategic sites which will concentrate development in certain areas of the District.</p> <p>Dividing the District into several geographical areas will allow the correct scale and style of development to be delivered in different areas across the District, given the distinct characteristics of each of the areas in question. The Eastern Area is a mix of more open, rural areas and urban, built-up areas such as Calcot, Purley on Thames and Tilehurst, whilst the North Wessex Downs Area of Natural Beauty is a predominantly open and rural area with very little development, aside from a few rural service centres and service villages. The East Kennet Valley is also predominantly rural, but includes some large employment sites such as AWE Aldermaston and Burghfield, which can restrict residential development given their associated risks. Given these differences, it is prescient to plan for each of them individually.</p>
Pro Vision for Rootes Trustees	Yes
Pro Vision for Cala Group and Wates Developments	Yes
Pro Vision for Rivar	Yes
Savills for Englefield Estate	No specific comment is made at this stage, although the Council will need to consider how any new settlement might appropriately fit into this division by geographical area.
Joy Schlaudraff	YES, definitely. Exceptions, see above.

Respondent	Response
Turley for Commercial Estates Group	We do not consider that it is possible to provide an answer to this question until such time as the evidence-base has been updated, such that a properly justified and reasoned approach can be formed. Accordingly, we would simply suggest that the Local Plan Review considers the effectiveness of a sub-area approach against possible alternative options as well as its appropriateness in relation to the different characteristics across the District. We do, however, agree that a settlement hierarchy identifying the most sustainable settlements as the focus for the largest proportion of development is appropriate.
Turley for Berfeld Limited	We understand the rationale of dividing the District into four geographical areas, but we consider that the Council has a tendency to apply these artificial boundaries too rigidly in plan making and decision taking. For example, allocating housing delivery on fixed and inflexible figures to each spatial district based on assessed housing need across the whole Western Berkshire Strategic Housing Market Area, is inflexible and does not lead to the best plan making or decision taking. It may be appropriate to set out approximate targets for new homes across the spatial districts, but the policy wording should state that these are approximate and that there is scope to deviate from target figures. This would allow for more flexible decision taking to ensure that the overall presumption in favour of sustainable development is met.
Turley for A2dominion Housing Group	We consider that it is appropriate to establish policies for different parts of the District bearing in mind their different characteristics. Insofar as Streatley is concerned, we consider that this approach should have regard to the proximity of the settlement to Goring and the accessibility to local services and facilities and the interrelationship between the two locations.
Turley for North East Thatcham Consortium	<p>The Consortium considers that dividing the District into different geographical areas is an appropriate approach, provided that the strategy for each area is informed by an overarching strategy for the District as a whole.</p> <p>West Berkshire includes areas which are subject to different considerations. For example, the key urban areas of Newbury and Thatcham are geographically close and functionally related to one another. In contrast, the Eastern Urban Area shares a functional relationship with Reading. The North Wessex Downs Area of Outstanding Natural Beauty covers approximately 74% of West Berkshire and the restrictive approach to such areas in national planning policy requires a different strategy to that in other areas and moreover, this large part of the District does not include any of the most sustainable settlements (the most sustainable being Hungerford which is currently identified a Rural Service Centre). The East Kennet Valley lies outside of the AONB, and includes a number of settlements but none identified as being within the upper tiers of the settlement hierarchy.</p> <p>The highly contrasting characteristics of each part of West Berkshire suggest that a bespoke planning strategy be employed in each area.</p> <p>The Local Plan Review should ensure that policies for each geographic area are complementary and enable easy monitoring of delivery. Overlapping policies which ascribe or sub-divide requirements across areas should be avoided to ensure that there is a transparent rationale behind need and supply.</p>

Respondent	Response
West Waddy ADP for Gerald Palmer Eling Trust	As the different parts of West Berkshire have different characteristics it is agreed that dividing the District into different geographical areas is still the most appropriate way to deliver the spatial strategy.
Woolf Bond Planning for JJP Land	We do not object to this approach but note that any potential growth at Grazeley (paragraph 5.8 of Scoping Report) should not restrict growth of other sites within the Eastern Kennet Valley spatial area. If this occurred, it would undermine the approach of the draft NPPF to supporting growth in villages.
Woolf Bond Planning for Donnington New Homes	We do not object to this approach but do note the specific need to identify land in rural areas and on smaller sized sites, particularly where land is under-utilised in the revised NPPF.
Woolf Bond Planning for Donnington New Homes	We do not object to this approach but do note the specific need to identify land in rural areas and on smaller sized sites, particularly where land is under-utilised as stated in the revised NPPF.

## Summary of responses

The majority of respondents, including parish councils and statutory consultees, stated that they felt dividing the district into geographical areas is still an appropriate mechanism to deliver the spatial strategy. They outlined that this approach is an effective way to meet housing need and it also takes into account the distinctive features and characteristics of the district, which allows policies to be focused and relevant rather than taking a broad brush approach. One parish council disagreed with this approach however, and responded stating that a more district wide approach should be adopted, but that the different characteristics of the district should be recognised among other equally important factors. One statutory consultee highlighted the need to carry out the sequential test for fluvial flood risk when considering the location of development.

Some of the development industry considered the geographical areas were appropriate as a broad objective but that it would need to be balanced against an amended settlement hierarchy. Some respondents took this further and felt that a more sophisticated method of assessing sustainability should be applied, and highlighted the settlement hierarchy itself as a more appropriate way to deliver the spatial strategy. The relationship between the spatial areas and the settlement hierarchy was strongly emphasised, with many highlighting the important role the settlement hierarchy plays in identifying sustainable locations for development.

It was felt by some in the development industry that geographical areas would ensure that the supply of housing land in the district would not be over reliant on a small number of large scale strategic sites but allowed for an even spread of sites across the district. There was support from a landowner for retaining Newbury and Thatcham as a distinct area, and others stated that overlapping policies which sub-divide requirements across areas should be avoided to ensure transparency. A couple of respondents from the development industry felt the Council needed more evidence before it could make any decisions.

One landowner stated that dividing the district into geographical areas imposed arbitrary boundaries and distributing the housing requirement accordingly sits uncomfortably with the more strategic approach to planning which is emerging. It was outlined that geographical areas has the potential to lead to parochial decisions and compromise opportunities for sustainable patterns of growth. One of the responses from the development industry felt the Council had a tendency to apply these

artificial boundaries too rigidly in plan making and decision-taking and that flexibility was required, especially with regard to allocating housing figures for each spatial area.

Potential growth at Grazeley raised concern among some respondents who felt that such growth should not restrict the growth of other sites within that spatial area. Specific concern was also raised by landowners as to how a new settlement would fit into the mechanism of dividing the district into geographical areas. The specific need to identify land in rural areas and on smaller sized sites, as set out within the draft NPPF was set out in the responses of some site promoters. The relationship that some settlements on the edge on the District have with settlements in adjoining authorities was also raised.

### **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR).

The overwhelming support given to the effectiveness of dividing the District into geographical areas is welcomed but, in this context, the capacity of the Eastern Urban Area to accommodate future growth is an issue which requires further consideration. The Council will therefore review the character of and evidence it has for the existing spatial areas and consider whether it can introduce flexibility by reviewing boundaries.

A review of the spatial distribution of development across the District will also be done through a review of the settlement hierarchy and settlement boundaries. The Council intends to consult on both the methodology for the settlement hierarchy and criteria for the review of settlement boundaries in Nov/Dec 2018.

### Responses received to the Local Plan Review Scoping Report (February 2018)

**Q5: Do you think there is a realistic opportunity for a large scale development to the south of Reading which could have the potential to be incorporated into the overall spatial strategy for the District? Please give reasons for your answer.**

Number of responses received: 49

Respondent	Response
<b>Internal</b>	
Archaeology Team West Berkshire Council	Yes assuming sustainable development is proposed in terms of the historic environment of the area – we have yet to see any assessments.
Minerals and Waste Team West Berkshire Council	<p>Although it is acknowledged that here are no detailed plans for proposed development in this location, there are a number of operational minerals and waste sites with permanent and temporary planning permissions that are likely to be in close proximity to any large scale development in this area. The effect of any new residential development on the operation of these sites, should be considered in any future proposals.</p> <p>In general terms where any part of a site is underlain by aggregate mineral deposits then consideration of policies 1 and 2 of the Replacement Minerals Local Plan for Berkshire (Saved Policies) would be required. There are also areas in the vicinity of Grazeley which have been proposed as a Mineral Safeguarding Area in the emerging Minerals and Waste Local Plan (Preferred Options). There should be consideration given to the potential for sterilisation of mineral resources as a result of relevant future proposals.</p>
Public Transport Team West Berkshire Council	<p>Providing that all necessary supporting infrastructure and services are provided or upgraded in advance and that suitable mitigation is implemented to address the identified constraints, then I consider that there is a realistic opportunity to deliver a large-scale development to the south of the M4, south of Reading. This could potentially be delivered in partnership with Wokingham Borough Council, building on the joint activity that culminated in the production of the Spatial Planning Framework. Notwithstanding the constraints in the area, such as the proximity of the AWE Burghfield site, topography and drainage issues, there is substantial land available and limited potential to utilise capacity currently available on nearby radial routes into Reading (A33 and MereOak Park &amp; Ride, and via the Reading-Basingstoke rail line).</p> <p>In terms of transport infrastructure and services, given the outlying location of this proposed development in the vicinity of Grazeley and the lack of direct rail or road links from there to Newbury, as West Berkshire's administrative centre, and Thatcham, consideration should be given to:</p>

Respondent	Response
	<p>1. Construction or upgrading of road/s from the development linking through to the A4;</p> <p>2. Establishing and sustaining of peak and off-peak, high-quality, high-frequency public transport routes linking the development directly with:</p> <ul style="list-style-type: none"> <li>• established employment sites in West Berkshire including Calleva Park, AWE Aldermaston and Easter Park, and allowing for onward rapid travel to Thatcham and Newbury;</li> <li>• schools and amenities in Mortimer (the nearest Rural Service Centre in the District);</li> <li>• employment opportunities and amenities in the Reading area, including Reading International Business Park.</li> </ul> <p>This could potentially be achieved by complementing the existing ‘greenwave’ and the commercially-operated ‘lime’ branded high-quality bus routes.</p> <p>3. Scope to construct a new rail station at Grazeley, having regard to train pathing constraints and other developments planned for the Reading-Basingstoke line, including the pending construction of Reading Green Park Station. If an additional Grazeley Station is not deemed feasible, then upgrading of the station at Mortimer, coupled with connecting bus services to Mortimer and/or Reading Green Park Stations may be warranted.</p>
<b>Statutory consultees</b>	
Reading Borough Council	<p>Yes. Although, consideration should be given to the deposits of sharp and gravel that lie south of Reading, also the mineral extraction and processing site Bridge Farm. Where the need for development outweighs the benefits of protecting the mineral resource, there may be opportunities to accommodate both through the use of prior extraction. Prior extraction refers to the removal of a mineral before any development takes place on a site in order to avoid the loss of valuable mineral deposits, which once built over would not be accessible. The opportunity for prior extraction of the full resource may not always be available because of various factors, including the delivery program of development or the availability of the resource. However, in order to assist with the national policies for ensuring a steady and adequate supply of, it is important to make every effort to minimise the sterilisation of mineral resources. Furthermore, if development were to be proposed in close proximity to Bridge Farm, then appropriate buffers and mitigation measures should be incorporated into design proposals in order to make any nearby development compatible so that the site could continue its intended use. Early consultation on non-minerals and waste development proposals will allow for consideration of safeguarding of mineral resources and infrastructure and how this can be built into the scheme and not necessarily considered a barrier.</p>
Stratfield Mortimer Parish Council	<p>There clearly is scope for such an opportunity. However, our concern is that such a development would not be a true Garden Village but a mere extension of Reading across the motorway. Because, in our view, most of the new residents would see the development in that light, and would have existing connections that demanded access back to Reading, it would not be self-sustaining but cause all sorts of issues outside the boundary of the settlement. A ready example is the congestion at junction 11 of the M4 and along the A33 into Reading at present. To add 15,000 people just on the other side of the M4 would, in our view, lead to very much increased congestion. Similarly while GP facilities might be provided within the development, what would be the impact of the additional population on services at Royal Berkshire Hospital? Is</p>

Respondent	Response
	<p>it not the case that the infrastructure package for the settlement would largely be spent within the development itself (or on the immediate periphery) rather than on the wider network?</p> <p>While giving examples of issues with access to Reading it is also clear that traffic will be increased on the other roads around the area, including those through Mortimer. Another aspect of any development, but one that is thrown into sharp relief by the size of the proposed development is the timing of any infrastructure provision. For instance the provision of extra GPs in the area must happen at the same time as the increase in population if existing facilities are not to be overwhelmed</p>
Thatcham Town Council	Yes- due to the national need for housing this has great potential and importance in the overall spatial strategy.
Streatley Parish Council	<p>Streatley Parish Council agrees that a large scale development south of Reading makes a lot of sense for a number of reasons, including:</p> <ul style="list-style-type: none"> <li>a. It is close to existing major urban settlements and existing infrastructure and employment areas.</li> <li>b. It is strategically placed to support housing needs of 3 neighbouring Districts (West Berks, Wokingham and Reading).</li> <li>c. It will reduce the need to accommodate and provide numerous other sites scattered across the rest of the District.</li> <li>d. It is not in a sensitive "Green Belt" or AONB.</li> </ul>
Pangbourne Parish Council	<p>Yes I do. This development could deliver 15,000 new homes with supporting infrastructure and services, most of which would fall within the boundaries of WBC and Wokingham. The benefit to WBC would be at least 5,000 new houses. There may also be some further potential for development around Burghfield. This is clearly a long term vision and will involve massive investment in transport infrastructure which will eventually revolutionise access from the south into Reading. To enhance economic expansion we are dependent on infrastructure development outside our control, specifically Crossrail and the new runway at Heathrow both of which are important to Pangbourne. I also think that the difficulties we (and others) have faced in finding sites for housing it makes far more sense to develop and new town south of Reading with all the necessary services and infrastructure rather than expanding current village envelopes into AONB.</p>
Greenham Parish Council	<p>There has been overwhelming emphasis on housing in the Newbury &amp; Thatcham urban area in the 2026 Local Plan. We believe much of this merely accommodates commuters into Reading and therefore a new large housing development nearer to Reading at Grazeley ought to be pursued if at all possible as being more sustainable.</p>
Holybrook Parish Council	<p>Due to the lack of infrastructure in the urban areas, to the south of Reading, Holybrook Parish Council do not agree that there is a realistic opportunity for a large scale development.</p>
Burghfield Parish Council	<p>No. It would not be possible to build 5,000 new homes in the eastern fringe of West Berkshire without sacrificing an extensive area of attractive countryside, some of it in close proximity to AWE Burghfield and to the Thames Basin Heaths SPA.</p>

Respondent	Response
Burghfield NDP Steering Group	No. It would not be possible to build 5,000 new homes in the eastern fringe of West Berkshire without sacrificing an extensive area of attractive countryside, some of it in close proximity to AWE Burghfield and to the Thames Basin Heaths SPA.
Sport England	Yes, because the infrastructure which already exists within Reading
Environment Agency	<p>We don't know the exact location of the proposed large scale development south of Reading. However we have the following advice.</p> <p>Firstly we advise you to apply the flood risk sequential test when considering the location of any development. You will need to apply the sequential test as part of your evidence base for your local plan. You will need to be able to justify your choices for the location of development.</p> <p>If this scheme passes the sequential test and is compatible with the flood zone it lies in accordance with the flood risk tables 1, 2 and 3 in the Planning Practice Guidance then you will need to come to us for advice on other issues within our remit. Depending on where the development is located this can include, biodiversity and watercourses, groundwater quality and contaminated land, surface water quality and pollution prevention and fluvial flood risk.</p>
Savills for Thames Water	We believe it is something that's been considered for quite a few years. Thames Water has no objections to the plans and would welcome the opportunity to work with the Local Authority and developers on scale and phasing to ensure that any necessary infrastructure is delivered ahead of occupation.
<b>General consultation bodies</b>	
Mid & West Berks Local Access Forum	<p>We do not feel that it is within our remit to comment on where development should take place but, if this land area is developed, we recommend that:</p> <ol style="list-style-type: none"> <li data-bbox="658 959 2051 1054">i. Greenways / off-road paths are designed into the plans at an early stage to encourage non-motorised travel within the development and to other destination points. The example currently being implemented in Wokingham Borough may be useful to follow &amp; develop further.</li> <li data-bbox="658 1066 2051 1161">ii. Public Open Space (protected in perpetuity) is incorporated within walking distance of housing developments and reached by attractive, safe &amp; convenient off-road paths to encourage non-motorised travel. Existing use of land for current recreational activities needs to be retained or replaced with equivalent.</li> <li data-bbox="658 1173 2051 1268">iii. Off-road connections to the existing <u>public rights of way network</u> are designed into developments for all user groups to encourage Active Travel for both utility &amp; recreational purposes. New paths should be added to the Definitive Map and Statement at the correct status to ensure security and aid communication to the public.</li> </ol>
British Horse Society	It is not the Society's remit to comment on where development might take place but regard should be had to the existing equestrian establishments in the area and provision made for their retention. It should be noted that many horse riders

Respondent	Response
	live in urban areas and travel to where there horse is kept / or where they ride. The network of bridleways (which cater for most user groups) built into Milton Keynes are an example of development incorporating off-road paths for all to encourage non-motorised travel.
Reading Gospel Hall Trust	Development would be better elsewhere because of AWE and pre-existing traffic congestion.
<b>Other stakeholders</b>	
Robert Wallace	Reading will continue to grow in all directions - the critical issue by 2040 will be keeping it from linking up with Newbury and Pangbourne in a semi-continuous sprawl.
William Graham	It depends on the size of development being considered. Apart from the M4 and the M3 there are no major roads serving this area going East-West. Therefore the M4 between Junctions 12 and 10 in particular would become even more congested with local commuter traffic at rush hours. It should be protected as the main National East-West route. The M4 forms a barrier to southwards expansion at present. This should be resisted by developing all possible land in the Reading area north of the M4. Any large scale development should be considered as a stand-alone new “town” separated from Reading with its own infrastructure.
Neil Richardson	Major area of uncertainty that needs resolving soonest.
Christopher Gent	The large scale development proposed south of Reading, commonly referred to as Grazeley is a very good way of meeting the housing requirements across West Berkshire, Reading and Wokingham as it enables a coherent development as a single community with appropriate infrastructure such as schools, doctors surgeries, retail and leisure amenities. Such an approach is preferable to piecemeal development which adds additional strain on existing facilities as smaller scale does not normally come with increased infrastructure capacity.
<b>Landowners, site promoters and developers</b>	
Bewley Homes	However, whilst we agree in principle with this approach, it would have to be ensured that it was brought forward in combination with smaller sites to ensure a robust 5 year housing land supply is maintained. The delivery of infrastructure in terms of transport improvements and facilities would be fundamental for the project to be successful. Environmental constraints as well as the impact of AWE Burghfield would also need to be overcome.
Barton Willmore for Graham Child	Our client does not consider the need to comment on the sustainability of large scale development to the south of Reading as it is not considered relevant to the purpose of their representations. Moreover our client has not been provided with sufficient evidence with which to justify a meaningful response.

Respondent	Response
	<p>Notwithstanding this our client would note the deliverability of large sites previously with West Berkshire, which have been in some instances significantly delayed. Our client considers that it highlights the issues that can arise with large strategic sites and a cautious approach should therefore be taken in relation to their forecasted timeframes for delivery. As a consequence the Council have had to rely previously on windfall sites to deliver their housing requirement and indeed their 5 year delivery figures have been affected as a result.</p> <p>Whilst our client does not suggest that this should indicate that all strategic sites will encounter such delays, a broad recognition that larger strategic sites will deliver housing later in the plan period should be balanced by the allocation of smaller scale sites which have the ability to deliver earlier in the plan period. This will ensure that housing needs are met effectively with a steady delivery of homes and will also ensure that the council maintain a 5 year housing supply. Solely relying on large strategic sites is not considered conducive to a stable supply of housing. In this regard our client would highlight their land at Pangbourne Hill, which is able to deliver housing in the short/medium term and should therefore be considered for allocation within the emerging Local Plan.</p>
Barton Willmore for Sulham Estate	<p>We do not wish to comment specifically on a large-scale development to the south of Reading as it is not directly relevant to our client's representations. In addition, this consultation lacks any detailed information in relation to this which could provide the basis for a response.</p> <p>Nevertheless, we would like to comment that, in order for the Council to meet housing needs, we would support the allocation of a range of different site sizes across the District which are sustainably located and well-related to the 'Urban Areas' as identified within the Spatial Strategy.</p> <p>We would also like to comment that if the Council chooses to pursue large scale or strategic allocations, a cautious approach should be taken in terms of the forecasted timeframe for the delivery of houses.</p> <p>The recognition that larger strategic sites will deliver housing later in the plan period should be balanced by the allocation of small to medium scale sites which have the ability to deliver earlier in the plan period. This will ensure that housing needs are met effectively with a steady delivery of homes and will also ensure that the council maintain a 5 year housing supply.</p> <p>Our client's site, Land at Hall Place Farm Tilehurst, offers the opportunity to allocate a non-strategic scale site with the ability to deliver up to 80 homes in the short to medium term. The site is deliverable with all land within the ownership of our client.</p>
Boyer Planning for Spitfire Bespoke Homes Ltd	<p>Spitfire do not object to the principle of a new settlement at Grazeley, although it is essential that this is not at the expense of allowing early sustainable residential growth in villages in line with the draft NPPF.</p> <p>In addition to the importance of rural housing as outlined in Paragraph 80 of the draft NPPF (see above), it is noted that the draft NPPF (paragraph 69) recognises that "small sites can make an important contribution to meeting the housing requirements of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites local planning authorities should:</p>

Respondent	Response
	<p>a) Ensure that at least 20% of the sites identified for housing in their plans are of half a hectare or less...” For this reason, it is essential that the Local Plan Review allocates smaller sites which are capable of meeting a local housing need early in the Plan period.</p>
Mark Carter for Mr R.L.A. Jones	<p>The respondent does not think there is a realistic opportunity for a large scale development to the south of Reading with the potential to be incorporated into the overall spatial strategy for the District. 15,00 dwellings of which 5,000 would be in West Berkshire would be too dependant on Wokingham District and too many for West Berkshire to absorb. This is an idea which has existed for thirty years and has never progressed on any scale. The site is the wrong side of the M4 which heavily constrains traffic and is socially divisive, it has a number of sensitive environmental factors and is too close to the Atomic Weapons Establishment at Burghfield. Lastly a concentration of future development at the eastern end of the District would not serve West Berkshire. It would take overspill from Reading and Wokingham. It would not enable the steady growth of communities in West Berkshire which has occurred to date and which help to preserve important local facilities and services in West Berkshire communities such as Lambourn.</p>
The Chilton Estate	<p>Large new settlements of this nature can present practical and timing problems. The allocation of Sandford Farm, Newbury, as a strategic allocation in the Core Strategy has not proved successful. It has so far not come forward for development after many years and if it does it's likely to be under the control of a few larger developers which could have a restrictive impact on pricing and design. Accordingly land allocation should be concentrated on relatively small sites in areas such as Hungerford and Thatcham plus controlled growth within villages.</p>
Fisher German LLP for Mr Musgrave and Begley	<p>The allocation of the Garden Village new settlement is opposed and is of significant concern, both in terms of its physical impact, and its impact of the soundness of the development strategy and supply of housing. The site is alleged to have the opportunity to provide employment land and approximately 15,000 new homes, with 5,000 delivered in West Berkshire. Such a development will require large scale environmental and economic infrastructure, including a rail station, new roads, schools, flood alleviation and strategic scale green infrastructure. The site is being considered without detailed evidence that the site can be delivered in terms of environmental constraints, highways and utilities infrastructure. Until this work is completed, the new settlement should form no part of the proposed development strategy. The Council are already aware that the site has a number of strategic constraints and issues, not least that the land is within multiple ownerships and therefore land assembly would be required in order to deliver a single coherent scheme. In addition, large areas of the site are prone to flooding and it is unknown if alleviation of this to the level required in order to deliver a new settlement would be possible, and the site is close to an Atomic Weapons Establishment (AWE) where areas are safeguarded from increases in population in close proximity to the establishment. Funding has been directly sought from the Government in an Expression of Interest (EoI) in order to deliver the project. This includes £5.38m of capacity funding to pay for technical studies and a team of specialist staff to deliver the project. In</p>

Respondent	Response
	<p>addition, the Western Berkshire Council's have also requested £250m of forward funding from the Government in order to deliver the infrastructure required for the new settlement.</p> <p>In terms of the capacity funding, the EoI sets out that in the year 2016/17 it would require £325,000, with £1.764m in 2017/18, and approximately £800,000 in each of the next four years.</p> <p>In terms of the forward funding, the EoI sets out that the £250m will be required between 2018/19 and 2026/27.</p> <p>No decision has been made on the application as yet and as such the Council is behind in its delivery of their strategy as set out in the EoI. This strategy includes a housing and infrastructure trajectory which anticipates delivery of dwellings by 2020/21, with 6,700 dwellings projected to be delivered by the end of the Plan period in 2035/36. There is no break down as to which LPA areas these would be delivered within, however it is clear that the 15,000 overall units would not be delivered within the Plan period. In addition, there is no reasonable prospect that any delivery of units would be delivered by 2020/21.</p> <p>Having regard to the previous experience in delivering new settlements, the necessary infrastructure required for the development, including a new railway station, new access roads and schools, it is considered that the lead-in time for any such development and delivery of units would go beyond the Plan period. To assume that a new settlement will deliver any units within the Plan period will result in a Plan which is unable to meet the District's housing needs. As such it is considered that whilst planning for the new settlement can continue, in order to ensure the Plan is sound and that the OAN will be met it is considered that the existing settlements should be apportioned sustainable levels of growth.</p>
Gladman Developments	<p>It is essential that West Berkshire Council works pro-actively alongside relevant local authorities nearby to establish an appropriate strategy for the growth of the wider area. In particular, the continued growth of Reading will be vitally important in this context. Reading is already at a point where it is unable to meet its development needs within its administrative boundaries and it has a social and economic that extends into neighbouring areas. It is therefore essential that options to support the continued sustainable growth of Reading are robustly considered through the local plans of all of its neighbouring authorities. Such an approach will require opportunities for Reading's needs to be met within adjoining areas (including those that have not been defined within the Western Berkshire HMA such as South Oxfordshire). Any such approach should not however detract from the need for the Local Plan to support the sustainable growth of the main urban and rural settlements of West Berkshire.</p>
Hallam Land Management	<p>Over the course of a number of years HLM and WEL have commissioned a comprehensive review across all disciplines, the results of which are available to West Berkshire, and demonstrate that both technically and in terms of sound, sustainable planning there is a genuine and realistic opportunity to deliver a new settlement south of Reading. These conclusions are supported by:</p> <ul style="list-style-type: none"> <li>• The West of Berkshire Spatial Planning Framework December 2016</li> <li>• The Grazeley Garden Settlement Joint Expression of Interest submitted to Government July 2016. The Wokingham/West Berks/Reading Joint Housing Infrastructure Fund expression of interest submitted to Government September 2017 – now shortlisted.</li> </ul>

Respondent	Response
Nexus Planning for Pangbourne Beaver Properties	<p>The Council suggests that land to the south of Grazeley, south of Reading is being considered as a potential housing and mixed use development comprising approximately 15,000 homes. This development would straddle the local authority boundary and would comprise approximately 10,000 homes in Wokingham and 5,000 in West Berkshire.</p> <p>PBP Ltd does not object, as a matter of principle, to the allocation of what amounts to a new settlement to the south of Reading as a way of helping to meet future development needs in West Berkshire. But this new settlement should not detract from housing provision that will help to sustain existing settlements. It is also noted that housing delivery rates for new developments of this scale tend to be low, particularly in the early years due to the infrastructure requirements associated with this form of development. Implementation will be further complicated for a settlement that lies within two local authority areas.</p>
Nexus Planning for Croudace	<p>The Council suggests that land to the south of Grazeley, south of Reading is being considered as a potential housing and mixed use development comprised of approximately 10,000 homes in Wokingham and 5,000 in West Berkshire.</p> <p>Croudace Homes does not object, as a matter of principle, to the allocation of what amounts to a new settlement to the south of Reading as a way of helping to meet development needs in the District. However, this stance is predicated upon the Council, prior to making such an allocation, and prior to determining the scale of any such new allocation, ensuring that it has first maximised all sustainable options to deliver housing at the existing three strategic settlements and particularly at Thatcham.</p> <p>Whilst new settlements can of course deliver a range of benefits, urban extensions to existing settlements are generally preferable as they have much greater potential to ensure that the benefits, in terms of new infrastructure provision, accrue to both existing residents as well as new residents. New settlements, by their very nature, are self-contained and, therefore, generally provide infrastructure benefits to new residents only.</p> <p>We would also raise concerns regarding the potential delivery rates from a development of this scale. The emerging Local Plan is due for adoption at the end of 2020 but the Grazeley site crosses local authority boundaries would therefore require extensive cross boundary joint working. It is also likely that an Area Action Plan would be needed for development of this scale. Assuming this site is allocated, it would likely be followed by several outline planning applications with appropriate legal agreements which would be significant and complex for a development of this scale and nature.</p> <p>Further to this, conditions would need to be discharged and reserved matters submissions produced, submitted and determined. All of this would be required before enabling works on site can commence, let alone the construction and completion of houses. Given this lengthy lead in time, it is reasonable to assume that there would be no material start on site until the back end of the current Plan period at best, and possibility into the next Plan. In any event, the scope for delays aside, it would be mistake to rely too heavily on delivery of housing from a single site because it is highly questionable whether the market would be sufficiently strong to support the purchase of this many homes per annum, over a lengthy period of time, in a single location.</p> <p>To ensure a mixed portfolio of sites which will ensure delivery at the front end of the Plan period and throughout, as well as minimising risk associated with a new settlement, it is essential that the Council first ensures that all development opportunities at the three existing strategic settlements are maximised before determining the need for, and scale of, any</p>

Respondent	Response
	<p>new settlement proposal.</p> <p>In that regard, it has been demonstrated that the land at Henwick Park, Thatcham is suitable for development comprising at least 225 dwellings. Development at this site would make a meaningful contribution during the first five years of the Plan period.</p>
Origin3 Ltd for Sandtrend Ltd	<p>The West Berkshire Spatial Framework Plan provides the most suitable starting point in identifying suitable directions for new growth.</p> <p>Through working with the adjoining authorities of Reading Borough, Wokingham and Bracknell Forest, West Berkshire have identified broad site opportunities which span administrative boundaries and offer appropriate locations to direct new development.</p> <p>These locations are identified as Areas of Search in the Spatial Framework Plan. We support the Council's intentions to further explore development opportunities within these Areas of Search through the LPR.</p> <p>We understand from the Spatial Framework Plan 1, see attached document at Appendix 2, that the key Areas of Search within West Berkshire are at:</p> <ul style="list-style-type: none"> <li>• Land north of Newbury within the 'M4 Corridor'; and</li> <li>• At Grazeley, to the south of Reading</li> </ul> <p>This LPR provides an excellent opportunity for the Council to further test and explore the development prospects identified by the West of Berkshire Spatial Framework Plan. These broad areas have been identified by West Berkshire and the adjoining authorities as suitable locations for future growth, subject to detailed environmental assessment.</p> <p>It appears that through the LPR Scoping Report opportunities for a new settlement at Grazeley are being explored at length which, in principle, is supported providing a mix of other sites are also brought forward through the LPR. In order to balance supply and ensure that all reasonable alternatives are assessed, the Council should also explore development opportunities north of Newbury.</p> <p>The NPPF paragraph 182 stipulates that in order to be justified in the context of soundness, the plan should set out the most appropriate strategy, when considered against all reasonable alternatives.</p> <p>Development pressure to the north of Newbury is high due to excellent employment opportunities, excellent access and high quality housing and education. Through directing development to the north of the town, within the 'M4 corridor' new homes would be very well connected to both the immediate town of Newbury but also to Reading and the wider southeast region.</p> <p>Good connectivity to Reading has much wider benefits as it has been accepted by Reading Borough Council that it will struggle to meet its OAHN within its own administrative boundary.</p>
Pegasus Planning Group for Donnington New Homes	<p>No – there is not a realistic opportunity for incorporating a large-scale development to the south of Reading into the overall spatial strategy for the district. Any major development which is not delivered on land adjacent to an existing settlement would be a complete departure from the overall spatial strategy. This is because the current spatial strategy builds on the existing settlement pattern and suggests that land should only be allocated for housing development when it is adjacent to an existing settlement, as defined in Core Strategy Policy ADPP1, which states that:</p>

Respondent	Response
	<p>“Development in West Berkshire will follow the existing settlement pattern and comply with the spatial strategy set out in the Area Delivery Plan policies of this document based on the four spatial areas.”</p> <p>“Most development will be within or adjacent to the settlements included in the settlement hierarchy set out below”</p> <p>“West Berkshire’s main urban areas will be the focus for most development.”</p> <p>Policy ADPP1 also states that only appropriate, limited development, which focuses on addressing identified needs and maintaining a strong rural economy, will be allowed in the open countryside.</p> <p>If a large-scale development to the south of Reading is incorporated into the overall spatial strategy for the district, it should not be relied upon to contribute towards West Berkshire Council’s five-year housing land supply, as work on the strategic site is currently at very early stages, and will take decades to come forward given its complexities. These complexities include the site’s location within the boundaries of three Local Planning Authorities, its potential size of approximately 15,000 dwellings, and the complete lack of infrastructure at the site currently.</p>
Pegasus Planning Group for Donnington New Homes	<p>No – there is not a realistic opportunity for incorporating a large-scale development to the south of Reading into the overall spatial strategy for the district. Any major development which is not delivered on land adjacent to an existing settlement would be a complete departure from the overall spatial strategy. This is because the current spatial strategy builds on the existing settlement pattern and suggests that land should only be allocated for housing development when it is adjacent to an existing settlement, as defined in Core Strategy Policy ADPP1, which states that:</p> <p>“Development in West Berkshire will follow the existing settlement pattern and comply with the spatial strategy set out in the Area Delivery Plan policies of this document based on the four spatial areas.”</p> <p>“Most development will be within or adjacent to the settlements included in the settlement hierarchy set out below”</p> <p>“West Berkshire’s main urban areas will be the focus for most development.”</p> <p>Policy ADPP1 also states that only appropriate, limited development, which focuses on addressing identified needs and maintaining a strong rural economy, will be allowed in the open countryside.</p> <p>If a large-scale development to the south of Reading is incorporated into the overall spatial strategy for the district, it should not be relied upon to contribute towards West Berkshire Council’s housing land supply over the period to 2036, as work on the strategic site is currently at very early stages, and will take decades to come forward given its complexities. These complexities include the site’s location within the boundaries of three Local Planning Authorities, its potential size of approximately 15,000 dwellings, and the complete lack of infrastructure at the site currently.</p> <p>It is reasonable to consider that a new settlement such as this could contribute to housing supply, post 2036.</p>
Pro Vision for Rootes Trustees	<p>Large scale development south of Junction 11 of the M4 would significantly distort the existing spatial strategy and undermine the sustainable development objectives of supporting and enhancing the viability and vitality of existing settlements and promoting sustainable economic growth. The main focus of growth should continue to be in the Urban Areas, with further growth directed to the existing Rural Service Centres, including Hungerford, and Service Villages. The SHLAA demonstrates that there is capacity to accommodate the likely level of need for additional housing and employment land within, or as extensions to, the existing settlements.</p>

Respondent	Response
	<p>Not only would a new settlement located at the eastern extremity of the District undermine the viability and vitality of the existing settlement hierarchy, but it is likely to increase travel demands and undermine the objective of making as much use as possible of previously developed land. It will also raise issues about housing delivery, particularly in the light of the emerging Housing Delivery Test that will quickly penalise LPA's that rely heavily on large strategic sites that by their very nature are slow in delivering housing and very susceptible to delay due to their significant infrastructure requirements.</p>
Pro Vision for Cala Group and Wates Developments	<p>Large scale development south of Junction 11 of the M4 would significantly distort the existing spatial strategy and undermine the sustainable development objectives of supporting and enhancing the viability and vitality of existing settlements and promoting sustainable economic growth. The main focus of growth should continue to be in the Urban Areas, with further growth directed to the existing Rural Service Centres, including Hungerford, and Service Villages. Pro Vision for Rivar	<p>Large scale development south of Junction 11 of the M4 would significantly distort the existing spatial strategy and undermine the sustainable development objectives of supporting and enhancing the viability and vitality of existing settlements and promoting sustainable economic growth. The main focus of growth should continue to be at Newbury and Thatcham, with more modest growth directed to the existing Rural Service Centres and Service Villages. The SHLAA demonstrates that there is capacity to accommodate the likely level of need for additional housing and employment land within, or as extensions to, the existing settlements.</p> <p>Not only would a new settlement located at the eastern extremity of the District undermine the viability and vitality of the existing settlement hierarchy, but it is likely to increase travel demands and undermine the objective of making as much use as possible of previously developed land. It will also raise issues about housing delivery.</p>
RPS for AWE	<p>AWE Burghfield currently provides capability for assembly and disassembly of warheads together with limited component manufacture and storage. It is the only site in the UK that provides this function. Future capabilities will continue to include assembly and disassembly of warheads for the foreseeable future but also a potential increase in the component manufacture. This is evidenced by the modernisation and redevelopment programme that has been pursued over the last 10 years. In addition, provision will need to be made for AWE B to provide capabilities, if required, for storage of materials.</p> <p>Any major housing development in the vicinity of AWE Burghfield will need to be compliant with the requirements of the emergency planning area (also known as the Detailed Emergency Planning Zone) which is currently under review,</p>

Respondent	Response
	<p>together with the associated Emergency Plan. Local planning polices are already in place which seek to prevent inappropriate development, such as housing, within the EPA on the grounds of public safety.</p> <p>Future capabilities may also require consideration of the application of the Control of Major Accident Hazards regulations which could be affected by the presence of major development close to AWE Burghfield.</p> <p>In summary careful consideration needs to be given to the location of any major development close to AWE Burghfield and in particular within the EPA to ensure that there is no potential impact upon current and / or future site operations.</p>
Savills for Englefield Estate	<p>The Englefield Estate are one of the key landowners affected by the potential new settlement at Grazeley. Should the relevant Councils (Wokingham Borough and West Berkshire) consider that this is the most appropriate location for new growth to meet the needs of the West Berkshire Housing Market Area, the land is available for development. The Estate considers the land to be suitable, being relatively unconstrained in planning policy terms and well located to existing or proposed infrastructure improvements.</p>
Joy Schlaudraff	<p>I think this is somewhat unrealistic. The development of that many houses has potential in the area, but needs to be dispersed throughout the south of Reading and in other areas, in small groups of around 25-50, through the exceptions policy spoken of in Question 3 and 4 above.</p> <p>More flexibility in identifying suitable land for housing is needed, and it needs to be easier for people to find out if their land has development potential or not, and where.</p>
Turley for Commercial Estates Group	<p>The Local Plan Review is right to consider the possibility of delivering a new settlement at Grazeley. However, the development of what amounts to a new settlement at this location cannot be guaranteed and will invariably take a very long time to deliver. We draw the Council's attention to the experience of Swindon Borough Council, which has attempted to deliver a comparable allocation 'New Eastern Villages' (comprising 8,000 dwellings), but which has been plagued by difficulties that have impeded development. Not coincidentally, the land supply position in Swindon is presently less than 3 years and therefore falls significantly short of the requisite 5 years.</p> <p>Similarly, should Grazeley come forward, it is likely to contribute towards meeting Reading's and Wokingham's unmet need, rather than West Berkshire's. This is by virtue of the Grazeley site being situated adjacent to the Reading / Wokingham conurbation, and being dislocated from Newbury and other major settlements in West Berkshire. Accordingly, whilst we certainly consider that large allocations should play a key role in the spatial strategy, we strongly advise against an over-reliance on the 'Grazeley Solution'.</p>
Turley for Berfeld Limited	<p>Yes. We consider that there should be explicit recognition in the policy of the West of Berkshire Spatial Planning Framework. This is a joint agreement between the authorities of Bracknell Forest Council, Reading Borough Council, West Berkshire District Council and Wokingham Borough Council.</p> <p>This identifies that "up to 2036 the area needs to deliver in the region of 65,665 new dwellings to deal with population growth, affordability, market factors, sustaining and improving economic growth and the impact of the growth of London. This means finding land for just under 3,000 homes per year."</p>

Respondent	Response
	The Spatial Planning Framework has resulted in Reading Borough Council making a formal request to Wokingham Borough Council and West Berkshire Council in a 'Statement of Collaboration' to assist in their shortfall in unmet need for housing.
Turley for North East Thatcham Consortium	<p>The Consortium considers that any proposals for large scale development in the area to the south of Reading will need to be informed by the characteristics in that area, particularly the presence of areas at risk of flooding and the proximity of the area to the AWE facility at Burghfield which may represent a constraint on development in response to public safety considerations.</p> <p>In any event, the Consortium considers that large scale development to the south of Reading would serve to meet the needs of other authorities, namely Reading and Wokingham Boroughs. The area south of Reading has little, if any, functional relationship with the remainder of West Berkshire given the distance between this area and West Berkshire's main urban areas and principal settlements.</p> <p>Furthermore, the Consortium considers that any infrastructure and facilities provided as part of large scale development to the south of Reading would not provide any opportunities to help address the long established aspirations elsewhere in West Berkshire. For example development south of Reading would not assist in regenerating Thatcham, making it a more self-contained settlement or the pressing need for infrastructure delivery at the town.</p> <p>The Consortium considers that the Council should first and foremost seek opportunities within the District which will make a positive contribution to achieving sustainable development in West Berkshire. That is likely to be significantly more achievable at the settlements within the District rather than in a part of West Berkshire which is likely to have no functional relationship with Newbury/Thatcham but instead with Reading and Wokingham Boroughs.</p>
West Waddy ADP for Gerald Palmer Eling Trust	This is not relevant to the interests of the Gerald Palmer Eling Trust and so no opinion is expressed on this matter.
Woolf Bond Planning for Donnington New Homes	If this proposal is to be progressed then we note that it will require substantial infrastructure provision (with long lead in periods) and collaborative working with Wokingham Borough Council These factors could result in housing delivery not commencing until the very end of the Local Plan at best, with the majority of delivery being post 2036. We would suggest that the allocation of a range of sites, adjacent to existing settlements elsewhere in the District would therefore benefit from allocation to supplement this site and enable delivery at an early stage in the plan period.
Woolf Bond Planning for Donnington New Homes	If this proposal is to be progressed then we note that it will require substantial infrastructure provision (with long lead in periods) and collaborative working with Wokingham Borough Council These factors could result in housing delivery not commencing until the very end of the Local Plan at best, with the majority of delivery being post 2036. We would suggest that the allocation of a range of sites, adjacent to existing settlements elsewhere in the District would therefore benefit from allocation to supplement this site and enable delivery at an early stage in the plan period.
WYG for Donnington New Homes	Donnington New Homes believe that there are significant risks associated with the delivery of much of the Districts housing need through one strategic site, particularly given the specific constraints identified at paragraph 5.8. Donnington

Respondent	Response
	<p>New Homes believe while the strategic site should be considered to meet longer term housing and infrastructure needs, there is a more immediate requirement for the delivery of housing, which can be better met through a range of allocations adjoining the existing main urban areas, particularly as it will ensure a continued distribution of housing across the local plan area. Land at SPS provides a large- scale development, which will benefit from new and approved infrastructure associated with the development of the wider Sandford Park, without the constraints associated with the delivery of the development to the south of Reading - namely the scale of the proposal; its location within the consultation zone of the Atomic Weapons Establishment (AWE) Burghfield (which calls into question whether a development of the scale envisaged can be delivered in this location); the inevitable additional time required to progress the development given its cross-boundary location; the fact that any development in West Berkshire is only likely to be after the main part of the development outside the district has substantially progressed; and the requirements for major new infrastructure including a railway station.</p> <p>It is worth noting that the West of Berkshire Spatial Planning Framework, published in December 2016, identifies opportunities for growth. [Figure 3 of that document] shows the growth options proposed for Newbury. The existing Sandford Park allocation is shown in light blue as a “Large Development Area”, with land to west shown as an “Area of Search” (hatched dark blue). A proportion of the SPS proposal is shown as an Area of Search.</p>

## Summary of responses

Comments were divided on this issue. The majority of respondents who considered that there was potential for development in this area were cautious and felt it was dependent on a number of issues which would need to be resolved, some of which were potentially significant. These included the impact on infrastructure, especially the transport network; the amount of infrastructure that development would require; environmental constraints; AWE constraints; impact on green space and the impact on potential mineral sites.

Local communities who felt that would be directly affected by such a development in this area were not in favour of the proposal, citing similar concerns to those identified above.

Whilst acknowledging that development in this location could be seen as a strategic opportunity for authorities in the Western Housing Market Area some respondents felt that the area south of Reading has little, if any, functional relationship with the remainder of West Berkshire and that development in this location would serve to meet the needs of other authorities, namely Reading and Wokingham rather than West Berkshire. Others also felt that it would also undermine the viability and vitality of the existing settlement hierarchy in the District. At the same time, the risks of delivering through such a large strategic site were highlighted by those in the development industry, in particular the long lead in period for such a development. The need for the Plan to be flexible and to include a range of smaller sites across the District which would be able to deliver at an earlier stage in the plan period was also emphasised by many in the industry.

## **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR).

The four Western Berkshire authorities are committed to meeting the housing requirement across the Western Housing Market Area. To this end the Councils have agreed a Memorandum of Understanding which states that the four authorities will continue to work together to ensure that local plans in the area set out policies and proposals that collectively provide for the full housing needs of the area, including unmet need in Reading.

Should development be considered appropriate at this location, given the strategic nature of the site, any development would be delivered in partnership with Wokingham Borough Council. Reading Borough Council would also be involved in the process.

Should a large scale development go ahead at Grazeley it would require comprehensive masterplanning to ensure that it was delivered in the most sustainable way. Part of this would involve a detailed transport assessment of the existing network. Given that such a large scale development would likely impact significantly on the existing network, developer contributions from the development would go directly to funding any improvements required. A detailed assessment of the green infrastructure would also be required, including the identification of any suitable alternative greenspace (SANG). There would be a need for extensive consultation with AWE Burghfield and the Office for Nuclear Regulation (ONR) to ensure that any development was compatible the facility at AWE Burghfield and delivered in conformity with the Detailed Emergency Planning Zone (DEPZ).

The Council acknowledges that large new settlements are not without their problems and in seeking to identify land for new homes national policy notes the importance of identifying a mix of sites across the District.

As part of the LPR the Council will review the character of and evidence it has for the existing spatial areas and consider whether it can introduce flexibility by reviewing boundaries. A review of the spatial distribution of development across the District will also be done through a review of the settlement hierarchy and settlement boundaries. The Council intends to consult on both the methodology for the settlement hierarchy and criteria for the review of settlement boundaries in Nov/Dec 2018.

### Responses received to the Local Plan Review Scoping Report (February 2018)

**Q6: Do you agree with our assessment of existing planning policies? Please give reasons for your answer. What do you think works well at the moment and what do you think we could do better? Please clearly identify the policy area or specific policy as a sub-heading.**

Number of responses received: 56

Respondent	Response
<b>Internal</b>	
Archaeology Team West Berkshire Council	There currently are no policies for one of the objectives, ie 6 Culture – this is a major gap. Proposals for developing a Cultural Strategy are currently being considered - contact Paul James <a href="mailto:paul.james@westberks.gov.uk">paul.james@westberks.gov.uk</a> For 7 Heritage we will be looking for opportunities to work with Conservation and others to develop a suite of guidance notes for Development Management which Local Plan could refer to
Public Transport Team West Berkshire Council	Regarding policy area 5 in respect of Town Centres and also having regard to Rural Services Centres and Service Villages, I would urge that the review consider how the vitality (in terms of economic and environmental health) of these tiers of settlement can be enhanced and sustained by actively improving access to and from them by sustainable modes i.e. cycling, walking and public transport. Regarding policy area 9 in respect of Transport, it is important that the successor transport-related policies as envisaged adequately reflect the need for sustainable transport modes to continue to deliver reliable access to education, employment, leisure and shopping opportunities within the District, if these are to replace the current saved policy TRANS1.
<b>Statutory consultees</b>	
Stratfield Mortimer Parish Council	Naturally existing policies can be readily identified which help meet the new draft strategic objectives. However if the strategic objectives need reworking and/or adding to then the policies will need to be expanded, changed or added to. Many of the comments on existing policies simply say they will have to be reworked in the light of the developing review. This is of course perfectly reasonable but it does mean that there can effectively be no comment at this stage. One small matter is that in section 2 Housing of Appendix 2 no mention is made of the housing provision contained within the Mortimer NDP. You also ask for comment on what works well and what could be done better. Really our answer revolves around the need to address the issues that are considered important by the public even if it is only to explain why they cannot be carried forward. As part of this the use of plain English with little or no jargon is vital. So very many times in reading this

Respondent	Response
	scoping document, (and even more so in the Sustainability Analysis), do you find yourself saying what on earth does this actually mean!
Thatcham Town Council	Yes, however ensure that West Berkshire Council abide by their own policies, as it was noted that on occasions this has not always been the case. Policy C1- 'Location of New Housing in the Countryside' it states that this is 'subject to a number of exceptions'. More clarity needed on what these exceptions are how many there are.
Greenham Parish Council	<ol style="list-style-type: none"> <li>1. There are a number of policies that particularly concern us in Greenham. <ol style="list-style-type: none"> <li>1. CS16: Flooding. Although Greenham has not suffered recent flooding, the geology is similar to Thatcham.</li> <li>2. Housing ADPP5. Greenham is included within the Newbury area and distinct from Thatcham.</li> <li>3. CS7 &amp; TS3 – Gypsy and traveller accommodation. We experience unauthorised encampments on Stroud Green and parts of Greenham Common.</li> <li>4. CS1 Delivering new homes and retaining the housing stock. We note there is now a new (2016) Strategic Housing Market Assessment (SHMA) to consider, which affects the overall number of new homes the District will need. We are concerned to avoid having more housing as a result of this inflicted on Greenham.</li> <li>5. CS4 Housing type and mix. We are concerned that developers are either receiving the wrong advice from Housing or not following that advice. What 'further clarification' is needed?</li> <li>6. CS6 Affordable Housing – a 'Written Ministerial Statement' and White Paper on the subject are referred to. Details of these need to be given to us before a response can be made.</li> <li>7. CS9 Location and Type of Business Development needs major review in the light of the 2016 Functional Economic Market Area Assessment (FEMA) and Economic Development Needs Assessment (EDNA). Protected Employment Areas (PEAs) will be reviewed. A proverbial 'coach and horses' are being driven through this PEA policy by the Government allowing Permitted Development for converting commercial buildings to residential use, as with Overbridge Square in Hambridge Lane.</li> <li>8. 'Saved Policy' ECON6 Future of Former Greenham Common Airbase needs review, including its planning brief which is now over 20 years old. We are concerned to see that Greenham Trust is seeking a Local Development Order for the Business Park before this policy has been reviewed.</li> <li>9. Saved Policy RL1 Public Open Space Provision in Residential Development Schemes.</li> <li>10. CS5 Infrastructure Requirements and Delivery does need updating to include "stronger linkages to CIL".</li> </ol> </li> </ol> <p>We are <u>not</u> persuaded that TRANS1 (Meeting the Transport Needs of New Developments) is no longer needed as "covered by other transport related policies". This policy deals with levels of parking and provision of 'transport choices': in these respects the policy seems to us to be failing and need strengthening, not dropping.</p>

Respondent	Response
Burghfield Parish Council	We are broadly in agreement with the contents of Appendix 2. However, I have strong reservations about C6 Extension of Existing Dwellings within the Countryside. At present extensions may not exceed a certain percentage of the size of the original. This policy leads to seemingly endless and usually pointless discussion at Planning Meetings and should be replaced by a statement emphasising that any proposed extension should be appropriate in size and design to the setting of the building. In relation to CS15, we are concerned that Government legislation has weakened the ability of the Local Plan to require high standards of energy efficiency in new homes through the Code for Sustainable Homes, and would urge that a way forward is found to ensure that our new plan nevertheless requires high levels of energy efficiency
Burghfield NDP Steering Group	We are broadly in agreement with the contents of Appendix 2. However, we have strong reservations about C6 Extension of Existing Dwellings within the Countryside. At present extensions may not exceed a certain percentage of the size of the original. This policy leads to seemingly endless and usually pointless discussion at Planning Meetings and should be replaced by a statement emphasising that any proposed extension should be appropriate in size and design to the setting of the building. In relation to CS15, we are concerned that Government legislation has weakened the ability of the Local Plan to require high standards of energy efficiency in new homes through the Code for Sustainable Homes, and would urge that a way forward is found to ensure that our new plan nevertheless requires high levels of energy efficiency.
Sport England	In principle I agree with this approach.
Natural England	<p>Any review of the local plan will need to be compliant with paragraphs 115/116 of the NPPF and should also make reference to the Government's 25 year Environment Plan and proposed amendments to the NPPF.</p> <ul style="list-style-type: none"> <li>• For Policy CS17 Natural England would like to see specific reference made to SSSIs/SACs/SPAs within the Policy. We suggest you add a fourth bullet point in order to incorporate this.</li> <li>• Natural England notes that no reference has been made to the protection of Best and Most Versatile (BMV) agricultural land, ancient woodland, veteran trees, protected/priority species or priority habitat within the actual Policy wording itself. These should be named and referenced within Policy CS17.</li> <li>• Development proposals should provide an adequate amount of ecological survey information to be able to assess the extent of any potential adverse effects/impacts on the above features, prior to the determination of the application. Natural England would like to see this included in the Policy CS17 wording.</li> <li>• Reference should be made in Policy CS17 to avoidance, mitigation and compensation where adverse effects on</li> </ul>

Respondent	Response
	biodiversity are identified. Development should be refused if the requirements of this hierarchy are not met. Natural England would like to see this included in the Policy wording.
Historic England	We consider that the Local Plan Review should include a strategic policy for the conservation and enhancement of the historic environment (on the lines of Policy CS19 of the Core Strategy, but specifically for the historic environment and heritage assets therein), and an accompanying detailed development management policy or policies relating to the different types of heritage asset and setting out the considerations that apply to each.
Highways England	We have reviewed the above documents and note that West Berkshire Local Plan Review to 2036 SA Scoping Report mentions capacity of the road network, particularly around Newbury and Thatcham, the A34 and A339 as a key issue. We also note that West Berkshire Local Plan Review to 2036 Scoping Report (February 2018), In Section 9 – Transport, the WBDLP saved policy TRNS3 A34/M4 Junction 13 Chieveley limits further development at A34/M4 J13 to protect the landscape quality of the area. We look forward working with West Berkshire Council to develop proposals that help facilitate planned growth in West Berkshire whilst protecting safe and efficient operation of SRN.
Environment Agency	<p>The following policies are existing local plan policies for West Berkshire local plan you have asked us to review. We have covered those policies that are within our remit.</p> <p>CS16: Flooding We believe you will need to cover these points within your local plan in order to be compliant with the NPPF paragraphs 93, 94 100.</p> <p>The sequential approach referred to should be the sequential test. The sequential approach is usually applied at the site level for sites that have Flood Zones 1, 2 and 3 within them. The sequential test is about avoidance of locating development in flood risk areas. So the sequential test requires a search for reasonably available sites.</p> <p>The updated flood risk policy should reflect the recommendations of the Strategic Flood Risk assessment (SFRA). This is your evidence base for flood risk for your district.</p> <p>Your policy should also include using new development to reduce the causes and impacts of flooding. Your policy should also consider safe access and egress management from sites at flood risk. Your flood risk policy should also include the impact of climate change.</p> <p>CS7: Gypsies, Travellers and Travelling Showpeople This policy says: “In allocating sites, and for the purpose of considering planning applications relating to sites not identified in the relevant DPD, the following criteria will need to be satisfied for sites outside settlement boundaries: Located outside areas of high flooding risk;”</p> <p>You will need to clarify what is considered to be “high flooding risk”. The location of development and its compatibility with the Flood Zones is set out in Tables 1, 2 and 3 of the Planning Practice Guidance. In Table 2 it says that caravans, mobile homes and park homes intended for permanent residential use are in the highly vulnerable category. Highly vulnerable development should not be permitted in Flood Zones 3a or 3b and we would object to any highly vulnerable</p>

Respondent	Response
	<p>development within Flood Zones 3a and 3b. We advise you to make this clear in your local plan in order for your local plan to be consistent with national policy.</p> <p>TS3 Detailed Planning Considerations for Travellers Sites The location of development and its compatibility with the Flood Zones is set out in Tables 1, 2 and 3 of the Planning Practice Guidance. In Table 2 it says that Caravans, mobile homes and park homes intended for permanent residential use are in the highly vulnerable category. Highly vulnerable development should not be permitted in Flood Zones 3a or 3b and we would object to any highly vulnerable development within Flood Zones 3a and 3b. We advise you to make this clear in your local plan in order for your local plan to be consistent with national policy.</p> <p>WBDLP saved policy OVS5 Environmental Nuisance and Pollution Control This policy needs to be more specific in defining the environment. We are interested in the water environment. We would like to know if this policy will be updated and if wording about the prevention of pollution to surface water and groundwater quality can be included. This includes the protection of source protection zones (SPZs). We do not want an infiltration in contaminated land. This may create a pathway for contaminated water to the groundwater aquifers. Water resources should also be protected in terms of the supply of water.</p> <p>We recommend that compliance with the water framework directive's 'no deterioration' and getting to 'good' objectives is included in this policy. Your plan needs to comply with the key objectives of the water framework directive (WFD) which are to ensure growth does not cause a deterioration in the overall status of the receiving water bodies and that growth should not prevent good status or alternative objective being achieved.</p> <p>This will keep your local plan consistent with national planning policy which is NPPF paragraphs 109 and 121.</p> <p>CS15: Sustainable Construction and Energy Efficiency We need an addition to this policy so it refers to the 'higher water efficiency standard' to be used for new dwellings which is 110/l/p/d in the Building Regulations Approved document Part G.</p> <p>CS18 Green Infrastructure We are pleased to see a policy on green infrastructure included in your local plan. However this needs to be expanded to include watercourses and water bodies for 'blue infrastructure.'</p> <p>CS5: Infrastructure Requirements and Delivery We expect to see sewage infrastructure and flood defence infrastructure to be covered within your local plan.</p>
Savills for Thames Water Utilities	No objection
<b>General consultation bodies</b>	
Mid & West Berks Local Access Forum	<p><b>Strategic Objective 8: Green Infrastructure &amp; Healthy Living.</b> More thought needs to be given to the availability &amp; proximity of public open space &amp; networks of public paths (public rights of way) close to where they are needed. Existing public open space and existing public paths networks need to be made accessible without using a car and new off-road paths need to be designed into future developments where they will add to the off-road network. This will reduce car use and increase healthy exercise. Too many people are accessing</p>

Respondent	Response
	<p>public open spaces (such as Greenham Common and Snelsmore Common) by car thus adding to congestion. Off-road Community circuits need to be built in to developments.</p> <p>The requirements of dog walkers need to be addressed particularly.</p> <p>The provision of off-road paths often seems to fall between various stools: housing development policies, highway transport policies and rights of way policies.</p> <p>There needs to be better connection between the policies. Perhaps a specific policy needs to be developed for delivery 'green infrastructure'? The Local Access Forum, a statutory body to advise local authorities &amp; others, might have a role here.</p>
British Horse Society	<p>Inclusion of CS12 Equestrian / Racehorse industry in the current plan was a very welcome addition. We fully support this and call for it to be strengthened and expanded in the new plan based on available evidence &amp; data (see the BHS response to the Sustainability Appraisal).</p>
Reading Gospel Hall Trust	<p>See Q7</p>
The Canal and River Trust	<p>RL5</p> <p>The Canal &amp; River Trust (the Trust) is the guardian of the Kennet &amp; Avon Canal as it runs for 45 km through West Berkshire, passing through major towns such as Newbury and Thatcham and villages such as Hungerford and Kintbury. The Trust promotes the canal as a wildlife corridor, heritage asset, an attractive route for sustainable transport (part of National Cycle Route 4), part of the free local health resources providing informal leisure and recreation, (both on the water and on the towpath). The canal also provides a sense of place and brings economic regeneration opportunities to the area. We are aware that the Council understands the benefits that the canal brings to the area and we acknowledge your support and recognition of these benefits in policy documents as multi-functional green infrastructure, wildlife corridor and heritage asset as well an attractive route for sustainable transport and informal leisure and recreation, both on the water and on the towpath.</p> <p>We note that Appendix 2: Assessment of the relevance and effectiveness of the adopted policies from the West Berkshire District Local Plan 1991 - 2006, the West Berkshire Core Strategy 2006 - 2026 and the Housing Site Allocations DPD 2006 – 2026 states that the principles of WBDLP saved policy Policy RL5 Policy on the Kennet and Avon Canal is anticipated to be carried forward into the Local Plan to 2036 however the Council will consider providing further clarification for development management purposes.</p> <p>The Trust would welcome the opportunity to discuss amendments to Policy RL5. The Trust have recently produced an e-planning toolkit which provides advice on the Waterway proofing of planning policies at local plan level. This can be found <a href="#">here</a>.</p> <p>This document set out a need for to help unlock the economic, environmental and social benefits offered by the waterways and to secure the long-term sustainability and use of waterways as assets for the communities through which they pass. encouraging the use of waterways as tourism attractions in their own right, as well as a way to connect other attractions, and so protect the provision of boat services and facilities where required.</p>

Respondent	Response
	<p>In formulating policies, there are several important waterway factors to be considered.</p> <ul style="list-style-type: none"> <li>• There are different types of waterways, which have different characteristics and principal functions.</li> <li>• Waterways are multi-functional by nature.</li> <li>• Waterways are public assets accessible to local communities free of charge.</li> <li>• waterways, towpaths and water spaces are a part of a wider network that crosses administrative boundaries and cannot be viewed in isolation.</li> <li>• There are particular land use implications and locational requirements arising from the inherent constraint of inland waterways being 'non-footloose' assets.</li> <li>• Development and regeneration can impose burdens and liabilities upon the waterway infrastructure, facilities and environs.</li> <li>• There is a need to provide essential boat services and facilities to support the use of waterways for navigational purposes.</li> <li>• Waterways and towing paths are spaces in their own right, and not just settings or backdrops to development or edges to policy designations.</li> </ul> <p>The Trust would like to work with the Council to help carry out a review of this policy, and in reviewing the plan as a whole we suggest the following questions need to be addressed.</p> <ol style="list-style-type: none"> <li>1. Are waterways recognised as a form of local infrastructure within the Local Plan?</li> <li>2. Are the different types of waterways (i.e. the canal and river sections of the Kennet) and their different characteristics and roles acknowledged?</li> <li>3. Have the spatial and land use implications of waterway related issues, opportunities and proposals identified within the Local Transport Plan, local cycling and walking infrastructure plan, local infrastructure plan, local green infrastructure strategy, and so on, been fully translated into the Local Plan?</li> <li>4. Are all the functions of waterways being fully protected and promoted within the Local Plan?</li> <li>5. Are cross-boundary waterway-related issues and opportunities being fully considered with the adjoining local authorities?</li> <li>6. Is there flexibility within the local planning policy framework to accommodate the inherent constraint of waterways being 'non-footloose' assets?</li> <li>7. Does the policy encourage the unlocking of the economic, environmental and social benefits offered by the waterways?</li> <li>8. Does the proposals map indicate waterways and their corridors?</li> <li>9. Does the policy encourage new developments to: integrate land and water; open up access to, from and along the waterway; explore the added value and use of water space; and view the waterway, towpath and environs as part</li> </ol>
Theatres Trust	<p>In terms of Culture, we recommend that the implantation of a strong policy to protect existing uses such as theatres, cinemas and music venues from unnecessary loss. This policy could also be used to cover other facilities which positively contribute towards the well-being of local people, provide valued local services and opportunities for participation in cultural activities such as pubs and community halls. Such a policy should set out criteria required to</p>

Respondent	Response
	demonstrate redundancy or lack of need for the facility, such as evidence of genuine marketing effort at an appropriate value for the existing use. The Trust can assist with the drafting of such a policy. We would also recommend that Town Centre policies promote new or additional community and cultural uses.
<b>Other stakeholders</b>	
Robert Wallace	Planning is dysfunctional - small changes get a lot of attention whilst serious and serial breaches of permission by developers seem to float through the system. It needs to be faster and more certain
David Parry	My primary concerns relate to the sections C1 and CS1 of the attached Local Plan Review. The document refers to a “settlement boundary review” but I could find no further evidence of or links to it. The intent to potentially change settlement boundaries seems to me to be there in a subtle way. The issue of development outside of the boundary is potentially then not important if the boundary has been moved! I have strong concerns about moving settlement boundaries and development outside of them, in particular in village locations. For Pangbourne (where I am based), I do not believe any further expansion is sustainable and the settlement boundary should remain unchanged.
Christopher Gent	It is important to respect the balance between the smaller villages and communities which have a balance between development and countryside and the major towns of Newbury, Thatcham and Hungerford etc.
William Graham	Housing: Clearly, in the Newbury area WBC has big problems bringing current major planning approvals to fruition, e.g. Sandwell. This is giving developers comfort to successfully ‘try it on’ outside the planned settlement boundaries. In this regard the existing planning policies are not delivering. WBC must find a solution to this problem if it is to retain control. Industry: We query whether WBC is planning to provide enough land and incentives to attract and retain new businesses to Newbury. These will be needed to employ the growing local population planned above.
Neil Richardson	New omission policy needs to allow for appropriate extensions to suitable settlements and development of other well located land for housing to provide for continuity of supply of housebuilding land and to ensure as far as possible that local housing needs are met. 5 yr supply of housebuilding land needs to be available at all times. Policy C1 needs to reflect above.
Julian Worth	Re Policy ECON7 Safeguarding Rail-based Industry at Theale, whilst Theale is primarily a rail aggregates (& cement) terminal, and this traffic will continue to grow, it is important to recognise that consumer goods traffic by rail is also growing rapidly and is now the largest single commodity on Britain's railways at 40% of all volume. West Berks and Reading is a major consuming area for these goods and there is significant interest in using rail to transport consumer goods into the area. Theale is the only location available for modal transfer to road for final delivery and it is important that capability for this is maintained alongside aggregates traffic. It follows that reference to Theale in the Minerals & Waste Local Plan is not sufficient and it should also feature in general economic policies covering non-minerals related issues.

Respondent	Response
<b>Landowners, site promoters and developers</b>	
Barton Willmore for Sulham Estate	<p>Before making any comments in relation to existing planning policies, it is important to note that we do not consider the existing information available within the consultation document to be thorough enough to constitute an ‘assessment’ of policies.</p> <p><u>CS1: Delivery of New Homes and Retaining the Housing Stock</u> We agree that the approach to the delivery of housing should be ‘updated’ to reflect up to date and robust evidence of housing needs. In line with our commentary above we would note that policy CS1 currently delivers a figure which was adopted prior to significant changes in national planning policy and, therefore, is not compliant with the NPPF.</p> <p><u>CS4: Housing Type and Mix</u> We support the intention of the policy which is to provide a wide choice and mix of housing throughout the District to meet needs. We note that the recommendation within the scoping report is for the principles of the policy to be carried forward but to consider providing further clarification for development management purposes. Whilst we would encourage clarification as this would provide additional certainty for developers, we ask the council to ensure that the emerging position incorporates sufficient flexibility for the mix of dwellings sizes to be reflective of the surrounding environment and development pattern.</p> <p><u>All Site Allocations within the HAS DPD</u> The recommendation within the scoping report states that the site allocations will be carried forward or amended depending on the progress on the delivery of the site. In addition, the recommendation states that any allocations which have been delivered will be removed. Whilst we support the removal of delivered sites as allocations as a sensible course of action, we question whether site allocations which have not been delivered will be carried forward without further consideration of their prospects for delivery. In particular, if a site has been allocated for some time and there are no signs that progress is being made in terms of bringing the site forward for development, its deliverability should be reviewed to avoid undermining the Council’s land supply.</p> <p><u>C1 Location of new housing within the countryside</u> Firstly, we consider that the current policy position is overly restrictive and the presumption against development outside of settlement contained within this policy could result in a barrier to the delivery of sustainable development. This is inconsistent with the NPPF and, as such, we consider that this policy position should be relaxed to allow the consideration of sites which adjoin the existing settlement boundary subject to other material considerations within adopted local and national planning policy.</p> <p>Secondly, we note that the assessment of this policy states that as part of updating this policy, there will be a settlement boundary review. We are supportive of this review and encourage the council to give detailed consideration to our client’s site, Land at Hall Place Farm, Tilehurst.</p> <p>In conclusion, given our reservations in relation to the thoroughness of this ‘review’, we reserve the right to comment as draft policy wording is published at later stages of the development of the Local Plan Review.</p>

Respondent	Response
Barton Willmore for Graham Child	<p>Overall it is not considered that policies have been specifically ‘assessed’ as the question suggests, however we anticipate this will follow within a later consultation document. Whilst this therefore concludes our initial policy commentary on behalf of our client for this consultation, we reserve the right to comment in more detail when more depth is added to the proposed policies of the emerging Local Plan.</p> <p><u>Area Delivery Plan Policies</u>  Within Appendix 2 of the Scoping Report, in relation to the Area Delivery Plan Policies we note that the Scoping Report notes the appropriateness of the current spatial strategy will be considered in the first instance, before policies for its delivery are developed. This is in line with comments we have made above and we would urge the Council to consider the age of the currently adopted policies.</p> <p><u>CS1: Delivering New Homes and Retaining the Housing Stock</u>  We note that Appendix 2 considers that the approach to the delivery of housing should be ‘updated’ to reflect the evidence of the SHMA. In line with our commentary above we would note that policy CS1 currently delivers a non NPPF compliant housing requirement and should therefore be completely revisited, to reflect the most up to date position.</p> <p><u>Site Allocations within the HSA DPD</u>  We note that Appendix 2 of the Scoping Report proposes to carry the allocations forward depending on progress and remove those which have been delivered. Our client would support this approach, however we would expect up to date evidence to be prepared to support any sites continued inclusion, to avoid shortfalls in supply.</p> <p><u>C1 Location of New Housing in the Countryside</u>  Our client notes that Appendix 2 of the Scoping Report suggests that the list of settlements will be updated as part of the settlement boundary review, which our client is strongly supportive of and requests their site at Pangbourne Hill is given full consideration during the boundary review for Pangbourne. Notwithstanding this, we consider that the policy as worded is overly restrictive by suggesting a “<b>...presumption against new development outside of settlement boundaries...</b>”. Our client does not consider a presumption against sustainable development accords with the principles of the NPPF and does not allow consideration of those sustainable sites which adjoin the settlement boundary of a settlement within the spatial strategy.</p>
Bewley Homes PLC	<p>Policy CS1: Delivering New Homes and Retaining the Housing Stock  This Policy should also include Engagement with neighbouring LPAs.</p> <p>Policy C1: Location of New Housing in the Countryside  In reviewing settlement boundaries, extensions to existing settlements in appropriate sustainable locations can assist in meeting the borough’s housing need.</p> <p>Policy C2: Rural Housing Exception Policy  This Policy should also take into consideration emerging changes to national policy and supporting opportunities to bring forward exception sites that will provide affordable housing to meet identified local needs, and consider whether allowing some market housing on these sites would help facilitate this.</p>

Respondent	Response
	<p>CS5: Infrastructure Requirements and Delivery</p> <p>The recently published Consultation document regarding developer contributions, ‘Supporting housing delivery through developer contributions’, March 2018 and its recommendations will need to be assessed and reflected in this policy.</p>
Boyer Planning for Spitfire Bespoke Homes	<p>Spitfire welcome the Council's review of their existing planning policies and wish to make the following key observations: Policy CS1 relates to the delivery of new homes and retaining the housing stock. The Council intend to update the policy in light of the evidence from the Berkshire SHMA and any amendment to national policy regarding the assessment of housing need. Whilst Spitfire recognise the need to update the policy in light of the SHMA, it is also important to recognise that smaller rural villages like Beenham which do not feature in the settlement hierarchy should be encouraged to grow in order to support their long term future sustainability.</p> <p>Policy C1 relates to the location of new housing in the countryside. The Council intend to prepare a list of settlements to be updated as part of the settlement boundary review. Spitfire consider that there may be cases where development outside settlement boundaries may provide an appropriate solution to meeting sustainable housing growth, particularly in villages and that it is important that settlement boundaries are not drawn too narrowly which will restrict sustainable housing growth in villages.</p>
Mark Carter for Mr R.L.A. Jones	<p><b>2 Housing</b></p> <p>The Respondent considers that the existing method of examining the four main geographical areas of the District is the most appropriate way to examine future policies (and also the settlement hierarchy within those areas)is the most appropriate for the District.</p> <p>Within the North Wessex Downs Area of Outstanding Natural Beauty Lambourn still has a range of services and reasonable public transport provision which also serve the requirements of surrounding communities and these should be reinforced.</p> <p><b>Policy CS1 Delivering new homes</b></p> <p>The Respondent welcomes the Council's commitment to updating the housing requirements of the Plan for a further 10 years, 2026 to 2036 and looks forward to seeing how these are quantified by the Council.</p> <p><b>HSA19 Lynch Lane Lambourn and HSA20 Newbury Road Lambourn.</b></p> <p>The respondent welcomes the Council's commitment to review these two sites “depending on progress of delivery of the site”. However the review should go on to make to clear that where sites have not been delivered or have come up against problems they should be removed as allocations and replaced by sites which are available and deliverable such as the Respondents site at previously identified as LAM007 “land between Folly Road, Rockfel Road and Stork House Drive”.</p> <p><b>CS12 Equestrian and Racehorse Industry</b></p> <p>Thus Policy should be updated and further clarification added as suggested.</p>

Respondent	Response
The Chilton Estate	<p><u>Affordable Housing</u></p> <p>The policy for the provision of Affordable Housing should be flexible and facilitate viability assessment to ensure that land is brought forward for development in situations where the amount of social housing may need to be restricted in order to make the development viable.</p>
Fisher German LLP for Mr Musgrave and Begley	<p>Agree that the current spatial strategy should be reviewed. It is considered that each settlement in the settlement hierarchy should be apportioned growth rather than geographical areas.</p>
Gladman Developments	<p>Gladman have reviewed the assessment of existing planning policies that is contained in Appendix 2 of the West Berkshire Local Plan Review to 2036 Scoping Report. It is however considered that all of these policies will need to be reviewed further in due course in light of the emerging revisions to the National Planning Policy Framework and that a comprehensive approach is taken to the Local Plan Review.</p> <p>In relation to Policy CS1: Delivering New Homes and Retaining the Housing Stock, it is vital that this policy is fundamentally reviewed and that the associated evidence that it is based upon is up-to-date. The approach to setting the housing requirement for the District will be the founding basis of any strategy to enable the objectively assessed housing needs of the area to be met in full.</p> <p>CS2, CS3 and all of the site allocations contained in the HSA DPD will need to be carefully reviewed as part of the preparation of the new Local Plan. Up-to-date evidence on the projected delivery of these housing sites will play an important role in determining the scale of additional allocations that will be required to meet development needs over the extended plan period to 2036. In this regard, it is important that realistic start dates and delivery rates are applied to all sites that are to be retained within the Council's housing trajectory and for all related evidence published to accompany any future Local Plan consultations.</p> <p>Gladman are promoting land at Land off Andover Road, Newbury. This site is well related to a highly sustainable settlement and can be brought forward for residential development as part of an appropriate strategy for the sustainable growth of the area. It is a deliverable site that is available, offers a suitable location for development, and is achievable. There would also be a realistic prospect that housing could be delivered on the site within five years and that the development of the sites would be viable. The site also provides the potential to create a link into Sandford Park and a transport connection across southern Newbury. A copy of the location and extent of the site can be seen at Appendix 1. The current wording of Policy C1 includes a presumption against development. This mechanism prevents the Council from meeting future housing targets and delivering sustainable forms of development. This approach will therefore need to be reviewed as part of the preparation of the new Local Plan to ensure that it is sufficiently responsive to rapid changes in circumstance that can often occur over a plan period. It will also be important for the policies of the Local Plan as a whole to represent a strategy that will meet the requirements of the NPPF in terms of the need to plan for thriving rural communities.</p> <p>Policy CS2 supports rural housing exception sites. Gladman agree that there is a need to update this policy. In addition to</p>

Respondent	Response
	<p>the points raised regarding the lower order settlements within the hierarchy, there may also need to be revisions to support the delivery of starter homes.</p> <p>Policies CS4 relates to housing type and mix. It is considered likely that this policy will need to be reviewed in response to the provisions of the emerging revisions to the NPPF.</p> <p>A range of design related policies are referenced (such as CS14, CS15). There are also a number of other policies, such as CS6: Affordable Housing and those relating to infrastructure requirements that will have an impact on the cost of development in the area. These policies will all need to be considered within the evidence of whole plan viability that is prepared to accompany the new Local Plan in line with the requirements of national policy.</p>
Hallam Land Management	Housing – our comments on the spatial strategy are set out above.
LRM for Bloor Homes & Sandlesford Farm	<p>We are writing on behalf of Bloor Homes and Sandlesford Farm Partnership in response to the current consultation exercise related to the Scope of the Local Plan Review.</p> <p>We note that part of the review process will be to consider existing Core Strategy and Housing Site Allocation DPD policies. In respect of Core Policy CS3 Sandlesford Park, the recommendation in Appendix 2 is that the site allocation is be carried forward or amendments proposed, depending on progress on the delivery of the site.</p> <p>You will be aware that two Outline Planning Applications were submitted by the Bloor Homes/Sandlesford Park and Donnington New Homes for development at Sandlesford Park on the 23rd March 2018.</p> <p>The Sandlesford Park Application seeks planning permission for the following proposed development: up to 1,000 new homes; an 80 bed extra care facility as part of the affordable housing provision; a new 2 form entry primary school (D1); expansion land for Park House Academy School; a local centre to comprise flexible commercial floorspace (A1-A5 up to 2,150 sq m, B1a up to 200 sq m) and D1 use; the formation of new means of access onto Monks Lane; new open space including the laying out of a new country park; drainage infrastructure; walking and cycling infrastructure and other associated infrastructure works.</p> <p>The Sandlesford Park West Application seeks planning permission for the following proposed development: up to 500 new homes (including affordable), a one form entry primary school with land for its expansion to two form entry, replacement and / or expansion land for Park House Academy School, extra care elderly units as part of the affordable housing provision; access from Warren Road and emergency access from Kendrick Road, a recreational facility for families of children with special needs, green infrastructure including children’s play areas and informal open space, pedestrian and cycle links to and through the site, sustainable drainage and other infrastructure. our clients submitted an outline planning application on the 23rd March 2018 for the following proposed development.</p> <p>These applications were accompanied by a Memorandum of Understanding signed by the Applicants.</p> <p>The purpose of the Memorandum of Understanding is to set out the commitment that the Applicants have made in principle to work collaboratively together to deliver the comprehensive development of Sandlesford Park. That commitment will be formalised in a Landowners’ Agreement.</p> <p>A masterplan and other comprehensive plans and documents have been jointly prepared by the Applicants to ensure the coordinated provision of the infrastructure, services, open space and facilities required in association with the planned</p>

Respondent	Response
	<p>housing development, in accordance with adopted planning policy requirements. Whilst the Applicants are submitting separate Outline Planning Applications for the parts of the site in their respective control, these two planning applications will together deliver the holistically planned comprehensive development sought by the local planning authority. This approach is intended to address the concern expressed previously by the Local Authority that development proposals at Sandleford Park could lead to piecemeal development.</p> <p>Sandleford Park is a deliverable site; the environmental information submitted with the current planning applications confirm its suitability consistent with the NPPF's planning principles. The fact that the site is controlled by two housebuilders, Bloor Homes and Donnington New Homes further illustrates that the site will be delivered quickly once planning permission is granted.</p> <p>For these reasons, Sandleford Park should continue to be allocated in the Local Plan review.</p>
Nexus Planning for Pangbourne Beaver Properties	<p>Appendix 2 of the Scoping Report sets out an assessment of the relevance and effectiveness of the adopted policies from the West Berkshire District Local Plan 1991-2006, the West Berkshire Core Strategy 2006-2026 and the Housing Allocations DPD 2006-2026. We respond in connection with a number of specific policies below:</p> <p>Core Strategy Policy CS1 makes provision for the delivery of the overall housing requirement of at least 10,500 net additional dwellings over the period 2006 to 2026. It outlines four categories of land where it expects new homes will be 'primarily' developed. The Council sets out in the Topic Paper that the policy approach to the delivery of housing will be updated in light of evidence from the Berkshire SHMA and any amendment to national policy regarding the assessment of housing need.</p> <p>PBP Ltd supports the proposal for a fully Framework compliant housing target to be provided for within the emerging Local Plan. However, any replacement for adopted Policy CS1 will need to acknowledge that in order to achieve these targets new homes will be provided on greenfield sites adjoining settlement boundaries in all four of the spatial areas.</p> <p>Core Strategy Policy ADPP1 sets out the Spatial Strategy for the district, including a district settlement hierarchy. PBP Ltd do not object to this approach in principle, however adopted Policy ADPP1 also suggests that below the settlement hierarchy, only appropriate limited development will be allowed in the countryside. By contrast, the policy text is clear that 'most development will be within <u>or adjacent</u> to the settlements included in the settlement hierarchy'. In common with Policy CS1 above, the replacement policy for ADPP1 should clarify beyond any doubt that in addition to the urban area, development will need to come forwards on greenfield sites adjoining settlements in the hierarchy, i.e in the 'countryside'.</p> <p><u>HSA 21 Land north of Pangbourne Hill, Pangbourne</u> - This allocation was the subject of a planning permission ref 15/03320/OUTMAJ for 35 dwellings in February 2016. The site owners PBP Ltd discharged the relevant conditions, fulfilled the requirements of the S106 Agreement, including implementing structural landscaping that is now becoming well established and took the site to the market. The site is now being built out by Millgate Homes with a mix of private and affordable units. This demonstrates that PBP Ltd are able to facilitate and deliver good quality development in a sustainable location that will help to enhance the settlement of Pangbourne.</p>
Nexus Planning for Croudace	<p>Appendix 2 of the Scoping Report sets out an assessment of the relevance and effectiveness of the adopted policies from the West Berkshire District Local Plan 1991-2006, the West Berkshire Core Strategy 2006-2026 and the Housing</p>

Respondent	Response
	<p>Allocations DPD 2006-2026. We respond in connection with a number of specific policies below:</p> <p><b>Core Strategy Policy CS1</b> Core Strategy Policy CS1 makes provision for the delivery of the overall housing requirement of at least 10,500 net additional dwellings over the period 2006 to 2026. It outlines four categories of land where it expects new homes will be 'primarily' developed. The Council sets out in the Topic Paper that the policy approach to the delivery of housing will be updated in light of evidence from the Berkshire SHMA and any amendment to national policy regarding the assessment of housing need.</p> <p>Croudace Homes welcome the principle that a fully Framework compliant housing target will be embedded within the emerging Local Plan. However, any replacement for adopted Policy CS1 should also have regard to the fact that new homes will be provided on greenfield sites adjoining settlement boundaries.</p> <p><b>Core Strategy Policy ADPP1</b> Core Strategy Policy ADPP1 sets out the Spatial Strategy for the district, including a district settlement hierarchy. The Council, at Appendix 2 of the Scoping Report, suggests that in connection with policies ADPP1 - 6 that it will consider whether the current spatial strategy for the District is the most appropriate up to 2036. It goes on to suggest that policies for the delivery of the Spatial Strategy will be developed once the principles have been established.</p> <p>Croudace Homes does not object to this approach in principle, however adopted Policy ADPP1 also suggests that below the settlement hierarchy, only appropriate limited development will be allowed in the countryside. By contrast, the policy text is clear that 'most development will be within or adjacent to the settlements included in the settlement hierarchy'. Nonetheless, conflict with Policy ADPP1 was a point levelled against the Henwick Park appeal scheme. In common with Policy CS1 above, the replacement policy for ADPP1 should clarify beyond any doubt that in addition to the urban area, development will need to come forwards on greenfield sites adjoining settlements in the hierarchy, i.e in the 'countryside'.</p> <p><b>HSA DPD Policy C1</b> Policy C1 of the HSA DPD seeks to restrict housing supply through the identification of settlement boundaries, outside of which there is a presumption against development. However, it should be noted that the HSA DPD is limited to delivering the out-of-date Core Strategy housing requirement.</p> <p>Delivery of a Framework compliant housing target will require settlement boundaries to be redrawn again, to include current greenfield sites on the edge of settlements. Croudace Homes therefore does not object to the principle of the policy being carried forward into the emerging Local Plan to 2036 provided a fully Framework compliant is embedded in the Plan, including greenfield sites on the edge of sustainable settlements. As noted elsewhere, this should include the land at Henwick, Park, which is a sustainable location for growth.</p>
Pegasus Planning Group for Donnington New Homes	<p>Policy ADPP1 Spatial Strategy should be retained, as the current strategy is the most appropriate way to deliver the homes that are needed in West Berkshire over the next plan period.</p> <p>As stated in the Scoping Report, Policy CS1: Delivering New Homes and retaining the Housing Stock should be updated to include the latest evidence on housing supply, and the Objectively Assessed Need (OAN) for West Berkshire should be</p>

Respondent	Response
	<p>determined using the government's new standardised method. The principle of allocating greenfield sites adjoining settlements to accommodate the required housing in all four spatial areas should be retained.</p> <p>The principles of Policy CS4: Housing Type and Mix should be carried forward into the Local Plan to 2036. The policy should be added to, to specifically outline the number of adaptable homes for older people that are required across West Berkshire, and to establish a principle in favour of developments that provide significant numbers of adaptable homes for older people. This would be in line with the Draft Revised NPPF, which places increased importance on the delivery of adaptable homes for older people.</p> <p>All HSA Policies should be reviewed, and any allocations which have been delivered should be removed. Allocations which have not been delivered should be examined, to determine whether there is a realistic prospect of them coming forward during the next plan period. If there clearly isn't, then these sites should be removed from the plan. New housing sites should then be allocated to replace them and meet the full OAN as calculated in Policy CS1.</p> <p>Policy C1 Location of New Housing in the Countryside should be reviewed to determine whether the existing settlement boundaries are the most appropriate. Settlement boundaries should be redrawn where appropriate, to include new allocations on the edges of existing settlements in line with the Spatial Strategy.</p> <p>The lack of policies regarding culture should be addressed, and a specific policy regarding tourism, and the benefits of encouraging tourism through new development, should be created.</p> <p>The principles of Policy CS18: Green Infrastructure should be carried forward into the Local Plan to 2036. If the definition of green infrastructure is clarified, it should continue to include open space and allotments, as these are very important components of the overall green infrastructure in West Berkshire. The Policy should be updated to more clearly state the presumption in favour of developments that provide significant amounts of green infrastructure.</p>
Pegasus Planning Group for Donnington New Homes	<p>Principles of Policy CS16: Flooding should be carried forward into the Local Plan to 2036, but further information should be added regarding the benefits of schemes which provide towards flood risk mitigation measures, and can manage and reduce the flood risk on site and the surrounding areas, including especially where the flood risk to existing homes is reduced.</p> <p>Policy ADPP1 Spatial Strategy should be retained, as the current strategy is the most appropriate way to deliver the homes that are needed in West Berkshire over the next plan period.</p> <p>As stated in the Scoping Report, Policy CS1: Delivering New Homes and retaining the Housing Stock should be updated to include the latest evidence on housing supply, and the Objectively Assessed Need (OAN) for West Berkshire should be</p>

Respondent	Response
	<p>determined using the government's new standardised method. The principle of allocating greenfield sites adjoining settlements to accommodate the required housing in all four spatial areas should be retained.</p> <p>All HSA Policies should be reviewed, and any allocations which have been delivered should be removed. Allocations which have not been delivered should be examined, to determine whether there is a realistic prospect of them coming forward during the next plan period. If there clearly isn't, then these sites should be removed from the plan. New housing sites should then be allocated to replace them and meet the full OAN as calculated in Policy CS1.</p> <p>Policy C1 Location of New Housing in the Countryside should be reviewed to determine whether the existing settlement boundaries are the most appropriate. Settlement boundaries should be redrawn where appropriate, to include new allocations on the edges of existing settlements in line with the Spatial Strategy.</p>
Pegasus Planning Group for Wasing Park Estate	<p>Existing Policy CS10: Rural Economy supports economic growth in rural areas and encourages appropriate farm diversification. The Scoping Report confirms that this policy is to be updated along with saved policies ENV16 and ENV19 related to farm diversification and the reuse and adaption of rural buildings. This approach is supported – Policy CS10 should be updated to align with Paragraphs 84 and 85 of the Draft Revised NPPF as set out above.</p> <p>Pegasus Group act on behalf of the Wasing Estate in relation to their land interests. The Wasing Estate is working to develop a long-term business plan and vision plan with the objective of making the estate as sustainable as possible, and these emerging proposals currently include:</p> <ul style="list-style-type: none"> <li>• An organic farm, providing local food produce to the Estate's own markets – their wedding venue, a restaurant, hotel, and local box schemes;</li> <li>• A wellbeing operation which is part of the Estate's aim to become a leading hospitality centre in the UK;</li> </ul> <p>Liaising with local villages and communities to ensure that the Estate is working to help with infrastructure needs such as schooling, the aging population, housing need, pubs and village centres;</p> <ul style="list-style-type: none"> <li>• The need for more housing to staff the growing business at Wasing Estate, preferably flats or terraced homes, ultimately to house another 50 – 100 people;</li> <li>• The need to encourage tourism in rural areas and to promote the tourism industry throughout West Berkshire.</li> </ul> <p>Policy CS10 should be updated to include reference to Paragraphs 84 and 85 of the Draft Revised National Planning Policy Framework, and reflect the importance of the rural economy.</p> <p>Land under the control of the Wasing Estate has a clear role to play in ensuring a prosperous rural economy in West Berkshire. The Local Plan Review should include a new policy to facilitate the delivery of the emerging Wasing Estate Plan.</p>
Pro Vision for Cala Group and Wates Developments	<p>All policies will need to be reviewed to ensure that they accord with the revised NPPF and PPG. We have the following Policy specific comments:</p> <ul style="list-style-type: none"> <li>• ADPP1 : Spatial Strategy. In principle we support the existing Spatial Strategy (see our comments above). The role and</li> </ul>

Respondent	Response
	<p>function of Rural Service Centres and Service villages should be reviewed. To accord with the draft NPPF, they should be identified as being suitable to accommodate further sustainable development that will enhance or maintain their viability and vitality. Whilst the growth potential of the smaller villages will be more limited, there is no justification to, as a matter of principle, restrict development to infill only. By the same token, in the countryside, infill should be acceptable where it would not result in the development of isolated homes (as Policy CI now allows).</p> <ul style="list-style-type: none"> <li>• CSI: Delivering New Homes and Retaining the Housing Stock. See our comments above about assessing local housing needs. Local policies will need to identify non strategic sites and development opportunities. All settlement Policy boundaries will need to be reviewed.</li> <li>• CS3: Sandford Strategic Site Allocation. This allocation should be deleted unless the LPA is satisfied that there is robust evidence that is developable.</li> <li>• CS4: Affordable Housing. Will need to be updated in light of the draft NPPF. Housing allocations and delivery policies will need to be Viability Tested.</li> <li>• CI Location of New Housing in the Countryside. Should be updated generally and specifically to: 1) extend the categories of development allowed as an exception to the general presumption to include the redevelopment of the sites of redundant rural buildings (similar to the former ENV20 policy of the West Berkshire District Local Plan) and 2) enable the sustainable growth and expansion of all types of business in rural areas through conversion and well-designed new buildings.</li> <li>• C2 Rural Housing Exception Policy. Should be generally updated and informed by Viability Testing. Guidance about the scope and extent of "facilitating" market housing should be provided.</li> <li>• CS8: Nuclear installations - AWE Aldermaston and Burghfield. We support the proposed review. This Policy currently fails to apply the assessment of risk proportionately to individual sites.</li> <li>• CS9 and 10: Business and Rural Economy - will require comprehensively reviewing to accord with the revised NPPF.</li> <li>• ENV19: Re-use and adaptation of rural buildings. Should be reviewed and merged with Policy C4.</li> <li>• CS18: GreenInfrastructure: The review needs to clarify the definition of GI. The current list of land use typologies can be (and has frequently been) applied to any area of undeveloped land.</li> <li>• CS6:Infrastructure. The review and updating of this policy will require full Viability Testing.</li> </ul>
Pro Vision for Rootes Trustees	<p>All policies will need to be reviewed to ensure that they accord with the revised NPPF and PPG. We have the following Policy specific comments:</p> <p>ADPPI : Spatial Strategy. In principle we support the existing Spatial Strategy (see our comments above). The role and function of Rural Service Centres and Service villages should be reviewed. To accord with the draft NPPF, they should be identified as being suitable to accommodate further sustainable development that will enhance or maintain their viability and vitality. Whilst the growth potential of the smaller villages will be more limited, there is no justification to, as a matter of principle, restrict development to infill only. Pro Vision for Greenham Trust	<p>The Trust has the following comments on the existing Development Plan policies. Saved policy ECON6 – Future of the Greenham Common Airbase.</p> <p>The Trust welcomes a review of the current policy position for the former air base. Saved policy ECON6 relates to the 'Technical Area' of the former airbase, previously known as New Greenham Park in the Local Plan. The site is now known as 'Greenham Business Park'.</p>

Respondent	Response
	<p>A clear and positive policy framework is very important for the continued success of the business park. It would be appropriate, however, for new policy to recognise that the park has already established as a mixed-use park including elements outside of the traditional business use classes. It is appropriate for the Local Plan to continue to focus on these business uses, but also recognise that a wider range of use is typically associated with 21st century business parks. For example, limited amounts of small scale convenience retail can help to sustain business parks and reduce the need for employees to leave the site for basic daily facilities and services.</p> <p>In reviewing the “role and function” of the park, it is important to recognise that Greenham Business Park represents one of, if not the, key employment areas in the district. The revised policy position should positively reflect this and provide a clear framework for managing growth and evolution of the park through the plan period.</p> <p>It is agreed that review of the saved policy should also involve a review of the supplementary guidance for the former airbase. It may be that this guidance is no longer fit-for-purpose. Policy CS9 Location and type of business development</p> <p>‘New Greenham Park’ is acknowledged to be a strategically important employment site under this adopted policy of the West Berkshire Core Strategy (2006 to 2026). The policy stated that subsequent Development Plan Documents would consider whether this and other established employment sites should be given a protected status. The Trust presumes that the LPA sees the Review of the Local Plan to be the appropriate opportunity for this review.</p> <p>In principle, the Trust would welcome a strategic level policy that noted the strategic importance of Greenham Business Park followed by a site-specific development management policy.</p> <p>Local Development Order</p> <p>There is an extant planning permission for comprehensive redevelopment of the park dating back to the MoD’s disposal of the former airbase in the 1990s. Implementation of this permission has been slow, however, due to the inflexibility of the approved but speculative masterplan. Regeneration of the site has therefore been more ad hoc through a series of individual planning permissions driven by market demand, some of which have been implemented or partially implemented.</p> <p>In terms of the scale of regeneration permitted, over half of the permitted floorspace is still to come forward. Greenham Business Park therefore represents a significant opportunity for the effective reuse of previously developed land in line with national policy (as set out in our comments under Question 2).</p>

Respondent	Response
	<p>The Trust is working closely with West Berkshire Council to prepare a Local Development Order (LDO) for the site. The objective of the LDO is to introduce a more flexible development management framework to allow the park to respond to market demand more effectively. It also involves addressing all the key planning issues upfront thereby simplifying the planning process as and when suitable development opportunities come forward. This scheme of simplified planning can make a significant difference between new business and job opportunities coming to West Berkshire or going elsewhere in the UK or internationally and can also be a very positive tool for supporting existing businesses and organisations so that they can grow and adapt here without needing to relocate with the loss of jobs from the local economy.</p> <p>The Draft Revised NPPF continues to encourage LPAs to use LDOs in appropriate locations (paragraph 52). The benefits of an LDO specifically at Greenham Business Park are recognised by the Council's Economic Development Officer.</p> <p>Although an LDO no longer must be linked to adopted policy (Planning Act 2008 Section 188[1]), it would be preferable for the LDO, once formally adopted by the Council, to be underpinned by the Local Plan.</p> <p>P1 Residential Parking for New Development</p> <p>The Trust welcomes the review of parking standards, including addressing parking for non-residential development.</p> <p>Parking standards should offer some flexibility to ensure that appropriate levels of vehicle and nonvehicular parking are provided for the precise function, or range of functions of the non-residential development.</p>
Pro Vision for Audley Group	<p>We support the proposed review and update of saved policy ENV27 (Development on existing institutional and education sites in the countryside).</p> <p>Given that West Berkshire is a largely rural district, it is important the revised Local Plan continues to include positive policies for supporting residential institution sites in the countryside.</p> <p>As noted in our response to Question 2, residential institutions make a significant contribution to sustaining the local rural economy. As well as supporting the evolution of existing schemes, the revised Local Plan should also support opportunities for new schemes in appropriate locations where redevelopment opportunities may arise. For example, it would be appropriate to support the reuse of existing rural sites for residential institutions which might otherwise come under pressure for development as market housing or worse might even be abandoned, with inevitable detriment to local rural communities.</p> <p>Residential institutions such as those provided by Audley are low-impact developments that are well suited to rural areas. For example, Audley retirement communities typically have noticeably lower levels of traffic as the sites offer excellent social and recreational facilities and there is a low level of car ownership.</p> <p>The revised Local Plan should provide clarification of the saved policy that residential institutions are not only related to education but are increasingly also related to elderly care communities.</p>

Respondent	Response
	<p>A positive policy is also needed to ensure that existing residential institution sites, such as Audley’s elderly care community at Inglewood, can evolve and adapt to changing requirements. For example, established rural sites often have opportunities for appropriate extension to existing buildings or effective reuse of other previously developed land within their curtilage to improve the accommodation and facilities, or even for justified and well-reasoned limited greenfield expansions. It should not be necessary for such proposals to be treated negatively and wholly as ‘exceptions’ to policy. Rather, a criteria -based policy should provide a clear framework for managing these opportunities. By positively planning for the evolution of existing sites, the revised Local Plan will help to reduce the pressure for new greenfield development sites in the rural area.</p>
<p>Pro Vision for Rivar</p>	<p>Do you agree with our assessment of existing planning policies? Please give reasons for your answer. What do you think works well at the moment and what do you think we could do better? Please clearly identify the policy area or specific policy as a sub-heading.</p> <p>All policies will need to be reviewed to ensure that they accord with the revised NPPF and PPG. We have the following Policy specific comments:</p> <ul style="list-style-type: none"> <li>• ADPPI : Spatial Strategy. In principle we support the existing Spatial Strategy (see our comments above). The role and function of Rural Service Centres and Service villages should be reviewed. To accord with the draft NPPF, they should be identified as being suitable to accommodate further sustainable development that will enhance or maintain their viability and vitality. Whilst the growth potential of the smaller villages will be more limited, there is no justification to, as a matter of principle, restrict development to infill only. By the same token, in the countryside, infill should be acceptable where it would not result in the development of isolated homes (as Policy CI now allows).</li> <li>• CSI: Delivering New Homes and Retaining the Housing Stock. See our comments above about assessing local housing needs. Local policies will need to identify non strategic sites and development opportunities. All settlement Policy boundaries will need to be reviewed.</li> <li>• CS2: Newbury Racecourse Strategic Site Allocation. At a strategic or local policy level, consideration should be given to a potential extension of the existing site allocation.</li> <li>• CS4: Affordable Housing. Will need to be updated in the light of the draft NPPF. Housing allocations and delivery policies will need to be Viability Tested.</li> <li>• CI Location of New Housing in the Countryside. Should be updated generally and specifically to: 1) extend the categories of development allowed as an exception to - the general presumption to include the redevelopment of the sites of redundant rural buildings (similar to the former ENV20 policy of the West Berkshire District Local Plan) and 2) enable the sustainable growth and expansion of all types of business in rural areas through conversion and well-designed new buildings.</li> <li>• C2 Rural Housing Exception Policy. Should be generally updated and informed by Viability Testing. Guidance about the scope and extent of "facilitating" market housing should be provided.</li> <li>• CS8: Nuclear Installations - AWE Aldermaston and Burghfield. We support the proposed review. This Policy currently fails to apply the assessment of risk proportionately to individual sites.</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• CS9 and 10: Business and Rural Economy - will require comprehensively reviewing to accord with the revised NPPF.</li> <li>• ENV19: Re-use and adaptation of rural buildings. Should be reviewed and merged with Policy C4.</li> <li>• CS18: GreenInfrastructure: The review needs to clarify the definition of GI. The current list of land use typologies can be (and has frequently been) applied to any area of undeveloped land.</li> <li>• CS6: Infrastructure. The review and updating of this policy will require full Viability Testing.</li> </ul>
RPS for AWE	<p>1. AWE agree that Policy CS8 requires updating in light of the current review of the Detailed Emergency Planning Zones. In the interest of public safety, and in response to increasing demand for housing land in close proximity to the Inner Land Use Planning Consultation Zones at both sites, the Detailed Emergency Planning Zones (DEPZs) set out in Policy CS8 should be updated and fully enforced. The distances for the Inner Zone (Aldermaston 0-1.5km; Burghfield 0-1.5km), Middle Zone (Aldermaston 3-5km; Burghfield 1.5-3km) and Outer Zone (Aldermaston 5-8km; Burghfield 3-5km) will be reviewed in line with the updated DEPZs and enforced by the Council under Policy CS8. AWE continue to fully support Policy CS8 in advising that residential development in the Inner Land Use Planning Consultation Zones is likely to be refused planning permission by the Council where the ONR has advised against that development. This is especially relevant when considering the potential large-scale development south of Reading in the vicinity of AWE Burghfield.</p> <p>2. Policy CS9 recognises the AWE sites as strategically important for the District’s economy. AWE agree that policy CS9 should be updated and request that a bespoke designation consistent with the importance of AWE to the local economy (and national security) is made. The Council will be aware of AWE’s willingness to jointly progress a Local Development Order for their sites at Aldermaston and Burghfield, and a meeting is currently being arranged to start this process. The supporting text to policy CS9 raises the potential for “bespoke designation”; this is an option AWE would like to pursue through the LDO mechanism, supporting the business development potential of these strategically important employment sites.</p>
Savills for Englefield Estate	No specific comment is made at this stage, although in many cases where it is noted that ‘consider providing further clarification for development management purposes’ this is welcomed.
Joy Schlaudraff	It should be for easier for people to get their land allocated for housing. The council should not pick and choose the land which is offered, but allocate it all, as long as acceptable in planning terms.
Tetlow King Planning Ltd for Rentplus UK Ltd	Our comments relate to the proposed review of <b>Policy CS6</b> on the provision of affordable housing, which is timely following a significant number of national policy consultations and in particular the release on 5 March of the draft proposed changes to the National Planning Policy Framework, which is widely expected to take effect later this year. The rent to buy model has been recognised within the proposed changes to the Framework. The draft changes set out the Government’s commitment to supporting people in saving for a deposit while paying a below-market rent; this is intended to help many more working households into home ownership. Part (d) of the proposed definition of affordable housing is set out below:

Respondent	Response
	<p>1. d) <b>Other affordable routes to home ownership:</b> is housing provided for sale that provides a route to ownership for those who could not achieve home ownership through the market. It includes shared ownership, relevant equity loans, other low cost homes for sale and rent to buy (which includes a period of intermediate rent). Where public grant funding is provided, there should be provisions for the homes to remain at an affordable price for future eligible households, or for any receipts to be recycled for alternative affordable housing provision or refunded to Government or the relevant authority specified in the funding agreement.</p> <p>A substantial level of funding set aside for the delivery of affordable housing through Homes England (formerly Homes and Communities Agency) was recently returned to Treasury, unspent; negotiation on planning application requirements, planning obligations and discharge of planning conditions are key constraints on the speed of the planning system in building out consented schemes. The Council should look to follow the course set by national policy by ensuring its housing policies include provision for rent to buy housing as part of the affordable housing mix.</p> <p>Policy CS6: Provision of Affordable Housing should be amended to reflect the wider definition of affordable housing set out in the changes to the NPPF currently subject to consultation, and as set out above now to include 'other affordable routes to home ownership'. In response to Question 6, our recommendations for amendments to the policy are set out here:</p> <p>In order to address the need for affordable housing in West Berkshire a proportion of affordable homes will be sought from residential development. The Council's priority and starting expectation will be for affordable housing to be provided on-site in line with Government policy(48).</p>
Turley for Berfeld Limited	<p>CS16: Flooding</p> <p>We consider that there should be explicit recognition in the policy that some type of development is acceptable in flood risk areas, and that the aim of the policy should be to safeguard against inappropriate development in flood risk areas. "Inappropriate development" is defined as all conventional residential dwellings and other structures that are not flood proof. Flood proof dwellings never flood, do not make flooding worse elsewhere, provide safe access and egress and do not increase the burden on emergency services and are supported by a site specific flood risk assessment.</p> <p>C1: Location of New Housing in the Countryside</p> <p>We objected to the wording of Policy C1 when it was proposed as part of the Housing Site Allocations DPD on the grounds that went beyond the policy approach adopted in the Core Strategy.</p> <p>Area Delivery Plan Policy 1 of the Core Strategy sets out the Council's spatial strategy. The policy begins: "Development in West Berkshire will follow the existing settlement patterns and comply with the spatial strategy set out in the Area Delivery Plan policies of this document based on the four spatial areas". It continues in the second paragraph: "Most development will be within or adjacent to the settlements included in the settlement hierarchy set out below, and related</p>

Respondent	Response
	<p>to the transport accessibility of the settlements (especially by public transport, cycling and walking) their level of services and the availability of suitable sites for development. The majority of development will take place on previously developed land”.</p> <p>The spatial strategy therefore rightly places the focus for new development on “following” existing settlement patterns, seeking to locate “most” development within or adjacent to settlements and on “previously developed land”. It does not however, expressly prevent new residential development outside existing settlements and in doing so, allows a degree of flexibility to consider proposals that lie outside of settlement boundaries but that may nonetheless be considered sustainable development.</p> <p>It is regrettable that Policy C1 was adopted in its current form in the HSADPD and in common with our comments above under questions 3 and 4, a more flexible approach should be allowed for. Such restrictive wording does not allow for less orthodox developments or the changes that may lead us to different ways of living and working in the future and we therefore recommend the Council take a more, not less, flexible approach.</p> <p>CS18: Green Infrastructure</p> <p>We support the Council’s desire to revisit the wording of this policy to ensure that it reflects the health and environmental benefits of green infrastructure, and should recognise the benefits of living in an environment that creates such opportunities.</p>
Turley for A2dominion Housing Group	We consider that the existing policies should be reviewed based on updated evidence and changes in national planning policy.
Turley for Commercial Estates Group	Policies ADP1 to ADP6 will need to be reconsidered in light of any revisions to the spatial strategy which emerge as a consequence of the Local Plan Review. Accordingly, we will comment on the efficacy and wording of any new (and/or revised) policies, as may be proposed when the Draft Plan is published for consultation.
Turley for North East Thatcham Consortium	<p>Overall, the Consortium’s position is that policies should be reviewed in light of the evidence base produced by the Council and the national planning policy context in place as the Local Plan Review progresses (bearing in mind the likely publication of the revised Framework later in 2018). This is considered to be of particular relevance to the following policy areas.</p> <p><i>Housing policies</i></p> <p>There is a clear requirement to review policies relating to overall housing provision to ensure that the emerging Local Plan Review meets the housing needs of West Berkshire in full. It is agreed that reference should be made to the Berkshire (including South Bucks) Strategic Housing Market Assessment and its conclusion that housing needs are significantly higher at 665 dwellings per annum than the existing Core Strategy provides for (525dpa), or than have been annually</p>

Respondent	Response
	<p>delivered to date on average (500dpa). This evidences the increase in housing provision needed in West Berkshire to support anticipated job creation, which requires a more marked increase in the labour force than would be expected to result from a continuation of historic demographic or development trends.</p> <p>Such an elevation in the overall level of housing provision will also have implications for the spatial distribution of growth in West Berkshire, and the Consortium therefore agrees that the appropriateness of the spatial strategy should be kept under review as the plan-making process evolves. Reflecting their status in the settlement hierarchy, the urban areas of Newbury, Thatcham and the eastern settlements close to Reading will be expected to play an important role in meeting the higher need for housing evidenced in the district.</p> <p>Policies relating to housing type and mix must also be reviewed to ensure that the type and size of housing delivered responds to evidenced needs. The SHMA highlighted the significant need for homes with three or more bedrooms, which is expected to account for most (62%) of the market housing needed in the HMA and over half (55%) of its overall housing needs. While the Consortium considers that a revised policy should not be overly prescriptive, this clearly highlights the importance of identifying a balanced portfolio of sites capable of accommodating the family housing needed in West Berkshire and the wider housing market area over the emerging plan period.</p> <p><i>Economic policies</i></p> <p>The Core Strategy drew upon economic evidence produced in 2007, thereby reflecting the significantly different economic context which predated the recession. The Inspector noted the availability of some updated evidence produced in 2011 – which continued to be influenced by the recession and subsequent recovery – and highlighted the Council's intentions to update this evidence to inform the Site Allocations and Delivery DPD. While this update to the economic evidence base was commissioned and published, the scope of the Site Allocations and Delivery DPD was subsequently reduced to focus exclusively on housing sites.</p> <p>It is therefore imperative that the Local Plan Review fully reflects the latest evidence on West Berkshire's economy and the conclusions of the Economic Development Needs Assessment (EDNA) on the land required to support future employment growth, and identifies sites capable of meeting the concluded need for up to 75.2ha of additional employment land over the period to 2036. The Local Plan Review must adopt a positive and sufficiently flexible approach to create the conditions through which investment can be attracted and businesses' needs are met.</p> <p><i>Town centre policies</i></p> <p>The Consortium agrees that the policy approach to retail and town centres must be updated to take account of the latest available evidence, namely the Western Berkshire Retail and Commercial Leisure Assessment produced in 2016. This acknowledges proposals for the redevelopment of Thatcham town centre, in order to strengthen and enhance its role as a shopping destination. The importance of the extant permission for the redevelopment of the Kingsland Centre is noted within the evidence, with a requirement for additional comparison floorspace in the town were this permission to expire without implementation.</p> <p>The Local Plan Review can contribute towards creating the conditions through which this investment can be made, realising the opportunity to regenerate the town centre and achieve the vision for a strengthened and vibrant retail centre. Through the sustainable growth of Thatcham over the plan period, a growing residential population can be</p>

Respondent	Response
	<p>accommodated, increasing patronage and footfall and generating additional expenditure for local shops and businesses. Thus housing growth in Thatcham has a key role to play in supporting the town centre's regeneration.</p> <p><i>Infrastructure policies</i></p> <p>The Local Plan Review must take a sufficiently progressive view as to how infrastructure provision and the accommodation of housing needs can be realised in parallel. In Thatcham for example where the provision of new housing will be a pre-requisite of supporting the regeneration of the town, a strategic view must be taken of the full infrastructure needs associated with growth to ensure that they can be addressed and delivered.</p> <p>Directing additional development towards Thatcham would enable the provision of a range of infrastructure which would serve the needs of not only new developments but also provide opportunities to address strategic and long standing social infrastructure deficiencies in the town.</p> <p><i>Site specific policies and allocations</i></p> <p>The Consortium does not consider that site specific policies should simply be retained unless built out. The Consortium considers that allocations should be removed if they are unlikely to be achieved / delivered during the period to 2036.</p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>The Gerald Palmer Eling Trust has the following comments to make on the Council's assessment of existing policies:</p> <p><b>Housing policies</b></p> <p><b>Policy C1 Location of New Housing in the Countryside:</b> The Council's comment on this policy in the column entitled 'recommendation' is: '<i>Principles of this policy anticipated to be carried forward into the Local Plan to 2036. List of settlements to be updated as part of settlement boundary review.</i>' The commitment contained in this wording of carrying out a settlement boundary review is supported. However, it is considered that more information needs to be provided about the scope of the review and the methodology that will be followed and that this must be subject to public consultation at an early stage in the process so that there is a consensus about the methodology to be applied. As the current settlement boundaries were defined in the West Berkshire District Local Plan 1991 – 2006 they are now seriously out of date. As a result in some cases development has taken place in the interim which is outside of the current settlement boundary and encloses undeveloped land that is still currently outside of the settlement boundary. This is the case, for example, at Hampstead Norreys, where the existing dwelling at Red Cottage and adjoining land is still outside the settlement boundary, despite the adjoining land to both east and west already having been developed as indicated on the attached site location plan L01. Logically this land should therefore be within the settlement boundary. A review of settlement boundaries is also fundamental to determining the capacity of West Berkshire to accommodate the housing need identified in the Strategic Housing Market Assessment and its distribution across the District. The settlement boundary review should therefore be a priority for the Local Plan review.</p> <p><b>C2 Rural Housing Exception Policy:</b> The comment that consideration is to be '<i>given to permitting such schemes adjacent to Rural Service Centres, as well as those rural settlements lower down the settlement hierarchy,</i>' is supported. This is currently the situation under policy C2 and it is vital that this continues to be the case in order to satisfy the pressing need for more affordable housing in rural settlements.</p>

Respondent	Response
	<p><b>Policies C4 Conversion of Existing Redundant Buildings in the Countryside to Residential Use; C5 Housing Related to Rural Workers; C6 Extension of Existing Dwellings within the Countryside; C7 Replacement of Existing Dwellings; C8 Extension of Residential Curtilages:</b> In the case of all these policies the proposal is to carry the principle of the policy forward, with the comment '<i>Consider providing further clarification for development management purposes,</i>' with no identification of what the further clarification might be. It is considered that these policies have worked well, particularly in enabling a new use to be found for redundant rural buildings, which often have heritage value and make an important contribution to the landscape. The principle of carrying these policies forward is therefore strongly supported and it is considered that they do not need to be subject to any significant change.</p> <p><b>Economy</b></p> <p><b>CS10: Rural Economy:</b> This policy together with 'saved' West Berkshire District Local Plan 1991 – 2006 <b>policies ENV.16 on Farm Diversification and ENV.19 on the Re-Use and Adaption of Rural Buildings</b> currently provide a positive framework for rural business developments, which is strongly supported as it fully accords with national planning policy contained in paragraph 28 of the National Planning Policy Framework. This states that: <i>'Planning policies should support economic growth in rural areas in order to create jobs and prosperity by taking a positive approach to sustainable new development. To promote a strong rural economy, local and neighbourhood plans should:</i></p> <ul style="list-style-type: none"> <li>• <i>support the sustainable growth and expansion of all types of business and enterprise in rural areas, both through conversion of existing buildings and well designed new buildings;</i></li> <li>• <i>promote the development and diversification of agricultural and other land-based rural businesses;</i></li> <li>• <i>support sustainable rural tourism and leisure developments that benefit businesses in rural areas, communities and visitors, and which respect the character of the countryside. This should include supporting the provision and expansion of tourist and visitor facilities in appropriate locations where identified needs are not met by existing facilities in rural service centres; and</i></li> <li>• <i>promote the retention and development of local services and community facilities in villages, such as local shops, meeting places, sports venues, cultural buildings, public houses and places of worship.'</i></li> </ul> <p>This positive approach to rural businesses is also supported by the North Wessex Downs AONB Management Plan, which states in paragraph 8.3 that: <i>'The North Wessex Downs Partnership believes that promoting and supporting local enterprise is a key part of conserving and enhancing the character and special qualities of the area. Local businesses are likely to:</i></p> <ul style="list-style-type: none"> <li>• <i>employ local people;</i></li> <li>• <i>provide services to improve the local quality of life;</i></li> <li>• <i>spend money locally;</i></li> <li>• <i>promote community cohesion; and</i></li> <li>• <i>have a smaller environmental footprint (by reducing the transportation of goods from across communities).</i></li> </ul>

Respondent	Response
	<p><i>People like to live in a high quality environment. This attracts some businesses as it helps them retain staff. Support for small local businesses will provide local jobs and enhance the rural economy. For example, fast broadband is crucial for a healthy rural economy and we will work with relevant agencies to secure such infrastructure.'</i></p> <p>The Council's recommendation is that the policy approach is 'to be updated, alongside ENV.16 and ENV.19, and other policies relating to the rural economy.' It is important that as part of this process the current positive approach is retained in order to ensure the prosperity of the rural economy of West Berkshire in accordance with Government and North Wessex Downs AONB Management Plan policies.</p>
Woolf Bond Planning for Donnington New Homes	<p>We support the carrying forward of Policy C4 (Conversion of Existing Redundant Buildings in the Countryside to Residential Use) in the Local Plan Review. This policy provides an appropriate policy that acknowledges the benefit of converting existing redundant buildings to public and private beneficial uses, consistent with paragraphs contained in the emerging NPPF discussed above.</p>
WYG for Donnington New Homes	<p>Adopted Core Strategy Policy CS3 (July 2012) allocates land at Sandleford Park as a Strategic Site allocation, for the phased delivery of up to 2,000 dwellings. Supporting text confirms that, "some flexibility in delivery is anticipated, with at least 1,000 dwellings proposed to be delivered by 2026, but with the ability to increase this amount if monitoring or changing circumstances indicate that this is necessary". This flexibility in approach is supported, particularly given that the policy was adopted in 2012 and that housing requirements have increased since this time. Land at "Sanfoin" to the west of Sandleford Park was allocated in the subsequent Housing Site Allocations DPD which was adopted in 2017, and this site now forms part of the Sandleford Park West proposals which are the subject of a current outline planning application. Donnington New Homes welcomes the proposal at Appendix 2 of the Local Plan Scoping Report to carry forward the allocation at Sandleford Park, particularly the recognition that amendments can be included in the new local plan to reflect current circumstances.</p> <p>In March 2018, planning applications are being submitted by Donnington New Homes and by Bloor Homes / Sandleford Farm Partnership, together proposing the development of up to 1,500 homes at Sandleford Park, with associated infrastructure including new roads, schools, a country park, local centre and open space, as well as providing a site for the local charity, Swings and Smiles, to deliver a facility providing support to local families with children with special needs. Together, these two planning applications comprise a cohesive and comprehensive package of development proposals for Sandleford Park which meet the Council's policy requirements. As proposed, the dwelling numbers fall below the threshold of "up to 2,000 dwellings" set out at Policy CS3 and this is largely due to a desire to provide a high-quality development, with associated infrastructure and with a high provision of open space. The applicants have sought to avoid an overly-developed scheme, which while maximising numbers, would not deliver the scale of green infrastructure proposed through these two, complementary applications. However, on the basis of the submitted planning applications referred to above, construction of the first phases of the Sandleford Park development is now likely to commence during 2019.</p> <p>Significantly, the Sandleford Park South development would also facilitate the provision of a southern link road, serving both the proposed extension and the wider Sandleford Park development and alleviating the section of the A343 Andover</p>

Respondent	Response
	<p>Road through Wash Common. The proposal for this route is shown at Appendix A of this representation in the Sandleford Park Extension and Wash Common Relief Road “Call for Sites” submission. The concept masterplan is repeated here for reference: (see attached document).</p> <p>In response to the question set out at 6.1 of the Local Plan Scoping Report, “<i>Do you agree with our assessment of existing planning policies</i>”, DNH supports the recommendation to include Policy CS3, but also requests that a <b>new policy</b> is introduced to <b>allocate the Sandleford Park South site</b> to deliver up to 500 additional dwellings to be served by the additional section of the Sandleford Park main access road between the A343 at Sandpit Hill and the southern edge of the existing Sandleford Park allocation at New Warren Farm. It is also proposed that this section of new road is added to Policy TRANS1A (Road Schemes) which sets out key transport schemes and protects identified land on the Policies Map for such schemes.</p> <p>The Sandleford Park West illustrative masterplan submitted with the current outline application has been designed to retain the flexibility for primary and secondary school provision to cater for the needs arising from Sandleford Park South, and the main access route has been designed to facilitate its southerly extension to Wash. It is important to note that the submitted planning application for Sandleford Park West includes reserve education campus land. The SPW planning application generates a requirement for the provision of a 1 Form Entry Primary School, but additional land has been reserved for the expansion of this school to 2 Form entry. Expansion/replacement land (1.6ha) is also reserved for Park House School (adjacent to the PHS campus southern boundary). This is in addition to the provision required by the Core Strategy allocation, should this be necessary in order for the school to expand appropriately and in a plan led manner.</p>

## Summary of responses

The majority of respondents agreed with the Council’s aim to assess existing planning policies, including where there will be clarification for development management purposes (such as Core Strategy CS4). Some site promoters said that there was not enough information to be able to make an assessment of policies.

Some respondents highlighted specific concerns within their remit that will be considered further as the Review progresses and which will be taken forward through the development of particular policies. This includes the needs of the racehorse and equestrian industry, flooding, heritage assets, transport, water infrastructure, sport and recreation, community/cultural facilities, the Kennet and Avon Canal, and the expansion of Theale rail terminal.

There was general consensus that appropriate extensions to sustainable settlements may be a way forward. Some respondents, notably from the general public, were concerned with a settlement boundary review, and were keen to ensure a balance is retained between smaller villages and the main towns in the District. The housing number going forward needs to be based on up-to-date evidence, and would need to include greenfield sites.

New Greenham Park and the Atomic Weapons Establishment were keen to see a new policy or amendment to CS9 to reflect the strategic importance of both areas of employment.

There was a suggestion that there should be a review of all site allocations in the Housing Site Allocations DPD, including a review of sites which have not been delivered. One respondent was concerned that the delay in delivering sites such as Sandleford was having the effect of developers submitting schemes for unallocated land outside of settlement boundaries (e.g. North Newbury).

Other comments received focus on including a policy for the redevelopment of redundant rural buildings, similar to Local Plan Policy ENV20; the clarification of green infrastructure; expanding Local Plan Policy ENV27 to include residential institutions for elderly care; that Core Strategy Policy CS16 should recognise any public benefits of development through flood risk management and mitigation; for Core Strategy CS6 to take into account the changes to the definition of affordable housing outlined in the NPPF; and for a review of retail centres to take into account available evidence.

### **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR). Where respondents have highlighted specific concerns they will be taken forward through the development of either strategic or local policies as appropriate.

The importance of an adequate, up to date and relevant evidence base is acknowledged. As part of the LPR the Council will review the character of and evidence it has for the existing spatial areas and consider whether it can introduce flexibility by reviewing boundaries. A review of the spatial distribution of development across the District will also be done through a review of the settlement hierarchy and settlement boundaries. The Council intends to consult on both the methodology for the settlement hierarchy and criteria for the review of settlement boundaries in Nov/Dec 2018.

### Responses received to the Local Plan Review Scoping Report (February 2018)

**Q7: Are there any other policy issues that you think should be considered as part of the review of the Local Plan? If so, what are they and tell us why you think they should be included.**

Number of responses received: 56

Respondent	Response
<b>Internal</b>	
Environmental Health West Berkshire Council	<p>I note that policies OVS5 Environmental Nuisance and Pollution Control and OVS6 Noise Pollution OVS6 are to be reviewed. The PPG documents referred to (23&amp;24) are no longer valid and the Council's approach to pollution &amp; noise should be reviewed. In particular noise policy should be updated to reflect terminology /approach of Noise Policy Statement for England and NPPF. I would refer you to document entitled 'ProPG Planning and Noise' developed by the Institute of Acoustics, ANC and the CIEH  <a href="http://www.ioa.org.uk/sites/default/files/14720%20ProPG%20Main%20Document.pdf">http://www.ioa.org.uk/sites/default/files/14720%20ProPG%20Main%20Document.pdf</a>            Air Quality Policy - Just to note that the protection and improvement of local air quality is a priority for the Council and we are currently developing a 'planning and air quality guidance' document. A draft version of this has already been circulated internally for comment.</p>
Public Transport Team West Berkshire Council	No, I do not consider that there are any other policy issues to be considered as part of the Local Plan review.
<b>Statutory consultees</b>	
West Berkshire Health and Wellbeing Board	<p>West Berkshire's Health and Wellbeing Board have recently met and asked me to request that the West Berkshire Local Plan Review to 2036 considers the role that good design can play in the long term health and wellbeing of residents and workers in West Berkshire.            In addition, the Health and Wellbeing Board would welcome the opportunity presented by the West Berkshire Local Plan Review to 2036 for a new policy to be included for significant developments to include health and wellbeing opportunities, both hard (new health facilities) and soft (formal public open space) in their designs.            We also welcome the opportunity to work closely with you and your team in the production of the plan.</p>

Respondent	Response
Bracknell Forest Council	<p>In relation to the Localism Act and the Duty to Co-operate (and based on the strategic priorities listed in para. 156 of the National Planning Policy Framework), Bracknell Forest Council would ask you to take the following into account in preparing your Local Plan Review to 2036 document:</p> <ul style="list-style-type: none"> <li>• Representatives from this Council should be involved in any discussions relating to strategic issues (including consideration of possible joint evidence studies) as enlarged below;</li> <li>• The homes and jobs needed in the area; <ul style="list-style-type: none"> <li>○ Discussions on housing need, including affordable, following joint working on the evidence base relating to the Strategic Housing Market Assessment and the West of Berkshire Spatial Planning Framework. With regards to Gypsy and Traveller provision, Bracknell Forest Council has published a new Gypsy and Traveller Accommodation Assessment following the change in definition in Annex 1 of the</li> </ul> </li> <li>• The provision of infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and the provision of minerals and energy (including heat); <ul style="list-style-type: none"> <li>• <ul style="list-style-type: none"> <li>○ Representatives from this Council should be involved if any development is of such a size/significance (including minerals and waste provision), that it could result in implications for infrastructure provision within Bracknell Forest, in particular</li> </ul> </li> </ul> </li> <li>• Climate change mitigation and adaptation, conservation and enhancement of the natural and historic environment, including <ul style="list-style-type: none"> <li>○ Part of your Borough is seemingly within 5 km and within 7km of the Thames Basin Heaths SPA. The implications are that developments up to 7km may need to provide mitigation measures. It is advisable that you contact Natural England (NE) on this matter. It should be noted that the Habitat and Species Regulations have been updated, with the most recent regulations published in 2017. Bracknell Forest Council is currently agreeing a methodology with NE regarding the air quality assessment which will be undertaken as part of the HRA for the Bracknell Forest Local Plan which will include an in-combination assessment. We look forward to sharing information on this issue in the future with West Berkshire Council, as appropriate.</li> </ul> </li> </ul> <p>The 'Bracknell Forest Local Plan' (BFLP) provides the long term spatial vision and development strategy for the Borough up to 2034. A consultation on the draft BFLP, including draft SA, draft HRA and draft Infrastructure Delivery Plan took place during February/March this year. It is hoped to arrange a Duty to Co-operate meeting with the relevant bodies to discuss issues raised, over the next couple of months.</p> <p>We welcome the opportunity for on-going discussion relating to the preparation of the above documents, and would be willing to attend meetings, workshops, respond to consultation material as appropriate, and ask to be kept informed of any future consultations.</p>
Wokingham Borough Council	Thank you for consulting Wokingham Borough Council on the Local Plan Review to 2036 Scoping Report and SA Scoping Report for West Berkshire. WBC has reviewed these documents and does not wish to make any comment at this

Respondent	Response
	stage. We welcome this local plan review, and look forward to future progress on the Sustainability Appraisal and future consultations for the new plan.
Basingstoke & Deane Borough Council	Thank you for consulting Basingstoke and Deane Borough Council on the Scoping Report for a review of the Local Plan. We would like to offer our support for the review and its longer timeframe and also support the continuation of discussions through the Duty to Cooperate, particularly in relation to housing provision, transport infrastructure, environment and resource efficiency, the North Wessex Downs AONB, and also developments near licenced nuclear installations. We look forward to working with you further as the Plan progresses.
Cumbria County Council	Thank you for inviting Cumbria County Council to comment. This is an officer level response. We have no comment to make at this early stage in the process but please do keep us informed of progress as, given our shared experience of hosting a nuclear facility, we would be particularly interested to see your waste planning policies with regard to radioactive waste. Regarding the Duty to Cooperate, we are not aware of any strategic issues to raise at present but if you wish to discuss any matters going forward as the Plan progresses, please do not hesitate to contact me on the details below.
Stratfield Mortimer Parish Council	This has largely been dealt with via the comments on the other questions but in summary are:- <ul style="list-style-type: none"> <li>• Consideration of likely technological and social changes during the plan period.</li> <li>• Greater consideration of the use of policies to foster community spirit</li> <li>• Greater consideration of the use of policies to foster the health and wellbeing of the residents of the area</li> <li>• Far more consideration of what an ageing population will require in terms of development and social/health support</li> <li>• A realistic infrastructure plan which melds far more elements of public policy and private provision together than is the case at present.</li> <li>• A strategy for coping with the likely shortfall in provision and demand for infrastructure of all sorts in the future.</li> <li>• A strategy for meeting increased expectations not just in quantitative terms but also in the quality of provision</li> <li>• Improvements to biodiversity</li> </ul>
Holybrook Parish Council	We note that very little attention or positive action has been given to general infrastructure; roads, GP surgeries, leisure facilities, educational establishments etc. With 280 dwellings designated for Holybrook Parish and a further 285 planned for the neighbouring Pincents Hill (amounting to over 500 dwellings in a concentrated area) there will be, approximately, an additional 1000 cars per day using just one junction on the already over-burdened A4 Bath Road. It is noted that the report speaks of encouraging the use of cycling, public transport and walking. However, the current cycle-ways are very narrow making them dangerous for users, particularly along the A4 and across junction 12 of the M4 motorway. Currently, any residents in Holybrook Parish who wish to access West Berkshire Council's leisure facilities would have to

Respondent	Response
	<p>spend an unacceptable amount of time using public transport. The nearest sports centre is Willink which has no direct bus route from the Parish.</p> <p>It is widely acknowledged that we are an aging population. Therefore, walking any distance can prove difficult for many people. Consequently, senior citizens rely on their cars for shopping and access to leisure. The Parish Council fully supports a greener future and the provision for this but it must be acknowledged that the dependency on the car will not go away.</p> <p>The need for improved services to match the housing quota defined by Central Government, is imperative. Our roads in the east of the district are overburdened and some positive action needs to be taken to address the situation. The quality of life for our residents will be severely impaired if housing is not matched by infrastructure improvements.</p>
Burghfield Parish Council	<p>No.</p> <p>Housing design - there needs to be more consideration of the environmental impact of the house design and contraction as well as the energy required for the house to function (heat light etc) in the future.</p> <p>General infrastructure within and around the new developments should include</p> <ul style="list-style-type: none"> <li>• Well lit pavements for walking and cycle routes to minimise car use, these should encourage safe walking and cycling to both the area centre and the adjacent centres. For example it should be safe to walk and cycle to / from Burghfield to Mortimer, Theale and Reading if the number of homes is being increased.</li> <li>• This is particularly important with the inadequate parking proposed per bedroom (this needs increasing)</li> </ul> <p>Parking spaces for all new housing should have electric supply for charging cars in all parking spaces (whether house allocated or not).</p>
Burghfield NDP Steering Group	No.
Network Rail	<p>As Network Rail is a publicly funded organisation with a regulated remit it would not be reasonable to require Network Rail to fund rail improvements necessitated by commercial development. It is therefore appropriate to require developer contributions to fund such improvements. With this in mind I would strongly urge that when the council undertakes its viability testing for any proposed allocated sites it considers the impact the proposal may have on the railway infrastructure. The cost of mitigating any impact may have a bearing on the viability and deliverability of any such proposed site.</p> <p>Network Rail is a statutory undertaker responsible for maintaining and operating the country's railway infrastructure and associated estate. Network Rail owns, operates, maintains and develops the main rail network. This includes the railway tracks, stations, signalling systems, bridges, tunnels, level crossings and viaducts. The preparation of development plan policy is important in relation to the protection and enhancement of Network Rail's infrastructure.</p> <p>Level Crossings</p> <p>Any development of land which would result in a material increase or significant change in the character of traffic using a rail crossings should be refused unless, in consultation with Network Rail, it can either be demonstrated that the safety</p>

Respondent	Response
	<p>will not be compromised, or where safety is compromised serious mitigation measures would be incorporated to prevent any increased safety risk as a requirement of any permission.</p> <p>Network Rail has a strong policy to guide and improve its management of level crossings, which aims to; reduce risk at level crossings, reduce the number and types of level crossings, ensure level crossings are fit for purpose, ensure Network Rail works with users / stakeholders and supports enforcement initiatives. Without significant consultation with Network Rail and if proved as required, approved mitigation measures, Network Rail would be extremely concerned by the impact the proposed site allocation would have on the safety and operation of these level crossings. The safety of the operational railway and of those crossing it is of the highest importance to Network Rail.</p> <p>Councils are urged to take the view that level crossings can be impacted in a variety of ways by planning proposals:</p> <ul style="list-style-type: none"> <li>• By a proposal being directly next to a level crossing</li> <li>• By the cumulative effect of development added over time</li> <li>• By the type of crossing involved</li> <li>• By the construction of large developments (commercial and residential) where road access to and from site includes a level crossing</li> <li>• By developments that might impede pedestrians ability to hear approaching trains</li> <li>• By proposals that may interfere with pedestrian and vehicle users' ability to see level crossing warning signs</li> <li>• By any developments for schools, colleges or nurseries where minors in numbers may be using a level crossing.</li> </ul> <p>It is Network Rail's and indeed the Office of Rail Regulation's (ORR) policy to reduce risk at level crossings not to increase risk as could be the case with an increase in usage at the three level crossings in question. The Office of Rail Regulators, in their policy, hold Network Rail accountable under the Management of Health and Safety at Work Regulations 1999, and that risk control should, where practicable, be achieved through the elimination of level crossings in favour of bridges or diversions.</p> <p>The Council have a statutory responsibility under planning legislation to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the rail volume or a material change in the character of traffic using a level crossing over a railway.</p> <p>We would appreciate the Council's providing Network Rail with an opportunity to comment on any future planning policy documents as we may have more specific comments to make (further to those above). We look forward to continuing to work with you to maintain consistency between local and rail network planning strategy.</p>
Savills (UK) Ltd for Thames Water Utilities Ltd	<p>A key sustainability objective for the preparation of Local Plans and Neighbourhood Plans should be for new development to be co-ordinated with the infrastructure it demands and to take into account the capacity of existing infrastructure. New development should be co-ordinated with the infrastructure it demands and to take into account the capacity of existing infrastructure. Paragraph 156 of the National Planning Policy Framework (NPPF), March 2012, states: <b><i>“Local planning authorities should set out strategic policies for the area in the Local Plan. This should include strategic policies to deliver:.....the provision of infrastructure for water supply and wastewater....”</i></b></p>

Respondent	Response
	<p>Paragraph 162 of the NPPF relates to infrastructure and states: <b>“Local planning authorities should work with other authorities to: assess the quality and capacity of infrastructure for water supply and wastewater and its treatment.....take account of the need for strategic infrastructure including nationally significant infrastructure within their areas.”</b></p> <p>The web based National Planning Practice Guidance (NPPG) published in March 2014 includes a section on ‘water supply, wastewater and water quality’ and sets out that Local Plans should be the focus for ensuring that investment plans of water and sewerage/wastewater companies align with development needs. The introduction to this section also sets out that <b>“Adequate water and wastewater infrastructure is needed to support sustainable development” (Paragraph: 001, Reference ID: 34-001-20140306).</b></p> <p>It is important to consider the net increase in water and wastewater demand to serve the development and also any impact that developments may have off site, further down the network. The new Local Plan should therefore seek to ensure that there is adequate water and wastewater infrastructure to serve all new developments. Thames Water will work with developers and local authorities to ensure that any necessary infrastructure reinforcement is delivered ahead of the occupation of development. Where there are infrastructure constraints, it is important not to under estimate the time required to deliver necessary infrastructure. For example: local network upgrades take around 18 months and Sewage Treatment &amp; Water Treatment Works upgrades can take 3-5 years.</p> <p>Thames Water therefore recommends that developers engage with them at the earliest opportunity to establish the following:</p> <ul style="list-style-type: none"> <li>• The developments demand for water supply and network infrastructure both on and off site;</li> <li>• The developments demand for Sewage/Wastewater Treatment and network infrastructure both on and off site and can it be met; and</li> <li>• The surface water drainage requirements and flood risk of the development both on and off site and can it be met.</li> </ul> <p>In light of the above we recommend the new Local Plan include the following policy/supporting text:  <b>PROPOSED NEW WATER/WASTEWATER INFRASTRUCTURE POLICY</b>  <b>“Where appropriate, planning permission for developments which result in the need for off-site upgrades, will be subject to conditions to ensure the occupation is aligned with the delivery of necessary infrastructure upgrades.”</b></p> <p>Proposed new Policy text to support the above policy: <b>“The Local Planning Authority will seek to ensure that there is adequate water and wastewater infrastructure to serve all new developments. Developers are encouraged to contact the water/waste water company [Thames Water] as early as possible to discuss their development proposals and intended delivery programme to assist with identifying any potential water and wastewater network reinforcement requirements. Where there is a capacity constraint the Local Planning Authority will, where appropriate, apply phasing conditions to any approval to ensure that any necessary infrastructure upgrades are delivered ahead of the occupation of the relevant phase of development.”</b></p>

Respondent	Response
	<p><b>SUDS</b></p> <p>With regard to surface water drainage it is the responsibility of the developer to make proper provision for drainage to ground, watercourses or surface water sewer. It is important to reduce the quantity of surface water entering the wastewater system in order to maximise the capacity for foul sewage to reduce the risk of sewer flooding.</p> <p>Thames Water recognises the environmental and economic benefits of surface water source control, and encourages its appropriate application, where it is to the overall benefit of their customers. However, it should also be recognised that SUDS are not appropriate for use in all areas, for example areas with high ground water levels or clay soils which do not allow free drainage. SUDS also require regular maintenance to ensure their effectiveness.</p> <p>Limiting the opportunity for surface water entering the foul and combined sewer networks is of critical importance to Thames Water. Thames Water have advocated an approach to SuDS that limits as far as possible the volume of and rate at which surface water enters the public sewer system. By doing this, SuDS have the potential to play an important role in helping to ensure the sewerage network has the capacity to cater for population growth and the effects of climate change. SUDS not only help to mitigate flooding, they can also help to:</p> <ul style="list-style-type: none"> <li>• improve water quality</li> <li>• provide opportunities for water efficiency</li> <li>• provide enhanced landscape and visual features</li> <li>• support wildlife and</li> <li>• provide amenity and recreational benefits.</li> </ul> <p>With regard to surface water drainage, Thames Water request that the following paragraph should be included in the new Local Plan: <b><i>“It is the responsibility of a developer to make proper provision for surface water drainage to ground, water courses or surface water sewer. It must not be allowed to drain to the foul sewer, as this is the major contributor to sewer flooding.”</i></b></p>
Sport England	<p>The economic, social and health benefits of sport:  <a href="https://www.sportengland.org/research/benefits-of-sport/economic-value-of-sport/">https://www.sportengland.org/research/benefits-of-sport/economic-value-of-sport/</a>  <a href="https://www.sportengland.org/research/benefits-of-sport/health-and-benefits-of-sport/">https://www.sportengland.org/research/benefits-of-sport/health-and-benefits-of-sport/</a>  <a href="https://www.sportengland.org/research/benefits-of-sport/social-value-of-sport/">https://www.sportengland.org/research/benefits-of-sport/social-value-of-sport/</a></p> <p>These three areas can create sustainable, healthy, cohesive and robust communities. Sport is often overlooked in particular in its economic benefits to local economies.</p>
Historic England	<p><b>Appendix 1: Considerations for Development Management policies</b></p> <p><b>Archaeology</b></p> <ul style="list-style-type: none"> <li>• The preservation of scheduled monuments and other nationally important archaeological sites and their settings; and</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• The preservation, in situ, of other archaeological remains or, in those cases where this is not justifiable or feasible, provision is made for excavation recording; and</li> <li>• Requiring that an appropriate assessment and evaluation is submitted as part of the planning application in areas of known or potential archaeological interest.</li> <li>• Appropriate publication/curation of findings</li> </ul> <p><b>Listed Buildings</b></p> <ul style="list-style-type: none"> <li>• Ensuring that proposed alterations, extensions or changes of use to listed buildings, or development in their vicinity, will not have an adverse impact on those elements which contribute to their special architectural or historic interest including, where appropriate, their settings;</li> <li>• Taking measures to ensure that neglected listed buildings are appropriately repaired and re-used.</li> </ul> <p><b>Conservation Areas</b></p> <ul style="list-style-type: none"> <li>• Ensuring that development within or which would affect the setting of a conservation area will conserve or enhance those elements which contribute to its special character or appearance;</li> <li>• Safeguarding spaces, street patterns, views, vistas, uses and trees which contribute to the special character or appearance of that conservation area.</li> <li>• Where they exist, reference to the fact that Conservation Area Appraisals will be used to guide development in those areas.</li> <li>• Where up-to-date Conservation Area Appraisals are not available developers are required to submit character statements to demonstrate the impact of the development upon their character and appearance of the conservation area.</li> </ul> <p><b>Historic Parks and Gardens</b></p> <ul style="list-style-type: none"> <li>• Safeguarding features which form an integral part of the special character or appearance of the Park or Garden;</li> <li>• Ensuring that development does not detract from the enjoyment, layout, design, character, appearance or setting of the Park or Garden, key views out from the Park, or prejudice its future restoration;</li> </ul> <p><b>Locally important heritage assets</b></p> <ul style="list-style-type: none"> <li>• Setting out definitions of what constitutes a locally important or ‘non-designated’ heritage asset.</li> <li>• Providing criteria for their assessment for development proposals, including alteration and extension, and demolition.</li> <li>• Ensuring applicants are required to demonstrate significance and setting out information requirements for applications.</li> </ul>

Respondent	Response
Transport for London	Thank you for consulting Transport for London (TfL). I can confirm that TfL has no comments to make on the scoping reports
Environment Agency	<p>We strongly recommend the inclusion of the following policy in order to be consistent with national planning policy -</p> <p><b>Watercourse policy</b></p> <p>We expect to see a policy included for the conservation and enhancement of river corridors to ensure that your local plan is deliverable and compliant with National Planning Policy Framework (NPPF) paragraphs 99, 109, 114 and 117. For this policy we would like to see an identical policy to that of the adopted Wycombe District Council Policy DM15 of the Delivery and Site Allocations Plan adopted 2013.</p> <p>This policy says:</p> <p>“DM15 Protection and Enhancement of River and Stream Corridors</p> <ol style="list-style-type: none"> <li>1. Planning permission will only be granted for development proposals which would not have an adverse impact on the functions and setting of any watercourse and its associated corridor.</li> <li>2. Development should seek to conserve and enhance the biodiversity, landscape and recreational value of the watercourse and its corridor through good design.</li> <li>3. Opportunities for de-culverting of watercourses should be actively pursued. Planning permission will only be granted for proposals which do not involve the culverting of watercourses and which do not prejudice future opportunities for de-culverting (including on sites specifically identified in High Wycombe town centre).</li> <li>4. Development proposals adjacent to or containing a watercourse should provide or retain a 10m buffer between the top of the river bank and the development, and include a long term landscape and ecological management plan for this buffer.”</li> </ol> <p>Site allocations policies</p> <p>We expect to the site allocations polices to address onsite constraints such as flood risk, main rivers and their ecological buffer zones, sewage capacity and the impact on the receiving watercourses, groundwater quality and contaminated land including past historic uses. Source protection zones, pollution prevention and climate change.</p> <p>All of these constraints are likely to have an impact on the deliverability of development on a site.</p>
<b>General consultation bodies</b>	
CPRE Berkshire	It is time WBC had a proper policy on Light Pollution, alongside OVS6 on Noise Pollution, they are equally important. WBC has performed badly compared to some other LAs, (eg RBWM) despite it being largely in the AONB with Dark Sky areas. Complaints get passed 'environmental health' and nothing gets done. It is time the subject came squarely under Policy and Development Control.

Respondent	Response
	<p>A particular problem area is lighting of gateways where there is a huge range of installations, some good some very bad - lights that point up to the sky from ground level or higher, lights that shine out to the road and dazzle people trying to walk along a lane in th dark, or in some cases passing drivers.</p> <p>We suggest the main principles here should be:  gateway lights should illuminate the ground, not the sky or the highway.  Excellent examples of best practice may be seen on the walls of the car-park of the Hampstead Norreys community shop, and the gates of Walcroft at Kiln Corner, Upper Basildon: such examples are worthy of inclusion in the WBC 'Quality Design' document.</p> <p>Another widespread problem is the cheap high-power so-called 'spotlights' put up that illuminate a wide area. They should not illuminate other peoples property or the highway. There should be powers to require screening panels to limit spread sideways, as well as above so that the light source cannot be seen from afar. The same applies to high power sports ground lighting, but here, at last WBC has achieved reasonable control with planning applications.</p>
Mid & West Berks Local Access Forum	<p>We refer to the Forum's policy statement on development:  <b>Policy relating to Planning Applications for Housing, Roads, Minerals &amp; Waste sites and other industrial sites</b></p> <p>The Forum is a statutory body set up under the CROW Act 2000 to advise local authorities and other bodies on public access, including the improvement of public rights of way for recreational and utility purposes.  The CROW Act 2000 required all local authorities to produce a Rights of Way Improvement Plan (ROWIP) which can be found on the relevant local authority website. The plan has a number of objectives which relate to maintaining and improving the public rights of way network and also the development of new and improved public access generally.  The Forum will consider the following when commenting on plans.  That, the development:</p> <ol style="list-style-type: none"> <li>i. does not adversely affect existing public rights of way or other public open spaces in the area;</li> <li>ii. offers equivalent, or improved, diversion of existing public right of way affected by the development;</li> <li>iii. provides increased and / or improved off-road access to the existing public rights of way network in the area, and to existing and new facilities, open spaces and the countryside;</li> <li>iv. provides increased and /or improved off-road access for as many different user groups as possible, that is, pedestrians, cyclists, equestrians and disabled users;</li> <li>v. Provides paths which are definitive, rather than permissive, and are therefore added to the definitive map and statement;</li> <li>vi. Conforms to the British Standard '<i>Gaps, Gates and Stiles</i>' and Defra's guidance "<i>Good practical guidance for Local Authorities on compliance with the equalities act 2010</i>".</li> </ol>
British Horse Society	<p>Not as long as the new local plan includes an Equestrian / Racehorse objective which includes racing <b>and</b> non-racing activities (these include professional, semi-professional and recreational activities - see the BHS response to the Sustainability Appraisal).</p>

Respondent	Response
Forestry Commission South East and London Area Office	<p><b>Local Plans and ancient woodland – Forestry Commission approach</b></p> <p>The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.</p> <p><b>A summary of Government policy on ancient woodland</b></p> <p><a href="#">Natural Environment and Rural Communities Act 2006</a> (published October 2006).</p> <p><b>Section 40</b> – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.</p> <p><a href="#">National Planning Policy Framework</a> (published March 2012).</p> <p><b>Paragraph 118</b> – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.</p> <p><a href="#">National Planning Practice Guidance</a> – Natural Environment Guidance. (Published March 2014)</p> <p>This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a <a href="#">non-statutory consultee</a> on “<i>development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) (as defined and recorded in <a href="#">Natural England’s Ancient Woodland inventory</a>), including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings</i>”</p> <p>It notes that <b>ancient woodland is an irreplaceable habitat</b>, and that, in planning decisions, <b>Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework</b>. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.</p> <p><a href="#">Standing Advice for Ancient Woodland and Veteran Trees</a>. (Published April 2014)</p> <p>The Forestry Commission has prepared joint <a href="#">standing advice</a> with Natural England on ancient woodland and veteran trees which we refer you to in the first instance. This advice is a material consideration for planning decisions across England. It explains the definition of ancient woodland, its importance, ways to identify it and the policies that relevant to it. It also provides advice on how to protect ancient woodland when dealing with planning applications that may affect ancient woodland. It also considers ancient wood-pasture and veteran trees.</p> <p>The Standing Advice website will provide you with links to <a href="#">Natural England’s Ancient Woodland Inventory</a>, <b>assessment guides</b> and other tools to assist you in assessing potential impacts. The assessment guides sets out a series of questions to help planners assess the impact of the proposed development on the ancient woodland. <b>Case Decisions</b> demonstrates how certain previous planning decisions have taken planning policy into account when considering the impact of proposed developments on ancient woodland. These documents can be found on our <a href="#">website</a>.</p> <p><a href="#">The UK Forestry Standard</a> (3rd edition published November 2011).</p>

Respondent	Response
	<p><b>Page 24</b> “Areas of woodland are material considerations in the planning process and may be protected in local authority Area Plans. These plans pay particular attention to woods listed on the Ancient Woodland Inventory and areas identified as Sites of Local Nature Conservation Importance SLNCIs).  <a href="#">Keepers of Time</a> – A Statement of Policy for England’s Ancient and Native Woodland (published June 2005).  <b>Page 10</b> “The existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland”.  <a href="#">Natural Environment White Paper “The Natural Choice”</a> (published June 2011)  <b>Paragraph 2.53</b> - This has a “renewed commitment to conserving and restoring ancient woodlands”.  <b>Paragraph 2.56</b> – “The Government is committed to providing appropriate protection to ancient woodlands and to more restoration of plantations on ancient woodland sites”.  <a href="#">Biodiversity 2020: a strategy for England’s wildlife and ecosystem services</a> (published August 2011).  <b>Paragraph 2.16</b> - Further commitments to protect ancient woodland and to continue restoration of Plantations on Ancient Woodland Sites (PAWS).  Renewable &amp; low carbon energy  The resilience of existing and new woodland is a key theme of the Forestry Commission’s work to Protect, Improve and Expand woodland in England we will continue to work with Forestry / Woodland owners, agents, contractors and other Stakeholders to highlight and identify, pests and diseases and to work in partnership to enable Woodlands and Forests are resilient to the impacts of Climate Change.  Woodfuel and timber supplies continues to be an opportunity for local market growth whilst also enabling woodlands to be brought back into active management.  Flood risk  The planting of new riparian and floodplain woodland, can help to reduce diffuse pollution, protect river morphology, moderate stream temperature and aid flood risk management, as well as meet Biodiversity Action Plan targets for the restoration and expansion of wet woodland.  The Forestry Commission is keen to work in partnership with Woodland / Forest Stakeholders to develop opportunities for woodland creation to deliver these objectives highlighted above.  In the wider planning context the Forestry Commission encourages local authorities to consider <a href="#">the role of trees in delivering planning objectives</a> as part of a wider integrated landscape approach. For instance through:</p> <ul style="list-style-type: none"> <li>• the inclusion of <a href="#">green infrastructure</a> (including <a href="#">trees and woodland</a>) in and around new development; and</li> <li>• the use of locally sourced wood in construction and as a sustainable, <a href="#">carbon lean fuel</a></li> </ul>
Reading Gospel Hall Trust	<p>Provision of adequate community facilities is vital to the social health of every local community. Yet the existing local plan to 2026 is silent as to a district-wide policy, apart from vague reference to 'infrastructure' in policy CS5.  The only mentions of 'community facilities' as such in the plan are:</p> <ul style="list-style-type: none"> <li>• P27 ADPP2 In Newbury existing cf’s will be protected [nothing about applications for additional facilities]</li> <li>• P27 para 26 in Thatcham provision of cf s will be encouraged, but only within the town centre</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• P36 ADPP5 In the north Wessex Downs area limited development including of swill be allowed</li> <li>• P46 para 13 In Sandford Park cfs associated with the new housing are mentioned.</li> </ul> <p>This leaves substantial settlements like Theale and Tadley, not to mention the many villages, with no policy guidance. We think this should be rectified.</p> <p>Use class DI covers a wide range of community uses, with widely varying spatial and locational requirements. As such it is not easy for Councils to allocate land for these uses, nor to make generic guidance. Nevertheless, we would encourage the Council to consider including policy wording which states that where a local need is demonstrated sympathetic consideration will be given.</p> <p>One relevant factor to take into consideration is that some community facilities are promoted by charitable organisations reliant on voluntary funding, and unable to compete with house builders and others for prime sites. Where promoters can demonstrate a history of failed attempts within settlement boundaries, many Councils allow for use of sites outside settlements, and we would encourage West Berkshire to do the same.</p> <p>Recent Government-commissioned advice to Councils on provision of places of worship is pertinent. Appended to this statement is a publication <i>Faith Groups and the Planning System: Policy Briefing</i>, which was commissioned by DCMS. This document, issued as Government advice to LPAs, covers the needs of all faith groups, and makes recommendations as to a wide range of policy changes needed in the changing social environment of Britain.</p> <p>Recommendations 13 to 15 [The Planning Framework] are most relevant.</p> <ul style="list-style-type: none"> <li>• 13. ... <i>local authorities should prioritise protecting space for social infrastructure including places of</i></li> <li>• <i>Local authorities should ... 'move towards a proactive mode of needs provision'</i></li> </ul> <p>We would encourage the Council to engage with this policy briefing.</p> <p>Reading Gospel Hall Trust has a growing congregation in the area, and we anticipate that we will have need for further halls in the Plan period, most likely in the eastern part of the District.</p>
West Berkshire Spokes	<p>West Berkshire Spokes see the Local Plan as an opportunity to commit further investment for sustainable forms of transport to make cycling and walking more attractive for the benefit of all West Berkshire residents.</p> <p>There are a number of proposals for new improved cycle routes that have been identified in partnership with West Berkshire Cycle Forum that will help to mitigate the effects of development. These include proposals to improve the condition of the Kennet &amp; Avon Canal towpath (not just in the vicinity of the racecourse, but across the entire district), creation of new quietways to and from developments (i.e. Sandford and North Newbury) and bring up to standard the existing cycle network as per the 2016 Cycle Working Group Report.</p> <p>Furthermore the restoration of a shared use path on the old Newbury to Didcot Railway Line would provide opportunities for active travel to help make outlying villages such as Long Lane, Curridge, Hermitage, Hampstead Norreys and, possibly in the future, Compton, more sustainable locations for development. The first phase of making the dismantled rail track accessible to the public has begun this year and is expected to be complete by 2019. More investment and commitment to a vision to open the entire route would provide a community asset for West Berkshire residents that would become a tourist attraction in its own right, as well as an off-road cycle track that links into existing routes and attractions</p>

Respondent	Response
	such as Oxford, the Ridgeway and Stonehenge. We would like to see the Local Plan safeguard the route for this purpose in order to prevent further sections from being lost to development.
<b>Other stakeholders</b>	
Neil Richardson	As above, need for new policy to provide flexibility in ensuring sufficient housebuilding land brought forward for varied local housing needs throughout the Plan period. Potential Omission Sites. Specific sites potentially suitable as extensions to settlements or for housing development in well located areas can be identified in due course.
Philip John Williams	Why are you sending me this? It's all too detailed and would take an age to assimilate. I tried but you have to drill down into the information and get bored and annoyed the further you get into it. Please someone use some common sense pay a bit more of our money and have it shortened so it can be readily understood.
Liz Rigarlsford	I think it is brilliant that you keep us informed!!! Although not able to attend the meeting, you more than compensated for my absence. Thank you, I will watch with interest this project, which I personally would not approve, merely for the infrastructure that is not able to take much more traffic along the A4!
Robert Wallace	No mention of a revised Minerals policy No consideration of the economic and financial restraints on the Council
David Stubbs	I would say from the outset that for most ordinary households and residents, the prospect of reading, understanding and responding to planning regime documentation is not something which encourages transparency or accessibility. While fully appreciating the need for subject specific terminology and legal frame working, the knowledge that local opinion is therefore difficult both to assess and then to incorporate – and that once the consultation period closes, both the local authority and the many vested interests from the development community will then proceed to ‘interpret’ the local plan to their own desired outcomes does not inspire either great trust or great interest in engaging. Without either the specialist knowledge or ability to drill down deeply into the implications of the local plan review, I would restrict my comments to the following broad principles:- <ul style="list-style-type: none"> <li>· The recent economic climate, austerity and swingeing cutbacks in local services MUST be reflected in the ability of the local environment to contain and sustain large scale development.</li> <li>· The stated policy of central government to ‘build’ the country out of recession places undue pressure on local authorities who have not the infrastructure or resources to simply grant planning permission to fall in with national need and the local plan review MUST have the courage to strengthen West Berkshire council’s ability to retain proper control both of what is feasible and of the wishes of the local electorate.</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>· West Berkshire Council have showed some resolve in standing up to developers who refuse to submit applications which meet local requirements (such as the fractured approach being taken by the vying applications for Sandford). The plan review must acknowledge and strengthen this position.</li> <li>· Where delay to the desired number of new build starts each year is caused by the local authority properly rejecting applications which are not submitted in line with local planning guidance, the plan review must give the strength to resist both national government and developer pressure to grant 'catch up' approvals simply to hit targets!</li> <li>· The local plan MUST reflect that the local infrastructure, (road capacity and condition, bus services, reductions in waste collection, libraries, social services, NHS provision etc. etc.) is itself a constraint on the ability for new development to be 'sustainable'.</li> <li>· Where developers wish to make significant profit from their sites, the development must itself contribute proportionally to meeting the additional infrastructure needs that it will load onto the surrounding environment – and the plan must give the local authority the backbone to resist developers pleas that the proportion of social housing, school provision, brownfield remediation, play space or whatever will make the proposal unviable.</li> <li>· New developments MUST meet the requirements of policies such as the travel plan in preventing development which depends on vehicle transport and encouraging foot and cycle movement.</li> <li>· The plan review should encourage the priority use of infilling and brownfield sites – despite these not being the easy choice for developers - before permitting large scale greenfield development out of town with all the loss of countryside and traffic generation these entail.</li> <li>· The conversion of office and business premises into residential through permitted development should be resisted.</li> </ul>
Christopher Gent	Wherever possible it is important to respect existing settlement boundaries. Development should be focussed on rebuilding in existing development locations where possible.
William Graham	No. If WBC gets the future of housing and industry right, leisure, health and cultural facilities will naturally develop.
Julian Worth	Stronger links need to be made with the Minerals & Waste Local Plan as this covers important and potentially disruptive issues such as extraction, which impact significantly on the subjects considered in the Local Plan, notably landscape and water. In general, extraction in new areas should be opposed - alternative sources of aggregates are available, notably through the Theale rail depots, and despoilation of West Berks can be avoided by making greater use of these alternatives
David Lister	<p>The Sustainability Goals are ambitious and include objectives to 'mitigate.. climate change' and 'minimise demand for energy and other resources'. In Appendix 2 of the Local Plan the only policy related to climate change is CS16: Flooding which includes flood risk assessment.</p> <p>The Spatial Development Plan to 2036 must take into account the broader impacts of Climate Change and the change in energy availability in the next 20 years. National policy already recognizes the phasing out of fossil fuels in this time frame which is a result of fossil fuel depletion and carbon dioxide emissions.</p>

Respondent	Response
	<p>The development plan should have strategic objectives related to the generation of renewable energy (such as wind, solar, and biogas from anaerobic digestion) and objectives related to the energy efficiency of buildings. The policy should set out the goals of CO2 reduction from a defined starting point and the process under which progress against these goals is measured and enforced.</p>
<p><b>Landowners, site promoters and developers</b></p>	
<p>Barton Willmore for Sulham Estate</p>	<p>We consider that the review of the Local Plan should include the allocation of additional sites for residential development. In particular, Land at Hall Place Farm offers the opportunity to deliver up to 80 homes in the short to medium term in a sustainable location directly adjoining the Eastern Urban Area. The below comprises a summary of that which is contained in the suite of supporting documents which accompany these representations.</p> <p>The following demonstrate that the site is located within a sustainable location:</p> <p>The site is adjacent to the Eastern Urban Area which is categorised as an Urban Area within the settlement hierarchy and should be the focus for the majority of development. This site is within walking distance (800m) of Birch Copse Primary School. The site is also within walking distance (800m) of Little Heath Secondary School. The site is well located in terms of sustainable transport links with the 16, 17 and 33 buses all stopping within close proximity with regular bus services into central Reading. The site is approximately a 15 min walk from Tilehurst Village centre which has a number of local services including a Co-Operative supermarket. The site is located within the North Wessex Downs AONB. Accordingly, these representations are accompanied by a Landscape Capacity Assessment which concludes that the site has an overall low landscape sensitivity and has the potential to accommodate residential development. This is due to the influence of existing suburban fringe characteristics including the built form within the site and adjacent existing settlement edge. In addition, the ancient woodland to the north of the site also serves to shield views of the site from the wider AONB. The proposed layout has been designed with this capacity assessment in mind and looks to constrain development to that area which would not result in undue adverse effect to the AONB. From a heritage perspective, Hall Place Farmhouse which is contained within the site is Grade II listed. In addition, Kiln Cottage which lies to the south of the site is also Grade II listed. In order to consider the impact of these heritage assets on the potential for the development of the site a Heritage Preliminary Risk Appraisal has been prepared. This appraisal considers the site as three separate areas and concludes that whilst the area immediately surrounding Hall Place Farmhouse itself is highly sensitive, subject to sympathetic design, a proposal could be delivered which would not result in significant harm to the heritage asset. To the north of the site is an area of ancient woodland. The proposed layout incorporates a 15m buffer from this area in line with Natural England guidance. The highways technical note which accompanies these representations recommends that the main site access is taken from Little Heath Road. The preliminary site access arrangement complies with design standards in terms of the form of the junction, the carriageway and footway widths and the provision of visibility splays. As such, the report concludes that on this basis, “safe and suitable access to the site can be achieved for all people” in accordance with the requirements of the NPPF (paragraph 32).</p>

Respondent	Response
Barton Willmore for Graham Child	<p>We consider that the overall allocation of sites to meeting the housing need of the District should be carefully considered. We note that the current allocated sites are tasked with delivering the Core Strategy requirement, which is lower than that advised by the SHMA. Moreover, as we have stated we consider that the evidence underpinning the SHMA could be out of date and when tested during the Local Plan Examination, the housing requirement for the district may increase further. It is also noted that the Core Strategy extends only to 2026 and the emerging local plan will deliver housing to 2036. As we have noted above, whilst large strategic sites will be required to contribute heavily to the housing requirement, we advocate a mix of sites in all locations to contribute to the housing requirement of the District and in this regard we submit our clients site for consideration as an allocation within Pangbourne.</p> <p>Our client’s site is situated to the south west of Pangbourne and straddles the development boundary. The site was included within the 2013 SHLAA and has more recently been submitted to the Council’s most recent call for sites, for inclusion within the emerging HELAA. In 2013 the Council provided the following summary of the site within the SHLAA: “The potential impact on the natural beauty of the landscape would be the primary consideration...Landscape assessment required.”</p> <p>In response to the above our client has commissioned a Landscape Appraisal and Opportunities and Constraints Plan, in order to provide more evidence on this issue. The Landscape Appraisal, prepared by Barton Willmore, concludes that:</p> <ul style="list-style-type: none"> <li>• Development of the site would not cause the loss of any valued landscape elements or features;</li> <li>• Development of the site would not cause the loss of any characteristic landscape elements or features;</li> <li>• Development of the site would not interrupt any key views; and</li> <li>• Development of the site would increase the level of vegetation surrounding the site and form a definitive western boundary to the settlement of</li> </ul> <p>In addition to the Landscape Appraisal, our client has also commissioned a Capacity Plan, prepared by Barton Willmore, which takes account of the findings from the Landscape Assessment. The Capacity Plan concludes that the site can accommodate 41 dwellings at a density of 19.9dph.</p> <p>Our client’s site is also within single ownership and is therefore available to come forward immediately.</p> <p>We note that the Housing and Economic Land Availability Assessment (HELAA) is yet to be published and is expected Late 2018, in line with the next round of consultation (Regulation 18). We would advise the Council that our representations, specifically those regarding the landscape assessment of our client’s land, are designed to assist the Council with the conclusions of the HELAA in this regard.</p> <p>Further detail concerning the site is contained in the attached documents.</p>
Bewley Homes	<ol style="list-style-type: none"> <li>1. A Policy that would specifically address the Borough’s growing need for Housing Provision of Older People and specialist housing, such as C2 is necessary to ensure housing need for all is properly addressed.</li> <li>2. The Plan should consider the emerging changes to National Planning Policy Framework relating to 20% of its housing allocations being on sites which are less than 0.5 hectare. This would allow flexibility in the scale of housing sites that are focused in sustainable locations, delivered either as settlement extensions or allocations across the District.</li> <li>3. The emerging Local Plan should consider Woolhampton as a sustainable location for housing and allocate the site</li> </ol>

Respondent	Response
	<p>known as Land North of Bath Road site ref WOOL001 for housing. Previous assessments of the site made by West Berkshire through SHLAA have considered the site to have potential for residential development. The site is located on the west side of Woolhampton within the Parish of Midgham and sits adjacent to the current settlement boundary. The LPA considered its location was well related to the centre of the village and within walking distance of Midgham railway Station.</p> <p>Woolhampton as a service village provides a range of services which include two schools, (one being the local primary school), a church, village hall, village store and post office and a newsagent. The Coach and Horses is a pub and restaurant, whilst The Angel which is open seven days a week provides a restaurant and meeting and Wedding venue. The eastern side of the village also provides a BP petrol filling station, car wash and 24 hr kiosk shop. A garage, car servicing and repair business also operates in the village. Both Thatcham west of the village and Tadley to the south, offer further facilities within a 10 minute drive. It is also well linked to the M4, with travel times to Bristol and London within an hour. In terms of Public Transport links, the Council's Transport Policy Team have previously rated Woolhampton highly in terms of benefitting from good access to passenger transport services, enable existing residents and those from proposed developments to be able to choose modes of travel other than the car. These positive transport benefits include the easy access for Woolhampton residents to Midgham Railway Station via both walking and cycling. Midgham station provides hourly services to destinations including Thatcham, Newbury, Theale, Reading, London Paddington, Basingstoke, and the West Country with more frequent services provided to certain stations during peak times. In addition, Woolhampton is served by bus stops on both sides of the A4 in the village. The bus service is provided by premium Jet Black 1 operating a half hourly service along the A4 Bath Road, stopping in Woolhampton and Thatcham, running between Reading (east) and Newbury (west). Work on a new route of the National Cycle Network has been developed resulting in making improvements to cycle facilities on the A4. The National Cycle Network (NCN 422) once complete will run west to east along the A4/A329 corridor between central Newbury and Legoland, Windsor. The cycle network would deliver positive long-term benefits to residents of Woolhampton and its local economy. The recognised cycle facility along the A4 runs through the village, linking Newbury and Reading, improving linkages to key town centres and employment areas and will encourage the use of local sustainable transport networks. The first phase of the Route 422 Newbury to Ascot stretch of the NCN along Bath Road is already open, and work on the Reading Town centre Phase of the cross Berkshire route began earlier this</p>
Boyer Planning for Spitfire Bespoke Homes Ltd	<p>Our client's interest relates to land located to the south of Back Lane, Beenham, Berkshire. The site comprises 3.19 hectares and is suitable for housing development comprising approximately 40 dwellings in a sustainable central village location.</p> <p>The site contains a single detached bungalow with the rest of the site being agricultural land. The site is located in Flood Zone 1 and there are a small number of trees on the site which could be retained as part of any development proposal. The bungalow lies within the defined settlement boundary, although the remainder of the site lies outside the settlement boundary. The proximity to the settlement boundary however provides a suitable location for the sustainable growth of the village.</p>

Respondent	Response
	<p>Beenham is a linear village, located around 6 miles to the east of Newbury. Beenham has a fairly limited range of facilities although there is a bus service which runs through the village, and a more frequent service running along the A4 towards Reading and Newbury. The nearest railway station is Aldermaston, located approximately 2 miles to the south east. Beenham Primary School is situated on Back Lane, around 0.1 miles to the east of the existing site entrance. Discussions with the Primary School has identified that the village is unable to provide sufficient children to ensure the future sustainability of the school which may be at risk of closure without housing growth in the village. The village contains a public house (The Six Bells) although there is no village shop.</p> <p>To the south of the site is an area of Ancient Woodland and the Old Copse Site of Special Scientific Interest (SSSI). The site is also located within the North Wessex Area of Outstanding Natural Beauty (AONB). Any residential development on the site can be delivered without any detrimental impact on these areas.</p> <p>The site is an available, suitable and deliverable site, with no constraints to bringing the land forward for development at an early stage during the emerging plan period.</p> <p>As set out above, potential exists for residential development on land south of Back Lane to meet a local housing need in Beenham. Potential may also exist to incorporate an element of social infrastructure where it meets a local identified need. Such development would be sustainably and centrally located in the village and could assist in providing family homes to support the future sustainability of the Primary School and other social infrastructure. Without growth in Beenham, there is a risk that the Primary School may close.</p> <p>A Landscape Appraisal was undertaken by Pegasus Group in relation to the site which concluded that “the site is suitable to accommodate residential development. Mindful that it is located with the AONB environment and it will be necessary to demonstrate how the proposal not only conserves but enhances the environment. It can be demonstrated through a high quality residential scheme in combination with a comprehensive green infrastructure that significant opportunities exist to enhance the local environment not only in terms of scenic beauty and visual amenity but also in ecological and recreational terms” (Para 1.22).</p> <p>Vehicular access to the site is provided from Back Lane which can be delivered with appropriate visibility splays. Back Lane connects centrally to the village.</p> <p>The site is located entirely within Flood Zone 1 and there will be no adverse impact on floodplain flows or conveyance as a result of the development.</p> <p>The site lies close to a SSSI although the site itself is not considered to be of high biodiversity value. Subject to appropriate mitigation measures, the proposed development of the site can be achieved.</p> <p>The potential development of Land South of Beenham for residential development, potentially including social infrastructure improvements to meet local housing needs, offers substantial benefits for the village by providing family housing (including affordable housing) to meet local needs which will support the sustainable future of the village. The detailed analysis and commentary above demonstrates the suitability of the site for allocation within the new Local Plan. Further, the land is under the control of a quality house builder, who is in a position to bring forward the site for approximately 40 dwellings, including affordable housing and potentially some social infrastructure improvements. In addition, the site is deliverable in the immediate five year period and can provide a material number of homes in a</p>

Respondent	Response
	location where the short term need is pressing. For the reasons set out above the site should be allocated within the emerging Local Plan as a housing site allocation for approximately 40 dwellings and associated open space.
Carter Jonas for Hermitage Farms	<p>Given the overall level of housing and employment need, smaller sustainable settlements such as Hermitage can and should accommodate further housing and employment development to help sustain local services and facilities, to support the rural economy, and to improve issues of affordability and the plan should seek to allocate sites in the smaller sustainable settlements such as in Hermitage.</p> <p>Land around Hermitage as identified in the attached document is available now and is deliverable. There are no known constraints which would prevent development in this location. The sites are well related to the existing settlement of Hermitage, and would constitute sustainable development in accordance with the NPPF's presumption in favour of sustainable development.</p>
Deloitte LLP for Green Park Business Park	<p>We write on behalf of our client Green Park Reading No.1 LLP, who is the owner of Green Park business park. Green Park Reading No.1 LLP (GPR) is ultimately wholly owned by Mapletree Investments Pte Ltd (Mapletree).</p> <p>Since acquiring GPR in 2016, Mapletree has been reviewing the Park's potential, undertaking some asset management and considering future opportunities. Green Park is part located in the West Berkshire administrative area. GPR is keen to support the Council in making West Berkshire a sustainable place to live now and the future.</p> <p>Having reviewed the Scoping Report, GPR is supportive of the Councils broad objectives and wishes to comment on some of these to reflect its aspirations for Green Park.</p> <p>Green Park is a premier Business Park located in the Thames Valley area, serving the office needs of Reading, Wokingham and West Berkshire. It is situated on the border of three local authority areas, covering a 79 hectare land mass offering high quality office stock and associated amenities, located around a central body of water. The Business Park is accessed from the A33 relief road, and is located south of Reading town centre.</p> <p>At present the Park provides around 1.4 million square feet of office space to over 60 companies (excluding those companies located in Regus, i2 Office and Grow@ Green Park), including leading IT, technology and pharmaceutical business sectors. A range of business accommodation is provided, ranging from larger corporate headquarter floorplates to smaller business start-up areas.</p> <p>Green Park is well served by public transport with frequent bus service access to Reading Town Centre and the Madejski Stadium and will accommodate Green Park railway station, anticipated to open in the next 3 – 5 years. Green Park Village, positioned north and west of the business park, provides for a wider residential setting with associated mixed use development.</p> <p>Evolution of Green Park (1985 to Present Day)</p> <p>Green Park was originally identified in the Berkshire Structure Plan in 1985 as a location for 40ha of general employment development including light and general industry and warehousing. Outline permission restricted office use quantum to a maximum of 50% with a required a minimum quantum of light industry (B1c) and general industry and warehousing (B2&amp;8). Between the period 1995 to 2000, the original Outline Permission was later varied to allow for unrestricted B1 office use.</p>

Respondent	Response
	<p>Development of the site since 1985 has largely followed the principles set by the outline application as well as principles set by The Prudential Assurance Company Limited, who appointed Fosters &amp; Partners to create a non-statutory Masterplan in 1998.</p> <p>In 2013, Aukett Swanke were asked by Oxford Properties to undertake a Masterplan refresh, principally in relation to the undeveloped land parcels. The Masterplan refresh was worked in close collaboration with West Berkshire and the adjoining Reading and Wokingham Councils. This has also been cognisant of the wider development aspirations, including Green Park Village and other proposals in the area.</p>
Hallam Land Management	<p>In summary therefore;</p> <ul style="list-style-type: none"> <li>• we are advocating a new approach to planning within this part of Berkshire which is focused on delivering housing across the Housing Market Area regardless of authority boundaries, based upon the principles of sound, strategic, sustainable planning.</li> <li>• we support the further consideration of the Grazeley Garden Settlement and maintain that this proposal provides a genuine and credible response to the future housing and employment needs of West Berkshire.</li> </ul>
Gladman Developments Ltd	<p>It is vital that the policies of the Plan are sufficiently flexible to respond to rapid change. It is therefore important that an effective approach to monitoring is put in place. Suitable provisions should also be included within relevant policies to ensure that a positive response will be taken through decision making when required to ensure that a robust supply of land can be maintained throughout the plan period.</p> <p>These representations provide a range of general observations, together with specific responses to the questions that have been posed within the Local Plan Review Scoping Report. The general observations cover issues relating to: National Policy, Housing White Paper and Emerging Revisions to National Policy, Legal Compliance, Duty to Cooperate, Sustainability Appraisal, Housing and Economic Development Needs and are set out in the attached document.</p> <p>Gladman welcomes the publication of the West Berkshire Local Plan Review to 2036 Scoping Report and consider that this represents an opportunity to comprehensively update the Local Plan. The Review will need to be established against a robust assessment of housing and economic development needs and then identify the additional land that is required to meet those needs in full over the extended plan period to 2036. In this regard, Gladman endorse the following sites for inclusion within the Local Plan:</p> <ul style="list-style-type: none"> <li>• Land off Andover Road, Newbury</li> </ul> <p>It is essential that sufficient flexibility is provided within the Local Plan to enable a rolling 5 year housing land supply to be maintained in a manner that is responsive to rapid change. In addition, the Local Plan must include an approach that positively supports economic development and include policies that are fully responsive to associated needs that may arise that have not necessarily been anticipated by the Plan.</p> <p>Gladman looks forward to being provided the opportunity to comment further on the West Berkshire Local Plan Review to</p>

Respondent	Response
	2036 in due course. Effective and on-going engagement with all interested parties, including the development industry, will ultimately ensure the production of a Plan that is deliverable and successful in achieving its vision and aims.
Nexus Planning for Croudace Homes	<p>As set out above, Croudace Homes considers that a full and comprehensive review of the Local Plan is required in order to ensure that full objectively assessed development needs are planned for within the District as required by the Framework at Paragraph 47. In that regard, we welcome the proposed scope of the review as set out, but consider that regard should be had to emerging changes to the Framework. In seeking to allocate housing we consider that the existing spatial strategy, which places Thatcham in the top tier of the Settlement Hierarchy, remains robust. However, Thatcham was deemed to require a period of consultation under the adopted Core Strategy and was duly allocated for modest levels of growth. That decision was taken nearly 10 years ago and since that time, Newbury and the Eastern Urban Area have seen much greater levels of growth. In accordance with the comments of the Core Strategy Inspector, Thatcham must be considered again for growth this time around. Croudace Homes does not object to the principle of a new settlement at Grazely, but notes that the land would cross Local Authority boundaries and would require extensive cross boundary working in order to be developed. A scheme of this size could only deliver towards the back end of the plan period at best. As such, sustainable options to deliver housing at the existing strategic settlements must first be explored. Against that background, it has been demonstrated through the decision by the Secretary of State that there are technical matters precluding development of at least 225 dwellings on land at Henwick Park, Thatcham. The land is available now, offers a suitable location for development now, and is achievable with development coming forwards within the first five years of the plan period. Thus the site is therefore deliverable within the meaning set out at Footnote 11 of the Framework.</p> <p>Croudace Homes Ltd is actively promoting land at Henwick Park, Thatcham, also known as 'Land North of Bowling Green Road' for inclusion in the emerging Local Plan as a strategic housing allocation. The Henwick Park site comprises 24.5ha of agricultural land and is situated approximately 1.6km to the north of Thatcham Town Centre.</p> <p>The Council will be aware that in July 2015 Nexus Planning, on behalf of Croudace Homes, submitted an Outline Planning application (ref. 15/01949/OUTMAJ) for up to 265 homes on the Henwick Park site (later amended to 225 homes). West Berkshire Council, contending that it has an up-to-date Core Strategy and that it is able to demonstrate a five year supply of deliverable housing sites, refused the application.</p> <p>The application was duly heard by public inquiry (conjoined with the scheme east of Thatcham at 'Siege Cross'). Following the Inquiry which concluded in December 2016, inspector John Chase recommended that both appeals be allowed. However, the applications were called in for decision by the Secretary of State (Sajid Javid) and in a decision letter dated 27th July 2017, the secretary of State disagreed with the inspector's recommendation and refused permission for both schemes.</p> <p>In his decision letters the Secretary of State outlined that following the close of the original inquiry he had received</p>

Respondent	Response
	<p>representations from the Council, including information on an updated five-year housing land supply. The Housing Site Allocations DPD (HSA DPD) had also been formally adopted by the council in May 2017 following the close of the Inquiry.</p> <p>In dismissing the appeals he found that the Council could demonstrate a five-year supply of deliverable housing sites at that time. As such, there were no material considerations sufficient to indicate that the proposals should be determined other than in accordance with the development plan. Significantly however, he found no technical matters that would preclude development at the site including matters such as landscape, transport, ecology or flood risk.</p>
Nexus Planning for Pangbourne Beaver Properties Ltd	
Origin3 Ltd for Sandtrend Ltd	<p><b>Housing Need</b> This section considers the Western Berkshire Housing Market Area (HMA), how forecasted housing needs may need to be met over the plan period and considers the work undertaken by West Berkshire Council in coordination with the other HMA authorities within the Strategic Housing Market Assessment (SHMA) to calculate the objectively assessed housing need (OAHN).</p> <p><b>Duty to Cooperate and Housing Market Areas</b> The legal requirement of the local plan preparation process, the Duty to Cooperate is set out at Section 110 of the Localism Act 2011 and reinforced by national policy at NPPF paragraphs 178 to 181. It requires local planning authorities to cooperate on planning issues that cross administrative boundaries, particularly those strategic priorities set out at NPPF paragraph 156, one of which is the number of homes and jobs needed in an area.</p> <p>NPPF paragraph 159 strongly recommends that where the HMA extends over administrative boundaries, local planning authorities should work with neighbouring authorities to produce a Strategic Housing Market Assessment (SHMA) to assess their full housing needs. The coordination of a SHMA to comprehensively identify the needs of the four authorities within the Western Berkshire HMA is supported.</p> <p>West Berkshire Council should ensure that flexibility is maintained in order to accommodate any unmet housing need arising from within the HMA itself. This is very likely to arise from Reading, in consideration of its tightly drawn administrative boundaries, and close functional relationship with West Berkshire.</p> <p>As set out in Section 2 above, the four local authorities within the HMA have coordinated a non- statutory Spatial Planning Framework (December 2016) which strategically sets out how housing requirements could be met over the period to 2036. This is a good starting point for complying with the Duty to Co-operate, however this must continue through into the respective constituent Local Plans and flexibility must be incorporated in order to meet unmet needs arising due to unforeseen circumstances.</p> <p>At the time of writing, the Spatial Planning Framework envisaged that the four constituent plans would progress near simultaneously which would be advantageous in terms of being responsive to unmet needs arising.</p>

Respondent	Response
	<p>Reading Borough Council are working on producing a new Local Plan for the period up to 2036, having consulted on a Pre-Submission Draft Local Plan in January 2018. We acknowledge that the four authorities have signed a Memorandum of Understanding (MoU) which agrees that Reading cannot accommodate its entire OAHN within its boundaries. We also note that formal requests have been made to Wokingham Borough and West Berkshire to accommodate unmet need. The scale of the shortfall is yet to be agreed but is likely to be within the range of 500 – 1,000 dwellings over the period 2013-2036 and will arise in the second half of the plan period.</p> <p>It is understood that Reading believes that Wokingham Borough and West Berkshire are the most appropriate locations to meet any unmet housing needs arising from Reading, not South Oxfordshire District to the north because of underlying congestion issues<sup>3</sup>.</p> <p>Wokingham Borough Council has consulted on its Issues and Options document in August 2016 with Preferred Options Consultation likely to take place during the course of 2018. Bracknell Forest Borough Council has recently concluded the consultation of its Draft Local Plan in March 2018. It is understood that both Councils have coordinated a formal review of their land that lies within the Metropolitan Green Belt.</p> <p>It is considered that all of Reading Borough, Wokingham Borough and Bracknell Forest Borough are further advanced in their local plan preparation than West Berkshire. This will enable the West Berkshire Local Plan Review to be responsive to meeting any unmet needs arising through the various processes.</p> <p>We support the Council's commitment to meet the full OAHN for the Western Berkshire HMA within the HMA itself. It is however important that the local authorities within the HMA make allowances and maintain flexibility to accommodate any unmet housing needs arising from neighbouring HMAs. The potential considerations of each with respect Newbury and West Berkshire are listed below:</p> <ul style="list-style-type: none"> <li>• Swindon HMA – this HMA is newly formed following the recent Swindon and Wiltshire Joint Spatial Framework The Swindon / M4 Corridor Functional Economic Market Area (FEMA) has a strong eastward focus into West Berkshire and the Thames Valley. It may be more logical and more sustainable for any unmet need arising from Swindon and the wider HMA to be met within West Berkshire which because of the M4 holds a closer functional relationship with the city than more southerly parts of Wiltshire;</li> <li>• Oxfordshire HMA – this HMA is centred on Oxford and similarly to Reading, because of tightly drawing administrative boundaries, requires unmet needs arising from the city to be met in neighbouring The Green Belt around Oxford is a factor alongside the North Wessex Downs AONB in the southern extremes of the HMA. The A34 provides strong connections and a functional relationship between Oxford and Newbury;</li> <li>• Eastern Berkshire and South Bucks HMA – this HMA is heavily constrained by the Metropolitan Green Belt and is considered likely that needs being met outside of the HMA will need to be fully explored, in order to comply with national policy;</li> <li>• Basingstoke and Deane HMA – this HMA holds a close functional relationship with West Berkshire and particularly The northernmost extents of the HMA lie within the Newbury Travel to Work Area (TTWA) because of the A34 and the A339.</li> </ul>

Respondent	Response
	<p>National policy affords Green Belt land the highest protection and the draft revised NPPF considers that 'before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic plan-making authority should have examined fully all other reasonable options for meeting its identified need for development, which will take into account whether the strategy, amongst other items, has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development.</p> <p><b>Demographic Analysis</b></p> <p>It is acknowledged that the starting point for the calculation of OAHN is the latest official household projections which are the CLG 2014-based Household Projections which are, in turn, underpinned by the 2014 based sub-national population projections (SNPP), and the Government's emerging Standardised OAHN methodology.</p> <p>It is noted that for West Berkshire the CLG household projections show a notably lower increase in number of households over the period 2013-2036 (13.7%) when compared with the wider HMA (average 18.8%). The SNPP show a notably lower increase in population (7.1%) when compared with the wider HMA (average 13.2%). Both projections for West Berkshire and the difference between those of the HMA are not fully explained within the SHMA work.</p> <p>It is also noted that the SHMA opts to work on the basis of the rebased SNPP and 10 year migration (without a UPC adjustment). It is questioned why the SHMA does not adequately factor in an allowance for un-attributable population change (UPC) given the SNPP shows that the population of West Berkshire is expected to grow by circa 7.1% over the plan period, below the average for the HMA (13.2%). It would be very prudent to make an adjustment, specifically for West Berkshire, for population growth closer to the average of the HMA.</p> <p><b>Household Formation Rates</b></p> <p>It is understood that the SHMA then seeks to make an adjustment in consideration of household formation rates for younger age groups, addressing evidence of suppression in the historical trends and in line with national policy supporting an improved ability of younger households to form. These issues are particularly prevalent in West Berkshire and Bracknell Forest where the downward trend of household formation in the 25-34 year old age bracket is projected to continue.</p> <p>The OAHN is derived on the expectation that we will continue to experience a reduction in the ability of 25-34 year olds to form households. It is critical that a meaningful uplift is applied, particularly for West Berkshire and Bracknell Forest. It is understood that an uplift of circa 10-12% is applied to West Berkshire and 11-13% for Bracknell Forest, whilst Reading is afforded an uplift of 6-8% and Wokingham 7-8%.</p> <p>It is questioned whether the uplift afforded to West Berkshire and Bracknell Forest is sufficient enough to halt the current downward trend and meaningfully improve headship rates for younger households within these authority areas.</p> <p><b>Supporting Economic Growth</b></p> <p>The principle of the SHMA considering aspirational growth in employment in order to consider whether higher housing provision over and above the demographic projections is required, is supported. The HMA is part of the Thames Valley Berkshire Local Enterprise Partnership (LEP) and also incorporates the rest of Berkshire. The LEP considers that the sub-regional economy is the most productive in the UK outside of London.</p>

Respondent	Response
	<p>The concept of adopting the more positive of the two econometric forecasts (Cambridge Econometrics) for West Berkshire is generally supported, albeit this does not take the economic-led need scenario above the demographic-led need scenario like it does for the other HMA authorities.</p> <p>The economic attributes and self-sufficiency of West Berkshire are being overlooked by the SHMA. West Berkshire has a diverse business profile, being dominated by small and micro-enterprises but also being home to some of the LEP's major corporates, including at Newbury. LEP evidence points to West Berkshire being the most self-contained of the six authorities within the LEP, even more so than Reading. This is reflected in Newbury being recognised as having its own TTWA which also extends into north-eastern Wiltshire towards Swindon and northern Hampshire, whereas the Reading TTWA encompasses most of Wokingham and Bracknell Forest. Furthermore, the LEP report into the Functional Economic Market Areas (FEMA) of Berkshire recognise that West Berkshire is its own FEMA, focused on the key centre Newbury, which is characterised by having a relatively self-contained TTWA and tends to operate within a westward facing commercial property market (towards Swindon). This all points to the capacity for West Berkshire and especially Newbury to accommodate greater growth, taking advantage of good self-containment, thereby reducing commuting as far as is possible. The ongoing electrification of the railway between Reading and Newbury will only serve to increase economic prosperity in West Berkshire.</p> <p>On the basis of the above, it is considered that a greater adjustment for econometrics should be factored in to take the economic-led projection for West Berkshire above the demographic-led projection, in line with the rest of the HMA.</p> <p><b>Market Signals</b></p> <p>The notion of upwards adjustment on the basis of market signals is supported. In respect of West Berkshire and the wider Western Berkshire HMA, the following conclusions can be drawn in relation to an adjustment to account for market signals as noted by the Planning Practice Guidance (PPG):</p> <ul style="list-style-type: none"> <li>• Land Prices – anecdotal evidence suggests that there is strong competition for land that often landowner expectation on value of return is unreasonably high and can often compromise otherwise viable. Despite being marginally below the regional average, the post-permission residential land value in West Berkshire remains substantially above the national average (circa 60%) and points to a prevalent issue (Table 49, Paragraph 6.6, Page 80, OAN Sensitivity Testing – Western Berkshire Housing Market Area (March 2018))</li> <li>• House Prices – the evidence suggests that house prices are growing across the HMA and notably more than the regional average for the South-East. House prices are currently growing fastest in Reading, West Berkshire and Wokingham and slower in Bracknell Forest, perhaps reflecting the availability of employment opportunities and the subsequent commuting patterns that it is notable that West Berkshire has demonstrated similar house price growth comparative to the rest of the HMA despite being further away from London and the tendency to commute into the capital therefore being less (Table 50, Paragraph 6.8, Page 80, OAN Sensitivity Testing);</li> <li>• Rents – the evidence suggests that rents across the HMA have grown relatively uniformly similar to the regional average but markedly above the national average (Table 52, Paragraph 6.15, Page 82, OAN Sensitivity Testing)</li> <li>• Affordability – the evidence suggests that affordability is generally worsening across the HMA, Bracknell Forest and Wokingham remain the least affordable authority areas and this reflects proximity to London but West</li> </ul>

Respondent	Response
	<p>Berkshire remains less affordable than the regional average for both lower quartile and median work-place and residence based earnings and Reading for lower quartile work-place and residence based</p> <ul style="list-style-type: none"> <li>• Rate of Development – the evidence suggests that throughout recent years, average development rates across the HMA have generally remained lower than the respective identified annualised requirements resulting in a marked under-delivery.</li> <li>• Overcrowding – in our experience, overcrowding is compounded by worsening affordability, access to mortgage finance and an under-supply of housing which all lead to a concealed need, perhaps best demonstrated by young people being forced to live with their parents for</li> </ul> <p>Generally, all of the market signals within West Berkshire and the wider HMA point to a lack of housing supply in relation to the number of people who desire to form a household. The ability of an upward adjustment for market signals to comprehensively address an under-supply of housing is questioned. Further clarity on how the household projections take into account unmet need from previous plan periods would also be helpful.</p> <p>In consideration of the prevailing market signals across the whole of the HMA and the modest variance that is evidenced, it is questioned why the SHMA concludes that an uplift of only 10% is considered appropriate in West Berkshire (the SHMA recommends 10-15%), whereas for Wokingham, an uplift of 20% is recommended. In real terms this equates to an uplift of 39 dwellings per annum for West Berkshire and an uplift of 116 dwellings per annum, nearly three times as many as West Berkshire which is disproportionate in consideration of the similar issues faced by the two authorities.</p> <p>Due consideration should be given to the Government's standardised methodology for adjusting for market signals which is linked to affordability ratios and indicates that an uplift of 36% across the HMA, relative to the demographic baseline of household growth per annum, should be applied. This ranges from 28% for Reading, 32% for Bracknell Forest, 37% for West Berkshire and 45% for Wokingham. It is therefore questioned why the SHMA is seeking to apply a far lower market signals adjustment, especially in respect of West Berkshire.</p> <p><b>Affordable Housing Need</b></p> <p>The evidence suggests that there are inherent affordability issues across the entire HMA. The net affordable housing need for West Berkshire is calculated at 180 dwellings per annum but this relies upon a high proportion of total need (72%) being satisfied through relets of current stock which is an unreliable factor. The SHMA estimates that the net affordable housing need across the HMA is 1,328 dwellings per annum, taking into consideration current need, newly forming households, existing households falling into need and supply for existing stock. In consideration of the suggested OAHN of 2,790 dwellings per annum for the HMA, it is difficult to see how the OAHN is sufficiently high enough to make a positive contribution to improving issues of wide-spread issues of affordability and provide more affordable housing.</p> <p><b>Significant Boost to Supply of Housing across West Berkshire?</b></p> <p>NPPF Paragraphs 47 through 55 set out the aspiration to 'boost significantly' the supply of housing. This suggested significant boost is in order to combat and eventually remedy a historic and chronic under-supply of housing across the United Kingdom. This should not factor in a response to demographic changes which would have had to have been planned for in any event i.e. the significant boost should be considered as a policy and supply factor after forecasted population projections have been established.</p>

Respondent	Response
	<p>The West Berkshire Council Core Strategy (July 2012) set a housing requirement of 10,500 net additional dwellings over the period 2006 to 2026, this equates to a net additional dwelling requirement of 525 dwellings per annum. The West Berkshire Local Plan Annual Monitoring Report (AMR) states that 5,497 dwellings were delivered over the period 2006-2017, equating to an average delivery of 500 dwellings per annum which represents under-delivery of around 5% over the first eleven year period of the plan.</p> <p>The SHMA suggests that the OAHN for West Berkshire over the plan period 2013-2036 should be 600 dwellings per annum. On the assumption that a similar under-delivery is recorded in the next plan period then this would equate to the delivery of around 570 dwellings per annum. Can 570 dwellings per annum be considered to be a significant boost in the supply of housing from the 500 dwellings per annum historically delivered? It is a modest 14% increase. National and local policy objectives, supply capacity and cross-boundary unmet need arising should all be considered following the calculation of the OAHN to determine an appropriate overall housing provision target.</p> <p>To summarise the above, we ask the Council to consider the following headlines:</p> <ul style="list-style-type: none"> <li>• The coordination of a SHMA to comprehensively identify the needs of the four authorities within the Western Berkshire HMA is supported;</li> <li>• West Berkshire will need to account for some of Reading's unmet housing need following the signed Memorandum of Understanding;</li> <li>• We support the Council's intentions to arrive at a suitable OAHN beyond simply applying the Government's emerging standardised methodology however urge the Council to ensure that is robust enough to sufficiently account for under delivery to date, Reading's unmet need and account for local affordable housing</li> </ul> <p>Land West of Wantage Road, Donnington, Newbury</p> <p>Our client's site at 'Land to the west of Wantage Road', Shaw-cum-Donnington is located directly north of Newbury. The site is located within the West of Berkshire Spatial Framework Plan Newbury 'Area of Search'. Development prospects in this location should therefore be tested and explored through the LPR.</p> <p>Details of site included in attached document</p> <p>Conclusion</p> <p>As set out throughout these representations, we support the Council's intentions to undertake a comprehensive Review of the Local Plan providing that through this process the Council arrive at a suitable OAHN (and subsequent housing requirement for the new plan period) and put in place a strategy to deliver new homes in sustainable locations, including non-strategic housing allocations.</p> <p>At a minimum, the LPR will need to satisfy the tests of soundness set out in the NPPF paragraph 182 to ensure the plan is positively prepares, justified, effective and consistent with national policy.</p> <p>In this instance, due to the timing of the LPR, particular regard will need to given to consistency with national policy in the context of emerging national policy. Most notably updates to the NPPF expected to be formally put into place later this year.</p>

Respondent	Response
	<p>As a starting point, the Council should test and explore strategic and non-strategic development opportunities within the Areas of Search identified in the West of Berkshire Spatial Framework Plan which was published by the four authorities within the Western HMA and therefore represents a cohesive, joined approach.</p> <p>As part of this, our client's site at Land West of Wantage Road, Donnington, Newbury, presents a suitable, sustainable location to direct new development. The site has the capacity to deliver up to 200 dwellings in the immediate short term as a standalone application or alternatively could form part of a wider strategic option to the north of Newbury, depending on the Council's aspirations.</p>
Pegasus Planning Group Ltd for Donnington New Homes	<p>As raised in the previous response, the provision of accessible homes for older people should be addressed as part of the review. This may be as part of Policy CS4: Housing Type and Mix, or as part of a new, standalone policy. Tourism should also be addressed as part of the review, and a specific policy should be created for it.</p> <p>The provision of community uses as part of new development should also be examined, and a new policy created to address it.</p>
Pegasus Planning Group Ltd for Donnington New Homes	No – there are not any other policy issues that should be considered as part of the review of the Local Plan.
Pro Vision for Audley Group	<p>Following on from our comments regarding the draft objectives, the revised Local Plan should positively address meeting the objectively assessed need for specialist accommodation, including accommodation and care to meet the needs of an ageing population.</p> <p>It should, however, be mindful that simplistic responses to the challenge of planning for an ageing population are possible with an inadequate policy position. For example, it may be possible to satisfy the planning requirement for 'specialist accommodation' for the elderly by simply providing age-restricted conventional accommodation. The addition of an age-restriction, such as over 55's, should not be considered an appropriate long- term solution to the objective of helping people to live independently for as long as possible. Rather, the revised Local Plan should actively support genuinely specialised accommodation models that provide for the changing needs of the elderly overtime and therefore provide a secure and comfortable environment without the prospect of further essential moves in later years. The revised Local Plan should explicitly recognise and support the full spectrum of specialist elderly care models, including Use Class C2 which helps people to remain living independently.</p> <p>Positively supporting elderly independent living models will also have a benefit for the wider challenge of meeting overall housing requirements by freeing-up under-occupied market housing (see reference to the NPPG below).</p> <p>Positive policy support for C2 provision would also be justified in the context of recent research that identifies that this specialist accommodation helps to reduce the burden on health services. For example, key findings of a recent study (Collaborative Research between Aston Research Centre for Healthy Ageing (ARCHA) and the ExtraCare Charitable Trust, Aston University, The Final Report, April 2015) included:</p>

Respondent	Response
	<ol style="list-style-type: none"> <li>1. The ExtraCare Charitable Trust model can result in significant savings for NHS budgets – over a 12 month period costs total NHS costs (including GP visits, practice and district nurse visits and hospital appointments and admissions) reduce by 38% for ExtraCare residents who were in the sample across the period.</li> <li>2. NHS costs for ‘frail’ residents had reduced by 51.5% after 12 months.</li> <li>3. The ExtraCare model is associated with a significant reduction in the duration of unplanned hospital stays, from an average of 8-14 days to 1-2 days.</li> </ol> <p>The adopted Core Strategy is very indistinct and generalist in terms of addressing this key issue of planning for the challenges of the ageing population. Part of the Spatial Vision states:  “The District will be coping well with the challenges of an ageing population, partly by retaining larger numbers of younger people and families (through the provision of an appropriate range of housing in terms of size and tenure), who will help support the older communities but also through increased investment in accommodation for the elderly”.(our emphasis).</p> <p>Policy CS4 (Housing type and mix) states that:  “Residential development will be expected to contribute to the delivery of an appropriate mix of dwelling types and sizes to meet the housing needs of all sectors of the community, including those with specialist requirements”. (Our emphasis)</p> <p>The supporting text goes on to explain that:  “Housing provision must support the needs of the whole community, include the provision of both market and affordable housing, and reflect the needs of specific groups such as families with children, single person households, the elderly, and those households with special needs.” (Our emphasis).</p> <p>There are, however, no specific or positively worded site allocation or identification policies about meeting the needs for the elderly, nor addressing the different formats in which this need can and is being met by Audley and others. Given the widely recognized issue that the country, including West Berkshire, has a rapidly growing elderly population, the revised Local Plan should include specific policies to positively meet this need.</p> <p>Addressing the needs of the elderly is recognised in national policy (as we have noted in response to Question 2). Supporting the NPPF, the National Planning Policy Guidance (NPPG) specifically addresses “how local authorities should deal with housing for older people” (para 037):  “Older people have a wide range of different housing needs, ranging from suitable and appropriately located market housing through to residential institutions (Use Class C2). Local planning authorities should count housing provided for older people, including residential institutions in Use Class C2, against their housing requirement. The approach taken, which may include site allocations, should be clearly set out in the Local Plan”.</p> <p>Regarding development management decisions, it goes on to state that:  “evidence that development proposals for accessible and manageable homes specifically for older people will free up under-occupied local housing for other population groups is likely to demonstrate a market need that supports the approval of such homes”.</p> <p>In terms of assessing the need, the NPPG (para 021) states that:</p>

Respondent	Response
	<p>“The need to provide housing for older people is critical given the projected increase in the number of households aged 65 and over accounts for over half of the new households (Department for Communities and Local Government Household Projections 2013)”.</p> <p>“Plan makers will need to consider the size, location and quality of dwellings needed in the future for older people in order to allow them to live independently and safely for as long as possible, or to move to a more sustainable accommodation if they wish”.</p> <p>“Supporting independent living can help to reduce the costs to health and social services, and providing more options for older people to move could also free up houses that area under occupied”.</p> <p>“The future need for specialist accommodation for older people broken down by tenure and type (eg sheltered, enhanced sheltered, extra care, registered care) should be assessed and can be obtained from a number of online tool kits provided by the sector. The assessment should set out the level of need for residential institutions (Use Class C2)”.</p> <p>As well as the NPPG, the review of the Local Plan will need to take into account the latest Strategic Housing Market Assessment (SHMA). The latest version of the SHMA addresses the provision ‘Registered Care Housing (C2 class)’ at section 9. The picture across the SHMA area is that there is expected to be a shortfall in accommodation of 3,462 bed spaces looking ahead to 2036, equating to 151 bed spaces per annum.</p> <p>For West Berkshire alone, the shortfall is calculated as 599 bed spaces<sup>11</sup>. In Audley’s experience, and as reflected in the Committee Report publication by HCLG – ‘Housing for Older people’ (Paragraph 120), the vast majority of residents within an Audley care community come from the local area. The provision of additional specialist accommodation for the elderly within West Berkshire would make a direct and tangible contribution to meeting local need and the Local Plan should encourage this.</p> <p>The SHMA (paragraph 9.43) states that these figures are very relevant</p> <p>“if the Councils intend to include residential institutions which do not meet the definition of a dwelling in their assessment of 5-year housing land supply as it will be necessary to include figures on both the need and the supply side of the equation”.</p> <p>As noted above, the NPPG has clarified that LPAs should include Use Class C2 against their housing requirements. The SHMA (paragraph 9.44) also notes that:</p> <p>“Although residential institutions which do not meet the definition of a dwelling cover more than just elderly accommodation, the elderly age groups are the only ones expected to see a notable increase in its population”.</p> <p>In principle, Audley will therefore support an explicit policy (or policies) in the revised Local Plan, which is consistent with the NPPF and NPPG, to support and guide meeting the needs for an ageing population which is above the national average in West Berkshire. Without a positive policy position, this key issue for the district is likely to get worse, which would have a significantly detrimental consequence for meeting overall housing needs and social well-being within the district.</p> <p>An example of an LPA that has already made an attempt to positively meet this need is North Somerset District Council. Its Sites and Policies Plan Part 1 (adopted in July 2016) includes policy DM40 and DM4112,</p>

Respondent	Response
	<p>Policy DM40 states that the LPA will “support retirement accommodation and supported independent living for older and vulnerable people” subject to specified criteria. It also acknowledges that these uses can “blur the edges of C2 and C3 use”. Policy DM41 states that the LPA will support “extensions that would result in extra capacity to new or residential care or nursing homes within Class C2” subject to specified criteria.</p> <p>It is important, however, that Local Plan policies explicitly support care communities which, as noted under our response to Question 2, are now widely recognised as being a more effective response to the elderly care challenge than traditional nursing and care homes.</p>
Pro Vision for Rivar Ltd	<p>Our response to Question 1,above, is relevant to Consultation Question 7 of the SA (SEA) Scoping Report, as set out below:</p> <p>The SA Objectives reflect the economic, social and environmental dimensions to sustainable development defined in paragraph 7 of the NPPF and carried forward in the proposed revisions to the NPPF. However, Table 4 of the SA (SEA) Scoping Report does not provide an accurate assessment of the compatibility of the SA Objectives and the Local Plan Review Objectives.</p> <p>In its current form, Local Plan Review Objective A Climate Change should be shown as working against SA Objectives 1and 10. Minimising demand for energy is likely to restrict housing development and economic growth.</p> <p>Local Plan Review Objective B Housing does not strongly support SA Objective 1. The Local Plan Review Objective should be focussed on meeting the identified local need for housing to ensure compatibility with the SA Objective.</p> <p>Local Plan Review Objective D Economy does not strongly support SA Objective 10, as the SA Objective requires identified needs to be met, whilst the Local Plan Review Objective makes no reference to the assessment of need.</p> <p>Local Plan Review Objective E Town Centres does not strongly support SA Objective 10, as if a diverse mix of uses (including housing, offices and live / work) are not promoted in town centres, vacancy rates are likely to increase.</p>
Joy Schlaudraff	<p>Yes. There should be a specific policy that identifies semi-rural sites, or potential semi-rural sites. These are often the most pleasant and positive places to live, due to their proximity to towns, large villages, and urban areas, but very hard to get allocated for development.</p> <p>These would be developed by the private small developer, which give the best quality developments with attention to detail.</p> <p>Yet they are also most conservant of green space, as they secure the future of an area, but use land effectively.</p> <p>Paragraph 55 of the nppf should be taken as it is meant to be interpreted for mixed use schemes or small major housing developments, not just single dwellings.</p> <p>Where there is development with ANY kind of standard community benefit (community hall, school, meeting places, or anything of public benefit – these applications should be allowed). It should not have to be a specific scheme, this or that, just proven public benefit should be enough, along with the quality of a development, and its respect to councils standards of quality relevant to the particular location.</p> <p>Paragraph 95 of the draft nppf should also be given great weight.</p>

Respondent	Response
	As long as buildings fit in with the character and appearance of a place, and are suitable in their use and design, that should be sufficient.
Turley for Berfeld Limited	<p>We consider that the following evidence and policy documents should be considered as part of the Local Plan review to inform and directly influence future policies.</p> <p>West Berkshire Strategic Flood Risk Assessment: Climate change is increasing flood risk to the planning authorities and exposing their housing stock to increased levels of flood risk e.g. 30,000 homes are already at risk in West Berkshire and over 6,000 in Reading and more in Wokingham. New developments that seek to reduce flood risk to existing communities at risk of flooding should be encouraged.</p> <p>It is also important to recognise that flood risk management occurs across catchment wide spatial areas and there may be a need for cross-boundary collaboration between local authorities to bring forward development that manages and reduces flood risk.</p> <p>West Berkshire Local Flood Risk Management Strategy (LFRMS): Increase the ability for West Berkshire Council to rapidly deploy a scheme to alleviate flooding and prioritise sites that bring forward flood risk management.</p> <p>West Berkshire District Council Level 1 SFRA: It strives to ensure a positive reduction in flood risk through future development and regeneration as well as reduce the risk of flooding to existing development.</p>
Turley for Commercial Estates Group	<p>As explained, we consider that there is a requirement for a number of sites to be progressed through being allocated within the Local Plan Review, which will provide extensive new infrastructure and ensure that housing need within the District can be effectively addressed. Newbury, being the largest and most well-served settlement in West Berkshire, is considered to represent one of the most sustainable locations for development. The Local Plan Review should therefore consider the potential for new development at the town.</p> <p>We consider that our land interests at North Newbury can make a significant contribution to the supply of new dwellings in West Berkshire. The proposal is to provide an extension to the site 'Land adjacent to Hilltop, Oxford Road, Donnington, Newbury' which benefits from outline planning permission (Pins Ref: APP/W0340/W/16/3143214) for; "401 dwellings on 11.35 hectares of land. A 400 sq.m. local centre (Use Classes A1/A2/D1/D2 – no more than 200 sq.m. of A1) on 0.29 hectares of land, a one form entry primary school site on 1.7 hectares of land, public open space, landscaping and associated highway works."</p> <p>It is considered that an extension to this site would allow for the provision of new dwellings, as well as areas of green infrastructure, public open space and community facilities and could help to assist with the movement of traffic in and around this part of Newbury.</p>
Turley for North East Thatcham Consortium	<p>The Consortium does not have any further comments at this stage, but reserves the opportunity to address the contents of the Local Plan Review and the associated evidence base as it emerges.</p> <p>In making these representations, the Consortium is mindful that the revised draft National Planning Policy Framework has been issued for consultation. Accordingly, the Consortium reserves the opportunity to provide any subsequent comments in accordance with the updated national planning policy context as it emerges.</p>

Respondent	Response
	<p>Collectively the Consortium controls a significant area of land to the north east of Thatcham. This area can make an important and significant contribution towards meeting the housing needs of West Berkshire and the HMA and towards providing infrastructure improvements (notably education facilities) at Thatcham.</p> <p>The Consortium would welcome the opportunity for constructive engagement with the Council's Planning department in order to discuss the contribution that the land north east of Thatcham may be able to make towards achieving the objectives of the Local Plan Review over the period to 2036.</p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>The West Berkshire District Local Plan 2001 – 2006 contained a policy ENV.20 on the redevelopment of existing buildings in the countryside. However, this policy was superseded by policy C1 on the Location of New Housing in the Countryside in the Housing Site Allocations DPD. This was not replacing like with like as the supporting text to policy ENV20 explained that its purpose was 'to assist the diversification of the rural economy and to maintain or enhance the rural economy.' It did not relate therefore primarily to the provision of new housing.</p> <p>It is important that the new Local Plan contains a policy on the redevelopment of existing buildings in order to be consistent with the advice in the NPPF which states in paragraph 28 that Local Plans 'should support the sustainable growth and expansion of all types of business and enterprise in rural areas, both through conversion of existing buildings and well designed new buildings.' This is further emphasised in the proposed revisions to the NPPF, which adds additional text in paragraph 85 stating that: 'Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found outside existing settlements, and in locations that are not well served by public transport.'</p> <p>To include provision for the redevelopment of existing buildings in the countryside is also important in promoting a prosperous rural economy as the existing buildings may not be suitable for conversion to business use, necessitating the replacement of the existing buildings in order to satisfy the needs of rural enterprises.</p>
Woolf Bond Planning for JJP Land Ltd	<p>Our client's interests relate to land located at Brook House Farm, Sulhampstead Road, Burghfield. The site has a significant planning history, including a previous application for the erection of 40 dwellings (24 market houses, 10 affordable houses and 6 affordable flats) (LPA Ref. 16/03638/OUTMAJ). Some of the information associated with the previous application, together with additional supporting information, is included in support of these representations.</p> <p>The site extends to a total 2.9ha and is suitable for housing development comprising approximately 40 no. dwellings in a sustainable location as an extension to the settlement of Burghfield Common.</p> <p>The site is an available, suitable and deliverable site, with no constraints to bringing the land forward for development at an early stage during the emerging plan period.</p> <p>As noted above, we propose an amendment to the settlement boundary of Burghfield Common to include our client's site at Brook House Farm together with the adjoining established residential area off Rowan Way and Saxon Gate. This forms an accessible and sustainable location for a medium sized residential development opportunity which as outlined above, is consistent with the current strategy. The site is defined and contained by further permitted development on its western side at Brookhouse Farmhouse (12/00484, 13/01541 an 14/00604).</p>

Respondent	Response
	<p><b>Conclusion</b></p> <p>For the reasons set out above, the Local Plan could risk failing the NPPF tests of soundness for the following reasons:</p> <ul style="list-style-type: none"> <li>• <b>Negatively Prepared</b> – If it does not plan for appropriate housing delivery having regard to minimum needs within West Berkshire District or the wider needs occurring elsewhere in the HMA. Further if it fails to allocate a sufficient amount of housing land to meet pressing needs early on in the plan period.</li> <li>• <b>Unjustified</b> – If the proposed housing distribution strategy fails to acknowledge the continued suitability of Burghfield Common as an appropriate location for housing growth and identifies inappropriate potential housing sites when considered against the reasonable alternative of a housing allocation at Brook House Farm</li> <li>• <b>Ineffective</b> – If the plan fails to propose an appropriate housing distribution strategy or introduce sufficient flexibility into the developable supply over the plan period.</li> <li>• <b>Inconsistent with the National Policy</b> – If the plan fails to allocate an appropriate amount of housing land or in the right location, having particular regard to the need for housing in rural locations.</li> </ul>
Woolf Bond Planning for Donnington New Homes	<p>We propose an amendment to the settlement boundary to include our client's site at Curridge, to the north of Kiln Drive. This forms an accessible and sustainable location for a small to medium sized residential development opportunity. Our client's site is located on the northern side of the village of Curridge. As discussed above it is located within close proximity to the main Urban Area of Newbury and the Service Village of Hermitage. The site comprises undeveloped land bound by residential development on its southern and eastern sides, covering 4.16 ha. The site could be accessed direct from Kiln Drive and suitable visibility splays provided accordingly.</p> <p>The site's southern and eastern boundaries lie adjacent to a ribbon form of development that runs along Kiln Drive and forms the village's settlement boundary.</p> <p><b>Development Considerations</b></p> <p>As discussed in our response to earlier questions, there is a clear imperative in the draft NPPF to provide housing development in rural locations where a site offers the ability to deliver a sustainable form of development. With the above principle in mind, any future scheme's key elements could comprise:</p> <ul style="list-style-type: none"> <li>• Erection of up to 125 no. houses (in a mix of sizes and forms), associated gardens and landscaping;</li> <li>• Provision of local open space and area of allotments for community use acting as a focal point to the settlement of Curridge;</li> <li>• Provision of an appropriate access (to adoptable standard) from Kiln Drive;</li> <li>• Buildings heights to not exceed two storeys, in order to provide for an appropriate transition between built form and the wider countryside beyond; &amp;</li> <li>• Extensive structural planting, including a comprehensive landscape buffer on the site's northern</li> </ul> <p>Furthermore, Curridge Primary School may benefit from an appropriate increase in pupil intake from the immediate area. Our client's land at Curridge is a deliverable site that will deliver significant benefits for both existing and future residents in the area. Accordingly the Council should allocate it for a residential led development. We note that the site's size</p>

Respondent	Response
	<p>comprises 4.16ha and enables a low to medium density scheme to be brought forward that provides for approximately up to 125 no.dwellings.</p> <p><b>Masterplanning &amp; Landscape Considerations</b>  The site is not subject to any statutory or non-statutory designations for landscape quality, scientific or nature conservation interest and there are no known heritage assets which will be affected by the proposals. The scheme can be supported by a comprehensive landscape strategy to provide a significant amount of green infrastructure which will help assimilate the development into the wider landscape character comprising dwellings interspersed with trees/landscaping. Our client will shortly be commissioning a masterplan exercise, to consider an appropriate residential layout, incorporating a comprehensive landscape strategy and potential community uses. We would be more than happy to share the outcomes from this exercise with the Council should the Council wish to discuss this site opportunity further.</p> <p><b>Highway Considerations</b>  Vehicular access to the site is proposed from Kiln Drive with appropriate visibility splays provided. Further a safe pedestrian link through the site linking the eastern and western parts of Curridge could be provided generating a highway safety benefit.</p> <p><b>Drainage Considerations</b>  The site is located entirely within flood zone 1 and there will be no adverse impact on floodplain flows or conveyance as a result of the development. The scheme would be supported by a sustainable drainage strategy that accords with requirements to restrict surface water runoff rates to existing greenfield rates</p> <p><b>Ecological Considerations</b>  A suite of ecology surveys would be undertaken. At a desktop level there is nothing to suggest that the site is of high biodiversity value. Subject to appropriate mitigation measures, the proposed scheme is appropriate in ecological respects.</p> <p><b>Summary</b>  The site is under the control of a local housing developer, who is in a position to bring forward the site for an approximate up to 125 no. dwellings, parking, upgraded access, open space and landscaping.  In addition, the site is deliverable in the immediate five year period and can provide a material number of housing units in a location where the short term need is pressing.</p> <p>For the reasons set out above the site should be allocated within the emerging plan as a housing site allocation for approximately up to 125 no. dwellings and associated open space. The settlement boundary should therefore be revised as illustrated on the plan attached in future iterations of the Local Plan.</p> <p><b>Conclusion</b>  For the reasons set out above, it is paramount that the Local Plan addresses the below:</p> <ul style="list-style-type: none"> <li>• Positively Prepared – It will need to plan for appropriate housing delivery having regard to minimum needs within West Berkshire District and the wider needs occurring elsewhere in the HMA. Further it will need to allocate a sufficient amount of housing land to meet pressing needs early on in the plan</li> </ul>

Respondent	Response
	<ul style="list-style-type: none"> <li>• Justified – The proposed housing distribution strategy should acknowledge the settlement of Curridge as an appropriate location for housing growth and in turn propose a housing allocation on land to the north of Kiln Drive,</li> <li>• Effective – The plan should propose an appropriate housing distribution strategy and introduce sufficient flexibility into the developable supply over the plan period (including allocation of small and medium sized sites).</li> </ul> <p>Consistent with the National Policy – The plan should allocate an appropriate amount of housing land and in the right location, having particular regard to the need for housing in rural locations on underutilised, smaller sites</p>
Woolf Bond Planning for Donnington New Homes	<p>Our client's interests relate to land located at Ashmore Green Farm, Stoney Lane, Ashmore Green. The site has a significant planning history, including a previous application for its redevelopment to provide 11 no. residential dwellings (LPA Ref. 12/01063/FULMAJ). Some of the information associated with the previous application and additional further information is included in support of these representations.</p> <p>We propose an amendment to the settlement boundary to include our client's site at Ashmore Green Farm, to the north of Stoney Lane. This forms an accessible and sustainable location for a small to medium sized residential development opportunity. The site is deliverable in the immediate five year period and can provide a material number of housing units in a location where the short term need is pressing.</p>
WYG for Donnington New Homes	<p>Donnington New Homes is supportive of the general approach set out in the Local Plan and Sustainability Appraisal Scoping Reports. However, for the reasons set out above, it is requested that a new policy is included in the West Berkshire Local Plan 2036, to include the allocation of land to the south of Sandford Park to deliver up to 500 dwellings and the link road to the A343 at Wash Water.</p> <p>These representations follow previous submissions in 2013 (for inclusion in the Strategic Housing Land Availability Assessment (SHLAA)) and in 2017 in response to the Council's Call for Sites (HELAA). A copy of the March 2017 submission can be found in the attached document.</p>

## Summary of responses

There was a wide range of responses to this question, and a common theme of responses related to the need for policies on health and wellbeing and sport and recreation, for elderly people's accommodation/extra care accommodation, and for community and cultural facilities. In terms of community and cultural facilities this focused on not only the protection but also the provision of such facilities, including churches, community halls, cinemas, theatres, pubs and music halls. One respondent suggested that development with any kind of community benefit should be allowed.

In terms of housing growth Thatcham should now be considered as a suitable location for allocations. There is a suggestion of allocating omission sites or 'back up' sites in the event where sites are not delivering the houses as envisaged, or there are other factors which influence the progress (e.g. economics). One respondent considered that the allocation of sites should concentrate on infilling and brownfield sites before greenfield sites. A respondent commented that there should be consideration of the 20% of housing allocations on sites less than 0.5 hectares, as per the revised NPPF. Similar to the respondents to question 6 there was

consideration of the extension of sustainable settlements and the allocation of 'semi-rural' sites, and for the inclusion of a policy akin to former Local Plan Policy ENV20 for rural businesses.

Infrastructure was highlighted by respondents, with a statutory consultee encouraging a policy on water supply and wastewater. Footpaths, street lighting, health provision and educational establishments were also highlighted. Conversely, one respondent commented that if the housing and industry is planned correctly then leisure, health and cultural facilities will naturally develop.

When considering landscape, biodiversity and heritage there was comment that there should be a strengthening of policy on light pollution and the governance of external lighting, particularly in the AONB; that there should be a protection of irreplaceable habitats such as ancient woodland, and of watercourses; there should be a definitive definition of 'Green Infrastructure', which should encompass 'Blue Infrastructure'; and that there should be consideration of further detail of heritage assets.

When considering human health an internal consultee noted that a priority of the Council is for the protection and improvement of local air quality. Therefore, updating the policy for pollution and noise in line with new guidance is needed.

There were queries about the duty to cooperate and taking on unmet need from surrounding authorities; housing affordability; and whether West Berkshire Council aims to boost the supply of housing when looking at the SHMA and Government target figures.

## **Council response**

All the comments made have been noted and will be given full consideration at the appropriate stage in the review of the Local Plan (LPR). The Council will need to prepare the Review to conform to the revised national policy in the NPPF published on 24th July 2018.

The four Western Berkshire authorities are committed to meeting the housing requirement across the Western Housing Market Area. To this end the Councils have agreed a Memorandum of Understanding which states that the four authorities will continue to work together to ensure that local plans in the area set out policies and proposals that collectively provide for the full housing needs of the area, including unmet need in Reading.

Housing need will be assessed using the government's standard method contained in the revised NPPF and PPG. This assessment will use the most up to date household projections as a starting point and the resultant need figure is considered to represent the minimum requirement to be included within the Local Plan Review to 2036. This figure will supersede the OAN in the 2016 Berkshire SHMA. The LPR will set out the strategy to meet this revised requirement. It will consider both strategic and non-strategic growth opportunities to meet the need over the plan period, including housing in rural areas of the District. The HELAA will provide evidence of growth opportunities in the area and will identify sites that have potential for development to inform the spatial strategy. Most of the sites that will be included were submitted through the Call for Sites (December 2016 to March 2017), through which agents and the public were invited to submit sites that they considered developable.

Where respondents have highlighted specific concerns and have made suggestions for the strengthening of particular topics they will be taken forward in more detail through the development of both strategic and local policies as appropriate.

## **Summary of responses received to the SA/SEA Scoping Report (February 2018)**

Number of responses received: 207

### **Summary of responses:**

There was an overall consensus that the baseline information was adequate with some exceptions relating to the age of some data and the paucity of data on green infrastructure, tourism and recreation, and the racehorse/equestrian industry. There were many useful suggestions to tighten up the evidence.

Overall there was general agreement with the key sustainability issues and objectives identified. A number of refinements were suggested from statutory bodies and 'tourism' proposed as an addition. Ranking the objectives was not seen as helpful.

There was some overlap with the issues raised under the Local Plan Review scoping report, including:

- the timescale of the Review;
- the justification for any large scale development to the south of Reading;
- an endorsement of cross boundary working;
- favouring large site allocations in and around urban areas as the most "sustainable locations" and in contrast;
- the benefits of allocating smaller sites adjacent to smaller sized settlements as a potential strategy for aiding housing delivery and supporting sustainable development in rural areas;
- the need for a settlement boundary review;
- a greater commitment to fulfil the unmet housing need from neighbouring authorities, especially Reading;
- the need for an overall vision to provide context and sense of direction;
- the weight to be given to the draft and final versions of the revised NPPF;
- the need to present housing numbers by spatial area;
- the provision of housing for younger people and affordable housing;
- the provision of necessary infrastructure with the developments, including implications of electric/zero carbon technological developments.

### Responses received to the SA/SEA Scoping Report (February 2018)

#### Q1: Are there other relevant policies, plans, programmes, and sustainable development objectives that will affect or influence the West Berkshire Local Plan Review?

Number of responses received: 21

Respondent	Summary of Response
Julian Worth	<p>Stronger links need to be made with the Minerals &amp; Waste Local Plan as this covers important and potentially disruptive issues such as extraction, which impact significantly on the subjects considered in the Local Plan, notably landscape and water. In general, extraction in new areas should be opposed - alternative sources of aggregates are available, notably through the Theale rail depots, and despoilation of West Berks can be avoided by making greater use of these alternatives</p>
Stratfield Mortimer Parish Council	<p>The initial section of the consultation document identifies key issues relevant to West Berks and goes on to give the Sustainability Appraisals (SA) objectives. However the key issues seem to be a mix of trends, such as an ageing population, and desirable outcomes, such as maintaining vitality of town and village centres. Should they not be one or the other? Should they not all be existing or expected problems or opportunities? Even a wording change would at least give consistency. For instance.....The continuing threat posed to town and village centres by changes in social attitudes.... as opposed to the existing ... Maintaining vitality of town and villages centres.....</p> <p>Irrespective of the above, it is considered that the changes likely to be brought about by automation and AI, for example, are a key issue both in the physical changes they will bring as well as the social change that is expected as a result. One of those social changes could be the erosion of community spirit in the towns and villages of West Berks if identified trends in behaviour continue. This is also considered a key issue.</p> <p>The examples above illustrate a wider point that the whole analysis seems to rest on an examination of existing policies and information describing the present situation. It is felt very strongly that likely future trends and developments should be considered just as, if not more than, important than the existing situation.</p> <p>As far as the objectives are concerned it could be argued that some of them are contradictory but this may well be intentional and acceptable. For example, to promote the opportunity for travel may contradict the aim of conserving and enhancing the natural environment.</p> <p>Of more significance is the objective of promoting and maximising opportunities for all forms of safer and sustainable travel. Surely in sustainability terms should not the first action be to minimise the need to travel? Only when a trip is necessary should it be safe and sustainable.</p> <p>Similarly should not the objective about emissions start off with eliminating the need for unnecessary emissions before going any further?</p>
Carter Planning for Mr RLA Jones	None

Respondent	Summary of Response
Burghfield Parish Council	Not that we are aware of.
Burghfield NDP Steering Group	Not that we are aware of.
North Wessex Downs AONB	Failed to acknowledge AONB management Plan which WB have signed up to and forms part of their development plan. Need to now include the Governments 25 year Environment Plan and proposed amendments to the NPPF.
Turley Associates for North East Thatcham Consortium	<p>These representations are provided jointly and severally on behalf of the North East Thatcham Consortium (“the Consortium”) in response to the Local Plan Review to 2036 Sustainability Appraisal Scoping Report. Alongside these representations, comments have also been submitted in response to the associated Local Plan Review to 2036 Scoping Report.</p> <p>The North East Thatcham Consortium comprises A2Dominion; Donnington New Homes, Ptarmigan and Gully Farm and these representations are made jointly and severally on behalf of the Consortium members.</p> <p>The Consortium have reviewed Appendix 1 of the SA Scoping report and would recommend that the following policies, plans and programmes be reviewed and their respective requirements/ recommendations be incorporated for incorporation within the SA:</p> <ul style="list-style-type: none"> <li>• The draft revisions to the National Planning Policy Framework (NPPF). <a href="https://www.gov.uk/government/collections/national-planning-policy-framework-and-developer-contribution-consultations">https://www.gov.uk/government/collections/national-planning-policy-framework-and-developer-contribution-consultations</a></li> </ul> <p>At the end of Appendix A and on Page 12 of the SA Scoping Report are a summary of the key sustainability objectives/ issues emerging from the review of relevant policies, plans and programmes. The Consortium considers that the following objectives should be presented or amended to inform the SA process and Local Plan Review:</p> <ul style="list-style-type: none"> <li>• Conserve and enhance wildlife habitats and species <i>or where possible secure net overall gain where development is needed to satisfy other objectives.</i></li> <li>• To improve educational standards and access to educational facilities <i>in line with the growth in local communities.</i></li> <li>• The need to provide for new community infrastructure such as primary and secondary schools to meet current and projected demand.</li> <li>• Maintaining the vitality of town and village centres <i>through the allocation of new housing and employment land in the most sustainable locations.</i></li> <li>• <i>The need to tackle areas of deprivation in Thatcham and Newbury in the context of a relatively affluent local authority area.</i></li> </ul>
Woolf Bond Planning for Donnington New Homes	We agree that the suggested list of relevant policies, plans, programmes, and sustainable development objectives are appropriate.
Historic England	<p>In Appendix 1: List and Review of Relevant Plans, Programmes and Strategies reference should be made to the 2016 Culture White Paper. “Conserving and enhancing the historic environment” is a key objective of the NPPF.</p> <p>We welcome the identification of the Historic Environment Character Zoning and Historic Environment Action Plan in Appendix 1. Other relevant background documents for the historic environment should ideally be specified in the text e.g. the West Berkshire</p>

Respondent	Summary of Response
	Historic Environment Record, the West Berkshire Historic Landscape Characterisation, Conservation Area Character Appraisals, any archaeological studies etc.
Pegasus Planning Group for Donnington New Homes	<p><i>Response relates to land adjacent to Long Lane, Newbury</i></p> <p>The National Planning Policy Framework Draft text for consultation will affect and influence the West Berkshire Local Plan Review. This is a new version of the National Planning Policy Framework (2012), which was published on the 5th March 2018, after the Sustainability Appraisal Scoping Report was released.</p> <p>The Draft Revised NPPF alters national planning policy in several key areas, and this will need to be reflected in the Local Plan Review, as the Local Plan to 2036 has to be consistent with prevailing national planning policy. The key area which will need reviewing is the methodology for calculating Objectively Assessed Need (OAN) for new housing in the Borough. Site allocations will also need to be reviewed so that all those allocated are consistent with the aims and objectives contained within the new national planning policy.</p> <p>Reading Borough Council published its Pre-Submission Draft Local Plan on the 30th November 2017. It includes a new calculation of housing need for the Borough, and policy on the mix and tenure of new dwellings. Policy H1 states that:</p> <p>“Provision will be made for at least an additional 15,433 homes (averaging 671 homes per annum) in Reading Borough for the period 2013 to 2036. The Council will continue to work with neighbouring authorities within the Western Berkshire Housing Market Area to ensure that the shortfall of 644 dwellings that cannot be provided within Reading will be met over the plan period.”</p> <p>Paragraph 4.4.12 states that:</p> <p>“Reading is likely to provide a significantly greater proportion of smaller dwellings than its neighbours in the Western Berkshire HMA. This may mean that some rebalancing across the HMA is appropriate, with other authorities potentially providing a greater proportion of larger family accommodation.”</p> <p>This demonstrates that Reading will require some of its housing need to be met by other authorities within the HMA. Where other authorities are meeting this need, it should be in the form of larger family dwellings. The objectives should therefore recognise the important role that West Berkshire has in meeting the needs of households not accommodated in Reading, or other parts of the HMA.</p>
Archaeology Team West Berkshire Council	<p>SEA/SA Objective 5 “To ensure that the character and distinctiveness of the natural, built and historic environment is conserved and where possible, enhanced” would be better split into the natural and historic (built being part of this). This was the advice given by Historic England (There is a danger that conflating the two could mask effects on one or the other) and we would echo this. Though the two elements are intertwined, there are different evidence bases for them, as well as legislation and planning guidance.</p> <p>Missing from the policies is the Culture White Paper 2016 – should go under National, key objectives were</p> <p>“Culture can be used in place-making, cultural attractions are the most commonly mentioned factor in terms of what makes the UK an attractive place to visit, the power of culture can drive economic growth, education and wellbeing”</p> <p>Should the emerging Vision 2036 be mentioned under Plans?</p> <p>ie</p> <p><b>Vision 2036</b> West Berkshire in 2036 where</p>

Respondent	Summary of Response
	<ol style="list-style-type: none"> <li>1. everyone benefits from a thriving economy.</li> <li>2. residents get the housing they need.</li> <li>3. individuals and communities are enabled to fulfil their potential.</li> <li>4. everyone experiences good health and wellbeing and where people are able to age well.</li> <li>5. the local environment is treasured and protected for future generations to enjoy.</li> </ol>
Public Transport Team West Berkshire Council	<p>No, I believe that through reviewing established plans such as the Local Transport Plan and related Implementation Programme, the assessment that has culminated in this Sustainability Appraisal Scoping Report has identified the key issues at a local level. In addition the document highlights the context of the National Planning Policy Framework and the Housing White Paper (2017), while also referencing in the Appendix 1 the wider global and EU policy context. The SA Assessment also flags considerations in terms of possible impact on sections of the community and on the environment, which it's noted will be subject to detailed impact assessments.</p>
Francis Connolly	<p>Policies and proposals of neighbouring authorities, particularly Reading and Wokingham. Regional and sub regional transport plans and proposals including airports and rail.</p>
Ian Campbell	<p>There is one critical objective, which can only be achieved through the pursuit of sustainable policies, which is not explicitly stated in the February 2018 draft Local Plan. As there is no evidence in this Local Plan that the intended future supply of new homes will return house prices to affordable levels, what other steps will be taken by the Council which guarantee to return house prices to their historic, equilibrium levels? Or is this not seen to be an objective of the Local Plan? If so the intention to penalise the next generation is omitted. Is this cut in their living standards fair to the next generation?</p> <p>AN OMISSION. There is a housing crisis in West Berkshire, in the Thames Valley and in much of the south east of England. It is now high on the agenda of this Government and the official opposition in Parliament. There is, in Westminster a consensus that many more homes must be built. Due to supply shortages house prices in popular areas are far too high. But the fact that the remedy lies in hands of the council through this Local Plan is not acknowledged. Denial of this consequence is timid. Without this candour, together with a solution, the Local Plan cannot be sustainable.</p> <p>It is clear from Ministerial and Prime Ministerial statements the Government sees the current planning system, possibly including this Local Plan to be part of a general planning failure.</p> <p>BROKEN? The crisis can be quantified with simplicity. Throughout most of the Thames Valley, including West Berkshire, the ratio of salaries to house prices is now about 12:1. A generation ago they were below 3:1. As house prices go up if their supply is restricted this dramatic deterioration in affordability is evidence of the consequences of several decades of restrictions on the supply of local house building land. Housing policies have progressively moved wealth from the have nots to the haves. By most planners and politicians the consequence of restricting supply was either not foreseen or was deliberately ignored. As a policy approach it is not sustainable. The system, the Government says, is broken. West Berkshire Council seems unaware this is so.</p> <p>WHO SAID WHAT. The following eight quotations chart the story of a broken housing market in the Thames Valley. In the eighties and nineties Berkshire County Council tried to slow down growth. In consequence it failed to plan far enough ahead. This is when the collapse in sustainability began.</p>

Respondent	Summary of Response
	<p>“The regional planning group (SERPLAN) is proposing what I believe is an unacceptable level of new housing in Berkshire. The task of the forthcoming consultations will be to moderate this, and yet not leave the county open to challenge.” (Coun. Phillip Houldsworth, Chairman of Berkshire County Council Environment Committee, December 1990)</p> <p>“There is widespread resistance to continuing development in many parts of the region. That resistance is informed, politically potent, and increasingly effective”. (South East Regional Planning, SERPLAN,1990)</p> <p>“It is commonly said that Berkshire suffers from the problems of success. In these circumstances it is natural to wonder what local government in general, and the County Council in particular, can do to make sense of these fast moving changes and plan for the future with any hope of success.” Foreword by R.H.Clarke, Director of Highways and Planning. Towards 2000; Shaping the Future of Berkshire. Berkshire County Council Dept. Of Highways and Planning; February 1990)</p> <p>“Historically, house prices in the South East, including Berkshire, have been high in relation to other regions in the UK. The Halifax Building Society estimate that in the fourth quarter of 1990 the average price of all houses in South East was £88,936-33% above average prices in the UK as a whole (£66,811). Yet average annual incomes in Berkshire were only 10% to 18% higher than UK equivalents. This implies that Berkshire’s residents will need to devote a higher proportion of their income to house purchase than the national average. As financial institutions will only generally lend between 2.25 and 3 times the annual household income, this suggests that households other than those on above incomes, or with substantial savings, will have difficulties in meeting the cost of house purchase in Berkshire.” ( A New Strategy for Berkshire; The Structure Plan Review: Background Paper. Population and Housing; para’s 35/36. March 1991)</p> <p>“Under provision of housing and a growing rate of household formation will result in labour shortages and a rapid increase in house prices. These impose a penalty on wage earners, whose net disposable income will be reduced as a growing percentage of their family budget is allocated to increasingly expensive accommodation. Good news for existing home owners, whose equity will increase, but rough justice for the next generation of home owners and the socially disadvantaged, unable to compete in the market place.” (Campbell Gordon, Prosperity at Risk, June 1992)</p> <p>“Our broken housing market is one of the greatest barriers to progress in Britain today. Whether buying or renting, the fact is the housing is increasingly unaffordable for ordinary working class people who are struggling to get by... We need to build many more houses, of the type people want to live in, in the places they want to live. To do so requires a comprehensive approach that tackles failure at every point in the system.” (Forward by Prime Minister in February 2017 White Paper, ‘Fixing up broken housing market’; DCLG)</p> <p>“ Soaring prices and rising rents caused by a shortage of the right homes in the right places has slammed the door of the housing market in the face of a whole generation.” (Foreword in the same white paper by the Secretary of State for Communities and Local Government; February 2017)</p> <p>“The truth is that for, nearly 20 years, Governments of all parties and politicians of all stripes have failed to build enough new homes to meet the housing needs of our fellow citizens. We have done that even though almost every single one of us in this House knows</p>

Respondent	Summary of Response
	<p>that happy feeling of living in a home we own. In all our constituencies, for huge numbers of people we represent, the dream of home ownership has turned into a tantalising mirage-a nightmare which they can never hope to get out of. We have failed through a combination of cowardice, complacency, laziness and incomprehension.”</p> <p>(Nick Boles, MP and previous Housing Minister; Housing, Planning and Green Belt debate, House of Commons, 6 February 2018)</p> <p>MORE OMISSIONS There are other sustainable objectives that are also ignored in this Local Plan.</p> <p>What happens at the end of the Plan period? After 2036 where will new homes go after that? The Plan is silent.</p> <p>IS THERE A THREAT? The Government is committed to protecting the Green Belt. Other protected areas such as AONB, flood plains, and SSI's are also likely to remain protected in the very long term. Which suggests the remaining unprotected land is suitable for housing in the long term. The Plan does not say so. Residents ought to be told some, perhaps a great deal of West Berkshire's unprotected open countryside will eventually have to be built on, but when, where and how much being are the key issues this Local Plan fails to address. The omission is shortsighted.</p> <p>OVERSPILL There is a growing overspill problem. Reading has an overspill problem because it lacks land which is recognised by West Berkshire in the West Berkshire Spatial Framework. This is a step forward. Slough too has the same problem. Slough Council proposes a major urban extension to the north onto green belt land in adjoining council areas which those councils oppose. In east Berkshire the Duty to Cooperate is failing. West Berkshire has plenty of unprotected land. Does it also have a Duty to Cooperate with Slough Council as it has plenty of unprotected land? The Plan is silent.</p> <p>London has the same overspill problem. So too has the County of Surrey, which although mainly a dormitory area, about 90% of Surrey land is protected. Where will Surrey's overspill go in the future, after the current local plans expire? North and east Hampshire are obvious locations if Surrey's future population growth will be located close to Surrey. North Hampshire adjoins West Berkshire. Is West Berkshire talking to Hampshire councils about long term, highly sustainable new settlement solutions? If not, why not?</p> <p>London's overspill problems are unique. They are now active topics for those who look ahead. See for example 'Next-door Neighbours- collaborative working across the London boundary'; Centre for London and Southern Policy Centre., January 2018.</p> <p>West London's overspill pressures will fall first on Slough, Windsor and Maidenhead and other Surrey and Buckingham councils, who have very little unprotected land. Spatially how far does West Berkshire's Duty to Cooperate extend, to assist London? Overspill examined from a sustainability perspective suggests a high and growing obligation exists for councils with an abundance of unprotected land within easy commuting reach of London. Although this is plain to an outside observer the West Berkshire Local Plan is silent.</p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>An additional document that will be very relevant to the Sustainability Appraisal is the settlement boundary review that the Council is intending to undertake, which is referred to in Appendix 2 to the 'West Berkshire Local Plan Review to 2036 Scoping Report,' (February 2018) in relation to policy C1 on Location of New Housing in the Countryside. This needs to be carried out at an early stage in the Local Plan preparation as it is critical to addressing some of the key social, environmental and economic issues that have been identified as being relevant to West Berkshire including:</p> <ul style="list-style-type: none"> <li>• The allocation and phasing of the housing delivery up to 2036, that meets the predicted demand using the new, standardised way of calculating housing demand to reflect current and future housing pressures;</li> <li>• An identified shortage of affordable and/or suitable homes for local people at different stages of life;</li> </ul>

Respondent	Summary of Response
	<ul style="list-style-type: none"> <li>• Allocation of appropriate employment land;</li> <li>• Maintaining vitality of town and villages centres; (p4 &amp; 12)</li> </ul>
Natural England	Reference should be made to the Government's 25 year Environment Plan and proposed amendments to the NPPF.
Joy Schlaudraff	<p>Yes. The new draft nppf. Global issues (immigration) National need for housing/development</p>
Woolf Bond Planning for Donnington New Homes	We agree that the suggested list of relevant policies, plans, programmes, and sustainable development objectives are appropriate.
Pegasus Planning Group for Donnington New Homes	<p><i>Response relates to land adjacent to Smitham Bridge Road, Hungerford</i></p> <p>The National Planning Policy Framework Draft text for consultation will affect and influence the West Berkshire Local Plan Review. This is a new version of the National Planning Policy Framework (2012), which was published on the 5th March 2018, after the Sustainability Appraisal Scoping Report was released.</p> <p>The Draft Revised NPPF alters national planning policy in several key areas, and this will need to be reflected in the Local Plan Review, as the Local Plan to 2036 has to be consistent with prevailing national planning policy. Some of the key areas which will need reviewing are the methodology for calculating Objectively Assessed Need (OAN) for new housing in the Borough, the provision of accessible homes for older people, and the provision of green space in new developments. Site allocations will also need to be reviewed so that all those allocated are consistent with the aims and objectives contained within the new national planning policy.</p> <p>Reading Borough Council published its Pre-Submission Draft Local Plan on the 30th November 2017. It includes a new calculation of housing need for the Borough, and policy on the mix and tenure of new dwellings. Policy H1 states that: "Provision will be made for at least an additional 15,433 homes (averaging 671 homes per annum) in Reading Borough for the period 2013 to 2036. The Council will continue to work with neighbouring authorities within the Western Berkshire Housing Market Area to ensure that the shortfall of 644 dwellings that cannot be provided within Reading will be met over the plan period."</p> <p>Paragraph 4.4.12 states that: "Reading is likely to provide a significantly greater proportion of smaller dwellings than its neighbours in the Western Berkshire HMA. This may mean that some rebalancing across the HMA is appropriate, with other authorities potentially providing a greater proportion of larger family accommodation."</p> <p>This demonstrates that Reading will require some of its housing need to be met by other authorities within the HMA. Where other authorities are meeting this need, it should be in the form of larger family dwellings. The objectives should therefore recognise the important role that West Berkshire has in meeting the needs of households not accommodated in Reading, or other parts of the HMA.</p>

Respondent	Summary of Response
Environment Agency	<p>We are pleased to see that you have included our comments and amendments as set out in our response letter dated 25 January 2018 to the draft Scoping Report dated December 2017.</p> <p><b>Catchment Abstraction Management Strategy (CAMS)</b>  You will need to include our Catchment Abstraction Management Strategy (CAMS) to your list of policies, plans, programmes in Appendix 1. These strategies assess water availability determining how much water can be abstracted whilst leaving sufficient water within the environment to meet its ecological needs. West Berkshire falls under the Kennet and Vale of White Horse Catchment. Please use the following link to our CAMS documents on the GOV.UK website <a href="https://www.gov.uk/government/collections/water-abstraction-licensing-strategies-cams-process">https://www.gov.uk/government/collections/water-abstraction-licensing-strategies-cams-process</a></p> <p><b>Thames Catchment Flood Management Plan</b>  This is an overview of the flood risk across the river catchment and recommended ways of managing the risk now and over the next 50 to 100 years. This document should also be referred to when considering flood risk in your local plan and should be included in your list of policies, plans, programmes in Appendix 1. Please use the following link to our Thames Catchment Flood Management Plan documents on the GOV.UK website <a href="https://www.gov.uk/government/publications/thames-catchment-flood-management-plan">https://www.gov.uk/government/publications/thames-catchment-flood-management-plan</a></p> <p><b>Water Cycle Study</b>  You have said that you are considering a water cycle study as part of your evidence base. We need to know that the proposed growth within your local plan does not lead to a deterioration in water framework directive (WFD) status of the receiving rivers and that it does not prevent the future target status objectives being achieved. Infrastructure capacity is only one aspect that needs to be considered (e.g. capacity of the sewer network to accommodate the increased flows). Environmental capacity is the other key consideration which has not been assessed. For example there may be infrastructure capacity to accommodate the increased effluent, however this does not tell us if the increased effluent flow would lead to a deterioration in WFD status for ammonia, biochemical oxygen demand (BOD), and Phosphate. It is strongly recommended that a Water Cycle Study (WCS) or if appropriate a water quality assessment is completed as it will form part of the evidence base to support the local plan.</p> <p>An effective water cycle study and strategy will help achieve the following objectives:  1. New development only within environmental constraints; 2. New development in the most sustainable location, in relation to the water environment; 3. Water cycle infrastructure in place before new development is occupied and; 4. Opportunities for more sustainable infrastructure options realised. If you cannot satisfy the following questions you will need to produce a water cycle study in order for your local plan to be compliant with paragraphs 109, 158, 165 and 173 of the NPPF.  Will the proposed housing growth have a detrimental impact on water quality? · Is there sufficient environmental capacity within the receiving water environment to accommodate the resulting increase in flow and pollutant loads from the Sewage Treatment Works as the result of the planned housing growth? · If not, are there alternative discharge locations that will not cause a failure of water quality targets or cause deterioration in water quality? · Is there an increased risk of discharges from storm water overflows causing an adverse water quality impact? · Will the sewerage undertaker need to apply to increase the level of treated sewage effluent that is allowed to be discharged under the existing environmental permits, to allow for future growth? · Will the quality standard on the environmental permit need to be tightened to meet existing or future water quality standards as a result of the proposed growth (e.g. Water Framework Directive (WFD))? · Can the existing sewerage and wastewater treatment networks cope with the increased</p>

Respondent	Summary of Response
	wastewater the proposed growth will generate? As part of the duty to co-operate with neighboring authorities it is important to consider the cumulative impact of growth on the receiving water courses. For example there may be cases where more than one authority are planning on building homes within the same sewage treatment works (STW) catchment. If both are assessed in isolation, this may lead to an underestimation of the impact on the water environment. Any WCS assessment should have a joint approach and information sharing between the authorities is important.
Energy Team West Berkshire Council	<p>Reading through the scoping report there doesn't appear to be any reference or recognition of the UK Clean Growth Strategy that was published in October 2017 by the Dept for Business, Energy and Industrial Strategy. This strategy outlines the actions that the government will take to grow our national income while cutting greenhouse gas emissions. Amongst other areas it covers:</p> <ul style="list-style-type: none"> <li>• Carbon Capture and storage</li> <li>• Phasing out installation of high carbon forms of fossil fuels in new and existing business during the 2020's</li> <li>• Phasing out the installation of high carbon forms of fossil fuel in new and existing homes, starting with new homes.</li> <li>• Strengthening energy performance standards for new and existing homes under building regs INC futureproofing new homes for low carbon heating</li> <li>• Build and extend heat networks across the country</li> <li>• Ending the sale of new conventional petrol and diesel cars and vans by 2040</li> <li>• Plans for public sector to lead the way in transitioning to zero emission vehicles</li> </ul> <p>The review of WBLP should be taking all these actions into account in its function as a way of delivering the above.</p>
Mid & West Berks Local Access Forum	<p>1. The West Berkshire Rights of Way Improvement Plan will be relevant (ROWIP). Every local authority has a statutory duty it have a ROWIP – see <a href="http://info.westberks.gov.uk/article/29147">http://info.westberks.gov.uk/article/29147</a></p> <p>2. The Mid &amp; West Berks Local Access Forum would like to bring attention to its current policy on development and bring to the attention of the Council that the Forum is a <b>statutory</b> body.</p> <p style="text-align: center;"><b>MID AND WEST BERKSHIRE LOCAL ACCESS FORUM</b></p> <p style="text-align: center;"><b>Policy relating to Planning Applications for Housing, Roads, Minerals &amp; Waste sites and other industrial sites.</b></p> <p>The Forum is a statutory body set up under the CROW Act 2000 to advise local authorities and other bodies on public access, including the improvement of public rights of way for recreational and utility purposes.</p> <p>The CROW Act 2000 required all local authorities to produce a Rights of Way Improvement Plan (ROWIP) which can be found on the relevant local authority website. The plan has a number of objectives which relate to maintaining and improving the public rights of way network and also the development of new and improved public access generally.</p> <p>The Forum will consider the following when commenting on plans.</p> <p>That, the development:</p> <ol style="list-style-type: none"> <li>i. does not adversely affect existing public rights of way or other public open spaces in the area;</li> <li>ii. offers equivalent, or improved, diversion of existing public right of way affected by the development;</li> <li>iii. provides increased and / or improved off-road access to the existing public rights of way network in the area, and to existing and new facilities, open spaces and the countryside;</li> </ol>

Respondent	Summary of Response
	<p>iv. provides increased and /or improved off-road access for as many different user groups as possible, that is, pedestrians, cyclists, equestrians and disabled users;</p> <p>v. Provides paths which are definitive, rather than permissive, and are therefore added to the definitive map and statement; Conforms to the British Standard 'Gaps, Gates and Stiles' and Defra's guidance "Good practical guidance for Local Authorities on compliance with the equalities act 2010"</p> <p><b>3. We draw your attention to the DfT's document</b> 'Local Cycling and Walking Infrastructure Plans' at <a href="https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/607016/cycling-walking-infrastructure-technical-guidance.pdf">https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/607016/cycling-walking-infrastructure-technical-guidance.pdf</a></p>
British Horse Society	<p>i. The West Berks Council Rights of Way Improvement Plan (ROWIP) is probably relevant.</p> <p>ii. Please note the policy statement of the Mid &amp; West Berks Local Access Forum on development given in its response to this consultation.</p> <p>iii. Strategy for the Horse Industry in England and Wales : <a href="https://www.gov.uk/government/publications/strategy-for-the-horse-industry-in-england-and-wales">https://www.gov.uk/government/publications/strategy-for-the-horse-industry-in-england-and-wales</a></p> <p>iv. A report of research on the Horse Industry in Great Britain <a href="https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain">https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain</a></p> <p>v. 'Making Ways for horses' by the Equestrian Access Forum <a href="http://www.bhs.org.uk/~media/bhs/files/pdf-documents/making-ways-for-horses.ashx?la=en">http://www.bhs.org.uk/~media/bhs/files/pdf-documents/making-ways-for-horses.ashx?la=en</a></p> <p>vi. The Health Benefits of Horse Riding at <a href="http://www.bhs.org.uk/enjoy-riding/health-benefits">http://www.bhs.org.uk/enjoy-riding/health-benefits</a></p> <p>It might be worth asking the British Horse Society via its Head Office for its policy statements on development relating to equestrianism / horse industry.</p> <p>Policies need to be developed <u>specific for the equestrian community</u> for the construction of equestrian accommodation (stabling, field shelters, riding arenas / indoor schools) and importantly horses need to be catered for when off road paths are considered. The viability of equestrian establishments can depend on the proximity of a good rights of way network, eg. Curridge Green Riding School.</p> <p>Focussing on where people live is reasonable but bear in mind that green infrastructure (assuming GI includes public paths and open spaces) needs to be preserved and improved from where people <b>ride</b> which is not necessarily where they live.</p> <p>The West Berks planning dept probably somehow needs to become much more familiar with equestrian issues.</p>

### Responses received to the SA/SEA Scoping Report (February 2018)

#### Q2: Do you agree that the baseline data collected in Appendix 2 is appropriate to the West Berkshire Local Plan Review?

Number of responses received: 21

Respondent	Summary of Response
Stratfield Mortimer Parish Council	Yes
Carter Planning for Mr R.L.A. Jones	<p>Yes. However it would have been helpful if “housing” could follow “population”. These two topics are linked and are fundamental to the new Local Plan. It would have been useful to state that the SHMA 2016 (Strategic Housing Market Assessment) which is referred to will be regularly updated. It would also be useful to state what the OAN (objectively assessed housing need) is currently, how often and by what mechanism it will be updated in future and that it will be regularly updated to inform the new Local Plan.</p>
Burghfield Parish Council	Yes. This seems a very thorough account of where we are.
Burghfield NDP Steering Group	Yes. This seems a very thorough account of where we are.
North Wessex Downs AONB	No. Data should be spilt to show housing numbers in and outside of the AONB to be more accurate and better demonstrate pressure. Would also be helpful to show percentage increase in housing numbers and applications.
Turley Associates for North East Thatcham Consortium	<p>The Consortium have reviewed the baseline data presented within Appendix 2 of the SA Report and make the following comments to ensure that the Local Plan Review makes the maximum social, economic and environmental contribution to West Berkshire:</p> <ul style="list-style-type: none"> <li>• Page 11- 12 of Appendix 2 presents the baseline data with regards to the provision of, and access to, education within West Berkshire. The Consortium recognises the need for additional primary and secondary places across the District but notes that the baseline data with regards to current provision is focused mainly on Newbury. The Consortium believe there to be a significant historical requirement for both Primary and Secondary school places within Thatcham which can only be addressed via the provision of new development. The Consortium agrees however that the Local Plan Review must recognise the future demand for both primary and secondary school places within both Thatcham and Newbury</li> <li>• Page 12 -14 of Appendix 2 presents the current baseline situation with regards to the availability and provision of housing. The Consortium acknowledges the fact that West Berkshire is one of the most expensive places to purchase new housing outside London and recognises that demand since the recession has significantly exceeded supply. This is unlikely to change in the future. The Consortium also supports the requirement for significant additional affordable housing, particularly</li> </ul>

Respondent	Summary of Response
	<p>for local residents and key workers. The Consortium also considers that the baseline data should refer to the potential requirement across the HMA (and by definition Thatcham and Newbury as areas of focused growth) for a greater proportion of family housing given the admission by Reading Borough Council in their emerging Local Plan that their ability to deliver family housing will be constrained.</p> <ul style="list-style-type: none"> <li>• Pages 16 and 17 of Appendix 2 present the baseline data with regards to the presence of Deprivation within West Berkshire. The Consortium notes the presence of significant pockets of deprivation around Newbury and Thatcham which is notable given that they sit in relatively affluent areas. The Consortium notes that one of the factors behind this deprivation is the lack of affordable housing and key services and the Consortium therefore agrees that the SA Scoping report should identify these pockets of deprivation as a key sustainability issue to positively address.</li> <li>• The baseline data with regards to Economy and Employment does not appear to reference the latest evidence on West Berkshire's economy and the conclusions of the Economic Development Needs Assessment (EDNA) which identifies the need for up to 75.2ha of additional employment land over the period to 2036. This data and indeed any other recent baseline data pertaining to the economy should be reviewed and incorporated into the scope of the SA.</li> <li>• With regards to the baseline data associated with Transportation within West Berkshire, the Consortium broadly agrees with the data provided but makes the following specific comments: <ul style="list-style-type: none"> <li>○ The commuting survey appears to be based upon the 2011 Census and should therefore be updated in order to reflect current commuting patterns.</li> <li>○ Notwithstanding the results of any new data, the Consortium recognises that a greater percentage of workers within West Berkshire utilise the private car as a means of commuting to work compared to the South East and England and Wales. Given the potential implications upon air quality and congestion (and therefore productivity) the Consortium considers that the Local Plan should focus major development in those areas with mainline train stations with access to the regional economy.</li> </ul> </li> </ul>
Woolf Bond Planning for Donnington New Homes	We agree that the baseline data is appropriate, however would suggest there may be benefit in separate additional studies considering the benefits of allocating smaller sized sites adjacent to smaller sized settlement as a potential strategy for aiding housing delivery in accordance with the referenced draft NPPF paragraphs. We also consider a detailed review of affordable housing need, specific to West Berkshire District may assist.
Historic England	We consider the baseline data for the historic environment to be comprehensive and adequate. However, on the 2017 Heritage at Risk Register there are, strictly-speaking, three listed structures, four scheduled monuments, three Registered Historic Parks and Gardens and one dual designation (listed and scheduled) deemed to be at risk. It should be noted that outside London, the Register does not include Grade II listed secular buildings. We note that the Council has not undertaken a survey of Grade II listed buildings nor has it completed Historic England's annual survey of Conservation Areas to see if any are at risk. These are, therefore, correctly identified as gaps in the baseline.
Pegasus Planning Group for Donnington New Homes	Yes – the baseline data collected in Appendix 2 covers all the relevant areas, and is appropriate to the West Berkshire Local Plan Review.

Respondent	Summary of Response
Archaeology Team West Berkshire Council	There is still a gap in terms of surveying the condition of both Grade II listed secular buildings and Conservation Areas. There is not a mechanism at the moment to assess Grade II listed buildings but Conservation Areas do need up to date Appraisals in order for their At Risk status to be determined. There is a tentative plan to address Conservation Area Appraisals – many local communities are keen to get involved.
Transport Team West Berkshire District Council	In general, I agree that the baseline data that has been collected and carefully set out in Appendix 2 is appropriate to the West Berkshire Local Plan Review. However, in relation to the section on Transport, perhaps it may be appropriate to review the percentages in terms of average delay per vehicle as a proportion of average journey time, if more recent data than that cited from the 2005 Atkins study is available.
Francis Connolly	Yes generally
Hampshire County Council	We agree that the baseline data collected in Appendix 2 is appropriate to the WBLP Review.
Ian Campbell	<p>DEFECTIVE DATA? In my comments on Question 1 above I list several omissions in the Local Plan. As this Local Plan does not provide sufficient building land to return house prices over a long period to historic normal levels this conclusion suggests the data used in the Plan preparation is not adequate.</p> <p>You list the West of Berkshire Spatial Planning Framework as one of the relevant documents. It contains two errors</p> <p>ERROR 1. It is not sustainable as it fails to put forward a strategy for a sustainable period of time in the future. In a growth area like West Berkshire a sustainable period of time must extend far beyond 2036.</p> <p>ERROR 2. It promotes a urban settlement in the countryside of 15,000 new homes. The choice of this location is a response to a commercial initiative by a consortium of land owners and builders to build on a site of their, not the four councils choice. The adoption of this land is not the result of a rational approach to a site identification exercise assessing all other sites which may be equally suitable. Without first obtaining independent verification how do the four councils know Grazeley is the right location? This is not possible without the right evidence.</p> <p>UNTESTED My submission to you dated 14 January 2014 (Para. 18) said the basis of selection of countryside sites seemed crude. The new draft Local Plan does not explain the rationale for selecting open countryside sites. Unhappily there is no reason to alter this description. This exclusion is a particular concern relating to the Grazeley option, because a settlement here sets a historic precedent. It will establish the pattern for further growth in the decades after 2036. If the correct long term approach to solving the Thames Valley housing crisis is a major new settlement or urban extension in the open countryside it is especially important that the search area and the criteria for selection the location have proper regard to the long term, sustainability score of all other potential open countryside site locations sufficient to satisfy all reasonable foreseeable future housing needs. See for example the requirements mentioned in para. 6 above. In this sense context Grazeley is untested and therefore premature.</p>
West Waddy ADP for Gerald Palmer Eling Trust	The list of evidence to be collected as part of the preparation of the Local Plan Review needs to include the Settlement Boundary Review as the Council is committed to undertaking this study in the West Berkshire Local Plan Review to 2036 Scoping Report as

Respondent	Summary of Response
	<p>outlined in the response to question 1 above and also in the Housing Site Allocations DPD (adopted May 2017) which stated in paragraph 1.35 that:  <i>'All settlement boundaries, including those below the settlement hierarchy, will be reviewed through the new Local Plan.'</i>            It is also a critical piece of the evidence base for determining where housing development should go.</p>
Joy Schlaudraff	<p>Yes, in general. It does not take enough notice of national or global concerns over housing provision. It needs to be more proactive regarding enabling all suitable development, more realistic, less historic, there's no reason why historic buildings can't be conserved and enhanced within semi-rural and urban environments, as much as rural environments. Housing is basic to all. If there is not housing, people can not prosper, in ANY way</p>
Woolf Bond Planning for Donnington New Homes	<p>We agree that the baseline data is appropriate, however would suggest there may be benefit in separate additional studies considering the benefits of allocating smaller sized sites adjacent to smaller sized settlement as a potential strategy for aiding housing delivery in accordance with the referenced draft NPPF paragraphs. We also consider a detailed review of affordable housing need, specific to West Berkshire District may assist.</p>
Pegasus Planning Group for Donnington New Homes	<p>Yes – the baseline data collected in Appendix 2 covers all the relevant areas, and is appropriate to the West Berkshire Local Plan Review.</p>
Environment Agency	<p>Please be aware that you can get flood risk data from us at <a href="mailto:enquiries_THM@environment-agency.gov.uk">enquiries_THM@environment-agency.gov.uk</a></p>
Mid & West Berks Local Access Forum	<p>As far as we are aware but we note that there are a number of documents listed which we were not aware of &amp; have not read. We note, and approve of, the frequent references to green infrastructure, access to quality green space, and its importance to health and well-being.</p> <p>For example, we endorse the comments:</p> <ul style="list-style-type: none"> <li>- page 81 <i>'Planning therefore has some influence for enabling good mental health and wellbeing through helping to create access to quality green space, ....'</i></li> <li>- page 102 on Green Infrastructure the need for 'Interconnecting GI assets to form a strong GI network of green spaces and corridors which deliver the range of GI functions'</li> </ul> <p>We are a little unclear what the main purpose of Green Infrastructure is. Is it for the human population or to enhance wildlife? Biodiversity seems to be covered in its own right. Thus we advise that the main purpose of Green Infrastructure should be to provide benefits for the human population to encourage healthy outdoor activities and active travel.</p> <p>We note that it is planned to include CS12 Equestrian/ Racehorse Industry in the new plan but there does not appear to be any baseline data to support this. We understand that the horse industry contributes significantly to the national and West Berkshire economy and a significant amount of land is used by the industry. Data needs to be collected. See the submission by the British Horse Society.</p>
British Horse Society	<p>There is little baseline data included to support the inclusion of the Equestrian / Racehorse Industry (commonly called the Horse Industry).</p>

Respondent	Summary of Response
	<p>The BHS was very pleased to see the Horse Industry recognized in CS12 in the current plan. It strongly believes that the horse industry must be included in local development plans and very much hopes that the new plan will be even stronger on equestrian issues. The BHS has used the current West Berks development plan as an example to other local authorities.</p> <p>I was not involved in drawing up the current West Berks Local Development Plan and am unaware of the data which may have been collected to support the inclusion in the current plan.</p> <p>The non-racing horse industry (as well as the horse racing industry) makes a significant contribution to the economy, to employment, land use &amp; leisure activities in West Berks and to the health &amp; well-being of a wide age range of the population.</p> <p>Please note that my role within the British Horse Society (BHS), is as an Access and Bridleways officer for West Berks and southern region (Berks, Bucks, Hants, IOW, Oxon). We receive training for this role but we are volunteers. The BHS does not have planning officers and it often falls on its access &amp; bridleways officers to respond to development plans</p> <p>Nationally, the horse industry is recognized as a significant land based industry and West Berkshire is no exception. The equine industry is not just made up of the horse racing industry. It consists of professional, semi-professional and recreational riders (see pages 10 &amp; 11 in A report of research on the Horse Industry in Great Britain <a href="https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain">https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain</a>). Economic activity centres around educational establishments, livery yards, veterinary practices, farriers, forage suppliers and small parcels of land rented for the keeping of horses who may be primarily pets. There is considerable land use for livery yards which are small businesses and an important example of farm diversification scattered all over West Berkshire. In addition there are a number of equestrian centres which offer training and education. These activities need to be recognized and policies developed to support them in all local plans, from the construction of riding arenas, stabling and inclusion of provision for horses in the construction of new public paths / bridleways / green infrastructure</p> <p>With reference to the consultation document:</p> <ol style="list-style-type: none"> <li>i. the horse Industry contributes to ‘Communities and Well Being’ and ‘Economy and Infrastructure’ listed on page 9.</li> <li>ii. We are pleased to see on page 102 the need for improved equestrian access. We fully endorse this and believe the Mid &amp; West Berks Local Access Forum also supports this.</li> <li>iii. Under Future trends on pages 102 /103, <i>‘Focusing and prioritising GI investment on economic growth points where the majority of people will be located in the future to deliver multiple GI benefits’</i>, we would like to point out that there needs to be mention here on where horses are kept / where there are equestrian establishments which is often <b>not</b> where people live. We suggest an amendment along the lines of <i>‘Focusing and prioritising GI investment on economic growth points where the majority of people will be located and where there is an economic or recreational need in the future to deliver multiple GI benefits.’</i> This assumes that GI means, or includes, the provision of off-road paths, public open space etc and not just wild-life corridors with some public access. The well-being of the human population needs to be fully recognized and the contribution of the horse to human well-being recognized.</li> <li>iv. The Equestrian / Racehorse industry (horse industry) should be mentioned under ‘Rural economy and rural infrastructure’. Equestrianism uses a significant amount of the grazing land nationally and the same is likely to be true in West Berks.</li> </ol>

**Responses received to the SA/SEA Scoping Report (February 2018)****Q3: Do you have, or know of, any additional baseline data which should be added to that already listed?**

Number of responses received: 21

Respondent	Summary of Response
Francis Connolly	Not to my knowledge
Ian Campbell	<p>DEFECTIVE DATA? In my comments on Question 1 above I list several omissions in the Local Plan. As this Local Plan does not provide sufficient building land to return house prices over a long period to historic normal levels this conclusion suggests the data used in the Plan preparation is not adequate.</p> <p>You list the West of Berkshire Spatial Planning Framework as one of the relevant documents. It contains two errors</p> <p>ERROR 1. It is not sustainable as it fails to put forward a strategy for a sustainable period of time in the future. In a growth area like West Berkshire a sustainable period of time must extend far beyond 2036.</p> <p>ERROR 2. It promotes a urban settlement in the countryside of 15,000 new homes. The choice of this location is a response to a commercial initiative by a consortium of land owners and builders to build on a site of their, not the four councils choice. The adoption of this land is not the result of a rational approach to a site identification exercise assessing all other sites which may be equally suitable. Without first obtaining independent verification how do the four councils know Grazeley is the right location? This is not possible without the right evidence.</p> <p>UNTESTED My submission to you dated 14 January 2014 (Para. 18) said the basis of selection of countryside sites seemed crude. The new draft Local Plan does not explain the rationale for selecting open countryside sites. Unhappily there is no reason to alter this description. This exclusion is a particular concern relating to the Grazeley option, because a settlement here sets a historic precedent. It will establish the pattern for further growth in the decades after 2036. If the correct long term approach to solving the Thames Valley housing crisis is a major new settlement or urban extension in the open countryside it is especially important that the search area and the criteria for selection the location have proper regard to the long term, sustainability score of all other potential open countryside site locations sufficient to satisfy all reasonable foreseeable future housing needs. See for example the requirements mentioned in para. 6 above. In this sense context Grazeley is untested and therefore premature.</p>
West Waddy ADP for Gerald Palmer Eling Trust	Yes, the results of the Settlement Boundary Review, which is still to be undertaken, for the reasons given in the responses to questions 1 & 2.
Natural England	Baseline data with more of a specific focus around development pressures within the AONB (e.g. with regards to numbers and percentages of housing and other non-housing related planning applications coming forward within the AONB and outside of it) could be integrated into the SA scoping in order to clearly understand the baseline with regards to development within this protected landscape.

Respondent	Summary of Response
Joy Schlaudraff	Yes. There are many unidentified sites, because there are no free or cheap assessments by the council
Woolf Bond for Donnington New Homes	We agree that the baseline data is appropriate, however would suggest there may be benefit in separate additional studies considering the benefits of allocating smaller sized sites adjacent to smaller sized settlement as a potential strategy for aiding housing delivery in accordance with the referenced draft NPPF paragraphs. We also consider a detailed review of affordable housing need, specific to West Berkshire District may assist.
Pegasus Planning Group for Donnington New Homes	No – I am not aware of any additional baseline data which should be added to that listed.
Stratfield Mortimer Parish Council	<p>Not being expert in any of the fields mentioned, it is difficult to say that a precise piece of data has not been used. However, it is clear that the following issues do not appear to be covered by any of the data listed:</p> <p><b>Population</b></p> <ul style="list-style-type: none"> <li>• While the fact of an ageing population is covered it would seem that there is no data on what such a population would like to see happen. For instance they might seek to down-size at a particular point in life. Are there no such attitude surveys?</li> <li>• This is a general point about all the issues. There seems to be little or no information on what people actually want, now or in the future, as opposed to simply extrapolating existing statistics.</li> </ul> <p><b>Health</b></p> <ul style="list-style-type: none"> <li>• There is virtually nothing in this section about mental health</li> <li>• There seem to be a mix of value judgements and statistics that reduce the section's impact.</li> <li>• There does not seem to be any information on NHS and other health providers plans</li> <li>• There is little or no background on trends in delivery of medical services such as the use of remote monitoring of conditions</li> <li>• There is very little on the impact of environmental conditions on health or indeed cross-referencing to other issues</li> <li>• Again this last issue is prevalent through all of this appendix</li> </ul> <p><b>Air Quality</b></p> <ul style="list-style-type: none"> <li>• Should there not be a data set on health and air quality?</li> </ul> <p><b>Education</b></p> <ul style="list-style-type: none"> <li>• There is no mention of changing educational practices such as internet learning</li> <li>• There is no mention of apprenticeships and this route to qualifications</li> <li>• There is no mention of the need to retrain for different jobs as the 'job for life' disappears.</li> <li>• In general terms this section confines itself to those educational needs that are met, in some way, by WBC and does not take a more wide-ranging view.</li> <li>• There is little or no cross referencing to other sections where education is important such as Health</li> </ul> <p><b>Housing</b></p>

Respondent	Summary of Response
	<ul style="list-style-type: none"> <li>• There does not seem to be any data on housing construction such as the increasing use of factory built homes.</li> <li>• Nor does there seem to be any data on the type of buildings required to minimise the environmental footprint of housing</li> <li>• Little cross-referencing to other issues such as flooding</li> </ul> <p><b>Deprivation</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Crime</b></p> <ul style="list-style-type: none"> <li>• No mention is made of the national crime survey where individuals are asked about their experiences of crime in the last year. This gives a different picture to police crime statistics. Indeed police crime trend figures are well known to be suspect as the basis for recording has changed over time.</li> </ul> <p><b>Sport</b></p> <ul style="list-style-type: none"> <li>• Mortimer has commissioned a consultant to report on sport in and around the parish and this can be made available if required.</li> <li>• There are no figures showing the correlation between sporting activity and health, especially for the older members of society</li> <li>• While this section is entitled community sport and leisure facilities there is no real mention of leisure facilities which, presumably, would include everything from pubs to cinemas.</li> <li>• There is no mention of the myriad of clubs that cater for specific interests from gardening to chess.</li> <li>• There is no mention of informal leisure facilities such as recreation grounds and open countryside</li> </ul> <p><b>Landscape</b></p> <ul style="list-style-type: none"> <li>• There is no mention of landscape as an aid to better health</li> <li>• The characterization of landscape into the very broad categories does not do justice to the very varied landscapes held within each category</li> <li>• There is a presumption that this only concerns the rural areas. Surely the urban landscape is just as important?</li> </ul> <p><b>Geology</b></p> <ul style="list-style-type: none"> <li>• Would it be appropriate to deal with Hydrology in this section?</li> </ul> <p><b>Historic environment</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Commons</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Biodiversity</b></p> <ul style="list-style-type: none"> <li>• There does not seem to be any information on the overall current state of biodiversity.</li> <li>• The emphasis is all on protected areas and species. It is believed that WBC hold records of species identified in the District.</li> <li>• Should the Lawton report be mentioned?</li> </ul> <p><b>Green Infrastructure</b></p> <ul style="list-style-type: none"> <li>• Should designated Green Spaces be mentioned and how many there are in the District?</li> </ul>

Respondent	Summary of Response
	<p><b>Climate</b></p> <ul style="list-style-type: none"> <li>• There is no mention of the likely impact that climate change will have on health.</li> </ul> <p><b>Water quality and contaminated land</b></p> <ul style="list-style-type: none"> <li>• Should the future trends cross-reference to climate change?</li> </ul> <p><b>Water supply</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Flood risk</b></p> <ul style="list-style-type: none"> <li>• Various papers have been published on the impact of short high intensity storms affecting impermeable areas be these man made or simply very dry ground. These intense events can be just short periods of rainfall or intense events within a longer storm. It is considered that these events need to be considered when assessing the sustainability of any policy or proposal.</li> </ul> <p><b>Soil</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Previously developed land</b></p> <ul style="list-style-type: none"> <li>• The future trends section is confusing. If it is saying that brownfield sites may increase in number why would the use of green field sites increase as a result? If this is because of a general decrease in the availability of other windfall sites where is the evidence and is this the correct place to mention it?</li> </ul> <p><b>Minerals</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Waste</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Renewable energy</b></p> <ul style="list-style-type: none"> <li>• There does not seem to be a recognition that in the future there will be increasing need for electricity as renewables provide that form of energy and the use of electric vehicles will put demand on a much higher plane. There is likely to be demand for ancillary facilities as well as generating capacity, for example, large scale electricity storage (battery) plants.</li> </ul> <p><b>Economy</b></p> <ul style="list-style-type: none"> <li>• There is mention of the road network but not the rail network.</li> <li>• There is no mention of broadband provision which is now an exceptionally important determinant of good prospects for the economy of an area.</li> <li>• There is no mention of the problems faced due to increased congestion on all transport networks or the opportunities offered by rail electrification</li> <li>• There is little or no cross-referencing to other sections such as education and health</li> <li>• There seems to be no recognition of how work will change due to greatly increased use of Artificial Intelligence</li> </ul> <p><b>Tourism</b></p> <ul style="list-style-type: none"> <li>• No comment</li> </ul> <p><b>Agriculture</b></p>

Respondent	Summary of Response
	<ul style="list-style-type: none"> <li>• It is noticeable that this is the first time that Brexit has been mentioned. In reality might this not affect a number of sections in the analysis?</li> </ul> <p><b>Transport</b></p> <ul style="list-style-type: none"> <li>• There is no mention of the impact of the increasing use of electric vehicles on transport or indeed the use of autonomous vehicles.</li> <li>• The mention of reductions in usage by home working is welcomed but this depends on good access to broadband and this is not mentioned.</li> <li>• There is mention of the encouragement of active transport modes but very little information on the location of this.</li> <li>• There is little cross-referencing, for instance to the minerals section where the reuse of materials for roads could be important or public rights of way that encourage walking and health.</li> <li>• There is little or no mention of freight transport</li> </ul>
Carter Planning for Mr R.L.A. Jones	No but any future Neighbourhood Plans will need to be included
Burghfield Parish Council	No
Burghfield NDP Steering Group	No
North Wessex Downs AONB	No. Although Horse racing industry is an important sector of West Berkshires economy and data from this could be incorporated if viable.
Turley for North East Thatcham Consortium	<p>With regards to the SA Process beyond this Scoping Report, the Consortium acknowledges that the Council will be updating its evidence base in support of the Local Plan Review and therefore assumes that West Berkshire Council will amend the baseline data and key sustainability issues in light of any new evidence.</p> <p>The Consortium's response to Question 2 above has highlighted a number of new sources of baseline data which are considered to be helpful to the SA Process. These are:</p> <ul style="list-style-type: none"> <li>• The latest evidence on West Berkshire's economy and the conclusions of the Economic Development Needs Assessment (EDNA)</li> <li>• The Reading Pre-Submission Local Plan (2017) and particularly paragraph 4.4.12 which states the need for greater number of family housing within the Western Berkshire HMA.</li> </ul>
Pro Vision for Audley Group	<p>Particularly in the context of West Berkshire's ageing population being above the national average, it would be appropriate to include reference to the following House of Commons report published last month: <i>Housing for Older People, Second Report of Session 2017-19; Communities and Local Government Committee (5 February 2018).</i></p>

Respondent	Summary of Response
Woolf Bond Planning for Donnington New Homes	We agree that the baseline data is appropriate, however would suggest there may be benefit in separate additional studies considering the benefits of allocating smaller sized sites adjacent to smaller sized settlement as a potential strategy for aiding housing delivery in accordance with the referenced draft NPPF paragraphs. We also consider a detailed review of affordable housing need, specific to West Berkshire District may assist.
Pegasus Planning Group for Donnington New Homes	No – I am not aware of any additional baseline data which should be added to that listed.
Archaeology Team West Berkshire Council	Another form of primary evidence we use is LiDAR data supplied by the Environment Agency – work by the Council's GIS team has turned this into Hillshade models available on corporate mapping. This display both surface and terrain topography and is valuable for many areas (eg for flooding assessments) as well as for our purposes in identifying archaeological earthworks.
Transport Team West Berkshire Council	<p>In addition to the telephone information service (Traveline) for bus times that is referenced in Appendix 2, in line with the Local Transport Plan Policy on Information, through partnership working with Reading Transport Limited, live local bus information is also available via Traveline's NextBuses mobile internet and text service, and via Traveline South &amp; East's and individual transport operators' apps (e.g. the free 'Kennections' app). Service status and disruption updates are also now available via social media, including via Twitter feeds integrated into apps.</p> <p>Further, Reading Transport have now taken on the maintenance of nine on-street audio-visual screens at bus stops served by their routes, and are currently working with the Council to introduce audio-visual information on board the Kennections local bus fleet.</p> <p>During 2017, local bus services were enhanced with the introduction of contactless bankcard payment and mobile ticketing on routes radiating from Newbury operated by Kennections (under contract to WBC), by Reading Buses, and by Stagecoach South. GWR are also introducing contactless payment to their ticket machines at key stations including Newbury.</p>
Mid & West Berks Local Access Forum	Not that we are aware of but see answer to Q2.
British Horse Society	<p>Up-to-date data specific for West Berks may be difficult to obtain. National data on the importance of the Horse Industry is more readily available although some of it is rather out of date.</p> <p><b>West Berks-Specific data:</b></p> <p><b>1. The National Equine Database / Central Equine database.</b></p> <p>In theory, this should allow an estimate of the economic value of the horse industry to be calculated in West Berks. Further information may be available via <a href="https://data.gov.uk/dataset/national-equine-database-ned">https://data.gov.uk/dataset/national-equine-database-ned</a></p> <p>Legally, every horse has to have a passport. In the past, the number of passports by postcode was available from the National Equine database. Data obtained by the Society in 2011 showed that 16,711 horses were registered with RG postcodes. The British</p>

Respondent	Summary of Response
	<p>Equestrian Trade Association (see below) estimated that in 2015 each horse costs £3,600 pa to keep. Thus, the economic value of horses kept in RG postcodes equated to <u>£60 million per annum</u> at that time period. Others claim the BETA figure is an underestimate.</p> <p>The National Equine Database was discontinued and as far as we are aware up-to-date figures are not available to the public. The Society understands that a Central Equine Database is planned but has little information about it.</p> <p>It might be worth West Berks Council asking Defra for advice on how it should calculate the economic value of the horse industry in West Berks. Also it might be worth contacting the CEO at the BHS Headquarters: The British Horse Society, Abbey Park, Stareton, Kenilworth, Warwickshire, CV8 2XZ</p> <p><b>2. Conduct a survey / snapshot of equestrian enterprises in West Berkshire.</b></p> <p>It may, perhaps, be necessary for the Council to conduct a survey /snapshot of non-racing equestrian enterprises in West Berkshire to gain an estimate of the size of the horse industry.</p> <p>There are numerous enterprises throughout West Berks which contribute to the equestrian economy. These include: equestrian centres, livery yards, veterinary practices, farrier services, forage suppliers etc. ( see below, National data 2a below for the range of the horse industry nationally).</p> <p>For example,</p> <p>(i) there are at least 4 large equestrian <b>veterinary practices</b> in West Berks. These might be a source of the number of horses kept to owners with West Berks postcodes.</p> <p>(ii) a ridden horse will usually be shod by a <b>registered farrier</b> every 5-8 weeks. The number of registered farriers in West Berks might be available from the Farriers Registration Council and an estimate of the average number of horses on each farriers' books obtained. Both these are likely to give an under estimate of the number of horses kept in West Berks but may serve as an estimate.</p> <p>(iii) <b>Licensed riding schools:</b> these may seriously underestimate the horse population if they do not include livery yards and private premises</p> <p>3. For the <b>importance / economic value of horse racing in West Berks</b>, the British Horse Racing Board may be a source of information.</p> <p><b>National data:</b></p> <p>We are aware of the following:</p> <p>1. <b>British Equestrian Trade Association's National Equestrian Survey 2015</b>  <a href="http://www.beta-uk.org/pages/industry-information/market-information.php">http://www.beta-uk.org/pages/industry-information/market-information.php</a>  Taken from the website: <i>'This highlights new spending patterns and changing trends over the past five years to provide an insight into the equestrian sector today. Key findings include: Nationally, the economic value of the equestrian sector stands at £4.3 billion of consumer spending across a wide range of goods and services each year. This has increased from £3.8 billion in 2011. <b>Riding for pleasure, at 96%</b>, was the most popular equestrian activity, with 59% of riders taking part in non-affiliated competitions.'</i></p> <p>It may be that BETA may have data specific to West Berkshire which it may release on application</p> <p>2. <b>British Horse Industry Confederation reports published 2004 /2005.</b></p> <p>a. <a href="https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain">https://www.gov.uk/government/publications/a-report-of-research-on-the-horse-industry-in-great-britain</a>. See the diagrams on pages 10 &amp; 11 which depict the breadth of the Horse industry which also will relate to West Berks.</p>

Respondent	Summary of Response
	<p>b. A summary this report is available at <a href="http://www.ridingsafely.net/defrabhicssummary1.html">http://www.ridingsafely.net/defrabhicssummary1.html</a>. I have a paper copy</p> <p>c. Strategy for the Horse Industry in England &amp; Wales  <a href="https://www.gov.uk/government/publications/strategy-for-the-horse-industry-in-england-and-wales">https://www.gov.uk/government/publications/strategy-for-the-horse-industry-in-england-and-wales</a></p> <p><b>3. The Health Benefits of Horse Riding</b></p> <p>In 2010, the BHS commissioned the University of Brighton, in partnership with Plumpton College, to research the physical health, psychological and well-being benefits of recreational horse riding in the United Kingdom. The report is available at <a href="http://www.bhs.org.uk/enjoy-riding/health-benefits">http://www.bhs.org.uk/enjoy-riding/health-benefits</a></p> <p>4. <a href="https://www.lantra.co.uk/">https://www.lantra.co.uk/</a> may have useful data.</p> <p>It should be noted that the agriculture data provided by Defra is unlikely to include equestrian activities as most horses in the UK are not classified as an agricultural animal. However, many farms have diversified into livery yards (places where horse owners pay to keep their horses often on a DIY basis) and the income from this is a source of income. The livery costs range from around £200 to £800 a month per horse.</p>

### Responses received to the SA/SEA Scoping Report (February 2018)

#### Q4. As far as you are aware, are there any inaccuracies or anomalies in the data presented?

Number of responses: 17

Respondent	Summary of Response
Stratfield Mortimer Parish Council	No apart from the lack of cross-referencing and surveys of public opinion of the existing situation and their aspirations.
Carter Planning for Mr R.L.A Jones	No.
Burghfield Parish Council	No
Burghfield NDP Steering Group	No
North Wessex Downs AONB	No
Turley Associates for North East Thatcham Consortium	Other than the comments presented above, the Consortium has not identified any specific inaccuracies or anomalies however it is noted that some of the baseline data sources were utilised in support of the adopted Core Strategy and therefore we fully support the Council's commitment to a new and revised evidence base as part of the development of the Local Plan Review
Woolf Bond Planning for Donnington New Homes	We agree that the baseline data is appropriate, however would suggest there may be benefit in separate additional studies considering the benefits of allocating smaller sized sites adjacent to smaller sized settlement as a potential strategy for aiding housing delivery in accordance with the referenced draft NPPF paragraphs. We also consider a detailed review of affordable housing need, specific to West Berkshire District may assist.
Pegasus Planning Group for Donnington New Homes	No – I am unaware of any inaccuracies or anomalies in the data.
Archaeology Team West Berkshire Council	I believe the historic environment section is reasonably accurate – but NB the HER is continually being updated.
Public Transport Team West Berkshire Council	No
Francis Connolly	Not to my knowledge

Respondent	Summary of Response
Ian Campbell	<p>DEFECTIVE DATA? In my comments on Question 1 above I list several omissions in the Local Plan. As this Local Plan does not provide sufficient building land to return house prices over a long period to historic normal levels this conclusion suggests the data used in the Plan preparation is not adequate.</p> <p>You list the West of Berkshire Spatial Planning Framework as one of the relevant documents. It contains two errors</p> <p>ERROR 1. It is not sustainable as it fails to put forward a strategy for a sustainable period of time in the future. In a growth area like West Berkshire a sustainable period of time must extend far beyond 2036.</p> <p>ERROR 2. It promotes a urban settlement in the countryside of 15,000 new homes. The choice of this location is a response to a commercial initiative by a consortium of land owners and builders to build on a site of their, not the four councils choice. The adoption of this land is not the result of a rational approach to a site identification exercise assessing all other sites which may be equally suitable. Without first obtaining independent verification how do the four councils know Grazeley is the right location? This is not possible without the right evidence.</p> <p>UNTESTED My submission to you dated 14 January 2014 (Para. 18) said the basis of selection of countryside sites seemed crude. The new draft Local Plan does not explain the rationale for selecting open countryside sites. Unhappily there is no reason to alter this description. This exclusion is a particular concern relating to the Grazeley option, because a settlement here sets a historic precedent. It will establish the pattern for further growth in the decades after 2036. If the correct long term approach to solving the Thames Valley housing crisis is a major new settlement or urban extension in the open countryside it is especially important that the search area and the criteria for selection the location have proper regard to the long term, sustainability score of all other potential open countryside site locations sufficient to satisfy all reasonable foreseeable future housing needs. See for example the requirements mentioned in para. 6 above. In this sense context Grazeley is untested and therefore premature.</p>
West Waddy ADP for Gerald Palmer Eling Trust	No
Joy Schlaudraff	<p>Yes.</p> <p>Paragraph 55 of the current nppf, lends great scope to West Berkshire. More notice should be taken of it, its spirit for all developments, not just single dwellings. This was not the point of the paragraph spirit.</p> <p>Paragraph 95 of draft nppf, and all the new draft nppf, should be given great weight.</p> <p>It updates us all with the real needs of real people; historic landscape character is all very well, but we need to house people. The land is for the people, not the people for the land</p>
Mid & West Berks Local Access Forum	Not that we are aware of but we are not familiar with a number of the documents listed.
British Horse Society	Not as far as the Society is aware.

**Responses received to the SA/SEA Scoping Report (February 2018)****Q5: Do you agree that these are the key sustainability issues for the West Berkshire Local Plan Review?**

Number of responses: 21

Respondent	Summary of Response
Stratfield Mortimer Parish Council	Please see response to question 3
Carter Planning for Mr RLA Jones	Yes – the key sustainability issue is future housing needs and how they will be met. Perhaps Housing should be a specific Thematic Topic rather than being part of Communities and Well Being. Housing is the single most important issue and yet the paragraph on it does not specifically refer to overall housing needs being met but concentrates on the more detailed matters of income levels, the size of houses and old persons accommodation.
Burghfield Parish Council	Yes: the key sustainability issues for West Berkshire are covered. However, the statement should be more proactive in identifying and addressing emerging changes to some of these issues. For example in relation to waste management there is now a growing awareness of the environmental damage arising from discarded plastics. Our emerging Local Plan should therefore be seeking to discourage the unnecessary use of plastics, to increase the range of plastics that are recycled, and to seek to contain other waste plastics to ensure that they do not reach, particularly, the marine environment.
Burghfield NDP Steering Group	Yes: the key sustainability issues for West Berkshire are covered. However, the statement should be more proactive in identifying and addressing emerging changes to some of these issues. For example in relation to waste management there is now a growing awareness of the environmental damage arising from discarded plastics. Our emerging Local Plan should therefore be seeking to discourage the unnecessary use of plastics, to increase the range of plastics that are recycled, and to seek to contain other waste plastics to ensure that they do not reach, particularly, the marine environment.
North Wessex Downs AONB	No. Landscape pressure should also include climate change and biodiversity should include flooding.
Turley Associates for North East Thatcham Consortium	The Consortium has reviewed the key sustainability issues within Table 2 of the SA Scoping report and save for the comments provided in Question 6 (below) agrees that (based on the baseline data provided) these represent the key sustainability issues for the West Berkshire Local Plan Review. The Consortium acknowledges that any new baseline data may warrant a further review of the key sustainability issues.
Woolf Bond Planning for Donnington New Homes	We agree these sustainability objectives are appropriate.

Respondent	Summary of Response
Pegasus Planning Group for Donnington New Homes	Yes – these are the key sustainability issues for the West Berkshire Local Plan Review. Specifically, increasing the supply of housing and flood risk should be given considerable weight when considering the key sustainability issues. This is because they have been given continuing or increased significance in the revised NPPF.
Archaeology Team West Berkshire Council	<p>Under Landscape, Townscape and Cultural Heritage - Landscape – agree with these Historic Character and Features – what is meant by the word ‘features’? It’s not used anywhere else. Should be replaced by ‘Heritage Assets’</p> <p>This text “The conservation of historic, sites and commons, monuments, battlefields, parks, buildings and Conservation Areas has contributed to the historic, cultural, economic heritage of West Berkshire and helped to sustain the distinctive communities in the District” could be improved – change to “Sustainable management of historic sites (monuments, buildings and structures) and landscapes (battlefields, parks and gardens, Conservation Areas) contributes to the social, cultural and economic vitality of West Berkshire and helps to maintain the distinctive communities in the District”</p> <p>We wonder why the paragraph on nuclear safety is included in this section?</p>
Public Transport Team West Berkshire Council	<p>Yes, I agree that the issues identified are the key sustainability considerations for the Review.</p> <p>In respect of “increased availability of transport links” being identified within the SA Scoping Report as a means of addressing rural social isolation, it is vital that stakeholders appreciate the associated financial implications,</p> <p>In relation to Economy and Infrastructure, in parallel with encouraging use of more sustainable transport modes including buses, train, walking and cycling in particular for urban journeys, close consideration should be given to bidding for significant funds (e.g. Major Roads Network funding to deliver wider ranging development of strategic roads, including new links, so as to take inter-urban and long-distance through traffic further away from West Berkshire’s main settlements, thereby reducing the environmental impact for the District.</p>
Francis Connolly	<ul style="list-style-type: none"> <li>• Generally yes</li> <li>• The Grazely area proposals for 15,000 new homes should be investigated for further development for say up to 25,000 new homes. Cognisant of the good transport links including public transport, (rail and fast bus)</li> <li>• Greater commitment to affordable and starter homes with guarantees on delivery</li> </ul>
Hampshire County Council	We agree that the issues outlined in Appendix 2 are key sustainability issues for the West Berkshire Local Plan Review.
Ian Campbell	Community wellbeing is given as the first sustainable thematic topic. You mention there are a number of factors that are important to enable everyone to fully participate in society, which impact on the housing issue. In particular an ageing population is identified as an issue, with the over 65’s forecast to grow by 59% in the period 2016-2036 and the over 85’s by 148% in the same period, both above the national average. The Plan points to a much increased demand for suitable housing bearing in mind the wish of these age groups to retain independence. It also highlights the impact of the house prices being now amongst the highest in the UK for key

Respondent	Summary of Response
	<p>occupational workers. Finally the Plan notes the high dependency on private transport and the implications of a car dependency on emissions and air quality.</p> <p>SHORT-SIGHTED. This analysis high lights trends in house prices and transport but makes no attempt to quantify any of the outcomes at the end of the Plan period in 2036. What will prices be in 2036? This is a gap. It also fails to look further ahead by another 20 or 40 years to the 2080's. From a sustainability perspective this is a big hole in shrewd thinking.</p> <p>LIMITATIONS It is certain that most predictions in the Plan will be wrong. This is not a criticism. It is a reflection on incomplete base data, and changing circumstances. The prudent way forward is to plan for a range of outcomes, not one selected outcome. Which is why a sustainable local plan must look much further ahead. It must look at long term trends, and solutions. For example 60year potential housing locations and the infrastructure they will demand if dependency on private cars is to be significantly constrained. These long term perspectives are omitted. They are the essence of sustainable planning. If their inclusion exceeds the council's authority then the Council must notify the Government its housing aspirations cannot be achieved without new local powers. Ignoring the dilemma, or hoping that they can be delivered is not sufficient. Other councils are grappling with these challenges. West Berkshire's approach is not apparent. (See Planning Resource, How a group of Oxfordshire councils secured £215m. of government infrastructure cash; 8 February 2018; by Stuart Watson).</p>
Thatcham Town Council	Yes
West Waddy ADP for Gerald Palmer Eling Trust	<p>Yes, particularly the comment on housing, which states that:</p> <p><b><i>'Housing: The higher than average annual income, and house prices now amongst the highest in the UK, have particularly affected key occupational workers and potential first time buyers who are unable to get onto the property ladder. The lack of smaller sized as well as affordable dwellings for predicted lower density households is an issue for the future, particularly in relation to rural areas and in retaining younger local people employed in the District. The increasing number and proportion of older persons and those with long term needs places more demand for housing and accommodation that is available and/or adaptable for different stages of life.'</i></b></p> <p>This emphasises the importance of making housing provision in rural areas particularly for occupational workers; first time buyers and affordable housing. A key tool in identifying how this can be done will be the Settlement Boundary Review, which is still to be undertaken and therefore needs to be a priority.</p>
Joy Schlaudraff	<p>Yes, but there is far too much emphasis on key point 1 which is blocking nearly all development. This needs to be taken away or highly trimmed.</p> <p>Key point 2 is much more to the point regarding current day needs. (Enable provision of housing in sustainable locations, and reduce inequality)</p>
Woolf Bond Planning for Donnington New Homes	We agree these sustainability objectives are appropriate.
Pegasus Planning Group for Donnington New Homes	Yes – these are the key sustainability issues for the West Berkshire Local Plan Review. Specifically, housing for an aging population, increasing the supply of housing, culture (tourism), community uses, and green infrastructure should be given considerable weight

Respondent	Summary of Response
	when considering the key sustainability issues. This is because they have been given continuing or increased significance in the revised NPPF.
Environment Agency	For the above question you should consider adding in another sustainability issue which is conservation and enhancement of river corridors which includes their ecological buffer zones from the top of the river bank. These are usually 8-10 metres in width.
Mid & West Berks Local Access Forum	Yes, they seem appropriate. We particularly endorse the frequent reference to the importance of well-being and the role of green infrastructure. Green Infrastructure might be strengthened by making it an objective in its own right rather than combining it with Biodiversity. The health of the human population is of high significance and the importance of healthy outdoor exercise is increasingly being recognized.
British Horse Society	Yes, they seem appropriate. We note reference to equestrian sporting prowess under ' <b>Landscape, Townscape and Cultural Heritage</b> ' and draw your attention to points above on how data might be collected, if required.

**Responses received to the SA/SEA Scoping Report (February 2018)****Q6: Are you aware of any issues which, in your opinion, should be added, or any that should be removed?**

Number of responses received: 19

Respondent	Summary of Response
Francis Connolly	<ul style="list-style-type: none"> <li>• The Greater Reading Area (West Berks, RBC and Wokingham BC) development should be planned comprehensively</li> <li>• South Newbury development should also consider the adjacent North Hampshire area.</li> </ul>
Ian Campbell	<p>Community wellbeing is given as the first sustainable thematic topic. You mention there are a number of factors that are important to enable everyone to fully participate in society, which impact on the housing issue. In particular an ageing population is identified as an issue, with the over 65's forecast to grow by 59% in the period 2016-2036 and the over 85's by 148% in the same period, both above the national average. The Plan points to a much increased demand for suitable housing bearing in mind the wish of these age groups to retain independence. It also highlights the impact of the house prices being now amongst the highest in the UK for key occupational workers. Finally the Plan notes the high dependency on private transport and the implications of a car dependency on emissions and air quality.</p> <p>SHORT-SIGHTED. This analysis high lights trends in house prices and transport but makes no attempt to quantify any of the outcomes at the end of the Plan period in 2036. What will prices be in 2036? This is a gap. It also fails to look further ahead by another 20 or 40 years to the 2080's. From a sustainability perspective this is a big hole in shrewd thinking.</p> <p>LIMITATIONS It is certain that most predictions in the Plan will be wrong. This is not a criticism. It is a reflection on incomplete base data, and changing circumstances. The prudent way forward is to plan for a range of outcomes, not one selected outcome. Which is why a sustainable local plan must look much further ahead. It must look at long term trends, and solutions. For example 60year potential housing locations and the infrastructure they will demand if dependency on private cars is to be significantly constrained. These long term perspectives are omitted. They are the essence of sustainable planning. If their inclusion exceeds the council's authority then the Council must notify the Government its housing aspirations cannot be achieved without new local powers. Ignoring the dilemma, or hoping that they can be delivered is not sufficient. Other councils are grappling with these challenges. West Berkshire's approach is not apparent. (See Planning Resource, How a group of Oxfordshire councils secured £215m. of government infrastructure cash; 8 February 2018; by Stuart Watson).</p>
Thatcham Town Council	<p>Inclusion of 'Provision for Young People' as a sustainability issue  'Affordable Housing' as a separate issue that is distinct from wider 'Housing'  'Flood Risk' to also incorporate 'Flood Prevention'</p>
West Waddy ADP for Gerald Palmer Eling Trust	No

Respondent	Summary of Response
WYG for Donnington New Homes	<p>Donnington New Homes is supportive of the approach set out in the Sustainability Appraisal Scoping Report and considers that the objectives and issues which have been identified, provide an appropriate way in which to assess the sustainability of policies and proposals in the new local plan. In particular, SA Objectives 1 (to enable the provision of housing to meet identified need in sustainable locations) and 4 (to promote and maximise opportunities for all forms of safer and sustainable travel) are welcomed. Table 2 identifies Key Sustainability Issues for the district. These include specific housing pressures including an ageing population, affordability and the way in which the high cost of housing will result in problems with staff recruitment and retention, affecting not only the local economy but also the vitality and vibrancy of the district</p> <p>Table 2 also identifies that a sustainable transport system can have both economic and environmental benefits. It is believed that the proposed urban extension at Sandleford Park South can make an important contribution to addressing these issues and meeting the SA Objectives. The development of Sandleford Park, as set out in adopted policy CS3 and the Sandleford Park SPD and now being brought forward by planning applications submitted in March 2018, will deliver up to 1,500 new homes and support a range of options for sustainable travel. These include footpaths and cycle routes as well as the phased provision of bus services, ultimately routing through the site from Monks Lane to Andover Road.</p> <p>The proposed southern extension to Sandleford Park will help deliver up to 500 additional homes in a sustainable location, maximising opportunities for sustainable travel and helping meet the objectives proposed in the SA Scoping Report. Its allocation will also mean that about 2,000 dwellings will be delivered at Sandleford Park. <i>[Please see attached document for further details of the site]</i></p>
Joy Schlaudraff	<p>Yes ! See above question 5. What has been termed a key sustainability issue, isn't in fact a sustainability issue. It is an issue of the historic landscape and non-built environment.</p> <p>However, if small major development (between 25-50 houses) were allowed, on all suitable sustainable location sites, in close proximity to Rural Service Centres eg Burghfield Common and Theale, this would sort the housing crisis, before it overcomes us. If looked into many of these sites are, in fact, suitable for development. We just don't like change. Once its happens, we'll adjust to it.</p> <p>If we don't make some areas now semi-rural in development, the housing crisis will overtake us, and we could end up with urban environments, instead of more balanced semi-rural ones, where there is a good balance between nature and houses, with houses in beautiful surroundings. What not to like?</p> <p>Paragraphs 80 – 85 of the new draft nppf, should be given great weight</p>
Woolf Bond Planning for Donnington New Homes	We agree these sustainability objectives are appropriate.
Pegasus Planning Group for Donnington New Homes	No – I am not aware of any issues that should be added or removed.
Environment Agency	For the above question you should consider adding in another sustainability issue which is conservation and enhancement of river corridors which includes their ecological buffer zones from the top of the river bank. These are usually 8-10 metres in width.

Respondent	Summary of Response
Julian Worth	As indicated in response to Qu1, mineral extraction, which impacts significantly on the subjects considered in the Local Plan, notably landscape and water. In general, extraction in new areas should be opposed - alternative sources of aggregates are available, notably through the Theale rail depots, and despoilation of West Berks can be avoided by making greater use of these alternatives
Stratfield Mortimer Parish Council	Please see response to question 3. In particular the need to include other infrastructure requirements such as good broadband and those associated with quickly changing transport trends such as electric and autonomous vehicles. The inclusion of more social attitude surveys would help identify what people actually want as opposed to simply extrapolating existing trends.
Carter Planning for Mr R.L.A. Jones	No.
Burghfield Parish Council	One of the biggest local issues we currently face is the low proportion of affordable housing being constructed, in part because developers are able escape from their responsibilities by claiming lack of viability. This problem needs to be urgently addressed with central Government.
Burghfield NDP Steering Group	One of the biggest local issues we currently face is the low proportion of affordable housing being constructed, in part because developers are able escape from their responsibilities by claiming lack of viability. This problem needs to be urgently addressed with central Government. We should also seek to address the issue of sustainability in the longer term. We can not go on allocating additional land for housing and other development every few years. We need to work locally and nationally to find a way of curbing the need for continuing to build on agricultural and other greenfield land.
North Wessex Downs AONB	Green Infrastructure should not simply be about new routes/links it should also focus on improving existing routes and links within both rural and built environments, such as the river corridor/canal.
Turley for North East Thatcham Consortium	<p>The Consortium considers that the following amendments and additions to the key sustainability issues should be undertaken by West Berkshire Council which, in turn, should result in policies that secure greater economic, social and environmental benefit:</p> <ul style="list-style-type: none"> <li>• Communities and Well Being (Education/ Skills) – There is an acute need for additional Primary and Secondary School places within Newbury and Thatcham</li> <li>• Communities and Well Being (Housing) - In addition to a significant need for both private and affordable housing there is also a greater need for the provision of family housing within West Berkshire as a result of Readings provision of a greater number of flats</li> <li>• Communities and Well Being (Deprivation) – There is a need to positively address the areas of deprivation within the District with an opportunity in Thatcham and Newbury for new development to provide long term benefits</li> <li>• Communities and Well Being (Community Facilities) – There is a need to ensure appropriate community and leisure facilities are provided across West Berkshire in line with projected growth of both housing and the economy.</li> </ul>

Respondent	Summary of Response
	<ul style="list-style-type: none"> <li>• Climate Change and Resource Efficiency (Climate Change) – Significant reductions in Greenhouse Gas emissions can be secured through the location of major new development in sustainable locations which include those that provide the most opportunity for the use of sustainable modes of transportation.</li> <li>• Economy and Infrastructure (Employment Land) – Recent evidence indicates a need for the provision of employment land which in combination with growth in housing could result in an increase in commuting within the District through more sustainable modes of transportation</li> <li>• Economy and Infrastructure (Sustainable Transport) – To reduce reliance on the private car, development should be located in areas whereby key services, facilities and employment opportunities are accessible by sustainable modes of transportation such as train, bus, cycling and walking.</li> </ul>
Planning Transport Team West Berkshire Council	No
Mid & West Berks Local Access Forum	It must be recognized that development should not compromise existing ‘green infrastructure’ without replacement of green infrastructure which is equivalent or better than existing (see the MWBLAF policy above). Focussing on where people live is reasonable but bear in mind that green infrastructure needs to be preserved and improved from where people take exercise which is not necessarily where they live, eg. to public open spaces, such as commons, where many dogs are exercised; from equestrian livery yards where horses are kept. Integration of off-road access within and from new developments by the thoughtful provision of off-road paths where they are required, and in the context of existing open spaces and the rights of way network, will help discourage car use to popular sites.
British Horse Society	<p>It is essential that the horse industry is fully recognized, based on sound evidence, as contributing to the economy, leisure &amp; recreation, health and well-being in all the appropriate local plans <b>IF</b> it is to thrive and continue to contribute to the West Berks economy. Plans need to refer to the provision of equestrian accommodation (from professional establishments which offer training, to livery yards and use of individual fields where field shelters may be required) and places to ride including public paths / bridleways and other open spaces. So often, my experience is that inclusion of equestrians, particularly on new paths, has to be fought for with each application or project even though equestrian needs are recognized in the current West Berkshire Active Travel Plan &amp; Local Development Plan. Walking &amp; cycling is automatically catered for as a hopeful means of alternative travel even without evidence that the provision of cycle paths has significantly increased cycling uptake.</p> <p>It should be noted that the urban fringe is a popular place for equestrian establishments because many horse riders live in urban areas and <u>not</u> at the premises where horses are kept. Thus equestrian establishments on the urban fringe can be under threat from housing developments and need protection. A prime example of an establishment close to an urban location is Hall Place Equestrian Centre located in Tilehurst and on the fringe of the population of Reading (<a href="http://hallplaceequestriancentre.co.uk">http://hallplaceequestriancentre.co.uk</a>). Another is the carriage driving centre at Sheldon Farm, Tidmarsh and Celebration Carriages at Poplar Farm, Cold Ash (<a href="http://www.celebration-carriages.co.uk">http://www.celebration-carriages.co.uk</a>). Such establishments need recognition &amp; protection as they contribute to the economy, employment, health &amp; well-being of the human population.</p>

### Responses received to the SA/SEA Scoping Report (February 2018)

#### Q7: Are the objectives suitable in the context of the West Berkshire Local Plan Review?

Number of responses received: 19

Respondent	Summary of Response
Francis Connolly	As my answer under question 6 for the area south of M4 J11
Hampshire County Council	Yes, the objectives are suitable in the context of the WBLP Review.
Ian Campbell	<p>The Local Plan seems to set in place a a set of sustainability objectives. This I welcome. The snag is the input data is so massive that the reality is what matters more is what is left out, not what is put in.</p> <p>For example, in (Table 3) the column 'Suggested indicators' for the provision of housing 'to maximise the provision to meet identified (demand) the Plan puts forward the number of housing completions as an indicator.</p> <p>TOO RISKY? The simplistic, rational answer is to give back to owners of the countryside the right to develop their land. Although it is not a solution I support the supply of new homes would rocket up because the scarcity is massive. The obvious consequence is that large parts of the open countryside in West Berkshire will be built over in a random way.</p> <p>If national land protection policies remain in place then the new homes following restoration of development rights will only be built on unprotected land. There is plenty of that in the east and south of the council district. A policy on these lines justifies Grazeley, at least in part. But it also justifies other unprotected land areas in the vicinity too. Untested with like locations Grazeley is premature.</p> <p>As the Plan recognises house prices are too high, it is apparent the remedy lies in the hands of the council. This sequential analysis is ignored in the Plan. Without it the next generation must conclude there is another agenda, which remains unstated.</p> <p>EFFICIENT LAND USE. A second SA Objective (4) is 'to promote and maximise opportunities for all forms of safe and sustainable travel. This is a worthy objective with no teeth. To minimise additional private cars on the public road system additional travel modes of similar appeal must be offered. This can only be viable in new settlements of medium and high densities. The fleeting mention of a new settlement policy does not convince me the council have the understanding, let alone the capacity to deliver such a futuristic outcome. Over a long timescale; over a large area; with suitable cross-border governance in place, a sustainable travel solution becomes realistic. It also fulfils section 7, 'to promote and improve the efficiency of land use. Indeed the benefits will, be overlapping for several indicators.</p>
West Waddy ADP for Gerald Palmer Eling Trust	Yes
Joy Schlaudraff	See above 2 answers. No. The first objective isn't. Its overdone, and out of date. See draft paragraphs 80- 85 of the new draft nppf.

Respondent	Summary of Response
Woolf Bond Planning for Donnington New Homes	We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.
Pegasus Planning Group for Donnington New Homes	Yes – these objectives appear suitable in the context of the review.
Energy Team West Berkshire Council	<p>Headline Objective 4 talks about maximising the opportunity for all forms of safe and sustainable travel BUT there is no mention of Low Emission Vehicles (LEV) in any of the detail and this is potentially a massive omission in terms of the way in which existing and future UK strategy / legislation / fiscal incentives are focusing on the adoption of low emission vehicles and associated infrastructure. If not under Objective 4 then LEV and associated infrastructure should be considered under Objective 9.</p> <p>Consider whether the first sub-category under Headline Objective 8 (To reduce energy use and promote the development and use of sustainable /renewable energy technologies) could be further split to reflect the relative importance and differences of these areas, and to allow more specific indicators to be adopted, for example:</p> <ul style="list-style-type: none"> <li>a) To reduce Energy Use (reduce kWh),</li> <li>b) Promote the use of new or preferred energy technologies ('Smart' towns)</li> <li>c) Promote the use of renewable energy generation and energy storage</li> </ul>
Stratfield Mortimer Parish Council	<p>As far as the objectives are concerned it could be argued that some of them are contradictory, but this may well be intentional and acceptable. For example, to promote the opportunity for travel may contradict the aim of conserving and enhancing the natural environment.</p> <p>Of more significance is the objective of promoting and maximising opportunities for all forms of safer and sustainable travel. Surely in sustainability terms should not the first action be to minimise the need to travel? Only when a trip is necessary should it be safe and sustainable.</p> <p>Similarly should not the objective about emissions start off with eliminating the need for unnecessary emissions before going any further?</p>
Carter Planning for Mr R.L.A. Jones	<p>Yes. As stated meeting housing needs is considered to be the single most important objective in the District.</p> <p>We support the Number 1 SA Objective being the provision of housing to meet identified needs in sustainable locations.</p>
Burghfield Parish Council	Yes. It is particularly good to see reference to the need to increase energy storage from renewable technologies (page 24) in ways that may become available from current research into battery power and other areas. This should enable us to store energy harvested from solar power and wind for use during periods of darkness and calm conditions, and may thus substantially increase the proportion of the energy we use that is derived from renewable resources.
Burghfield NDP Steering Group	Yes. It is particularly good to see reference to the need to increase energy storage from renewable technologies (page 24) in ways that may become available from current research into battery power and other areas. This should enable us to store energy harvested from solar power and wind for use during periods of darkness and calm conditions, and may thus substantially increase

Respondent	Summary of Response
	the proportion of the energy we use that is derived from renewable resources. One action we could take now would be to provide facilities for charging car batteries in new developments.
North Wessex Downs AONB	Yes, how the objectives will be achieved is another matter.
Turley for North East Thatcham Consortium	The Consortium has reviewed the SA Objectives and notwithstanding our comments in response to Question 8 considers them to be broadly suitable in the context of the West Berkshire Local Plan Review. As stated above, it is possible that the objectives may need amendment following the identification of new baseline data or evidence further into the Local Plan Review process.
Historic England	We are pleased to see the historic environment included in a Sustainability Objective. However, we would prefer a separate objective specifically for the historic environment/ heritage assets – the natural and historic environments are both significant matters in their own right, worthy of separate consideration. There is a danger that conflating the two could mask effects on one or the other. Whether a separate objective or not, reference should be made to the significance/special interest of the historic environment/heritage assets – the significance/special interest is what is important about heritage assets and what should be conserved or enhanced (as well as the asset itself).
	Yes – these objectives appear suitable in the context of the review.
Archaeology Team West Berkshire Council	‘To protect, and enhance the built and historic environment including heritage assets’ – don’t consider that the word built is necessary as this is a sub-set of the historic environment
Mid & West Berks Local Access Forum	They seem so. We particularly support inclusion of objective H ‘Green Infrastructure & healthy Living’ as a distinct objective.
British Horse Society	Yes

### Responses received to the SA/SEA Scoping Report (February 2018)

**Q8: Are there any other additional objectives that should either be included or are there any that should be removed?**

Number of responses received: 20

Respondent	Summary of Response
Francis Connolly	Not at present
Ian Campbell	<p>The Local Plan seems to set in place a set of sustainability objectives. This I welcome. The snag is the input data is so massive that the reality is what matters more is what is left out, not what is put in.</p> <p>For example, in (Table 3) the column 'Suggested indicators' for the provision of housing 'to maximise the provision to meet identified (demand) the Plan puts forward the number of housing completions as an indicator.</p> <p>TOO RISKY? The simplistic, rational answer is to give back to owners of the countryside the right to develop their land. Although it is not a solution I support the supply of new homes would rocket up because the scarcity is massive. The obvious consequence is that large parts of the open countryside in West Berkshire will be built over in a random way.</p> <p>If national land protection policies remain in place then the new homes following restoration of development rights will only be built on unprotected land. There is plenty of that in the east and south of the council district. A policy on these lines justifies Grazeley, at least in part. But it also justifies other unprotected land areas in the vicinity too. Untested with like locations Grazeley is premature. As the Plan recognises house prices are too high, it is apparent the remedy lies in the hands of the council. This sequential analysis is ignored in the Plan. Without it the next generation must conclude there is another agenda, which remains unstated.</p> <p>EFFICIENT LAND USE. A second SA Objective (4) is 'to promote and maximise opportunities for all forms of safe and sustainable travel. This is a worthy objective with no teeth. To minimise additional private cars on the public road system additional travel modes of similar appeal must be offered. This can only be viable in new settlements of medium and high densities. The fleeting mention of a new settlement policy does not convince me the council have the understanding, let alone the capacity to deliver such a futuristic outcome. Over a long timescale; over a large area; with suitable cross-border governance in place, a sustainable travel solution becomes realistic. It also fulfils section 7, 'to promote and improve the efficiency of land use. Indeed the benefits will, be overlapping for several indicators.</p>
West Waddy ADP for Gerald Palmer Eling Trust	Not that I am aware of.
Joy Schlaudraff	<p>Yes. We should have an objective to do our bit, to help the nation and ourselves supply enough housing.</p> <p>We admit shamelessly that we are one of the UKs most wealthy regions, yet we are appearing to be very selfish in our refusal to put beautiful housing in beautiful surroundings for others, before historic conservation.</p> <p>The first objective should either be removed, or put last on the list of priorities.</p>

Respondent	Summary of Response
Woolf Bond Planning for Donnington New Homes	We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.
Pegasus Planning Group for Donnington New Homes	Yes – given the value of tourism to the economy, a new objective should be added regarding improving and promoting opportunities for tourism in West Berkshire.
Julian Worth	Reduction and elimination of mineral extraction which is a highly damaging and unsustainable activity
Stratfield Mortimer Parish Council	There does not seem to be an overall vision/objective which puts these objectives in context. Without such a context it is difficult to determine if there are any missing objectives because the totality of the aim of the analysis is not stated. However, even without such an overall objective it is evident that specific objectives concerned with happiness, community spirit and health and wellbeing would start to bring into play the aspirations of individuals and communities. It is considered important that the individuals aspirations are considered as they are the ultimate beneficiaries of good policies.
Carter Planning for Mr R.L.A. Jones	No.
Burghfield Parish Council	There should be a stronger statement under objectives about the importance of maintaining and enhancing the local environment. What at present appears under G. does not quite fill the bill because not all that we might wish to conserve is part of our “local distinctive character and identity”. Perhaps begin this section “To conserve and enhance the distinctive and otherwise desirable features of the built, historic and natural environment.....”.
Burghfield NDP Steering Group	There should be a stronger statement under objectives about the importance of maintaining and enhancing the local environment. What at present appears under G. does not quite fill the bill because not all that we might wish to conserve is part of our “local distinctive character and identity”. Perhaps begin this section “To conserve and enhance the distinctive and otherwise desirable features of the built, historic and natural environment.....”.
North Wessex Downs AONB	No. Objectives should always aim to enhance rather than simply conserve and where possible enhance, each development should provide a net gain to landscape character and biodiversity. Pg 25 last few paragraphs state that impacts on the natural environment are heavily dependent on the siting and type of development, it should also include scale and design. Objective G should include environment in the title
Turley for North East Thatcham Consortium	The Consortium does not consider that any additional objectives are warranted however we do have a number of suggested amendments and additions to the sub-objectives and indicators used to assess the impact upon the SA objective. For ease of reference our suggested amendments are placed here acknowledging that this responds to Questions 8 and 9 and which are as follows:

Respondent	Summary of Response
	<ul style="list-style-type: none"> <li>• <b>SA Objective 1-New Sub objective:</b> The Consortium suggests the inclusion of a new sub-objective as follows; <ul style="list-style-type: none"> <li>○ To locate new development in sustainable locations with access to an appropriate range of services and facilities through sustainable modes of transportation <ul style="list-style-type: none"> <li>▪ Suggested Indicators – Allocation in accordance with the Settlement Hierarchy; Services and Facilities accessible by sustainable modes of transportation such as walking, cycling and public transportation</li> </ul> </li> </ul> </li> <li>• <b>SA Objective 2:– New Sub objective:</b> The Consortium suggests the inclusion of a new sub- objective as follows; <ul style="list-style-type: none"> <li>○ To tackle deprivation and inequality in the District <ul style="list-style-type: none"> <li>▪ Suggested Indicators – Proximity to deprived areas; the use of specific measures to tackle deprivation including employment and training opportunities</li> </ul> </li> </ul> </li> <li>• <b>SA Objective 3- New Indicator:</b> The Consortium suggests the inclusion of a new indicator to measures the success of this SA Objective which is as follows: <ul style="list-style-type: none"> <li>○ Number of new primary or secondary school places provided by the proposed development</li> </ul> </li> <li>• <b>SA Objective 4 – New Indicator:</b> In order to encourage and identify new development in the most sustainable locations the Consortium suggests the inclusion of a new indicator within SA Objective 4 which is as follows: <ul style="list-style-type: none"> <li>○ Percentage of new development within walking or cycling distance of a train station</li> </ul> </li> <li>• <b>SA Objective New Indicator:</b> The Consortium suggests the following indicator <ul style="list-style-type: none"> <li>○ Percentage of new development within walking or cycling distance from an existing town centre</li> </ul> </li> <li>• <b>SA Objective 8 – Amendments to existing indicators:</b> In order to align with national policy for sustainable design and construction and to utilise metrics that allow the assessment of a wide range of development types and sizes, the Consortium suggests the following amendments to the indicators associated with SA Objective 8: <ul style="list-style-type: none"> <li>○ % of commercial buildings meeting either BREEAM Very Good or Excellent standard</li> <li>○ % of energy generated from renewable or low carbon energy sources</li> </ul> </li> </ul> <p>The Consortium considers that the amendments below will allow for a more effective implementation of the SA Framework for both policies and proposed allocations however we reserve the right to make further comments once we have reviewed the methodology deployed to update the Settlement Hierarchy and carry out the assessment of each proposed allocation. Key to SA objectives 1 and 4 are the distances utilised to measure the sustainability of a proposed location with respect to key services and facilities. It is also appropriate to acknowledge the potential benefits of multi-modal travel which may involve a short walk to a bus stop and then a longer journey to a key destination but which can be regarded as a sustainable travel choice. Within the SA methodology deployed it will also be important to understand the role of mitigation such as sustainable travel plans which can significantly improve the sustainability of a sites location but which is not apparent should the assessment rely on existing baseline or GIS data.</p>
Pro Vision for Audley Group	<p>With reference to comments on behalf of Audley Group on the Local Plan Review, the Sustainability Appraisal (SA) Objectives should also include supporting sustainable development in the rural areas. The SA objectives do not distinguish between the urban and rural areas despite the different sustainability considerations in these areas.</p>

Respondent	Summary of Response
	<p>The benefit of appropriate development in the rural areas should not be underestimated. Paragraph 28 of the NPPF states that LPAs should:“support economic growth in rural areas in order to create jobs and prosperity by taking a positive approach to sustainable new development.”</p> <p>And“promote the retention and development of local services and community facilities in villages, such as shops, meeting places, sports venues, cultural buildings, public houses and places of worship”.</p> <p>This theme is expanded in the Draft Revised NPPF under the sub-heading “Supporting a prosperous rural economy”.</p> <p>Draft paragraph 85 states:</p> <p><i>“Planning policies and decisions should recognise that sites to meet local business and community needs in rural areas may have to be found outside existing settlements, and in locations that are not well served by public transport. In these circumstances it will be important to ensure that development is sensitive to its surroundings, does not have an unacceptable impact on local roads and exploits any opportunities to make a location more sustainable (for example by improving the scope for access on foot, by cycling or by public transport). The use of previously developed land and sites that are well-related to existing settlements should be encouraged where suitable opportunities exist”.</i></p> <p>The sustainability objectives for the revised local plan, which form the foundation to the revised policy, should therefore be explicit in recognising the different challenges and opportunities in the rural areas of the district.</p>
Woolf Bond Planning for Donnington New Homes	We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.
Historic England	<p>The key emerging local level objectives for the historic environment should be summarised as “conserve and enhance the historic environment”.</p> <p>We welcome West Berkshire Local Plan Review Objective G, although it should also refer to the significance/special interest of heritage assets (what it is that makes them important).</p>
Pegasus Planning Group for Donnington New Homes	No- we are not aware of any additional objectives that should either be included or removed.
Archaeology Team West Berkshire Council	It is dismaying seeing that Culture has the highest number of impacts from other objectives classed as ‘neutral’, or the other way round, the lowest number of positive impacts from the other objectives set out in the SA and the Local Dev Plan. This is noted in the text, but no mitigation is suggested. We should be looking particularly at improving communication between parties involved in delivering each objective so as to manage this as best as we can.
Transport Team West Berkshire Council	No
Mid & West Berks Local Access Forum	Nothing has come to mind so far.

### Responses received to the SA/SEA Scoping Report (February 2018)

**Q9: It may be necessary to rank the objectives to assess options. Do you have any comments on those which hold particular importance?**

Number of responses received: 20

Respondent	Summary of Response
Francis Connolly	Most important is to ensure deliverability
Ian Campbell	<p>The Local Plan seems to set in place a set of sustainability objectives. This I welcome. The snag is the input data is so massive that the reality is what matters more is what is left out, not what is put in.</p> <p>For example, in (Table 3) the column 'Suggested indicators' for the provision of housing 'to maximise the provision to meet identified (demand) the Plan puts forward the number of housing completions as an indicator.</p> <p>TOO RISKY? The simplistic, rational answer is to give back to owners of the countryside the right to develop their land. Although it is not a solution I support the supply of new homes would rocket up because the scarcity is massive. The obvious consequence is that large parts of the open countryside in West Berkshire will be built over in a random way.</p> <p>If national land protection policies remain in place then the new homes following restoration of development rights will only be built on unprotected land. There is plenty of that in the east and south of the council district. A policy on these lines justifies Grazeley, at least in part. But it also justifies other unprotected land areas in the vicinity too. Untested with like locations Grazeley is premature. As the Plan recognises house prices are too high, it is apparent the remedy lies in the hands of the council. This sequential analysis is ignored in the Plan. Without it the next generation must conclude there is another agenda, which remains unstated.</p> <p>EFFICIENT LAND USE. A second SA Objective (4) is 'to promote and maximise opportunities for all forms of safe and sustainable travel. This is a worthy objective with no teeth. To minimise additional private cars on the public road system additional travel modes of similar appeal must be offered. This can only be viable in new settlements of medium and high densities. The fleeting mention of a new settlement policy does not convince me the council have the understanding, let alone the capacity to deliver such a futuristic outcome. Over a long timescale; over a large area; with suitable cross-border governance in place, a sustainable travel solution becomes realistic. It also fulfils section 7, 'to promote and improve the efficiency of land use. Indeed the benefits will, be overlapping for several indicators.</p>
Thatcham Town Council	Housing should be a priority given the national need for more house building.
West Waddy ADP for Gerald Palmer Eling Trust	Housing is of particular importance as it is not only needed to ensure a good standard of living but is an essential requirement. It should therefore be given the highest ranking.
Joy Schlaudraff	<p>Yes !</p> <p>The whole chart (Summary of Key Emerging Local Level Objectives, at end of Appendix 1) has got the priorities back to front !</p>

Respondent	Summary of Response
	<p>The objectives are right in the main, but should read from bottom to top, not top to bottom. They should read:</p> <ul style="list-style-type: none"> <li>Economy and Infrastructure</li> <li>Communities and Wellbeing</li> <li>Climate change and resource efficiency</li> <li>Biodiversity and green infrastructure</li> <li>Landscape, townscape and cultural heritage</li> </ul> <p>Read them through in that order, and it all makes more sense. This would be far more successful and address needs quickly. Agriculturally poor land, in addition, should be allowed to develop, where in sustainable locations, and not have to be a designated official farm, in order to diversify. That is just ridiculous</p>
Woolf Bond Planning for Donnington New Homes	<p>We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.</p>
Pegasus Planning Group for Donnington New Homes	<p>SA Objective 1: 'To enable provision of housing to meet identified need in sustainable locations' should be considered the most important objective. The core tenet of the NPPF is the presumption in favour of sustainable development, as the government attempts to increase the supply of housing. The Local Plan to 2036 will likely have a higher OAN when it is calculated using the government's new standardised method, meaning that more sites will need to be allocated for housing in the Local Plan to 2036. The objective within this, 'To enable provision of housing to meet all sectors of the community, including those with specialist requirements' is also very important. The Draft Revised NPPF reiterates the importance of providing more accessible housing units for older people, and this objective will help this to be achieved. However, it would be helpful if more specific reference could be added to meeting the needs of older people.</p> <p>SA Objective 2: 'To improve health, safety and wellbeing and reduce inequalities' is also a very important objective. As more housing is developed, and areas become denser, it is more important than ever that green space exists to be used by those who do not easily have access to it at home. The objective within this, 'To enable the protection and enhancement of high quality multi-functional green infrastructure across the District' reiterates that protecting existing green space, and creating new, useable green space, is an essential part of new development.</p> <p>SA Objective 3: 'To improve access to education, health and other services' is also an important objective. Given growing populations and the quantity of new housing being developed, community uses are extremely valuable for maintaining existing communities, and bonding new communities together.</p>
Stratfield Mortimer Parish Council	<p>There does not seem to be an overall vision/objective which puts these objectives in context. Without such a context it is difficult to rank objectives as they all contribute differently to different aspirations. With such an overall vision/objective the public may be able to make informed choices. This is not the case at present.</p>

Respondent	Summary of Response
	For instance if the overall object is to be able to sustain a better lifestyle without putting future generations at risk then objective 7 seems to have little bearing.
Carter Planning for Mr R.L.A Jones	The Respondent supports the Council's objectives. In particular the Respondent fully supports the Number 1 objective "To enable the provision of housing to meet identified need in sustainable locations". This should remain the Number 1 objective of the new Local Plan.
Burghfield Parish Council	All ten objectives are very important, and we would not wish to rank them. Indeed, they could be listed in alphabetical order to emphasise that they are not ranked.
Burghfield NDP Steering Group	All ten objectives are very important, and we would not wish to rank them. Indeed, they could be listed in alphabetical order to emphasise that they are not ranked.
North Wessex Downs AONB	Yes as one of the greatest pressure is on the natural environment from housing, objective G should be high on the agenda along with objective H and C, whereby efficient use of existing vacant sites are sought first for development before greenfield sites.
Turley for North East Thatcham Consortium	<p>The National Planning Policy Framework (NPPF) and the proposed revisions both state that the purpose of the planning system is to contribute to the achievement of sustainable development.</p> <p>Paragraph 8 of the proposed Revisions to the NPPF state that the three pillars (economic, social, environmental) of sustainable development should be pursued in mutually supportive ways.</p> <p>With this statement in mind, the Consortium considers that it is difficult to rank the SA objectives in accordance of importance given that all represent the three pillars of sustainable development which must be pursued jointly. As an example, the provision of additional private and affordable housing within the District is an absolute priority social and economic priority yet the SA Scoping Report recognises that this might result in some environmental impacts which, following mitigation could be acceptable to West Berkshire.</p> <p>In practical terms the Consortium recognises that this may require qualitative judgement by the SA Practitioner of the impacts and benefits from any policies or proposed allocations upon the SA objectives. It is therefore of fundamental importance to the SA and Local Plan Review Process that the methodology and conclusions of each key stage of the Local Plan Review are transparent and available for public consultation.</p> <p>Of particular interest to the Consortium will be the methodology deployed by the SA to assess all of the <i>reasonable alternatives</i> (site allocations) to deliver the housing and employment need within the District. There is an established body of case law and best practice to ensure that the SA makes a positive contribution to the selection of the most sustainable options for development within a Local Plan.</p> <p>The Consortium would be pleased to liaise further with West Berkshire Council during the development of the SA Process and Local Plan Review in order to ensure it is robust and in accordance with the necessary guidance and legislation.</p>
Pro Vision for Audley Group	Meeting the accommodation and care needs of the ageing population, which is noted to be higher than the national average in West Berkshire (Sustainability Scoping Report: Table 2, page 17), should be one of the key priorities for the Local Plan Review. Failure to

Respondent	Summary of Response
	prioritise this issue is likely to have a significantly detrimental affect on the overall housing provision, health and social well-being in the district.
Woolf Bond Planning for Donnington New Homes	We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.
Historic England	If it is necessary to rank the objectives to assess options, then we consider that Objective 5 should be accorded particular importance, having regard to statutory requirements regarding listed buildings, scheduled monuments and conservation areas and the clear indications in the National Planning Policy Framework that heritage assets should be conserved and enhanced.
Pegasus Planning Group for Donnington New Homes	SA Objective 1: 'To enable provision of housing to meet identified need in sustainable locations' should be considered the most important objective. The core tenet of the NPPF is the presumption in favour of sustainable development, as the government attempts to increase the supply of housing. The Local Plan to 2036 will likely have a higher OAN when it is calculated using the government's new standardised method, meaning that more sites will need to be allocated for housing in the Local Plan to 2036. SA Objective 9: 'To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change', and the objective within this, 'To sustainable manage flood risk to people, property and the environment' also hold a particular importance. Given the changing climate, and the more frequent occurrence of major flooding events, it is becoming increasingly important to ensure that new development mitigates any potential flood risk to itself, and where possible, reduces flood risk for surrounding areas as well.
Transport Team West Berkshire Council	The Objectives that in my view hold particular importance are: Objective 10: to support a strong, diverse and sustainable economic base which meets identified needs – on the grounds that the ability to deliver against other objectives is likely to be reliant upon economic performance; Objective 1: to enable provision of housing to meet identified need in sustainable locations – on the grounds that ensuring the availability of housing – of suitable quality - in appropriate, accessible places is intrinsically linked to economic performance and social cohesion. Objective 3: to improve accessibility to community infrastructure; Objective 4: to promote and maximise opportunities for all forms of safe and sustainable travel; Objective 2: to improve health, safety and well-being and reduce inequality - Again these objectives are inter-related; the establishment of and continued support for more sustainable modes of transport under Objectives 3 and 4 can contribute to reducing inequality as well as improving access and enhancing economic opportunities.
Mid & West Berks Local Access Forum	The Forum is not convinced that ranking distinct objectives is appropriate as each is important in its own right. However, it might be noted that it is often said that good health is the most important aspect of life and thus objective H should have a high priority.
British Horse Society	We are not sure this is a valuable exercise as each objective is important in its own right.

### Responses received to the SA/SEA Scoping Report (February 2018)

**Q10: Do the indicators provide a relevant measure for the associated objectives? If not, then please suggest additional indicators.**

Number of responses received: 21

Respondent	Summary of Responses
Francis Connolly	Generally yes
Ian Campbell	<p>The Local Plan seems to set in place a set of sustainability objectives. This I welcome. The snag is the input data is so massive that the reality is what matters more is what is left out, not what is put in.</p> <p>For example, in (Table 3) the column 'Suggested indicators' for the provision of housing 'to maximise the provision to meet identified (demand) the Plan puts forward the number of housing completions as an indicator.</p> <p>TOO RISKY? The simplistic, rational answer is to give back to owners of the countryside the right to develop their land. Although it is not a solution I support the supply of new homes would rocket up because the scarcity is massive. The obvious consequence is that large parts of the open countryside in West Berkshire will be built over in a random way.</p> <p>If national land protection policies remain in place then the new homes following restoration of development rights will only be built on unprotected land. There is plenty of that in the east and south of the council district. A policy on these lines justifies Grazeley, at least in part. But it also justifies other unprotected land areas in the vicinity too. Untested with like locations Grazeley is premature. As the Plan recognises house prices are too high, it is apparent the remedy lies in the hands of the council. This sequential analysis is ignored in the Plan. Without it the next generation must conclude there is another agenda, which remains unstated.</p> <p>EFFICIENT LAND USE. A second SA Objective (4) is 'to promote and maximise opportunities for all forms of safe and sustainable travel. This is a worthy objective with no teeth. To minimise additional private cars on the public road system additional travel modes of similar appeal must be offered. This can only be viable in new settlements of medium and high densities. The fleeting mention of a new settlement policy does not convince me the council have the understanding, let alone the capacity to deliver such a futuristic outcome. Over a long timescale; over a large area; with suitable cross-border governance in place, a sustainable travel solution becomes realistic. It also fulfils section 7, 'to promote and improve the efficiency of land use. Indeed the benefits will, be overlapping for several indicators.</p>
West Waddy ADP for Gerald Palmer Eling Trust	<p>The housing indicators are:</p> <ul style="list-style-type: none"> <li>• No of housing completions</li> <li>• Affordable housing completions</li> <li>• Housing mix by type and size</li> </ul> <p>These are not sufficient on their own but need to be measured against housing need for each of the sub areas including the rural areas to ensure that housing provision is distributed across the District, including in rural communities, and that the key sustainability issues arising from a lack of housing for key occupational workers; first time buyers and affordable housing are addressed.</p>

Respondent	Summary of Responses
Joy Schlaudraff	<p>Yes and no.                      The lower objectives should have a higher priority as before said, and the objectives should be ranked differently.                      Bottom to top.                      And the first objective should be left off, as we are giving it far too great place.</p>
Woolf Bond Planning for Donnington New Homes	<p>We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.</p>
Pegasus Planning Group for Donnington New Homes	<p>Many of the indicators do provide a relevant measure for the associated objectives. However, some objectives do require additional indicators if they are to be judged correctly.                      Objective 2(3), 'To enable the protection and enhancement of high quality multifunctional green infrastructure across the District' currently does not include an indicator regarding allotments. It is suggested that an additional indicator is added for this objective, which states 'Number of allotments'. This is because allotments are extremely valuable for many people, especially those who are older, who do not have easy access to a garden. As densities increase, the demand for allotments is rising as people seek an area of green space that they can make their own. They are an important part of the overall provision of Green Infrastructure in West Berkshire, and should be considered as such.</p>
Environment Agency	<p>Under objective 9: "To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change". There is sub heading called "To sustainably manage flood risk to people, property and the environment". There are indicators for the objective concerning flood risk. One of these indicators says,                      "No of planning permissions granted contrary to the advice of the Environment Agency on flood defence grounds"                      We think this should read:                      "No of planning permissions granted contrary to the advice of the Environment Agency on flood risk grounds"                      This objective should also include an indicator for no inappropriate development within the floodplain. This follows the guidance for flood risk in the Planning Practice Guidance. Table 3 'Flood Risk vulnerability and flood zone compatibility shows which development vulnerability category from table 2 should not be permitted in certain flood zones.                      There should also be an indicator about the avoidance of development in the Flood Zones. This ties in with the requirements of the flood risk sequential test.                      Under objective 5 another indicator to add in should be "conserve and enhance ecological /wildlife corridor value of watercourses and their ecological buffer zones."</p>
Energy Team West Berkshire Council	<p>Headline Objective 1 should be more than just about meeting identified need through the number of affordable homes completed.                      This indicator focuses on the ability for individuals to buy (capital) the house without considering if they can afford to 'run' (revenue) the house. The area of West Berkshire whilst considered affluent still has a number of fuel poverty areas and with increasing energy prices, alongside slow wage growth, this issue could potentially worsen across the district without the proper strategic intent and planning. The WBLP review would not be expected to provide the solution on its own but is an important 'tool' as part of the solution.</p>

Respondent	Summary of Responses				
	<p>As indicated under the response to question 7, there should be an indicator included under Objective 4 (or Objective 9) that measures the adoption and use of Low Emission Vehicles and their associated infrastructure. For example:                      “Number of EVs registered in WBC”                      “Number of public charging points available in West Berks”                      Under Objective 8, the indicator ‘Megawatts generated from renewable energy sources’ needs clarification. Is this associated with housing developments or an indicator for the district in its own right? If associated with housing developments then it could be argued that this indicator favours larger developments in that it would be easier for them to achieve any target just through the adoption of one technology such as solar PV. Depending on whether this is a district or housing development indicator, it may be more useful to put such an indicator into context by changing the terminology to something along the lines of:                      “% of total energy consumption for the district coming from local renewable energy generation” OR                      “% of the total energy consumption for the housing development coming from on-site renewable energy generation”.</p>				
Julian Worth	Reducing tonnage of minerals extracted in West Berks, year-on-year				
Stratfield Mortimer Parish Council	<p>Picking up the point from the previous question, if there was an explicit overall objective it would be a lot easier to see if the indicators were relevant to not only the particular objective but to the overall context of the analysis. Some of the objectives do not seem to be consistent across the page. For instance</p> <table border="0" data-bbox="568 660 2148 1335"> <tr> <td data-bbox="568 660 873 1335"> <p><b>7: To promote and improve the efficiency of land use.</b></p> </td> <td data-bbox="873 660 1164 1335"> <p>To maximise the use of previously developed land and buildings where appropriate</p> </td> <td data-bbox="1164 660 1478 1335"> <ul style="list-style-type: none"> <li>• Percentage of major residential developments completed at: i) less than 30dph; ii) between 30 and 50 dph; iii) above 50 dph</li> <li>• Percentage of new or converted dwellings and non-residential developments on previously developed land</li> <li>• Area of registered brownfield sites suitable and available for residential development</li> </ul> </td> <td data-bbox="1478 660 2148 1335"> <p><b>Material Assets Soil</b></p> </td> </tr> </table>	<p><b>7: To promote and improve the efficiency of land use.</b></p>	<p>To maximise the use of previously developed land and buildings where appropriate</p>	<ul style="list-style-type: none"> <li>• Percentage of major residential developments completed at: i) less than 30dph; ii) between 30 and 50 dph; iii) above 50 dph</li> <li>• Percentage of new or converted dwellings and non-residential developments on previously developed land</li> <li>• Area of registered brownfield sites suitable and available for residential development</li> </ul>	<p><b>Material Assets Soil</b></p>
<p><b>7: To promote and improve the efficiency of land use.</b></p>	<p>To maximise the use of previously developed land and buildings where appropriate</p>	<ul style="list-style-type: none"> <li>• Percentage of major residential developments completed at: i) less than 30dph; ii) between 30 and 50 dph; iii) above 50 dph</li> <li>• Percentage of new or converted dwellings and non-residential developments on previously developed land</li> <li>• Area of registered brownfield sites suitable and available for residential development</li> </ul>	<p><b>Material Assets Soil</b></p>		

Respondent	Summary of Responses
	<p>In this example it would appear that the objective is about using previously developed land. However one of the indicators is about densities which has nothing to do with previously developed land. Either the objective should explicitly include a mention of increased densities or the density indicator should be removed.</p> <p>Some of the items in the table are not fully related. For instance</p> <ul style="list-style-type: none"> <li>• Percentage of development incorporating water conservation and/or water efficiency measures</li> <li>• New Developments with SUDs installed (EA)</li> </ul> <p>To reduce water consumption and promote reuse</p> <p>The use of SUDs as an indicator is only marginally relevant as SUDs normally relate to the discharge of surface water not consumption by individuals.</p> <p>This example also illustrates a more general point that many of the indicators measure inputs or outputs as opposed to outcomes. Hence it is perfectly possible to measure the number of dwellings with water efficiency measures installed (an input measure) but how these are used may mean that they are just encouraging people to use more water. A better measure would be simply to measure the amount of water consumed in the District (an outcome measure). While it is recognised that moving to outcome measures does involve a different mind-set from that employed traditionally to derive indicators or measures research has shown that there are marked benefits from doing so.</p> <p>Another example is objective 9 where the number of SUDs schemes on new developments is a measure. All this does is measure the ‘capping’ of a problem and does nothing to address the outcome which would be for less dwellings overall to be subject to flooding by 2036. Without such outcome measures there is virtually no challenge to policy makers to consider what policies can be derived which make overall improvements to the life of all residents.</p> <p>In objective 3 which is about accessibility to community infrastructure should there not be an indicator which covers cultural venues to create a measure for the new culture strategic objective? In the same section why is it only new residential development that is mentioned in terms of accessibility? Surely the provision of new facilities to assist all the residents of an area is more important. Indeed restricting any indicator to new development effectively creates a double standard and should be avoided. Another example is objective 9 where many of the indicators are all about new developments when the whole of the area should be considered.</p>
Carter Planning for Mr R.L.A. Jones	Yes
Burghfield Parish Council	The list looks pretty comprehensive.

Respondent	Summary of Responses
Burghfield NDP Steering Group	The list looks pretty comprehensive.
North Wessex Downs AONB	Think the indicators suggested will provide a basic baseline for the future SA/SEA
Turley for North East Thatcham Consortium	Please see the Consortiums response to Question 8.
Pro Vision for Audley Group	With reference to the National Planning Policy Guidance (NPPG) (NPPG Paragraph: 037 Reference ID: 3-037- 20150320), it would be appropriate to amend the ‘suggested indicators’ for SA Objective 1 (To enable provision of housing to meet identified need in sustainable locations) as follows: “Number of housing units for older people <b><i>including Use Class C2</i></b> ” (our emphasis).
Woolf Bond Planning for Donnington New Homes	We welcome the inclusion of an objective relating to housing that acknowledges the need for joint working with other Berkshire authorities, the need to meet objectively assessed need for market and affordable housing up to 2036 and the need to provide a mix of house sizes, types and tenures.
Pegasus Planning Group for Donnington New Homes	Yes - the indicators do provide a relevant measure for the associated objectives.
Transport Team West Berkshire Council	Yes, the indicators appear to provide relevant means of measurement against the identified objectives.
Mid & West Berks Local Access Forum	We think that the indicators under 2 (To enable the protection and enhancement of high quality multi-functional GI ) could be strengthened to measure the value of public rights of way and public open space to communities. We might work with the Council to identify indicators. So, often, these facilities are the Cinderella but they provide places for healthy outdoor exercise, free at the point of use and thus available for a wide range of socio-economic groups and for a wide variety of activities (walking, dog walking, horse riding, jogging, cycling, carriage driving).
British Horse Society	An indicator needs to be included which measures the importance to the equestrian community of public rights of way and open spaces open to equestrians (eg. commons) and any other places open to them so that these important facilities do not get overlooked in future development plans.

## Responses received to the SA/SEA Scoping Report (February 2018)

### Q0: Other comments

Number of responses received: 7

Respondent	Summary of Response
Transport for London	Thank you for consulting Transport for London (TfL). I can confirm that TfL has no comments to make on the scoping reports
Wokingham Borough Council	Thank you for consulting Wokingham Borough Council on the Local Plan Review to 2036 Scoping Report and SA Scoping Report for West Berkshire. WBC has reviewed these documents and does not wish to make any comment at this stage. We welcome this local plan review, and look forward to future progress on the Sustainability Appraisal and future consultations for the new plan.
Historic England	General advice on Sustainability Appraisal and the historic environment is set out in Historic England's Advice Note 8 "Sustainability Appraisal and Strategic Environmental Assessment": <a href="https://www.historicengland.org.uk/images-books/publications/sustainability-appraisal-and-strategic-environmental-assessment-advice-note-8/">https://www.historicengland.org.uk/images-books/publications/sustainability-appraisal-and-strategic-environmental-assessment-advice-note-8/</a> .
Ian Campbell	<p>SUMMARY</p> <p>It is not simple in a council area with a strong growth trademark, where past policies are rooted in long running council wishes to slow growth and stop change in the open countryside, to strike an enduring balance between the two opposing desires. Long entrenched resistance to change results in shortages of homes at affordable prices. Priorities must change.</p> <p>This draft Local Plan fails to address the core issues. It is my opinion Thames Valley growth pressures will continue far into the future. Falls in immigration will not off-set the impact of an ageing population or the magnetic effect of London, now a city of world appeal. Central government will come under increasing pressure to force the building of many more new, affordable homes to manage the numbers of alienated young, frustrated unsuccessful first time buyers urgently, currently unable to follow their parents example. This frustration will grow and impact on future housing policies.</p> <p>West Berkshire, and its neighbours in the western region need to be match or be ahead of Whitehall thinking. Looking ahead for example, what happens to places like West Berkshire when interest rates start to return to historic norms? And what happens when places like London, Slough and Surrey run out of unprotected land? Where will their overspill go? What happens if longevity increases? What happens if high levels of immigration continue?</p> <p>These are the questions a sustainable local plan must ask and answer. To produce a sustainable Local Plan for a target area like West Berkshire with lot of well-located unprotected land this Local Plan must, as the Duty to Cooperate expects, must look far ahead and seek ways of helping neighbours whilst profiting in the process locally too.</p> <p>If the West of Berkshire Spatial Framework is the first phase of a regional masterplan for central Thames Valley, and this can be demonstrated to the Inspector the Plan may be sound. Are all the elements tested? Is there evidence to support them? It is not apparent in this Local Plan.</p>

Respondent	Summary of Response
	<p>There is way forward. The SHMA figures, if rolled forward suggest at least 200,000 new homes will be needed in the Thames Valley over the 60/70 year's ahead. This means finding a location in the Thames Valley for a new Milton Keynes with local support. With foresight this is possible. To win local support some policy changes will be necessary. They can be summarised as follows</p> <ul style="list-style-type: none"> <li>~ a plan for the period 2036-2086;</li> <li>~ cross-party politically support locally, to match the Westminster consensus;</li> <li>~ cross-border cooperation regionally;</li> <li>~ agreement that nationally protected areas remain unchanged;</li> <li>~ future major new development will be directed to unprotected countryside;</li> <li>~ new settlements or urban extensions will be medium and high density, highly accessible by public transport with low or very low private car ownership.</li> <li>~ existing land owners cooperation is vital. This will be achieved by ensuring loss of longterm development rights causes no financial loss, and the value of existing use rights will increase through improvements to the compulsory purchase code.</li> <li>~ land value capture is included in the next Local Plan., together with an enhanced compensation code for land owners and introduction of financial compensation to local residents in host areas.</li> </ul> <p>Those who say this approach fails to address the short term supply deficit do not understand the market. Existing land owners, seeing a new political consensus on future land supply, and no prospect of policy U-turns will accelerate existing land supply pipelines as the competitive impact of a new supply sources becomes clear.</p> <p>Appendix provided as part of the representation which sets out some details about the respondent and their background. *Not made publicly available.</p>
Natural England	<p>Natural England would like to would like to see specific reference made to water quality of the River Kennet SSSI and the River Lambourn SSSI/SAC designated sites within the document.</p> <p>These designated sites should be given particular consideration (and be monitored through the appropriate indicators), due to their sensitivity to high phosphorus concentrations and subsequent vulnerability with regard to package treatment plant and septic tank usage.</p> <ul style="list-style-type: none"> <li>• Green Infrastructure should focus on improving existing routes and links within both rural and built environments, and not just creating new ones. Existing green linear features should be considered such as river corridors and existing canal networks and enhanced wherever possible, thus contributing to the council's commitment to providing biodiversity net gain.</li> <li>• In the last few paragraphs of Page 25, it is stated that impacts on the natural environment are heavily dependent on the siting and type of development. This should also reference scale and design of developments (with regards to potential effects on both biodiversity and landscape).</li> </ul>
Bracknell Forest Borough Council	<p>Part of your Borough is seemingly within 5 km and within 7km of the Thames Basin Heaths SPA. The implications are that developments up to 7km may need to provide mitigation measures. It is advisable that you contact Natural England (NE) on this matter. It should be noted that the Habitat and Species Regulations have been updated, with the most recent regulations published in 2017. Bracknell Forest Council is currently agreeing a methodology with NE regarding the air quality assessment which will be</p>

Respondent	Summary of Response
	<p>undertaken as part of the HRA for the Bracknell Forest Local Plan which will include an in-combination assessment. We look forward to sharing information on this issue in the future with West Berkshire Council, as appropriate.</p> <p>Please note the 'Bracknell Forest Comprehensive Local Plan' (referred to in Appendix 1 of the SA) has now been renamed the 'Bracknell Forest Local Plan' (BFLP) and provides the long term spatial vision and development strategy for the Borough up to 2034. A consultation on the draft BFLP, including draft SA, draft HRA and draft Infrastructure Delivery Plan took place during February/March this year. It is hoped to arrange a Duty to Co-operate meeting with the relevant bodies to discuss issues raised, over the next couple of months.</p> <p>We welcome the opportunity for on-going discussion relating to the preparation of the above documents, and would be willing to attend meetings, workshops, respond to consultation material as appropriate, and ask to be kept informed of any future consultations.</p>
Forestry Commission, South East and London Area Office	<p><b>Local Plans and ancient woodland – Forestry Commission approach</b></p> <p>The Forestry Commission is not in a position to input into the consultation process for Local Plans. However, the information below is provided to assist you in assessing the appropriateness of sites for future development, and to highlight opportunities for achieving your renewable energy obligations.</p> <p><b>A summary of Government policy on ancient woodland</b></p> <p><a href="#">Natural Environment and Rural Communities Act 2006</a> (published October 2006).</p> <p><b>Section 40</b> – “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.</p> <p><a href="#">National Planning Policy Framework</a> (published March 2012).</p> <p><b>Paragraph 118</b> – “planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss”.</p> <p><a href="#">National Planning Practice Guidance</a> – Natural Environment Guidance. (Published March 2014)</p> <p>This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission’s role as a <a href="#">non-statutory consultee</a> on “<i>development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) (as defined and recorded in <a href="#">Natural England’s Ancient Woodland inventory</a>), including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings</i>”</p> <p>It notes that <b>ancient woodland is an irreplaceable habitat</b>, and that, in planning decisions, <b>Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework</b>. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.</p> <p><a href="#">Standing Advice for Ancient Woodland and Veteran Trees</a>. (Published April 2014)</p> <p>The Forestry Commission has prepared joint <a href="#">standing advice</a> with Natural England on ancient woodland and veteran trees which we refer you to in the first instance. This advice is a material consideration for planning decisions across England. It explains the definition of ancient woodland, its importance, ways to identify it and the policies that relevant to it. It also provides advice on how to</p>

Dear

**West Berkshire Local Plan Review (LPR) to 2036  
Regulation 18 Consultation 9 November - 21 December 2018**

West Berkshire Council is reviewing its Local Plan to cover the period up to 2036. Between February and March 2018 we invited comments on the proposed scope and content of the Review as the first part of our consultation under Regulation 18 of the Town and Country Planning (Local Development)(England) Regulations 2012. The comments and suggestions we received are summarised in our [Consultation Statement](#) and will be taken forward in the development of the spatial strategy and both strategic and local policies as appropriate.

We are now progressing the LPR with a second round of Regulation 18 consultation which also takes into account revised national policy (as set out in the [National Planning Policy Framework](#) that was published in July 2018) and the revisions made to parts of the national [Planning Practice Guidance](#).

We are now seeking your comments on our proposed:

- vision for the LPR;
- revision of the existing spatial areas;
- methodology for reviewing the existing settlement hierarchy;
- criteria for the settlement boundary review; and
- update of our assessment of existing Local Plan policies.

This will be followed up with another consultation in the summer of 2019 with the publication of our assessments of sites that have been submitted to us as part of the Housing and Economic Land Availability Assessment (HELAA).

We would welcome your feedback on our proposals which are set out in our [Consultation Paper](#). Your comments should be submitted during the six week consultation period, running from Friday 9 November to 4:30pm on Friday 21 December 2018. They can be made:

**Online:** using the Council's [Local Plan Consultation Portal](#):  
This is the easiest and most efficient way to make your representations.

or by **Representation Form**: available electronically on the [Council's website](#) and through all libraries in the District and in hard copy at West Berkshire Council Offices, Market Street, Newbury, RG14 5LD between the hours of 8:30am and 5:00pm on Mondays to Thursdays and 8:30am and 4.30pm on Fridays. Completed representation forms can be returned:

- by email [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk); or
- by post to the Planning Policy Team, Development and Planning, West Berkshire District Council, Market Street, Newbury. RG14 5LD

All comments must be received by **4:30pm on Friday 21 December 2018**. Please note that all comments will be made available to the public to view and therefore cannot be treated as confidential.

If you have any queries relating to this consultation, please do not hesitate to contact the Planning Policy Team at [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk) or 01635 519111.

Yours sincerely

Gary Lugg  
Head of Development and Planning

*You have been sent this letter because you are either a statutory consultee, have previously made representations on the West Berkshire Local Plan or have asked to be kept informed. If you no longer wish to be contacted please let us know.*

## West Berkshire Local Plan Review (LPR) to 2036

### Consultation Statement for

### Regulation 18 consultation (undertaken from 9 November - 21 December 2018)

June 2019

#### 1. Introduction

- 1.1 The Council is currently reviewing its Local Plan to cover the period to 2036. We are still in the early stages of this Review (LPR) which is known as the Regulation 18 stage.
- 1.2 Between February and March 2018 we invited comments on the proposed [scope and content of the Local Plan Review](#) (LPR) as the first part of our consultation under Regulation 18 of the Town and Country Planning (Local Development)(England) Regulations 2012. The [comments and suggestions](#) we received as part of that work continue to inform the development of the spatial strategy and both strategic and local policies as appropriate. They also gave us an important steer as to what our priorities should be.
- 1.3 As part of the development of the Review we undertook a [second round of Regulation 18 consultation](#) from 9 November to 21 December 2018. This took into account revised national policy (as set out in the [National Planning Policy Framework](#) that was published in July 2018<sup>1</sup>) and the revisions made to parts of the national [Planning Practice Guidance](#).
- 1.4 We sought comments on our proposed:
- vision for the LPR;
  - revision of the existing spatial areas;
  - methodology for reviewing the existing settlement hierarchy;
  - criteria for the settlement boundary review; and
  - update of our assessment of existing Local Plan policies.
- 1.5 This statement sets out a summary of the comments received to this consultation and the Council's response to them<sup>2</sup>.

---

<sup>1</sup> In February 2019 the Government published another [revised version of the NPPF](#). This contains minor clarifications to the NPPF that was published in July 2018. None of these clarifications would materially alter any of the responses we received as part of Regulation 18 consultation.

<sup>2</sup> Please note that the Council is not commenting on the suitability or otherwise of any of the individual sites being promoted through the Housing and Economic Land Availability Assessment (HELAA) at this stage. The HELAA will be published later this year.

## 2. Regulation 18 Consultation

- 2.1 In all, there were 123 respondents to the consultation with some respondents commenting on all questions and others only commenting on those questions of specific interest to them. There were 438 comments made in total.

Question	Number of comments
Q1: Vision	81
Q2: Spatial areas	85
Q3: Settlement hierarchy	71
Q4: Settlement boundaries	70
Q5: Updated policies	61
Other comments	71
<b>TOTAL COMMENTS</b>	<b>438</b>

- 2.2 A summary of the respondents' comments to each question is provided below with the full responses available to view on our [Consultation Portal](#)
- 2.3 It is important to make clear that all comments made have been noted and will be given full consideration at the appropriate stage in the LPR.

## 3. Q1: Do you agree with our proposed Vision?

### Summary of comments received:

- 3.1 In general there was broad support for the Vision and its inclusion as a context for the Strategic Objectives was welcomed. Opportunities were highlighted where the Council could work with town and parish councils in order to deliver the LPR.
- 3.2 Our neighbouring authorities were broadly supportive of the Vision. Further expansion on what new housing would bring to the District was considered to be beneficial and consideration of the impact that new housing development in particular may have on the infrastructure of adjacent authorities. The Royal Borough of Windsor and Maidenhead was the exception, expressing concern that our approach would not be compliant with the NPPF because it may not meet the appropriate needs of all relevant households, particularly in relation to in migration, economic development and constrained housing and employment market areas elsewhere.
- 3.3 The importance of setting and considering the Vision in the context of the wider area both in terms of housing, employment and also infrastructure was highlighted by others, as was the consideration of other strategies. The objectives of the Thames Valley Berkshire Local Enterprise Partnership (LEP) Strategic Economic Plan (SEP), for instance, highlights the critical importance

of addressing housing availability and affordability to support local economic growth.

- 3.4 Whilst supporting the Vision, some respondents felt it was too broad and generic and should be more specific to West Berkshire. Some particular suggestions included highlighting the AONB and the challenges facing young people in the rural villages to the west of the District.
- 3.5 A recognition of the rural nature of the District and the challenges that brings was felt to be important generally and that flexibility should be introduced into the Vision to allow for that.
- 3.6 Some of those in the development industry felt that the housing needs of the District were the major issue to be addressed through the Local Plan and that the need to accommodate these should be prioritised and set out at the beginning of the Vision rather than the current economic focus in the first paragraph. In addition, providing 'sufficient housing' was not considered to be an aspirational aim by one respondent.
- 3.7 The fact that the vision should be implemented flexibly, accepting that housing needs can be met from a variety of sources including both large and small sites, with every settlement within the hierarchy capable of making a meaningful contribution towards the District's overall housing needs was stressed by those in the development industry. The role of previously developed land was highlighted by some and a bolder vision with regard to these sites suggested. There were also a variety of promoters who put forward specific sites which they considered would help achieve the Vision.
- 3.8 More specific wording and clarifications on particular issues were requested, particularly from those relating to environmental issues. These included matters such as water quality and pollution. Whilst welcomed by some, the reference to 'outstanding' in relation to the District's landscape and historic assets was felt to be misleading and a more measured approach was considered to be more appropriate. Some disappointment was expressed at the omission of particular wording such as 'sustainable development' and 'landscape led'.
- 3.9 Whilst the encouragement given to economic development was welcomed, it was put forward that the current wording suggests a focus upon the establishment of new businesses within the area, rather than a recognition of the needs of existing businesses which it was argued should be allowed to grow and adapt to changing circumstances, in order to remain prosperous.
- 3.10 Although not directly consulted upon, the updated Strategic Objectives did generate some comment. The importance of them flowing from the Vision was stressed. Specific amendments to the wording of a few objectives were proposed.

### **Council response:**

- 3.11 The consultation responses indicated broad support for the inclusion of a Vision and this is welcomed. Providing an overall context for the Local Plan Review (LPR) strategic objectives, the development of a Vision had arisen as a result of the responses to the consultation on the LPR Scoping Report in February / March 2018.
- 3.12 It is acknowledged that the main concerns of consultees related to the actual detail of the Vision. The Council therefore intends to undertake further work to see if we can strike a balance between making it more West Berkshire specific, picking up some of the particular issues raised, whilst still retaining a strategic outlook.
- 3.13 Encouragingly, there were plenty of opportunities highlighted where the Council will be able work with town and parish councils to deliver the LPR and these will be actively pursued.
- 3.14 More specific wording on particular issues was requested and some tightening up of the draft text, which is helpful. We intend to look at these in detail and amend the draft text as appropriate.
- 3.15 We will also look at the relationship of the Vision to the Strategic Objectives to ensure it is clear. In addition, although not directly consulted upon, the updated Strategic Objectives generated some useful comment and so will be considered again in this context.

### **4. Q2: Do you agree with our proposed revision of the existing spatial areas?**

#### **Summary of comments received:**

- 4.1 Although about a quarter of respondents did not express an opinion either for or against our proposed revision of the spatial areas, of those that did, comments were divided. Whilst most comments were accepting of the AONB and Newbury/and Thatcham spatial areas, most of the responses that were against any revision related to the proposed change to combine the existing Eastern Urban Area and Theale with the East Kennet Valley. Local communities and site promoters who felt that would be directly affected by such a change were particularly concerned. AWE also continued to express concern about potential development at Grazeley.
- 4.2 It was noted by a few respondents that other than their geographical locations adjacent to each other, there was little synergy between the current Eastern Area and the East Kennet Valley. The Eastern Area is very urban in nature with much, but not all, of the undeveloped land forming part of the North Wessex Downs AONB. It has a strong functional relationship with the rest of Reading. By contrast, the East Kennet Valley is characterised by a number of smaller villages located along transport routes and in the wider countryside.

Many of these areas have a stronger relationship with Newbury and Thatcham.

- 4.3 The parish councils in the Kennet Valley were concerned that the East Kennet Valley would become, in effect, a suburb of Reading. They felt each area and community required different approaches to both development and infrastructure delivery. Despite this, one respondent from the development industry felt that combining the two areas would have actually no practical effect on the constraints to development. Whilst the Eastern Area was constrained by the AONB, there still remained opportunities for sustainable development on the edge of the existing settlements. It was noted that the constraints associated with AWE remained, whether the East Kennet Valley was combined with the Eastern Area or remained separate. It was felt that the creation of a new Eastern Spatial Area would provide greater justification for the consideration of a large-scale strategic development at Grazeley. Considered as part of a wider Eastern Area, the new housing could contribute towards housing need within the current Eastern Area and within the Greater Reading Area Urban Area to which it would be well related. It was stressed though that whilst this might be a sustainable option for growth within West Berkshire District, it should not be pursued at the cost of further small-scale development within the Calcot/ Tilehurst/Purley area.
- 4.4 There was more support for the proposed revision from other respondents not directly affected. Cold Ash Parish Council and Thatcham Town Council questioned whether the more rural areas surrounding the larger towns should be included in the Newbury and Thatcham area as this could lead them being treated more in an urban than a rural context. A suggestion was made that Cold Ash should be included in the AONB spatial area instead. Thatcham Town Council also thought the Newbury and Thatcham spatial area should include the land at Lower Way Farm.
- 4.5 General support was expressed for the identification of the AONB spatial area although concern was raised that the area still needs to thrive and that the vitality of rural settlements across the District should be supported, regardless of whether there was any large scale development at Grazeley. The importance of the spatial strategy containing enough flexibility to enable small to medium sites to be allocated and delivered in the short-term was stressed. It was felt that policies relating to this spatial area should recognise the diversity in the character and form of settlements and modest growth that would support existing settlements such as at Hungerford be encouraged. Streatley was used as a particular example where development has not occurred despite its proximity to Goring which is classed as a larger village in the South Oxfordshire hierarchy.
- 4.6 There were also some respondents, particularly from the development industry, who thought that the division of the District into spatial areas was both complicated and unnecessary and that simply having a clear settlement hierarchy applied across the District was sufficient. Concern was expressed that the Council would arbitrarily set targets for the various spatial areas with no evidence to support the intended split between them. They stressed that the benefit of using a spatial hierarchy approach only was that there would

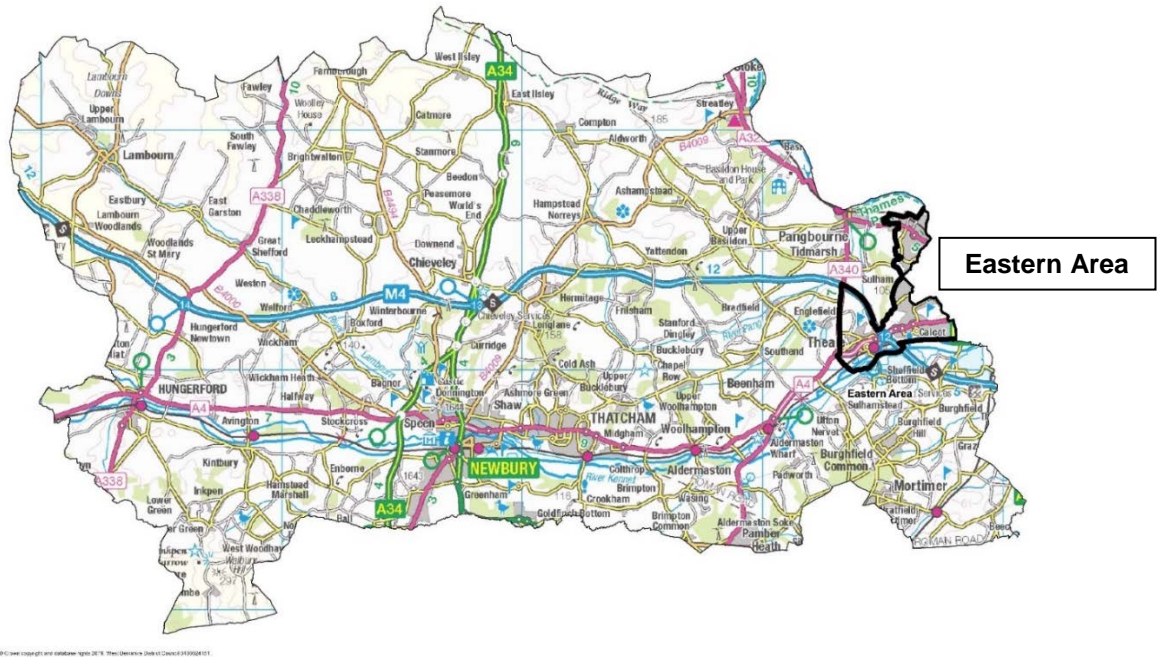

then be clarity where unmet needs could not be met within a given tier as they would be distributed to another tier in the hierarchy starting from the top-down. Unmet needs from any given tier could be met in the most sustainable locations first. It was noted that this approach was relatively standard across the country, including those authorities which include large areas of Green Belt and AONB. The respondent felt there could then be no claim that needs could not be met unless it could be categorically shown that no acceptable sites existed within sustainable settlements.

### **Council response:**

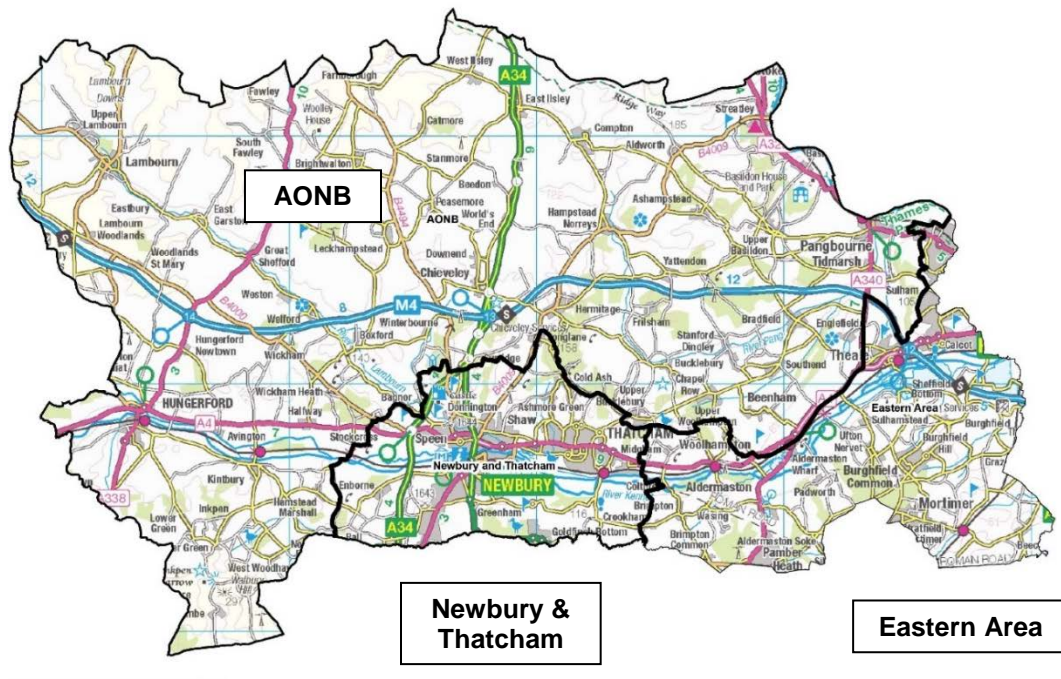

- 4.7 It is fair to say that the proposed amalgamation of the Eastern Area with the East Kennet Valley created most discussion. The disparities between the two areas were highlighted and genuine concern was raised that the individual identities of each would be lost if they were combined.
- 4.8 In taking these issues forward it is important to make clear that the conservation and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's towns, villages and countryside is key to our spatial approach and remains one of the strategic objectives of the LPR.
- 4.9 What is also important to recognise is that there are significant differences in character within all of the spatial areas – whether existing or proposed. The Newbury and Thatcham spatial area, for instance, contains a significant rural hinterland which includes villages such as Cold Ash and Enborne and which visibly contrasts in character with the more urban areas of Newbury and Thatcham. Similarly, in the existing Eastern Area the rural hinterland to the north of Theale contrasts greatly with the urban areas of Calcot and Tilehurst. It is clear that we will need to ensure that differences in character are drawn out clearly in any descriptive text for each of the spatial areas.
- 4.10 Functional relationships were also cited as a reason to not combine the Eastern Area with the East Kennet Valley with respondents arguing that the Eastern Area looks towards Reading and the East Kennet Valley towards Newbury and Thatcham. In reality the situation is much more complex. Neither area can be seen in isolation and both clearly interact with each other and with the AONB and Newbury Thatcham spatial areas too. The rural service centre of Theale currently sits on the edge of the Eastern Area but it could easily be argued that it has more in common with the East Kennet Valley. Combining the two spatial areas would therefore assist when considering the role and function of Theale in the wider context.
- 4.11 In strategic planning terms the existing Eastern Area is now very small and is very difficult to plan for in isolation (see figure 1 below). In 2010, when the Core Strategy was being prepared, the Eastern Area was originally a broad area for development that included Pangbourne and a small area of the AONB running along the edge of the main urban area. However, through the Core Strategy examination process this area was reduced to exclude all parts of the AONB and so ultimately, the adopted Eastern Area is smaller than originally envisaged. This has since created challenges in delivery.

**Figure 1: Existing Eastern Area spatial area**

4.12 In reality, combining the two existing spatial areas as proposed (see figure 2 below), will simply be more practical and give the Council more flexibility in strategic planning terms. It also needs to be considered in the context of national guidance. The National Planning Policy Framework (NPPF) makes clear that in order to be considered sound, plans and policies have to be both flexible and deliverable.

**Figure 2: Proposed Spatial Areas**

- 4.13 For the reasons outlined above, the Council will therefore amalgamate the existing Eastern Area with the existing East Kennet Valley as originally proposed.

**5. Q3: Do you agree with the methodology we propose to use for reviewing the existing settlement hierarchy?**

**Summary of comments received:**

- 5.1 The overall approach of having a settlement hierarchy was generally endorsed. The two stage quantitative and qualitative process was also supported. Various respondents, particularly from the development industry used the opportunity to put forward arguments as to where, why and how, particular settlements should be considered within the hierarchy.
- 5.2 It was considered important that the proposed methodology should identify the most sustainable settlements to accommodate future development. A few respondents considered the review should be of all settlements, whether they had defined boundaries or not. Some also felt there was a need to distinguish between those within and outside the AONB.
- 5.3 There was concern expressed from a few in the development industry that our approach would not take into account the potential for settlements to be sustained by, and acquire improved facilities or services as a result of sustainable development taking place or proposed to take place.
- 5.4 There were some suggestions relating to the various categories of settlements. One respondent thought that rural service centres should be divided into two groups in relation to their access to a railway station. Another noted that while there are currently two additional types of area where there will be more limited development (smaller villages with settlement boundaries and open countryside), consideration should be given to a third category between the two, to recognise settlements or parts of settlements that have a looser pattern of development (but not so loose to be reasonably described as 'isolated') but nevertheless relate to a settlement with a boundary. Given the diverse nature of the settlements across the North Wessex AONB spatial area, it was felt that there were many groups of dwellings that would fit into this category
- 5.5 There were a variety of comments and concerns expressed in relation to the scoring of facilities and services. There was criticism from some that no explanation had been provided to how the points were allocated to each of the criteria.
- 5.6 One respondent commented that the audit of services and facilities speaks to the performance of the settlement in terms of accessibility (to services, facilities and employment) rather than sustainability and so the text should be amended to reflect that.

- 5.7 Clarification was sought on a number of issues and it was felt that further justification may be required to determine the points system with regard to certain facilities and services. In some circumstances it was argued it was unclear why a particular service secured a higher score than another. For instance, it was felt it was unclear why a village hall / community hall should score higher than a permanent library. Both offer community facilities and were often a source of local information.
- 5.8 A few respondents thought it was important that the points awarded should be weighted to take account of partial provision, for instance, the part time provision of Post Office facilities through the existence of outreach services or the provision of a mobile library. In addition, clarification on whether services and facilities had to be a unique facility or whether they could be combined with one another, such as a community hall, were also sought.
- 5.9 The scoring given to public transport was raised by quite a few respondents. Some felt that that further weighting should be given to accessibility by public transport and that there should be a distinction between bus and rail services. It was thought that the presence of a railway station had been underplayed and that it was not clear why accessibility to a railway station scored the same as accessibility to a bus service to a larger centre. It was argued that a rail service provided a greater level of accessibility to higher order settlements where people could have access to a greater range of services and facilities. The frequency of services was also considered important.
- 5.10 Questions were also raised with regard to the scoring for schools. It was highlighted that many of the significant villages in the District have a primary school but few have a secondary school. It was argued that given the amount of travel associated with secondary school education and the facilities and services that these establishments offered, additional weighting would be justified.
- 5.11 The consideration of a settlement's wider access to services and facilities within its vicinity and locality was acknowledged by some but it was considered important that an explanation of how the 1km was defined (whether from the centre of a settlement or its boundary) was justified within the methodology. A point made by a few respondents was that it should be acknowledged that services and facilities may be located in an adjoining authority, or outside of a settlement. In addition, a clearer definition of what is meant by access 'to business employment opportunities of an *appropriate size* within the settlement or within 2km of the centre of the settlement' was considered essential.
- 5.12 It was argued that some of the criteria were not necessary: a dental surgery was not regarded as a day to day requirement and so both its inclusion and score of three points were questioned. Similarly, whilst a health centre may be a more frequent requirement for some, it was argued it was not reasonable to expect one to be located in each settlement due to the changes in the way healthcare services are now delivered. Additionally, the presence of a bank/building society was not felt to be an indicator of sustainability any more, given the rise of internet banking.

- 5.13 There were a number of suggestions proposed for addition criterion:
- availability of broadband
  - car parking provision
  - the level of community involvement
  - sheltered accommodation
  - restaurants and takeaways
  - supermarket
  - existing development commitments, both permitted and planned
  - number of dwellings
  - population
  - properties / floorspace liable for business rates
- 5.14 It was also felt that the distance from urban centres (both within and outside the District) should be included because the sustainability of settlements in locational terms is relative, not only to the services/facilities within the settlement itself, but also in relation to services/facilities in other settlements.
- 5.15 The statistical scoring exercise was noted as being a starting point and the qualitative assessment was generally welcomed. There was clear support for any decisions made through it to be transparent and informed by evidence. A respondent from the development industry was particularly keen that the Council showed flexibility even with the hierarchy in place.
- 5.16 There were various suggestions put forward as to what the qualitative assessment should include, such as consideration of the availability of potential development sites and long-term land holders that might act as development partners, the presence of significant redundant or brownfield sites and the proximity to employment opportunities or good accessibility links. It was also argued that there should be consideration given to the future potential of each settlement to support sustainable growth.
- 5.17 Furthermore, concern was expressed that there were no details as to what the scoring thresholds would be for classifying different settlements. It was felt that this should be clearly set out in the final methodology before the assessment starts so that the process is completely transparent.
- 5.18 Finally, there was a strong support for further consultation on the settlement hierarchy and the evidence/analysis that supports it as the Local Plan Review progresses particularly with parish councils.

**Council response:**

- 5.19 The settlement hierarchy plays an important role in identifying sustainable locations for development. It categorises the District’s settlements according to their different roles and groups them accordingly. The general endorsement given to the principle of our approach, particularly the two stage quantitative and qualitative process, is therefore welcomed.
- 5.20 We acknowledge that the provision of services and facilities within settlements can change over time and so that is why we are updating our existing assessment of settlements as we plan for the period to 2036. By assessing existing settlements at this early stage of the LPR we can ensure the spatial strategy is based on an accurate and up to date reflection of the role of settlements within the District.
- 5.21 It is acknowledged that the main concerns of consultees relate to the actual detail of the methodology, particularly the clarity surrounding the points given to specific services or facilities. We therefore intend to undertake further work on the points system in light of the comments made. This will include:
- whether additional weighting should be given to the part time provision of services; the sharing of services; accessibility by public transport; the distinction between rail and bus services and; the provision of a secondary school.
  - Consideration of whether some criterion should be removed e.g. dental surgery or bank/building society
  - Consideration of the additional criterion proposed
  - Scoring thresholds
  - Clarification of some of the definitions used
- 5.22 We recognise that further work will need to be undertaken to assess whether the existing categories within the hierarchy continue to remain the most appropriate going forward to 2036. To some extent this will depend on the outcome of both the audit of existing services and facilities and the qualitative assessment.
- 5.23 The responses clearly showed that involvement in the evolution of the settlement hierarchy is important for many stakeholders and this is welcomed. The importance of a sound evidence base will be key to its success and so the interest expressed from parish councils is particularly encouraging. We will be contacting each of them as part of the quantitative assessment to clarify the level of services and facilities within each settlement as appropriate.

**6. Q4: Do you agree with the criteria we have set out for reviewing the settlement boundaries?**

**Summary of comments received:**

- 6.1 The majority of respondents agreed with the principle of the Council’s landscape led approach to the drawing of settlement boundaries. One favoured a community led approach instead. Another respondent considered that using physical boundaries was not necessarily a useful way of defining landscape impact and another was unclear how this would work in practice. A few respondents from the development industry disagreed with the principle of boundaries altogether, feeling that they didn’t accord with the principles of the NPPF and by creating a binary approach, did not allow enough flexibility to allow for appropriate development to come forward. Another thought that it should include greater consideration of the economic and social benefits resulting from development, particularly in the AONB.
- 6.2 The use of the existing evidence base was welcomed although one respondent questioned the up to datedness of some of the studies quoted. The use of Historic Landscape Characterisation in particular was welcomed by some. Historic England noted that the specific issues to be considered on a site by site basis should include the potential impact on the significance of designated and non-designated heritage assets, which may require a specific Heritage Impact Assessment. Parish plans were also mentioned as being useful evidence. The Environment Agency also made clear that if any settlement boundary were close to a main river corridor then it would expect to see an ecological buffer zone between the edge of the settlement and the top of the riverbank.
- 6.3 Whilst the use of the higher level studies was supported, one parish council suggested that the relative weighting between the landscape studies and the physical attributes could usefully be clarified. Another respondent also argued for further clarification as to their relationship and thought this would be an important issue particularly when considering settlements within or closely related to the AONB.
- 6.4 Clarity regarding the inclusion of sites allocated through the local plan process was sought. It was also assumed the review of settlement boundaries would be undertaken after the assessment of potential site allocations had been completed. The issue of whether to include the whole of the allocated sites within the boundary or whether to just include the developable area was also raised. It was considered essential that the review of settlement boundaries takes account of all development which has taken place since the boundaries were first drawn up or last reviewed and that this included sites with extant planning permission. There were a number of respondents from the development industry who made specific comments in relation to individual sites that are being promoted for development and felt should be included within any settlement boundary review. It was argued that the policy approach should allow for development proposals ‘within or adjacent to a settlement boundary’.

- 6.5 One respondent commented that revisions to the settlement boundaries should be informed by the updated LHN figure. It was also argued that settlement boundaries should be flexible and be drawn to allow windfall development if the Council was going to rely on them for five-year land supply calculations and housing trajectories. There was a suggestion that settlements in the AONB should be treated differently to those outside.
- 6.6 Although some examples of what the Council means by '*clearly defined physical features*' were given, one respondent felt the process would be more transparent if a more comprehensive list were provided and that this should consider the permanence of features. A feature that is more likely to remain static over time, such as an adopted road, would act as a robust boundary whereas boundary features such as hedges could easily be removed and prone to change over time.
- 6.7 The proposal to include '*individual plots or other similar scale development opportunities*' caused some discussion. A few thought they shouldn't be included as it wouldn't be plan led, whereas others, particularly from the development industry, welcomed the flexibility they would bring to the long term sustainability of settlement, particularly in rural areas. Some argued that the reference was unclear as to what size of plot was being referred to, whereas others thought it was unnecessarily restrictive and where a plot could accommodate several houses, it should be assessed on its own merits.
- 6.8 It was argued that there was a tension between allowing for '*individual plots or other similar scale development opportunities*' and the exclusion of '*open undeveloped parcels of land on the edges of settlements*'. It was suggested that the wording should be revised to include '*small sites where development would form a logical complement to the existing pattern of development and sites allocated through the local plan process.*'
- 6.9 Some respondents argued that some of the criteria proposed for excluding land from the settlement boundary were overly restrictive and unclear. These should instead be lists of features and characteristics that would be taken into consideration, with greater emphasis being given to specific issues to be considered on a site by site basis.
- 6.10 The proposal to exclude some existing developed areas, including loose knit buildings, farm buildings and farmyards, horse related development and public utilities (sewage treatment plants, substations) from settlement boundaries where they are located on the edge of a settlement caused concern from some in the development industry. It was argued that such sites are likely previously developed in nature and could, if surplus to operational developments in the future, provide obvious development sites well related to their communities. It was asserted that such sites should be assessed on a case by case basis but should be considered for inclusion within the settlement boundary as a default position.

**Council response:**

- 6.11 The overwhelming support given to the principle of the Council's landscape led approach to the drawing of settlement boundaries is welcomed.
- 6.12 We are currently updating some of the evidence base with a Landscape Character Assessment for West Berkshire due to be completed later this year and this will help in providing a context for the review of settlement boundaries.
- 6.13 It is appreciated that whilst the principle of the approach was supported, clarity was sought in some of the detail. We therefore intend to undertake further work on the practical application of dealing with the inclusion of individual plots or other similar scale development opportunities. Other issues will be considered and incorporated as appropriate as the review progresses.

**7. Q5: Do you agree with our updated assessment of policies?**

**Summary of comments received:**

- 7.1 Although this consultation related to our 'updated' assessment of policies, some comments made previously in our Feb - March 2018 were reiterated and reinforced using the revisions made to the NPPF. At the same time, others felt there was not enough information to be able to make an assessment or that the information was not presented clearly enough to comment.
- 7.2 In general, the ability of the policies to incorporate flexibility was stressed, particularly from those in the development industry. Considering the 'bigger picture' with the ability to accommodate various scenarios was important. There were offers of help to work together from a number of respondents on either individual policies, those relating to specific spatial areas and also relevant supporting documents and guidance. Clarifications were also sought on specific policies, with the importance of the linkages between the policies and the Vision stressed.
- 7.3 A number of comments were made relating to the economy. Some respondents stated that the role of the and function of the Protected Employment Areas (PEA) should be reviewed in light of the evidence produced from the Functional Economic Market Area Assessment (FEMA) and the Economic Development Needs Assessment (2016). It was also argued that many sites within the PEAs are currently underutilised and could be more sustainable if redeveloped for mixed use schemes. It was also noted that Green Park should be recognised as a key employment location and as such would need to continue to be supported by the enhancement of transport and infrastructure.
- 7.4 Both Newbury and Thatcham town councils advocated specific policies relating to their areas. A new business park, designed especially for new and

innovative businesses at A34/ M4 Junction 13 and the creation of a “Business Enterprise Zone” to complement the existing area at Colthrop, respectively.

- 7.5 Policies regarding the delivery of homes generated much discussion, particularly within the development industry. The ability of the LPR to consider and accommodate the needs of the wider housing market area within appropriate locations was stressed. The consideration of sites adjacent to settlement boundaries was again reinforced. At the same time it was also argued that policy should be seen in the context of relevant policies in the NPPF that protect areas and assets of particular importance. It was stressed that it was important that the LPR considers all options regarding existing housing site allocations and that it would need to have regard to whether they continue to remain deliverable and / or developable when assessed against up-to-date evidence.
- 7.6 The policy stance to support the delivery of affordable housing needs to be strengthened it was argued, to reflect the fact that this is one of WBC’s strategic priorities and to address housing need in general. One respondent strongly urged the Council to adopt the definitions of affordable housing in the revised NPPF, including starter homes and discounted market sales housing. It was also claimed that in order to reduce negotiations on viability, the Council may need to reduce its overall affordable housing requirement, prepare a more area based policy or reduce the costs arising from other policies.
- 7.7 Some respondents stressed that whilst the Council needs to consider the broad mix of homes that are required across the area (particularly with regard to an aging population) it was important that flexibility was retained with regard to the type of homes delivered on each site. Having a requirement to provide a fixed mix of housing types within a specific policy was questioned. It was also argued that the LPR should incorporate sufficient flexibility for the mix of dwellings sizes to be reflective of the surrounding environment and development pattern.
- 7.8 It was asserted that retail policies should be reviewed in light of the current challenges facing the high street. Future planning policy should allow for the development of a suitable mix of main town centre uses with higher density residential development within the town centre. The defined boundary of Newbury town centre in particular should continue to be afforded protection to ensure that out of town retailing does not harm or jeopardise investment within the town.
- 7.9 The Environment Agency provided some detailed comments and specific policy wording with regards to our approach to flood risk, specifically the sequential test, sequential approach and exception test, together with pollution prevention and water quality measures. It also noted that the LPR should include a specific water resources policy, together with another on watercourses. Thames Water also made detailed comments regarding water and wastewater infrastructure.

- 7.10 A comprehensive district-wide green infrastructure (GI) strategy was advocated in order to enable the most appropriate and efficient delivery of GI with new allocated development, and GI provision which best meets the needs of the District and the strategic objectives of the LPR. The overlap between this and a widening out of a policy on the Kennet and Avon Canal was also noted.
- 7.11 Whilst the inclusion of a specific policy covering cultural facilities was supported, it was also noted that this could also be achieved by way of a strategic policy promoting cultural facilities more generally under the umbrella of community facilities, the promotion of new cultural uses within town centre policy and ensuring robust protection of such facilities through an enhanced community, cultural and social facility policy.
- 7.12 One respondent argued the continued importance of maintaining separate policy provisions within the LPR for schools, colleges and residential institutions which lie partially or entirely within the open countryside.
- 7.13 Lastly, there was also support for the provision of specific policy protecting public houses, with the recommendation that the existing Supplementary Planning Guidance (SPG) is brought into Local Plan policy to give it greater weight.

### **Council response**

- 7.14 Although this consultation related to our ‘updated’ assessment of policies it is acknowledged that some comments made previously in our Feb - March 2018 consultation were reiterated and reinforced using the revisions made to the NPPF.
- 7.15 We agree that the ability of the policies to incorporate flexibility will be important. There were offers of help to work together from a number of respondents on either individual policies, those relating to specific spatial areas and also relevant supporting documents and guidance which are welcomed. The additional technical information and guidance submitted will be particularly useful as the policies are reviewed further.
- 7.16 It is clear that as part of our assessment of policies some of the key tasks over the next few months will be:
- the inclusion of a strategic policy on climate change
  - the consideration of the revised affordable housing definitions and further consideration to different types of rural exception sites
  - further work on housing types and mixes, including appropriate pattern book densities and specialist housing such as older persons accommodation, custom and self-build and houseboats
  - to have regard to the existing housing site allocations and be further informed by our work on the Housing and Economic Land Availability

Assessment (HELAA) to help assess whether they continue to remain deliverable

- a review of the Protected Employment Areas (PEAs)
- a review of retail issues, including the hierarchy of centres and our approach to retail frontages
- consideration given to additional policies on water resources, pollution prevention and water quality
- consideration of our overall approach to the Kennet and Avon Canal and wider cultural and tourism issues

## **8. Other comments**

### **Summary of comments received:**

- 8.1 There were extensive comments made in response to the consultation generally, primarily relating to the Council's review of the housing requirement and the housing land supply. Some previously made comments in the Feb-March 2018 consultation were also updated in light of the revised NPPF.
- 8.2 The representations highlighted the continued importance of working strategically with our neighbouring authorities, specifically with regard to the provision of housing and in particular affordable housing and accommodation for Gypsies and Travellers and Travelling Showpeople, the strategic road network, the potential strategic development at Grazeley and the Thames Basin Heaths Special Protection Area (SPA). Statutory consultees also took the opportunity to reinforce the importance of identifying and mitigating any potential impacts on the strategic road network, rail infrastructure and the historic environment.
- 8.3 The length of the plan period was raised again. The Review will need to plan for at least 15 years from its adoption and is intended to cover the period to 2036. One respondent felt that consideration should be should be given to adopting a plan with a later end date in case the adoption date slipped. Another respondent questioned the timescale for the LPR, thinking it unlikely the Council would meet the timetable as set out in the current LDS.
- 8.4 There were a number of comments advocating both for and against the continued exploration of potential development at Grazeley. AWE in particular reiterated its previously expressed concern about major housing development close to AWE Burghfield. It was felt by some that the scale of development proposed at Grazeley would mean it was unlikely to come forward until 2036 and so to include a specific allocation within the Plan would conflict with the NPPF and make the LPR unsound.
- 8.5 Some in the development industry again took the opportunity to highlight the need for clarification around the approach the Council will take to housing in

rural areas, particularly the need to achieve a good mix of smaller sites and the need to identify opportunities for villages to grow and thrive.

- 8.6 Several respondents thought that insufficient attention had been paid to the economic needs of the area and stressed the importance of reflecting the wider strategies, investment priorities and infrastructure funding requirements of the Local Economic Partnership. It was argued there was also a requirement for the LPR to take account of any needs that may arise over the plan period from ‘predictable and known events’ such as the London overspill, planned infrastructure provision (e.g. Crossrail) and the expansion of Heathrow. It was agreed that it was crucial the employment land requirement was reviewed to look longer term and important it was translated into an appropriate ‘requirement’, with the figure adjusted on a policy basis (including allowing for a greater margin of choice/flexibility to the land demand forecast calculation, to ensure a reasonable choice of sites for businesses and developers and/or to allow for delays in sites coming forward or premises being developed) to determine the actual employment target for the District. It was also considered important to have an understanding as to how people would be working in the future. It was argued that the historic reliance upon “B-uses” may not be a sound approach for understanding future employment needs, where there may be a greater reliance upon technology, employment hubs, working from home and potentially less, or indeed different forms of space.
- 8.7 The focus of many comments was on the review of the housing requirement and the housing land supply. Those within the development industry stressed the importance of the Local Housing Needs (LHN) being seen as simply a minimum starting point and put forward arguments for the final housing requirement to be much higher. It was argued that it was evident that the Council’s housing requirement would be in excess of its need’s assessment given the unmet needs arising from Reading. It would also be important for the Council to consider how best to deliver the affordable housing need of the District on the basis of a realistic assessment of the viability of development within the area.
- 8.8 Having the housing requirement as a range was considered to be a pragmatic approach, but many felt that West Berkshire should be planning to meet the higher end of this range. Opinion was divided as to whether the AONB should be treated differently and whether or not it should be seen as a constraint. It was considered important that the requirement was underpinned by the Housing and Economic Land Availability Assessment (HELAA). A large number of respondents from the development industry took the opportunity to either submit new or resubmit existing sites under the HELAA.
- 8.9 The need to plan for a consistent delivery of homes across the plan period was emphasised, but the stepped trajectory proposed by the Council generated much discussion. There was a general feeling from those in the development industry that was no justification for this approach. It was argued that this would result in an insufficient supply of housing being planned for across the early part of the plan period and that such an approach could cause both affordability and supply issues generally. It was stated that the

LPR should not be over-reliant on housing delivery at fewer strategic development which take longer to come forward, but should incorporate a supply of small and medium-sites, as encouraged by the NPPF.

- 8.10 The housing land supply generated some comments. Some respondents in the development industry considered that the windfall allowance was too high. Others commented that any windfall allowance within the Council's trajectory would need to be fully justified through compelling evidence that demonstrated such sites would provide a reliable source of supply.
- 8.11 One respondent thought that we should include and allocate sites inside settlement boundaries rather than treat them as windfalls, particularly as many of those sites would be brownfield and specifically identified as priority for re-development within the NPPF.
- 8.12 There were some new sites submitted under the Housing and Economic Land Availability Assessment (HELAA) and others which were revised after having previously been submitted.

**Council response:**

- 8.13 The continued importance of working strategically with our neighbouring authorities is acknowledged and agreed. We are currently working with the other authorities in the Western Berkshire Housing Market Area in drafting a Statement of Common Ground which will cover these issues. As far as the timetable for the LPR is concerned, we are currently reviewing the Local Development Scheme (LDS).
- 8.14 The extensive comments primarily relating to the Council's review of the housing requirement and the housing land supply have been noted. The housing requirement and housing supply position will be reviewed during the course of preparation of the LPR, taking account of the latest evidence. The position at the time of consultation on the proposed submission plan will be set out in a supporting technical document. This will bring the evidence on housing need and housing land supply up to date and include an explanation of the proposed housing requirement and any allowances made in the supply for windfall development and for flexibility. It is encouraging to note that having the housing requirement as a range is considered to be a pragmatic approach, especially as the Local Housing Need (LHN) is variable up until the LPR is submitted to the Secretary of State for examination as the inputs are constantly changing. The concerns relating to any development proposed at Grazeley are again noted. The masterplanning work that has been undertaken will provide a detailed assessment of its potential that will be taken into consideration when sites are considered for development as part of the LPR.
- 8.15 The sites submitted under the Housing and Economic Land Availability Assessment (HELAA) and those sites which were revised after having previously been submitted will all be assessed. It is important to note that not all sites that are being promoted and which have been submitted as part of the HELAA will be appropriate for development. The HELAA will make a

preliminary assessment of the suitability and potential of those sites for new homes, employment and other land uses and will provide evidence of both strategic and non-strategic growth opportunities across the District. The Council is therefore not commenting on the suitability of the individual sites being promoted through the HELAA in its response to this Regulation 18 consultation in advance of the publication of the HELAA later in the year.

- 8.16 The HELAA is not a policy making document and so does not make recommendations on which sites should be developed, but the information we gather from the HELAA will inform how and where we allocate sites through the LPR to cover the period up to 2036.

## **9. Next steps**

- 9.1 Following an analysis of the responses received we will:

- Finalise our Vision and Strategic Objectives
- Finalise the methodology for the settlement hierarchy and in co-operation with town and parish councils, start work on the audit of facilities and services
- Finalise the settlement boundary review criteria and in co-operation with town and parish councils, start work on the review of boundaries
- Start to undertake a detailed review of policies in co-operation with relevant stakeholders
- Publish a list of all sites that have been submitted to us for consideration under the HELAA
- Continue to update the evidence base to inform the LPR

---

Dear all,

Thank you to everyone who was able to attend the recent stakeholder events. For anyone who was unable to attend, we will shortly be circulating electronically to all Parish/Town Councils, neighbourhood planning groups and Ward Members the information that was handed out at the events. The presentation from the events is attached to this email. The information relating to the Housing and Economic Land Availability Assessment (HELAA), settlement hierarchy review and settlement boundary review will be sent in separate emails with the relevant information for each area.

From the District Council's perspective, the events were very helpful. We hope you found the events useful too. Some of you provided us with information and we have kept this. Most of you will need more time to consider your responses and we hope to hear from you soon. We have asked that information be returned to us if at all possible by **Friday 27 March 2020**. Please respond to the area specific emails you will be sent shortly if you wish to discuss.

We also hope that you found the question and answer sessions of use and that officers were able to provide helpful answers. In the coming months we will be busy undertaking much of the work required to get us to the point where we can consult on a 'draft plan'. Please do keep an eye on the ['Planning Policy News'](#) page our website where we will be publishing updates as we go. Many thanks,

**Planning Policy Team Leader**  
West Berkshire Council

**Subject:** Parish Stakeholder Event in the Council Chamber, Market Street Offices, Newbury - 12 February at 10.00

Dear parish/town councils and neighbourhood development plan groups,

As you will know, West Berkshire District Council is reviewing its Local Plan to cover the period up to 2036. Over the past 2 years, we have invited comments firstly on the proposed scope and content of the Review as the first part of our consultation under Regulation 18 of the Town and Country Planning (Local Development)(England) Regulations 2012.

A second round of Regulation 18 consultation sought comments amongst others, on the methodology for reviewing the existing settlement hierarchy set out in our Core Strategy 2006-2026 and the revised criteria for the settlement boundary review as currently set out in our Housing Site Allocations Development Plan Document (2006 – 2026). We have considered all the comments on both and made revisions.

Also, over that period we have been completing the Housing and Economic Land Availability Assessment (HELAA) of all the sites that have been submitted to us for potential development by landowners and promoters. We intend to publish the HELAA at the end of January and, when published, you will be able to view the document on our website.

To help guide us in the next stage of the Local Plan Review we would particularly value having the benefit of your local knowledge and insight of these issues and so in February, we will be holding a series of parish and town council workshops to discuss them in more detail.

For the purposes of the workshops only, we have divided the district into three areas. We hope this will give you more of an opportunity to express your views. Your particular workshop is being held on

**Wednesday 12 February at 10.00 in the Council Chamber, Market Street Office, Newbury** and we would welcome the attendance of up to two representatives from your organisation. The workshop will be no longer than two and a half hours and will cover:

- The confirmation of local facilities and services in your area and how these can help further guide the development of our settlement hierarchy;
- Our criteria for reviewing settlement boundaries and how we take this work forward; and
- the sites promoted to us in the HELAA.

Tea, coffee and refreshments will be provided.

Please respond to this email by **Friday 31 January**, indicating whether or not your organisation can attend. Please also provide the name(s) and direct contact details, including e-mail address, of who will be attending.

Many thanks,

**Planning Policy Team Leader**

Dear Sir/Madam,

**Regulation 18 Consultation on the Emerging Draft of the West Berkshire Local Plan Review (LPR) to 2037**

West Berkshire District Council is reviewing its Local Plan to cover the period up to 2037. The Local Plan Review (LPR) will identify the development that is required to meet our local needs, set out our strategy for distributing development within the district, as well as outlining our policies for conserving and enhancing the natural and built environment. It will help people in West Berkshire achieve sustainable development.

We are still at an early stage in the plan-making process and have produced an emerging draft version of the LPR. In preparing this we have taken account of previous Regulation 18 consultations which considered the scope and content of the LPR. We think it is important to understand what our stakeholders think at this stage and so we are taking this opportunity to ask you what you think of our current proposals. We want to give you a chance to influence the LPR before we have to formally consult on the draft Plan next year.

We would welcome your feedback on the emerging draft LPR. Your comments should be submitted during the eight week consultation period which runs from Friday 11 December 2020 to 4.30pm on Friday 5 February 2021.

Inspection of the document and how to comment

The consultation document can be viewed at:  
<https://info.westberks.gov.uk/localplanreview2036>.

Representations can be made in writing or by way of electronic communications:

**Online:** using the Council's Local Plan Consultation Portal which can be accessed at: <http://consult.westberks.gov.uk/kse>. **This is the easiest and most efficient way to both view the document and respond.** You will need to register, but then any comments you make will be stored in your account for future reference. Registration is possible using a Facebook or Twitter account.

**By Representation Form:** available electronically on the Council's website (<https://info.westberks.gov.uk/localplanreview2036>) and in hard copy at the following location:

- West Berkshire Council Offices, Market Street, Newbury, RG14 5LD between the hours of 8:30am and 5:00pm on Mondays to Thursdays and 8:30am and 4.30pm on Fridays. Please note that opening hours may be subject to change at short notice due to Covid-19 restrictions.

All representations must be received by **4:30pm on Friday 5 February 2021:**

- By email to [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk); or
- By post to the Planning Policy Team, Development and Planning, West Berkshire District Council, Market Street, Newbury, RG14 5LD.

After this consultation ends, we will consider all responses we receive and prepare the draft version of the Local Plan Review which we hope to publish in Spring 2021.

If you have any queries relating to this consultation, please do not hesitate to contact the Planning Policy Team at [planningpolicy@westberks.gov.uk](mailto:planningpolicy@westberks.gov.uk) or 01635 519 111.

Yours faithfully,

Gary Lugg  
Head of Development and Planning

*You have been sent this letter because you are either a statutory consultee, have previously made representations on the Local Plan, or have asked to be kept informed. If you no longer wish to be contacted please let us know.*

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR reference: Introduction & Background

### (Proposed Submission LPR reference: Introduction & Background)

Number of responses received: 37

Respondent	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr702)	<p>As the Council's Archaeologist I welcome the opportunity to comment on new planning policies to ensure the conservation and management of the district's valuable historic environment.</p> <p>Para 1.6 I would prefer the phrase the 'natural and built environment' to be replaced throughout this document by 'the natural and historic environment'. This latter pair is the terminology used in the NPPF where it's made clear that the historic environment is all aspects of the environment resulting from the interaction between people and places through time, including landscaped, planted and managed flora. So fields, woods, commons, orchards are both natural and historic (though wouldn't be considered to be 'built').</p>	<p>Comments noted. The NPPF uses the terminology 'natural, built and historic environment' see para 8c and para 20d of that document. For consistency amend LPR as follows -</p> <p>Amend para 1.6 2<sup>nd</sup> sentence of the Emerging Draft LPR to read - 'It sets out the strategy for distributing development within the District and the policies for protecting, conserving and enhancing the natural, <del>and</del> built <u>and historic</u> environment.</p> <p>Amend para 5.30 1<sup>st</sup> sentence of the Emerging Draft LPR to read – 'One of the key issues facing West Berkshire is the conservation and enhancement of the distinctive local character of <del>both</del> the natural, <del>and</del> built <u>and historic</u> environment.</p> <p>Amend para 10.29 1<sup>st</sup> sentence of the Emerging Draft LPR to read – 'The NPPF seeks to conserve and enhance the natural, <del>and</del> built <u>and historic</u> environment....</p>

Respondent	Response	Council Response
Public Protection Partnership (lpr10)	Supports the approach	Comments noted
<b>Statutory consultees</b>		
Greenham Parish Council (lpr863)	<p>This review takes place in the middle of what is an unprecedented set of events that will radically alter the economic life of the country and its neighbours: the Covid-19 pandemic; the end of the BREXIT transition period; the enactment of related legislation (Agriculture and Environment Acts); and declaration of a Climate Emergency by both West Berkshire District Council and the UK Government. Yet almost all the evidence based upon which the Local Plan policies presented here are derived pre-dates these events.</p> <p>GPC therefore question whether it is possible to conclude the process of adopting the new Local Plan before further data is gathered on certain aspects. We are proceeding to comment on the Plan with that major <i>caveat</i> and urge the Authority to consider an early review of the evidence and categorically state that some aspects of policy will need amending as soon as the impacts of these events are clear.</p> <p>We refer again to this point in our comments on a number of specific policies.</p> <p>GPC would like to see consideration given to an interim review of the newly adopted Local Plan when the impacts of the major changes in context have become clearer in, say, 2024.</p> <p>In 1.12, we welcome the bringing together of three documents in one. However we are concerned that the Sustainability Appraisal (SA) and other supporting evidence is not also being actively consulted upon at this time, because in the past it has proved as important to site promoters, developers and the Planning Inspector as the Local Plan itself. In 1.29 you say it “is intended to be an integral part” of this process, yet there has been no attempt to encourage consultees such as local councils to comment on the SA. We see this as a serious omission. Even the Opposition Members on the Planning Advisory Group were unaware until well into the consultation (on 14<sup>th</sup> Jan) that the SA was published and at the time of writing (19<sup>th</sup> Jan) there is no sign of the Infrastructure Delivery Plan and several other key documents.</p>	<p>Comments noted.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.</p> <p>An interim SA report was published for consultation at the same time as the Emerging Draft of the LPR in December 2020.</p> <p>The Draft IDP was published on the Council’s website in October 2021. It is currently being updated and will be published alongside the Proposed Submission LPR.</p>
Hungerford Town Council (lpr118)	Supports the approach. We agree with the need for an up to date Local Plan that reflects the priorities of West Berkshire and provides some protection from inappropriate developments.	Comments noted

Respondent	Response	Council Response
<p>Newbury Town Council (lpr1100)</p> <p>Newbury Town Council (lpr2275)</p>	<p>This review takes place in the middle of what is an unprecedented set of events that will radically alter the economic life of the country and its neighbours: the Covid-19 pandemic; the end of the BREXIT transition period; the enactment of related legislation (Agriculture and Environment Acts); and declaration of a Climate Emergency by Newbury Town Council (NTC), West Berkshire District Council (WBDC), and the UK Government. Yet almost all the evidence upon which the Local Plan policies presented here are derived pre-date these events.</p> <p>We therefore question whether it is possible to conclude the process of adopting the new Local Plan before further data is gathered on certain aspects. We are proceeding to comment on the Plan with that major caveat and urge the Authority (WBDC) to consider an early review of the evidence and categorically state that some aspects of policy will need amending as soon the impacts of these events are clear.</p> <p>We refer again to this point in our comments on a number of specific policies. We would like to see consideration given to an interim review of the newly adopted Local Plan when the impacts of the major changes in context have become clearer in, say, 2024. In 1.12, we welcome the bringing together of three documents in one. However, we are concerned that the Sustainability Appraisal (SA) and other supporting evidence is not also being actively consulted upon at this time, because in the past it has proved as important to site promoters, developers, and the Planning Inspector as the Local Plan itself. In 1.29 you say it “is intended to be an integral part” of this process, yet there has been no attempt to encourage consultees such as local councils to comment on the SA. We see this as a serious omission. Even the Opposition Members on the Planning Advisory Group were unaware until well into the consultation (on 14th Jan) that the SA was published and at the time of writing (19th Jan) there is no sign of the Infrastructure Delivery Plan and several other key documents.</p>	<p>Comments noted.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.</p> <p>An interim SA report was published for consultation at the same time as the emerging draft of the LPR in December 2020.</p> <p>The Draft IDP was published on the Council’s website in October 2021. It is currently being updated and will be published alongside the Proposed Submission LPR.</p>
<p>Shaw-cum-Donnington Parish Council (lpr191)</p>	<p>Supports the approach.</p> <p>The consultation portal is exceedingly tedious. It is unresponsive with each comment taking some minutes of waiting for the site to respond. I would not be surprised if this has not reduced the amount of comment received with respondents giving up fighting the system.</p> <p>1.5 We note that the Plan will “meeting...social...priorities”. Planning applications should ensure that social infrastructure is provided including such items as parish halls, allotments, sports fields, play areas with equipment and there will be other infrastructure depending on local needs. Any planning application should provide appropriate social infrastructure either in cash and/or in kind.</p>	<p>Comments noted.</p> <p>Policy SP23 will ensure that new development is supported by adequate and appropriate infrastructure in a timely manner. This includes physical, social and green infrastructure.</p>

Respondent	Response	Council Response
<p>Stratfield Mortimer Parish Council (lpr386)</p>	<p>The Emerging Local Plan has many positive aspects:</p> <ul style="list-style-type: none"> <li>• We agree with most of the far-reaching aspirations demonstrated in the plan</li> <li>• Stratfield Mortimer is not specifically allocated any more housing</li> <li>• The aim to provide West Berkshire residents with housing of different types, sizes, tenures and affordability is stated as a priority</li> <li>• There is good emphasis on design, green spaces and biodiversity</li> </ul> <p>However, there is also much which could be improved:</p> <ul style="list-style-type: none"> <li>• There is little reference to the role of the NDP as a statutory document. NDPs should be emphasised and the legal/statutory role re site selection, design codes and contribution of local knowledge to such things as flooding and infrastructure shortcomings made clear in a statement of policy in the relevant sections.</li> <li>• There is a lack of rigour in the phrasing of many policies and inconsistent use of terms. Several say things like “we will not allow X” and then go on to say but “if it must be allowed, we will mitigate the impact on X”. That implies you can get away with having an adverse impact as long as it is not quite as bad as it might have been. Many policies use general words like, mitigate, reasonable etc. That can mean anything. They should be defined in the context of the policy. The definition of carbon neutrality for West Berks is a particular issue.</li> <li>• There is a lack of consistency and integration. Some policies say one thing in the SP (Strategic Policies) and then contradict the SP or do not follow through in the DC (Development Control) policies; an example is the Transport SP and DC policy. The Plan makes great play at the start that you have to view it as an integrated plan where you must consider all policies together. However, that is not the case when you read the whole thing. Some parts look integrated but some, noticeably the Transport policies do not seem to mesh.</li> <li>• Building Beautiful is made much of at the start of the document but then simply vanishes, from the core of the document. If there are to be new homes they should be the BEST and create a stronger sense of place than before the development. New homes are inevitable but we don’t have to have boring bog standard, off-the-peg design from national house builders.</li> </ul> <p>Amendments should be made to reduce the number of underdefined terms to ensure clarity and consistency of policy interpretation and application. Though flexibility is beneficial, clarity is needed to ensure consistency of the application of the policies. Furthermore, there are several uses of general terms such as “mitigate”, “reasonable” and “carbon neutral” which are also up to individual interpretation and should therefore be clearly defined within the context of the policy in question.</p>	<p>Comments noted.</p> <p>The Proposed Submission LPR will include an appendix which sets out how the LPR and Neighbourhood Plans will interact.</p> <p>The Proposed Submission LPR will also include a glossary.</p> <p>Planning decisions involve making a judgement and the LPR is phrased accordingly. It is acknowledged that there are some inconsistencies in formatting and these will be rectified when the Proposed Submission LPR is published.</p> <p>Policy SP7 sets out the Council’s approach to Design Quality and is clear that new development will strengthen a sense of place through high quality, locally distinctive design and place shaping.</p> <p>The Council considers it appropriate to highlight its role in mitigating and adapting to climate change under the LPRs Strategic Objectives.</p> <p>The comments relating to draft government proposals are appreciated, but as the emerging draft LPR noted, there was no certainty that the published proposals would be taken forward. In this instance, they were not.</p>

Respondent	Response	Council Response
	<p>The Local Plan should also reflect and take into account, where reasonable and appropriate, the 'Living with Beauty' and National Design Guides. For example:</p> <ul style="list-style-type: none"> <li>• Sustainable and Quality Development strategic objective 3 p11</li> <li>• Quality Design - West Berkshire Supplementary Planning Documents are dated June 2006 which are out of date.</li> </ul> <p><b>Para 1.7</b> This section sets out a very reasonable description of what the plan is for While in general agreement, should there not be something about Climate Change in 1.6 as it is such a major driver in the rest of the document?</p> <p><b>Para 1.11</b> We agree with this but with reservations: Clearly the local plan will have to align with Government Policy. However, would it not be prudent to do some scenario planning on likely ways forward that the Government might take? If nothing else, it would inform the debate about what should happen on housing policy. The preferred approach would be to give a range of likely Government requirements and outline how these would change the local plan. Even if they did not go into detail it would at least indicate the direction of travel.</p> <p><b>Para 1.14</b> This seems eminently sensible because no local area is an island. Would it not be sensible to say if WBC is doing this? The way it is worded almost sounds as if WBC are hedging their bets.</p> <p><b>Para 1.29</b> Clearly the Sustainability Appraisal is and should be integral to the Local Plan. The SA, or the relevant parts of it, should be hyperlinked where relevant to the Local Plan.</p>	<p>A Duty to Cooperate Statement will be published alongside the Proposed Submission LPR.</p> <p>Relevant hyperlinks will be included in the Proposed Submission LPR.</p>
Thatcham Town Council (lpr1397)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p><b>Section 1.4</b></p> <ul style="list-style-type: none"> <li>• "contribute to the achievement of sustainable development ... such that the right development happens in the right place at the right time benefiting communities and the economy.</li> </ul> <p>We acknowledge the needs for sustainable development and the importance of selecting the right place, at the right time. There are different pressures on communities - ensuring 'viable villages' in rural areas is as important as respecting the limits to growth in more urbanised areas that may be constrained by geography or through limits on infrastructure.</p>	<p>Comments noted</p> <p>The policies in the LPR will support in addressing the climate emergency declared by the Council in July 2019, the strategic objectives of the Environment Strategy as well as its duty to mitigate climate change in line with the Climate Change Act 2008.</p> <p>The Council has a statutory duty to prepare a Local Plan and review it every 5 years.</p>

Respondent	Response	Council Response
	<p>Where infrastructure is constraining growth in one area then it is necessary to consider growth in other areas.</p> <p><b>Section 1.12</b></p> <ul style="list-style-type: none"> <li>"the Local Plan will replace in one document the three documents listed above"</li> </ul> <p>We welcome the merger of the 3 documents as this should enable West Berkshire Council to articulate a clear strategic vision for the district. This must align with sustainable growth that takes into account the very considerable challenge of moving towards net-zero carbon by 2030.</p> <p><b>Section 1.13</b></p> <ul style="list-style-type: none"> <li>"The NPPF covers most forms of development and sets out the Government's economic, environmental and social priorities for planning in England"</li> </ul> <p>We respect that the NPPF must be followed but note other organisations and commentary have identified that the NPPF is out of step with central government statements related to net-zero. We believe that the Local Plan should be robust and reflect a net-zero policy as the NPPF itself is likely to evolve during the period of the Local Plan.</p> <p>During the period of this Local Plan consultation, we also note that central government has published its Future Home Standards including the outcome on the Part L (Building Standards) consultation. It is encouraging to see that the government states that "local authorities will retain powers to set local energy efficiency standards for new homes" and therefore West Berkshire is able to adopt standards that ensure it respects its net zero carbon objectives for the period to 2030.</p> <p><b>Section 1.15</b></p> <ul style="list-style-type: none"> <li>"The proposed submission version of the Minerals and Waste Local Plan is due to be consulted on in early 2021."</li> </ul> <p>The consultation includes for the first time the combination of the Core Strategy Development Plan Document, Housing Site Allocation Plan, and Local Plan and a parallel consultation of a Sustainability Assessment which includes a Strategic Environment Assessment, and a partly overlapping Emerging Minerals and Waste Local Plan.</p> <p>We do not believe that conducting such a broad range of consultations using the minimum consultation period, without public briefings and engagements, during a pandemic, is a good approach to democratic engagement.</p> <p><b>Section 1.16</b></p> <ul style="list-style-type: none"> <li>"Neighbourhood plans must be in general conformity with, and reflect the strategic policies in, the Local Plan Review. Neighbourhood plans should not promote less development than set out in the Local Plan but can promote more development."</li> </ul>	<p>The Council is still at the regulation 18 of the Local Plan process – this is the evidence gathering and informal consultation stage. The consultation that the Council has, is and still intends to do fully complies with its statutory obligations and is fully in accordance with the <a href="#">Statement of Community Involvement (SCI)</a>. The Council's timetable for the production of the LPR is set out in its <a href="#">Local Development Scheme (LDS)</a></p> <p>The Government published guidance in May 2020 with regard to planning and COVID 19: <a href="https://www.gov.uk/guidance/coronavirus-covid-19-planning-update">https://www.gov.uk/guidance/coronavirus-covid-19-planning-update</a>. This stated that "<i>We continue to want to see Local Plans progressing through the system as a vital means for supporting economic recovery in line with the government's aspirations to have plans in place across the country by 2023.</i>"</p> <p>A written ministerial statement (<a href="https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720">https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720</a>) published on 19 January 2021 set out the importance of work continuing to advance on Local Plans through to adoption by the end of 2023 to help ensure that the economy can rebound strongly from the pandemic.</p> <p>The Proposed Submission LPR will include an appendix which sets out how the LPR policies will be applied in a Neighbourhood Plan context.</p>

Respondent	Response	Council Response
	<p>It is unclear as to what takes precedent. If an existing neighbourhood plan identifies less development than the strategic policies in the Local Plan Review does the emerging Local Plan take priority?</p> <p><b>Section 1.21</b></p> <ul style="list-style-type: none"> <li>"We also undertook focussed consultation with parish and town councils, and neighbourhood plan (NDP) groups seeking views on the sites assessed in the HELAA."</li> </ul> <p>We note that this consultation is the first opportunity that the public at large will have had to review the NE Thatcham proposal.</p> <p>We note that West Berkshire Council failed to include the Thatcham Town Council objections to the site THA20 in the Site Assessment.</p> <p>It is necessary for the Site Assessment to be updated and for a revision list to be included for the entire consultation that reflects changes made during the consultation.</p> <p>At a minimum it is necessary for the revision list to include:</p> <ol style="list-style-type: none"> <li>That Thatcham Town Council object to the site assessment for THA20</li> <li>When changes were made to the statements related to publication of the Infrastructure Delivery Plan.</li> </ol> <p><b>Section 1.22</b></p> <ul style="list-style-type: none"> <li>"The document being consulted on has been produced during extraordinary times."</li> </ul> <p>We respect this but would like to record that the same pressure to those people preparing a response. This consultation contains 250 pages, but by far the most important information for Thatcham is contained within the evidence packs of which there are many thousands of pages and over 60 documents, appendixes, and spreadsheets. As this LPR impacts on Thatcham disproportionately we do not believe that sufficient attention to public consultation has been considered, nor has there been a sufficient time between Officer Briefing (from 12th January) to enable a Town Council to consult with residents and prepare a consultation response.</p> <p>The impact of Covid and Brexit will both lead to unpredictable changes to economic patterns, labour demand and land use. The impact of Brexit will be unclear for some time, but it raises the question of whether it is an appropriate time to set a strategic direction that includes employment centres and economic development when the business environment is so uncertain.</p> <p>It is necessary that West Berkshire Council reach out to the residents of Thatcham with direct mailshots, more detailed (virtual) briefings where the public can ask questions directly, and social media engagement prior to the second stage of consultation.</p>	<p>An update to the HELAA will be published as part of the LPR evidence base alongside the Proposed Submission LPR.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>Paragraph 1.22 of the emerging draft LPR did acknowledge that <i>'There are still aspects of the LPR which need further work. For example, an updated Policies Map has yet to be produced as there is still work to do on finalising settlement boundaries and town centre boundaries. The document being consulted on has been produced during extraordinary times and some activities such as site visits have taken far longer than usual to plan and undertake.'</i></p> <p>Paragraph 1.26 also noted <i>'As this is an emerging draft version of the LPR, not all evidence has been completed. The evidence base will be added to as the plan progresses.'</i></p> <p>The Draft IDP was published on the Council's website in October 2021. It is currently being updated and will be</p>

Respondent	Response	Council Response
	<p><b>Section 1.24</b></p> <ul style="list-style-type: none"> <li>"One of the key features of the plan-led system is that development plans should be based on up-to-date evidence. The LPR is underpinned by a wide-ranging evidence base, which has been prepared and reviewed over the past three years."</li> </ul> <p>We agree that any plan should be based on evidence. We note that evidence has been collected prior to the Covid crisis. It would be inappropriate to base employment patterns, mobility patterns, and traffic profiles on a period during Covid as this does not represent historical patterns.</p> <p>Brexit also creates great uncertainty on future employment patterns. This will create fundamental change that means labour and economic growth forecasts are already outdated.</p> <p>The Sustainability Appraisal does not refer to WBC Environment Strategy, there is a lack of evidence related to recording of air quality in a recognised air-quality management area, and the traffic assessment is incomplete and misleading. The failure to publish the Infrastructure Delivery Plan, which is baseline material for the Sustainability Appraisal, is a significant failing in the evidence base.</p> <p>Taken together we do not believe the evidence base for the Local Plan is sound.</p> <p><b>Section 1.25</b></p> <ul style="list-style-type: none"> <li>"evidence can be broken down ... views and experiences of our local communities"</li> </ul> <p>We appreciate that the experiences of local communities will be considered. This is particularly relevant for Thatcham as the proposed development is of such a scale that input from a wide range of stakeholders must be sought. Where there are inconsistencies between the evidence prepared by external consultants sought during the Covid period, and those of local communities we would expect the balance of evidence to be biased towards the community.</p> <p>We provide feedback from residents that Town Councillors have collected from social media to support the basis for our response. This feedback reflects &gt;2,500 responses through a combination of resident's petitions and Councillor led surveys.</p> <p><b>Section 1.28</b></p> <ul style="list-style-type: none"> <li>All local plans must be accompanied by a sustainability appraisal (SA) of the plan. The SA offers a systematic and robust way for checking and improving on plans and their policies as they are being developed.</li> </ul> <p>We note the SA is also an interim document, and open to comments.</p> <p>We refer to the SA in more detail in our response to SP 17.</p> <p><b>Section 1.30</b></p>	<p>published alongside the Proposed Submission LPR.</p> <p>An air quality assessment will be published as part of the LPR evidence base.</p> <p>The other issues raised are considered as part of the overall Council's response to Policy SP17</p>

Respondent	Response	Council Response
	<ul style="list-style-type: none"> <li>"We will also finalise any outstanding evidence and prepare the next version of the LPR ... to consult in May 2021"</li> </ul> <p>We refer to the previous comments. These are extraordinary times, and should further evidence be required, such as employment patterns, mobility, or traffic flow, it will be impossible to collect meaningful data. This calls into question what appears to be a very aggressive consultation period, for a complex consultation that for the first time is bringing together three reports and a sustainability assessment.</p> <p>We believe that it is essential that WBC take into account the responses from residents and consultees ensuring a democratic approach is taken towards the second phase, which includes residents' briefings such as those proposed in response to Section 1.22.</p>	
Environment Agency (lpr1655)	<p>Thank you for consulting us with your draft Local Plan Review to 2037. We have reviewed the policies and site allocations in relation to our remit on flood risk, biodiversity and conservation of fisheries and the water environment, groundwater quality and contaminated land, water quality and water resources.</p> <p>We have provided our comments and recommendations in the format of the ordering of your policies which are of relevance to our remit, including the supporting text to these policies. We have also provided some general comments on broader issues such climate change, to provide oversight.</p> <p>We have made comments on site allocations which have environmental constraints within our remit, along with relevant evidence based documents supporting your local plan, such as the Water Cycle Study scoping document.</p> <p>In summary, there are some significant issues with the West Berkshire District Council Local Plan Review Draft that need to be resolved prior to the Regulation 19 stage of the plan making process. These are mainly in relation to the water environment and water quality. However, we are willing to support you going forwards and hope that these issues can be overcome as the local plan progresses.</p>	Comments noted. Responses to the more detailed comments raised are made under the relevant policies.
Historic England (lpr1565)	<p>As the government's adviser on the historic environment, Historic England is keen to ensure that protection of the historic environment is fully taken into account at all levels and stages of the local planning process.</p> <p>We have concerns about the lack of conservation area appraisals in West Berkshire, as well as a number of other issues, some of which relate to soundness. These are set out in detail [under the relevant policy]. Links to our published advice and general comments on planning for the historic environment can be found in [the attached document].</p> <p>There are 53 conservation areas in West Berkshire but 51 of have no conservation area appraisal, including all of those located in and around Newbury. We appreciate that</p>	<p>Comments noted.</p> <p>CAAs are considered under the Council's response to Policy SP9</p> <p>Clarify policies by amending para 1.27 of the Emerging Draft LPR as follows – 6<sup>th</sup> bullet 'Strategic policies (SP)', 7<sup>th</sup> bullet 'Non-strategic site allocation policies (RSA)' and</p>

Respondent	Response	Council Response
	<p>councils have resourcing issues and that the legislation only requires appraisals to be carried out from time-to-time. However, in this case, we consider it appropriate for the local plan to make a specific and measureable commitment to publish appraisals. These should be prioritised taking into account factors such as planned development and sensitivity to change. The Council's conservation officers should be able to advise in this respect. Clearly, it will be for the Council to determine its own resource availability but we would suggest, based on experience from elsewhere, that a commitment to completing at least five conservation area appraisals per year should not be unreasonable.</p> <p>From reading the section on strategic policies on page 8, and from the 'SP' naming, the strategic policies in the plan can be inferred. However, NPPF paragraph 21 states that plans should be explicit about which policies are strategic. This should therefore be clarified.</p>	8 <sup>th</sup> bullet 'Development <u>Management</u> <del>control</del> (DM) policies'
Natural England (lpr1592)	<p>Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.</p> <p>We thank West Berkshire District Council for its engagement with Natural England from an early stage in the process, and for paying heed to our advice on housing and economic site allocations, particularly with reference to the North Wessex Downs AONB.</p> <p>We have a number of comments on the various policies and site allocations. We recommend these are duly and fully considered as part of our statutory response. We have considered and commented on the policies in the order they appear in the Local Plan. <i>[see individual policies for details]</i></p> <p>We would be very happy to comment further as the plan process progresses.</p>	Comments noted
<b>General consultation bodies</b>		
British Horse Society (lpr822)	<p>Please note that these comments from The British Horse Society (the Society) relate to how proposed development could affect the Horse Industry and in particular how development could impact on riding on public highways (including public rights of way) and open spaces. It has been prepared in parallel with the response from the Mid &amp; West Berks Local Access Forum which has sent in a separate response. Some of the Society's comments repeat and thus endorse those of the Forum's.</p>	Comments noted
Central Bedfordshire Council (lpr27)	<p>Thank you for consulting the Shared Minerals and Waste Planning Service on the West Berkshire Local Plan Review. The Shared Service has no comments to make on the emerging plan and unless future iterations incorporate minerals and waste planning</p>	Response noted

Respondent	Response	Council Response
	matters which may affect Bedford Borough, Central Bedfordshire or Luton Borough, the Shared Service does not wish to be consulted.	
CLY Pipeline System (lpr29)	Please find attached a plan of our client's apparatus. We would ask that you contact us if any works are in the vicinity of the CLH-PS pipeline or alternatively go to <a href="http://www.linerearchbeforeudig.co.uk">www.linerearchbeforeudig.co.uk</a> , our free online enquiry service. Heritage Forum (lpr63)	<p>Supports the approach.</p> <p>1.11 We assume that this refers to the White Paper "Planning for the Future" (August 2020). We are concerned that developments in Renewal Areas, as defined in it, will not be subject to planning applications under the present form and process.</p> <p>1.24 Completion of the Conservation Area Appraisals will be necessary to achieve this objective, by enabling us to assess what heritage is unique and should be conserved.</p>	Comments noted. CAAs are considered under the Council's response to Policy SP9
Jockey Club Estates (lpr1908)	<p>JCE considers that the plan (including the associated evidence base) should accommodate the following matters:</p> <ol style="list-style-type: none"> <li>1. Acknowledgment and consideration of the importance of the HRI when assessing the options for the strategic distribution of growth – the baseline information signalled as being prepared in this regard must be incorporated in further SA work;</li> <li>2. The need to ensure that distribution options avoid or minimise impacts on the HRI since the HRI is not susceptible itself to seeking alternative locations or options (other than on a very local scale).</li> <li>3. The need for appropriate policies to protect the industry both from itself and from other development that may impact upon it.</li> </ol> <p><b>General</b></p> <p>JCE notes and welcomes the reference at paragraph 4.15 to Lambourn being the heart of one of the most important areas for horseracing in the country. It also welcomes the reference at paragraph 11.41 to the importance of the industry to the local rural economy. However, JCE considers that this underplays the contribution that the industry currently makes to the wider economy given the national importance of horseracing to the economy and the complementary role that various horseracing locations around the country have in this regard. Lambourn is an area of growing importance to the industry and is one that JCE is very keen to protect.</p> <p>JCE considers that it is important that the evidence for the Local Plan includes documents that clarify the economic significance to the area so that the impacts of development proposed through the Local Plan can be fully understood and evaluated.</p>	<p>Comments noted and the general support of the Jockey Club Estates is welcomed.</p> <p>Specific comments in relation to the Sustainability Appraisal are dealt with as part of the Council's response to comments on that document.</p> <p>Comments in relation to the Site Selection Background Paper will be incorporated as appropriate into that document, an updated version of which will be published at the Proposed Submission stage.</p> <p>Comments in relation to the horseracing industry are dealt with as part of the Council's response to those issues under Emerging Draft LPR Policy DC34.</p>

Respondent	Response	Council Response
	<p>The importance of the industry stretches beyond economic considerations. It also contributes to the characteristics of the area and assists in making the area an extremely beautiful place to live, work and visit. JCE considers that the next stages of the Plan will need to ensure that this is adequately explained and evidenced with appropriately worded policies to deliver the protection and support for growth that appears to be within the Regulation 18 documents. To assist in this regard, JCE has provided comments on the consultation documents.</p> <p>We consider first the evidence base documents before moving on to the Local Plan.</p> <p><b>Interim Sustainability Appraisal (SA) Report, December 2020</b></p> <p>JCE notes and is pleased to see the acknowledgement in Appendix 1 of this document regarding the gap that exists in the baseline studies relating to the HRI and the intention of the Council to fill this. This is reiterated at paragraph 2.10 of the document. JCE requests that the details of the additional baseline work be identified along with a timeline for the publication of this work. It notes that this information is not included in Appendix 2 of the SA, which relates to baseline information. JCE also offers its continued assistance in preparing this work.</p> <p>The Council is aware of the report that JCE commissioned from SQW to identify the HRI's economic and social impact in Lambourn Valley (Horse Racing in Lambourn Valley: The Industry's Economic and Social Impacts by SQW). It confirmed that the industry directly employs over 500 people (FTE) with over 160 people (FTE) employed in services that are related to the industry. It also contributes £22.6m to the local economy. This is an important summary of the economic significance of the industry that JCE considers should be included in the evidence base for the Local Plan. This is especially significant as the Western Berkshire Economic Development Needs Assessment (2016) only makes one passing reference to the HRI at paragraph 3.12.</p> <p>JCE considers that the Local Plan evidence base should include reports that measure the importance of the industry and explain how this will be protected. Especially in light of the acknowledgement at paragraph 5.35 of the Berkshire Functional Economic Market Area Study, 2016 regarding the challenges that the rural characteristics of the area create to economic development. The HRI is an appropriate industry that complements the character of the rural area and can continue to ensure the economic strength of these challenging areas. This should be recognised in the evidence base documents and should be a consideration of the SA work.</p> <p>JCE notes that SA Objective 10 (economic considerations) includes reference to the impact of policies on the needs of the HRI. It is unclear how that appraisal can be carried out without the baseline evidence being updated in the manner described above. Aligned</p>	

Respondent	Response	Council Response
	<p>with this is the need to understand the housing needs of the HRI. Sufficient and appropriate housing for HRI staff has a direct impact on the ability of the industry to survive and it is important that the housing needs of this industry are adequately understood. This is relevant to both SA Objective 10 and SA Objective 1 (housing).</p> <p>To assist the Council in its understanding of the housing needs of part of the HRI, JCE attaches a report prepared by the University of Cambridge on behalf of Racing Homes, the housing arm of Racing Welfare. Racing Homes is a registered charity with properties in West Berkshire. The attached report summarises the housing issues faced by those employed in the HRI and incorporates a number of recommendations, some of which are relevant to Local Plan considerations. JCE commends this report as a document to add to the Council's evidence base.</p> <p>SA Objective 10 stops short of considering the impact of policies on the existing HRI. This should be explicitly identified, and the relevant evidence base documents used to assess this should be referred to.</p> <p>JCE is concerned that the absence of the information referred to above means that the subsequent assessment of policies and allocations against the Strategic Objectives does not adequately consider the implications for the HRI. This is compounded by the fact that the Local Plan does not contain a specific policy that seeks to protect the HRI. This is discussed further in the Local Plan section below.</p> <p><b>Site Selection Background Paper</b></p> <p>JCE requests that this background paper is updated to reflect new evidence base documents recommended by JCE and identified as forthcoming in the SA. The implications of the site selection process on the HRI should be clearly and readily identifiable given the acknowledged importance of this industry to the area. The absence of this means that it is not possible to conclude that the site selection process has adequately considered this important matter and in turn means that the considerations cannot be adequately reflected in the SA process.</p> <p><b>HRI information</b></p> <p>In addition to the matters referred to above, JCE recommends and advocates the inclusion of a document that summarises the location of HRI activities within the District. It is important that the Plan acknowledges the differences between the activities centred on Lambourn and those in the wider area. Collectively, these contribute to the area being known as the Valley of the Racehorse, but the location of the individual activity creates different issues that should be taken into account when applying development plan policy.</p>	

Respondent	Response	Council Response
	<p>JCE offers its support in identifying these locations and the implications that they have in the consideration of development proposals – both for HRI-related uses and other uses that may impact on the HRI. (see <i>lpr1907</i> for comments on evolving draft LPR)</p>	
<p>Mid &amp; West Berkshire Local Access Forum (lpr1895)</p>	<p>MWBLAF welcomes and supports the detailed and systematic assessment in the Detailed Sustainability Appraisal of the impact of each development on public rights of way and open spaces, for example:        GREE 8 (Sandleford): Public Right of Way GREE/9/1 traverses the site. The developer would incorporate this within the development, in addition to providing additional PROW as appropriate. Public open space and green and blue infrastructure to support the development would be provided with development.        SP17 (North East Thatcham): Public Rights of Way THAT/4/1, THAT/3/3, THAT/2/1, THAT/3/5, THAT3/1/, THAT/1/1, traverse the site. The developer would incorporate these within the development, in addition to providing additional PROW as appropriate. Public open space and green and blue infrastructure to support the development would be provided with development.        RSA 3 (Speen): Overall, in terms of environmental and social sustainability, development of the site would have a positive impact. If the allotments were not retained or re-provided Public Right of Way (PROW) were not protected there could be a negative impact on environmental social sustainability.        It appears from paragraph 1.2 of the interim Sustainability Appraisal and Strategic Environmental Assessment and paragraph 32 of the National Planning Policy Framework that this assessment is used in the preparation of the Local Plan and does not form part of the Plan once approved:        Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets the relevant legal requirements. Therefore, the key conclusions of the assessment and any avoidance, mitigation or enhancement measures required must now be added to the Local Plan.        Some elements of the assessments appear to describe the present intention of the current proponent of the site – “The developer would ...”. The wording of these need to be amended to become requirements.        The Forum requests that the key conclusions of the Detailed Sustainability Appraisal of Site Options and any avoidance, mitigation or enhancement measures are included within the relevant policies in the Local Plan document.</p>	<p>Comments noted.</p> <p>The SA process is an integral part of the preparing the LPR and the Council confirms it will continue to inform and influence the plan as it evolves.</p>

North Wessex Downs AONB (lpr1630)	We would commend you on this first draft which clearly reflects the scale of designation within West Berkshire and the desire to create a landscape led approach. I have already advised a neighbouring LPA to take note of your plan.	Comments noted
Transport for London (lpr26)	Thank you for consulting Transport for London (TfL). I can confirm that we have no comments to make on the emerging draft of the West Berkshire Local Plan Review.	Response noted
West Berkshire Green Exchange (lpr1546)	<p>This response is submitted by the committee of the West Berks Green Exchange (WBGE) on behalf of its members.</p> <p>WBC has declared a climate emergency and although the LPR document makes reference to WBC's environmental strategy, there is no sense that planning needs to change sufficiently to deliver the results called for in the environmental plan. In fact, as the Environmental Implementation Plan has not yet been produced, it cannot be known what results are required of planning, which makes the issue of this document, at this time, bizarre.</p> <p>We question whether this is the right time to produce a local plan before thoroughly researching the requirements of local people for living, working and travelling. There has been much change during the past year (2020) because of Covid-19. We expect that there will be some permanent changes to the way in which people live and work, and that a sound plan will need to acknowledge them.</p> <p>Similarly, over the past five years, the general public has come to understand much better the threat of climate change. They require solutions to enable them to live in a carbon neutral environment and in a waste neutral environment. In other words, they require greenhouse gases and waste products to be dealt with locally and not transmitted to the atmosphere or to other places on the planet.</p> <p>There is nothing in the plan seeking to support or incentivise a reduction in the use of energy. In our recent past, post WW2, the human race has gone for economic growth at the expense of almost everything else especially the environment. We have maximised the use of most resources, especially fuel and energy. This has resulted in the evils of climate change and environmental degradation and breakdown, the costs of which will be huge as sea level rise takes its toll on seaside communities, ports and also on land for food production. We are in danger of making the same mistakes again as we bolster economic growth with the maximum use of resources instead of going for a minimisation of energy and resource use.</p> <p>Government would seem to be adopting a policy of continuing to maximise energy use, although using renewable energy instead of fossil energy. This can be seen in its reluctance to address the extremely high energy use of existing homes and putting off</p>	<p>Comments noted</p> <p>The Council has a statutory duty to prepare a Local Plan and review it every 5 years. The Government published guidance in May 2020 with regard to planning and COVID 19: <a href="https://www.gov.uk/guidance/coronavirus-covid-19-planning-update">https://www.gov.uk/guidance/coronavirus-covid-19-planning-update</a>. This stated that <i>"We continue to want to see Local Plans progressing through the system as a vital means for supporting economic recovery in line with the government's aspirations to have plans in place across the country by 2023."</i></p> <p>A written ministerial statement (<a href="https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720">https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720</a>) published on 19 January 2021 set out the importance of work continuing to advance on Local Plans through to adoption by the end of 2023 to help ensure that the economy can rebound strongly from the pandemic.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of</p>

Respondent	Response	Council Response
	<p>maximising insulation of new homes. This policy is good for growth because it means that the replacement electrical heaters in existing homes, heat pumps instead of gas or oil boilers, are four times the size that they would have to be to if the houses were insulated properly before the heaters were replaced. That means four times the electricity use which means four times the generation capacity be it nuclear, wind, solar or tidal. This may be all very good for growth but is a disaster for the environment as it means that we have to literally scour the earth and sea bed for the minerals to build the excess heat pumps, wind turbines, solar panels and nuclear plants necessary to heat uninsulated homes. We are facing a shortage of many of the materials which are required for this high tech machinery as it is without having to ramp up electricity production to power both our houses and cars. With a policy of minimising energy use by very high level home insulation we will use much more insulation material but this, by its very nature, is mostly air so the increased material use is small. The country would save a fortune on the smaller number of wind turbines and solar panels that we have to find space for and we could save on the building of at least one new nuclear plant. The savings on energy costs to each household would also be significant and the increased comfort of a properly insulated house would be a revelation to most people and boost the health of the many in fuel poverty. And the much lower level of generation infrastructure would save pressure on the landscape of AONBs as the demand rises on government to increase electricity supply. Also much of the excess infrastructure would have to be manufactured using current fossil fuel technology worsening the current situation with regard to carbon emissions.</p> <p>Locally the increased electricity use engendered by a transfer of every home to oversized home heating installations and also the complete change over to e-car use will require a serious overhaul of the electricity delivery cabling; the digging up of every road in the district to increase the size of the cabling would be a probability. This could be minimised by a policy of energy reduction.</p> <p>The introduction of carbon neutrality as soon as possible should be essence of any policy going forward.</p> <p>With the Home Quality Mark (HQM) coming forward as a new standard for building houses, the council should require all new homes to be built to this standard rather than the sub-standard, second or third quality homes indicated in the draft plan.</p>	<p>the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>The policies in the LPR will support in addressing the climate emergency declared by the Council in July 2019, the strategic objectives of the Environment Strategy as well as its duty to mitigate climate change in line with the Climate Change Act 2008.</p>
<b>Other stakeholders</b>		
Ian Campbell (lpr860)	I sent to you earlier representations on the developing Local Plan on the 5th December 2018; 4th April 2018; and 14th January 2017. These representations are consistent with	Comments noted.

Respondent	Response	Council Response
	<p>the earlier ones and do not repeat them, except as necessary to reflect your new policies or continued omissions.</p> <p><b>DURATION OF PLAN</b> This plan ends in 2037. It says nothing about the Borough policies for the period beyond that. This is a serious omission and I suggest makes the plan unsustainable.</p> <p><b>HOUSE PRICES AND SUPPLY</b> Despite the fact that the UK has left the EU, it is unlikely that net inward immigration levels will fall to levels that invalidate the ONS housing projections. The recent declines in ageing may slow down the rate of new household formation. By looking two generations ahead it is clear many more new homes must be built in high need areas like the Thames Valley. Put bluntly where will West Berkshire's share of 200,000 +/- new homes be located in the post plan period? The plan says discussions are continuing with neighbouring councils because of the obligations of the Duty to Cooperate. No other information is provided to test the sustainability of this policy. It is not clear why there is a need for secrecy if it is the intention to win local support. The public needs to be informed about the conflicts the Local Plan seeks to resolve long before they become locally contentious. The necessity to plan far ahead is made more compelling by the recent AWE decision to extend the DEPZ around the facility at Burghfield. This decision will materially reduce the number of potential locations for major new housing supply within the Reading travel to work catchment area on unprotected land.</p> <p><b>GOVERNMENT WHITE PAPERS</b> This draft says nothing about the two government white papers published last year, Planning for the Future and the formula for housing numbers matter. Both are expected to impact this local plan. Is it the policy of the Borough to ignore the direction of travel they suggest? It seems so, as this Plan is silent. In a growth area needing strong, far-sighted local leadership is silence a sufficient response? Sustainable planning needs to be pro-active. Relying on the private sector, being re-active is not sufficient, as the example of Grazeley shows. A shrewd, pro-active council will know where it wants long term growth to be directed, following thorough desk-top studies with their neighbours. It will be taking steps to take control of these locations far ahead, enabling them to use their powers to capture for their local communities most of the uplift in value planning consent creates. There are some highly effective private sector landed estates examples to follow, such as the Crown Estate, the well-endowed Oxbridge colleges and others, both rural and urban.</p> <p><b>STRIKING THE RIGHT BALANCE</b></p>	<p>The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>Paragraph 22 of the NPPF was updated in July 2021 to state that '<i>Where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area, policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery.</i>' The Council has therefore undertaken further longer term visioning work for Newbury and Thatcham which will be published as part of the evidence base for the LPR.</p> <p>A Duty to Cooperate Statement will be published alongside the regulation 19 version of the LPR.</p> <p>The LPR is being prepared in the context of, and is supported by, a vast amount of national and local information and numerous professional studies.</p> <p>Policy SP12 sets out the Council's approach to the delivery of housing and this will be underpinned by a Housing Background Paper which will be published at Proposed Submission stage.</p>

Respondent	Response	Council Response
	<p>Nearly ten years the coalition devolved responsibility for spatial housing policy to local councils has passed. In the time price/rent affordability as worsened. This outcome cannot be overlooked by any government. Thames Valley councils, enjoying the benefits of strong local economies must also accept their spatial responsibility for providing enough houses in the locations of need. I suggest this short term Local Plan fails to discharge this obligation.</p>	
Gary Clarke (lpr700)	<p>Objection to the plan in general  This local plan is not an effective or persuasive vision for the future relying as it does on predictions and forecasts about economic growth in West Berkshire and specifically a reliance on the need for office space.  A more imaginative solution is required post covid to meet section 1.4. Without infrastructure improvements simply adding houses is unsustainable and is not the right development in the right place at the right time. Developers pressure to build on land in North Thatcham should be resisted.</p>	<p>Comments noted</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>The Draft Infrastructure Delivery Plan (IDP) is currently being updated and will be published alongside the Regulation 19 Local Plan Review.</p> <p>Comments in relation to the proposed development at North East Thatcham are dealt with as part of the Council's response under Policy SP17.</p>
Richard Foster (lpr741)	<p>This local development plan (LDP) is such a major document and will have such a huge effect on Thatcham that it warrants much more publicity than it is currently getting, e.g. through real presentations (not online) particularly among residents of Thatcham, and more opportunity for them to comment thereafter. I urge WBC to put approval of this document on hold until the lockdown is over and a much fuller consultation can take place.  The document feels as though it could have been written in the 1990s, in that it expects development of that type: small, boxed-in, poky little houses. There is no sense of the way</p>	<p>Comments noted</p> <p>The Council has a statutory duty to prepare a Local Plan and review it every 5 years. The Council is still at the regulation 18 of the Local Plan process – this is the evidence gathering and informal consultation stage.</p>

Respondent	Response	Council Response
	<p>in which society has changed in the last 30 years, and particularly in the last year under Covid, with more people working from home and less travelling. Rural villages have problems that are not being addressed, such as housing that is too expensive for young people, loss of essential services such as post offices, shops and pubs, and loss of bus routes making travel difficult. One answer to some of these problems is to put more development into the villages, which would mean challenging the constraints of the AONB, but the planners do not seem willing to do this.</p> <p>Town centres, too, have changed in that time. Many retail outlets have closed because of the competition from online shopping, and will probably never reopen. That real estate could become available for accommodation, but the plan shows no intention of using that resource.</p> <p><b>Summary</b> - This feels like a rushed plan that is being issued without proper publicising and debate, compounded by the restraints of Covid. Furthermore it is backward looking and fails to address basic issues, particularly on transport. It fails to justify the imposition of a massive number of homes on Thatcham and it pays lip service to achieving zero carbon without knowing what that actually involves because it precedes, when it should follow, the Council's implementation plan on its environmental strategy. It should be withdrawn until such time as its deficiencies are addressed and a proper face-to-face set of presentations can be given to the people of Thatcham, the community that it affects most.</p>	<p>The consultation that the Council has, is and still intends to do fully complies with its statutory obligations and is fully in accordance with the <a href="#">Statement of Community Involvement (SCI)</a>. The Council's timetable for the production of the LPR is set out in its <a href="#">Local Development Scheme (LDS)</a></p> <p>The Government published guidance in May 2020 with regard to planning and COVID 19: <a href="https://www.gov.uk/guidance/coronavirus-covid-19-planning-update">https://www.gov.uk/guidance/coronavirus-covid-19-planning-update</a>. Respondent	Response	Council Response
<p>Ian Halliday (lpr590)</p> <p>Jane Halliday (lpr591)</p>	<p>The Local Plan is based on evidence that largely predates the current pandemic, Brexit and related legislation on agriculture and the environment, declaration of a climate emergency by the council, and the government's plans to change the entire planning system.</p> <p>I believe that these factors will have a major impact on planning issues. For example, Covid-19 will lead to big changes in the way people work, whether or not they commute, where they shop, and so on. There is a danger that the Local Plan will be out of date as soon as it is published.</p> <p>It is vital that these various factors be taken into account when drawing up the Local Plan, and consequently, the Plan should be reviewed specifically in the light of the current circumstances and new government environmental policies before being approved.</p> <p>The Plan should be reviewed specifically in the light of the current circumstances and new government environmental policies before being approved.</p>	<p>Comments noted.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p>
<p>Councillor Alan Law (lpr1075)</p>	<p>In General I find the Emerging Draft to be very comprehensive and appropriate.</p> <p>Development in the countryside: I do question why so many related policies had to be rewritten. They were working well and had only been adopted since 2016. Additions and clarifications could have been made without the need for such a comprehensive rewrite.</p>	<p>Comments noted.</p> <p>The existing policies have been clarified and updated where appropriate to accord with current national policy.</p>
<p>Councillor Alan Macro (lpr749)</p>	<p>The results of traffic modelling are not included in the consultation documents. Modelling has been done, though inadequately - particularly for the Theale and Calcot area.</p> <p>Many residents' concerns about new development centre on the anticipated effect on infrastructure and services, such as highways and medical services. The omission of an infrastructure delivery plan in this draft mean they cannot determine whether planned infrastructure will be adequate.</p> <p>Full traffic modelling of the proposed development areas should be carried out and the results published and incorporated in the draft local plan.</p> <p>The infrastructure delivery plan should be developed to address problems identified in the model and incorporated in the draft new local plan.</p> <p>The revised draft, incorporating the above, should then be consulted upon.</p>	<p>Comments noted</p> <p>The Draft IDP was published on the Council's website in October 2021. It is currently being updated and will be published alongside the Proposed Submission LPR.</p> <p>Transport modelling has taken place which incorporates the combined impact of proposed new development through the plan period. Detailed transport work for each development (where applicable) will come forward at the planning application stage.</p>
<p>Susan Millington (lpr457)</p>	<p>The Local Plan is based on evidence that largely predates the current pandemic, Brexit and related legislation on agriculture and the environment, declaration of a climate emergency by the council, and the government's plans to change the entire planning</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>system. These factors will have a major impact on planning issues. For example, Covid-19 will lead to big changes in the way people work, whether or not they commute, where they shop, and so on. There is a danger that the Local Plan will be out of date as soon as it is published.</p> <p>I believe it is vital that these various factors be taken into account when drawing up the Local Plan, and urge that where necessary up-to-date evidence is gathered and incorporated into it, even if this leads to a delay. I suggest an interim review of the newly adopted plan in a year or two when the impact of these factors will be much easier to assess.</p>	<p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p>
Paula Saunderson (lpr943)	<p>I think it is unfortunate you are conducting this review when NPPF and more detailed planning policies are under review. Likewise the implications of the new Environment bill are not fully understood (if it ever gets into statute) and I do not see in your documents any urgent drive to commit to the Climate Change target you voted for. Also the implications of the pandemic are not yet fully understood in terms of impacts on Population levels, Density Patterns, and Employment practices.</p> <p>I do not think you have undertaken the Consultation in a very robust way, as with no Section 18 Public Exhibitions taking place these should have been conducted virtually with the opportunity to display key data visually on Presentation Boards, and the opportunity to question Planning Officers (not the odd Cllr as they come and go).</p>	<p>Comments noted.</p> <p>The Council has a statutory duty to prepare a Local Plan and review it every 5 years.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p> <p>The Council is still at the regulation 18 of the Local Plan process – this is the evidence gathering and informal consultation stage. As para 2.21 of our SCI notes, <i>'The exact nature of our consultation will depend on the nature of the document being produced and the ways in which we involve the community will depend on the stage we are at in the preparation of that document.'</i></p>

Respondent	Response	Council Response
		The consultation that the Council has, is and still intends to do fully complies with its statutory obligations and is fully in accordance with the <a href="#">Statement of Community Involvement (SCI)</a> .
Graham Storey (lpr559)	<p>The Plan is based on evidence that largely predates the current pandemic, Brexit and related legislation on agriculture and the environment, declaration of a climate emergency by the council, and the government's plans to change the entire planning system. These factors will have a major impact on planning issues. For example, Covid-19 will lead to big changes in the way people work, whether or not they commute, where they shop, and so on. There is a danger that the Local Plan will be out of date as soon as it is published.</p> <p>It is vital that these various factors be taken into account when drawing up the Local Plan, and I strongly urge that where necessary up-to-date evidence is gathered and incorporated into it, even if this leads to a delay. There should be an interim review of the newly adopted plan in a year or two when the impact of these factors will be much easier to assess</p>	<p>Comments noted.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Proposed Submission LPR.</p>
Councillor Tony Vickers (lpr117)	<p>Throughout this consultation, we find it difficult to choose between "yes" and "no". As we have consulted widely within the local Liberal Democrat Party which we here represent - and beyond among our apolitical contacts - we have found increasing levels of disquiet about the lack of detail on the potential impact of development upon communities. So we have moved from "Yes" to "No" in this first question.</p> <p>In general, we welcome the updated Local Plan and the overall approach taken. In several places however, we wish to see it strengthened.</p> <p>1.4 refers to "sustainable development" but it is some way into the document before any mention is made of a Climate Emergency. Nothing could compromise "the ability of future generations to meet" their needs more than for governments to fail to take every possible measure NOW and hereafter to tackle climate change. So this is 'front and centre' in all our comments.</p> <p>We realise that this Plan can only be made within the context of existing national and local policies but we have to assume that those policies will also take account of the climate crisis and that during the Plan period - even before the next regular review of this Council's Local Plan - significant advances in both technology and policy will occur. Therefore we look for the Plan to be sufficiently robust yet flexible not to become a barrier to progress towards achieving the 2030 Carbon Neutral target of the Council.</p>	<p>Comments noted.</p> <p>It is agreed that the LPR needs to be both robust and flexible.</p> <p>Paragraph 1.22 of the emerging draft LPR did acknowledge that <i>'There are still aspects of the LPR which need further work. For example, an updated Policies Map has yet to be produced as there is still work to do on finalising settlement boundaries and town centre boundaries. The document being consulted on has been produced during extraordinary times and some activities such as site visits have taken far longer than usual to plan and undertake.'</i></p>

Respondent	Response	Council Response
	<p>1.7 states that the LPR must be read as a whole. It has been difficult to comment on many sections in the absence of information that hasn't been presented yet, such as the Infrastructure Development Plan (Appendix 5). Many residents' concerns about new development centre on the anticipated effect on infrastructure and services, such as highways and medical services. The omission of an infrastructure delivery plan in this draft mean they cannot determine whether planned infrastructure will be adequate.</p> <p>It has also hampered our work not to have been told that other evidence was made available on the website after the launch of this consultation. We should not have had to check on a daily basis: we should have been told immediately when it was published there. The results of traffic modelling are not included in the consultation documents. Modelling has been done, though inadequately - particularly for the Theale and Calcot area. But not nearly enough has been done for Thatcham to allay the strong feeling that the town is being "put upon". We realise that traffic modelling is expensive but it is vital that more is done - and seen to be done - before any Plan is presented to the Inspectorate.</p> <p>Full traffic modelling of the proposed development areas should be carried out and the results published and incorporated in the draft local plan.</p> <p>The infrastructure delivery plan should be developed to address problems identified in the model and incorporated in the draft new local plan.</p> <p>The revised draft, incorporating the above, should then be consulted upon.</p> <p>Our comments relate to past process and not to content of the current Draft. Please note and action as appropriate.</p>	<p>The Draft IDP was published on the Council's website in October 2021. It is currently being updated and will be published alongside the Proposed Submission LPR</p> <p>Transport modelling has taken place which incorporates the combined impact of proposed new development through the plan period. Detailed transport work for each development (where applicable) will come forward at the planning application stage.</p> <p>The proposed highways and other transport/travel mitigation packages for the NET site will be identified as part of the LPR Transport Assessment to be submitted for the Local Plan examination.</p>
<p>Barton Willmore for Hallam Land Management &amp; Wilson Enterprises (lpr2396)</p>	<p>On behalf of Hallam Land Management and Wilson Enterprises Ltd, we are pleased to be able to provide the following comments in relation to the above consultation document, with particular consideration given to the proposed new community at Grazeley.</p> <p>For more than five years Grazeley has been jointly promoted as a new Garden Town by Wokingham Borough Council, Reading Borough Council and West Berkshire Council. It is a new settlement that would provide around 10,000 new homes in Wokingham Borough and around 5,000 new homes West Berkshire. It is disappointing to see the West Berkshire stepping back from the project in this draft local plan as set out below.</p> <p><b>Timing and Process of the Publication of this Local Plan</b></p> <p>The Council's latest Local Development Scheme (LDS) was published in April 2020, not long after Lockdown 1 of the UK Coronavirus pandemic. In this document the Council has set out that public participation at Regulation 18 stage was scheduled to take place "December 2017 to September 2021" with Regulation 19 consultation on the proposed</p>	<p>Comments noted.</p> <p>The consultation that the Council has, is and still intends to do fully complies with its statutory obligations and is fully in accordance with the <a href="#">Statement of Community Involvement (SCI)</a> and its Duty to Cooperate.</p> <p>The Council is still at the regulation 18 of the Local Plan process – this is the evidence gathering and informal consultation stage. As para 2.21 of our SCI notes, <i>'The exact</i></p>

Respondent	Response	Council Response
	<p>submission document anticipated in May 2021. This LDS was amended, prior to publication, to enable the West Berkshire Local Plan to follow the Wokingham Local Plan, including its allocation of Grazeley Garden Town.</p> <p>Since March 2020, the English planning and development industry - and local authorities in particular – have had to adjust to working differently and remotely, and having resources diverted to deal with the consequences of the pandemic and national lockdown(s). It is somewhat of a surprise therefore, given the Council's recently adopted Local Development Scheme, that West Berkshire Council has managed to do all the requisite evidence gathering and research to be able to publish such a detailed Regulation 18 document so quickly on Friday 11 December 2020, after more than nine months of disruption. This timeline would suggest publication of the plan was rushed.</p> <p>It is also considered to be unusual that this Regulation 18 document was not considered at any form of public committee or through any other statutory oversight process before publication. In contrast, the West Berks Minerals and Waste Reg 19 Local Plan went to Full Council on 3 December 2020 and officers sought delegated authority to publish that plan for consultation. The vast majority of the Mineral and Waste Plan had already been seen by Full Council and had been out for public consultation before. The report to Full Council on 3 December 2020 merely presented the main changes to the plan, mostly as a result of one site being withdrawn. This is nowhere near as significant as providing the new spatial strategy for development up to 2037 – including 8,114 new homes – as well as policies for employment, retail and leisure uses; infrastructure, flood risk and community facilities; and policies for the conservation and enhancement of the natural, built, and historic environment and planning measures to address climate change mitigation and adaptation. We fail to understand how such a detailed local development plan was not subject to a similar process as the Mineral and Waste Plan.</p> <p>To add to the premise that this plan was rushed to publication without an oversight process by Members, it is understood that the Council may be taking another version of the local plan to Full Council later this spring/summer (prior to the Reg 19 version) which would be outside the adopted LDS programme. We wonder whether this is possibly to regulate the preparation process.</p> <p>The High Court challenge hearings to the extension of the DEPZ around Burghfield AWE started on 15 December just one working day after the local plan was published. Publishing the draft plan late on a Friday evening after significant disruption, without it going to Full Council for consideration and authorisation to publish, one working day before the High Court hearings and a week and a half before offices closed for Christmas, feels rushed and cannot be seen to be best practice.</p>	<p><i>nature of our consultation will depend on the nature of the document being produced and the ways in which we involve the community will depend on the stage we are at in the preparation of that document.'</i></p> <p>The sites included as part of the proposal for Grazeley were located in the administrative areas of Reading, Wokingham and West Berkshire with the majority of the site located Wokingham. Though Grazeley had been identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation. No strategic allocation will therefore be made in this area.</p>

Respondent	Response	Council Response
	<p><b>Duty to Cooperate</b>  Paragraph 1.23 of the draft Local Plan states:  <i>“The LPR is being produced through close partnership working with our neighbouring local authorities to ensure that cross-boundary issues are being taken into account. Key work on satisfying the Duty takes place on an ongoing basis. The Council will prepare a Duty to Cooperate Statement to accompany the LPR and which will set out in detail how we cooperate on strategic cross-boundary issues in order to create and deliver a positively prepared plan.”</i></p> <p>It is concerning given cross boundary issues that are inherent to the consideration of the plan and its evidence base that the Council has pushed this document into a future phase of plan preparation, particularly given paragraph 26 of the NPPF which states:  “Effective and on-going joint working between strategic policy-making authorities and relevant bodies is <b>integral to the production of a positively prepared and justified strategy</b>. In particular, <b>joint working should help to determine where additional infrastructure is necessary, and whether development needs that cannot be met wholly within a particular plan area could be met elsewhere.</b>” (Authors emphasis).</p> <p>The Local Plan should be ambitious and plan for the appropriate level of growth to ensure that existing and future communities thrive. This draft Local Plan therefore needs to consider not just West Berkshire’s own development needs but that of its neighbours and the wider spatial area (see Section 4 below) as it did working jointly with Wokingham Borough Council, Reading Borough Council and Bracknell Forest Borough Council to produce the West of Berkshire Spatial Planning Framework in December 2016 and subsequent additional studies. The Framework was intended to guide the four Western Berkshire authorities in pulling together their local plans by identifying some key opportunities for major delivery of new development, particularly for housing and the level of infrastructure provision required.</p> <p>The Local Plan also needs to consider the implications of any neighbouring authority’s local plan allocations and consider any impacts or opportunities this may bring, including planning for social and community infrastructure, such as the proposed new settlement at Grazeley immediately adjoining the boundary of Wokingham Borough (Policy SS3 in the Wokingham Borough council Draft Local Plan, February-March 2020).</p> <p>Paragraph 6.22 of this Reg 18 Local Plan states, <i>“Though Grazeley has been identified as a possible location for a new garden settlement, there are uncertainties regarding the proximity to AWE Burghfield, funding for infrastructure and delivery timescales. No strategic allocation is therefore made in this spatial area.”</i> However, this draft plan effectively then ignores the major proposal on its boundary. By ignoring the</p>	

Respondent	Response	Council Response
	<p>proposal of a new garden community at Grazeley in this Local Plan and moving away from previous commitments and ambitions to develop the Council's own land to the south of Grazeley, as an integral part of the garden community, this draft plan will fail the soundness tests of being positively prepared and having a justified long-term strategy for the development needs of its district or the wider area.</p> <p>West Berkshire has been a joint partner in the Grazeley garden town project since the preparation of the West of Berkshire Spatial Planning Framework. However, the Council seems to have backed away from this joint work and the evidence that supported the garden community, despite being part of the group of authorities that submitted a bid and received funding to pursue this long-term proposal in 2019.</p> <p>This is a significant step back given the forward-thinking nature of this collaboration and the time, resources and expenditure applied in the last five years by all local authorities involved; something which demonstrated a good example of strategic planning as considered in the recent White Paper, "Planning for the Future" (paragraph 2.19).</p>	
Carter Planning for RLA Jones (lpr1899)	<p>Para 1.23 We understand the legal duty to co-operate and are sure that this will be carried out, but it is unfortunate that no details of the co-operation to date are given at this stage. This would have been helpful and would have informed the Draft Plan, and the responses to it, if details could have been given.</p> <p>This is especially true on the subject of housing as the Plan deals with the Council's housing need but does not explain whether or not adjoining Authorities (such as Reading, Swindon and Wokingham) will require housing need to be met in West Berkshire District and if so what the quantum of that additional housing would be.</p> <p>The Draft Plan sets out a figure for overall housing need together with some sites but it may be that both of those aspects will need to be revisited in the light of the duty to co-operate.</p> <p>Give details of the responses to the duty to co-operate as soon as possible so that the overall housing requirement figure and the sites needed to meet it can be addressed.</p>	<p>Comments noted.</p> <p>A Duty to Cooperate Statement will be published alongside the Proposed Submission LPR.</p>
Rural Solutions for Karine Giannamore (lpr2306)	<p>As a general observation, we suggest that this and the following sections should be referred to as 'Development Management' Policies in line with the NPPF. The term 'Development Control' implies restrictive policies and negativity, whereas our experience indicates the Council wishes to be proactive in shaping development proposals in their area.</p>	<p>Comments noted.</p> <p>References throughout the document will be changed from DC to DM</p>
Savills for Englefield Estate (lpr1545)	<p>The LPR is supported by a number of evidence studies including the HELAA and other supporting evidence studies which are referenced above where relevant. The HELAA</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>(December 2020) has been updated to take account of factual inaccuracies in the earlier February 2020 publication. This includes updated assessments of several sites owned by the Estate following submission of additional clarification on 20th March 2020. In response to the updated assessment we would comment as follows:</p> <ul style="list-style-type: none"> <li>BRAD4: Land at Cock Lane, Bradfield Southend – the HELAA assessment has been updated to state, <i>'The site is in use as a temporary allotment (the site comprises garden land that is let by the landowner under license to one private individual).'</i> However the assessment concludes that the suitability of the site is <i>'unknown'</i> because <i>'the promoter has not indicated if these will be reprovided for elsewhere.'</i> The updated HELAA partly acknowledges our response of 20th March 2020 (in which we noted that the site is used as an extension to the garden of the adjoining property, Southend House, rather than as an allotment) and acknowledges that temporary allotments are not protected from disposal and do not constitute green infrastructure. On this basis, there is no justification in planning policy terms for re-provision to be required. The HELAA assessment should be updated accordingly to conclude that the site is <i>'suitable'</i> for</li> <li>BUR12: Land at Green Park, Kirton's Farm Road, Reading, and BUR13: Land west of Green Park Station, off Cottage Lane, Reading – the HELAA assessment has been updated to state that whilst each site <i>'lies adjacent to a 'Major Development Location' and 'Core Employment Area' at Green Park...the surrounding area of the site in West Berkshire is rural and the site does not relate physically or visually to an existing built up area'</i> (our emphasis). As set out in our response of 20th March 2020, it is misleading and wholly inaccurate to describe the sites' context as <i>'rural'</i> given the surrounding transport and utilities infrastructure (e.g. Green Park Station, M4 and substation) and planned development at Green The NPPF (paragraphs 24, 35, 102 and 106) clearly encourages effective strategic planning across authority boundaries and development around transport interchanges and therefore it is critical that the site is considered in its overall context.</li> </ul> <p>Development opportunities - In the context of the above, the Estate's landholdings within the District provide an opportunity for appropriate development to contribute towards the aims and objectives of the LPR.</p> <p><b>Grazeley</b> The Englefield Estate are one of the key landowners of land identified as a potential new settlement at Grazeley (ref. WOK4). As outline in the previous LPR Regulation 18</p>	<p>The specific comments that relate to sites being promoted as part of the HELAA will be dealt with as part of that process.</p> <p>The Council's strategy is to direct development to the most sustainable locations in accordance with the settlement hierarchy. Within these settlements, policy SP13-15 identify the sites that are considered suitable in relation to the hierarchy taking into account the assessment of sites carried out through the HELAA.</p> <p>The sites included as part of the proposal for Grazeley were located in the administrative areas of Reading, Wokingham and West Berkshire with the majority of the site located in Wokingham. Though Grazeley had been identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation. No strategic allocation will therefore be made in this area.</p>

Respondent	Response	Council Response
	<p>consultation, this strategic development opportunity has the potential to deliver a major housing and mixed use development of 15,000 dwellings, including 5,000 dwellings in West Berkshire district. Given the significant benefits that this strategic site could bring to the housing and development needs of the area, should the DEPZ change (noted at LPR paragraph 4.47), a review of the LPR should be undertaken to reconsider development at Grazeley. In the meantime, the LPR should continue to note the potential future opportunity at Grazeley and the on-going cross-boundary work that is being undertaken to support its allocation in future.</p> <p><u>Englefield</u> Englefield village comprises a sustainable rural community within the district with a range of local community services and facilities. The current local planning policies that apply to the village are restrictive of development and this is reflected in the amount of new development that the village has experienced in recent years. As such there is very little inward migration of new families to the village and, together with a lack of employment opportunities, the resultant trend is towards an ageing population. This threatens the medium to long term economic and social viability of the village and its community, in particular the survival of core services. It is however considered that, together with updates to draft LPR policies above, opportunities exist within the village (e.g. HELAA site refs. ENG1, ENG2 and ENG3) to ensure that it remains a diverse, vibrant and rural community with a mix of housing, employment and education which sustains the community and contributes to meeting the needs identified in the LPR.</p> <p><u>Bradfield Southend</u> The Estate's landholdings at Cock Lane, Bradfield Southern (ref. BRAD4) is situated within the existing settlement boundary of Bradfield Southend, and is less than 5 minutes' walk from all the services and facilities within the village (including educational, retail and community facilities). The site is located within the North Wessex Downs AONB, which washes over the entirety of the settlement, however in all other respects, the site is not constrained environmentally. The site is therefore situated in a sustainable location could accommodate in the region of 4-5 dwellings to meet local needs. As noted above, a change to the HELAA assessment is required to reflect the absence of allotments (and therefore lack of justification for their reprovision) and to conclude the site is 'suitable' for development.</p> <p><u>Burghfield Common</u> In addition to the Estate's site at Pondhouse Farm, Burghfield Common (referred to above), the Estate's landholdings at Burghfield Common include land adjacent to Pondhouse Farm and land at Hollybush Lane, Burghfield Common. Taking into account the role of Burghfield</p>	

Respondent	Response	Council Response
	<p>Common within the district, and given that the DEPZ may be subject to change (as noted above), it is recommended that some provision is made for additional housing at Burghfield in order to ensure certainty of future housing supply.</p> <p>The site adjacent to Pondhouse Farm adjoins the eastern edge of Burghfield Common and is within walking distance of all the services and facilities within the village (including educational, retail and community facilities). The site is currently in agricultural use and is not constrained environmentally e.g. by ecological or landscape designations, or by flood risk considerations. The site is therefore situated in a sustainable location to accommodate development in the region of 100-140 dwellings.</p> <p>The site at Hollybush Lane adjoins the northern edge of the Burghfield Common settlement boundary. The site is a c10 minute walk to educational, retail and community facilities and 1 mile away from the village centre. The site is recognised as having opportunities for biodiversity enhancements through its designation as a 'Biodiversity Opportunity Area', however in all other respects, the site is not constrained environmentally e.g. by landscape designations or flood risk considerations. The site, or part thereof, is therefore situated in a sustainable location to accommodate development.</p> <p><u>Mortimer</u></p> <p>In addition to land at West End Road (ref. SM2) and The Street (ref. SM3) (promoted by others), the Estate has landholdings at Spring Lane (ref. SM4) and Monkton Copse, Mortimer (ref. SM5). Mortimer is located just outside the DEPZ in the Eastern Area and has potential to accommodate additional development within the LPR plan period to 2037 (beyond the existing Neighbourhood Plan period).</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR reference: Context

### (Proposed Submission LPR reference: Context)

Public Protection Partnership (lpr11)	Supports the approach	Support for the approach is noted.
<b>Statutory consultees</b>		
Cold Ash Parish Council (lpr1727)	<p>The West Berkshire District Council Local Plan clearly represents a significant amount of work and provides a comprehensive response to the key issues of the day, both national/international and local. Few could be in disagreement with its aims however the challenge faced is how to achieve them in a balanced way.</p> <p>The recognition of the value of protecting and enhancing the character of the varying landscapes across the district, and recognising and maintaining the distinctness of individual areas, is extremely positive. Much of West Berkshire is made up of towns, villages and local areas, whose distinctiveness and local character are very important.</p> <p>The main concern around the plan is that the aims have not been met for significant areas of the district, due to a number of constraints; both those placed on West Berkshire District Council and those it has chosen to adopt.</p>	<p>Comments noted.</p> <p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy; and is based on robust up-to-date evidence.</p>

Respondent (with lpr ref)	Response	Council Response
Greenham Parish Council (lpr870)	<p>2.6 states “West Berkshire is well connected in transport terms”. This is true of most of the district, however not true of Thatcham, which leads us to question the decision to allocate so many more houses in NE Thatcham. Traffic to and from the main road network (M4 / A34) has to pass through Newbury and this adds to congestion. There is a need for a road link – especially for HGVs – from the east of Thatcham railway station (by bridge over road and canal /river) from A4 to A339 Thornton Road, via New Greenham Park. This could continue between the Swan roundabout south of the River Enborne to link with Newbury bypass at Wash Water. From this road link, if Sandleford Park (SP 16) is to avoid further congesting both the A339 through Newbury and A343 through Wash Common with traffic that need not use those roads, a local link into Sandleford from the south could be made.</p> <p>We would like the District Council to consider asking for a grant from the Local Enterprise Partnership which together with CIL contributions from the two strategic housing sites in this Local Plan (Sandleford and NE Thatcham SP 17) could largely pay for this, topped up from the general CIL pot.</p>	<p>Comments noted.</p> <p>Paragraph 2.6 of the Emerging Draft LPR provides an overview of the District as a whole. It is acknowledged that some parts of the area will have better access to the rail and strategic road network than others.</p> <p>The Council will be undertaking a review of its Local Transport Plan following the Local Plan Review and some of the issues raised are more appropriately considered as part of that process. Other detailed comments will be dealt with as part of the Council’s response to comments made under Policy SP17.</p>
Hungerford Town Council (lpr119)	<p>Supports the approach. The North Wesssex Downs is rightly highlighted as a very important feature of the West Berkshire District.</p>	<p>Support for the approach noted.</p>
Newbury Town Council (lpr2274)	<p>Para 2.6 states “West Berkshire is well connected in transport terms”. This is true of most of the district, however not true of Thatcham, which leads us to question the decision to allocate so many more houses in NE Thatcham. Traffic to and from the main road network (M4 / A34) has to pass through Newbury and this adds to There is a need for a road link – especially for HGVs – from the east of Thatcham railway station (by bridge over road and canal /river) from A4 to A339, via New Greenham Park. This could continue between the Swan roundabout south of the River Enborne to link with Newbury bypass at Wash Water.</p>	<p>Comments noted.</p> <p>Paragraph 2.6 of the Emerging Draft LPR provides an overview of the District as a whole. Other detailed comments will be dealt with as part of the Council’s response to comments made under policy SP17.</p>

Respondent (with lpr ref)	Response	Council Response
Shaw cum Donnington Parish Council (lpr192)	Context Shaping - No comment.	Response noted.
Thatcham Town Council (lpr1381)	<p><b>Section 2.1</b> "AONB ... legally protected landscape" It is our understanding that, for AONB regions, separate policies apply instead of the presumption in favour of granting permission. Where management plans exist, development in the setting of AONB are matters for decision makers. Given that 74% of West Berkshire is AONB it is important that the proper consideration is given, and the area as a whole should not be dismissed as being unavailable for development. This statement should describe the meaning of "legally protected" in context and explain that this does not mean that development is prohibited.</p> <p><b>Section 2.4</b> "The rural environment of West Berkshire adds significantly to the quality of life enjoyed by urban residents of the District and is a considerable asset for the area." We recognise that the rural environment of West Berkshire is a valuable and precious asset. Nevertheless, the rural environment only adds to the quality of life for residents of urban areas if it easily accessible. It is essential that rights-of-way that connect urban conurbations to the surrounding countryside are maintained and strengthened to maintain quality of life, well-being and health.</p> <p><b>Section 2.5</b> "the current economic uncertainty which both COVID-19 and Brexit ... rates of employment in the District are high". We agree that there is a great deal of economic uncertainty and are concerned that committing to a Local Plan during this period is appropriate. We note that West Berkshire contains a large number of employers, including major business and SME's, with a European focus. The largest business sector in 2019 is stated as being Professional, Scientific and Technical Businesses. We would encourage WBC to conduct primary research with a range of European facing companies to understand the extent of growth, or contraction that is anticipated post-Brexit.</p>	<p>Comments noted.</p> <p>This section is an introduction only. Further detail on the AONB is given in Policy SP2 which clearly sets out the Council's approach to the nationally designated landscape.</p> <p>The Council agrees that access to the countryside is important. Rights of Way will be maintained and strengthened through the Local Plan Review and this is set out in Policy SP10.</p> <p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic.</p> <p>Paragraph 2.6 of the Emerging Draft LPR provides an overview of the District as a whole. It is acknowledged that some parts of the area will have better access to the rail and strategic road network than others.</p> <p>The Council will be undertaking a review of its Local Transport Plan following the Local Plan Review and some of the issues raised are more appropriately considered as part of that process.</p> <p>Other detailed comments will be dealt with as part of the Council's response to comments made under Policy SP17.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We note that in the Evidence Base the employment assessment states that "Covid19 ... the impact on the current economy and future economic growth will need to be assessed' and 'it is not possible to capture the impact ... in this report'. Given that the employment distribution, and economic development, are critical inputs to the policy and strategic direction for West Berkshire we struggle to understand how major developments can be proposed based on what may be dated mobility patterns and traffic flow. It is necessary for West Berkshire to test the robustness of its assumptions through engagement with local businesses.</p> <p><b>Section 2.6</b> "well connected in transport terms. At the centre of the District is an important road interchange"</p> <p>This is a statement that is true of West Berkshire in general, but not at a local level. We recognise that the mainline railway service is an important asset, particularly with regards sustainable travel and the desire to reduce private vehicle use. Nevertheless, the position remains that Thatcham is poorly connected to its station. Its location, access, and parking are sub-standard for a population centre of the size of Thatcham. The crossing creates significant congestion, with queues approaching 1km in length, and the crossing being closed for up to 40 minutes in an hour. In effect this means that Thatcham is poorly connected to the centres to the South. This information has previously been released by West Berkshire into the public domain.</p> <p>Recently, Thatcham Town Council has made enquiries with GWR as to whether the scheduling at the rail crossing can be improved. In the most recent feedback (19th Jan 2020) our request to relocate trip points to reduce closure duration was rejected. There will be no changes to the Colthrop signal box until at least the period 2029-2034. Therefore, there does not appear to be any credible option to reduce crossing closures.</p> <p>It is essential that there is a full disclosure of the traffic queuing, crossing closure rate, and period of closure, in the evidence pack related to traffic assessment. The time period should represent pre-Covid data to align with other evidence.</p> <p>Further, access from Thatcham to the North is primarily through the rat-run route of Cold Ash, Hermitage and Chieveley to access the A34.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>In effect this means that Thatcham is served with one primary East-West route. There are several fundamental issues with the A4 approaching, and through, Thatcham:</p> <ol style="list-style-type: none"> <li>1. The route is over-stretched - it serves as a route for 'active-travel' with the introduction of cycle lanes; it is a main route for HGV traffic to the distribution centres to the East of Thatcham; it is a main access route for 'blue-light' services for A&amp;E hospitals at Reading and Basingstoke (via Brimpton); it is a trunk-road and diversion route for M4 traffic; and it remains the essential route to serve local residents to enable access to the Town Centre. Consequently, the A4 within Thatcham, and its access from both the East and West routes, are often congested during peak periods.</li> <li>2. The A4 road is narrow in width and contains many junctions in a short stretch through the town centre. There are recently introduced active travel measure measures for cycling but these are already being called into question due to vehicles colliding with the cycle lane borders ('Orcas' and poles). It remains unclear to the long-term viability of these measures when traffic flows increase to pre-Covid levels.</li> </ol> <p>The alternative routes to the A4 all involve transiting through residential areas on roads that are not dimensioned for supporting high traffic flow or HGV (e.g. Lower Way to the South, or Bowling Green Road to the North). Therefore, we accept that whilst West Berkshire as whole may be well-connected, we disagree that the proposed site for NE Thatcham is well-connected.</p> <p>It is therefore necessary to clarify the statement to describe that within West Berkshire there are areas that are not well connected and specifically this includes the strategic site proposed for NE Thatcham under policy SP 17 due to constraints on infrastructure.</p>	
Environment Agency (lpr1656)	2.1 – Add: The Rivers Lambourn and Kennet are nationally important chalk rivers, while the former is also internationally important, as are a number of wetland habitats along the Kennet corridor.	Comments noted. Add the following to the end of paragraph 2.1 – <u>'The valleys of the internationally and nationally important chalk rivers of the Lambourn and Kennet also form two distinctive landscapes threading through the District.'</u>
<b>General consultation bodies</b>		

Respondent (with lpr ref)	Response	Council Response
West Berkshire Green Party (lpr1822)	<p>The Emerging Draft is based on evidence that largely predates the current pandemic, Brexit and Brexit-related legislation on agriculture and the environment, declaration of a climate emergency by the council, and the government's plans to change the entire planning system.</p> <p>We believe that these factors will have a major impact on planning issues. For example, Covid-19 will lead to big changes in the way people work, whether or not they commute, where they shop, and so on. The collapse in the retail sector at the expense of online shopping will have major implications for town centres – including an opportunity for more homes in town centres, with a corresponding reduction in the need to build on greenfield sites.</p> <p>There is therefore a danger that the Local Plan will be out of date as soon as it is published. The Green Party believes it is vital that these various factors be taken into account when drawing up the Local Plan, and we strongly urge that where necessary up-to-date evidence is gathered and incorporated into it, even if this leads to a delay. We also propose an interim review of the newly adopted plan after a year or two when the impact of these factors will be easier to assess.</p>	<p>Comments noted.</p> <p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic.</p> <p>In line with the NPPF, the policies in the plan will be reviewed to assess whether they need updating at least once every five years and will then be updated as necessary.</p>
West Berkshire Heritage Forum (lpr106)	Supports the approach.	Support for the approach is noted.
<b>Other stakeholders</b>		
Sam Coppinger (lpr277)	<p>We agree that the rural nature of West Berkshire should be paramount in considering new developments and fundamentally that the AONB needs to be preserved.</p> <p>We agree that West Berkshire benefits from really good road connections, however, we would like to bring to your attention that not all rural communities are well served by public transport.</p>	<p>Comments noted.</p> <p>It is recognised that many rural parts of the District have no, or a very minimal bus service. The Council has recently published a Bus Service Improvement Plan, which outlines that Demand Responsive Transport options are being investigated for rural areas where there are no bus services (e.g. between Hungerford and Lambourn).</p>
Councillor Alan Macro (lpr750)	It is true that West Berkshire has several major arteries running through it, but it cannot be said that it is "well connected". Both national (M4 and A34) and local highway networks are overloaded and congested at peak times.	<p>Comments noted.</p> <p>This introductory section has taken a strategic look at the District. The Council will be undertaking a review of its</p>

Respondent (with lpr ref)	Response	Council Response
	This affects roads in and around Newbury, Thatcham and Theale in particular. The section should be re-worded to reflect the problems.	Local Transport Plan following the Local Plan Review and the issues raised will be considered as part of that process.
Paula Saunderson (lpr45)	<p>The AONB, whilst a designation comprises of much intensively farmed agricultural land, and as such is very low in Biodiversity. Many of your villages have become mini dormitories for the affluent with very little of their original feel about them. There seems to be no encouragement of these large landowners to place Green Energy generation schemes on their lands.</p> <p>I am not sure you have a full handle on your Housing Stock, and what types and size of housing is over-supplied and what is under-supplied</p>	<p>Comments noted.</p> <p>The primary purpose of AONB designation, ‘to conserve and enhance the natural beauty of the area’, is set out in the Countryside and Rights of Way Act 2000. Under Section 85 of the Act, the Council has a duty to have regard to the primary purpose of designation and Policy SP2 makes clear that the North Wessex Downs will have appropriate sustainable growth throughout the plan period to support its local communities and rural economy in a manner commensurate with its statutory status.</p> <p>Local housing needs within the AONB will be met through the affordable housing and exception site policies. New homes will be expected to comply with Local Plan Review policies regarding renewable energy and carbon.</p>
Councillor Tony Vickers (lpr523)	<p>2.6 states “West Berkshire is well connected in transport terms”. It is true that West Berkshire has several major arteries running through it, but it cannot be said that it is “well connected” if these are frequently congested. Both national (M4 and A34) and local highway networks are overloaded and congested at peak times. This affects roads in and around Newbury, Thatcham and Theale in particular.</p> <p>The infrastructure delivery plan should be developed to address problems identified in the model and incorporated in the draft new local plan. The revised draft, incorporating the above, should then be consulted upon. Traffic to and from the main road network (M4 / A34) has to pass through Newbury or Theale along the A4 – or ‘rat run’ through Cold Ash. This adds to congestion, limits opportunities for local active travel. There is a need for a road link south of Newbury – especially for HGVs – between Colthrop and the A34 at Wash Water, via New Greenham Park and A339. This could also help alleviate problems from increased through traffic from Manydown (NE of Basingstoke) through A339 in the centre of Newbury.</p> <p>The sentence in 2.6 should be changed to “<b>Most of</b> West Berkshire is well connected in transport terms.”</p>	<p>Comments noted.</p> <p>This introductory section has taken a strategic look at the District. Paragraph 2.6 of the Emerging Draft LPR provides an overview of the District as a whole. It is acknowledged that some parts of the area will have better access to the rail and strategic road network than others.</p> <p>The Council will be undertaking a review of its Local Transport Plan following the Local Plan Review and the issues raised will be considered as part of that process.</p>

Respondent (with lpr ref)	Response	Council Response
	We also propose a change in Section 4 (Newbury and Thatcham Area).	
<b>Landowners, site promoters and developers</b>		
Rural Solutions for Karine Giannamore (lpr2310)	<p>About 90% of West Berkshire is rural in character. The North Wessex Downs Area of Outstanding Natural Beauty (AONB) is a protected landscape, covering approximately 74% of West Berkshire.</p> <p><i>“This rural dimension is very important in shaping the character of West Berkshire, its communities, economy and environment. The importance of agriculture and rural businesses, the prominence of landscape and countryside along with the small scale and dispersed nature of rural communities, are all important issues and challenges to be considered through the review of the Local Plan. The rural environment of West Berkshire adds significantly to the quality of life enjoyed by urban residents of the District and is a considerable asset for the area.”</i></p> <p>Whilst the above is very true, the rural environment is a working landscape, and its local communities require sustainable growth to keep these essential services going. This has become more apparent during the Covid-19 pandemic where people have become much more reliant on local services and facilities within their hamlet or surrounding villages, which between them often support each other.</p> <p>For example, Hamstead Marshall includes the local church, a pub and village hall, whereas the next village Crockham Heath contains the local primary school (Enborne CE Primary) serving a wider cluster of hamlets. Whilst the rural area provides an asset for urban residents, we must not forget those living within these important communities. To indicate that these areas will see no growth at all during the plan period could have long-term negative consequences for the sustainability of these settlements.</p> <p>The concept of a ‘place-based approach’ is good, but this should go further to support the growth of West Berkshire’s rural communities. It focuses on the urban settlements for growth such as Newbury/Thatcham and the eastern areas but more emphasis is needed on the smaller spatial scale. There are important roles and interrelationships which the rural hinterlands play to the benefit of the urban centres and more generally to the wider area.</p>	<p>Comments noted. The issues raised are considered as part of the Council’s response to comments made under Policy SP1.</p> <p>Policies SP20 and DM39 of the Emerging Draft LPR will support the ongoing vitality of rural communities and community facilities.</p>

Number of responses received: 28

<b>Respondent</b>	<b>Response</b>	<b>Council Response</b>
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr705)	Support for the Vision.	Support noted
Public Protection Partnership (lpr12)	Support for the Vision.	Support noted
<b>Statutory consultees</b>		
Cold Ash Parish Council (lpr1728)	<p>Vision neither supported nor not supported.</p> <p>The vision is somewhat prosaic, which is understandable to an extent given the Plan's nature, but a significant omission is the lack of reference to quality of life for residents. How is the Plan genuinely going to enhance this? How are residents going to feel about living in West Berkshire within 5 years, half-way through, and at the end of the Plan?</p>	<p>Comments noted. The Vision is deliberately concise. The common components of quality of life run through the Vision in seeking to satisfy the needs of current and future residents as well as attract and retain employers, workers, and visitors. Development of the physical environment in the form of housing, employment land and infrastructure within a cleaner more sustainable outlook for residents is connected directly to community cohesion, health and social wellbeing. The extent to which the Local Plan can be linked further productivity, satisfaction, and happiness (and thus how people feel) in any measureable way is considered beyond the scope of the Vision.</p>

Respondent	Response	Council Response
Greenham Parish Council (lpr874)	<p>Vision is supported.</p> <p>We strongly support all Strategic Objectives and Objective 1 (Climate Change) in particular but note that for West Berkshire to become carbon neutral by 2030, the contribution from new development will almost certainly need to go further than current national policy requires in terms of environmental sustainability. The stock of existing buildings will be much harder to retro-fit for sustainability in use than is possible with new development.</p> <p>The Council declared a Climate Emergency in 2019. This reinforces the imperative of giving very high priority to environmental sustainability in all aspects of the new Local Plan if necessary, at the expense of economic and even social sustainability. However nothing could be more likely to fail to secure social and economic sustainability than failure to tackle climate change, because all the evidence (e.g. The Stern Report of 2006) indicates that the costs of doing so overall and in the long term will increase unless measures are taken early.</p> <p>Therefore our approach to achieving this aspect of the Council's Vision will be to consistently give much greater weight to a development's contribution to mitigation of climate change than to being in keeping with the character and distinctiveness of the area. This applies as much to the AONB as to the rest of the District, where changes implied in the Environment and Agriculture Acts are likely to lead to changes in spatial planning and in the landscape of rural areas of greater impact than in recent decades.</p> <p>Over the Plan period, even if all new homes are built to zero carbon standards, there will by 2037 be only a small reduction in the overall carbon footprint of the District. New build in any one year seldom accounts for more than 1% of total built stock. We should be insisting on the highest standards in all new builds and encouraging the opportunity to upgrade and replace poorly insulated and badly maintained buildings, in addition to permitting new build. Whatever can be done through the planning system by amending this Local Plan should be done, in the interests of sustainability. Our Vision is for West Berkshire to set the national benchmark standard for green prosperity for all.</p>	Comments noted.
Hungerford Town Council (lpr54)	Vision is supported.	Comments noted.

Respondent	Response	Council Response
	<p>Strongly support 3.3 in particular as we need to accelerate progress on delivering real carbon neutrality for the District as a whole primarily by eliminating direct carbon emissions from residential and commercial buildings and transport rather than relying on off-setting. Local employment opportunities (3.1) particularly in technology and creative businesses are well suited to the area. In our area of relatively high residential prices 3.2 remains a key part of the required vision</p>	
<p>Newbury Town Council (lpr2273)</p>	<p>Vision is supported.</p> <p>We strongly support all Strategic Objectives and Objective 1 (Climate Change) in particular but note that for West Berkshire to become carbon neutral by 2030, the contribution from new developments will almost certainly need to go further than current national policy requires in terms of environmental sustainability. The stock of existing buildings will be much harder to retrofit for sustainability than is possible with new developments. The Council declared a Climate Emergency in 2019. This reinforces the imperative of giving very high priority to environmental sustainability in all aspects of the new Local Plan – if necessary, at the expense of economic and even social sustainability. However, nothing could be more likely to fail to secure social and economic sustainability than failure to tackle climate change, because all the evidence (e.g. The Stern Report of 2006) indicates that the costs of doing so overall and in the long term will increase unless measures are taken early.</p> <p>Therefore, our approach to achieving this aspect of the Council's Vision will be to consistently give much greater weight to a development's contribution to mitigation of climate change than to being "in keeping with the character and distinctiveness of the area". This applies as much to the AONB as to the rest of the District, where changes implied in the Environment and Agriculture Acts are likely to lead to changes in spatial planning, and in the landscape of rural areas, of greater impact than in recent decades.</p> <ul style="list-style-type: none"> <li>• Absolute priority being given to tackling Climate</li> </ul> <p>Over the Plan period, even if all new homes are built to zero carbon standards, there will by 2037 be only a small reduction in the overall carbon footprint of the District. New builds in any one year seldom accounts for more than 1% of total built stock.</p>	<p>The support is noted.</p> <p>The comments on climate change are noted. The LPR seeks to go as far as it is believed we can within the current legislation and the planning system. This is set out in further detail in Policies SP5 and DM3 of the Emerging Draft LPR.</p>

Respondent	Response	Council Response
	<p>That does not mean it is not worth insisting on the highest standards in all new builds, but it does mean that every opportunity to encourage upgrading or replacing poorly insulated and badly maintained buildings (especially homes or buildings that could be homes) must be taken, in addition to permitting new builds.</p> <p>Whatever can be done through the planning system by amending this Local Plan should be done, in the interests of sustainability. Our Vision is for West Berkshire to set the national benchmark standard for 'green prosperity for all', beginning with its own land at Newbury's London Road Industrial Estate as an exemplar carbon positive mixed development and matched by a new urban quarter in the Kennet Centre.</p>	
Shaw cum Donnington Parish Council (lpr193)	<p>Support for the Vision: This section states that developments should be of a high quality design. Experience of recent developments show that large developments are of identikit dwellings and pay marginal if any respect to the local area. Dwellings tend to be smaller with very small if minimal amenity/garden areas. They are built to minimum building regulations particularly with respect to energy efficiency. This is disappointing. They are advertised as exciting executive opportunities and that may well be against the trade descriptions act. We support the aims of this section and hope that these can be met in the light of developer's determination to maximise profits and pay little respect to the aims of this section.</p>	<p>Comments noted.</p> <p>The Local Plan Review includes extensive policies to meet a range of requirements in urban and rural settings in terms of purpose and sustainable design, the mix of dwellings types, their location and affordability. Support is noted as is the caveat of the need for determined and effective implementation of policy to achieve the Vision.</p>
Stratfield Mortimer Parish Council (lpr387)	<p>Vision is not supported.</p> <p>Para 3.2 From our experience with the neighbourhood plan, the type of housing, such as bungalows, is a very important aspect of any plan if it is to achieve buy-in from the local community.</p> <p>Para 3.3 While the main thrust of the proposal is very much supported, the wording is not clear and is largely contradictory. For instance, what does delivering carbon neutrality really mean and is this just for WBC as a body or West Berkshire as an area? If the latter, then a great deal more than is outlined in this plan will have to be done to achieve it.</p> <p>Later in this clause the objective is thrown away by using statements such as reducing carbon footprint which is a very much lesser goal than achieving carbon neutrality.</p>	<p>Comments on Para 3.2 are noted. The plan does not exclude bungalows. Carbon neutrality is a common term referring to the balance of carbon emissions and carbon absorption. The continuation of carbon emissions is a fact. Reference to carbon footprint relates to embracing new technologies within development over the next 15 years to drive down emissions on its own merits alongside absorption measures in, for instance, green infrastructure amongst others. The Vision states that the Plan will "contribute" to carbon neutrality in recognition that the Plan alone will not achieve it by 2030.</p>

Respondent	Response	Council Response
	<p>This clause needs to be re-written to be quite specific about what is to be achieved and the words need to be consistent throughout.</p>	
<p>Thatcham Town Council (lpr1383)</p>	<p>Section 3.1 "Making available housing of different types, sizes, tenures and affordability will be a priority in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs." We recognise that there are different pressures across West Berkshire. It is important that villages remain viable, and that primary schools, community hubs, shops and local pubs are sustainable. It is also important that due consideration is given to transport assets such as the electric rail line to encourage sustainable travel. We recognise the importance of the M4/A34 interchange as made clear in the Economic Assessment where it is noted that local agents regard that for industrial development "the best location would be between Newbury and the M4/A34 bypass". This is likely to drive the location of future employment centres. Taken together, there are different pressures across West Berkshire that justify the meaning of a sustainable location. Housing could be located in either villages, or close to employment centres, or close to rail stations, with equal justification that they are sustainable. It is necessary that the Local Plan does not give dominance to one location, because in doing so it undermines the sustainability of other locations and may lead to greater distances to travel to work or weaken the viability of rural villages with ageing populations.</p> <p>Section 3.3 "Development and infrastructure will be sustainable, contributing to our aim to deliver carbon neutral by 2030". We support this mission. We note that the referenced Environment Strategy states "that carbon dioxide will be reduced to a net zero level. In other words, any carbon dioxide gas emissions within West Berkshire will be balanced with an equivalent of emissions that are either offset or prevented." We draw attention to the Building Homes Standard, recently published by central government that local authorities will retain powers to set local energy efficiency standards for new homes. Therefore, we recommend that West Berkshire has an independent assessor or carbon footprints for major new developments. Where development exceeds net zero carbon beyond 2030 a developer should demonstrate how offsetting will be used to mitigate carbon emissions. We recommend that consideration is given to approaches such</p>	<p>Comments noted. The Council's strategy is to direct development to the most sustainable locations in accordance with the settlement hierarchy. Policies SP13-15 identify the sites that are considered suitable in relation to the hierarchy taking into account the assessment of sites carried out through the HELAA. The comment saying that there is a dominance of one location is not accepted.</p> <p>The comments on climate change and zero carbon or carbon neutrality are noted. The LPR seeks to go as far as it is believed we can within the current legislation and the planning system. This is set out in further detail in Policies SP5 and DM3 of the Emerging Draft LPR.</p> <p>More detailed comments about the NE Thatcham allocation and it's relationship to the countryside and AONB will be dealt with as part of the Council's response under Policy SP17.</p>

Respondent	Response	Council Response
	<p>as the London Authority in which development that fail to meet net-zero carbon result in a financial contribution being delivered to the Authority to support carbon offsetting.</p> <p>Section 3.4 "there will be greater opportunity for enjoyment and appreciation of the special qualities of the built and natural environment." The proposed NE Thatcham development would subsume existing right-of-ways, and if it were to proceed would require residents to walk through a large housing estate to access the AONB to the North. This is in conflict with the statement that it will provide greater opportunity to appreciate the natural environment. It is essential that rights-of-way from urban areas to neighbouring countryside are not compromised.</p>	
Reading Borough Council (lpr1485)	RBC supports the vision to achieve growth that is sustainable and contributes to aims to be carbon neutral by 2030. Housing developed within West Berkshire close to Reading's boundary is likely to rely on Reading for services and facilities. As such, it is vital that these sites are supported by adequate infrastructure. Development should make adequate provision towards local infrastructure through the Community Infrastructure Levy (CIL) and Section 106 payments, which may include the funding and provision of infrastructure within Reading, and RBC considers it essential to agree a protocol between the two authorities to cover this.	The comments supporting the approach are noted and the further representation in relation to infrastructure is also noted.
<b>General consultation bodies</b>		
Heritage Forum (lpr64)	<p>Support for the Vision:</p> <p>Given the rural nature of the AONB, there should be a specific reference to improved transport infrastructure.</p>	Support noted. The Council wishes to promote a broader vision that develops all forms of infrastructure to improve connectivity whilst at the same time striving for carbon neutrality.
West Berkshire Green Exchange (lpr1547)	<p>Vision neither supported nor not supported but changes to text suggested:</p> <p>Words shown below in bold are changes or additions to the original text that we would like to see.</p> <p><b>3 Shaping West Berkshire: Vision and Objectives</b></p>	<p>Comments noted.</p> <p>Amend the first sentence of para 3.2 of the Emerging Draft LPR as follows –  'Making available <u>carbon neutral</u> housing of different types, sizes, tenures and affordability....'</p>

Respondent	Response	Council Response
	<p>3.2 Making available <b>carbon-neutral</b> housing of different types, sizes, tenures and affordability will be a priority in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs, whatever their income, stage of life and ability.</p> <p>3.3 .....Development will be better connected to local services, facilities and open space within the District, <b>by public transport, cycling and walking</b> and where relevant, in adjoining local authority areas.....</p>	<p>Amend the second sentence of para 3.3 of the Emerging Draft LPR as follows –</p> <p>‘Development will be better connected to local services, facilities and open space within the District, and where relevant, in adjoining local authority areas, <u>by favouring more sustainable means of travel including reducing the need to travel,....</u>’</p>
<b>Other stakeholders</b>		
Sam Coppinger (lpr278)	<p>Support for the Vision:</p> <p>We absolutely agree that development must be sustainable and contribute to carbon neutrality by 2030. Before development is undertaken, local infrastructure must be considered - can it cope with any additional traffic? The health and well-being of residents is important. Green spaces should be preserved. Residential and industrial development must be in sustainable locations.</p>	<p>Comment noted. The LPR is intended to support these aspirations.</p>
Caroline Farrant (lpr43)	<p>Vision not supported:</p> <p>Repeatedly you say you're providing affordable housing, but in reality they are not affordable. quality and design of houses is negligible.</p>	<p>Comments noted. The LPR seeks to provide a range of affordable housing tenures to meet identified local need, depending on the level of financial support needed to make housing affordable.</p>
Tim Hall (lpr630)	<p>Vision not supported:</p> <p>By 2037, West Berks should already have been carbon neutral for 7 years and yet the Vision does not reflect that adequately. So, not just "provide the space and environment for sustainable development" but "be a sustainably developed space and environment which is carbon neutral".</p>	<p>Comments noted. Paragraph 3.3 addresses carbon neutrality.</p> <p>Amend the first sentence of para 3.3 of the Emerging Draft LPR as follows – ‘Development and infrastructure will be sustainable, contributing to our aim to deliver carbon neutral by 2030 and thereafter....’</p>
Peter Norman (lpr948)	<p>Vision not supported:</p> <p>3.1 There is a real danger that this vision for the future will be out of date by the time you reach the final consultation. To not acknowledge the impact of</p>	<p>Comments noted.</p> <p>Given the preparation of the Employment Land Review 2020 was undertaken prior to the COVID 19 pandemic, the</p>

Respondent	Response	Council Response
	<p>Covid19 and potential changes on employment practices and needs means that the district could be tying into polices that are quickly outmoded in terms of business needs going forward. Have we spoken/surveyed existing employers about their needs/requirements/plans going forward in the light of their pandemic experience? For example how many businesses will be encouraging more home working going forward and hot desking requiring less office space going forward. What impact does homeworking have on providing local amenities to service a larger consumer base versus town centre amenities. What impact does the collapse of national chains have on the High Street going forward and what is it going to look like if we are to encourage footfall so the centre does not die?</p>	<p>Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. The update to the ELR will inform the LPR and will be published alongside the Regulation 19 consultation.</p> <p>The Local Plan will be reviewed at least every 5 years which will provide the opportunity for policy to respond to changes.</p>
<p>Ian Parsons (lpr824)</p>	<p>Support for the Vision: The plan seems to offer considerable support for the maintenance of the principle of the AONB. We welcome this and hope that this will continue. Our area has been walked and visited by people from outside the AONB much more in recent months and we would hope that the features of the AONB are retained so that visiting remains attractive.</p>	<p>Comments noted</p>
<p>Paula Saunderson (lpr947)</p>	<p>Support for the Vision selected, although response indicates not:  Until every dwelling and business premises you allow to be built can be operated in a net zero way you are allwoing inferior dwellings to be put into the market for future generations to buy probably unwittingly. The PAs I have seen go through recently do not meet your Vision in terms of Flood Management &amp; Mitigation, Bio-diversity, net zero Operations, traffic impacts etc .etc. So why would we have the confidence you can deliver the Vision given here.</p>	<p>Comments noted.</p> <p>The Local Plan Review is desirable and necessary even though the current adopted Local Plan has a number of years to run. This is in recognition of changes in circumstances and national policy. In addition, there is now a requirement for Local Plans to be reviewed every 5 years going forward.</p>
<p>Councillor Tony Vickers (lpr524)</p>	<p>Support for the Vision:  We strongly support all Strategic Objectives and Objective 1 (Climate Change) in particular but note that for West Berkshire to become carbon neutral by 2030, the contribution from new development will almost certainly need to go further than current national policy requires in terms of environmental sustainability. The stock of existing buildings will be much harder to retro-fit for sustainability in use than is possible with new</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>development. The Council declared a Climate Emergency in 2019. This reinforces the imperative of giving very high priority to environmental sustainability in all aspects of the new Local Plan if necessary, at the expense of economic and even social sustainability. Although there is reference to the Council's Environmental Strategy in the next section (4.3) its significance is not made clear enough at various relevant points in Strategic Policies. Our approach to achieving this aspect of the Council's Vision will be to consistently give much greater weight to a development's contribution to mitigation of climate change than to being in keeping with the character and distinctiveness of the area. This applies as much to the AONB as to the rest of the District, where changes implied in the Environment and Agriculture Acts are likely to lead to changes in spatial planning and in the landscape of rural areas of greater impact than in recent decades.</p>	
<b>Landowners, site promoters and developers</b>		
<p>Savills for Newbury and District Agricultural Society (lpr2047)</p>	<p>Vision is neither supported nor not supported: Our client supports the Council's Vision to foster sustainable business growth and its commitment to ensuring a resilient and sustainable economy. However, our client considers that the Vision should include a commitment to maximise business and employment opportunities by taking advantage of the excellent highways infrastructure which exists in West Berkshire. The presence of the M4 and the A34 means that the district is very fortunate to have strong transport connections to key towns/cities across the south of England including Southampton, Oxford, London and Bristol. Our client is also supportive of Strategic Objective no.4 (SO4, Economy) which establishes a commitment to facilitate a diverse and sustainable economic base across the district. SO4 includes the provision of employment land which provides for a range of local job opportunities. In order to maximise employment opportunities in the district's most populated area (Newbury and Thatcham), the Council should ensure that there is sufficient flexibility in the plan to respond to the needs of growing sectors of the economy. As strategic logistics sites need to be located adjacent to the strategic road network, and there is significant demand for increased provision for them, the plan should allow for greater employment opportunities adjacent to the strategic road network, particularly at Junction 13 of the M4.</p>	<p>Comments noted.</p> <p>The Vision foresees better connectivity but is clear that infrastructure must be increasingly sustainable in order to meet the goal of carbon neutrality. All sustainable modes of transport should contribute and the Vision should not favour one mode in particular.</p> <p>The point about new employment provision will be considered through the HELAA and through the site allocated in the LPR for employment land.</p>

Respondent	Response	Council Response
<p>Barton Willmore for Donfield Homes Ltd (lpr2091)</p>	<p>Vision is not supported.</p> <p>We do not agree that the part of the vision set out at paragraphs 3.2 and 3.3 reflects the character of West Berkshire.</p> <p>Paragraph 3.2 states:  <i>“Making available housing of different types, sizes, tenures and affordability will be a priority in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs, whatever their income, stage of life and ability.”</i></p> <p>The above neglects to recognise that a mix of locations is also important to meeting housing needs. The rural nature of much of West Berkshire needs to be recognised within this paragraph in order to acknowledge that not all needs can be met through delivering housing in urban or relatively urban areas. There is a local need for housing in rural locations and the Council should allocate sites to meet this need.</p> <p>This is supported by paragraph 77 of the National Planning Policy Framework which states that:  <i>“In rural areas, planning policies and decisions should be responsive to local circumstances and support housing developments that reflect local needs.”</i></p> <p>At paragraph 3.3, the vision goes on to state that:  <i>“Development will be better connected to local services, facilities and open space within the District, and where relevant, in adjoining local authority areas, all of which will foster community cohesion, health and wellbeing.”</i></p> <p>Whilst the aims of community cohesion, health and wellbeing are supported, we question whether this will always be most successfully achieved through good connections to local services and facilities. Whilst in most cases, we agree that locating development such that future residents can benefit from existing local services and facilities, the rural nature of much of West Berkshire needs to be recognised. In particular, some settlements do not benefit from significant existing services or facilities, however, there is still likely to be a housing need arising from these settlements and people who wish to live there and benefit from a more rural location whilst benefiting from close proximity to Reading and Newbury. Indeed, high quality additional homes in and of themselves can result in community cohesion. This should not be overlooked by the Council.</p>	<p>Comments noted.</p> <p>The Vision says just that, “... towns and villages that meet their needs.....”. Allocations are proposed in both.</p> <p>The Council disagrees with the premise of the question. Connection to local services, facilities and open space are essential components for fostering community cohesion, health and wellbeing. Connectivity can be achieved in many different ways to support housing need of rural settlements. Policies are included in the LPR specifically to address development in rural locations to meet local needs.</p> <p>The specific comments for the site put forward here are dealt with in the updated HELAA.</p>

Respondent	Response	Council Response
	<p>With this in mind, we consider that our Client's Site, land off Reading Road, Lower Basildon, (reference BAS1 within the West Berkshire Housing and Economic Land Availability Assessment ('HELAA') (February 2020)) is well-placed to meet the need for housing in a more rural location. The Site lies on the edge of the existing settlement boundary of Lower Basildon and would form a logical addition to that settlement. We refer you to the other parts of our representations, our covering letter and enclosures for further detail in relation to the site which would provide in-fill development between existing residential uses.</p> <p>The vision should acknowledge the need for modest housing development in rural locations in order to truly meet the needs arising from West Berkshire.</p>	
Woolf Bond Planning for JPP Land Ltd (lpr2077)	<p>Vision is neither supported nor not supported.</p> <p>In our response to the earlier draft version of the Local Plan (December 2018), we highlighted our concern regarding the inconsistency of the Council's proposed vision with the approach of the NPPF, particularly paragraph 78). This related to the failure of the proposed vision to effectively support growth in villages. The revision to the vision (particularly the second paragraph) which includes references to both towns and villages is therefore consistent with national advice, as is the allocation our client's land north of Bath Road, Woolhampton.</p>	<p>Comments noted</p> <p>The specific comments for the site put forward here are dealt with in the updated HELAA.</p>
Sovereign Housing Association (lpr2156)	<p>Vision is neither supported nor not supported.</p> <p>Sovereign (SHA) are a leading Housing Association and a major developer delivering one of the largest new affordable housing programmes in the country. We manage just over 60,000 homes, housing around 140,000 residents, in 59 local authority areas across the south and west of England.</p> <p>Our homes are located in both urban and more rural areas supporting various communities and housing needs. As a major developer of affordable housing we currently build just under 1,800 homes per year with plans to deliver around 10,000 new homes over the next five years. SHA's roots were established when Newbury District Council transferred it's housing stock into West Berkshire Housing Association, which since 1989 has grown and evolved into Sovereign Housing Association. Whilst SHA has become one of</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>the largest housing associations in the country, we've held on to our local focus and our commitment to providing quality, affordable homes. We welcome the councils consultation on the Emerging Draft Local Plan Review 2020- 2037 (LPR) and the opportunity to provide our feedback.</p> <p>Again, we welcome the opportunity to engage with the Council with the formulation of the Local Plan update. We hope our input is of assistance and would welcome further engagement as the Council progresses the Local Plan Update.</p> <p>Our housing team works closely with the Council housing enabling officers and would welcome continued partnership and engagement. Should you require any clarification on the issues raised in this representation please do contact me.</p> <p>SHA welcome and support the objectives set out in section three of the LPR.</p> <p>At the time of publishing the LPR the Covid-19 pandemic has already had a devastating impact on communities and economies across the globe. Whilst the virus doesn't discriminate, the wider impacts of the pandemic have seemingly had a disproportionate impact on those with less secure jobs, on lower incomes and living in cramped or poor quality housing with limited access to open space and experiencing data poverty. Whilst the longer term impact of the pandemic on how we live, work and interact remains to be seen, the recovery will require innovation and a degree of flexibility that makes drafting a Local Plan now extremely challenging. The vision and objectives set out in the LPR need to acknowledge there will be a post pandemic recovery that requires the plan to be dynamic and flexible.</p>	
Woolf Bond Planning for JPP Land & Spitfire Bespoke Properties (lpr2316)	<p>Vision not supported.</p> <p><b>The Vision Statement</b></p> <p>In our response to the earlier draft version of the Local Plan (December 2018), we highlighted our concern regarding the inconsistency of the Council's proposed vision with the approach of the NPPF, particularly paragraph 78). This related to the failure of the proposed vision to effectively support growth in villages. The revision to the vision (particularly the second paragraph) which includes references to both town and villages is therefore consistent with national advice.</p>	<p>Comments noted.</p> <p>This comment does not relate to the Vision which the respondent now endorses in the previous paragraph here.</p> <p>Specifically the proposed site will be covered in the updated HELAA.</p>

Respondent	Response	Council Response
	<p>However, although allocations are proposed at some villages, there has been no consideration of growth in the smaller villages like Burghfield which would be consistent with that envisaged in the NPPF. The Council had confirmed that the new local plan would review the settlements boundaries of the smaller villages too. This would be consistent with NPPF 78. Moreover, the settlement boundary to Burghfield is out of date as it has not taken into account more recent developments that have occurred on the ground in the area.</p> <p>[Preferred approach]. Allocation of land located at Brook House Farm, Sulhamstead Road, Burghfield</p>	
<p>Armstrong Rigg Planning for Manor Oak Homes Ltd (lpr2416)</p>	<p>Vision is supported. Manor Oak Homes' support the vision set by the emerging LPR and in particular, the statement at paragraph 3.2 that: <i>"Making available housing of different types, sizes, tenures and affordability will be a priority in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs, whatever their income, stage of life and ability"</i>. This is a highly positive statement that speaks to a Local Plan that will seek opportunities to meet the development needs of its area in accordance with the presumption in favour of sustainable development and must be supported wholeheartedly.</p>	<p>Comments noted.</p>
<p>Barton Willmore for Sulham Estates (lpr2440)</p>	<p>Vision is supported.</p> <p>We note the key themes within Councils Vision and, in particular, the focus on community cohesion, health and wellbeing. The energy efficiency, landscape, heritage and biodiversity elements of the vision are also noted. In relation to the key themes of the vision, we consider that our Client's site, Land at Hall Place Farm, is highly consistent and offers the opportunity to realise the separate strands of the vision on a medium sized site which can be delivered in the short to medium term.</p> <p>Land at Hall Place Farm Tilehurst, provides the opportunity to accommodate in the region of 80 new homes, a farm shop, small workshop units (to support small and medium sized enterprises), allotments and new public</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>open space within a sustainable location adjoining the Eastern Urban Area. The majority of the homes are intended to be delivered as private rental which would be retained and managed by the landowner. The landowner has a track-record of providing quality accommodation to very longstanding tenants and believes that the private rented sector can offer a genuine, long-term alternative to homeownership. Please refer to the Vision Document which accompanies these representations and other supporting reports for further information as to the details of the proposal.</p> <p>Land at Hall Place Farm (TIL18 in the Council's HELAA 2020) should be allocated on the basis that the development proposal offers the opportunity for an exemplar scheme to reflect the Council's Vision for the district.</p>	
Origin 3 for Sandtrend Ltd (lpr2392)	<p>Vision is neither supported nor not supported.</p> <p>National Planning Policy Framework (NPPF), 2019 (and the Draft NPPF, January 2021). Further, the Government maintains its commitment to accelerating housing growth and positive planning. Its 'Build, build, build' agenda is founded on this approach.</p> <p>In turning to the LPR Vision for West Berkshire, this includes making available housing of different types, sizes, tenures and affordability a priority – and that these are provided at towns and villages to meet needs. This too is positive. And para 4.10 of the LPR, its Vision in directing development, recognises that Newbury and neighbouring Thatcham will be the main focus for new development - an approach which follows that of the West Berkshire Core Strategy (adopted 2012). Again this is broadly supported by our client. However, the Vision, in setting a direction through the plan period must support the delivery of an aspirational and deliverable Local Plan – reflecting a robust approach which recognises the challenges and effects of COVID-19 and Brexit, and be flexible to adapt to rapid change. In that respect further consideration should be given by the Council to the Vision so that the LPR can cater for and respond promptly to such change.</p>	<p>Comments noted.</p> <p>The Vision for the LPR is intended as a constant and should not be confused with tactical means for delivery which may well need to respond to change. The LPR will be reviewed every 5 years as required and should ensure that the aspiration of the Vision remains intact.</p>
Rural Solutions (lpr2311)	<p>Vision is neither supported nor not supported.</p> <p>Whilst we agree that the AONB will 'remain of outstanding value and its biodiversity more abundant in settlements and the surrounding countryside'.</p>	<p>Comments noted.</p> <p>The Council's strategy is to direct development to the most sustainable locations in accordance with the settlement</p>

Respondent	Response	Council Response
	<p>It is important to recognise that rural needs should continue to be met, secured through the retention, enhancement and future viability of local community facilities and local services. This should be emphasised, especially important given 90% of West Berkshire is rural in character. A general policy of restraint outside of those settlements identified in Appendix 3 and on the policies Map is not going to achieve this long-term ambition. These areas are treated as 'open countryside' as set out in Policy DC1.</p>	<p>hierarchy. Policies SP13-15 identify the sites that are considered suitable in relation to the hierarchy taking into account the assessment of sites carried out through the HELAA.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR reference: Strategic Objectives

### (Proposed Submission LPR reference: Strategic Objectives)

Number of responses received: 31

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr710)	<p>Support all these objectives, and of course they overlap with each other in many respects, so this interconnection should be explored and exploited. The historic environment and culture (7 and 6 respectively) play a huge part in the economy (4), the vitality of town centres (5) and the character of the AONB (8), and human activity has created many of the parks, gardens, fields and open spaces that make up Green Infrastructure (9). Today's transport and infrastructure if well designed becomes part of the character and interest of the district in the future, as the historic routes, railways and canals are seen now.</p> <p>Section 7 Heritage - prefer the phrase 'special interest of the historic and natural environment'. The historic (ie people's interaction on places, <i>right up to the present day</i>) includes buildings, earthworks, landscape and drainage modifications as well as planting and managing flora). Dividing the environment into built, historic and natural gives a misleading message that that 'historic' is somehow separate from built, and perhaps the historic is just the old crumbly bits!</p>	<p>Comments noted</p> <p>The NPPF states that one of the three overarching objectives of the planning system is to protect and enhance our natural, built and historic environment and the wording is consistent with that.</p>
Public Protection Partnership (lpr13)	Supports the objectives	Comments noted
<b>Statutory consultees</b>		

Respondent (with lpr ref)	Response	Council Response
Chieveley Parish Council (lpr1717)	<p>Chieveley Parish Council agrees with the Strategic Objectives of the plan (3.5) and, in particular, that the landscape in the North Wessex Downs should remain of outstanding value (3.4).</p> <p>The plan must continue to conserve and enhance the North Wessex Downs AONB in accordance with national policies.</p> <p>Any landscape-led development should be both appropriate within that policy context and deliver wider environmental, economic, and social benefits. These requirements should also have regard to local needs.</p>	Comments noted
Cold Ash Parish Council (lpr1729)	<p>Cold Ash Parish Council supports the listed strategic objectives. It is good that these are succinctly worded, which aids clarity.</p> <p>Objective 10 Transport could be improved by signalling a real intent to reduce traffic journeys through the impact of increased home working. This would be a major contributor to many of the other objectives (e.g. 1, 4, 7) and would of course help to offset the impacts of all the extra dwellings built over the life of the Plan.</p> <p>The reference to home working in policy DC38, mentioning increasing FTTP connections to new homes, is welcomed. Ideally there should also be incentive schemes for employers to provide greater opportunities for homeworking for their staff.</p>	<p>Comments noted.</p> <p>Recent developments in communication technology are enabling many employers to provide opportunities for hybrid working.</p>
Greenham Parish Council (lpr875)	<p>We strongly support all Strategic Objectives and Objective 1 (Climate Change) in particular but note that for West Berkshire to become carbon neutral by 2030, the contribution from new development will almost certainly need to go further than current national policy requires in terms of environmental sustainability. The stock of existing buildings will be much harder to retro-fit for sustainability in use than is possible with new development.</p> <p>The Council declared a Climate Emergency in 2019. This reinforces the imperative of giving very high priority to environmental sustainability in all aspects of the new Local Plan – if necessary, at the expense of economic and even social sustainability. However nothing could be more likely to fail to secure social and economic sustainability than failure to tackle climate change, because all the evidence (e.g. The Stern Report of 2006) indicates that the costs of doing so overall and in the long term will increase unless measures are taken early.</p>	<p>Comments noted.</p> <p>Mitigating and adapting to the impact of climate change in order to minimise demand for energy is a key priority for the Council.</p> <p>The principles of climate change adaptation and mitigation are embedded in Policy SP5 and supported by other policies in the LPR.</p> <p>All development will be required to meet the high standards and design required to reduce the impact of climate change.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Therefore our approach to achieving this aspect of the Council’s Vision will be to consistently give much greater weight to a development’s contribution to mitigation of climate change than to being “in keeping with the character and distinctiveness of the area”. This applies as much to the AONB as to the rest of the District, where changes implied in the Environment and Agriculture Acts are likely to lead to changes in spatial planning and in the landscape of rural areas of greater impact than in recent decades.</p> <p>Over the Plan period, even if all new homes are built to zero carbon standards, there will by 2037 be only a small reduction in the overall carbon footprint of the District. New build in any one year seldom accounts for more than 1% of total built stock.</p> <p>We should be insisting on the highest standards in all new builds and encouraging the opportunity to upgrade and replace poorly insulated and badly maintained buildings, in addition to permitting new build.</p> <p>Whatever can be done through the planning system by amending this Local Plan should be done, in the interests of sustainability. Our Vision is for West Berkshire to set the national benchmark standard for ‘green prosperity for all’.</p>	
Hungerford Town Council (lpr120)	Agree with these objectives	Comments noted
Shaw cum Donnington Parish Council (lpr1591)	3.5 We support the strategic objectives. In particular we support 3.5 11 that “ensure the infrastructure (physical and social)...keep pace with development...” In the case of Shaw-cum-Donnington and Greenham very little social infrastructure has been provided and we urge that this situation is changed.	Comments noted
Stratfield Mortimer Parish Council (lpr388)	Throughout this section there are a lot of words or phrases that are used that, without definition, can mean anything. This section deals with objectives and unless they are presented in some measurable form, they are fairly meaningless. For instance, objective one is to mitigate and adapt to the effects of climate change. Does this mean that new development can be accepted if it is capable of withstanding the changed climate or does it mean that all development should be altered to reduce the extent of climate change?	Comments noted.  The Proposed Submission LPR will include a glossary and an appendix which will set out how the LPR policies will be monitored and delivered.

Respondent (with lpr ref)	Response	Council Response
	Clarity and definition of terms is required along with what measurable achievements are expected to meet these objectives so that progress on these objectives can be measured.	
Thatcham Town Council (lpr1384)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p><b>Section 3.5</b></p> <ul style="list-style-type: none"> <li>"strategic objectives ... all-encompassing and interrelated"</li> </ul> <p>We do not disagree with the 11 items listed when taken individually. Nevertheless, there is a lack of a cohesive vision that brings these together that outlines the inter-relation. Given that this is the first Local Plan that brings together the Development Plan, Housing Allocation Plan, and Policies, this appears to be a missed opportunity.</p>	<p>Comments noted.</p> <p>A clear vision and direction for the LPR is set out in paragraphs 3.1-3.4 of the Emerging Draft LPR</p>
<b>General consultation bodies</b>		
Sovereign Housing Association (lpr2157)	<p>SHA welcome and support the objectives set out in section three of the LPR. Whilst reference is made at paragraph 3.2 of "Our Vision" to "<i>Making available housing of different types, sizes, tenures and affordability will be a priority in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs, whatever their income, stage of life and ability.</i>", further reference and a stronger commitment to delivering more affordable homes could be made within the Strategic Objectives under objective two "Housing".</p> <p>Objective 5 "Town Centres" seeks "<i>To enhance the vitality and viability of town, district and local centres in West Berkshire as places for shopping, leisure and community activities</i>". As highstreets and town centres look to bounce back from the pandemic it is important the LPR builds in maximum opportunity to bring variety and vitality into the town centres. Whilst a balance needs to be struck, SHA believe Objective 5 should be expanded to recognise the positive contribution town centre living can make to vibrant towns when complemented by suitable public spaces and amenity.</p>	<p>Comments noted.</p> <p>Emerging Draft LPR Policy DC21 Residential use of space above shops and offices supports the expansion of residential uses in town centres.</p> <p>Also from the 21st August 2021 the new Permitted Development rights enables the conversion of Class E Uses of the new Use Classes Order (Commercial, Business and Service) buildings to dwellings. This is expected to increase residential uses in town centres.</p>
West Berkshire Green Exchange (lpr1548)	Words shown below <b>in bold</b> are changes or additions to the original text that we would like to see.	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p><b>3. Sustainable and Quality Development</b></p> <p><b>To ensure provision of sustainable <u>carbon neutral</u> developments of high quality design, construction and efficiency</b></p> <p>5.</p> <p><b>Town Centres</b> To enhance the vitality and viability of town, district and local centres in West Berkshire as places for shopping, leisure and community activities <b><u>easily accessible by public transport cycling and walking.</u></b></p> <p><b>9. Green Infrastructure and Healthy Living</b> <i>To ensure that West Berkshire contains a strong network of multi-functional green infrastructure which provides health and environmental benefits and enhances the overall quality of life of sustainable communities. <b>The Council will promote the provision of additional allotment spaces throughout the district to support the health and economic benefits of growing one's own food.</b></i></p> <p>10. Transport <b>The council will prioritise the provision of</b> transport networks that support sustainable growth in West Berkshire and <b><u>the promotion of</u></b> low emission transport choices.</p>	<p>The objectives are by their very nature strategic, all-encompassing and interrelated. The proposed suggested changes cover more detailed and specific issues which are considered more appropriately highlighted under relevant Emerging Draft LPR policies:</p> <p>Policy SP 5: Responding to Climate Change Policy SP 7: Design Principles Policy SP 10: Green Infrastructure Policy SP 22: Transport</p>
West Berkshire Heritage Forum (lpr65)	3.5 7. Heritage. We recommend the expanded wording: “To <u>record</u> , conserve, enhance <u>and protect</u> the local distinctive character, identity, significance and special interest of the built, historic and natural environment in West Berkshire’s towns, villages and countryside.”	<p>Comments noted.</p> <p>Conserve and enhance encompasses ‘record’ and ‘protect’. This is more fully explained and detailed in Emerging Draft LPR policies SP9 and DC8 – DC13 and supporting text.</p>
<b>Other stakeholders</b>		
David Copas (lpr1430)	<p>The chapter on ‘Our Vision and Strategic Objectives’ need to be strong and future proofed.</p> <p>The vision statement in para 3.4 is welcome and that West Berkshire’s landscape in the North Wessex Downs will remain of outstanding value and</p>	<p>Comments noted.</p> <p>The objectives are by their very nature strategic, all-encompassing and interrelated. The strategic policies expand on the issues raised with regards to the natural</p>

Respondent (with lpr ref)	Response	Council Response
	<p>its biodiversity more abundant in settlements and the surrounding countryside.</p> <p>However strategic objectives on Heritage, AONB and Green infrastructure do not spell out a compelling vision for nature. Written strategic objectives on nature are sadly lacking. This means the Council's plan lacks ambition for the future and demonstrates no apparent priority is attached to the natural environment, biodiversity or nature conservation.</p> <p>It is remarkable that the clear global concerns on biodiversity, species loss, habitat loss and climate emergency, well-rehearsed in section 5, are so condensed into inanimate, inherited and purely visual aspects of our area. The council should aim do far more to respond to peoples concern that this is not only under threat globally but also imperilled by weakness in their own plans.</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 1 – Add in a new standalone strategic objective on Nature for Future Generations</b> <ul style="list-style-type: none"> <li>○ Gives a specific means to deliver the vision of abundant biodiversity across the entire area,</li> <li>○ Holds the council to account for concerns of local people on delivery of Section 5 currently called 'our environment and surroundings',</li> <li>○ To be measured by conservation of existing assets and the creation of new ones.</li> </ul> </li> </ul> <p>Ensure the necessary means to deliver is recognised, delivered upon and funded in appraisals put forward by developers.</p> <p><b>Chapter 5 Our environment and surroundings – responding to climate change</b></p> <p>There are several important and strategic statements to emphasise here, in particular:</p> <p>'To improve wildlife habitat and species conservation and connectivity to allow for movement in response to climate change in accordance with policy SP11</p> <p>Ecological distinctiveness – design proposals will create habitats and select species that are locally characteristic, taking opportunities to design wildlife habitats into the fabric of buildings and enhance wildlife connectivity in accordance with policy SP11</p>	<p>environment with Policies SP8, SP10 and SP11 setting out the Council's strategic approach in more detail.</p> <p>The Proposed Submission LPR will include a glossary and an appendix which will set out how the LPR policies will be monitored and delivered, including for the natural environment with indicators and targets to assess if the objectives are being met.</p> <p>In accordance with the Environment Act 2021 all development will be required to contribute to biodiversity net gain and seek opportunities to use green infrastructure to extend wildlife corridors, particularly in urban areas and where it contributes to the nature recovery networks (see Policies SP10 and SP11).</p> <p>A new chapter on Nature Delivery is not considered necessary as the topic is well covered in the LPR with policies giving sufficient protection and criteria on assessing development proposals.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>A landscape does not have to have a designation to be valued locally. Outside the AONB, the River Kennet, from Newbury to Reading, lies within a distinctive broad corridor of an open lowland landscape characterised by a variety of wetland habitats including wet meadow, reed bed, and flooded gravel workings.</p> <p>Contribute to biodiversity net gain and seek opportunities to use green infrastructure to extend wildlife corridors, particularly in urban areas and where it contributes to nature recovery networks.</p> <p>However the absence of the strategic priority reduces their impact and will not ensure their delivery.</p> <p><b>Recommendation 5 – In addition to the new proposed Strategic Objective the Council should deliver its ambition by adding a new Chapter - The Nature Delivery Plan - to the document.</b> This must demonstrate the design, commitment and resources it will allocate to Nature for the future generations. This is what residents of the existing and any new houses will expect.</p> <p>Changes - <b>Recommendation 1 – Add in a new standalone strategic objective on Nature for Future Generations</b></p> <p><b>Recommendation 5 – In addition to the new proposed Strategic Objective the Council should deliver its ambition by adding a new Chapter - The Nature Delivery Plan - to the document.</b></p>	
Sam Coppinger (lpr279)	AONB should be protected, local character preserved everywhere.	Comments noted
Peter Dowling (lpr2339)	<p>Support. The inclusion of Strategic Objective 4 (Economy) objective is welcomed and the specific reference to “...support a strong, diverse and sustainable economic base across the district.” is supported as it represents a key delivery outcome that the LPR must help achieve. As noted in paragraph 4.81 of the West Berkshire District Council Employment Land Review (ELR) (August 2020), the industrial market itself is very diverse and strong and this should also be reflected in the LPR:</p> <p>“The industrial market in West Berkshire is very diverse, attracting a range of size and type of occupiers – typically we do not see one particular sector driving demand for space. The area is attractive to some B8 distribution due</p>	<p>Comments noted.</p> <p>The employment market, the diverse economic base of the District, and the need to support growth are recognised in Policy SP20.</p>

Respondent (with lpr ref)	Response	Council Response
	to its east/west links along the M4 and north/south link through the A34. Also, there is activity from business servicing the local and regional markets.	
Caroline Farrant (lpr44)	We are not seeing the suggested mitigated effects of the proposals, were just seeing trees and green spaces disappear, a good example is the crammed in housing on the Robin Hood.	Comments noted.  Any replacement or mitigation measure must seek to secure a net gain in lost functionality and be deployed as closely as possible to the affected green infrastructure asset.
Tim Hall (lpr635)	<p>1. <b>Climate Change</b> should include specific reference to carbon neutrality being achieved as the overriding objective of the plan by 2030, and bettered thereafter, in light of the Climate Emergency.</p> <p>2. <b>Housing</b> should include specific reference to both affordable and social housing rather than just 'identified need'.</p> <p>3. <b>Sustainable and Quality Development</b> should include specific reference to achieving carbon neutrality, in light of the Climate Emergency.</p> <p>4. <b>Economy</b> should include specific reference to maximising re-use of existing brownfield land rather than just 'provision' generally.</p> <p>5. <b>Town Centres</b> should include specific reference to overcoming the challenge of the decline of retail (with the trend to online shopping accelerated by Covid-19) and, associated with that, achieving a greater use of town centres as places in which to live. It should also reference, along with vitality and viability, attractiveness as a place to both live and visit, and 'greening' as a part of that and in light of the Climate Emergency.</p> <p>8. <b>AONB</b> should include reference to the specific need to increase forestry in light of the Climate Emergency and to foster biodiversity.</p> <p>9. <b>Green Infrastructure and Healthy Living</b> should also include reference to biodiversity.</p> <p>10. <b>Transport</b> should say 'ensure' provision.</p> <p>11. <b>Infrastructure</b> should include reference to infrastructure being sustainable and capable of withstanding climate change.</p>	Comments noted.  The objectives are by their very nature strategic, all-encompassing and interrelated. The proposed suggested changes cover more detailed and specific issues which are considered more appropriately highlighted under relevant policies:

Respondent (with lpr ref)	Response	Council Response
		All the points raised are covered in detail under the policies listed above.
Ian Halliday (lpr597)  Jane Halliday (lpr598)	<p>Climate change is the biggest issue facing this council and consequently, it has to be the top priority in all council actions and activities if the target of carbon neutrality by 2030 is to be reached. Therefore Objective 1 (Climate Change) should state that all new development has to make a major contribution towards this.</p> <p>Housing delivery in the draft plan is too reliant on large edge-of-town developments, specifically Sandford and NE Thatcham. These are not sustainable developments and are incompatible with the council's environment strategy and climate change targets.</p> <p>As estates that would be dominated by car use, the Sandford and NE Thatcham developments contravene the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in Vision point 3</p> <p>Objective 1 (Climate Change) should state that all new development has to make a major contribution towards this.</p> <p>The Sandford and NE Thatcham developments must comply with the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in Vision point 3.3</p>	<p>Comments noted.</p> <p>A significant number of policies in the LPR do require development to make a substantive contribution towards mitigation and adapting to the impact of climate change.</p> <p>The release of sustainable urban extensions is considered necessary to meet anticipated future housing need including affordable housing. The sites have been assessed as being the most sustainable through the LAA, site selection methodology and SA. The requirements to meet climate change policies will be enforced through planning conditions and S.106 agreements.</p>
Susan Millington (lpr459)	<p>Climate change is the biggest issue facing this council (or any other authority, locally, nationally and internationally). It has to be the No 1 priority in everything we do if the target of carbon neutrality by 2030 is to be reached. I note Objective 1 (Climate Change) but this does not go far enough. New development has to make a major contribution towards this; it is no good waiting until the houses are built and then having to spend far more on retro-fitting them.</p> <p>Housing delivery in the current draft plan is too reliant on large edge-of-town developments, namely Sandford and NE Thatcham. I believe these are not sustainable developments in any meaningful sense of the word, and are incompatible with the council's environment strategy and climate change targets.</p> <p>As estates that would be dominated by car use, they contravene the</p>	<p>Comments noted.</p> <p>Please see response as above.</p> <p>The release of sustainable urban extensions is considered necessary to meet anticipated future housing need including affordable housing. The sites have been assessed as being the most sustainable through the HELAA, site selection methodology and SA. There is insufficient supply of brownfield land to meet housing need.</p> <p>The requirements to meet climate change policies will be enforced through planning conditions and S.106 agreements.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in the Vision section 3. The need for these two new estates could be mitigated or eliminated by:</p> <ol style="list-style-type: none"> <li>1) Identifying more brownfield sites within existing settlements and using the JV with Sovereign Housing and/or the proposed WBC Housing Company to develop these sites with a focus on social housing.</li> <li>2) Scaling back the office space development envisaged in the plan as demand is unlikely to grow as envisaged in the plan, as businesses adapt post-Covid.</li> <li>3) Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This would involve relocating the existing distribution centres to a more appropriate location closer to the motorway junctions. This district would benefit from being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</li> <li>4) There is a need for more rural homes, particularly affordable and social housing (rather than “executive homes”) that would enable younger families to live and work there. This would enable villages to thrive and not just become nice places for commuters to spend their evenings and weekends. In addition the windfall allowance of 140 dwellings a year in the plan is less than the historical volume. Making assumptions in line with recent years would further reduce the need for new edge-of-town development.</li> </ol> <p>Overall, there is a perception that the draft plan concentrates on building as many homes as possible in just two areas rather than take a more imaginative, balanced and district-wide approach. The plan also has an unconvincing approach to affordable housing.</p>	<p>The remainder of the issues raised are considered under responses to the Spatial Strategy, and responses to housing allocations at Sandford and NE Thatcham.</p>
Peter Norman (lpr950)	<p>Objective 3 In ensuring that the environment and sustainable development is to the forefront of all planning considerations. Unfortunately we have seen in recent applications that Councillors have been all too willing to overrule environmental considerations in planning to the detriment of biodiversity that is acknowledged in the NPPF as critical in our efforts to tackle climate change</p> <p>Objective 11 To ensure that infrastructure needs physical and social <b>arising from growth</b> in West Berkshire are provided to support and keep pace with developments in accordance with the detail set out in the Infrastructure</p>	<p>Comments noted.</p> <p>The impact of alternative allocation options on biodiversity and the landscape have been assessed in the HELAA, through the site selection process, SA/SEA and the Habitats Regulations Assessment. These have resulted in the proposed site allocations in the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Delivery Plan. This objective should not be limited to "arising from growth" It should be an objective to ensure infrastructure meets the needs of the current 158,400 inhabitants of the district and especially the 70,000 odd inhabitants of Newbury and Thatcham where it is clear that current infrastructure are not meeting their needs especially in regard to traffic densities in the town centres and the resultant air pollution which breaches the aims of 3.3</p> <p>Changes -</p> <p>3.3 We should consider Basingstoke and Deane's approach who have with a Landscape, Biodiversity and Trees Supplementary Planning Document. This would be reference document that can be used in advance of site selection and planning to inform early decision making and help avoid monetary or environmental costs later in a project that could have been avoided</p> <p>3.5.11 To ensure that infrastructure needs, physical and social, in West Berkshire are provided to support current and future inhabitants of the district as outlined in the Infrastructure Delivery Plan. This includes reviewing the current state of infrastructure to meet the needs of the population as well as ensuring that sufficient new infrastructure in place to support and keep pace with future developments.</p>	<p>The Council will produce SPDs where necessary to provide more guidance to policies.</p>
<p>Debby Reynolds (lpr1306 and lpr2459)</p>	<p><b>Response to consultation by West Berkshire Council on Emerging Draft West Berks LPR and Thatcham Growth Study Stage 3 report by David Lock Associates</b></p> <p>[NB. The response is recorded all together under lpr1305 for SP17 NE Thatcham, and separately in lpr1307, 1308, 1309 and 1310. It keeps the original numbering of the recommendations.]</p> <p><b>Chapter 3 Shaping West Berkshire Vision and Objectives</b></p> <p>The chapter on 'Our Vision and Strategic Objectives' need to be strong and future proofed.</p> <p>The vision statement in para 3.4 is welcome and that West Berkshire's landscape in the North Wessex Downs will remain of outstanding value and its biodiversity more abundant in settlements and the surrounding countryside.</p> <p>However strategic objectives on Heritage, AONB and Green infrastructure do not spell out a compelling vision for nature. Written strategic objectives</p>	<p>Comments noted.</p> <p>The objectives are by their very nature strategic, all-encompassing and interrelated. The strategic policies expand on the issues raised with regards to the natural environment with Policies SP8, SP10 and SP11 setting out the Council's strategic approach in more detail.</p> <p>The Proposed Submission LPR will include a glossary and an appendix which will set out how the LPR policies will be monitored and delivered, including for the natural environment with indicators and targets to assess if the objectives are being met.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>on nature are sadly lacking. This means the Council's plan lacks ambition for the future and demonstrates no apparent priority is attached to the natural environment, biodiversity or nature conservation</p> <p>It is remarkable that the clear global concerns on biodiversity, species loss, habitat loss and climate emergency, well-rehearsed in section 5, are so condensed into inanimate, inherited and purely visual aspects of our area. The council should aim do far more to respond to peoples concern that this is not only under threat globally but also imperilled by weakness in their own plans.</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 1 – Add in a new standalone strategic objective on Nature for Future Generations</b> <ul style="list-style-type: none"> <li>○ Gives a specific means to deliver the vision of abundant biodiversity across the entire area,</li> <li>○ Holds the council to account for concerns of local people on delivery of Section 5 currently called 'our environment and surroundings',</li> <li>○ To be measured by conservation of existing assets and the creation of new ones.</li> <li>○ Ensure the necessary means to deliver is recognised, delivered upon and funded in appraisals put forward by developers.</li> </ul> </li> </ul> <p><b>Chapter 5 Our environment and surroundings – responding to climate change</b></p> <p>There are several important and strategic statements to emphasise here, in particular:</p> <p>'To improve wildlife habitat and species conservation and connectivity to allow for movement in response to climate change in accordance with policy SP11</p> <p>Ecological distinctiveness – design proposals will create habitats and select species that are locally characteristic, taking opportunities to design wildlife habitats into the fabric of buildings and enhance wildlife connectivity in accordance with policy SP11.</p> <p>A landscape does not have to have a designation to be valued locally. Outside the AONB, the River Kennet, from Newbury to Reading, lies within a distinctive broad corridor of an open lowland landscape characterised by a</p>	<p>In accordance with the Environment Act 2021 all development will be required to contribute to biodiversity net gain and seek opportunities to use green infrastructure to extend wildlife corridors, particularly in urban areas and where it contributes to the nature recovery networks (see Policies SP10 and SP11).</p> <p>A new chapter on Nature Delivery is not considered necessary as the topic is well covered in the LPR with policies giving sufficient protection and criteria on assessing development proposals</p>

Graham Storey (lpr560)	<p>Climate change is the biggest issue facing this council (or any other authority, locally, nationally and internationally). It has to be the No 1 priority in everything we do if the target of carbon neutrality by 2030 is to be reached. We note Objective 1 (Climate Change) but this does not go far enough. New development has to make a major contribution towards this; it</p>	<p>Comments noted.</p> <p>See Policy SP5 - Depending on the nature and scale of proposals, development will be expected to satisfy all of</p>

Respondent (with lpr ref)	Response	Council Response
	is no good waiting until the houses are built and then having to spend far more on retro-fitting them.	the relevant policy criteria in order to contribute towards mitigating and adapting to the impact of climate change.
Councillor Tony Vickers (lpr525)	<p>We strongly support all Strategic Objectives and Objective 1 (Climate Change) in particular but note that for West Berkshire to become carbon neutral by 2030, the contribution from new development will almost certainly need to go further than current national policy requires in terms of environmental sustainability. The stock of existing buildings will be much harder to retro-fit for sustainability in use than is possible with new development.</p> <p>The Council declared a Climate Emergency in 2019. This reinforces the imperative of giving very high priority to environmental sustainability in all aspects of the new Local Plan – if necessary, at the expense of economic and even social sustainability. Although there is reference to the Council’s Environmental Strategy in the next section (4.3) its significance is not made clear enough at various relevant points in Strategic Policies.</p> <p>Our approach to achieving this aspect of the Council’s Vision will be to consistently give much greater weight to a development’s contribution to mitigation of climate change than to being “in keeping with the character and distinctiveness of the area”. This applies as much to the AONB as to the rest of the District, where changes implied in the Environment and Agriculture Acts are likely to lead to changes in spatial planning and in the landscape of rural areas of greater impact than in recent decades.</p> <p>Changes needed - Absolute priority being given to tackling Climate Change</p>	<p>Mitigating and adapting to the impact of climate change in order to minimise demand for energy is a key priority for the Council.</p> <p>The principles of climate change adaptation and mitigation are embedded in Policy SP5 and supported by other policies in the LPR.</p> <p>All development will be required to meet the high standards and design required to reduce the impact of climate change.</p>
Ian Watson (lpr683)	<p>More recognition needs to be given to the impact of new housing on demand for water. The Kennet CAMS already identifies that under most flow conditions, capacity for abstraction is limited. How will water be supplied sustainably to the new developments?</p> <p>Changes - Seek concrete plans from Thames Water on how it intends to meet additional demand for water and what timescale will be required. Due to constraints on the ability of utilities to carry out capital spend this timetable may not match the planning timetable.</p>	<p>Comments noted.</p> <p>Water resources is dealt with under Emerging Draft LPR Policy DC6</p>
<b>Landowners, site promoters and developers</b>

Aldi Stores Ltd (lpr2286)	Overall, we support the strategic objectives set out in Para 3.5 and agree that the strategic objectives are both all encompassing and interrelated, and will apply in both urban and rural areas. They are also a good barometer for the key delivery outcomes that the Local Plan Review should measure.	Support noted
Armstrong Rigg Planning for Manor Oak Homes (lpr2417)	<p><i>Full representation promoting development of Land at Fairview, Greenways, Lambourn is attached.</i></p> <p>It is unfortunate that following such a strong start, the emerging LPR proceeds to set a series of unambitious strategic objectives that appear to be wholly unrelated to the proposed vision for the area.</p> <p>To take the vision for housing delivery (as set out above) as an example. The vision is of a Local Plan that prioritises the delivery of housing of different types, sizes and tenures to meet local needs, but this is translated into a strategic objective that reads:</p> <p><i>“2. To ensure that the identified housing need will be met across the District up to the end of the plan period.”</i></p> <p>Paragraph 3.5 of the emerging LPR states that the strategic objectives represent the key delivery outcomes that the success of the LPR will be measured against. As such a strategic objective to simply ensure that the identified housing need is met is simply not good enough in ensuring the housing vision of the Local Plan is delivered. This objective makes no reference to the provision of different types, sizes and tenures of housing, or to the need to locate these homes where they are needed.</p> <p>To ensure that the LPR delivers on its vision of prioritising the delivery of housing of different types, sizes and tenures to meet local needs, this vision must be reflected in the strategic objective for housing. We recommend, that strategic objective 2 is amended as follows:</p> <p><i>“2. To ensure that the identified <b>housing needs for different types, sizes and tenures of housing in specific towns and villages and in the District as a whole</b> will be met across the District up to the end of the plan period.”</i></p>	<p>Comments noted.</p> <p>Objective 2: Housing to be amended as follows:</p> <p><del>To ensure that the identified housing need will be met across the District up to the end of the plan period</del>  <u>To provide a range of sites to ensure that the District’s housing needs and aspirations are met by providing a range of market, affordable and specialist housing types, tenures and sizes in appropriate and sustainable locations.’</u></p>
Southern Planning Practice for the Saunders family (lpr1992)	<p><i>Full representation on behalf of the Saunders Family promoting development to the east of Stoney Lane is attached.</i></p> <p>We are supportive of West Berkshire’s vision set out in paragraphs 3.1 to 3.4 of the Local Plan Review Consultation document. We strongly agree with the</p>	<p>Comments noted.</p> <p>A Housing Background Paper will be produced to accompany the Proposed Submission LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Council's priority to make available housing of different types, sizes, tenures and affordability. In addition to focusing most of the growth in the urban areas, the Council should look to all settlements and available land within the district in sustainable locations to help meet this priority.</p> <p>In order to have a robust five-year land supply, the council should look to all settlement tiers in the hierarchy to deliver homes through a range of small, medium and strategic sites. By allocating a range of sites, the Council will be able to maintain a stable housing land supply enabling the delivery of homes throughout the plan period to meet the identified local requirements and to ensure they are not vulnerable to unsustainable, speculative development. We agree that the 11 strategic objectives are all-encompassing. With regards to strategic objective 2, whilst we agree that the identified housing need should be met across the District up to the end of the plan period, we consider that in light of the contents of paragraph 59 of the NPPF, which refers to the Government's objective of significantly boosting the supply of homes, the Council should be more ambitious and plan for the objectively assessed housing need as a minimum. As per the Planning Practice Guidance (PPG) (Paragraph: 001 Reference ID: 68-001-20190722), the standard method for calculating local housing need provides a <b>minimum</b> (our emphasis) number of homes to be planned for. It clearly sets out that authorities should use the standard method as the starting point when preparing the housing requirement in their plan, unless exceptional circumstances justify an alternative approach. We do not believe that there are an exceptional circumstances which would justify an alternative approach in West Berkshire.</p> <p>Indeed, in order for the Local Plan Review to meet the 'positively prepared' test of soundness as required by paragraph 35 a) of the National Planning Policy Framework (NPPF), the Local Plan Review must: <i>"provide (ing) a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development"</i>.</p> <p>Strategic Objective 5 looks to enhance the vitality and viability of town, district and local centres in West Berkshire. Land to the east of Stoney Lane would provide a significant addition to the population of Newbury which</p>	

Respondent (with lpr ref)	Response	Council Response
	would help to achieve this objective. The allocation of the site would also contribute to meeting several of the Plan's strategic objectives.	
Southern Planning Practice for the Saunders family (lpr2114)	<p>(Full representation attached, in relation to land at Coombe Bottom Farm, Streatley)</p> <p>We are supportive of West Berkshire's vision set out in paragraphs 3.1 to 3.4 of the Local Plan Review Consultation document. We strongly agree with the Council's priority to make available housing of different types, sizes, tenures and affordability. The Council should look to all settlements and available land within the district in sustainable locations to help meet this priority. In order to have a robust five-year land supply, the council must look to all settlement tiers in the hierarchy to deliver homes through a range of small, medium and strategic sites. By allocating a range of sites, the Council will be able to maintain a stable housing land supply enabling the delivery of homes throughout the plan period to meet the identified local requirements. We agree that the 11 strategic objectives are all-encompassing. With regards to strategic objective 2, whilst we agree that the identified housing need should be met across the District up to the end of the plan period, we believe that the Council should be more ambitious and plan for the identified housing need as a minimum. As per the Planning Practice Guidance (PPG) (Paragraph: 001 Reference ID: 68-001-20190722), the standard method for calculating local housing need provides a <b>minimum</b> (our emphasis) number of homes to be planned for. It clearly sets out that authorities should use the standard method as the starting point when preparing the housing requirement in their plan, unless exceptional circumstances justify an alternative approach.</p> <p>Indeed, in order for the Local Plan Review to meet the 'positively prepared' test of soundness as required by paragraph 35 a) of the National Planning Policy Framework (NPPF), the Local Plan Review must:</p> <p><i>"provide (ing) a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development"</i>.</p> <p>Strategic Objective 8 looks at the AONB and seeks to continue to conserve and enhance the North Wessex Downs AONB with appropriate landscape-</p>	<p>Comments noted.</p> <p>A Housing Background Paper will be produced to accompany the Proposed Submission LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	led development delivering wider environmental, economic and social benefits. We support this objective and encourage new development which is landscape-led and which conserves and enhances the North Wessex Downs AONB.	
Turley for Panattoni (lpr2380)	<p><i>Full representations by Turley on behalf of Panattoni, supporting allocation of land to the north of the A4, Theale for employment development, are attached with extracts below.</i></p> <p><b>Strategic Objective 4</b></p> <p>Panattoni support strategic objective 4 which states; <i>“To facilitate and support a strong, diverse and sustainable economic base across the District, including the provision of employment land which provides for a range of local job opportunities.”</i></p> <p>Panattoni would however note that it is essential that any future planning policies and employment allocations pursued through the Local Plan Review allow sufficient flexibility to accommodate changes in market and consumer demand over the life time of the Development Plan to ensure that this objective is met.</p>	<p>Comments noted.</p> <p>It is a requirement for Local Plans to be reviewed 5 years from adoption. This would allow for changes in market and consumer demand to be considered.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

Emerging Draft LPR reference: Background to Development Strategy

Number of responses received: 18

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lp714)	<p>Support approach</p> <p>Para 4.5 and the following map (which is too small) should be better linked. There are constraints mentioned in the text which aren't on the map and vice versa. NB also the map doesn't show <i>all</i> constraints. Furthermore many heritage assets especially non-designated ones, can be opportunities for sustainable development as much as a negative limitation. However in heritage terms you've omitted Scheduled Monuments which of course <i>do</i> require an additional consent regime for change.</p>	<p>Support for approach noted.</p> <p>Emerging Draft LPR paragraph 4.5 – Update figure 1 and amend the text as follows -            'West Berkshire contains a number of physical and environmental constraints which influence the location of development. <u>At a strategic level</u> <del>These</del> these include the North Wessex Downs (AONB), which covers 74% of the District, substantial areas liable to flood, the presence of Atomic Weapons Establishments (AWE) at Aldermaston and Burghfield, a registered battlefield to the west of Newbury, <u>various international and national nature conservation designations and the River Lambourn Nutrient Neutrality Zone (NNZ) as identified in Figure I below.</u> In addition there are other <del>designations heritage assets</del> designations, including conservation areas <u>and</u> historic parks and gardens <u>which due to scale are not included in Figure 1, but which are included on the Policies Map, and.</u>'</p>
<b>Statutory consultees</b>		

Respondent (with lpr ref)	Response	Council Response
Greenham Parish Council (lpr877)	Support approach. GPC would like to see the creation of viable communities. To look at the local plan with respect to providing housing to communities to enable them to be sustainable. With the obvious benefits associated with being able to live and work in your community	Support for approach noted.
Hungerford Town Council (lpr123)	Support for approach	Support for the approach noted.
Shaw-cum-Donnington Parish Council (lpr194)	In general we support the strategy. In many places we see the term “sustainable development” and “a presumption in favour of sustainable development” We have difficulty understanding this term from the text. Any built development on undeveloped land is unsustainable as it takes away agricultural or other land that cannot be replaced as land is a finite resource. Even redevelopment is unsustainable as it uses finite resources such as minerals that cannot be replaced. Thus the absolute term “sustainable” is misleading and should be replaced by “minimise the adverse effects on the environment”.	Support for the strategy noted.  No changes are required as a result of this representation. Development can be sustainable if it is brought forward in a way that balances economic, social and environmental factors.
Stratfield Mortimer Parish Council	Do not agree with approach It is unclear what <b>para 4.3</b> means. Are the 5 strategic aspirations part of the local plan? If they are, they need to be integrated into the plan and there is no evidence of this. Similarly, what relevance does the declaration of a climate emergency and the Environmental Strategy have for the plan. It is not explained. Clarity as to the relevance of these other Council Strategies needs to be built into the plan rather than just a casual reference that they exist. <b>Para 4.4</b> As previously stated, it seems naïve to proceed with reference to just the present regulatory framework when it is well known that it is about to change. At least reference the likely direction of travel of the Government’s housing policy/requirements. <b>Para 4.5</b> We support this paragraph as it is sensible to be aware of the constraints that effect any planning decision; while there is only one registered Battlefield site there are two major battlefield sites and it would be pleasing to recognise this in this section	Comments noted.  Paragraph 4.1 of the Emerging Draft LPR makes clear that the spatial strategy sets out the overall strategy for the pattern and scale of development across the District and that has been informed by national planning policy, other plans and strategies, key pieces of the evidence base and responses to previous consultation on the LPR  For clarity, amend paragraph 4.3 of the Emerging Draft LPR as follows – ‘Key Council Strategies are reflected in the West Berkshire Vision 2036, prepared by the West Berkshire Health and Wellbeing Board, which contains five strategic aspirations: <ul style="list-style-type: none"> <li>• <u>A West Berkshire where everybody has what they need to fulfil their potential</u></li> <li>• <u>A West Berkshire with a housing mix with something for everyone</u></li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<ul style="list-style-type: none"> <li>• <u>A West Berkshire that welcomes business, enterprise and industry into a productive, growing and dynamic local economy</u></li> <li>• <u>A West Berkshire where the health and wellbeing of residents of all ages and backgrounds is good</u></li> <li>• <u>A West Berkshire with both beautiful and diverse natural landscapes and a strong cultural offering</u></li> </ul> <p><del>Including housing to meet the needs of all in the community, a productive, growing and dynamic local economy and conserving and enhancing our cultural, historic and landscape assets. A climate emergency was declared by the Council in July 2019 followed by publication of and an Environment Strategy 2020-2030, a strategic plan for the district which aims to deliver carbon neutrality by 2030 has recently been published</del></p> <p>Paragraph 4.4 of the Emerging Draft LPR - The comments relating to draft government proposals are appreciated, but as the emerging draft LPR noted, there was no certainty that the published proposals would be taken forward. In this instance, they were not.</p> <p>Paragraph 4.5 of the Emerging Draft LPR – Update figure 1 and amend the text as follows -          'West Berkshire contains a number of physical and environmental constraints which influence the location of development. <u>At a strategic level these include the North Wessex Downs Area of Outstanding Natural Beauty (AONB), which covers 74% of the District, substantial areas liable to flood, the presence of Atomic Weapons Establishments (AWE) at Aldermaston and Burghfield, a registered battlefield to the west of Newbury, various international and national nature conservation designations and the River Lambourn Nutrient Neutrality Zone as identified in Figure 1</u></p>

Respondent (with lpr ref)	Response	Council Response
		below. In addition there are other designations heritage assets, including conservation areas and historic parks and gardens which due to scale are not included in Figure 1, but which are included on the Policies Map. and.'
Thatcham Town Council (lpr1386)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p><b>Section 4.2</b></p> <ul style="list-style-type: none"> <li>"The NPPF promotes the effective use of land including re-using previously developed land, encourages higher densities in urban areas of high housing demand and refers to the need to release small and medium sized sites for development."</li> </ul> <p>We disagree that the selection of NE Thatcham reflects this statement. NE Thatcham is outside the settlement boundary, and the identified large site is rural, countryside, and high-quality agricultural land. Placing the majority of the entire housing supply on a single site is inconsistent with the NPPF policy.</p> <p><b>Section 4.3</b></p> <ul style="list-style-type: none"> <li>"conserving and enhancing our cultural, historic and landscape assets"</li> </ul> <p>We note that the North Wessex Downs AONB Board has objected to the development of all sites that make up NE Thatcham through the HELAA process.</p> <p><b>Section 4.4 – Key pieces of evidence</b></p> <ul style="list-style-type: none"> <li>scale of growth that is required during the plan period is informed by ...</li> </ul> <p>We respond to each of factors separately:</p> <ul style="list-style-type: none"> <li>.. Employment Land Review</li> </ul> <p>We note that the recommendation in this review is that office space development is recommended for Newbury and Theale. If these are to be the major new employment centres there must be evidence that access to Theale (A4 eastbound, AM Peak, and A4 westbound PM Peak) can support the traffic flow, and similarly for Newbury (A4 westbound AM Peak and A4 eastbound PM Peak).</p>	<p>Comments noted.</p> <p>Specific comments in relation to North East Thatcham are dealt with as part of the Council's response to comments made under Policy SP17.</p> <p>The Council will be undertaking a review of its Local Transport Plan following the LPR and some of the issues raised are more appropriately considered as part of that process.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. This work also extends the plan period to 2039. The update to the ELR will inform the LPR and will be published alongside the Regulation 19 consultation.</p> <p>The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.</p> <p>The HELAA will be revised and updated and published alongside the Proposed Submission LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We do not observe this evidence in the Traffic Flow Analysis in the evidence pack. This needs to be urgently refreshed and must reflect traffic flow pre-Covid for the reference case.</p> <ul style="list-style-type: none"> <li>.. Retail and Commercial Leisure Assessment</li> </ul> <p>We note that this assessment was prepared in 2017. We are very concerned that structural changes to retail have rendered this assessment irrelevant and that the evidence base needs to be urgently refreshed.</p> <p>Nevertheless, for West Berkshire we note that there is a stated aim from the 2012 West Berkshire Core Strategy "to achieve growth in retail activity and increase the vitality and vibrancy of town centres." Further, the 2006 strategy identified that "Thatcham town centre will be a focus for regeneration, enabling the town to fulfil its role within the District's Hierarchy of Centres by improving the retail offer and enhancing Thatcham town centre" (Area Delivery Plan Policy 3).</p> <p>It is clear that residential development in itself does not lead to regeneration as there has been little change to the town centre even though population has increased by 50% in the period from 1981 to 2001, and with further growth since that period. It is essential that West Berkshire assess the reasons for failure for the regeneration to understand the learnings from the 2006 strategy and what plans are in place for future development.</p> <p>We note that the assessment identified risks to retail outlook, due to various factors, including the exit of the European Union and that this would need to be monitored in the short term.</p> <p>It is important that appropriate weight is given to the recent withdrawal from the Single Market and Customs Union, its impact on GDP growth, and the purchasing power and retail demand (assuming post-Covid). Are the underlying assumptions made before leaving the EU, such as retail growth of approximately 3%, still valid? What are the implications for town centre design if this is not the case?</p> <p>We note that the 'click-and-connect' model was recognised in the retail assessment. Covid has accelerated this transition beyond that which could have been anticipated when the assessment was produced. For example, online shopping was predicted to account for just 14% (comparison goods) and 6% (convenience goods) by 2036. A peak of 15.2% was anticipated for</p>	<p>The zones (identified in the Core Strategy) shown on figure 1 will be updated to reflect the latest Detailed Emergency Planning Zone (DEPZ) and Outer Consultation Zone (OCZ).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>comparison goods, and online shopping for convenience goods such as food would increase only incrementally.</p> <p>It is essential that West Berkshire consider the fundamental changes in retail patterns arising from Brexit and Covid. In our view the assessment from 2016 is now invalid.</p> <ul style="list-style-type: none"> <li>... Housing and Economic Land Availability Assessment (HELAA)</li> </ul> <p>Thattham Town Council has previously objected to developments on the sites to NE Thattham. This has not been recorded in the site assessment. Therefore, the key pieces of evidence on which the plan is based, is dated, incomplete and inaccurate.</p> <p><b>Section 4.5</b></p> <ul style="list-style-type: none"> <li>"the presence of Atomic Weapons Establishments (AWE)"</li> </ul> <p>We note that the NE Thattham falls within the AWE Outer Zone. It is essential that West Berkshire liaise with the appropriate authorities to understand the implications of a proposed major development within the Outer Zone. This is particularly important given the scale of this development, and the impact that it will have on the A4 which is likely to be part of the off-site emergency planning.</p> <p>It is necessary for the traffic forecast to represent the peak flow, and that this includes events such as motorway closures that can divert large volumes of traffic onto the A4 and hinder emergency response.</p>	
Environment Agency (lpr1657)	4.5 – Biodiversity should be included in this section on constraints, particularly regarding the protected sites, habitats and species. Although biodiversity and the AONB can also be seen as assets as well as constraints.	<p>Comments noted.</p> <p>Paragraph 4.5 of the Emerging Draft LPR – Update figure 1 and amend the text as follows -</p> <p>'West Berkshire contains a number of physical and environmental constraints which influence the location of development. <u>At a strategic level</u> These include the North Wessex Downs <u>Area of Outstanding Natural Beauty</u> (AONB), which covers 74% of the District, substantial areas liable to flood, the presence of Atomic Weapons Establishments (AWE) at Aldermaston and Burghfield, a registered battlefield to the west of Newbury, <u>various international and national nature</u></p>

In addition there are other designations heritage assets, including conservation areas and historic parks and gardens which due to scale are not included in Figure 1, but which are included on the Policies Map. and.</u></p>
<b>General consultation bodies</b>		
Heritage Forum (lpr66)	<p>Support for approach</p> <p>4.5 Constraints also include the Kennet and Avon Canal, which limits transport links to those bridges across it wide enough to take a main road, and also include conservation of Greenham and Crookham Commons.</p>	<p>Support noted.</p> <p>Paragraph 4.5 of the Emerging Draft LPR – Update figure 1 and amend the text as follows -          'West Berkshire contains a number of physical and environmental constraints which influence the location of development. <u>At a strategic level</u> These include the North Wessex Downs <u>Area of Outstanding Natural Beauty</u> (AONB), which covers 74% of the District, substantial areas liable to flood, the presence of Atomic Weapons Establishments (AWE) at Aldermaston and Burghfield, a registered battlefield to the west of Newbury, <u>various international and national nature conservation designations and the River Lambourn Nutrient Neutrality Zone as identified in Figure 1 below. In addition there are other designations heritage assets, including conservation areas and historic parks and gardens which due to scale are not included in Figure 1, but which are included on the Policies Map. and.</u></p>
West Berkshire Green Party (lpr1823)	<p>In our view, climate change is the biggest issue facing this council (or any other authority, locally, nationally and internationally). It has to be the No 1 priority in everything we do if the target of carbon neutrality by 2030 is to be reached. We note Strategic Objective 1 (Climate Change) but would wish to see this go much further. New development has to make a major contribution towards this; it is no good waiting until the houses are built and then having to spend far more on retro-fitting them.</p>	<p>Comments noted. No changes are required as a result of this representation.</p> <p>Climate Change is a key strategic objective for the Local Plan Review and runs through the whole plan. Policies SP5 and DC3 of the Emerging Draft LPR set out the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We believe that housing delivery in the current draft plan is over-reliant on large edge-of-town developments, namely Sandford and North-East Thatcham, that these are not sustainable developments in any meaningful sense of the word, and that they are incompatible with the council's environment strategy and climate change targets. As estates that would inevitably be dominated by car use, they contravene the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in Our Vision (3.3).</p> <p>The need for these two new estates could be mitigated or eliminated by:</p> <ol style="list-style-type: none"> <li>1) Identifying more brownfield sites within existing settlements and using the joint venture with Sovereign Housing and/or the proposed WBC housing company to develop these sites, with a focus on social housing.</li> <li>2) Scaling back the office space development envisaged in the current draft, as demand is unlikely to grow on the scale envisaged in the plan, as businesses adapt to post-Covid.</li> <li>3) Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This would involve relocating the existing distribution centres to a more appropriate location closer to the motorway junctions. This district would benefit from being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</li> <li>4) Providing more rural homes, particularly affordable and social housing (rather than “executive homes”) that would enable younger families to live and work there. This would enable villages to thrive and not just become nice places for commuters to spend their evenings and weekends. In addition the windfall allowance of 140 dwellings a year in the plan is less than the historical volume. Making assumptions in line with recent years would further reduce the need for new edge of-town development. Overall, there is a perception that the draft plan concentrates on building as many homes as possible in just two areas rather than take a more imaginative, balanced and districtwide approach.</li> </ol>	<p>Council's approach to climate change and building sustainable homes and businesses</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment. The strategy seeks to focus development on previously developed (brownfield) land within the main existing settlements, and to avoid detrimental impact on significant environmental assets including the AONB.</p> <p>The strategy includes making available housing of different types, tenures and affordability. The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries.</p> <p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic.</p> <p>Given the preparation of the ELR 2020 was undertaken prior to the COVID 19 pandemic, the Council has taken the opportunity to update this work using the most recent economic forecasts which take account of the major macro-economic changes which have taken place, including COVID and Brexit. This work also extends the plan period to 2039. The update to the ELR will inform the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The plan also has an unconvincing approach to affordable housing (see comments against SP19 below).</p>	<p>LPR and will be published alongside the Regulation 19 consultation.</p> <p>The need and demand for employment land in West Berkshire remains strong. Designated Employment Areas (DEAs) are considered to represent coherent areas of employment land containing established concentrations of office, industrial and warehousing development. These areas allow business uses to locate together, complement and support one another, with relatively little disturbance to surrounding residential areas. It is therefore important to ensure the role and function of each DEA is maintained and strengthened to enhance economic growth so as to prevent their economic function being diluted and potentially compromised through amenity concerns or a lack of competitiveness.</p> <p>The Plan provides for affordable housing and different types of housing in locations across the District. Specific comments in relation to affordable housing are dealt with as part of the Council's response to comments made under policy SP19.</p>
<p>CPRE West Berkshire (lpr1698)</p>	<p><b>West Berkshire &amp; East Berkshire Combined Comments</b> We applaud the very detailed set of documents setting out a vision and development for West Berkshire to 2037. The size of the draft is a very large document that makes it difficult to assimilate in its entirety. Rather than comment on specific policies we have submitted an overview of the situation.</p> <p><b>Housing Numbers and their effect:</b> It is vital not to rush into new development so that we can ensure the infrastructure is in place and that environmental damage is prevented rather than rushing into unnecessary house building. The planned expansion needs to take account of roads, water conservation, waste disposal and energy resources as well as the social considerations. Once the infrastructure and environmental policies are in place housing can follow –</p>	<p>Comments noted. No changes are required as a result of this representation.</p> <p>The strategy seeks to focus development on previously developed (brownfield) land within the main existing settlements, and to avoid detrimental impact on significant environmental assets including the AONB. The spatial strategy takes account of existing and planned infrastructure capacity and the transport network. The proposed housing requirement reflects local housing need and can be accommodated within the District.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>not the other way round. Concentrating population in rural areas increases dependence on cars and roads and the effect this has on climate change. The AONB and rural areas need full recognition as they are vital components of “Quality of Life” with outstanding landscapes to be protected by everyone in the District and a boost to the economy. Active planning is needed for rural areas and recognition of their particular needs. Rural issues and the conservation and enhancement of nationally protected landscapes and the wider countryside should have stronger representation within the Review. Key workers and affordable housing in rural areas are not compatible with low-income households as public transport and social facilities are not as numerous as those in urban areas of West Berkshire. The use of Brownfield or previously developed land would solve the use of the destruction of greenfields and green gaps and provides an opportunity for removing some of the derelict and local eyesores to breathe new life into areas that need regeneration. A large number of sites could be transformed into the homes needed in West Berkshire.</p> <p>The Government target of 300,000 homes was based on information available from the 2014-based projections– the updated figures from ONS identify lower levels of household growth, which would reduce the number of homes required in West Berkshire and save unnecessary destruction of the green spaces. The current draft of the Local Plan proposes 8840-9775 net additional homes which is too high to be accommodated without sacrificing valuable agricultural land and land used for recreation and the housing calculations need to be reviewed. The ONS household data for 2018-2028 gives growth for West Berkshire as 2482 and with windfall sites this total is likely to be exceeded. West Berkshire is in a strong position to contest the number of housing units required with Government, especially against a backdrop of a seven-year land supply.</p> <p><b>General</b></p> <p>The WBC Local Plan consultation proposes 8,840 to 9,775 net additional homes; some 520– 575 pa. We think these figures are too high and the 'housing need' calculations need to be reviewed in the light of changing government guidance and the recent withdrawal of its 'algorithm'. Also the most recent ONS household forecast data 2018 - 2028 gives West Berkshire's growth as 2482, There is the usual range of sites put forward in</p>	

Respondent (with lpr ref)	Response	Council Response
	our towns and villages and we note WBC now has over 7-year land supply satisfying the >5 year need, and has done well with slight excess housing numbers in 2019 and 2020.	
<b>Other stakeholders</b>		
Gary Clarke (lpr701)	Events in 2020 have rewritten all the requirements for retail space with the closure of John Lewis and Debenhams in Newbury. A new approach is needed recognising how the needs and employment opportunities in the High Streets have changed.	Comments noted.  The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.  A new strategic policy relating to town and district centres will be included in the Proposed Submission LPR.
Sam Coppinger (lpr280)	Support for approach	Support noted. No changes are required as a result of this representation.
Tim Hall (lpr636)	Objection to approach The shortfall in appropriate evidence which is sufficiently current. I don't believe that the acceleration of the collapse of the retail sector (with online retail rocketing during the pandemic), although a long term trend, is reflected in the evidence. This has major implications for all town centres and will affect Newbury and Thatcham, etc. It represents an opportunity for more people to live in town centres (if suitably adapted) and to obviate the need for greenfield site development, which all right thinking people should be kept to the absolute minimum. I'm horrified by Sandford and the Thatcham NE proposal (where a specious "retail scale" argument is put forward in justification which I think covid will have run a coach and horses through).	Comments noted.  The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The Employment Land Review prepared in 2020 was updated in 2022. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of further changes in response to macro and local economic factors will be assessed through subsequent reviews of the Local Plan.
Peter Norman (lpr946)	Para 4.4 While I understand the need to have a 15 year view on planning, it seems an odd time to carry out such a review when Covid19 has as yet unknown consequences on our work patterns, home requirements and needs from a town. For example will people be working more from home or	Comments noted. No changes are required as a result of this representation. National policy requires local planning authorities to keep up-to-date local planning policies and it is necessary to regularly review the Local Plan.

Respondent (with lpr ref)	Response	Council Response
	<p>is there a need to combine housing with local work hubs that reduces the need to commute? We also have yet to see the full impact on housing requirements as such how can we be certain that the current LHN of 513 dwellings pa is correct. It would seem sensible to challenge and test this figure before building a complete strategy around it given this LPR was started before the pandemic struck.</p> <p>I would like to see a study done on new work patterns and housing needs post pandemic and an updated LHN figure in light of Covid -19 and to work our strategy for the district going forward from that.</p>	<p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The Employment Land Review prepared in 2020 was updated in 2022. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of further changes in response to macro and local economic factors will be assessed through subsequent reviews of the Local Plan.</p>
Jackie Paynter (lpr716)	<p>I believe there should be much more emphasis on providing homes, both private and for rent, for those with a lower income. These are often hard working people, but who struggle to buy or rent an acceptable home. Homes are extremely expensive compared with many in the rest of the country but pay may well be the same. This should be a priority.</p> <p>New homes are often built on 'estates' probably because it is cheaper and easier to build that way but, for most, it is not ideal. Small areas of community are much more pleasant, and normal ways to live. A village, or small areas of a town, have a wide range of age groups and types of people. They also include Village halls, small shops, allotments, play areas, wooded areas, small parks etc. These are the places that people meet others, stop, chat and interact, make friends. New Housing Estates might try to emulate this with the odd tree, bench, but it doesn't match up to village or town life.</p> <p>Changes sought:</p> <p>(This is a very long and complicated document to respond to. I will put brief comments, overall, in this Comment box)</p> <p>More homes, as mixed as possible, and in already existing communities and in small groups is preferential. Any large 'estates' should have as much community feel as possible.</p> <p>Build many more homes for low rent and affordable.</p>	<p>Comments noted. No changes are required as a result of this representation. The Plan provides for affordable housing and different types of housing in locations across the district.</p> <p>Emerging Draft LPR Policies SP5 and DC3 set out the Council's approach to climate change and building sustainable homes and businesses and Policy DC35 sets out the approach to transport infrastructure and the provision of electric charging points.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Much stronger steps on being sustainable and on consideration of the Climate Change Emergency as the most crucial issue on every aspect of the plan.</p> <p>Put a requirement of Solar panels on all new buildings wherever possible.</p> <p>Charging points in New Estates.</p>	
Paula Saunderson (lpr949)	<p>I think your evidence base is suspect and your rates of predicted growth will need a review given the effects of the pandemic on many aspects of daily life and businesses.</p> <p>The LHN looks decidedly in question given I have not managed to find any data on your Current Stock by numbers of each type and size, and where you predict the under and over supply will be that needs building to fill the gaps etc.</p> <p>The HELAA looks like lists of land offered by land owners and builders with no consideration for Water &amp; Flood Management ( for which there is not an overall strategy - unless I have missed it somewhere - GROUND WATER is a huge issue going forward.)</p>	<p>Comments noted. No changes are required as a result of this representation.</p> <p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic development, including following Britain's exit from the European Union and the Covid-19 pandemic.</p> <p>The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.</p> <p>The HELAA is a thorough assessment of land being promoted for development in the District and takes into account potential water and flood management issues.</p>
Nataliya Topliss (lpr790)	<p>West Berks council must comply with the national planning policy. This does not mean that the council must allocate most of their developments plans on Thatcham area. What about the remainder of the county? Thatcham has been neglected for decades. Nobody who is familiar with Thatcham would believe that the town could support an expansion of 2,500 new homes.</p> <p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>Comments noted. No changes are required as a result of this representation.</p> <p>The specific comments in relation to North East Thatcham are dealt with as part of the Council's response to comments made under Policy SP17.</p>
Councillor Tony Vickers (lpr730)	<p>As we have already said, we do not accept that the evidence base is sufficiently up-to-date. There is little or no recognition - especially with the selection of NE Thatcham as a strategic site (SP17) - that "sustainability"</p>	<p>Comments noted. No changes are required as a result of this representation.</p>

<b>Respondent</b> <i>(with lpr ref)</i>	<b>Response</b>	<b>Council Response</b>
	<p>has taken account of Covid-19 and its likely impacts on future work and travel patterns.</p> <p>We also do not accept that the new DEPZs are necessarily excluding Grazeley. See SP3.</p>	<p>The Plan's spatial strategy has been developed following a number of rounds of consultation and engagement with communities and stakeholders and complies with national policy. Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The Employment Land Review prepared in 2020 was updated in 2022. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of further changes in response to macro and local economic factors will be assessed through subsequent reviews of the Local Plan.</p> <p>The comments in relation to Policy SP3 are dealt with as part of the Council's response to comments made under that policy.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR reference: The Spatial Areas

### (Proposed Submission LPR reference: The Spatial Areas)

Number of responses received: 17

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr725)	Support for approach. Because in the pdf para 4.6 is under Fig 1, the text saying the four areas have been reduced to three doesn't make sense on this map. Either label them as the old areas, or produce another map showing the changes in boundaries. Possibly helpful to again use the full wording for AONB acronym at the start of 4.14, but I would prefer the sentence to read 'conserve and enhance its beauty'.	Comments noted.  Amend para 4.6 of the Emerging Draft LPR as follows – '.....The four spatial areas of the West Berkshire Core Strategy (2012) have been reduced to three <u>in the LPR</u> , by combining the Eastern Area and the East Kennet Valley (as shown in figure 2)'
<b>Statutory consultees</b>		
Aldermaston Parish Council (lpr1052)	Para 4.11 Spatial Areas. APC remains of the view that it is wrong to merge the old Eastern Area with the East Kennet Valley, but note it is WBC's view to continue with this merger.	Comments noted
Cold Ash Parish Council (lpr1731)	The demarcation into the three zones is understandable, but flawed for two main reasons: Firstly it relies on a blanket designation of 74% of the land area as AONB. We have no argument at all with the principles of designating an AONB, but the sheer size of the AONB drastically reduces the space available elsewhere and places too much development pressure on the "leftover" areas.	Comments noted.  The primary purpose of AONB designation, 'to conserve and enhance the natural beauty of the area', is set out in the Countryside and Rights of Way Act 2000. Under Section 85 of the Act, the Council has a duty to have regard to the primary purpose of designation.

Respondent (with lpr ref)	Response	Council Response
	<p>Also, such a huge area will actually vary quite significantly in the quality of its landscape and views etc. Just being within the AONB does not automatically make a particular landscape area better or of special landscape quality. Secondly there are several examples of landscape in Cold Ash Parish, outside the AONB, that are just as spectacular and important, if not more so, than areas within the AONB. We provide some example photos [attached]. There would be plenty of scope for increasing development within the AONB without jeopardising its character or the identity and integrity of communities.</p>	<p>With regard to the request to re-consider the strategy and provide for more development within the AONB, the primary consideration within the AONB must be the conservation and enhancement of the natural beauty of the landscape.</p> <p>The Council's overall planning policy approach to the AONB is set out in Policy SP2. The policy is clear that the AONB will have appropriate and sustainable growth over the plan period. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR.</p> <p>Policy SP8 applies across the whole of the District. Its purpose is to ensure that development proposals are informed by an understanding of the distinctive character of West Berkshire and that this understanding is used as a positive tool in accommodating change by ensuring the inherent qualities and valued features of the District's landscape will continue to be appreciated.</p>
Holybrook Parish Council (lpr1318)	<p>'The four spatial areas of the West Berkshire Core Strategy (2012) have been reduced to three, by combining the Eastern Area and the East Kennet Valley.'</p> <p>The Parish Council is concerned about this proposal. This would create a diverse area with a mixture of urban and rural neighbourhoods. The only common factor is that they are not in the AONB and not in Newbury/Thatcham. The Council is concerned that less attention will be paid by planners to the circumstances of the urban parishes of the Eastern Urban area and that this shows a broad brush approach with more concerns shown for the ANOB and Newbury/Thatcham.</p>	<p>Comments noted.</p> <p>It is important to make clear that the conservation and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's towns, villages and countryside is key to our spatial approach and remains one of the strategic objectives of the LPR.</p> <p>What is also important to recognise is that there are significant differences in character within all of the spatial areas – whether existing or proposed. The Newbury and Thatcham spatial area, for instance, contains a significant rural hinterland which includes villages such as Cold Ash and Enborne and which visibly contrasts in character with the more urban areas of Newbury and Thatcham. Similarly, in the existing Eastern Area the rural hinterland</p>

Respondent (with lpr ref)	Response	Council Response
		<p>to the north of Theale contrasts greatly with the urban areas of Calcot and Tilehurst.</p> <p>Functional relationships are also complex. Neither the Eastern Area nor the East Kennet Valley can be seen in isolation and both clearly interact with each other and with the AONB and Newbury Thatcham spatial areas too. The rural service centre of Theale currently sits on the edge of the Eastern Area but it could easily be argued that it has more in common with the East Kennet Valley. Combining the two spatial areas would therefore assist when considering the role and function of Theale in the wider context.</p> <p>In strategic planning terms the existing Eastern Area is now very small and is very difficult to plan for in isolation. In 2010, when the Core Strategy was being prepared, the Eastern Area was originally a broad area for development that included Pangbourne and a small area of the AONB running along the edge of the main urban area. However, through the Core Strategy examination process this area was reduced to exclude all parts of the AONB and so ultimately, the adopted Eastern Area is smaller than originally envisaged. This has since created challenges in delivery.</p> <p>In reality, combining the two existing spatial areas is more practical and gives the Council more flexibility in strategic planning terms.</p>
Hungerford Town Council (lpr121)	Support for approach	Support noted
Stratfield Mortimer Parish Council (lpr390)	We do not support this paragraph. It is felt that that the two distinct types of area, Reading fringe and rural villages, that make up the Eastern Area have little in common. As such it does not seem logical to have them in the same area and by implication treated in the same way as far as this local plan is concerned. Our preferred approach would be to revert to the situation in the	<p>Comments noted.</p> <p>It is important to make clear that the conservation and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's towns, villages and countryside is key to our</p>

Thatcham Town Council (lpr1387)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p><b>Section 4.9</b></p> <ul style="list-style-type: none"> <li>"well located in terms of access to rail and to the strategic road network"</li> </ul> <p>Thatcham does not have good access to the rail station for reasons outlined previously (2.6 of full representation). The town of Thatcham, and the surrounding residential areas, are poorly connected to its station. Its location, access, and parking are sub-standard for a population centre of the size of Thatcham. This is also recognised in the Thatcham master planning work (Stage 1) that being a 1.5km walk "the station therefore does not provide easy accessibility for residents of north and west Thatcham." Further the crossing creates significant congestion, with queues approaching 1km in length, and the crossing being closed for up to 40 minutes in an hour. In effect this means that Thatcham is poorly connected to the centres to the South, and access to the station is itself constrained. It is necessary that this is acknowledged, and this statement is modified.</p> <p><b>Section 4.10</b></p> <ul style="list-style-type: none"> <li>"Newbury and Thatcham urban area is the main focus for development in the current Local Plan and will remain the focus in the Local Plan Review."</li> </ul> <p>We note that the DPD (2012) also included the statement that most new development would include 'the East of the District close to Reading'. We note that the Housing Site Allocations DPD (2006-2026) states that "Thatcham has a more modest level of facilities and has experienced rapid housing growth over the last few decades" and that "The Core Strategy does</p>	<p>Comments noted.</p> <p>The issues raised in relation to Policy SP17 are dealt with as part of the Council's response under that policy.</p> <p>Paragraph 4.9 of the Emerging Draft LPR is a brief statement providing an overview of the Newbury Thatcham area as a whole. It is acknowledged that some parts of that area will have better access to the rail and strategic road network than others.</p> <p>Paragraph 4.10 of the Emerging Draft LPR is a brief statement providing an overview of the Newbury Thatcham area as a whole. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes. The Council commissioned the <a href="#">Thatcham Strategic Growth Study</a> to inform its approach and this forms part of the LPR evidence base. This is set out in the supporting text to Policy SP17.</p> <p>The Council's overarching spatial strategy is set out in Policy SP1. It aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus will be on existing settlements, using the settlement hierarchy, set out in Policy SP3. This steers development to the most sustainable areas, with an</p>

Respondent (with lpr ref)	Response	Council Response
	<p>not, however, identify Thatcham for significant growth in this plan period due to rapid expansion in recent years."</p> <p>There has not been any significant inward investment, re-generation, nor improvement of infrastructure or services since the publication of the previous DPD and Local Plan. This Local Plan Review is therefore the opportunity to assess whether a previous approach that appears to have failed to deliver on historical objectives should be carried forward.</p> <p>The phrasing of the text implies that no such consideration has been given and should be improved.</p> <p><b>Section 4.12</b></p> <ul style="list-style-type: none"> <li>"There is significant employment provision within this area. The AWE has two major sites in this area, at Aldermaston and Burghfield and is an important provider of local jobs. There is a business park at Arlington near Theale and a number of other employment areas comprising small industrial estates."</li> </ul> <p>We agree that these are the major employment hubs. We believe that West Berkshire should encourage settlements to be located that minimise distance to work, and that have either existing good transport links or that are easily scalable.</p> <p><b>Section 4.16</b></p> <ul style="list-style-type: none"> <li>"delivery of up to 2,000 homes over the period 2006 – 2026"</li> </ul> <p>This statement is not relevant for the period to 2037 for which this consultation is being conducted.</p> <ul style="list-style-type: none"> <li>"Hungerford, Lambourn, Compton and Hermitage have designated neighbourhood areas for the preparation of Neighbourhood Plans. Additional development for the period beyond 2026 will therefore be limited and will come in part through allocations within NDPs".</li> </ul> <p>We do not understand why development beyond 2026 need be limited. The Local Plan sets out a vision to 2037, and the NDP should conform with, and not promote less development as defined in section 1.16.</p> <p>It is essential that this Local Plan does not use guidance that is dated to restrict its ability to meet future housing supply beyond 2026.</p>	<p>appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity, while protecting and enhancing the environmental assets of the District.</p> <p>Newbury and Thatcham are the largest settlements in the District and it is appropriate that the focus for development should be here. The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston.</p> <p>The LPR covers the 15 year period to 2039 and so it is relevant that it considers the delivery of housing to 2026 as part of that. The Council's strategic approach to the delivery and distribution of housing is set out in policies SP1, SP3, SP12, SP13, SP14 and SP15. A Housing Background Paper will be prepared to accompany the Proposed Submission LPR.</p>

<b>General consultation bodies</b>		
Heritage Forum (lpr67)	Support for approach 4.10 Since 4.11 includes a reference to the Kennet & Avon Canal, there should be a similar reference in 4.10.	Comments noted.
Reading West Berkshire Labour Party (lpr1177)	<p>We are concerned about the proposal to merge the Eastern Urban Area with the current Eastern Area to create a new Eastern Spatial Area. This would create a diverse area and a mixture of urban and rural neighbourhoods. The only common factor is that they are not in the AONB and not in Newbury/Thatcham. We are concerned that less attention will be paid by planners to the circumstances of the urban parishes of the Eastern Urban Area and that this shows a broad brush approach with more concern shown for the AONB and Newbury/Thatcham.</p> <p>Changes sought: To retain the existing Spatial areas</p>	<p>Comments noted.</p> <p>It is important to make clear that the conservation and enhancement of the local distinctive character and identity of the built, historic and natural environment in West Berkshire's towns, villages and countryside is key to our spatial approach and remains one of the strategic objectives of the LPR.</p> <p>What is also important to recognise is that there are significant differences in character within all of the spatial areas – whether existing or proposed. The Newbury and Thatcham spatial area, for instance, contains a significant rural hinterland which includes villages such as Cold Ash and Enborne and which visibly contrasts in character with the more urban areas of Newbury and Thatcham. Similarly, in the existing Eastern Area the rural hinterland to the north of Theale contrasts greatly with the urban areas of Calcot and Tilehurst.</p> <p>Functional relationships are also complex. Neither the Eastern Area nor the East Kennet Valley can be seen in isolation and both clearly interact with each other and with the AONB and Newbury Thatcham spatial areas too. The rural service centre of Theale currently sits on the edge of the Eastern Area but it could easily be argued that it has more in common with the East Kennet Valley. Combining the two spatial areas would therefore assist when considering the role and function of Theale in the wider context.</p> <p>In strategic planning terms the existing Eastern Area is now very small and is very difficult to plan for in isolation.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In 2010, when the Core Strategy was being prepared, the Eastern Area was originally a broad area for development that included Pangbourne and a small area of the AONB running along the edge of the main urban area. However, through the Core Strategy examination process this area was reduced to exclude all parts of the AONB and so ultimately, the adopted Eastern Area is smaller than originally envisaged. This has since created challenges in delivery.</p> <p>In reality, combining the two existing spatial areas is more practical and gives the Council more flexibility in strategic planning terms.</p>
<b>Other stakeholders</b>		
Sam Coppinger (lpr281)	Support for approach Development with AONB must be sympathetic and not too impactful. We accept houses are needed but all other land options should be considered first.	Comments noted
Tim Hall (lpr637)	Support for approach. Seems logical	Support noted
Peter Norman (lpr957)	<p>4.6 Spatial areas. The spatial area of Greenham makes no sense. Land to the west of the A339 has no connection to Greenham and should reflect the diocese borders where west of A339 and south of and including Monks Lane should properly be considered Wash Common. This would provide the opportunity for this community to develop their own local plan which at the moment is impossible as it would require acceptance of Sandleford as a Strategic site for housing development</p> <p>4.10 The battleground in South Newbury should also be recognised as a designated historical site that would be inappropriate for development. In addition the objective here should be the development of brownfield sites in preference to greenfield sites where ever possible</p> <p>4.16 Notes that for this area the planning inspector in his review of the 2006-2026 Core Strategy that there should be a maximum of 2,000 new homes in this area, but no such limits have been put on the other districts covered in</p>	<p>Comments noted.</p> <p>Parish boundaries are not a matter for the Local Plan.</p> <p>Emerging Draft LPR Policy DC12 sets out the Council's approach to proposals that could affect the Registered Battlefield which extends south to the west of Wash Common along Enborne Street.</p> <p>Policy SP1 sets out the overall spatial strategy for the District. This makes clear that the strategy seeks to make effective use of brownfield land and notes that opportunities for this are greatest in those settlements at</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the LPR. This states by implication that there is no limit to the housing that can be built in the other areas. This is patently absurd given the physical constraints of the district and I would like to see a study undertaken as to what is the maximum number of homes that can be reasonably be built and supported across the entire district and especially its two main towns given the explosion in growth (+10,500 new homes) built in the preceding period</p> <p>Changes sought:</p> <p>4.6 For a district of Wash Common to be created that recognises the particular requirements and strong community of this area.</p> <p>4.10 Ensure the battleground in South Newbury is designated</p> <p>4.10 Amend final sentence to: there are also opportunities for brownfield development, particularly in Newbury, that should be considered before the allocation of additional greenfield sites</p> <p>Amend section to include a maximum number of homes for all areas of the district following a study as to what can be supported with a reasonable build out of infrastructure</p>	<p>the upper levels of the settlement hierarchy, particularly Newbury.</p> <p>Policy SP12 sets out the Council's approach to the delivery of housing across the District and this will be supported by a Housing Background Paper.</p>
Ian Parsons (lpr825)	<p>The division of the county into three areas is agreeable.</p> <p>Public transport around the AONB remains problematic with parish councils often heavily subsidising local bus companies. A return to a council run bus company covering the AONB would be welcomed. Reading's bus company is a shining example of this approach.</p>	<p>Comments noted</p> <p>It is recognised that many rural parts of the District have no, or a very minimal bus service. The Council has recently published a Bus Service Improvement Plan, which outlines that Demand Responsive Transport options are being investigated for rural areas where there are no bus services (e.g. between Hungerford and Lambourn).</p>
Paula Saunderson (lpr951)	<p>Looking at the map it would seem to me that West Berkshire as an administrative area would be better split into the many LA areas that surround it, and consideration should be given to disbanding it as a small Unitary Authority and whether the Communities it serves would be better served by the other LAs near to them. Having it stuck out like a sore thumb on the end of the M4 Corridor probably means the spatial areas defined within your plan are more for convenience than for the benefit of the communities. WBC never looks to the South, West &amp; North, always looking East and that approach does not always benefit the population.</p>	<p>Comments noted.</p> <p>Comments in relation to the appropriateness of West Berkshire as an administrative area fall outside the scope of the LPR.</p> <p>The LPR is being produced through close partnership working with all our neighbouring local authorities to ensure that cross-boundary planning issues are being taken into account. The Council has a statutory</p>

Respondent (with lpr ref)	Response	Council Response
		Duty to Cooperate in this regard and key work takes place on an ongoing basis. A Duty to Cooperate Statement will accompany the Proposed Submission LPR.
Nataliya Topliss (lpr792)	<p>The development of 2,500 homes in the north east of Thatcham will make the lives of the existing residents of Thatcham much worse. It will put excessive strain on our infrastructure and services: the railway crossing, traffic congestion, roads, doctors surgeries, libraries, open and green spaces. Before pandemic, congestions on the A4 and other roads leading out of town is astronomical. It took me up to two hours one way to get to Reading from Thatcham daily. The road network in and around Thatcham cannot cope. No new roads and rail bridges have been built. The trains are always overcrowded. Before Covid pandemic, it was impossible to get to a train station by a car as all roads were congested. Residents of Thatcham are living in hell. There are no local jobs and it is next to impossible to travel to other towns due to congestions on the roads.</p> <p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>Comments noted.</p> <p>The issues raised relate to Policy SP17 and so are dealt with as part of the Council's response under that policy.</p>
Councillor Tony Vickers (lpr731)	<p>We agree with the reduction from 4 to 3 Spatial Areas. However as noted already we don't agree with the statement in 4.9 which implies that the whole Newbury &amp; Thatcham urban area in "well connected" to the strategic road network.</p> <p>Modify 4.9 in respect of Thatcham.</p>	<p>Comments noted.</p> <p>Paragraph 4.9 of the Emerging Draft LPR is a brief statement providing an overview of the Newbury Thatcham area as a whole. It is acknowledged that some parts of that area will have better access to the rail and strategic road network than others.</p>
Ian Watson (lpr689)	<p>Support for approach The importance of public transport provision is recognised. Travel to Thatcham station by public transport is very difficult with very few buses and poor timetables. More housing may lead to more commuters and</p>	<p>Comments noted.</p> <p>Improving access to and improving facilities at Thatcham railway station is likely to be a key project. It is recognised that as well as improving active travel to the station, access by bus and improvements car parking are also</p>

<b>Respondent</b> <i>(with lpr ref)</i>	<b>Response</b>	<b>Council Response</b>
	in normal time parking at or near the station is already difficult. Maybe some form of peak rail travel time shuttle bus is needed?	considered. Any package of enhancements would also need to make the station more accessible for all who wish to travel. The Council has a good record of working with the rail industry (especially GWR) and local communities to develop and deliver such projects, such as those currently being delivered at Newbury and Theale stations.

<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr727)	<p>Minor formatting comment but it matters when people search documents digitally. Please could you decide whether spaces are included or not in the policy references - ie keep it as SP1 throughout, not both SP1 and SP 1. Same issue has happened with other RSA references.</p> <p>I'd like to understand the total scoring systems for environmental value (where is lower apart from outside the AONB). As mentioned previously, don't like the three-part concept of 'built, historic and natural' environment, please just use the NPPF terms that people can easily cross-reference.</p> <p>Para 4.19 brownfield land can have archaeological interest (almost by definition).</p>	<p>Comments noted.</p> <p>The formatting of policy references will be corrected.</p> <p>The NPPF states that one of the three overarching objectives of the planning system is to protect and enhance our natural, built and historic environment. Paragraph 20 of the NPPF requires strategic policies to make provision for conservation and enhancement of the natural, built and historic environment. The wording of the policy is therefore consistent with terms used in the NPPF and no changes are required to the policy in this regard.</p> <p>It is recognised that brownfield land can have archaeological value. Any development proposal would need to be assessed against all relevant Local Plan policies.</p>
<b>Statutory consultees</b>		

Respondent (with lpr ref)	Response	Council Response
Chieveley Parish Council (lpr1718)	Chieveley Parish Council supports the overall spatial strategy and principles underlying new housing allocations in the AONB.	Comments noted.
Cold Ash Parish Council (lpr1740)	<p><b>The treatment of Cold Ash Parish</b></p> <p>It has been accepted by West Berkshire District Council that Cold Ash Parish is in a quite unique position. This can be explained by the fact that it has been placed within the same spatial area as Thatcham and Newbury and has also been recognised as a service village. This leaves it in a confusing position, as the development expectations of each are quite different; the Thatcham and Newbury spatial area has higher development density expectations, whilst service villages are "smaller rural settlements" that "may offer some limited and small-scale development potential, appropriate to the character and function of the village, in order to meet local needs". Also, part of the parish is in the North Wessex Downs AONB. The plan doesn't balance this dichotomy, as the allocated number of houses is significantly higher than similar service villages, even though there are already c100 dwellings due to be built in response to the DPD.</p> <p>Also, Cold Ash village is strategically placed between Thatcham and the strategic road network of the M4 and A34. This results in a high volume of transit traffic through the parish, which would be greatly exacerbated by the building of up to 2,500 houses in the North East Thatcham Strategic Site. It needs to be borne in mind that the parish's road network is predominantly made up of adopted tracks, many without pedestrian paths.</p> <p>It's clear that the landscape, character and distinctiveness of Cold Ash is very important to its parishioners. It also provides a valuable flow between the urban areas of Thatcham and Newbury, to the south, and the rural landscape and AONB, to the north, due to its balanced blend of sensitive housing and semi-rural road network, and an appropriate amount of green space. As such, any overdevelopment or urbanisation, with excessive housing and an upgraded road network, is likely to destroy the nature, character and distinctiveness of the area, which will be a loss not only for the parishioners of Cold Ash, but also to those of the surrounding areas, both urban and rural.</p> <p><b>Summary</b></p> <p>Cold Ash Parish Council acknowledges the hard work that has gone into the production of the Local Plan Draft through periods of political uncertainty and</p>	<p>Comments noted.</p> <p>The NDP for Cold Ash will cover the parish area. The parish does partly fall within the AONB although the majority is within the Newbury and Thatcham spatial area. Small parts of the parish also lie within the Newbury and Thatcham settlement boundaries (both of which are identified as 'urban areas' in the settlement hierarchy). The number of dwellings proposed for Cold Ash therefore relates to an area significantly wider than the service village of Cold Ash.</p> <p>The indicative housing requirements (as set out in the draft emerging LPR) for the designated Neighbourhood Areas took into account the development opportunities identified within the HELAA, the placing of settlements within the settlement hierarchy, and constraints such as the AONB.</p> <p>A number of potential opportunities were identified in the HELAA, with site selection work undertaken by the NDP Steering Group since publication of the Emerging Draft LPR showing there is one site suitable for potential allocation in the Parish. However, as this site is located within the settlement boundary of Newbury, where there is a presumption in favour of development, policy SP1 will be amended as follows:</p> <p>'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b></p>

Respondent (with lpr ref)	Response	Council Response
	<p>recently the corona virus disruption. We would particularly like to highlight the role played by the Planning Policy Team who have engaged with us over the last 18 months and thank them for their diligence and responsiveness. The Plan is by its nature complex and wide-ranging and there is much in it that we support, particularly from a more general perspective – for instance references to the importance of combating climate change, biodiversity and maintaining the character and identity of settlements and communities. However, we believe there are some fundamental flaws in the Plan, most especially its spatial and development strategies being too skewed to protecting the AONB, and its lack of recognition of the unique situation and challenges facing our parish, resulting in an over-allocation of dwellings here. We ask WBC to consider carefully all the points raised in this response, but particularly draw your attention to the following key items:</p> <ol style="list-style-type: none"> <li>1. We object to the number of 40 dwellings allocated to our Parish and ask WBC for a fairer, lower allocation akin to Lambourn or</li> <li>2. We urge WBC to reconsider the Spatial Strategy and amend it to provide for greater (but still contained) development within the huge 74% of land within the AONB.</li> <li>3. We strongly recommend a re-think and scaling back of the THA20 development to a sustainable number, both for Thatcham itself and neighbouring parishes such as ours.</li> <li>4. We ask WBC to ensure that the Local Plan: <ol style="list-style-type: none"> <li>1. formally acknowledges Cold Ash Parish’s unique situation within the District</li> <li>2. confirms that WBC will not allocate any strategic sites within our</li> </ol> </li> <li>5. We request that WBC facilitate further additional processes of engagement between parishes regarding THA20.</li> </ol>	<p>.....  <del>New allocations for housing for Cold Ash will be made through a NDP. ....’</del></p> <p>The key issues for Cold Ash are noted. With regard to the request to re-consider the strategy and provide for more development within the AONB, the primary consideration within the AONB must be the conservation and enhancement of the natural beauty of the landscape.</p> <p>Responses to comments on the North East Thatcham proposal are set out in the responses to SP17 and traffic modelling will consider the impact on roads through the parish.</p>
Hermitage Parish Council (lpr1820)	<p>Hermitage Parish Council, along with many Hermitage residents objects to the 20 additional dwellings proposed for the parish. In the last 15 or so years the number of dwellings has increased by 36% to 786 or 42 % if all those currently in the planning process are included. It is understood that this community has absorbed one of the greatest increases in homes in the area, second only to Cold Ash.  The perception is that Hermitage will soon cease to be a village.</p>	<p>Comments noted.</p> <p>A NDP is being prepared for Hermitage, and the designated Neighbourhood Area (the area that the NDP will cover) encompasses the Parish area. At the time of the consultation on the draft emerging Local Plan Review,</p>

Respondent (with lpr ref)	Response	Council Response
	<p>It believes that the number of additional dwellings allocated to service villages in the ANOB should take into consideration the number of dwellings recently added or allocated in the current DPD to them. If a parish has had a great deal of development in recent years, it should not have more foisted on it.</p> <p>Changes sought:</p> <ol style="list-style-type: none"> <li>1. A reduced number of dwellings for Hermitage.</li> <li>2. Fairness in the way additional dwellings are allocated to service villages in the ANOB.</li> </ol> <p>The council does realise this is partially affected by the availability of brown field sites and points out that there are no brownfield sites left in Hermitage.</p>	<p>Hermitage had identified that the NDP would include allocations for residential development.</p> <p>The indicative housing requirements (as set out in the draft emerging LPR) for the designated Neighbourhood Areas took into account the development opportunities identified within the HELAA, the placing of settlements within the settlement hierarchy, and constraints such as the AONB.</p> <p>Hermitage NDP Steering Group advised the Council in February 2022 that they no longer intended to include allocations in the NDP. Site allocations in Hermitage will now be considered through the LPR.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3. Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints. The primary consideration within the AONB must be the conservation and enhancement of the natural beauty of the landscape. The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>
Holybrook Parish Council (lpr1319)	<p>Within Newbury, Thatcham, Tilehurst, Purley-on-Thames and Calcot developments are expected to secure a net density of at least 35 dwellings per hectare.’ (p17) continues with ‘with densities of at least 70 dwellings per hectare in town centres and for flatted developments along main transport routes and close to transport nodes’.</p> <p>This proposed ‘expected’ minimum density is too high and of great concern especially regarding developments close to and feeding into the A4 Bath Road not only from Junction 12 of the M4 but also from Tilehurst and</p>	<p>Comments noted.</p> <p>Efficient use of land is a government priority and will reduce the need to build on greenfield sites. The policy does include the flexibility for justification of lower densities depending on site specific issues.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Burghfield. Densities of this magnitude will lead to immense pressure on already over stretched services.</p> <p>The Emerging Local Plan encourages more development in an area where traffic levels are dangerously close to saturation and infrastructure simply has not kept pace. The local plan should do more to protect these areas from over development and complete collapse through lack of sufficient infrastructure.</p> <p>HPC and its residents have made many unheeded representations to West Berkshire Council in respect of high density development, traffic and infrastructure impact. Our residents face a regular battle with these ever increasing issues.</p> <p>'The individual identities of the separate settlements within this area [Eastern Area] will be maintained and the high quality landscape and environmental assets in this part of West Berkshire will be conserved and enhanced.' (p. 19)</p> <p>Whilst it is extremely important that the individual identities between areas are maintained it must not be forgotten that 'there is interaction within and between all the spatial areas' (Section 4.6) and the effect of development in other areas can and does directly impact its neighbours. For example, the proposed development at Pincents Hill, which has received many objections from Tilehurst residents, has also seen a significant number of objections from Holybrook residents as it is our residents who will suffer greatly from the increased traffic for example.</p> <p>Holybrook Parish Council supports many of the idealistic policies within the emerging Local Plan which demonstrate West Berkshire Council's commitment to provide the required housing stock in a way that enhances and protects existing localities within its district. However, distinct areas, such as Holybrook, have been ignored and this takes away their identity. The Parish of Holybrook has found that, in practice, the wording within policy documents does not always marry with the reality of what developers produce. Our Parish has been subjected to many developments in the recent years resulting in the loss of distinction, loss of habitat and loss of green space all whilst our infrastructure has been put under immense pressure and is close to collapse.</p>	<p>Transport modelling will form an important part of the evidence base and applications will need to mitigate any impact on local transport networks and the strategic road network, as outlined in policy SP22.</p> <p>The policies of the Local Plan need to be read together in the consideration of any development proposal. Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of policy SP7. The supporting text notes that '<i>New development should begin with an understanding of an area's existing character and context and its design should evolve from West Berkshire's high quality and diverse landscape character and rich built and cultural heritage. Development should complement and enhance existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed.</i>'</p>

Respondent (with lpr ref)	Response	Council Response
	The local plan should do more to protect these areas [where traffic levels are near saturation and infrastructure is lacking] from over development and complete collapse through lack of sufficient infrastructure.	
Hungerford Town Council (lpr122)	We welcome the explicit support for NDPs to play a key role as part of the planning strategy	Support for the policy noted.
Lambourn Parish Council (lpr1443)	N.B. Lambourn NDP are not seeking to make allocations for housing	<p>Comments noted.</p> <p>It is acknowledged that since making those comments the NDP Steering Group has stated that it will be allocating housing through the NDP.</p> <p>Nevertheless, further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p> <p>'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b> ..... New allocations for housing for Cold Ash will be made through a NDP. ....</p> <p><b>Eastern Area</b> .... <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b> .... Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</p>

Respondent (with lpr ref)	Response	Council Response
Lambourn Neighbourhood Development Plan Steering Group (lpr1703)	The Lambourn NDP is not at this time planning to allocate sites for housing. The sites already allocated by WBC (RS19 and RS20) together make provision for 65 of the 90 houses deemed to be needed to meet housing demand in Lambourn. We anticipate the remaining 25 may be found by natural development/windfall. Our policies on this are still emerging, but we are looking to designate Green Space and to produce Local Policies and Design Codes for housing development within which such natural development can take place.	<p>Comments noted.</p> <p>It is acknowledged that since making those comments the NDP Steering Group has stated that it will be allocating housing through the NDP.</p> <p>Nevertheless, further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p> <p>'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b> ..... <del>New allocations for housing for Cold Ash will be made through a NDP. ....</del></p> <p><b>Eastern Area</b> .... <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b> .... <del>Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</del></p>
Newbury Town Council (lpr2272)	We agree with the policy – but with a changed proposed. The Spatial Strategy is well balanced, apart from not recognising that it may be necessary to allow some high-density housing within Designated Employment Areas that need modernisation and redevelopment in order to make such redevelopment economically viable.	<p>Comments noted.</p> <p>Designated Employment Areas are considered to represent coherent areas of employment land containing established concentrations of office, industrial and warehousing development. These areas allow business</p>

Respondent (with lpr ref)	Response	Council Response
	<p>It seems odd that the LPA is aware that one promoted housing site within a Newbury DEA already has the benefit of planning consent on part of its area for several years' worth of 'windfall allowance', yet this does not feature anywhere in the calculations of housing need and the assessment of overall windfall allowance in the Plan Period takes account only of 'small sites' of less than 10 dwellings.</p> <p>We particularly welcome the supporting text in 4.18, where it refers to "maintaining vibrant and balanced communities" and "opportunity to reduce out-commuting and the need to travel". This applies as much to service villages in the AONB as elsewhere. The post-Covid environment is likely to mean that even those whose jobs notionally are based outside their home area – or even outside the District – will be able and willing to travel less for work purposes, because working from home for at least part of the time will remain the norm. It is largely for this reason that we wish the Local Plan to be more flexible about new developments of all kinds in and adjacent to the AONB. However, we see no need to amend SP 1 in this respect.</p>	<p>uses to locate together, complement and support one another, with relatively little disturbance to surrounding residential areas. It is therefore important to ensure the role and function of each DEA is maintained and strengthened to enhance economic growth so as to prevent their economic function being diluted and potentially compromised through amenity concerns or a lack of competitiveness.</p> <p>Presumably Newbury Town Council are referring to the London Road Industrial Estate in Newbury, where there is a permission for 160 residential units on Land off Faraday and Kelvin Road. The calculation of housing need takes no account of sites – it is based on household projections with an uplift based on local affordability. The housing supply, however, includes these 160 units as outstanding permissions. The windfall allowance is for sites that are not yet permitted or even identified.</p> <p>Comments regarding development in the AONB are noted. However, the conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of development proposals in the AONB.</p>
Shaw-cum-Donnington Parish Council (lpr195)	<p>We note the claim that "Demand for travel will be managed". We do not understand how this will be achieved. Currently we see the bus services declining over the years and the demand for car travel remaining to meet people's needs. The investment in cycle travel has not achieved much if the observed use of recently installed cycle lanes is to be believed. So what is intended to be done in the light of progress so far?</p> <p>4.17 We note again the text "development that will meet social and economic need of the District". We refer to our previous comment in 1.5. (lpr191 on Introduction and Background)</p>	<p>Comments noted.</p> <p>The policies in the Emerging LPR need to be read together. Policy SP22 outlines requirements for Transport Assessments, Transport Statements and Travel Plans, with the aim of encouraging sustainable travel and improving travel choice.</p> <p>The strategy seeks to plan for people to live in places where there are local facilities and services so that the need to travel is reduced.</p>

Respondent (with lpr ref)	Response	Council Response
Stratfield Mortimer Parish Council (lpr391)	<p>We support this policy overall but have the following reservations: The general thrust of the policy to make the best use of land and to direct development to areas of lower environmental value makes sense and is in line with government guidelines. However, many of the statements are vague and it would seem that the policy can be satisfied by having a brief that just says the correct things rather than actually meets the intent of the policy.</p> <p>For instance, what does this statement actually mean? “optimises the density of development to make the best use of land whilst conserving and enhancing the distinctive character and identity of the built, historic and natural environment” Optimise means to make the best use of and hence can be read as meaning to maximise the density of development. On the other hand, the conserving and enhancing clause can be read to mean the exact opposite.</p> <p>There are several more such statements in SP 1 such as: - “Density on individual sites will vary according to their location and context, size of developable area and site-specific issues such as shape and access”.</p> <p>This is so broad that it is almost not worth having in the document, although the assumed thought behind the words is to be applauded.</p> <p>And yet the next section has the statement that: - “Within other defined settlements developments are expected to secure a net density of at least 30 dwellings per hectare with higher densities achievable in the centres of Hungerford, Pangbourne and Theale.”</p> <p>This density maybe at odds with the surrounding home/building densities and therefore out of character. Plans are to review boundaries. If a boundary is extended the presumption in favour will apply with potential higher densities. This could be in conflict with</p> <ul style="list-style-type: none"> <li>o - “Developments on the edge of defined settlements are generally expected to secure a net density of 30 dwellings”</li> <li>o - surrounding homes/building density</li> </ul> <p>This also seems to impose an overarching standard which is contradictory to the previously highlighted quote.</p> <p>The plan also states: -</p>	<p>Overall support for the policy noted.</p> <p>Policy SP1 is an over-arching strategic policy. The policies of the Local Plan need to be read together in the consideration of any development proposal.</p> <p>Efficient use of land is a priority and the policy sets out density expectations in different parts of the District. But each site will have site specific constraints including size and shape of site together the character and amenities of the surrounding area. These may well justify lower densities for particular sites or locations.</p> <p>Regarding the suggestion to allow higher densities on brownfield land, the policy does not set a maximum density. Design quality is covered in Policy SP7. Any design codes and policies in adopted NDPs will still apply.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain’s exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>“Employment development to meet the existing and future economic demands for business use will be directed to Designated Employment Areas, to help promote sustainable patterns of development, prioritise the use of previously developed land and support the retention of these areas for employment uses”.</p> <p>Bearing in mind the change in work patterns highlighted by the pandemic, does this policy need revising? Is there not now a need for more small-scale, dispersed/local employment opportunities?</p> <p>Changes sought:</p> <p>Clarity and measurability for all these policies rather than woolly words that can be interpreted in so many different ways.</p> <ol style="list-style-type: none"> <li>Note allow higher densities on brownfield (redevelopment) sites; suggest density should be subject to local situation and agreed design codes must comply with local design codes particularly those in made NDPs etc.</li> </ol> <p>Eastern area p19 “individual identities of the separate settlements within this area will be maintained and the high-quality landscape and environmental assets in this part of West Berkshire will be conserved and enhanced.” ‘to meet local needs and maintain vibrant and balanced communities with their own sense of identity’ (text para 4.18)</p> <p>This policy strongly supported to maintain distinctiveness and quality landscapes.</p>	
Thatcham Town Council (lpr1388)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <ul style="list-style-type: none"> <li>"Outside of settlement boundaries land will be treated as open countryside where development will be more restricted."</li> </ul> <p>The proposed area of THA20 is countryside which has restricted development according to existing settlement boundaries. The policy appears to contradict with the selection of the strategic NE Thatcham site.</p> <ul style="list-style-type: none"> <li>"Thatcham ... net density of at least 35 dwellings per hectare"</li> <li>"Developments on the edge of defined settlements are generally expected to secure a net density of 30 dwellings."</li> </ul>	<p>Comments noted.</p> <p>The settlement boundaries are proposed to be amended through the LPR and will include new allocations. The area to the north east of Thatcham that is included within the settlement boundary will therefore no longer be considered as open countryside in policy terms.</p> <p>Efficient use of land is a government priority and will reduce the need to build on greenfield sites. The policy does include the flexibility for justification of lower densities depending on site specific issues.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>These statements are inconsistent. NE Thatcham is outside the existing settlement boundary and defined as countryside. To maintain consistency with similar rural areas a density of 30 dwellings would be implied. More generally, the housing density appears to be based on legacy planning assumptions. We believe it is important that West Berkshire assess whether such densities remain valid when designing residential layouts aligned with net-zero carbon. For example, orientation of buildings may become more constrained to maximise solar gain and avoid shadowing, and land may require to be set aside for renewable energy generation for offsetting purposes.</p> <ul style="list-style-type: none"> <li>• "Demand for travel will be managed, and accessibility to sustainable transport opportunities increased through improving choice in transport modes."</li> </ul> <p>We agree that where possible a choice should be offered to support active travel.</p> <p>Nevertheless, we believe it would be a mistake to put too much weight on active travel as a traffic congestion solution. Even for those residents that embrace active travel it cannot be assumed to be suitable for many journeys, or most of the time. Further, active travel is seasonable and will be less popular during winter months, and periods of ice or snow, or rain. For this reason, it cannot be used to substitute for critical infrastructure and in the absence of other evidence traffic assessment must be based on existing known traffic models (pre-Covid).</p> <p>We do not believe it is possible to manage travel demand, as the policy implies. Traffic demand will be based on personal choice, and depend on economic growth, labour markets and affordability of private vehicles. The Department of Transport predicts (2018), in all its scenarios, that traffic growth will increase. It is important that the policy does not imply that demand is managed or make unfounded assumptions that traffic demand will decrease.</p> <p>It is essential that active travel should not be used to reduce traffic flow forecasts as these must be dimensioned for peak traffic which will occur during busy periods, and when Motorway diversions are in place (particularly if it impacts emergency planning response for AWE).</p>	<p>Support for active travel choices is noted. The policies in the Emerging LPR need to be read together. Policy SP22 outlines requirements for Transport Assessments, Transport Statements and Travel Plans, with the aim of encouraging sustainable travel and improving travel choice. Transport modelling will form an important part of the evidence base and applications will need to mitigate any impact on local transport networks and the strategic road network, as outlined in policy SP22.</p> <p>Comments specific to the North East Thatcham proposal are covered in the responses on SP17.</p> <p>Regarding the description of Thatcham as a focus for new housing and improved provision of services and facilities, the development of an urban extension to the north east will help boost economic activity in the town and provide opportunities for both existing and new businesses.</p> <p>The NPPF is clear that NDPs should not promote less development than set out in strategic policies of the Local Plan but that development can come forward via Neighbourhood Plan allocations without needing to be allocated in the Local Plan. Neighbourhood Plans have to be in general conformity with the Local Plan and, alongside the LPR, will form part of the development plan. Appendix 8 of the LPR will also make clear how the LPR policies will be applied in the context of NDPs.</p> <p>The purpose of the planning system is to contribute to the achievement of sustainable development. Broadly this can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs. There are three overarching objectives economic, social and environmental.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>"environmental assets will continue to be protected and enhance to establish a distinctive sense of place that nurtures human health and wellbeing."</li> </ul> <p>The proposed development of NE Thatcham will result in a loss of accessible countryside to the neighbouring urban areas of Thatcham, removes the green boundary to the existing well establishment settlement boundary, and has significant ecology and biodiversity implications. This reduced access to countryside is detrimental to well-being, and therefore the proposed development is in conflict with this policy.</p> <p>It is essential that the policy assesses the needs of existing residents, their health and well-being, and that this is reflected in the policy. The policy will need to be amended to reflect the inconsistency with selection of NE Thatcham with this statement.</p> <ul style="list-style-type: none"> <li>"Thatcham will be a focus for regeneration, for new housing and for improved provision of services and facilities."</li> </ul> <p>There is no supporting text for this statement, and therefore it is not possible to understand the meaning of the word 'regeneration' in this statement. The same words have been used from the previous DPD that dates to 2008 and referred to the town centre. However, since the 2008 DPD there has been increasing encroachment of residential development around the town centre, and the recent development by McCarthy &amp; Stone reduces space for the town-centre to expand.</p> <p>The Draft Local Plan was published for consultation with a statement that the IDP would be published in week beginning 14th December. The lack of any supporting text, or the publication of the IDP means that there is no evidence to support this statement.</p> <p>We believe that statements that define policies should be backed up with evidence. We find no reference to substantiate this statement in either this policy (SP 1) or policy (SP 17). It is important that supporting text, or evidence, is provided that explains this specific text.</p> <ul style="list-style-type: none"> <li>"urban extension to the north east of the town will provide a new residential neighbourhood with supporting facilities and green infrastructure."</li> </ul> <p>We note that the existing public right-of-way access serves as important access to the existing countryside. Over 90% of residents that have</p>	<p>Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>The SA will be updated to reflect any recent legal and policy requirements and the Infrastructure Delivery Plan will be published with the Reg.19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>contacted our Town Councillors value the protection of the existing rural countryside, and that the overwhelming majority are not in favour of development.</p> <p>It is important that the policy recognises the loss of green space to existing residents.</p> <ul style="list-style-type: none"> <li>• "New allocations for housing for Cold Ash will be made through an NDP."</li> </ul> <p>We are unclear as to the priority of an NDP. It is stated elsewhere that "Neighbourhood plans should not promote less development than set out in the Local Plan" yet under this policy the Cold Ash NDP appears to take precedent.</p> <p>It appears to be inconsistent that NDP that are not yet published are being given priority over a Local Plan. The policy should define the legal status of NDP's that are not yet published.</p> <ul style="list-style-type: none"> <li>• "Newbury and Thatcham will remain the focus for business development, with Newbury the main focus for office development."</li> </ul> <p>This statement reinforces the low availability of office space in Thatcham, and that future economic growth and inward investment is targeted for Newbury. This is inconsistent with statements elsewhere regards managing traffic demand, Thatcham re-generation, and delivering inward investment in Thatcham.</p> <ul style="list-style-type: none"> <li>• "Tilehurst and Burghfield will be made through NDPs. ... Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs."</li> </ul> <p>As per previous comment, we are unclear as to the priority and legal status of undefined NDP, and whether these NDP's are valid to the period of 2026, or include the period between 2026-2037.</p> <p><b>Section 4.17</b></p> <ul style="list-style-type: none"> <li>• "Principles which underlie spatial strategy stem from overriding objective of enabling sustainable development."</li> </ul> <p>It is unclear as to what exactly is the definition of sustainable in this context. We note that NE Thatcham site is only poorly related to the target economic and employment growth centres.</p> <p>We provide further comments on the Sustainability Assessment in our response to policy SP 17.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Section 4.18</b></p> <ul style="list-style-type: none"> <li>".. protecting and enhancing the environmental assets of the District. The existing urban areas are regarded as the most suitable locations"</li> </ul> <p>The NE Thatcham site is classed as countryside, as described in the Council's position to the Secretary of State (2016, Siege Cross). This creates a conflict between the selection of the site and the policy. It is necessary for the plan to address this conflict.</p> <p><b>Section 4.19</b></p> <ul style="list-style-type: none"> <li>The allocation of sites takes account of the evidence from the Housing and Economic Land Availability Assessment (HELAA), Sustainability Appraisal (SA)</li> </ul> <p>We note that the SA recognises the presumption against development in the countryside.</p> <p>We note that the SA is written prior to exiting the EU, and for example refers to EU Directives on building standards (Appendix 3).</p> <p>We also note that the SA recognises that current installed renewable energy capacity is about 15% of the previously designated 2016 target, and that the target has not been updated to reflect West Berkshire Council policy (2019)</p> <p>We also note that the Infrastructure Delivery Plan is part of the SA and that IDP should "deal with existing deficiencies and to cater for a growing and changing population".</p> <p>It is necessary that that the SA is brought up to date with relevant UK legislation to enable cross-referencing of appropriate legislation.</p> <p>It is essential that the SA is updated to reflect the new net-zero carbon policy (2019) of West Berkshire Council and that any new development demonstrates how it can respect net-zero carbon.</p> <p>It is essential that the IDP that has been produced is published for the consultation on the SA to be valid.</p>	
Theale Parish Council (lpr1101)	<p><b>Theale's character</b></p> <p>Theale is a historic village with its own rural identity. Its location entails strong rail and road links, making it an excellent location for businesses. However, this presents a risk to the village's character and makes it vital to</p>	<p>Comments noted.</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment. As the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>keep the two areas separate. The allocated and proposed sites for development listed below bely this.            Allocated employment area off Hoad Way (EMP6) [<i>Detailed representation included at Policy SP 21</i>]            Proposed residential developments at Whitehart Meadow (RSA 16) and the former sewage works (RSA 17) [<i>Detailed representations included at Policy RSA 16 and RSA 17</i>]</p> <p><b>Theale's infrastructure</b>            The proposed developments present a substantial increase in Theale's population. Following the approval of the Lakeside development of over 300 houses—already a large increase—the village needs an adjustment period to recognise deficiencies in the existing infrastructure. The following facilities would need addressing urgently:</p> <ul style="list-style-type: none"> <li>• the medical centre would need to expand</li> <li>• sewage and drainage would need upgrading</li> <li>• the new primary school was built to accommodate the existing number of pupils attending—this would need to expand and</li> <li>• there would need to be a community hub or leisure centre—something which is currently lacking.</li> </ul> <p><b>Conclusion</b>            Taken in their totality, the additional sites for development identified in the draft Local Plan represent an unacceptable increase to the size of Theale. The parish council strongly encourages a period of adjustment following the already approved large-scale developments, otherwise it is concerned how the existing infrastructure will be able to cope.            The parish council strongly encourages a period of adjustment following the already approved large-scale developments, otherwise it is concerned how the existing infrastructure will be able to cope.</p>	<p>Parish Council point out, Theale is a very sustainable location, with excellent transport links and local facilities.</p> <p>Responses to comments on the sites proposed in Theale are included in the responses on SP21, RSA16 and RSA17. The representations and any further work on site assessment will be considered in decisions on taking forward the proposed sites in the next version of the LPR.</p> <p>Key infrastructure schemes will be set out in the Infrastructure Delivery Plan and the Council will work with infrastructure providers and stakeholders to identify requirements and co-ordinate delivery.</p>
Tilehurst Parish Council (lpr1980)	<p>The Tilehurst NDP will not be allocating sites (SP1, SP3). It will instead focus on defining policies to ensure that wherever development happens in the Parish it meets the needs and wishes of the local community, takes due consideration of environmental and ecological impacts and protects green spaces. It will also define infrastructure projects to mitigate the impact and enhance the quality of life for residents.            Section 4.12 should include Tilehurst Station.</p>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
Reading Borough Council (lpr1486)	We support WBDC's continued focus on development within existing settlements and strong protection for the North Wessex Downs AONB. We would welcome further dialogue as detailed below to ensure proper provision of infrastructure, particularly regarding growth at the edge of Reading's boundary within the Eastern Area.	Support for the policy noted.
Vale of White Horse & South Oxfordshire District Councils (lpr1775)  South Oxfordshire District Council (lpr1780)	<p>Vale of White Horse District Council and South Oxfordshire District Council support the logical approach that the draft Plan takes to meeting future growth needs across West Berkshire and we support the underlying principles behind the proposed spatial distribution of development, particularly in the context of the physical constraints to development, with 74% of West Berkshire lying within the North Wessex Downs Area of Outstanding Natural Beauty (AONB).</p> <p>We note that Policy SP1 (Spatial Strategy) proposes '<i>appropriate and sustainable growth</i>' in the AONB that conserves and enhances its special landscape qualities, as set out in Policy SP2. We also note that Policy SP15 (Sites Allocated for Residential Development in the North Wessex Downs AONB) identifies six large housing sites (total of 350 dwellings) and five small/medium sites (total of 50 dwellings), with sites to accommodate a further 20, 55 and 25 dwellings identified within the respective Neighbourhood Plans for Hermitage, Hungerford and Lambourn. We see that there are existing allocations in the AONB at the rural service centres and service villages that are still to be delivered and which will largely meet housing need in this rural area. Overall, the level of growth appears commensurate with the environmental constraints and the need for a higher level of landscape protection and enhancement within the AONB and its setting.</p> <p>At Vale of White Horse District Council, we are committed to working collaboratively with our neighbouring authorities. Thank you again for the opportunity to review your consultation document and we hope that a positive working relationship between the two councils continues as you progress with your Local Plan Review to 2037.</p>	Comments noted. No changes to the policy are required in light of this representation. Support for the policy noted.
Wokingham Borough Council (1467)	The Plan takes a place based approach to future growth, by identifying 3 distinct spatial areas: Newbury and Thatcham; North Wessex Downs AONB; and Eastern Area. Development sites and decisions within each spatial area	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>should therefore reflect the different characteristics of the district. Within each of the areas, settlements are defined and placed within the settlement hierarchy based on their function and sustainability.</p> <p>The Newbury and Thatcham urban area continues to be the focus of new housing and employment development. An urban extension south of Newbury is proposed to accommodate 1,500 dwellings (carried forward from the existing development plan and expected to deliver 1,000 dwellings within the plan period) as well as regeneration and intensification within the existing centre for a further 250 dwellings. The expansion of Thatcham to the north east is also proposed, comprising 2,500 dwellings, of which a minimum 1,250 are expected within the plan period.</p> <p>The Eastern area partly adjoins WBC. Here the strategy proposes to maintain the individual identities of the separate settlements and to conserve the high quality landscape and environmental assets. New non-strategic development allocations are proposed at Theale, Woolhampton and Tilehurst in addition to existing commitments at Theale, Calcot and Burghfield Common. AWE Burghfield and AWE Aldermaston are significant constraints, which act to restrict development opportunities.</p> <p>The largest area, the North Wessex Downs Area of Outstanding Natural Beauty (AONB), will accommodate appropriate and sustainable growth that conserves and enhances its special landscape qualities. Only modest (between 15 – 55 dwellings) new development allocation sites are proposed.</p> <p>The spatial strategy proposes to direct development to areas of lower environmental value, optimising the use of previously developed land (PDL), and optimising development densities. Higher development densities (at least 70 dwellings per hectare (dph)) are expected in town centres as part of flatted development, and a district wide minimum of 30 dph applies unless this would harm prevailing character. It is recommended that WBC support WBDC's intention to promote higher density housing at more sustainable settlements.</p> <p>Overall, the spatial strategy approach does not seek to allocate significant levels of development in proximity to WBC, with growth focussed on Newbury and Thatcham as the largest and most sustainable settlements.</p> <p><u>Grazeley Garden Town</u></p> <p>Over a number of years, WBC has worked jointly with WBDC and RBC to</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>investigate the potential for a garden town in the area around Grazeley. This work, which was undertaken with the support of Homes England and the Ministry of Housing, Communities and Local Government considered the potential to deliver 10,000 dwellings within WBC and 5,000 dwellings in WBDC over an extended period. The three local authorities prepared a joint bid to the government's Housing Infrastructure Fund (HIF) for £252m in order to achieve the upfront delivery of key infrastructure. This bid was ultimately unsuccessful.</p> <p>The Plan acknowledges that whilst Grazeley has been identified as a possible location for a new garden settlement, there are uncertainties regarding the proximity to AWE Burghfield, funding for infrastructure and delivery timescales. As a result, the Plan does not identify Grazeley as a development allocation.</p>	
<b>General consultation bodies</b>		
Defence Infrastructure Organisation (lpr2071)	<p>In line with the need to ensure matters of National Security are considered and National Planning Policy Framework (NPPF) it is important that planning authorities and development plans recognise that MOD Establishments are of strategic military importance to the UK. As such operational development on MOD establishments should be supported. In turn, due to the need to maintain operational capabilities, development in proximity of MOD Establishments should be required to demonstrate that they align with the 'agent of change' principle found in paragraph 182 of the NPPFii. As such their development won't lead to the need for mitigation from MOD activities. It is therefore suggested that emerging development plans include a specific policy to address those needs. Such a policy also needs to recognise the brownfield nature of MOD sites and the MOD's commitments to bring forward proposals to reduce its built estate, as part of those proposals sites could be declared as surplus Such policies have been adopted in development plans across the UK.</p> <p>For MOD operational developments the associated community facilities needed are identified through nationally set guidance known as Joint Service Publications (JSPs). In summary, these seek to identify that the daily needs of service personnel are met within MOD establishments. It would not therefore be appropriate for CIL / Developer contributions policies not to take</p>	<p>Comments noted.</p> <p>The Council does not consider that there is a need for an additional policy for MOD establishments. Both facilities are in the AONB and if the site or part of the site is surplus to requirements it may be more appropriate to prepare an SPD.</p> <p>With regard to the protection of the area around the existing facilities, the NPPF already provides a policy, which together with the AONB designation should provide ample protection.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>account of that level of existing provision and “double count” contributions needed. There are specific elements also related to service accommodation as outlined below.</p> <p>Suggested policy on MOD Establishments:  POLICY Military Establishments: New development at military establishments that helps enhance or sustain their operational capability will be supported.</p> <p>Redevelopment, conversion of change of use of redundant MOD sites and buildings at Welford and Hermitage will be supported.</p> <p>Non-military or non-defence related development within or in the areas around a MOD site will not be supported where it would adversely affect military operations or capability, unless it can be demonstrated that there is no longer a defence or military need for the site.</p>	
Defence Infrastructure Organisation (lpr2074)	<p>Neighbourhood Plans:  The case of Daws Hill v Wycombe (C1/2013/0861) established that land should not be included in neighbourhood plans where it would lead to ‘false expectations’ (para 22). Neighbourhood plans should therefore be realistic about what they can control. It should be noted that separate legislation applies to the Crown estate and the operational military nature of MOD sites means that engagement and enacting of Neighbourhood plans to cover the area would not be appropriate. It is therefore suggested that designated Neighbourhood Plan areas should exclude MOD establishments.</p>	<p>Comments noted.</p> <p>The Council does not consider that there is a need to exclude MOD land from Neighbourhood Plan areas.</p>
Heritage Forum (lpr68)	<p>Support for policy.  SP1 “Thatcham will be a focus for regeneration...” Thatcham’s historic identity, as possibly one of the oldest towns in England, has suffered through the loss of much of historic significance in the Broadway area owing to poor development choices in the past. A specific reference should be made to respecting and conserving what remains in future.</p>	<p>Support for the policy noted.</p> <p>The development plan should be read as a whole and other policies cover issues of conservation and the historic environment.</p>
Avison Young for National Grid plc (lpr357)	<p>Following a review of the above Development Plan Document, we have identified that one or more proposed development sites are crossed or in close proximity to National Grid assets.  Details of the sites affecting National Grid assets are provided below.  <b>Electricity Transmission -</b></p>	<p>Comments noted.</p> <p>Details of National Grid assets will be taken into account in any site assessment.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>YG route TWR (040-110): 400Kv Overhead Transmission Line route: Bramley to Didcot 1            400Kv Underground Cable route: Bramley to Didcot 1            400Kv Underground Cable route: Bramley to Didcot 2</p> <p><b>Gas Transmission -</b>            Gas Transmission Pipeline, route: CHALGROVE TO BARTON STACEY            A plan showing details of the site locations and details of National Grid's assets is attached to this letter. Please note that this plan is illustrative only. Please also see information outlining further guidance on development close to National Grid assets.</p> <p>Guidance on development near National Grid assets            National Grid is able to provide advice and guidance to the Council concerning their networks and encourages high quality and well-planned development in the vicinity of its assets.</p> <p><u>Electricity assets</u>            Developers of sites crossed or in close proximity to National Grid assets should be aware that it is National Grid policy to retain existing overhead lines in-situ, though it recognises that there may be exceptional circumstances that would justify the request where, for example, the proposal is of regional or national importance.</p> <p>National Grid's 'Guidelines for Development near pylons and high voltage overhead power lines' promote the successful development of sites crossed by existing overhead lines and the creation of well-designed places. The guidelines demonstrate that a creative design approach can minimise the impact of overhead lines whilst promoting a quality environment. The guidelines can be downloaded here: <a href="https://www.nationalgridet.com/document/130626/download">https://www.nationalgridet.com/document/130626/download</a></p> <p>The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed.</p> <p>National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>National Grid's statutory safety clearances are detailed in their 'Guidelines when working near National Grid Electricity Transmission assets', which can be downloaded here: <a href="http://www.nationalgridet.com/network-and-assets/working-near-our-assets">www.nationalgridet.com/network-and-assets/working-near-our-assets</a></p> <p><u>Gas assets</u></p> <p>High-Pressure Gas Pipelines form an essential part of the national gas transmission system and National Grid's approach is always to seek to leave their existing transmission pipelines in situ. Contact should be made with the Health and Safety Executive (HSE) in respect of sites affected by High-Pressure Gas Pipelines.</p> <p>National Grid have land rights for each asset which prevents the erection of permanent/ temporary buildings, or structures, changes to existing ground levels, storage of materials etc. Additionally, written permission will be required before any works commence within the National Grid's 12.2m building proximity distance, and a deed of consent is required for any crossing of the easement. National Grid's 'Guidelines when working near National Grid Gas assets' can be downloaded.</p>	
West Berkshire Green Party (lpr1824)	Spatial strategy. We believe the plans for Sandford and North-East Thatcham run counter to many of the objectives and the vision outlined in the plan.	Comments noted. The strategy includes making available housing of different types, tenures and affordability. The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries.
<b>Other stakeholders</b>		
David Bridle(lpr19)	<p>The A4 corridor nodes (on the Northern flank) has capacity to reduce the concentration/density of the housing allocation earmarked for Thatcham NE. These smaller centres along the A4 all have good connectivity inc rail connections and more housing sites would enhance the viability of their respective local businesses, services and schools.</p> <p>Reduce the density of housing planned for sites such as Thatcham NE by utilising smaller sites along the A4 corridor and A34 corridor.</p>	Comments noted. Sites promoted for development have been assessed within the HELAA. The HELAA is a technical document that makes a preliminary assessment of the suitability and potential of sites. Sites that were not ruled out in the HELAA were then subject to further site selection work. An

Respondent (with lpr ref)	Response	Council Response
	Assess the viability of existing and planned office sites for housing considering the change in demand for offices as a result of the likely permanent shift to home working.	<p>update to the HELAA and the site selection background paper which will be published alongside the Regulation 19 consultation.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p>
James Benford (lpr46)	<p>I feel further development in Theale will expand an already growing Village. We moved here because of the village feel, peaceful location, access to good schools and local services. Due to expansion up to this point these existing services are significantly stretched. The primary school is full and I cannot get a doctor's appointment for 2 weeks (this was before COVID arrived!)</p> <p>The roads are getting busier and the pressure to build additional houses is reducing the space for my family to enjoy which impacts on our quality of life.</p> <p>Changes sought: There must be other spaces near Newbury that can accommodate the additional need for housing which I do understand.</p>	<p>Comments noted.</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment. Theale is a very sustainable location, with excellent transport links and local facilities. Key infrastructure schemes will be set out in the Infrastructure Delivery Plan and the Council will work with infrastructure providers and stakeholders to identify requirements and co-ordinate delivery.</p>
David Copas (lpr1431)	<p>The spatial strategy SP1 and SP2 and supporting text are important. SP1 states: 'Thatcham will be a focus for regeneration, for new housing and for improved provision of services and facilities. A new urban extension to the north east of the town will provide a new residential neighbourhood with supporting facilities and green infrastructure (Policy SP17). Opportunities will be taken to maintain and enhance the identity of Thatcham separate to that of Newbury and its surrounding rural settlements'.</p> <p>However the red-lined envelope depicted in the Thatcham growth study fails to address the necessary separation and is in direct contradiction to this strategy. The separation of Newbury and 'surrounding rural settlements' from places identified in the development strategy (e.g. Thatcham</p>	<p>Comments noted.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>regeneration) needs to be strengthened in every aspect of Council thinking and policy.</p> <p>Recommendation 2– The LPR must step up and improve its policy, internal and external guidance on separation. The requirement for a strategic gap, to include buffer zones, with recognition of village visions prepared by Parish Councils is essential. It must ensure that sufficient budget is allocated to meaningful strategic separation by developers in their appraisals. Pre-commencement conditions must be set to enforce this.</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the strategic site at North East Thatcham be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p>
Tim Hall (lpr638)	<p>Disagree with Sandford and Thatcham NE proposals</p> <p>Reconsider both Thatcham and Newbury town centres and avoid in every possible way the extension of both towns into greenfield land which would be profligate, contrary to all good sense and impossible to do sustainably or in line with the demands of the Climate Emergency.</p>	<p>Comments noted.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes</p>
Ian Halliday (lpr600) Jane Halliday (lpr601)	<p>The plans for Sandford and NE Thatcham run counter to many of the objectives and the vision outlined in the plan.</p> <p>Changes sought:</p> <ul style="list-style-type: none"> <li>• Identifying more brownfield sites within existing settlements and using the JV with Sovereign Housing and/or the proposed WBC Housing Company to develop these sites with a focus on social housing.</li> <li>• Scaling back the office space development envisaged in the plan as demand is unlikely to grow as envisaged in the plan, as businesses adapt post-Covid.</li> <li>• Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This district would benefit from</li> </ul>	<p>Comments noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within the settlement boundaries of those settlements within the settlement hierarchy, on previously developed land.</p> <p>Policy SP19 sets out the Council's approach to delivering affordable housing. Policies DM15 and DM16 set out the Council's approach to delivering affordable housing in rural areas via exception sites.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</p> <ul style="list-style-type: none"> <li>• There is a need for more rural homes, particularly affordable and social housing that would enable younger families to live and work there. This would enable villages to thrive and not just become nice places for commuters to spend their evenings and weekends.</li> <li>• It seems that the draft plan concentrates on building as many homes as possible in just two areas rather than take a more imaginative, balanced, and district-wide approach.</li> </ul>	<p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p>
David Hill (lpr695)	<p>Whilst the focus for development centres around more urban areas, the infrastructure in these areas is becoming increasingly over-burdened. Traffic congestion for example in and around Newbury and Thatcham is a major barrier to desire of businesses to be based within these towns. Schools and Doctors surgeries are stretched beyond capacity.</p> <p>Meanwhile, in the smaller villages, isolation issues are becoming more prevalent, community infrastructure such as pubs, surgeries and libraries are closing owing to lack of use. The age and social profile of residents is disproportionately old and wealthy. Social cleansing of villages is a severe detriment to the communities within them. Exacerbated by increasing house prices and a shortage of affordable (lower case "a") housing.</p> <p>The Spatial strategy should seek to provide for the displaced local citizens who struggle to work or afford to live in these rural areas. Forced to move into two due to rising house prices and closure of facilities owing to lack of use.</p> <p>Provision of family homes to rent, offered by responsible rural landlords should be encouraged. Particularly where they can be provided at affordable levels by prior arrangement.</p> <p>The centralisation of development leads only to a growing divide in social structure and proportionate development in rural villages should be encouraged.</p>	<p>Comments noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within those settlements within the settlement hierarchy. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>Key infrastructure schemes will be set out in the Infrastructure Delivery Plan and the Council will work with infrastructure providers and stakeholders to identify requirements and co-ordinate delivery.</p> <p>Policy SP19 sets out the Council's approach delivering affordable housing. Policies DM15 and DM16 set out the Council's approach to delivering affordable housing in rural areas via exception sites.</p>
Susan Millington (lpr460)	<p>I believe the plans for Sandleford and NE Thatcham run counter to many of the objectives and the vision outlined in the plan.</p>	<p>Comments noted.</p>

Respondent (with lpr ref)	Response	Council Response
Heather Kearns (lpr514)	<p>The area of Theale is and will be swamped with new developments within the near future especially if planning permission is granted to the proposed Pincents Hill development. Consequently the A.4, M.4 and Theale by-pass will become extremely busy with all types of vehicles. The Local Plan Review, in my opinion, does not ensure that the right development happens in the right place at the right time and will not benefit communities and the economy. The amount of housing proposed and office buildings will have a detrimental effect on Theale and its surroundings. There is already a Business Park off the A.4 roundabout approaching the by-pass so it seems ludicrous to think of putting another one on the opposite side creating more traffic approaching and leaving Theale.</p> <p>Therefore I object very strongly to the idea of totally swamping Theale and its surroundings.</p> <p>Changes sought: To leave the area of Theale alone with no further housing or commercial development.</p>	<p>Comments noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within those settlements within the settlement hierarchy. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>Key infrastructure schemes will be set out in the Infrastructure Delivery Plan and the Council will work with infrastructure providers and stakeholders to identify requirements and co-ordinate delivery.</p> <p>Transport modelling will form an important part of the evidence base and applications will need to mitigate any impact on local transport networks and the strategic road network, as outlined in policy SP22.</p> <p>Responses to comments on the sites proposed in Theale are included in the responses on SP21, RSA16 and RSA17. The representations and any further work on site assessment will be considered in decisions on taking forward the proposed sites in the next version of the LPR.</p>
Debby Reynolds (lpr1309 and 2460)	<p><b>Chapter 4 Development strategy – our place based approach</b></p> <p>The spatial strategy SP1 and SP2 and supporting text are important. SP1 states: 'Thatcham will be a focus for regeneration, for new housing and for improved provision of services and facilities. A new urban extension to the north east of the town will provide a new residential neighbourhood with supporting facilities and green infrastructure (Policy SP17). Opportunities will be taken to maintain and enhance the identity of Thatcham separate to that of Newbury and its surrounding rural settlements'.</p> <p>However the red-lined envelope depicted in the Thatcham growth study fails to address the necessary separation and is in direct contradiction to this strategy. The separation of Newbury and 'surrounding rural settlements'</p>	<p>Comments noted.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p>

	<p>from places identified in the development strategy (e.g. Thatcham regeneration) needs to be strengthened in every aspect of Council thinking and policy.</p> <p><b>Recommendation 2– The LPR must step up and improve its policy, internal and external guidance on separation.</b> The requirement for a strategic gap, to include buffer zones, with recognition of village visions prepared by Parish Councils is essential. It must ensure that sufficient budget is allocated to meaningful strategic separation by developers in their appraisals. Pre-commencement conditions must be set to enforce this.</p> <p><b>Recommendation 3 – Complete consultation on the LPR to make the much needed improvements.</b> This should include removal of new allocations on larger sites until after consultation on specific growth studies to ensure the council, residents, developers and other stakeholders have the fairest possible consultation. This must apply to residents impacted by any new proposed SP.</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the strategic site at North East Thatcham be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>The Local Plan Review will be subject to further consultation and public examination, as required by legislation.</p>
Ivor McArdle (lpr544)	<p>The West Berkshire District Council Local Plan clearly represents a significant amount of work and provides a comprehensive response to the key issues of the day, both national/international and local. Few could be in disagreement with its aims however the challenge faced is how to achieve them in a balanced way.</p> <p>The recognition of the value of protecting and enhancing the character of the varying landscapes across the district, and recognising and maintaining the distinctness of individual areas, is extremely positive. Much of West Berkshire is made up of towns, villages and local areas, whose distinctiveness and local character are very important.</p> <p>The main concern around the plan is that the aims have not been met for significant areas of the district, due to a number of constraints; both those placed on West Berkshire District Council and those it has chosen to adopt. This response covers three areas:</p> <ol style="list-style-type: none"> <li>1. The treatment of the North Wessex Downs AONB</li> <li>2. The proposal for c2,500 new dwellings in the north east of Thatcham (THA20) (see lpr546)</li> <li>3. The particular treatment of Cold Ash parish</li> </ol> <p><b>North Wessex Downs AONB</b></p>	<p>Comments noted.</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>The comments regarding the AONB and treatment of Cold Ash parish are noted. The AONB designation applies to an area which constitutes different settlements with different characteristics. However, the AONB designation is the unifying factor and within the whole of the AONB, conservation and enhancement of the natural beauty of the landscape in the AONB is the primary consideration in the assessment of all development proposals.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The rules and regulations around development of an AONB are to be applauded and West Berkshire District Council's embracing of them is important. However, such high values need to be put in context of the overall picture of West Berkshire. As highlighted in the report, 74% of West Berkshire is covered by the North Wessex Downs AONB. Embracing AONB regulations to their fullest means West Berkshire District Council is accepting of the increased impact of development in the non-AONB areas of the district, which is further exacerbated when taking into account the wider restrictions relating to AWE and flood zones.</p> <p>So, rigorous application of AONB rules is only feasible if it is balanced with allowance in the housing targets set by central government. In the situation where this isn't the case, it places an undue burden on the non-AONB areas, in terms of the amount of development they are expected to absorb. This in turn would result in a polarisation of the district into heavily urbanised areas, with little green space, and significant swathes of rural land, with little development. This polarisation cannot be good for the district, as it is likely to result in a higher incidence of mental health issues among the population that is forced into living in very urbanised areas, which will be at odds with those who are fortunate enough to live in the rural areas. Indeed, the proposals defend the aims in relation to Landscape Character and Distinctiveness of locations in relations to AONB, but at the expense of all of the other areas within the district.</p> <p>What the district needs is a more balanced approach to development, with more green space retained in urban areas, more sensitive and landscape appropriate development in the rural areas and a gentle flow from urban to rural environments, thus providing a natural continuum.</p> <p>The stark difference proposed, between the treatment of AONB and urban areas, is likely to lead to an us and them mentality, which cannot be helpful for the district as a whole.</p> <p><b>The treatment of Cold Ash Parish</b></p> <p>It has been accepted by West Berkshire District Council that Cold Ash Parish is in a quite unique position. This can be explained by the fact that it has been placed within the same spatial area as Thatcham and Newbury and has also been recognised as a service village. This leaves it in a confusing position, as the development expectations of each are quite</p>	<p>The policies of the Local Plan need to be read together in the consideration of any development proposal. Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of policy SP7 and applies across the whole of the district. The supporting text notes that <i>'New development should begin with an understanding of an area's existing character and context and its design should evolve from West Berkshire's high quality and diverse landscape character and rich built and cultural heritage. Development should complement and enhance existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed.'</i></p>

Respondent (with lpr ref)	Response	Council Response
	<p>different; the Thatcham and Newbury spatial area has higher development density expectations, whilst service villages are "smaller rural settlements" that "may offer some limited and small-scale development potential, appropriate to the character and function of the village, in order to meet local needs". Also, part of the parish in in the North Wessex Downs AONB. The plan doesn't balance this dichotomy, as the allocated number of houses is significantly higher than similar service villages, even though there are already c100 dwellings due to be built in response to the DPD.</p> <p>Also, Cold Ash village is strategically placed between Thatcham and the strategic road network of the M4 and A34. This results in a high volume of transit traffic through the parish, which would be greatly exacerbated by the building of c2,500 houses to the south east of the parish. It needs to be borne in mind that the parishes road network is predominantly made up of adopted tracks, many without pedestrian paths.</p> <p>It's clear that the landscape, character and distinctiveness of Cold Ash is very important to its parishioners. It also provides a valuable flow between the urban areas of Thatcham and Newbury, to the south, and the rural landscape and AONB, to the north, due to its balanced blend of sensitive housing and semi-rural road network, and an appropriate amount of green space. As such, any overdevelopment or urbanisation, with excessive housing and an upgraded road network, is likely to destroy the nature, character and distinctiveness of the area, which will be a loss not only for the parishioners of Cold Ash, but also to those of the surrounding areas, both urban and rural.</p> <p><b>Summary</b></p> <p>So, in summary, whilst the aims of protecting the AONB are laudable, the price the district would need to pay to achieve them are too great. Central government has indicated that it's attitudes towards AONB and the way land is used is changing. One such proposed change, to the way grants are allocated to landowners, shows the desire to provide greater access to the countryside for the general population. Surely this can be best provided for if urban and rural areas co-reside rather than being in discrete areas. It is fully accepted that this would need to be landscape led and protect the character and identities of the various areas, but surely this is achievable with the right focus and approach.</p>	

Respondent (with lpr ref)	Response	Council Response
	A review of the approach to AONB would enable a more pragmatic and sustainable solution to be found, enabling appropriate development in the AONB whilst avoiding the ghettoization of our urban areas and protecting the natural buffers and flow between the two.	
Sarah Mulvany (lpr736)	Over the past 12 years we have seen so many properties being built which has already seriously increased the size of the village. The queues of traffic on the A4 are bad enough during rush hour.	Comments noted.  Transport modelling will form an important part of the evidence base and applications will need to mitigate any impact on local transport networks and the strategic road network, as outlined in policy SP22.
Peter Norman (lpr997)	<p>SP1 The plan carries over from the Core Strategy 2006 to 2026 the strategic site allocation of Sandford in spite of the site having not delivered 1 of the 1,000 homes that were supposed to be delivered up to 2026. It is now highly unlikely that it will deliver any of the housing promised in that time period and it now is planned to deliver only 1,350 homes on the footprint agreed in CS3 for 2,000 homes.</p> <p>It is inconceivable that as we now enter a new period that that decision to allocate Sandford as a strategic site is not reviewed against other sites that have now come forward. Much of the development of Sandford would be in direct breach of the objectives laid out in this document, and if proper protection of protected habitats are taken into account it will not be able to deliver anything like the 1,500 homes, even with the expanded footprint now being proposed in this document. Failure to achieve this target would undermine the fabric of the whole plan and will lead to unwanted developments that Sandford was supposed to avoid but failed as we saw with North Newbury.</p> <p>Why is the Council opening itself up to making the same mistake all over again rather than conducting an independent review from the extensive knowledge that it now has of the site, to see if the housing allocation for Sandford is realistic and how it now compares with other sites that could come forward? As such SP16 should be reviewed in light of current strategic objectives as opposed to relying on a study that is now 11 years out of date.</p>	<p>Comments noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within those settlements within the settlement hierarchy. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>SP17 with 2,500 homes for Thatcham is curious. In the review of strategic sites conducted in 2010 where Sandleford was selected over North Newbury and Thatcham (Siege Cross) the latter was dismissed as it was believed that Thatcham was over developed and needed time for the infrastructure to catch up. Clearly nothing has been done to improve Thatcham's infrastructure in the intervening period so what's changed that makes developing 2,500 homes in Thatcham a sensible option? The whole housing allocation across the district needs to be reviewed especially in the light of Covid-19 which has changed peoples work patterns and requirements. The whole of SP1 needs to be reviewed in light of changes to work patterns wrought by Covid19 to see whether spatial patterns and mix for offices and retail are still relevant. Also with the development of LRIE what land is the Council allocating for non-office based work and employment (such as engineering firms) that provide vital work opportunities for apprentices and non-academic students and where in the LPR is there recognition of the current under-provision of community sports sites?</p> <p>Given the change in work patterns and a greater emphasis of people working from home the whole strategy of meeting the area's housing needs through large urban extensions should be reviewed as more people could be looking to rural living with community hubs and workspaces bringing renewed life to villages and the opportunities to open facilities that have been closed due the migration to urban centres (eg pubs and shops).</p> <p>Changes sought:  SP16 should be subject to an independent assessment as to how many houses Sandleford could deliver while keeping to the LPR other objectives of sustainable development under 3.3 in particular protecting and enhancing biodiversity of its ancient woodlands and other protected habitats as well as minimising waste and pollution to our air and water its rivers and aquifers and to reduce the district's carbon footprint. This then needs to be compared to other potential sites in the district to review where best to allocate a strategic site for housing (if at all). This would also apply to SP17 as otherwise the Council will be repeating the mistakes of having all its houses</p>	

Respondent (with lpr ref)	Response	Council Response
	in one or two baskets delays to which will lead to unplanned and unwanted development without the requisite infrastructure.	
Ian Parsons (lpr826)	<p>Support policy.</p> <p>The priority given to brownfield sites is to be welcomed, and fully supported. Also, the increase in home working, with the consequent reduction in the need for office space, means that office and retail space in Newbury, Thatcham and elsewhere has become available for housing. If the council can utilise this opportunity the revitalisation of the high street may become a realistic probability.</p>	<p>Support for the policy noted.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain's exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p>
Paula Saunderson (lpr952)	Object to policy	Comment noted.
Graham Storey (lpr564)	<p>Object to policy.</p> <p>Housing delivery in the current draft plan is too reliant on large edge-of-town developments, namely Sandleford and NE Thatcham. I believe these are not sustainable developments in any meaningful sense of the word, and are incompatible with the council's environment strategy and climate change targets.</p> <p>As estates that would be dominated by car use, they contravene the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in the Vision section I believe the plans for Sandleford and NE Thatcham run counter to many of the objectives and the vision outlined in the plan.</p> <p>Changes sought:</p> <p>Scale back these development in favour of more small scale developments, brownfield sites and the redevelopment of the Colthrop estate into a mixed housing and employment area. Create a new employment zone around J13 of the M4 and support the relocation of the Thatcham distribution centres to this location</p>	<p>Comments noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within those settlements within the settlement hierarchy. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The need for these two new estates could be mitigated or eliminated by:</p> <ol style="list-style-type: none"> <li>1) Identifying more brownfield sites within existing settlements and using the JV with Sovereign Housing and/or the proposed WBC Housing Company to develop these sites with a focus on social housing.</li> <li>2) Scaling back the office space development envisaged in the plan as demand is unlikely to grow as envisaged in the plan, as businesses adapt post-Covid.</li> <li>3) Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This would involve relocating the existing distribution centres to a more appropriate location closer to the motorway junctions. This district would benefit from being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</li> <li>4) There is a need for more rural homes, particularly affordable and social housing (rather than “executive homes”) that would enable younger families to live and work there. This would enable villages to thrive and not just become nice places for commuters to spend their evenings and weekends. In addition the windfall allowance of 140 dwellings a year in the plan is less than the historical volume. Making assumptions in line with recent years would further reduce the need for new edge-of-town development.</li> </ol> <p>Overall, there is a perception that the draft plan concentrates on building as many homes as possible in just two areas rather than take a more imaginative, balanced and district-wide approach. The plan also has an unconvincing approach to affordable housing (see comments against SP19 below).</p>	<p>planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p>
Nataliya Topliss (lpr793)	<p>West Berkshire council stated in their previous Plans that Thatcham will be a focus for regeneration. This is never true. Thatcham has not had any regeneration for the last 20 years. The only thing Thatcham has had is numerous developments of the residential housing. Thatcham got thousands of new homes and zero regeneration and no infrastructure investments. Changes sought: West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then,</p>	<p>Comments noted.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p>

Respondent (with lpr ref)	Response	Council Response
	there has been no such regeneration so the Council's conclusions of 2012 must still stand.	
Councillor Tony Vickers (lpr526)	<p>Support policy. We support the overall Spatial Strategy apart from having two caveats.</p> <p>1. If Grazeley proves to not be ruled out, it would be preferred to NE Thatcham and would be a departure from the strategy that puts most new housing in the Newbury &amp; Thatcham area. It would also sit outside the settlement hierarchy policy as an entirely new settlement - eventually on a level with Thatcham.</p> <p>2. The Strategy does not recognise that it may be necessary to allow some high density housing within Designated Employment Areas that need modernisation and redevelopment, in order to make such redevelopment economically viable. This is already universally known in the case of LRIE, so why is it not stated in the Plan? Taking NPPF paragraphs 120 &amp; 121 together, we believe that in order for some older DEAs to achieve the necessary redevelopment for anticipated appropriate future employment uses, a significant amount of housing – including market housing – will need to be included. The contribution of this housing to the total requirement for the District should be explicitly recognised in the spatial strategy and not left as ‘windfall’. There is otherwise “no reasonable prospect of an application coming forward for the use allocated in the plan” (para 120), so we should “support proposals to use employment land for homes in areas of high housing demand” like Newbury (para 121a) where it will also enable increased employment on such sites. Changes sought: Further to the point made in Section 2 about Thatcham’s poor road links: In 4.9, add to end of first sentence: “... apart from lacking a route linking the commercial area east of Thatcham at Colthrop across the main railway to the A339 and A34/M4/M3 avoiding the A4 and A339 through Newbury. This issue needs addressing as part of any new strategic developments in the area (SP16 &amp; SP17).” In the penultimate paragraph of “Newbury and Thatcham” in SP 1 the second sentence should be amended thus: “Designated Employment Areas will play a vital role in meeting the existing and future economic needs of the District <b>but it may be necessary to allow</b></p>	<p>Support for the policy noted.</p> <p>The spatial strategy complies with the NPPF and seeks to focus development within those settlements within the settlement hierarchy. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>Robust up-to-date evidence sets out the continuing need for housing and economic (employment land) development, including following Britain’s exit from the European Union and the Covid-19 pandemic. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews.</p> <p>However, need and demand for employment land in West Berkshire remains strong. Designated Employment Areas (DEAs) are considered to represent coherent areas of employment land containing established concentrations of office, industrial and warehousing development. These areas allow business uses to locate together, complement and support one another, with relatively little disturbance to surrounding residential areas. It is therefore important to ensure the role and function of each DEA is maintained and strengthened to enhance economic growth so as to prevent their economic function being diluted and potentially compromised through amenity concerns or a lack of competitiveness.</p>

Respondent (with lpr ref)	Response	Council Response
	<b>some high density housing within them in order to facilitate their renewal, for economic viability reasons.”</b>	The Council will be undertaking a review of its Local Transport Plan following the Local Plan Review and some of the issues raised are more appropriately considered as part of that process. Other detailed comments will be dealt with as part of the Council’s response to comments made under policy SP17.
Toby and Gail Woodhouse (lpr2019)	Object to policy.  ( <i>Extracted from whole rep to SP17 Thatcham</i> ) The proposed development abuts Bucklebury Common and the North Wessex Downs AONB. Residents of the proposed new developments will be drawn to the Common and will significantly increase the pressures already evident on the delicate eco systems and existing wildlife. Parking on and around the Common is already exceeding capacity, with verges being used during peak periods. Whilst the development is relatively close, not all residents will walk/cycle to the Common they are more likely to drive. The open spaces on the proposed developments will not be big enough or as appealing as the Common land within the AONB.	Comments noted.  Specific comments in relation to North East Thatcham are dealt with as part of the Council’s response to that policy.
<b>Landowners, site promoters and developers</b>		
Armstrong Rigg Planning for Manor Oak Homes Ltd. (lpr2418)	Object to policy. <i>Part of full representation promoting development of Land at Fairview, Greenways, Lambourn.</i> The Spatial Strategy proposed by Policy SP 1 continues the approach of the Core Strategy in defining three spatial areas: Newbury and Thatcham; Eastern Area; and North Wessex Downs AONB. Within this Spatial Strategy, Lambourn is within the AONB which covers 74% of the District’s area. Manor Oak Homes do not object in principle to dividing the District into specific spatial areas, but to be effective in meeting the District’s needs, these areas must be based on a thorough assessment of social, environmental and economic factors and also recognise key differences within the spatial areas. Our client therefore objects to the current categorisation of the North Wessex Downs AONB on the grounds that it fails to consider important spatial differences within this spatial area.	Comments noted.  The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.  The comments regarding the North Wessex Downs AONB and Lambourn are noted. The AONB designation applies to an area which constitutes different settlements with different characteristics However, the AONB designation is

Respondent (with lpr ref)	Response	Council Response
	<p>The North Wessex Downs AONB spatial area has clearly been identified on the basis of a single environmental characteristic – i.e. the AONB designation. This approach differs from that employed in the identification of the other spatial areas which are not simply characterised by the fact they are located outside of the AONB, but rather a nuanced approach is taken which recognises other spatial influences affecting Newbury and Thatcham and the Eastern Area (e.g. the functional connectedness of Newbury and Thatcham with their rural hinterland and the proximity of Reading and the location of important AWE sites in the Eastern Area). There is a distinct failure to apply the same nuanced approach to areas within the AONB, despite clear differences within what is a vast area that makes up 74% of the District.</p> <p>To ensure that the Local Plan respects the importance of the AONB designation, while positively planning for the specific social and economic needs within this area, we consider that much more emphasis is needed on identifying the specific needs, opportunities and constraints to development in different parts of the AONB. This could either be achieved by redefining the spatial areas in a way that honestly assesses the spatial influences affecting the whole District, or more simply by conducting this exercise for specific locations within the AONB.</p> <p>For example, the spatial context of Lambourn in the west of the AONB spatial area is quite different from that of Pangbourne in the east or the large villages of Hermitage and Kintbury that are located closer to Newbury. Lambourn is c.18 km from the nearest large town (either Swindon or Newbury), it provides a key role as a service centre to its wider rural catchment and is a nationally significant centre for racehorse breeding and training. By comparison, Pangbourne is located barely 2km from the built up area of Reading and has a station on the Great Western Railway making it part of the London commuter belt, while Hermitage and Kintbury are located 6km north and 8km west of Newbury respectively and rely much more heavily on it for key services. Lambourn is also more economically independent than those parts of the AONB (including Pangbourne) that rely more heavily on larger order settlements for employment. This can be quickly demonstrated by the following table (<i>in full representation</i>) which provides census data on the proportion of people working within 5km of</p>	<p>the unifying factor and within the whole of the AONB, conservation and enhancement of the natural beauty of the landscape in the AONB is the primary consideration in the assessment of all development proposals.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>where they live for Lambourn, Pangbourne, Hermitage and Kintbury and demonstrates that a significantly higher proportion of residents in Lambourn work locally.</p> <p>The demonstrates that were it not for the AONB designation, these settlements would have little in common with each other and highlights the need to plan for the various needs within the AONB separately.</p> <p>In Lambourn the high proportion of people working locally is a direct result of the importance of the racehorse industry to the local economy and makes the village a uniquely sustainable location. As set out in further detail under our site specific reps below, the racehorse industry also creates a unique set of housing demands that it is critical the LPR accounts for.</p> <p>As set out in further detail under <b>Policy SP 15</b> below, there is also no certainty that allocations for development will be forthcoming through the Lambourn Neighbourhood Plan and it is critical that the Council clarify the intentions of Lambourn Parish Council in this regard so that suitable allocations can be made in the LPR if required.</p> <p>Changes sought:</p> <p>Amend the spatial strategy for the AONB spatial area to provide much more emphasis on identifying the specific needs, opportunities and constraints to development in different parts of the AONB and to remove reference to sites being allocated through Neighbourhood Plans as follows:</p> <p><b>North Wessex Downs AONB</b></p> <p><i>The North Wessex Downs Area of Outstanding Natural Beauty (AONB) will have appropriate and sustainable growth <b>that seeks to meet the unique social and economic needs of different settlements in the area while that conserv<del>ing</del>es and enhanc<del>ing</del>es its special landscape qualities as set out in policy SP2.</b></i></p> <p><b><del>Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.</del></b></p> <p>We also recommend that to support the revisions to this policy, the supporting text should be updated to set provide a summary of the key needs, opportunities and constraints to development in key areas within the AONB. We provide this context for Lambourn below (see <i>full representations</i>).</p>	

Respondent (with lpr ref)	Response	Council Response
Barton Willmore for Copas Farms (lpr196910)	<p>Support policy.</p> <p>Paragraph 68 of the NPPF, states that to promote the development of a good mix of sites local planning authorities should “<i>Identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved.</i>”</p> <p>Paragraph 117 of the NPPF states that “<i>Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or ‘brownfield’ land</i>”.</p> <p>Our client supports draft policy SP1 which identifies optimising the use of previously developed land (PDL) to assist in the delivery of the District’s spatial vision and strategic objectives. With regards to residential sites, this is supported by national policy as indicated by the reference to paragraph 117 above. However, our client is aware that meeting housing and employment needs may not always be possible within the designated settlement areas. In terms of employment, this is accepted at paragraph 84 of the NPPF, which as indicated above, recognises that sites to meet local business needs in rural areas may have to be found adjacent to or beyond existing settlements. Therefore, PDL sites can assist in meeting needs, in particular in rural areas outside of existing settlement boundaries which in turn, can support the provision of small sites within the District, and supports the approach within the NPPF of making as much use as possible of PDL or brownfield land i.e. “a PDL/brownfield land first approach”.</p> <p>Changes sought:</p> <p>We therefore consider the following additional wording (in bold and underlined) should be included to the following paragraph of draft policy SP1:</p> <p><i>In each spatial area opportunities will be taken to make the best use of previously developed land with higher densities of development in locations such as town centres, where the extent and capacity of supporting infrastructure, services and facilities is the greatest. <u>In particular, proposals on previously developed land of less than 10 dwellings or 1,000 sqm of</u></i></p>	<p>Comments noted.</p> <p>Policy DM16 sets out the Council’s approach to delivering housing in rural areas via exception sites.</p>

Respondent (with lpr ref)	Response	Council Response
	<u>floorspace will be supported which will assist towards the overall spatial strategy for the District including the provision of small sites.</u>	
Barton Willmore for Wilson Enterprise Ltd & Hallam land Management Ltd (lpr2411)	<p><b>The Need for a Longer-term, Wider Vision</b></p> <p>Whilst the draft Local Plan is prepared for the administrative area of West Berkshire, in reality the functional economic area and housing market area of the west of Berkshire area is a very different geography (rather around functional economic areas, travel to work areas and socio-economic frameworks). The draft Local Plan must therefore reflect this. In this regard, the draft Local Plan needs to not only comprehend and plan for its own development needs, but it also needs to understand and reflect the future needs, future growth pressures and aspirations of both employment and housing needed to support the wider economic growth of the Thames Valley and that arising from London's unmet needs in a way which affects the area. Furthermore, the future impacts of Heathrow, Crossrail, and the Western Rail Link proposals within the plan period and beyond need to be properly considered and planned for. This approach would then be in line with Paragraph 11 of the NPPF which states that Local Plans should positively seek opportunities to meet the development needs of their area - as a minimum: be sufficiently flexible to adapt to rapid change and meet the needs of any that cannot be met within neighbouring areas.</p> <p>There seems to be an inconsistency between the more inward-looking approach of the draft Local Plan and the more outward-looking West of Berkshire Spatial Planning Framework, and the benefits this provides. For example:</p> <p>Paragraph 3 of the Spatial Planning Framework states, "This focused joint working enables a new way of collaborative working across administrative boundaries, sharing best practice where it has been found, in a way which may become a legacy model for civic governance, service delivery and planning and meeting the needs for community growth in the future. In particular the focus on possible development sites which span administrative boundaries is of key importance to help deliver housing which meets needs across the four authorities..."</p> <p>Paragraph 6 goes on, "The benefit of such a spatial framework is to:</p>	<p>Comments noted.</p> <p>The proposal for a garden town in Grazeley was located in the administrative areas of Wokingham Borough Council and West Berkshire Council with the majority of the site located in the former administrative area. Due to the legislative change which has caused emergency planning requirements around the Atomic Weapons Establishment at Burghfield to be extended, the area around Grazeley is now within this area. As a result, the Defence Nuclear Organisation, part of the Ministry of Defence, objected to the Grazeley garden town proposal within the Wokingham Local Plan and requested its removal and due to the extension of the emergency planning requirements it was also not carried forward through the West Berkshire LPR.</p> <p>The Grazeley proposal would have largely met the housing needs of the wider Reading area and would have only gone a limited way towards meeting West Berkshire's housing needs. Even without the concerns due to the proximity of AWE, the lead in time for this development meant that it was not considered appropriate to include it in the housing supply for the Local Plan Review period.</p> <p>Regarding the housing needs in London, the Greater London Authority has not asked West Berkshire Council to meet any unmet needs.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Identify large scale site opportunities which span administrative boundaries and offer the opportunity to create new and sustainable locations to live and work;</li> <li>• <i>Develop a collaborative model for successful delivery of high quality, infrastructure rich new and expanded communities in the interests of residents;</i></li> <li>• <i>Demonstrate active and real collaborative behaviours with a view to establishing a culture of co-operation in Western Berkshire;</i></li> <li>• <i>Explore opportunities for establishing a collective resource or methods of working which share expertise in community engagement, the creation of new communities, design, funding/lobbying for funding, infrastructure planning and the implementation of environmental change on a large scale;</i></li> <li>• <i>Grasp opportunities for locally planned development sites of a scale which optimise delivery strategically in locations which are less disruptive to the amenities and interests of our existing residents and bring with them additional benefits in terms of substantial, highly sustainable, integrated and 'boundary-less' infrastructure;</i></li> <li>• <i>To ensure that Local Plans are aligned to bring forward suitable high quality, infrastructure rich strategic sites which may also span boundaries”.</i></li> </ul> <p>All of the above bullet points remain important to the effective and sound planning of the area. However, the last is considered to be the most pertinent to this draft Local Plan, where the Council should be planning for the Local Plan period and beyond, recognising that Grazeley Garden Town will take time to come forward. Whilst the West Berkshire landholding, if included within the new settlement, would likely to be in a later phase, such assumptions and longer-term proposals need to be planned for and evidenced now. This would be in accordance with paragraph 22 of the NPPF which states that strategic policies should look ahead to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. Grazeley has the opportunity to not only provide for much needed homes in a sustainable location, but also to provide for a range of facilities and infrastructure that will create a high quality, healthy and sustainable</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>destination for homes, jobs, and the creation of a community for generations to come. We consider that the Council needs to be clearer on Grazeley. We consider there are three options:</p> <p>Option 1: West Berkshire's land is identified at Grazeley as part of new settlement, recognising that this will come in a future plan period. In that case the Council will need to assess the Broad Location for Development in the SA, TA, and other local plan evidence base.</p> <p>Option 2: Consideration being given to Option 1 but want to keep options open given the perceived uncertainty. The Council will still need to assess the Broad Location for Development in the SA, TA, and other local plan evidence base.</p> <p>Option 3: West Berkshire's land does not form part of the new settlement, but the local plan recognises the growth on its boundary and works with Wokingham Borough Council to identify cross-boundary issues and any required mitigation.</p> <p>The local plan should therefore acknowledge this proposal, and any extension within WBDC itself (even if beyond the plan period). It should be considered now as a Broad Location for Development and be taken into account when preparing the local plan evidence base (such as the Sustainability Appraisal and Transport Assessment) to anticipate and respond to long-term requirements and opportunities of the Garden Town.</p> <p><b>Economic Growth</b></p> <p>We note again that no reference has been made to the West of Berkshire Spatial Planning Framework which has shaped the planning of the wider area. In addition, no reference is made to the important work of the Local Economic Partnership (such as the Local Economic Strategy, bids for infrastructure provision, background research on economic trends and growth projections or the emerging Industrial Strategy). This work spans across a number of administrative boundaries and will have a significant bearing upon the future of the West Berkshire area. It is therefore critical that the Local Plan and work of the LEP align and support each other so as to deliver economic growth and align locations and type of housing provision to economic needs.</p> <p><b>Housing Delivery</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>In addition to preparing to fully meet its own needs, West Berkshire must also factor in unmet need from adjacent/nearby areas, including:</p> <p><u>West of Berkshire authorities:</u></p> <p>The Memorandum of Understanding (MoU) between the Berkshire Local Authorities (July 2018) includes West Berkshire within the Western Berkshire Housing Market Area along with Bracknell Forest Borough Council, Reading Borough Council and Wokingham Borough Council. Paragraph 4.2 of the MoU states that the “<i>Berkshire Authorities will use their best endeavours to ensure that the full objectively assessed need for housing...</i>” is met.</p> <p>Under the MoU, the four authorities undertook a great deal of joint work. One of the key pieces of work was the West of Berkshire Spatial Planning Framework, which identified Grazeley on the boundary of Wokingham and West Berkshire as being able to accommodate 15,000 homes, together with supporting infrastructure and facilities.</p> <p>The Reading Local Plan was adopted in November 2019. It reflected the MoU and joint work undertaken with the other Western Berkshire authorities. Paragraph 10.1.12 of the Local Plan states, “In particular, Reading Borough Council is working with its neighbours in examining how growth can take place within the Western Berkshire Housing Market Area, in particular in view of the expectation that Reading’s unmet housing need will be accommodated within the rest of the HMA. <b>The publication of the West of Berkshire Spatial Planning Framework is an important starting point and context for this plan</b>, but this joint work will continue into the future”.</p> <p>(Author’s emphasis).</p> <p>Although the Reading Local Plan sought to accommodate the vast majority of its own housing need, there was unmet need that needed to be allocated elsewhere in the HMA, and a significant requirement for family housing which cannot be provided within Reading’s boundary given its urban nature and tightly drawn boundaries. Further, the latest Government Standard Methodology, published in December 2020, shows Reading’s housing requirement increasing to 876 dwellings per annum, an increase of 35% from the adopted local plan figure. That future requirement is highly unlikely to be met in full within Reading Borough and will create an unmet need that</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>will need to be accommodated under the Duty to Cooperate or as part of future joint working by the neighbouring authorities.</p> <p>It is quite clear from the West of Berkshire Spatial Planning Framework that the study area has significant physical constraints (Green Belt, Area of Outstanding Natural Beauty, Special Areas of Conservation, Special Protection areas, flood areas) yet has very good connections with London and the surrounding area, making it a very desirable place to live, which in turn makes affordability an issue. The identification of a new settlement of Grazeley will ensure an appropriate number of new homes will be developed in the right place to serve existing and future residents.</p> <p>This draft Local Plan and its housing target, however, seem to have stepped back from the HMA work and is 'inward looking'. We suggest that greater clarity is needed to quantify the unmet needs of surrounding boroughs within the Housing Market Area (HMA) with clear direction as to how and where these unmet needs can be appropriately accommodated, because if not at Grazeley, where?</p> <p><u>London</u></p> <p>The London Plan Examination recognised the London Plan's inability to meet its own needs and highlighted its dependence on the wider region to accommodate the unmet need. Even with the latest (likely to be adopted) London Plan housing target of 52,000 dwellings per annum there will be an annual shortfall of 14,000 homes per year. However, using the Government's proposed Standard Methodology this figure could be as high as 60,000 homes per year.</p> <p>Given the importance to the protection of the Metropolitan Green Belt, the vast majority of the unmet need inevitably falls to those areas immediately beyond the Green Belt. This includes the housing market area of the West of Berkshire authorities, which in turn includes West Berkshire. The extent of this need has not been specifically quantified for this area, but that does not result in such needs disappearing. We consider that the emerging West Berkshire Local Plan should take account of any such unmet need and continue the work of the West of Berkshire Strategic Spatial Framework to accommodate a proportion of this need.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The impact of the pandemic on the London housing market should also be considered, as the significant increase in people looking for homes outside the capital will only create more pressure in West Berkshire.</p> <p><u>Heathrow</u></p> <p>Despite recent events, the planned expansion of Heathrow airport is still a long-term ambition and an essential element to the future prosperity of the UK economy. The economic impact of this proposal is well documented. Less well documented is the housing needs that will arise from the economic growth projected.</p> <p>However, despite its importance and very real impact on the wider area, including the West of Berkshire housing market areas, no reference appears to have been given to what this could mean for the emerging Local Plan. In this regard, it is worth highlighting the Interim Inspectors Findings for the Aylesbury Vale Local Plan (August 2018), where the Inspector raised particular concerns that there are many events and planning-related issues occurring outside of the Local Plan area that would have an effect on how the Local Plan area was shaped in the future. In this context, it was the relationship of the Local Plan area to the Oxford-Cambridge growth arc and the planned Heathrow expansion, wherein he stated that “Predictable events should be planned for. Both Heathrow expansion and the Oxford-Cambridge expressway are predictable, known, events. Only the route of the latter is not yet fixed. To be sound, VALP should make contingency plans to accommodate them, not simply abandon its function to a future review of uncertain timescale” (paragraph 7).</p> <p>In a similar manner, it is essential that the West Berkshire Local Plan takes account of predictable and known events such as the London unmet need, planned infrastructure provision (Crossrail etc) and Heathrow expansion. This is why the cross-boundary working of the LPA's in the West of Berkshire (for example to produce the West of Berkshire Spatial Planning Framework) is so important - to identify large scale opportunities meeting the identified future development needs in the area for the local plan and beyond; and plan for any cross-boundary implications. We believe that working collaboratively will help all authorities to meet their identified housing need and that of the wider area.</p> <p><b>Conclusion</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The West Berkshire Local Plan should be positively prepared and have a justified long- term strategy for the development needs of its district or the wider area, in collaboration with its neighbouring authorities.</p> <p>The Local Plan should reflect and continue the joint work undertaken over at least the last five years in the West of Berkshire Spatial Planning Framework and more recently.</p> <p>West Berkshire should be clear in the Local Plan about its approach to Grazeley, but whichever option is pursued, the Council needs to undertake the requisite evidential work to make the Local Plan sound.</p>	
Bluestone Planning for Darcliffe Homes Ltd (lpr2425)	<p>Darcliffe Homes Ltd (hereafter 'Darcliffe') support the principle stated in policy SP1 Spatial Strategy of identifying the locations as set out in the settlement hierarchy in policy SP3 where residential development may take place. This is consistent with the guidance on the general approach to the delivery of new homes, as set out in the NPPF.</p> <p>The densities as set out in the policy are generally supported, although it should also be noted that higher density may also be achievable in certain locations, particularly around the Eastern Area.</p> <p>Careful and sensitive design can deliver higher density, without leading to unacceptable intensification.</p> <p>The policy also refers to the significant commitments throughout the District and as explained below, there are concerns that these either may not come forward during the Plan period and/ or are being built out at a rate which would mean that they are not appropriate for inclusion in the Adopted Plan and therefore alternatives will have to be sought.</p> <p>Policy SP3 sets out the settlement hierarchy and identifies the urban areas which will be a prime focus for housing. It is supported that the Eastern Urban Area will be a focus, although there is a significant imbalance between the numbers allocated to Newbury and Thatcham when compared to Eastern Area, with over 4,000 homes to the former and under 1,000 homes to the latter. This is not considered appropriate given the level of services and facilities provided to the Eastern Area.</p> <p>With regard to the Eastern Area specifically, it is stated that new allocations for Tilehurst and Burghfield will be made through NDPs. This is clearly dependent on the NDP process, which is lengthy and sometimes fraught with difficulties.</p>	<p>Comments noted.</p> <p>The housing requirement figure needs to show the extent to which the identified housing need can be met over the plan period. The HELAA assesses land availability in West Berkshire and there is no evidence to show that the minimum housing need cannot be met in the district.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and</p>

Respondent (with lpr ref)	Response	Council Response
	<p>At the time of writing, Tilehurst for example have not yet published their draft Neighbourhood Plan and therefore it will still be some time before this can be taken to and approved at referendum, and housing can start to be delivered in accordance with such allocations. Although Policy SP14 sets out that the Designated Neighbourhood Area should allocate 175 dwellings, there is no timeframe for when this may come forward or whether this number will be agreed.</p> <p>It should also be noted that in the HELAA the text regarding Tilehurst makes it clear that allocations will be made within the Local Plan Review where not allocated by the NDP.</p> <p><i>“Tilehurst</i>  <i>8.31. Tilehurst Parish is designated as a Neighbourhood Area, and Tilehurst Parish Council are preparing a neighbourhood plan. The Parish Council have expressed an intention to include residential allocation(s) in the neighbourhood plan. The site selection work will therefore be undertaken by the Parish Council.</i>  <i>8.32. In the event that Tilehurst Parish Council choose not to include residential site allocations in the neighbourhood plan, then West Berkshire Council will pick up the site selection work and consider allocations through the LPR.”</i></p> <p>All other locations are to be treated as open countryside (as set out in Policy SP1) and therefore no sites in these areas could be brought forward in accordance with policy. It is therefore considered that housing allocations should also be made either independently or collaboratively in the Review Local Plan or the policy should be more flexibly worded in the urban areas.</p> <p>There is a concern that policies do not go far enough in bringing forward small and medium sized sites, particularly those located on the edge of the identified urban area settlements. As stated above, if such sites are not allocated in the Local Plan Review or in particular, a NDP, because an NDP has either not been developed or has been delayed, there is no mechanism for such sites to be approved in the future. This may be an issue of great concern where some of the larger strategic sites are not deliverable within the Plan period.</p>	<p>smaller sites, including brownfield sites within settlement boundaries.</p> <p>Strategic sites in Newbury and Thatcham are expected to deliver housing in the last 10 years of the plan period and beyond while the smaller allocations and existing permissions will deliver throughout the plan period.</p> <p>A trajectory will be prepared to accompany the Reg.19 consultation and will be reviewed annually and reported in the AMR. Progress will be continually monitored and adjustments made to the trajectory.</p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here. The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston. Sites promoted have been assessed through the HELAA and site selection process.</p> <p>The Tilehurst Neighbourhood Development Plan Steering Group has responded to the consultation and has stated that it does not now intend to allocate sites for development. Further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p> <p>‘Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p>

Respondent (with lpr ref)	Response	Council Response
	<p>It is also unclear from the supply calculations whether or not there has been an undersupply from the Core Strategy 2012 which has been carried forward. Sandleford Park was allocated in the 2012 Core Strategy and has not yet been granted permission. Clarification is sought as to how this has been dealt with and whether further sites should be allocated in this regard.</p> <p>The table in Policy SP13 also sets out that Sandleford Park seeks to accommodate up to 1500 dwellings, whereas the text in paragraph 6.12 states that only 1,000 houses will be delivered by 2037 and the remainder in the following Plan period.</p> <p>This approach is also inconsistent with the encouragement of developers to bring forward small and medium sized sites. The HBF document (2017) 'Reversing the decline of small housebuilders: Reinvigorating entrepreneurialism and building more homes' notes (p.29) that:</p> <p><i>"For understandable political and financial reasons, planning authorities have increasingly sought to allocate very large strategic sites for residential development in order to satisfy its requirement to demonstrate a five-year land supply. Large sites on the edge of settlements can be less likely to spark political controversy as they are slightly removed from existing communities. For the very same reason, however, they may require substantial infrastructure and up-front financing resulting in relatively lower delivery rates in the early years of the site's existence making rapid delivery unrealistic."</i></p> <p>The latest research from Lichfields (February 2020) 'Start to Finish What factors affect the build-out rates of large-scale housing sites? Second edition' discusses the lead times on large sites and the data is not encouraging:</p> <ul style="list-style-type: none"> <li>• Schemes of 500-999 dwellings take on average approximately 5.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 1,000-1,999 dwellings take on average between 6.9 and 7.0 years from validation of the initial outline application to</li> </ul>	<p><b>Newbury and Thatcham</b> ..... <del>New allocations for housing for Cold Ash will be made through a NDP. ....</del></p> <p><b>Eastern Area</b> ..... <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b> ..... <del>Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</del></p>

Respondent (with lpr ref)	Response	Council Response
	<p>delivery of the first house. These do not contribute any completions in the first five years.</p> <ul style="list-style-type: none"> <li>• Schemes of 2,000+ dwellings take on average approximately 8.4 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years. 6.1 years of this are taken up with the planning application process. (see figure 4 of the Lichfields document)</li> </ul> <p>In contrast, smaller sites between 0 and 99 dwellings typically deliver within 3.3 years of the validation of the first application. On this basis it is considered that the following should be taken into consideration:</p> <ul style="list-style-type: none"> <li>• SP16 Sandford Park is allocated for 1,000-1,500 dwellings, taking the above into account, it would take between 6.9 – 7.0 years until the first dwelling is built based on the above assumptions. It should be noted however that the site has been allocated since 2012 and although a number of applications have been submitted, there remains outstanding issues and the site still does not have permission. It is therefore considered that given the length of time taken to date, that the site is unlikely to realistically deliver the numbers proposed.</li> <li>• SP17 North East Thatcham is allocated for 2,500 dwellings, taking the above into account, it would take 8.4 years from validation until the first dwelling is built, based on the above assumptions. There has been no application to date. It is unlikely therefore that any dwelling would be built until approximately 2030 and following this, the average annual build-out rate for a scheme of 2,000+ dwellings is an average of 160 dpa (as set out in the aforementioned Lichfields report). On this basis, with the Plan period up to 2037, this would equate to 1,120 dwellings during the Plan period and not 2,500 as set out. It is unrealistic that on an allocation of this size that dwellings could be brought forward to the market at a faster rate.</li> </ul> <p>The HBF document goes on to advise that (p.29-39):  <i>“Once allocated, LPAs are systematically failing to assess on an ongoing or regular basis, the actual delivery achieved against the targets indicated in its local plan. For instance, by allocating one or several very large sites to</i></p>	

Respondent (with lpr ref)	Response	Council Response
	<p><i>achieve a five-year supply of land, delays progressing one site through planning will have a substantial impact on the ability of the authority to adequately plan for the number of homes required.....</i></p> <p><i>..... To meet demand for housing, we need more sites of all sizes allocated. Indeed, large sites often deliver new homes at astounding rates, particularly in areas where the market is strong, but small sites are consistently efficient in their delivery. For this reason, the allocation of a wider range of sites within local plan allocations would not only help increase plurality in the housebuilding sector, it would also improve the chances of local authorities' meeting ambitious supply trajectory plans.</i></p> <p><i>Achieving this all-round positive outcome need not involve overly prescriptive diktats. A subtle shift in policy emphasis, along with a greater focus on ongoing delivery within a local plan period would help to achieve a positive change in behaviours at a local level.....</i></p> <p>The above is also irrespective of the fact that many of the smaller HSA sites are already near completion and at least some the numbers should have potentially been counted before the Plan period. Therefore, these numbers are unlikely to be taken forward in the Adopted Local Plan.</p> <p>In addition, based on last published WBC housing monitoring report (2019), there was a projected windfall allowance of 362 dwellings for the five years up to 2024. To cover the Local Plan Review period to 2037 would suggest a windfall figure of 1,231 dwellings should be included in the supply and not 1979 as currently stated in Table 2 Housing Supply at March 2020.</p> <p>Therefore, there is real danger that the delivery target will not be met due to a reliance on windfalls. This makes very clear that when combined with a lack of flexibility / unclear non-implementation allowance, that there is a need for more allocation sites to bridge the shortfall, in the order at least 700 units.</p> <p>In summary, there is a clear under provision for new sites and further small to medium sites should be considered with flexibility to allow sites on the edge of the urban areas identified to come forward to ensure that sufficient sites can be delivered within the Plan period.</p> <p>Changes sought:</p> <p>It is considered that policies SP1 and SP3 should be reworded to provide more flexibility.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Other nearby Local Planning Authorities have recognised the issue that can arise where a NDP is not delivered. For example, South Oxfordshire District Council in their Policy H1 of the recently adopted Local Plan (but see also their Core Strategy which also contained a similar policy) set out that:  <i>“Where Neighbourhood Development Plans are not progressed in larger villages and market towns, planning applications will be considered against the housing delivery targets for the towns and larger villages set out in this Plan.”</i></p> <p>A form of words reflecting the above, would ensure that there would be sufficient flexibility to take into account any NDP problems and Policy SP1 should be amended accordingly, with and SP3 and DC1 given clarification in this regard. To reflect this and the potential undersupply of housing, further small to medium sites should be also be added to policies SP13-14, with any update to SP12 as a result. Darcliffe Homes are proposing two such sites within the Eastern Urban Area, which would deliver up to 80 dwellings. The supporting text at paragraph 6.22 would also need to be updated in this regard.</p> <p>The addition of further small to medium sites such as these will require a re-consideration of the capacity of the strategic-scale sites to reflect realistic expectations. Revising the site capacities slightly downward to accommodate a shift of dwelling numbers will not however adversely affect the ability of the promoters to bring the strategic sites forward for development, but will allow a longer period for developing out the entirety of the site, which is likely to run into the following Plan period. Allocating additional small to medium sites will also have a positive effect on the smaller scale and local housebuilding industry, which includes Darcliffe Homes, in providing opportunities that will help to continue to sustain this important re-emerging sector of the housebuilding industry.</p>	
Carter Planning Ltd for R L A Jones (lpr1898)	<p>Whilst much of Policy SP 1 is unobjectionable and can be supported objection is raised to the very last sentence.  “Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through Neighbourhood Development Plans”.</p> <p>That is an abrogation of the function of this Draft Plan. Neighbourhood Plans should not be making housing allocations, that is a function of the Draft Plan,</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the principle of the policy is noted.</p> <p>The NPPF is clear that Neighbourhood Plans should not promote less development than set out in strategic policies</p>

Respondent (with lpr ref)	Response	Council Response
	<p>and indeed some such sites, if suggested, may cut across the policies of the Draft Plan.</p> <p>Indeed if the task of allocating housing sites is left to Neighbourhood Plans, especially in Lambourn, either that Plan may not come forward or, more likely, local residents will not want additional housing in their locality leaving the housing requirement unsatisfied.</p> <p>Changes sought:</p> <p>The reliance on allocations through the Neighbourhood Plan process raises questions as to whether the objectively assessed housing needs will be met within the Plan period increasing pressures on other settlements to meet the unmet need.</p> <p>The Council should allocate all housing sites through this Draft Plan and do not leave the task to Neighbourhood Plans. Amend the last sentence of Policy SP1.</p>	<p>and that development can realistically come forward via Neighbourhood Plan allocations without needing to be allocated in the Local Plan. Further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p> <p>‘Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b> ..... <del>New allocations for housing for Cold Ash will be made through a NDP. ....</del></p> <p><b>Eastern Area</b> .... <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b> .... Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.’</p>
Deloitte for Green Park Reading No.1 LLP (lpr2031)	<p><i>Part of full representation in relation to Green Park, Reading</i> <u>Policy SP1 Spatial Strategy</u> Policy SP1 confirms that the new Eastern Area designation in the Local Plan (which Green Park falls partially within) will continue to be an important area for business development with the retention of Designated Employment Areas and the allocation of an additional site north of Arlington Business Park (located near J12 of the M4). It states: “Employment development to meet the existing and future economic demands for business use will be directed to Designated Employment Areas, to help promote sustainable patterns of development, prioritise the</p>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>use of previously developed land and support the retention of these areas for employment uses”.</p> <p>It is important than Green Park is recognised in the Local Plan as a Designated Employment Area and that the Site is also afforded this protection. This will assist in the protection of an employment area which can meet existing and future economic demands not just for West Berkshire but for Reading and Wokingham Borough Council's too.</p>	
Hallam Land Management (lpr2332)	<p><i>Part of full representation promoting the allocation of Land at Kiln Lane, Mortimer.</i></p> <p>The Spatial Strategy set out in the emerging draft document splits West Berkshire into three distinct areas, with Mortimer being located within the Eastern Area. Within these areas housing is to be allocated to meet both the existing needs and address specific housing requirements within the Strategic Housing Market Area.</p> <p>What is pertinent about the Eastern area, and Mortimer in particular, is its proximity to Reading, with Mortimer station providing a direct link into the Reading conurbation. In this context the following must be taken into account when determining the level of housing growth in the Eastern Area: -</p> <ol style="list-style-type: none"> <li>1. The Reading Local Plan identified a shortfall in housing delivery that would need to be addressed in a neighbouring Borough. The Council will need to engage with other neighbouring areas to establish the level of unmet housing needs and the extent to which this should be addressed in West Berkshire and in particular in the Eastern Area. This debate is complicated at the current time due the uncertainties over the Grazeley New Settlement. However, what is certain is that this Plan cannot simply turn its back on the Grazeley New Settlement, without identifying compensatory development elsewhere in the Eastern Area.</li> <li>2. The Strategic Improvements associated with Crossrail will inevitably bring migration into West Berkshire placing specific pressure on housing within the Eastern Area.</li> <li>3. Additional housing will be required in the Eastern Area to support the economic growth associated with Reading.</li> </ol>	<p>Comments noted.</p> <p>The local authorities which make up the Western Berkshire Housing Market Area (HMA) have agreed a Statement of Common Ground for the purposes of Local Plan-making. This continues to recognise Reading's unmet need set out in the Reading Local Plan and the principle that the need should be met within the West of Berkshire area. This agreement relates only to Reading's need as calculated by the Berkshire SHMA, not by any alternative calculations of need.</p> <p>As Reading Borough Council set out in their representation a five yearly review is required by 2024 and that will need to consider how to deal with the housing needs generated by the standard methodology.</p> <p>The shortfall of 230 dwellings was anticipated by Reading Borough Council to arise at the later part of their current plan period. Though the principle of meeting any unmet need within the HMA is accepted, the distribution of that unmet need within the HMA has not been agreed and will be subject to further review, through the plan –making process, before the need arises. Nevertheless the Council accepts that some of Reading's unmet need can in theory be met through our proposal to establish a housing requirement range</p>

Respondent (with lpr ref)	Response	Council Response
	<p>These external factors will put further pressure on the need for housing within the Eastern Area and further iterations of this Plan will need to respond to this housing need.</p> <p>Policy SP 1 sets out the Spatial Strategy for the Eastern Area stating: - There is no provision for further growth to Mortimer beyond that made in the current Neighbourhood Development Plan (NDP). The current adopted NDP has an end date of 2026. The emerging Local Plan covers the plan period of 2020-2037.</p> <p>There is therefore a gap of 10 years between the end of the NDP and the continuation of this emerging Local Plan where no housing is to be delivered to Mortimer. There is no sound justification to support this strategy, particularly as Mortimer is the least constrained of all of the key settlements in the Eastern Area and is furthest away from the AONB.</p>	<p>The proposal for a garden town in Grazeley was located in the administrative areas of Wokingham Borough Council and West Berkshire Council with the majority of the site located in the former administrative area. Due to the legislative change which has caused emergency planning requirements around the Atomic Weapons Establishment at Burghfield to be extended, the area around Grazeley is now within this area. As a result, the Defence Nuclear Organisation, part of the Ministry of Defence, objected to the Grazeley garden town proposal within the Wokingham Local Plan and requested its removal and due to the extension of the emergency planning requirements it was also not carried forward through the West Berkshire LPR.</p> <p>The Grazeley proposal would have largely met the housing needs of the wider Reading area and would have only gone a limited way towards meeting West Berkshire's housing needs. Even without the concerns due to the proximity of AWE, the lead in time for this development meant that it was not considered appropriate to include it in the housing supply for the Local Plan Review period.</p> <p>Apart from Reading, none of the other authorities in Berkshire have advised that they have unmet housing needs.</p> <p>The strategy for the LPR is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries.</p> <p>Strategic sites in Newbury and Thatcham are expected to deliver housing in the last 10 years of the plan period and beyond while the smaller allocations and existing permissions will deliver throughout the plan period.</p> <p>A trajectory will be prepared to accompany the Reg.19 consultation and will be reviewed annually and reported in the AMR. Progress will be continually monitored and adjustments made to the trajectory.</p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here. The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston. Sites promoted have been assessed through the HELAA and site selection process. The Tilehurst Neighbourhood Development Plan Steering Group have responded to the consultation and stated that they do not now intend to allocate sites for development. Further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p>

Respondent (with lpr ref)	Response	Council Response
		<p>'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b> ..... New allocations for housing for Cold Ash will be made through a NDP. ....</p> <p><b>Eastern Area</b> .... New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</p> <p><b>North Wessex Downs AONB</b> .... Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</p> <p>The indicative housing requirement for Stratfield Mortimer as set out in the draft emerging LPR was zero. The adopted NDP, which is currently being reviewed, includes an allocation for up to 110 dwellings. The allocated site has outline planning permission, and there is a Reserved Matters application pending determination for the first phase of development (28 dwellings).</p> <p>The Parish of Stratfield Mortimer contains the village of Mortimer which is identified as a Service Village within the settlement hierarchy meaning that it has a limited range of services and has some limited development potential. Given the outstanding dwellings still to deliver, it is considered that there should be not any additional allocations in the plan period. It is however recognised that</p>

Respondent (with lpr ref)	Response	Council Response
		windfall development may come forward over the plan period.
JSA Architects for Colthrop Village Consortium (lpr744)	<p>Object to policy.</p> <p>Agree that higher densities should be adjacent to transport nodes and corridors. The THA1 site at Rainsford Farm and the former Colthrop Paper Mill is placed alongside Thatcham Railway Station. The West Berkshire Council "Pattern Book" approach to housing densities suggest that this site is detached from the urban area but its boundary is contiguous with the Southern edge of Thatcham and only the Kennet and Avon Canal intervenes. The densities for housing on this site should maximise the edge-of-urban-area location close to a railway node which could be developed into an integrated transport hub with bus, pedestrian and cycle opportunities. The sustainability of this location should not be ignored in favour of the proposed North-East-Thatcham allocation. The two options have not had a fair comparison and the Colthrop Village proposals merit further scrutiny in preference to such a large urban extension to the north-east of the town.</p> <p>Reconsider development in proximity to Thatcham Railway Station and look at higher densities in this area.</p>	<p>Comments noted.</p> <p>Efficient use of land is a government priority and will reduce the need to build on greenfield sites. The policy does include flexibility in relation to densities.</p>
Jeremy Lawn for Terence Gallagher (lpr181)	<p>The spatial strategy enshrined in draft policy SP1 (Spatial Strategy) is strongly supported. However the approach outline in this policy is not reflective of the approach to development in relation to settlements as identified in the NPPF.</p> <p>The draft policy contains a key passage:  <i>“There will be a presumption in favour of sustainable development and redevelopment within the settlement boundaries of those settlements identified in Appendix 3 and outlined on the Policies Map. Outside of settlement boundaries land will be treated as open countryside where development will be more restricted, as set out in Policy DC1.”</i></p> <p>Policy DC1 (Development in the Countryside) makes absolutely clear that outside settlement boundaries (even adjacent to sustainable settlements) properties will be treated as being located in the countryside.</p> <p>The combined effect of both policies will be to draw very tight boundaries around existing built parts of settlements. The approach to identifying</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the spatial strategy is noted.</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment.</p> <p>Policy DM16 set outs the Council’s approach to delivering housing in rural areas via exception sites.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>settlement boundaries is set out in Appendix 3 to the emerging Local Plan. It states (p.230) that the boundaries will include:</p> <ul style="list-style-type: none"> <li>• <i>“...The main settlement area. i.e. the area of close knit physical character.....</i></li> <li>• <i>.....Curtilages which are contained, are visually part of the built up area and are separated from the open or wider countryside..”</i></li> </ul> <p>This is in effect indicating that significant parts of settlements will be regarded as being in ‘open countryside’, an approach which is plainly illogical where those parts of the settlements that are currently outside settlement boundaries continue to play an important role in both contributing Council Tax towards the settlements in question, providing support for local services and facilities, and providing dwellings that are generally counted as forming part of the settlements for Office for National Statistics purposes. The NPPF supports development that is sustainable in all three objectives (social, economic and environmental) (para 8). In recognising the role that dwellings in rural settlements play in supporting local services and facilities (the social and economic elements of sustainable development), the NPPF confirms (paragraph 78) that residential development in rural areas: <i>“...should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby.”</i></p> <p>This approach is very much aimed at recognising the value that those existing dwellings towards the edge of settlements such as Streatley and Goring play in terms of helping to achieve sustainable development. However there is no recognition in the policies of the draft Local Plan of the role such dwellings play in supporting their local settlements. This is a significant omission given the important role that these edge of settlement dwellings play in the helping to maintain the viability of the settlements in question.</p>	
Lochailort Newbury ltd (lpr2038)	We support the “town centre first” strategy and the sequential approach within it. We also support the presumption in favour of sustainable	Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.

Respondent (with lpr ref)	Response	Council Response
	<p>development and that the redevelopment of previously-developed land within defined settlement boundaries will be acceptable in principle.</p> <p>Changes sought: To ensure consistency with the above changes to draft Policy RSA1, draft Policy SP1 should be amended to read “Other developments will include redevelopment of previously developed land, including a substantial element of residential use as part of a town centre mixed use development at the Kennet Centre (Policy RSA1).”</p>	<p>The spatial strategy focuses development within the settlement boundaries of those settlements within the settlement hierarchy, on previously developed land.</p>
LRM Planning for Bloor Homes & Sandford Farm (lpr2171)	<p>The Core Strategy’s current spatial strategy is based on a settlement hierarchy that distributes new development in accordance with the role and function of the District’s towns and villages in order to achieve a sustainable pattern of development, as required by national planning policy.</p> <p>Core Strategy Policy ADPP1 identifies the District’s urban areas – Newbury, Thatcham, Eastern Urban Area (Tilehurst, Calcot and Purely on Thames). The existing urban areas were regarded as <i>“the most suitable locations for future development by virtue of their existing access to services and facilities, thereby providing the opportunity to reduce out-commuting and the need to travel”</i> and thus the <i>“focus for the majority of development”</i>.</p> <p>Of these urban areas, Newbury serves as the District’s administrative centre and as the principal focus for new development. Core Strategy Policy ADDP2 intended that over half of the new housing in the District would be provided at Newbury to contribute to its role and function as the largest urban area.</p> <p>In this regard, we note that the Settlement Hierarchy Topic Paper (November 2020) refers to the urban areas as having a wide range of services and opportunities for employment, community and education whilst serving a large catchment area with good levels of accessibility and frequent public transport provided to a large number of destinations.</p> <p>As the Interim Sustainability Appraisal (December 2020) notes, in comparison with Newbury and Thatcham, other spatial areas are more constrained.</p> <p>Accordingly, and whilst the settlement hierarchy was reviewed for other settlements, the urban areas that the Plan identifies are rightly the same as in the Core Strategy.</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>In reviewing the Local Plan, the District Council should take into account changing circumstances affecting the area, or any relevant changes in national policy. Evidently, in terms of spatial planning, the characteristics of the District have not changed and it remains wholly appropriate as a matter of principle for Newbury to continue to be the focus for new development and this would be consistent with national planning policy in the 2019 NPPF. We note from the Interim Sustainability Appraisal that this policy approach scores significantly positive on the objective for delivering housing (1) with other significant positive effects demonstrated for objectives relating to efficiency of land use (7), in supporting a strong, diverse and sustainable economic base (10), improving health, safety and wellbeing (2), and improving accessibility to community infrastructure (3). Similarly, positive effects are assessed for objectives of maximising opportunities for safe and sustainable travel (4), of conserving and enhancing the character and distinctiveness of the natural, built and historic environment (5) and of reducing emissions contributing to climate change (9).</p> <p>Accordingly, we support Policy SP1 where the focus of new development in each of the three spatial areas will follow the District-wide settlement hierarchy.</p> <p>The continued allocation of Sandford Park, also referenced in Policy SP1, is consistent with this established policy approach and we also support this.</p>	
Nexus Planning Ltd for Pangbourne Beaver Properties (lpr1651)	<p>Object to policy.</p> <p>In general terms we agree with the proposed spatial strategy for future development within the District as set out in Policy SP1 It is based on an approach focussing on three broad spatial areas and, within each of those, a strategy of following the District-wide settlement hierarchy that has regard to the function and sustainability of settlements and promote sustainable communities. More specifically, we support a strategy for the North Wessex Downs AONB spatial area that seeks to ensure appropriate and sustainable growth that has regard to its special landscape qualities i.e. recognising that there is a balance to be struck between the need for housing in this area and its special landscape qualities.</p> <p>However, as set out elsewhere in our representations we object to the application of this spatial strategy, most notably in Policy SP15, which fails to allocate any additional housing at Pangbourne despite the fact that it is one</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3. Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints. The primary consideration within the AONB must be the conservation and enhancement of the natural beauty of the landscape. The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>of the most sustainable Rural Service Centres in the District and the fact that development is proposed in equally more constrained locations which are less sustainable based on the Council's own evidence. As a consequence, the Council's own objective in Policy SP1 i.e. to deliver 'appropriate and sustainable growth' in the North Wessex Downs AONB area will not be met. Changes sought:</p> <p>To ensure that Policy SP1 is applied in an appropriate and sustainable way, and to ensure that the emerging Local Plan is internally consistent, Policy SP 15 must be amended to ensure that a site/sites at Pangbourne are identified for housing. For the reasons set out in our representations to Policy SP15, this should include the allocation of 35 – 40 dwellings at Site Ref: PAN8 (Pangbourne Hill).</p>	
Pegasus Group on behalf of Donnington New Homes (lpr1941)	<p>The identification of Newbury as the continued focus for new development is <u>welcomed</u> together with the confirmation that Sandlesford Park is a key part of that focus. The Policy, however, states that Sandlesford Park will be a '<i>new urban extension</i>'. Technically this is an inaccurate reference as Sandlesford Park has been allocated since 2012 through the Core Strategy. A more accurate description of the continued allocation would be a '<i>redefined urban extension that will continue to be the focus of development</i>'.</p>	<p>Comments noted.</p> <p>Amend the policy as follows –  '<i>Newbury will be a focus for housing development. A new An urban extension on greenfield land to the south of Newbury, at Sandlesford Park will provide a new residential neighbourhood.....</i>'</p>
Pegasus Planning Group Ltd for Newbury & Crookham Golf Club (lpr2048)	<p>Support policy.</p> <p>This policy states that the overall approach to development will be based on three spatial areas:</p> <ul style="list-style-type: none"> <li>• Newbury and Thatcham</li> <li>• Eastern Area</li> <li>• North Wessex Downs AONB</li> </ul> <p>Newbury is identified as a focus for housing development. NCGC (Newbury and Crookham Golf Club) is located on the south-eastern edge of Newbury. Therefore, in accordance with policy SP1, it is a suitable and sustainable location for housing development.</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p>
Pegasus Planning Group Ltd for Calcot Park Golf Club (lpr2319)	<p>Support policy.</p> <p>This policy states that the overall approach to development will be based on three spatial areas:</p> <ul style="list-style-type: none"> <li>• Newbury and Thatcham</li> </ul>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Eastern Area</li> <li>• North Wessex Downs AONB</li> </ul> <p>Calcot is within the Eastern Area, which is identified as a focus for housing development. Calcot Park Golf Club (CPGC) is located on the eastern edge of Calcot, within the greater Reading conurbation. Therefore, in accordance with policy SP1, it is a suitable and sustainable location for housing development.</p>	
Planning Potential Ltd for Aldi Stores (lpr2287)	<p>We understand the general aim of Policy SP 1 'Spatial Strategy' and consider that optimising the use of previously developed land will ensure that sustainable development can be delivered. It is also acknowledged that town centres will continue to play an important role for communities and will need to adapt to meet the changing needs of communities, and the implications of Brexit and the Covid-19 pandemic. However, at the same time, the Council should also ensure that it adopts a flexible approach when considering sites outside these areas that comply with retail policy tests and other technical considerations, and provide an improved and accessible retail offer for the local population.</p> <p>It is important to note that retail is an important contributor and critical element to the economy, due to the significant investment achieved through keeping spending local and the job opportunities created. This is in addition to the community benefits of providing accessible, and affordable weekly and top-up food shopping destinations, providing high-quality low priced goods.</p> <p>Introducing an Aldi store to an area reduces the need to travel further afield. Keeping the spending local not only has benefits to the environment through reduced travel, but also retains expenditure in an area, and increases the likelihood of spending taking place in other facilities rather than outside the area. Furthermore, as set out above, a new Aldi store provides approximately 40 new local job opportunities, paying its 'shop floor' staff market leading wages, and has two of the most successful apprentice schemes and graduate programmes in the UK. Apprentices are trained to work in all parts of the business including at store, distribution, logistics and management level, as well as progression through to the Store Management Team. Aldi's on-going graduate scheme secures an annual intake for the</p>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>Area Management Programme. Trainee Area Managers spend a year shadowing an Area Manager before they take on three to four stores of their own to manage. The training covers the entire spectrum of running a retail operation and is a UK wide programme. Aldi also offers a large number of other positions within the stores, which include <b>full</b> and part time jobs, and Aldi devise contracts that fit around people's other existing commitments. In addition, the development of new Aldi stores provide a significant contribution to the construction industry, which again benefits the local economy. A number of contractors and skills are required during the build of a new Aldi store, many of which are sourced from the local area.</p> <p>In light of this, we consider the Local Plan policies in respect of economic development should be amended to better reflect the benefits an Aldi store has to the economy, the high quality nature of retail jobs, and the other investment benefits a new store or improvements to an existing store bring to an area.</p>	
Prosper Infinity Ltd. (lpr176)	<ol style="list-style-type: none"> <li>1. Avoid using greenbelt or undeveloped land where possible.</li> <li>2. Suggesting a redevelopment site in Thatcham (Newbury Leisure Park) that is brownfield i.e. developed upon and entirely hardstanding and demonstrates it is in a sustainable location.</li> </ol>	<p>Comments noted.</p> <p>There is no greenbelt land within West Berkshire.</p> <p>The spatial strategy focuses development within the settlement boundaries of those settlements within the settlement hierarchy, on previously developed land.</p>
Pro Vision for CALA Group Ltd. (lpr2412)	<p><i>In context of two sites: East and West of Salisbury Road, Hungerford.</i></p> <p>The proposed spatial strategy makes policy decisions about how to apportion the development needs across the spatial areas. "Modest", or more accurately, very modest, growth is proposed to be directed to the AONB area.</p> <p>Specifically within Hungerford, the main settlement of the AONB area, what does the evidence base say about local need?</p> <p><b>Affordable housing</b></p> <p>In terms of the published evidence base, noting that the Strategic Housing Market Assessment has not been updated since 2016, a key evidence document for the LPR is the Updated Housing Need Evidence (UHNE)9, which provides information on the need for affordable housing.</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>This report does not appear to drill down to specific settlements, but does give useful information of need by spatial area.</p> <p>The UHNE identifies a need for 101 affordable homes per annum in the AONB spatial area. That equates to 1,515 affordable homes over the plan period.</p> <p>This need is described as “substantial” and “the Council is justified in seeking to maximise the provision of affordable housing on eligible development sites, subject to viability”.</p> <p>Indeed, the report invites the Council to “consider through plan-making process whether higher housing provision would have positive benefits on affordable housing delivery”.</p> <p>Noting the proposed spatial strategy is for 500 homes in total (open market and affordable) across the spatial area, there is no prospect whatsoever of the need being met through this plan. The draft plan is planning to fall well short of meeting the need, especially in the AONB spatial area.</p> <p><b>Need in Hungerford</b></p> <p>There appears to be no published evidence behind the LPR on specific need for Hungerford.</p> <p>In summary therefore, there is likely to be capacity for more development in Hungerford than the proposed housing requirement, a requirement which falls well short of meeting local need. The proposal to constrain the amount of development in the AONB, and Hungerford in particular, is likely to have significant social and economic impacts. A more balanced approach to meeting the three strands of sustainable development is needed.</p> <p><b>Sustainability Appraisal</b></p> <p>The SA appraisal demonstrates that significantly boosting the supply to 692 dpa has the greatest impact on meeting the affordable housing need and is scored ‘significantly positive’.</p> <p>Nonetheless, it is noted that this level of growth may have negative effects on several environmental objectives. Overall, this option is scored ‘neutral’, with the other two options scoring ‘positively’. However, it is noted that the SA appraisal scores options ii and iii the same with regards to economic benefits (i.e. SA Objective 10), but clearly a significant increase in housing delivery more closely supports delivering this SA Objective.</p> <p>The Council should be concerned that limiting the housing supply to deliver</p>	<p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the minimum requirement or with only a 10% buffer will significantly restrict the housing supply and therefore, amongst other issues, will further raise house prices to levels which create cost barriers to local residents and workers. As a result, not adequately addressing the affordability problems and lack of affordable housing across West Berkshire in this plan period could have significant social and economic consequences which do not appear to have been appropriately considered within the SA appraisal. it is considered that the SA, an important part of the evidence base that will require scrutiny at examination stage, currently fails to provide clear and credible reasons for selecting the 520-575 dpa as its preferred approach, and which does not support the Council's 'Vision' for the Local Plan to address affordability as a priority. Accordingly, the current approach within the LPR is unlikely to be justified and the plan would be vulnerable to be found unsound at examination</p>	
Pro Vision for CALA Homes (lpr2363)	<p>Rep made in reference to Land at Waller Drive, Newbury (CA10 HELAA reference), part of wider representation. The site is bisected by the Cold Ash Parish Boundary and within the settlement boundary. The site is previously developed and operating as a mixed use commercial site, including scrap yard and slaughter house.</p> <p>We support Policy SP1 in its clear objective to “optimise the use of previously developed land” and “optimise the density of development to make the best of land whilst conserving and enhancing the distinctive character and identity of the built, historic and natural environment”.</p> <p>This accords with the NPPF, which guides that policies should also support ? ensuring that where there is available and suitable previously developed land (PDL), proposals should optimise the development potential, and that proposals should be refused where they fail to make efficient use of the developable land<sup>5</sup>. This is especially so in local authority areas where there is a high degree of constraint, such as West Berkshire with a very significant proportion designated as an Area of Outstanding Natural Beauty (AONB).</p> <p>As drafted, the policy only emphasises town centres where higher densities are likely to be appropriate. It should be amended to clarify that suitable PDL sites, whether or not they are town centres are also likely to be appropriate for higher density development, albeit the precise density should reflect matters such as accessibility and local context, including neighbouring land</p>	<p>Comments noted.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>uses.</p> <p>The HELAA identifies that site CA10 is “suitable” for residential development. It indicates that the site capacity is around 42 dwellings. We consider that this is likely to be an underestimation of the site’s capacity (at pre-application stage, a scheme of 65 dwellings was discussed), especially noting the NPPF’s clear objective to make efficient use of previously developed land.</p> <p>Development of the site provides opportunity to remove the existing uses (including scrap yard), which are no longer complementary to the predominately residential development that has grown up around it. A high quality residential scheme would improve the local environment and provide a better neighbouring for this predominantly residential neighbourhood.</p> <p>The pre-application advice asserted that development of the site for residential uses, would entail the loss of some employment land. The employment currently generated by the site, however, is very low and it is not actually an employment site, comprising instead of sui generis uses, quite separate from the Turnpike Industrial Estate to the south. As noted above, there would be obvious improvements to amenity through regeneration of the site.</p> <p>Allocation would encourage the site to come forward early in the Plan period, which will help supply in the early years, noting that significant proportions of the strategic allocations (Sandleford Park and North East Thatcham) are not planned to deliver in the plan period.</p> <p>Both of these proposed strategic sites have significant infrastructure requirements, therefore will take some considerable time to go through the planning permission process and deliver homes. We note that strategic development proposals at Sandleford have already been refused twice, since allocation in the Core Strategy.</p> <p>An allocation in the Plan would also accord with the NPPF, which notes that “small and medium sized sites can make an important contribution to meeting the housing requirement of an area”.</p> <p>The NPPF goes onto note this is because smaller sites can be built out relatively quickly, compared to the larger, strategic allocations, such as Sandleford Park and North East Thatcham. While site CA10 is larger than 1 hectare, it still falls more comfortably in this category than a large strategic</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>site and is therefore likely to deliver significantly more quickly than the draft strategic allocations.</p> <p>The evidence base explains that the Council is not intending to allocate non-strategic sites within settlement boundaries as the principle of development is already established. CA10 warrants consideration as a strategic site allocation, given its potential development capacity (which would otherwise be a very significant windfall site).</p> <p>Site CA10 should also therefore be included on the Council's Brownfield Land Register, in line with the NPPF, which states that "Local planning authorities, and other plan-making bodies, should take a positive a proactive role in identifying and helping to bring forward land that may be suitable for meeting development needs".</p>	
Pro Vision for Mr and Mrs Mathew Pittard (lpr1957)	<p><i>Representation promotes the allocation of Land at Lower Way Farm, Thatcham. Full representation is attached as a response to Policy SP13</i></p> <p>Policy SP1 confirms that the focus of development in the District's three spatial areas "will follow the District-wide settlement hierarchy set out in policy SP3 which takes account of the function and sustainability of settlements across the District and promotes sustainable communities." This is an appropriate strategy, focusing new development in the most sustainable parts of the District, as confirmed by the policy's supporting text (paragraph 4.18).</p> <p>Paragraph 4.10 confirms that "The Newbury and Thatcham urban area is the main focus for development in the current Local Plan and will remain the focus in the Local Plan Review." At the time of preparing the current Local Plan, this part of the District was concluded to be the most sustainable spatial area to deliver the majority of new development. In light of this, the case for focusing new development in this location is even stronger now, given the level and range of existing facilities, services and infrastructure in the area, as well as those currently coming forward.</p> <p>Policy SP1 sets out that the spatial strategy "will deliver a range of site sizes for residential development." This is supported and is in line with national policy. Paragraph 67 of the NPPF explains that "planning policies should identify a sufficient supply and mix of sites". Furthermore, paragraph 68 explains that "Small and medium sized sites can make an</p>	<p>Comments noted.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly</i>” and that local planning authorities should “<i>promote the development of a good mix of sites</i>”. To add to this, a mix of large, medium and smaller scale sites enables housing needs in different parts of the District to be met.</p> <p>Policy SP1 introduces the proposed new urban extensions to the south of Newbury at Sandleford Park and to the north east of Thatcham. Large sites such as these – while capable of delivering a large quantum of new housing – are often complicated and take some time to start delivering housing. The importance of small and medium sized sites should therefore not be understated. Our recommendations in this regard as provided later in these representations.</p>	
Ptarmigan Group (lpr2345)	<p>The spatial strategy, outlined in draft Policy SP1, to direct employment development to meet the existing and future economic demands for business use to Designated Employment Areas (DEAs) is supported in principle. DEAs, such as Colthrop Industrial Estate, will play a vital role in meeting the existing and future economic needs of the District. The specific reference to Thatcham remaining one of two towns upon which business development should be focused is also supported in principle.</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p>
Royal & Sun Alliance PLC (lpr2108)	<p><i>Part of full representation on behalf of Royal &amp; Sun Alliance Insurance promoting residential development at Greenham Road Retail Park.</i></p> <p>Policy SP1 sets out the Council’s strategic policy on delivering its spatial strategy for the District. Key to its strategy is an acknowledgment that development will:</p> <ul style="list-style-type: none"> <li>• Direct development to areas of lower environmental value;</li> <li>• Optimise the use of previously developed land; and</li> <li>• Optimise the density of development to make the best use of land whilst conserving and enhancing the distinctive character and identify of the built, historic and natural environment.</li> </ul> <p>We consider this general policy approach to be logical and compliant with national policy, where these principles are reinforced. Policy SP1 goes on to note that the spatial strategy will focus development in locations that correspond with the District’s settlement hierarchy, whereby Newbury and</p>	<p>Comments noted.</p> <p>The spatial strategy focuses development on existing settlements, using the settlement hierarchy, to meet identified needs for housing and employment.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thatcham are given the highest status as Urban Areas. Focusing on Newbury, the Plan states that:  <i>“Newbury will... continue to fulfil its key role as the major administrative centre and major town centre for the District... Newbury will be a focus for housing development”.</i></p> <p>It is imperative that the objectives of Policy SP1 are actually reflected in the Council's site selection strategy and approach to site allocations, which we consider requires immediate attention. We highlight our key concerns below. The Council is proposing a number of housing allocations outside of current settlement boundaries and in its smaller settlements. With this in mind we suggest that the Council must focus on maximising development for residential development on its pool of brownfield sites in its key settlements. This should focus on Newbury given the Council accepts that it represents the District's primary settlement. This approach would better serve the Council's strategic policy objectives under Policy SP1 and accord with national policy, which notes that “substantial weight” must be given to the value of reusing brownfield land (Paragraph 118).</p> <p>It is also vital that the Council gives due weight to the need to protect designated land (including AONB land) which is afforded the highest status of protection by the NPPF. The draft Plan proposes to allocate a number of sites in the North Wessex Downs AONB, on sites in Hungerford and Lambourn for example. Paragraph 171 of the NPPF makes clear that Councils must protect valued landscapes and must instead “allocate land with the least environmental or amenity value”. Paragraph 172 of the NPPF explicitly states that great weight should be given to conserving AONB land and that the scale and extent of development within AONB areas should be limited.</p> <p>AONB land can therefore only be identified for allocation when the scope for developing outside of designated areas has been ruled out. The current approach is not justified because alternative sites have not been duly considered to date.</p> <p>Policy SP1 also outlines the Council's emerging policy on development density. Said policy explains that development should secure at least 70 dwellings per hectare for flatted developments along main transport routes and close to transport nodes. We welcome the Council's acknowledgement</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>that sites in such locations would be appropriate for higher density development than other less sustainable locations in the District. However, the Council must not impose an arbitrary ceiling on development capacity in areas of the District that could sustainably accommodate a greater quantum of development, given the Council's substantial development needs. Our client's site would be a highly suitable location for high density development. It could accommodate substantially more development through a design-led response, rather than through application of a units per hectare policy approach. The potential for impacts on the surrounding area could be dealt with through a sensitive design response without need to stymy development in this location through an overly restrictive policy approach.</p> <p>We also draw the Council's attention to the Government response (dated December 2020) to the local housing need proposals that were presented in the White Paper. This response makes clear that planning authorities must prioritise brownfield and underutilised urban sites and facilitate building at higher densities.</p> <p>We therefore recommend that the Council reviews its assumptions for suitable densities in urban locations, not least given the housing challenges the District faces in light of its environmental constraints.</p>	
Savills for Englefield Estate Office (lpr1524)	<p>The overall proposed spatial strategy set out in draft LPR Policy SP1 generally reflects that of the adopted Core Strategy, with new residential and employment development predominantly focused towards Newbury and Thatcham. Indeed there appears to now be an even greater focus towards Newbury and Thatcham, as a result of the extension of the Detailed Emergency Planning Zone (DEPZ) at Burghfield and the '<i>significant constraints</i>' (paragraph 4.13) in the newly-defined Eastern Area, as well as the continued overarching aim to conserve and enhance the North Wessex Downs Area of Outstanding Natural Beauty (AONB).</p> <p>It is noted that Newbury and Thatcham is the most sustainable location for development in the district, as evidenced in the Settlement Hierarchy Review Topic Paper (November 2020), and that the National Planning Policy Framework (NPPF) (2019) seeks to direct development to the most sustainable locations (paragraph 67). However, it is important that an</p>	<p>Comments noted.</p> <p>The strategy is to focus development on those settlements within the settlement hierarchy. Thatcham sits at the highest level in the settlement hierarchy in West Berkshire with a range of facilities and services and a high level of accessibility. The urban areas are regarded as the prime focus for housing and economic development to meet the identified needs for housing and employment purposes.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers</p>

Respondent (with lpr ref)	Response	Council Response
	<p>appropriate amount of development is also allowed for at other settlements to ensure that housing needs are met across the district and that the vitality of other settlements (e.g. Burghfield Common, Mortimer and Theale) is maintained. Whilst the Eastern Area has constraints, these are subject to change and are not insurmountable (e.g. DEPZ, flood risk etc.), and therefore a positive and proactive approach should be taken to addressing these issues and accommodating sustainable development, in line with NPPF paragraph 119.</p> <p>This is even more important given that large sites at Newbury and Thatcham which were allocated in the Core Strategy and Housing and Site Allocations DPD (including the 2,000 home allocation at Sandleford Park) have been delayed in coming forward. This has contributed to lower levels of housing delivery during the Core Strategy plan period and a shortfall against the Core Strategy requirement, as set out in the Annual Monitoring Report 2019 (January 2021). It is important therefore that sufficient housing is planned for in other sustainable parts of the district such as the Eastern Area.</p> <p>In seeking to accommodate some development in the Eastern Area, draft LPR Policy SP1 states that <i>'New allocations for housing for Tilehurst and Burghfield will be made through NDPs.'</i> However, draft LPR Policy SP14, whilst noting the designated Burghfield Neighbourhood Area, makes no allowance for housing in the Burghfield Neighbourhood Plan. No reason is provided for this omission. However, if this is due to the recent extension of the DEPZ for AWE Burghfield, further clarity is required. It is important to note that the extension of the DEPZ is currently subject to a Judicial Review (the outcome of which is not yet known) and may also be subject to changes of inputs to the ONR's model (as noted at LPR paragraph 4.47). In addition, taking into account the role of Burghfield Common in the district (noted further below), provision is required for some additional housing to be identified through the Burghfield NDP in order to ensure certainty of future housing supply.</p> <p>Draft LPR Policy SP1 also makes no reference to the potential for additional housing supply at Mortimer, one of the largest settlement in the Eastern Area. Notably the village is located just outside the DEPZ (Figure 4) and is therefore less constrained to accommodate development in the Eastern Area. Draft LPR Policy SP14 acknowledges the 110 units allocated in the</p>	<p>of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries.</p> <p>Strategic sites in Newbury and Thatcham are expected to deliver housing in the last 10 years of the plan period and beyond while the smaller allocations and existing permissions will deliver throughout the plan period.</p> <p>A trajectory will be prepared to accompany the Reg.19 consultation and will be reviewed annually and reported in the AMR. Progress will be continually monitored and adjustments made to the trajectory.</p> <p>The Council remains committed to the delivery of Sandleford Park as the most appropriate location in Newbury for significant residential development. The Thatcham Strategic Growth Study has considered viability and further whole plan viability work has been undertaken and will be published with the Regulation 19 consultation. The emerging plan assumes delivery of at least 1,000 units at Sandleford Park and 1,250 at North West Thatcham by 2039. This is not considered unrealistic. Using evidence from Lichfields research report 'Start to Finish' of Feb 2020 average rates for large sites are assumed to be 160 dpa for sites of 2,000 plus and 107 for sites of 1,000 to 1,499. Using these delivery rates would entail first completions on Sandleford Park in 2027/28 and at North East Thatcham by 2028/29 to achieve delivery of the numbers assumed in the housing supply calculation.</p> <p>The Grazeley proposal would have largely met the housing needs of the wider Reading area and would have only gone a limited way towards meeting West Berkshire's housing needs. Even without the concerns due to the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Stratfield Mortimer Neighbourhood Plan, however this only covers the period to 2026 and therefore does not account for the LPR plan period to 2037. Given the sustainable and relatively unconstrained location, the LPR spatial strategy should therefore make additional provision for development at Mortimer.</p> <p>It is welcomed that draft LPR Policy SP1 states that the Eastern Area will <i>'continue to be an important area for business development'</i>. It is important that the LPR therefore allows for a range of economic development to come forward in the area, including development to support the rural economy (as noted further below) in order to support this objective.</p>	<p>proximity of AWE, the lead in time for this development meant that it is not considered appropriate to include it in the housing supply for the Local Plan review period.</p> <p>The Parish of Stratfield Mortimer contains the village of Mortimer which is identified as a Service Village within the settlement hierarchy meaning that it has a limited range of services and has some limited development potential. Given the outstanding dwellings still to deliver, it is considered that there should be not any additional allocations in the plan period. It is however recognised that windfall development may come forward over the plan period.</p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here. The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston. Sites promoted have been assessed through the HELAA and site selection process. The Tilehurst Neighbourhood Development Plan Steering Group have responded to the consultation and stated that they do not now intend to allocate sites for development. Further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows: 'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b></p>

Respondent (with lpr ref)	Response	Council Response
		<p>.....  <del>New allocations for housing for Cold Ash will be made through a NDP. ....</del></p> <p><b>Eastern Area</b>  .....  <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b>  .....  <del>Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</del></p> <p>The Council believes a buffer of approximately 10%, expressed through the use of a range in the housing requirement is sufficient to provide flexibility to meet at least the LHN. The Council has a healthy five year supply of housing sites and the plan will be subject to continuous monitoring and 5 yearly review.</p> <p>The majority of allocated sites have planning permission or applications pending decision. The deliverability has also been assessed through the LPR process. It is not considered necessary to add a 10% non-implementation rate to those few sites that are yet to receive planning permission.</p> <p>The current Local Plan allocations were always intended to deliver towards the end of the plan period, with the strategic allocation at Sandleford Park originally phased for the latter half of the plan period. The HSA DPD was only adopted in 2017 and the vast majority of sites now have planning permission and delivery on those with permission is increasing, broadly in line with expectations.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Similarly for non-allocated sites it is not considered necessary to add a 10% non-implementation rate. There is no evidence to support a 10% rate and there is flexibility already built into the plan.</p> <p>Opportunities for limited development in the smaller villages of the District may arise through the review of settlement boundaries.</p>
Solve Planning for Emily West (lpr142)	<p>Support policy. The policy includes recognition of the importance of sites on the edge of settlements in providing housing sites. We support the identified role of Newbury as one of the two key centres of the Borough.</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p>
Solve Planning for Emily West (lpr1422)	<p>The policy includes specific density ranges for housing developments depending on the proposed location. The inclusion of density ranges is not helpful and the development of a site should be based on an assessment of prevailing character rather than a specific density range.</p> <p>Changes sought: Removal of density ranges and reference instead the role of the prevailing character in establishing an appropriate density.</p>	<p>Comments noted.</p> <p>Efficient use of land is a government priority and will reduce the need to build on greenfield sites. The policy does include the flexibility regarding densities, depending on site specific issues.</p>
Southern Planning Practice Ltd for the Saunders Family (lpr2115)	<p><i>(Part of full representation, in relation to land at Coombe Bottom Farm, Streatley)</i> Paragraph 4.16 of the Local Plan Review Consultation document sets out that the Core Strategy planned for the delivery of up to 2,000 homes over the period 2006 – 2026 in this area. Whilst it is acknowledged that the Inspector required this to be a maximum amount in view of the national landscape designation, it should be acknowledged that the identified housing need has increased and additional development to meet the identified need is still required, especially beyond 2026. As such, over the remaining 11 years of the plan period (up to 2037) the Council should look to small-medium sites such as the land at Coombe Bottom Farm to help meet the</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>identified need. In order to have a robust five year land supply, West Berkshire council must look to all settlement tiers in the hierarchy to deliver homes through a range of small, medium and strategic sites, including those within the North Wessex Downs AONB where a landscape-led approach is adopted. By allocating a range of sites in sustainable settlements, the Council will be able to maintain a stable housing land supply enabling the delivery of homes throughout the plan period to meet the identified local requirements.</p> <p>Policy SP1 sets out that the North Wessex AONB will have appropriate and sustainable growth that conserves and enhances its special landscape qualities as set out in policy SP2. It states that allocations for housing in Hungerford, Lambourn, Compton and Heritage will be made through Neighbourhood Plans. Whilst we support this approach, we believe the policy should be amended to include the provision of new development in other sustainable settlements in the AONB, including Streatley.</p>	<p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>
Southern Planning Practice Ltd for the Saunders Family (lpr1923)	<p>We support the Council's approach to splitting the district into three spatial areas, given the vast differences between need and constraints in each area. It is acknowledged that Newbury will be a focus for housing development, and we encourage this approach. We appreciate Sandleford Park (Policy SP16) is one of the biggest allocations in the Local Plan Review, however we note that the Council have twice now refused planning permission for residential development on the site. It is understood that an appeal has recently been submitted to get an independent view from the Planning Inspectorate on the proposed development.</p> <p>Given, the above, it is considered that the strategic allocation will not deliver the number of homes that it was intended to as per the allocation in the adopted Local Plan. In light of this, there is likely to be a shortfall in West Berkshire's housing land supply, therefore we believe that the Council should be looking to allocate more sustainable sites for residential development to 'bridge' the gap and provide the homes the district needs.</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the spatial strategy is noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p>
Sovereign Housing Association Ltd (lpr2158)	<p>SHA broadly supports the councils Development Strategy policies set out in section 4 of the LPR, focussing development at the Market Town location of Newbury and Thatcham, the Eastern Urban Areas (EUA) of Tilehurst, Calcot, Purley on Thames and the Rural Service Centres. We also strongly</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the spatial strategy is noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>support the Service Villages realising non-strategic development potential. Whilst the authority is heavily constrained by AONB meaning growth at the Market Towns and EUA is the logical focus for development, it is important the plan recognises the needs of its more rural settlements where demand is high and affordability acts as a barrier to home ownership. SHA support the inclusions of the Service Villages as a location for modest growth to address local affordability and ensure there is variety and flexibility in the councils land supply.</p>	<p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p>
Thames Water (lpr2147)	<p>Further to Thames Water's separate statutory undertaker consultation response to the Local Plan Review, this response is made to the consultation by Thames Water as a landowner.</p> <p>The overall proposed spatial strategy set out in draft LPR Policy SP1 generally reflects that of the adopted Core Strategy, with new residential and employment development predominantly focused towards Newbury and Thatcham. Indeed there appears to now be an even greater focus towards Newbury and Thatcham, as a result of the extension of the Detailed Emergency Planning Zone (DEPZ) at Burghfield and the 'significant constraints' (paragraph 4.13) in the newly-defined Eastern Area, as well as the continued overarching aim to conserve and enhance the North Wessex Downs Area of Outstanding Natural Beauty (AONB).</p> <p>It is noted that Newbury and Thatcham is the most sustainable location for development in the district, as evidenced in the Settlement Hierarchy Review Topic Paper (November 2020), and that the National Planning Policy Framework (NPPF) (2019) seeks to direct development to the most sustainable locations (paragraph 67).</p> <p>However, large sites at Newbury and Thatcham that were allocated in the Core Strategy and HSADPD (including the 2,000 home allocation at Sandleford Park) have been delayed in coming forward. This has contributed to lower levels of housing delivery during the Core Strategy plan period and a shortfall against the Core Strategy requirement, as set out in the Annual Monitoring Report 2019 (January 2021). It is important therefore that this shortfall is addressed.</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The KPL land at Speen provides the opportunity to do this and as set out below the site is available and deliverable, without any barriers to its allocation in the LPR.</p>	
<p>Turley Associates for A2 Dominion Housing Group (lpr1495)</p>	<p>A2Dominion broadly agree with the overall strategy for the District set out under Policy SP1.  We note within the policy text '<i>there will be a presumption in favour of sustainable development and redevelopment within the settlement boundaries</i>'.  However A2Dominion consider that the wording of the policy, and a presumption against development outside settlement boundaries has the potential to restrict development from delivered which might help to support the vitality of settlements, address local affordability issues and create vibrant places to live.  Notwithstanding this, we note there is the risk of internal inconsistencies within the draft Local Plan. Policy SP1 makes clear the Council's stance against development outside settlement boundaries, yet Policy DC18 (Specialised Housing) sets out a presumption in favour of specialised housing developments:  <i>"There is a presumption in favour of new housing designed to meet the needs of those with identified support of care needs where:</i>  <i>b) The location is appropriate, in terms of accessibility of facilities, services and public transport"</i>  We note that criterion b of the policy text does not specify that specialised housing developments are required to be located inside adopted settlement boundaries in contrast to the text in Policy SP1. The only location criterion with Policy DC18 is that  <i>"The location is appropriate, in terms of accessibility of facilities, services and public transport"</i>.  A2Dominion consider that the Local Plan should be clarified so that it provides flexibility in order to support the delivery of specialised housing to address the needs of different groups (for example as envisaged through Policy DC18). Considering such a proposal and whether the "location is appropriate, in terms of accessibility of facilities, services and public transport" may imply that a location outside of a settlement meets that definition. In our submission that is an appropriate solution given the lack of</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Broad agreement with the spatial strategy is noted.</p> <p>Policy DM18 sets out the approach to providing specialised housing and criteria for proposals for the development of specialised housing that come forward.</p>

Respondent (with lpr ref)	Response	Council Response
	alternative schemes proposed for such uses within defined boundaries. If the Local Plan does not provide the flexibility for specialised housing schemes to come forward in that way then it is unlikely the identified need of an important (and growing) group of the community will be met.	
Turley for Panattoni (lpr2381)	<p><i>Full representations by Turley on behalf of Panattoni, supporting allocation of land to the north of the A4, Theale for employment development, are attached with extracts below.</i></p> <p>In general Panattoni support the principles laid out by Policy SP 1 and support that the site would become a Designated Employment area.</p>	Comments noted. No changes to the policy are required in light of this representation. Support for the principles of the spatial strategy is noted.
Turley for Pangbourne College (lpr2353)	<p>Pangbourne College generally supports the Council's strategic objective for housing which seeks to ensure that the identified housing needs will be met across the District up to the end of the plan period, but contends that the proposed approach is flawed in respect of the lack of growth directed to Pangbourne and in its failure to properly plan for the needs of the ageing population.</p> <p>Pangbourne is identified within the adopted Development Plan, and in the emerging Local Plan Review as a Rural Service Centre alongside Burghfield Common, Lambourn, Hungerford, Mortimer and Theale, whilst the centre of the village is identified as a District Centre. When interrogated, the Council's settlement hierarchy review, identified Pangbourne as the third highest scoring location behind Hungerford and Theale.</p> <p>Despite this there is no proposed development allocated to Pangbourne and no intention for development to come forward through a Neighbourhood Plan which is identified as the route for housing being delivered in Hungerford, Lambourn, Compton and Hermitage. We have been unable to establish a reason for this, the emerging plan is surprisingly silent on the matter other than a single reference to development opportunities being limited, with no specific justification.</p> <p>This approach is not justified given the services afforded to Pangbourne and the contribution it can make to housing delivery in this part of the District. Pangbourne has seen very limited housing growth in the last 2 plan periods, resulting in a lack of affordable housing in an area that remains unaffordable and where younger people struggle to get onto the property ladder. This</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p> <p>The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston. Sites promoted have been assessed through the HELAA and site selection process. The Tilehurst Neighbourhood Development Plan Steering Group have responded to the consultation and stated that</p>

Respondent (with lpr ref)	Response	Council Response
	<p>should be a consideration in identifying new sites for housing in and around the village.</p> <p>Pangbourne College's land holding stretches to 93ha, although only a small proportion of that supports the built development comprising the College's buildings (teaching, residential and ancillary) and the Falkland Islands Memorial Chapel.</p> <p>The College, whilst very successful, has an ageing property portfolio and there is a pressing short, medium and long term need for replacement buildings on the site to meet current and future educational needs. The College makes a substantial economic contribution to the local area, both in relation to jobs and in inward investment and spend from families and staff using the local shops, restaurants and hotels. This contribution should be recognised and consideration should be given to identifying the built up area of the estate as a development area within the AONB, where educational development will be considered acceptable in principle. This would not preclude the consideration of individual development proposals from the appropriate scrutiny in design and impact terms but would give the College assurance that there is support for the College and its aspirations to improve the education offer.</p>	<p>they do not now intend to allocate sites for development. Further consideration as to how the policy refers to Neighbourhood Plans has been given and the policy will be amended as follows:</p> <p>'Additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in <u>some</u> Neighbourhood Plans.....</p> <p><b>Newbury and Thatcham</b> ..... <del>New allocations for housing for Cold Ash will be made through a NDP. ....</del></p> <p><b>Eastern Area</b> .... <del>New allocations for housing for Tilehurst and Burghfield will be made through NDPs. ....</del></p> <p><b>North Wessex Downs AONB</b> .... <del>Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through NDPs.'</del></p>
Turley for Richborough Estates Ltd (lpr2382)	<p><i>Part of full Representation promoting allocation of land north of Silchester Road, Tadley under Policy SP14.</i></p> <p>Richborough Estates Ltd broadly supports Policy SP1 with regards to the Spatial Strategy.</p> <p>However, it is considered that this policy should also facilitate development at adjoining existing settlements such as Tadley.</p> <p>It is apparent that Tadley has historically been overlooked as a growth location, given constraints relating to the DEPZ and that it is not within West Berkshire's administrative boundary. Sustainable development is not about lines on a plan and does not distinguish between local authority areas. Therefore West Berkshire cannot turn its back on a sustainable location like</p>	<p>Comments noted. No changes to the policy are required in light of this representation. Support for the policy is noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Tadley. In terms of the DEPZ, it is considered that this matter can be satisfactorily addressed and therefore this location should be considered as a suitable and sustainable location for growth. Therefore an additional line under the 'Eastern Area' subsection should be included to this effect. Suggested wording includes: <i>'Development adjoining Tadley will be facilitated by the Council subject to matters relating to the DEPZ being satisfactorily addressed'</i>.</p> <p>Changes sought: Suggested wording includes: <i>'Development adjoining Tadley will be facilitated by the Council subject to matters relating to the DEPZ being satisfactorily addressed'</i>.</p>	<p>settlement at the same level in the hierarchy will have different opportunities and constraints.</p> <p>The process of selection of sites for allocation will be outlined in the Site Selection background paper which will accompany the Regulation19 consultation.</p>
Wey Planning Ltd for Neville Baker Estate (lpr1272)	<p>We consider that the Spatial Strategy set out in Policy SP1 and elaborated upon by Policies SP2 to SP19 is not justified, effective or consistent with national policy. The main reasons are as follows:</p> <p>1.The Spatial Strategy does not strike an appropriate, equitable and sustainable balance between urban and rural development, resulting in an unacceptably high and increasing level of unmet housing need in the North Wessex Downs AONB, especially the need for affordable housing. In turn, failure to provide for an appropriate level of housing at the point of need will not provide adequate support for the local economy, services and facilities and will not help to maintain vibrant and balanced communities. Therefore, the Spatial Strategy will not deliver sustainable development in accordance with the policies of the NPPF. (See comments on Policies SP2 and SP15 for more detail).</p> <p>2. The increased urban emphasis of the Spatial Strategy which results in the unacceptable outcomes identified above is not justified ie. it is not an appropriate strategy, taking account of reasonable alternatives, and based on proportionate evidence. The Council seeks to justify the strategy on the basis of the "special characteristics" of the AONB (Paragraph 6.23 of the WBLPR) but has not undertaken any further landscape assessment of the potential of available sites within the AONB to establish whether a higher level of housing provision can be accommodated without causing harm to these special characteristics. In accordance with Paragraph 172 of the NPPF, it is considered that such evidence is necessary and proportionate. (See comments on Policy SP2, SP3 and SP15 for more detail).</p>	<p>Comments noted.</p> <p>Potential opportunities for development across the district have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p> <p>Comments regarding development in the AONB are noted. However, the conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of all development proposals in the AONB.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>3. The focus of development on the Newbury/Thatcham urban area is excessive and, as a result, the Spatial Strategy places undue reliance upon the strategic site allocations at Sandleford and North East Thatcham to deliver new housing, which has considerable potential to undermine the Council's ability to meet the housing needs of the area and maintain a 5 year housing land supply over the plan period. Given the very real concerns which exist in relation to the deliverability (availability, suitability and achievability) of both sites, it is considered that this high level of dependency is not justified. (See comments on Policies SP16 and SP17 for more detail).</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP2 North Wessex Downs AONB

### (Proposed Submission LPR Policy: SP2 North Wessex Downs AONB)

Number of responses received: 39

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr728)	Would prefer this sentence: The conservation and enhancement of the beauty of the landscape will be the primary consideration in the assessment of all development proposals.	Comments noted. Paragraph 4.23 of the Emerging Draft LPR sets out that the conservation and enhancement of 'natural' beauty is the primary purpose of AONB designation as set out in the Countryside and Rights of Way Act 2000.
<b>Statutory consultees</b>		
Chieveley Parish Council (lp1719)	Chieveley Parish Council welcomes the continued support for policies protecting the North Wessex Downs AONB. We think that development that does take place should be that which is required to support local environmental, economic and social benefits and must avoid significant harm to the landscape. Major development in the AONB should be refused except in exceptional circumstances. Great weight should be given to conserving and enhancing landscape and scenic beauty in Areas of Outstanding Natural Beauty, which have the highest status of protection. The application of these principles and relevant policy in the NPPF must be adequately reflected in the relevant policies of the Local Plan. Policy SP2 and the supporting text appears to achieve that.	Comments noted

Respondent (with lpr ref)	Response	Council Response
Cold Ash Parish Council (lpr1730)	<p>The rules and regulations around development of an AONB are to be applauded and West Berkshire District Council's embracing of them is important. However, such high values need to be put in context of the overall picture of West Berkshire. As highlighted in the report, 74% of West Berkshire is covered by the North Wessex Downs AONB. Embracing AONB regulations to their fullest means West Berkshire District Council is accepting of the increased impact of development in the non- AONB areas of the district, which is further exacerbated when taking into account the wider restrictions relating to AWE and flood zones. This just leaves 12% of the District available for development.</p> <p>So, rigorous application of AONB rules is only feasible if it is balanced with allowance in the housing targets set by central government. In the situation where this isn't the case, it places an undue burden on the non-AONB areas, in terms of the amount of development they are expected to absorb. This in turn would result in a polarisation of the district into heavily urbanised areas, with little green space, and significant swathes of rural land, with little development. This polarisation cannot be good for the district, as it is likely to result in a higher incidence of mental health issues among the population that is forced into living in very urbanised areas, which will be at odds with those who are fortunate enough to live in the rural areas. Indeed, the proposals defend the aims in relation to Landscape Character and Distinctiveness of locations in relations to AONB, but at the expense of all of the other areas within the district.</p> <p>What the district needs is a more balanced approach to development, with more green space retained in urban areas, more sensitive and landscape appropriate development in the rural areas and a gentle flow from urban to rural environments, thus providing a natural continuum.</p> <p>The stark difference proposed, between the treatment of AONB and urban areas could also lead to an "us and them" mentality, which cannot be helpful for the district as a whole.</p>	<p>Comments noted.</p> <p>SP2 is a strategic policy which sets out the Council's overall planning policy approach to the AONB. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR. This is set out in para 1.7 of the Emerging Draft LPR. There are other policies for instance which explain in more detail the Council's approach to the distribution of housing, green infrastructure, economic development and the response to climate change.</p>
Hungerford Town Council (lpr124)	We welcome the policy to conserve and enhance the AONB special landscape qualities.	Comments noted

Respondent (with lpr ref)	Response	Council Response
Newbury Town Council (lpr2271)	<p>This section is headed “Our Place Based Approach” but goes on to refer to “landscape led” planning. The two phrases are not the same, but “place” is much more than landscape.</p> <p>“Place” implies the entire perceived human geography: social, economic, and environmental. The AONB is more than mere landscape and the landscape we inherit is the result of centuries of stewardship by local people, who need to live and work in it as a community. We feel that much of the North Wessex Downs has become exclusive to people who live in it but do not work it or particularly wish to share it – even with Nature. Much of it is a prairie, barren of wildlife. It is not a place that future generations living working or visiting from the rest of the District and beyond will enjoy unless we plan differently.</p> <p>If the people of Newbury, Thatcham, and the outer suburbs of Reading – residents of West Berkshire – are to be expected to continue helping to pay to conserve and enhance the AONB then the Local Plan must accommodate more housing for its villages to remain or become viable, through tourism and new rural businesses offering employment within active travel distance wherever possible.</p> <p>We welcome the initiative of some villages in the AONB to prepare their own Neighbourhood Plans, noting that this will have to involve community led planning for more homes than are set out in this Local Plan. We trust this will enable some of the pressure on countryside surrounding our towns to be relieved. We do not see that all land outside settlements in the AONB needs protecting from development, even if it isn’t entirely ‘landscape led’.</p> <p>Development should always be sustainable but the social and economic aspects of tackling climate change can and should go alongside the environmental – which is about much more than preserving landscape as it is now.</p> <p>The conservation of the natural beauty of the landscape should not be the only “primary consideration” in assessment of development proposals in the AONB. The need to combat climate change is just as important in the AONB as anywhere outside it and there may be development proposed that helps tackle climate change but which it could be argued does not enhance the landscape.</p>	<p>Comments noted.</p> <p>SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR. This is set out in para 1.7 of the Emerging Draft LPR. There are other policies for instance which explain in more detail the Council’s approach to the distribution of housing, green infrastructure, economic development and the response to climate change.</p> <p>The Council’s approach to residential development in the countryside will be set out in Policy DM1 of the Proposed Submission LPR. This applies across the whole of the District.</p> <p>Paragraph 4.23 of the Emerging Draft LPR sets out that the conservation and enhancement of natural beauty is the primary purpose of AONB designation as set out in the Countryside and Rights of Way Act 2000.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>Climate change will, if unchecked, affect the landscape of the AONB and the nature of rural life more generally and permanently than even quite major forms of development.</i> Therefore, it is of no less importance to use development proposals that come forward there as a means of tackling climate change than it is elsewhere.</p> <ul style="list-style-type: none"> <li>The last sentence of the first paragraph in the policy should be amended thus: “The conservation and enhancement of the natural beauty of the landscape will be a prime consideration in the assessment of all development proposals, alongside the contribution made to tackling climate change.”</li> </ul> <p>The second sentence in the next paragraph should be amended thus: “Planning permission will be refused for major development in the AONB except in exceptional circumstances, and/or where it can be demonstrated to be in the long- term public interest.”</p>	
Shaw cum Donnington Parish Council (lpr196)	Supports the policy	Comments noted
Thatcham Town Council (lpr1389)	<ul style="list-style-type: none"> <li>"The strong sense of remoteness, tranquillity and dark night skies, particularly on the open downland, should be preserved."</li> </ul> <p>It is very unclear as to why maintaining remoteness should be an objective for West Berkshire Council regards AONB. The value of 'remoteness' which, amongst other metrics, is used to protect AONB land from development benefits, by definition, few people. However, the loss of accessible countryside and right-of-way access that is used by thousands has a much more profound effect on the residents of West Berkshire.</p> <p>It is necessary that greater weight is given to the health and well-being of the majority, versus the relative benefit obtained by a much smaller proportion of people who cherish remoteness.</p> <ul style="list-style-type: none"> <li>"The conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of all development proposals."</li> </ul> <p>We note that the North Wessex Downs AONB Board has objected to the development of all sites that make up NE Thatcham through the HELAA process. We fail to understand why the accessible, natural beauty of</p>	<p>Comments noted. The strong sense of remoteness, tranquillity and dark night skies, particularly on the open downland are some of the defining and special landscape qualities of the North Wessex Downs AONB. As a nationally designed landscape the policy is therefore clear that that the AONB will have appropriate and sustainable growth over the plan period which conserves and enhances these qualities.</p> <p>The NPPF para 80 also notes: <i>'Planning policies and decisions should also ensure that new development is appropriate for its location, taking into account the likely effects (including cumulative effects) of pollution on health, living conditions and the natural environment, as well as the potential sensitivity of the site or the wider area to impacts that could arise from the development. In doing so they should: ...limit the impact of light pollution from artificial light on ... intrinsically dark landscapes ...'</i></p>

Respondent (with lpr ref)	Response	Council Response
	<p>landscape to the North of Thatcham, should be valued any less than land designated as AONB elsewhere.</p> <p>It is necessary that equal weight is given to the assessment for NE Thatcham.</p> <ul style="list-style-type: none"> <li>• "Planning permission will be refused for major development in the AONB except in exceptional circumstances."</li> </ul> <p>We believe that this statement is inappropriate and constrains West Berkshire housing supply unnecessarily.</p> <ul style="list-style-type: none"> <li>• " It encompasses everything that makes the area distinctive: the area's geology and landform; its climate, soils and rivers; its wildlife and ecology; its rich history of human settlement and land use over millennia; its archaeology and buildings and cultural associations;"</li> </ul> <p>We note that NE Thatcham has previously been described by West Berkshire Council as "historic farmstead, proximity of woodland, and visibility across the valley. Proposals to reinforce the landscaping would only serve to partially conceal the housing and would take an extended period to become effective".</p> <p>There is a conflict between the selection of NE Thatcham and the policy SP 2 which is necessary to resolve.</p>	<p>The NPPF is clear that the scale and extent of development in AONBs should be limited and that planning permission for major development should be refused except in exceptional circumstances.</p> <p>Other issues are considered as part of Council response to issues raised under Policy SP17.</p>
South Oxfordshire District Council (lpr1781)	We are supportive of Policy SP2 as drafted and are pleased to see that it is consistent with the spatial context and strategic objectives set out in the North Wessex Downs AONB Management Plan 2019-2024.	Comments noted
Vale of White Horse District Council (lpr1776)	As the North Wessex Downs AONB stretches across the southern part of our own district, we are supportive of Policy SP2 as drafted and are pleased to see that it is consistent with the spatial context and strategic objectives set out in the North Wessex Downs AONB Management Plan 2019-2024.	Comments noted
Natural England (lpr1593)	We are supportive of the wording and content of this policy, and of its visibility at the beginning of the policies list. This is appropriate due to the importance of the AONB landscape within West Berkshire. The policy sets out and justifies what constitutes major development, which is in line with para. 172 of the NPPF. We are supportive of this approach and are satisfied that this policy will work to safeguard the North Wessex Downs AONB.	Comments noted

Respondent (with lpr ref)	Response	Council Response
<b>General consultation bodies</b>		
North Wessex Downs AONB (lpr1622)	<p>Encouraging and delighted to see a standalone AONB policy and for it to be high up the list of policies.</p> <p>The overall plan demonstrates a landscape led approach which is refreshing and welcoming. The Plan clearly outlines the current allocation of up to 2000 dwellings to 2026 as a ceiling figure and subsequent development after which is to be encouraged via NDPs.</p> <p>Policy SP2 is clear in providing residents/developers with a set criteria on which development will be assessed including context and cumulative impact, the AONB is highly sensitive and development that is deemed acceptable in one locality may be deemed unacceptable in another due to the context and character of the site and surrounding landscape, it is therefore important that a robust and clear policy is set which we believe WB has achieved. It follows the NPPF in not setting a definition of major development which we endorse as major development cannot be easily defined particularly in such a varied landscape as the North Wessex Downs.</p> <p>We welcome the background work of the policy within the informative text and the flexibility given within the definition of major development, as worded it ensures that not only naturally large applications but smaller/minor developments can be determined as major, for example a development of 5 houses, due to the landscapes sensitivity to change could have the same or greater impact than a development for 20 houses elsewhere in the AONB. A locations landscape character and sensitivity to change needs to be a factor in defining major development and this is demonstrated within Policy SP2.</p> <p>Setting has been included in the wording of the policy which we welcome as demonstrated in the changes to the NPPG, the same weight should be given to land within the setting of the AONB as is within.</p> <p>The policy also includes special qualities of the AONB including dark skies which we fully endorse.</p>	Comments noted
West Berkshire Green Party (lpr1825)	We broadly support this policy.	Comments noted

Respondent (with lpr ref)	Response	Council Response
West Berkshire Green Exchange (lpr1550)	<p>The analysis of the special areas shows that 70% of the available area is AONB. This is a problem, as the rest of the document shows, because it means that only a small percentage of the area is available for development of a large block of houses. Even this area is further constrained by the proximity to Burghfield and Aldermaston nuclear installations.</p> <p>Yet the document shows no appetite for challenging the constraints imposed in the AONB. Its villages are dying: many have lost their village post office, village shop even their pub. Many too can expect their churches to become de-consecrated and abandoned in the near future. They are inaccessible except by car, as local bus services have been axed. Their houses are not affordable by many young people, forcing them to move away. The inability of generations to remain in one location creates a loss of continuity and of history.</p> <p>A solution to the problems of the villages in the AONB is to build more houses there, including a proportion of affordable homes, so that the larger local economies can once again support the local services that are required. The required number could be built without damaging the character of the AONB and could even enhance it. The document should address this. Policy SP2 makes no mention of these problems. In particular the limit of 2,000 homes shown in para 4.16 should be challenged.</p> <p>Furthermore, the AONB should not just be a “pretty place” but should play its part in tackling the climate change emergency. Much more emphasis should be given to encouraging the use of solar power and wind turbines within the AONB. After all, these technologies can be rapidly deployed and, when no longer required, dismantled.</p>	Comments noted. SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR. This is set out in para 1.7 of the Emerging Draft LPR. There are other policies for instance which explain in more detail the Council’s approach to the distribution of housing, economic development and the response to climate change.
West Berkshire Heritage Forum (lpr69)	Support. The archaeological potential of the AONB should be a significant factor in considering any development. It should be mentioned in the policy itself, not just the supporting text.	Comments noted. SP2 is a strategic policy covering a wide range of issues which are not specifically highlighted. The supporting text is able to go into more detail.
<b>Other stakeholders</b>		
David Copas (lpr1432)	<p>[part of wider response to SP17]</p> <p>The spatial strategy SP1 and SP2 and supporting text are important. SP2 states the proposed arrangement if an application is deemed to be major development with proximity to the AONB and aspects that further</p>	Comments considered as part of Council response to lpr1305 under Policy SP17

Respondent (with lpr ref)	Response	Council Response
	<p>consideration will take account. However the consultation on the Local Plan Review and a simultaneous consultation of a detailed growth study, which is clearly a major development, is a seriously flawed procedure. This is confusing to local people who want to express their views, gives the clear message that the parameters in the plan are already fixed and therefore one or other consultation has a predetermined outcome. In addition the time table for two such large consultations is unfair.</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 3 – Complete consultation on the LPR to make the much needed improvements.</b> This should include removal of new allocations on larger sites until after consultation on specific growth studies to ensure the council, residents, developers and other stakeholders have the fairest possible consultation. This must apply to residents impacted by any new proposed SP.</li> </ul> <p><b>Recommendation 3 – Complete consultation on the LPR to make the much needed improvements.</b></p>	
Sam Coppinger (lpr283)	Supports the policy	Comments noted
Tim Hall (lpr639)	Supports the policy	Comments noted
David Hill (lpr696)	<p>The protection at virtually any cost of the character of the AONB is to freeze rural areas in a time-warp and prevents progression of communities and housing provision.</p> <p>A priority should be the protection of the environment of the AONB, over and above the character.</p> <p>Development has historically been of its age and best using materials and techniques of its time, which has developed over many generations. Preservation of what often are deemed to be inefficient techniques and materials is contradictory to the need to improve the environment. Excellent contemporary design can be sensitive to the environment and to the character of the area and should be allowed to evolve.</p> <p>Development should be permitted according to the needs and interests of the local communities.</p>	<p>Comments noted. The Council does not agree that the policy freezes rural areas in a time warp and does not allow landscapes to evolve. The policy is clear that the AONB will have appropriate and sustainable growth that conserves and enhances its special landscape qualities. It also makes clear that development should respond positively to the local context, conserving and enhancing local distinctiveness and sense of place. It also makes clear that future development will support its local communities and the rural economy.</p> <p>SP2 is a strategic policy which sets out the Council's overall planning policy approach to the AONB. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR. Policies SP5 and SP7 explain in more detail the Council's approach to</p>

Respondent (with lpr ref)	Response	Council Response
	Good quality and environmentally sensitive designs should be supported without needing to blend in with older properties. Landscapes should be allowed to evolve.	responding to climate change and design quality respectively.
Councillor Alan Law (lpr1078)	<p><b>Major/ minor developments in AONB: Policy SP2.</b> I welcome and support the statement in 4.26 (1st bullet) which will use the National standard definition of Major / minor development (Major equates to 10 dwellings or above) contained in the Town &amp; Country Planning order 2015 as the starting point and that only proposals of a National significance will be an exception to this definition of "major". This should help reinforce the requirements for developments within the AONB to be more restrictive and controlled as per the general intention of the NPPF and other local policies.</p> <p>I also welcome the flexibility (2nd bullet Para 4.26) which affords some flexibility for proposed sites below the 10 dwelling minor limit. This is especially important on sites adjacent to or close to small, landscape sensitive villages, such as Streatley where even a 9 house development may constitute major development in the context of the village and its setting.</p>	Comments noted
Councillor Alan Macro (lpr752)	<p>The statement “planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest” is too restrictive.</p> <p>Restricting development to this extent would increase pressures for development elsewhere in the district. It would also allow villages to “wither on the vine” because their population would age and thus reduce the viability of services such as shops, pubs, primary schools and churches.</p> <p>Major developments SHOULD be allowed in the AONB where they do not have a significantly adverse effect on landscape character.</p>	Comments noted. The Council’s approach to major development is in accordance with national planning policy set out in the NPPF.
Ian Parsons (lpr827)	<p>A policy refusal for development on a large scale is to be welcomed. We hope to see an enhanced value given to the views of parish councils and local residents with regard to smaller development proposals.</p> <p>"The <b>need</b> for development in the location proposed" must be clearly signposted as a central feature in any application.</p>	Comments noted

Respondent (with lpr ref)	Response	Council Response
Debbie Reynolds (lpr1310 and lpr2467)	<p>[NB. The response is recorded all together under lpr1305 for SP17 NE Thatcham, and separately in lpr 1306,1307,1308 and 1309. It keeps the original numbering of the recommendations.]</p> <p><b>Chapter 4 Development strategy – our place based approach</b></p> <p>The spatial strategy SP1 and SP2 and supporting text are important. SP2 states the proposed arrangement if an application is deemed to be major development with proximity to the AONB and aspects that further consideration will take account. However the consultation on the Local Plan Review and a simultaneous consultation of a detailed growth study, which is clearly a major development, is a seriously flawed procedure. This is confusing to local people who want to express their views, gives the clear message that the parameters in the plan are already fixed and therefore one or other consultation has a predetermined outcome. In addition the time table for two such large consultations is unfair.</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 3 – Complete consultation on the LPR to make the much needed improvements.</b> This should include removal of new allocations on larger sites until after consultation on specific growth studies to ensure the council, residents, developers and other stakeholders have the fairest possible consultation. This must apply to residents impacted by any new proposed SP.</li> </ul> <p><b>Recommendation 3 – Complete consultation on the LPR to make the much needed improvements.</b> This should include removal of new allocations on larger sites until after consultation on specific growth studies to ensure the council, residents, developers and other stakeholders have the fairest possible consultation. This must apply to residents impacted by any new proposed SP.</p>	Comments considered as part of Council response to lpr1305 under Policy SP17
Paula Saunderson (lpr953)	You will continue to create Dormy Villages for the affluent, typically allowing smaller dwellings with reasonable plots to be bought up and expanded and gardens destroyed. Social Housing will continue to decline in these villages, forcing the children of less affluent families into urban dwelling life to the detriment of their Health & Being Well.	Comments noted. SP2 is a strategic policy which sets out the Council's overall planning policy approach to the AONB. The policy is clear that the AONB will have appropriate and sustainable growth over the plan period. The policy has to be set within a national planning policy context and be read alongside all the other policies in the LPR. There are other policies for instance which explain in more detail the Council's approach to the provision of

Respondent (with lpr ref)	Response	Council Response
		affordable housing, health and wellbeing, house extensions, replacement dwellings, extension of residential curtilages in the countryside etc.
Councillor Tony Vickers (lpr527)	<p>The conservation of the natural beauty of the landscape should not be the only “primary consideration” in assessment of development proposals in the AONB. The need to combat climate change is just as important in the AONB as anywhere outside it and there may be development proposed that helps tackle climate change but which it could be argued does not enhance the landscape.</p> <p><b><i>Climate change will, if unchecked, affect the landscape of the AONB and the nature of rural life more generally and permanently far more than even quite major forms of development.</i></b> Therefore it is of no less importance to use development proposals that come forward there as a means of tackling climate change than it is elsewhere.</p> <p>The statement “planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest” is too restrictive.</p> <p>Restricting development to this extent would increase pressures for development elsewhere in the district. It would also allow villages to “wither on the vine” because their population would age and thus reduce the viability of services such as shops, pubs, primary schools and churches.</p> <p>Major developments SHOULD be allowed in the AONB where they do not have a significantly adverse effect on landscape character. They can still be “appropriate and sustainable” - perhaps far more so than a large addition to Thatcham or Newbury.</p> <p>The last sentence of the first paragraph in the policy should be amended thus:</p> <p>“The conservation and enhancement of the natural beauty of the landscape will be a <b>prime</b> consideration in the assessment of all development proposals, <b>alongside the contribution made to tackling climate change.</b>”</p> <p>The second sentence in the next paragraph should be amended thus:</p> <p>“Planning permission will be refused for major development in the AONB except in exceptional circumstances, and/or where it can be demonstrated to be in the <b>long term</b> public interest.”</p>	<p>Comments noted. SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. The policy has to be set within a national planning policy context and be read alongside all the other policies in the LPR. This requirement is set out in para 1.7 of the Emerging Draft LPR – ‘It is important that the LPR is read as a whole. All LPR policies should be viewed together and not in isolation in the preparation and consideration of planning applications. Development proposals will be judged against all relevant policies. All Development Plan policies will be taken into account in determining planning applications, along with other material considerations in a proportionate manner. Please note that the policies in the LPR do not list or cross-refer to all other policies that may be relevant.’</p> <p>Policy SP5 sets out how the LPR is responding to climate change.</p> <p>The Council's approach to major development is in accordance with national planning policy set out in the NPPF.</p>

Respondent (with lpr ref)	Response	Council Response
Toby & Gail Woodhouse (lpr2020)	<p>(Extracted from main representation to SP17 Thatcham) AONB SP1 &amp; SP 2) – the proposed development abuts Bucklebury Common and the North Wessex Downs AONB. Residents of the proposed new developments will be drawn to the Common and will significantly increase the pressures already evident on the delicate eco systems and existing wildlife. Parking on and around the Common is already exceeding capacity, with verges being used during peak periods. Whilst the development is relatively close, not all residents will walk/cycle to the Common they are more likely to drive. The open spaces on the proposed developments will not be big enough or as appealing as the Common land within the AONB.</p>	Comments noted. The issues raised relate to Policy SP17 and will be dealt with under the Council's response to that policy.
<b>Landowners, site promoters and developers</b>		
Armstrong Rigg Planning for Manor Oak Homes (lpr2419)	<p>Full representation is promoting development of Land at Fairview, Greenways, Lambourn Supports the policy. The wording of Policy SP 2 is largely copied from NPPF paragraph 172 with respect to presumption against major development, the criteria for assessing whether a development constitutes major development and the criteria for assessing whether major development should be allowed in the public interest. As such, Manor Oak Homes broadly supports Policy SP 2. Manor Oak Homes also supports the statement that “<i>Development in the North Wessex Downs will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape</i>”. This is an important recognition of the social and economic needs of the various communities within the AONB and dovetails with our suggested amendments to Policy SP 1 above.</p>	Comments noted
Barton Willmore for Donfield Homes (lpr2094)	The policy represents an unnecessary duplication of national planning policy. The majority of policy SP2 represents an unnecessary duplication of paragraphs 170-173 of the National Planning Policy Framework. This is inconsistent with Government direction set out in the White Paper: Planning for the Future (August 2020) which indicates an intention for local plans to be simplified and significantly shorter in length.	Comments noted. The North Wessex Downs AONB covers 74% of the District and the Council considers a specific policy is justified. It is notable that both Natural England and the North Wessex Downs AONB are both supportive of this approach.

Respondent (with lpr ref)	Response	Council Response
	The policy should be revised to remove duplication and refer to the relevant sections of national policy instead.	
Barton Willmore for Donnington Valley Group (lpr2432)	The majority of policy SP2 represents an unnecessary duplication of paragraphs 170-173 of the National Planning Policy Framework. This is inconsistent with Government direction set out in the White Paper: Planning for the Future (August 2020) which indicates an intention for local plans to be simplified and significantly shorter in length. The policy should be revised to remove duplication and refer to the relevant sections of national policy instead.	Comments noted. The North Wessex Downs AONB covers 74% of the District and the Council considers a specific policy is justified. It is notable that both Natural England and the North Wessex Downs AONB are both supportive of this approach.
Barton Willmore for Sulham Estate (lpr2437)	The majority of policy SP2 represents an unnecessary duplication of paragraphs 170-173 of the National Planning Policy Framework. This is inconsistent with Government direction set out in the White Paper: Planning for the Future (August 2020) which indicates an intention for local plans to be simplified and significantly shorter in length. The policy should be revised to remove duplication and refer to the relevant sections of national policy instead.	Comments noted. The North Wessex Downs AONB covers 74% of the District and the Council considers a specific policy is justified. It is notable that both Natural England and the North Wessex Downs AONB are both supportive of this approach.
Donnington New Homes (lpr2062)	Donnington New Homes are promoting land at Kiln Farm, west of B4009 and north of Hermitage Primary School and referenced within the HELAA as HER5. The site is approximately 5.8 Hectares (14.33 Acres) and based on the Concept Land Use Plan submitted with our call for sites submission package dated 29th September 2019, could accommodate approximately 110 dwellings. We welcome that the Policy states that the AONB will have “appropriate and sustainable growth” and that “Development ... will support its local communities and rural economy ...”. We are concerned that the second paragraph of the Policy goes on to state that “ <i>Planning permission will be refused for <u>major development</u> in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest</i> ” (my emphasis). The third paragraph of the Policy states that “ <i>in determining what constitutes major development the Council will consider whether the development, by reason of its scale, character or nature, has the potential to have a significant adverse impact on the landscape and scenic beauty of the AONB. This</i>	Comments noted.  Sites allocated as part of the plan making process, whether through the LPR or Neighbourhood Plan, will undergo a rigorous site assessment and sustainability appraisal. No changes to the policy are considered necessary.  The response relates to a specific site being promoted through the HELAA at Hermitage. The Council was informed in February 2022 that the Hermitage NDP will no longer be allocating housing sites and so the Council will be considering if there are appropriate opportunities for development as part of the LPR.

Respondent (with lpr ref)	Response	Council Response
	<p><i>will include the consideration of the individual characteristics of a proposal and its context and the impact of cumulative development</i>".</p> <p>Policy SP1 states that allocations for housing will be made for Hermitage through a Neighbourhood Development Plan.</p> <p>Policy SP15 goes on to allocate sites for residential development in the North Wessex Downs AONB, to settlements that are not registered as Designated Neighbourhood Areas.</p> <p>A Neighbourhood Area for the Parish of Hermitage was designated on 26th April 2019. As a result, no sites are allocated for residential development at Hermitage in the LPR and instead, Policy SP15 directs 20 new dwellings to Hermitage through the Neighbourhood Development Plan.</p> <p>We <u>support</u> the decision to <i>identify</i> the need for 20 new dwellings at Hermitage, to be delivered through the Neighbourhood Plan process.</p> <p>In order to provide consistency with regards to development in the AONB through the Local Plan Review it's considered necessary for Policy SP2 to make it clear that the delivery of housing required through Neighbourhood Plans (as required by Policy SP15) would not constitute major development (in principle). As currently drafted the Policy leaves consideration as to what constitutes major development down to the decision maker (i.e. the LPA) at the time an application is made. It is therefore requested that the second paragraph of Policy SP2 is amended as follows:</p> <p><i><u>"Development in the North Wessex Downs AONB will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape. Sites will be brought forward for residential development through Policies in the Plan and through Neighbourhood Development Plans. Such sites will not be deemed to constitute major development in the AONB. Planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest"</u></i>. (proposed new text is underlined).</p> <p>The above suggested change to Policy SP2 would ensure Policy SP15 is consistent with the wider strategy of the Local Plan Review.</p> <p>We have taken the opportunity to prepare a revised concept plan, to deliver a scheme of a suitable form and scale that accords with the Hermitage NDP 20 dwelling requirement.</p>	

Respondent (with lpr ref)	Response	Council Response
	We have written to the Hermitage NDP group on this basis and we enclose the correspondence and enclosures. This information should be used for any future HELAA updates. Please note that the original site area submitted to West Berkshire Council 29th September 2019, referenced within the HELAA as HER5, remains valid for any future HELAA assessment.	
Fisher German LLP for Mr M and W Musgrave and Begley (lpr1227)	We support the recognition within Policy SP2 that development is needed within the AONB, to support the sustainable growth of existing communities. Without such delivery, rural settlements within the AONB will likely age and stagnate, with no affordable housing delivered forcing young people and families out of the area.	Comments noted
Nexus Planning for Pangbourne Beaver Properties Ltd (lpr1652)	<p>Policy SP1 The Spatial Strategy states, inter alia, that;  <i>“The North Wessex Downs Area of Outstanding Natural Beauty (AONB) will have appropriate and sustainable growth that conserves and enhances its special landscape qualities as set out in policy SP2.”</i></p> <p>We endorse this policy objective which is replicated in Policy SP2. However, as set out in our representations to Policy SP1 and SP15 the Council’s housing strategy for this spatial area, which fails to allocate any additional housing at Pangbourne despite the fact that it is one of the most sustainable settlements in the District, is unsound. We note that the whole of Pangbourne, including the village itself, is washed over by this designation. Like most of the sites that are allocated for development in the Plan the site is currently outside, but adjoins the settlement boundary</p> <p>To ensure that the Council’s spatial strategy is applied correctly, having regard to the objective to accommodate appropriate and sustainable growth within the North Wessex AONB spatial area as identified in Policies SP1 and SP2, Policy SP 15 must be amended to ensure that a site/sites at Pangbourne are identified for housing. For the reasons set out in our representations to Policy SP15, this should include the allocation of 35 – 40 dwellings at Site Ref: PAN8 (Pangbourne Hill).</p>	Comments noted. The issues raised will be considered under the Council’s response to Policy SP15
Pegasus for Donnington New Homes (lpr2216)	<p><i>(comments submitted under SP15 as well)</i></p> <p>Donnington New Homes are submitting a number of representations in relation to the consultation and this letter and representation relates</p>	<p>Comments noted.</p> <p>Sites allocated as part of the plan making process, whether through the LPR or Neighbourhood Plan, will undergo a</p>

	<p>specifically to their land interests in Hungerford, namely sites HUN7, HUN8, HUN9 and HUN10 as labelled in the Council's HELLA.</p> <p>Policy SP2 of the Emerging Draft Local Plan deals specifically with the North Wessex Downs AONB which washes over the town of Hungerford.</p> <p>It is welcomed that the Policy states that the AONB will have <i>“appropriate and sustainable growth”</i> and that <i>“Development ... will support its local communities and rural economy ....”</i>.</p> <p>Donnington New Homes are however concerned that the second paragraph of the Policy goes onto state that <i>“Planning permission will be refused for <u>major development</u> in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest”</i> (my emphasis). The third paragraph of the Policy states that <i>“in determining what constitutes major development the Council will consider whether the development, by reason of its scale, character or nature, has the potential to have a significant adverse impact on the landscape and scenic beauty of the AONB. This will include the consideration of the individual characteristics of a proposal and its context and the impact of cumulative development”</i>.</p> <p>Notwithstanding the above text within Policy SP2 Policy SP1 states that allocations for housing will be made for Hungerford through a Neighbourhood Development Plan.</p> <p>Hungerford is identified as a Rural Service Centre in Policy SP3.</p> <p>Policy SP15 allocates sites for residential development in the North Wessex Downs AONB at settlements that are not included within a Designated Neighbourhood Area. A Neighbourhood Area for the Parish of Hungerford was designated on 9th April 2018. No sites are therefore allocated for residential development in Hungerford in the Emerging Local Plan Review. Rather, Policy SP15 directs 55 new dwellings to Hungerford through the Neighbourhood Development Plan.</p> <p>Donnington New Homes welcomes the identification of a need for 55 new dwellings at Hungerford and for these to be delivered through the Neighbourhood Plan process. They are however concerned that Policy SP2 could be overly restrictive to the delivery of this requirement through its reference to <i>“planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest”</i>.</p>	<p>rigorous site assessment and sustainability appraisal. No changes to the policy are considered necessary.</p> <p>The response relates to a specific site being promoted through the HELAA at Hungerford. The issues raised will be considered under the Council's response to Policy SP15</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The NPPF defines major development generally as being development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more (NPPF Glossary) except for the purposes of paragraph 172 and 173 of the NPPF which deal with AONBs where the definition of ‘major development’ is stated as being a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.</p> <p>An appeal decision (PINS ref: APP/F160/W/16/3165805) dated November 2017 for 30 dwellings in the Cotswold AONB in Chipping Camden (Cotswold District Council) considered what constitutes major development in the AONB. A copy of the decision is enclosed with this letter.</p> <p>The Inspector confirmed it was common ground that there is no definition of what constitutes “major development” (paragraph 13). He continued to acknowledge that <i>“the proposal, for 30 dwellings, using the normal meaning of the word ‘major’ is capable of amounting to major development, depending on context ... (however) ... the scale of the proposal in relation to the size of the settlement would not be major, amounting to about 2.5% of the size of the town”</i> (paragraph 13).</p> <p>At the 2011 Census the Parish of Hungerford was recorded as containing 2,756 households. The proposed Neighbourhood Plan allocation of 55 dwellings would therefore amount to about 1.99% of the size of the town. Furthermore, HUN7 which is being promoted by Donnington New Homes could deliver circa 31 dwellings and would therefore be consistent in scale with the development referred to in the above appeal decision which was found not to constitute major development in the Green Belt. Should HUN7 come forward for development it would also allow a further smaller site to come forward for residential development in Hungerford (i.e. such as HUN9).</p> <p>In order to provide consistency with regards to development in the AONB through the Local Plan Review it is considered necessary for Policy SP2 to make it clear that the delivery of housing required through Neighbourhood Plans (as required by Policy SP15) would not constitute major development (in principle). As currently drafted the Policy leaves consideration as to what constitutes major development down to the decision maker (i.e. the LPA) at</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>the time an application is made. It is therefore requested that the second paragraph of Policy SP2 is amended as follows:  <i>“Development in the North Wessex Downs AONB will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape. <u>Sites will be brought forward for residential development through Policies in the Plan and through Neighbourhood Development Plans. Such sites will not be deemed to constitute major development in the AONB.</u></i></p> <p>The above suggested change to Policy SP2 would ensure Policy SP15 is consistent with the wider strategy of the Local Plan Review.</p>	
Pro Vision for Cala Group Ltd (lpr2413)	<p><i>In context of two sites: East and West of Salisbury Road, Hungerford.</i></p> <p>Draft Policy SP2 (AONB) is supported in that it is consistent with the National Planning Policy Framework (NPPF) in recognising that a planning judgement is needed over individual proposals for development in the designated landscape as to whether it constitutes “major development” and therefore if “exceptional circumstances” are needed to allow the development (NPPF 172).</p> <p>The wording of policy duplicates NPPF 172 (parts a, b and c). A cross reference to NPPF 172 would be appropriate.</p> <p>The wording of draft Policy SP2 would also be more consistent with the NPPF if it explained that “great weight” should be given to the Authority’s duty to conserve and enhance the AONB.</p> <p>Great weight is rightly mentioned (consistent with the NPPF) in regard to heritage assets, but not, as drafted, in respect of landscape. This is an important term, confirming that the decision maker has to make a judgement about the impact on designated landscape as part of a balance of planning considerations.</p> <p>Therefore, by definition, there may be occasions where major development is acceptable in such areas, in which case, mitigation of any harm identified becomes paramount.</p> <p>Opportunity for development outside the AONB is limited, noting that 74% of the district has this designation (i.e. only a quarter of the district is outside).</p> <p>Sustainability Appraisal - Draft Policy SP2 is assessed as performing very positively against SA1. That would imply that the spatial policy for the AONB</p>	<p>Comments noted. The primary purpose of AONB designation, ‘to conserve and enhance the natural beauty of the area’, is set out in the Countryside and Rights of Way Act 2000. Under Section 85 of the Act, the Council has a duty to have regard to the primary purpose of designation and so this policy makes clear that the North Wessex Downs will have appropriate sustainable growth throughout the plan period to support its local communities and rural economy in a manner commensurate with its statutory status. The policy makes clear that the <i>‘conservation and enhancement of the natural beauty of the landscape will be the <b>primary</b> consideration in the assessment of all development proposals.’</i></p> <p>Comments in relation to the Sustainability Appraisal will be considered as part of the Council’s response to that document.</p> <p>SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. This has to be read alongside all the other policies in the LPR. This is set out in para 1.7 of the Emerging Draft LPR. These polices include SP7 Design Quality and SP8 Landscape Character. The proposed additional wording is therefore not considered necessary.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>would perform well against meeting affordable housing needs.</p> <p>As discussed in previous sections, the proposed policy approach to the AONB is protective and quite clearly is not designed to meet anywhere near the identified need (in the UHNE).</p> <p>Looking at Appendix 4 of the SA, with the detailed policy assessments, the policy is assessed as follows: “significantly positive contribution makes towards the provision of housing”.</p> <p>While we do not disagree with the SA that having no policy for the AONB area would not be appropriate, it should be recognised that the proposed policy approach to the AONB is one of constraint to housing delivery such that needs will not be met. The plan maker has to balance that negative against the positives, for example, potentially protecting the designated landscape from significant development over the plan period.</p> <p>A very positive assessment or score is therefore illogical and misleading against this objective. While the policy may well score highly in other respects, it does not in terms of SA1, and so the assessment should be thoroughly reviewed in this respect if it is to stand-up to scrutiny.</p> <p>The SA may even underplay how draft Policy SP2 and SP15 actually positively help to protect the AONB from development (for example, when assessed against SA5 – Natural, built and historic environment), again indicating a review of the assessment would be appropriate.</p> <p>We propose that the wording of draft Policy SP2 is amended in respect of its final sentence (proposed new words in bold italics): If it is considered that exceptional circumstances exist and development would be in the public interest, all opportunities to conserve and enhance the special qualities of the AONB will be sought. <b>This should include effective mitigation of the impacts of development, for example, careful location, design of new buildings and high quality landscaping schemes.</b></p>	
Rural Solutions for Karine Giannamore (lpr2309)	<p>This focuses on the ‘major development’ test based primarily on it’s ‘context’, scale and nature of the development in which the application is being considered. Perhaps this wider ‘context’ should be emphasised more, in light of the interdependencies often hamlets and village clusters often play. Again, this area is a working landscape, so supporting local businesses within the protected landscape and the important role they play should be</p>	<p>Comments noted. SP2 is a strategic policy which sets out the Council’s overall planning policy approach to the AONB. The policy is clear that the AONB will have appropriate and sustainable growth over the plan period. This has to be set within a national planning policy context and be read alongside all the other policies in the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>highlighted. “Development in the North Wessex Downs will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape’ should be reconsidered. This social economic duty and well-being of communities is crucial. It can be achieved without detriment to the landscape and have ecological net gains in the long-term.</p> <p>The supporting text is very negatively worded, ‘Detrimental Effects’ is cited many times. There is always a balance in assessing and identifying any perceived ‘harm’.</p>	
Savills for Englefield Estate (lpr1525)	<p>Draft LPR Policies SP1 and SP2 propose to continue the Core Strategy approach of allowing ‘appropriate and sustainable growth’ in the AONB, with provision made for 100 dwellings through NDP allocations plus several other small sites (draft LPR Policy SP15). In light of the increasing housing needs in the district (explained further below) and the challenges of accommodating these needs, a greater allowance should be made for new development in the AONB, including at Englefield village and other windfall sites. A positive approach should be taken to considering development proposals which are commensurate in scale and extent in the AONB which reflects guidance set out in paragraphs 78 and 172 of the NPPF.</p>	<p>Comments noted. Policy SP3 sets out that the focus of development in the district will follow the settlement hierarchy which takes account of the function and sustainability of settlements and promotes sustainable communities.</p> <p>The NPPF is clear that the scale and extent of development in AONBs should be limited and that planning permission for major development should be refused except in exceptional circumstances.</p>
Savills for Newbury and District Agricultural Society (lpr2043)	<p><i>(Part of full response to Newbury Showground site)</i></p> <p>NADAS recognises the importance of the North Wessex Downs AONB and its special landscape qualities.</p> <p>However given that this designation covers nearly three-quarters of the district (74%), the Council will need to consider promoting sites for economic growth across the less sensitive parts of the AONB. The supporting landscape evidence acknowledges that there are local urban influences in the surrounding area – in the form of large commercial buildings and the adjacent road network, including the Junction 13 gyratory, the motorway service station and Vodafone HQ to the south of the M4 – which does not reflect the landscape character of the predominantly rural parts of the AONB. These findings were corroborated by Council officers during their consideration of a retrospective application for the erection of warehouse premises on Land at Priors Court Farm, north of Priors Court Road, in 2016 (app. ref. 11/01089/FUL). The Planning Officer’s delegated report</p>	<p>Comments noted. The Council’s strategic approach to employment land will be set out in Policy SP20 of the Proposed Submission LPR.</p> <p>Specific points relating to land at Newbury Showground will be considered as part of the Council’s response to Policy SP21.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>highlighted the “relatively eroded / degraded nature of this segment of the AONB in the vicinity of Hermitage given the impact of the M4 corridor, the junction 13 road corridor, and the Showground itself with the recently completed new Exhibition Hall” (paragraph 6.3.1).</p> <p>The supporting Landscape Planning and Design Strategy sets out a series of recommendations to avoid and mitigate adverse landscape and visual effects in relation to the site’s development. Consideration will be given to moderating potential effects on the landscape, in relation to the AONB designation. The strategy includes the need to prepare a Landscape and Visual Impact Assessment.</p>	
Southern Planning Practice for the Saunders family (lpr2116)	<p>We support Policy SP2 and its objective that the North Wessex Downs AONB will have appropriate and sustainable growth that conserves and enhances its special landscape qualities and supports its local communities and rural economy.</p> <p>In determining what constitutes a major development we support and encourage the case by case approach. With regards to the land at Coombe Bottom Farm, we have assessed this against the criteria as to what constitutes a major development set out in policy SP2. The site would provide a sensitive landscape-led residential development which would not be of a scale, character of nature which would potentially have a significant impact on the landscape and scenic beauty of the AONB, as such it would not be a major development.</p> <p>The site provides a unique development opportunity in the AONB. The site is located immediately to the north west of the defined settlement boundary, and as set out later in these representations should be included within the revised settlement boundary, it is therefore very well related to the existing settlement. In addition, the site is both physically and visually well contained by Streatley Hill to the north, the area of woodland to the north west and west and residential development on the remaining boundaries. As set out in the Landscape and Visual Appraisal Report, through the implementations of landscape-led development parameters and mitigation measures, the site would not have an adverse visual impact on the surrounding AONB and as such, the Council should seriously look to allocate the site in the emerging Local Plan, or at the very least extend the settlement boundary to include the site to help facilitate its development.</p>	<p>Support for the policy noted.</p> <p>The response also relates to a specific site being promoted through the HELAA at Streatley. The issues raised will be considered under the Council’s response to Policy SP15.</p> <p>As part of the LPR the Council has undertaken a review of the existing settlement boundaries across the District and this site was considered as part of that process. Whilst acknowledging the argument put forward by the site promoter, the Council does not believe the site meets the criteria for inclusion within the boundary.</p>

Respondent (with lpr ref)	Response	Council Response
Wey Planning Ltd for Neville Baker Estate (lpr1276)	<p>1. Policy SP2 states that the North Wessex Downs AONB will have appropriate and sustainable growth that conserves and enhances its special landscape qualities. However, unlike the corresponding Policy ADPP5 in the West Berkshire Core Strategy DPD (the Core Strategy), which states that up to 2,000 new dwellings will be delivered in the AONB over the Core Strategy period, Policy SP2 gives no indication of the amount or scale of new housing provision in the AONB over the WBLPR plan period 2020 – 2037. This is a major shortcoming of PolicySP2 and should be corrected for (at least) the following reasons:</p> <p>a) It creates a high degree of uncertainty.</p> <p>b) Without such a figure, it is impossible to establish whether the stated policy objective of achieving appropriate and sustainable growth which conserves and enhances the special qualities of the AONB will be met. Put another way, the WBLPR is silent on the matter of how much new housing is considered to be appropriate and sustainable.</p> <p>c) Without such a figure, it is not possible to establish whether the Spatial Strategy of the WBLPR set out in Policy SP1 is justified ie. it is an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence.</p> <p>d) Without such a figure, it is not possible to establish the extent to which the housing and other objectives of the WBLPR in respect of the AONB will be met.</p> <p>e) Similarly, without such a figure it is not possible to monitor performance in terms of housing delivery over the lifespan of the Plan against the housing and other objectives of the WBLPR in respect of the AONB.</p> <p>In short, the absence of an overall housing requirement or target (expressed as a maximum) for the AONB makes the WBLPR unsound and this should be corrected.</p> <p>2. Notwithstanding the absence of an overall housing requirement for the AONB in Policy SP2, it is clear from Paragraphs 4.16 and 6.23 of the supporting text and Paragraphs 4.4 and 4.6 of the Interim Sustainability Appraisal Report that:</p> <p>a) The Council considers that existing housing allocations in the AONB identified in the Housing Site Allocations DPD that are still to be delivered by</p>	<p>Comments noted.</p> <p>The policy does not set out a housing figure for the AONB. The Council's overall approach to identifying land for allocation is set out in Policy SP1: Spatial Strategy and in Policy SP3: The Settlement Hierarchy. Sites proposed for allocation are detailed in Policies SP13 to 15. The Council will also prepare a Housing Background Paper to be published alongside the Proposed Submission LPR. The issues raised are more appropriately considered as part of the Council's response to Policies SP1 and SP15.</p> <p>The Landscape Sensitivity and Capacity Assessments that have been undertaken on sites in the AONB are published on the Council's website. In Designated Neighbourhood Areas where NDPs are allocating sites, then assessment would be undertaken as part of the NDP process.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>2026 will largely meet the housing needs of the AONB to 2037, so additional allocations for the period 2026-2037 need only be limited.</p> <p>b) Development in the AONB over the period 2020-2037 will be modest, helping to meet local needs.</p> <p>c) The WBLPR Spatial Strategy proposes to focus a higher proportion of development within the Newbury and Thatcham urban area than in the Core Strategy, with limited additional growth in the AONB.</p> <p>d) The Council considers that a Spatial Strategy of maximising the provision of new housing in the most sustainable locations should ensure an equitable distribution of housing, including housing for different sectors of the community. (Our underlining)</p> <p>3. The Council provides no evidence to justify the above statements. However, they all clearly indicate that the amount of new housing development in the AONB over the WBLPR plan period will be a reduction on the current planned levels of housing provision in the Core Strategy in absolute terms and relative to the rest of the District. In this regard, it should also be noted that the amount of new housing provided for by Policy ADPP5 of the Core Strategy (up to 2,000 new dwellings over the period 2006 – 2026) is itself a shortfall compared against local housing need in the AONB and so a further reduction in the amount of new housing provision proposed will mean that the level of unmet housing need in the AONB will rise progressively over the WBLPR plan period.</p> <p>4. The unacceptable consequences of a high and increasing level of unmet housing need in the AONB in terms of meeting the housing and other objectives of the WBLPR in relation to the AONB are set out in our comments on Policies SP1 and SP15.</p> <p>5. As Paragraph 4.4 of the Interim Sustainability Appraisal Report confirms, the proposed reduction in the level of new housing provision in the AONB is the result of a Spatial Strategy which focuses a higher proportion of development within the Newbury/Thatcham urban area. Compared with the Spatial Strategy of the CS, this represents a shift in the broad distribution of new housing development towards urban areas and away from rural areas, including the AONB. In this regard, Paragraph 63 of the CS Inspectors Report notes that the broad approach to the distribution of housing taken in the CS is to allocate 75% to the urban areas and 25% to rural areas. The CS</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Inspector considered this broad distribution to be sound (balanced and sustainable) and made it clear that “A much greater focus on urban areas would undermine the vitality of rural settlements, particularly the larger settlements such as Hungerford and provision to meet at least some local housing needs in these settlements”.</p> <p>6. Accordingly, we consider that the increased urban focus underpinning the broad distribution of new housing proposed between urban and rural areas and across the 3 spatial areas of the WBLPR is inequitable, unbalanced and unsustainable, because the resulting reduction in the level of new housing provision in the AONB will undermine the vitality of settlements in the AONB and increase the level of unmet housing need in these settlements.</p> <p>7. One key part of the WBLPR evidence base required to justify the proposed distribution of development and reduction in the level of new housing provision in the AONB is the further landscape assessment of potentially developable sites adjacent to the Rural Service Centres and Service Villages in the AONB, work which the HELAA identifies as being necessary to establish whether these sites can be developed without harm to the natural beauty and special qualities of the AONB. Given the great weight attached to this matter by Paragraph 172 of the NPPF, we consider that such evidence is necessary and proportionate. However, this work has not been undertaken.</p> <p>8. In the absence of this further landscape assessment work, it is not possible for the Council to claim that the Spatial Strategy of the WBLPR is “appropriate and sustainable”, or that the proposed reduction in the level of new housing in the AONB is “equitable” and “commensurate with AONB status”. This is because a reduction in the level of new housing provision cannot be justified without first establishing the capacity of the AONB landscape to accommodate development without causing harm to its natural beauty and special qualities.</p> <p>9. Taking all of the above factors into account, it is considered that the proposed broad distribution of new housing and reduction in the level of new housing provision in the AONB are not justified because they do not represent an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>1. For Policy SP2 to be justified, we consider it is essential to include a specific housing requirement or target for the AONB, expressed as a maximum in order to reflect Paragraph 172 of the NPPF and the landscape objectives of AONB designation.</p> <p>2. In order to achieve “appropriate and sustainable growth” in the AONB we consider that, subject to undertaking the further landscape assessment work required to demonstrate that planned levels of growth can be accommodated without causing harm the natural beauty and special qualities of the AONB, the broad distribution of development between urban and rural areas underpinning the Core Strategy (75% urban, 25% rural) and the current planned levels of new housing development in the AONB identified in Policy ADPP5 of the CS (up to 2,000 new dwellings over the period 2006-2026 at an average rate of 200 dwellings per annum) should be maintained.</p> <p>3. The Policy ADPP5 housing requirement or target for the AONB represents 19% of the overall housing requirement of the CS (up to 2,000 dwellings out of at least 10,500 dwellings). Therefore, to maintain the broad distribution between urban and rural development and maintain the current planned level of new housing provision in the AONB we propose that, subject to the above caveat re landscape assessment, Policy SP2 should include a housing requirement or target figure of up to 1,680 – 1,870 net additional dwellings for the period 2020 – 2037.</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP3 Settlement Hierarchy

#### (Proposed Submission LPR Policy: SP3 Settlement Hierarchy)

Number of responses received: 50

Respondent	Response	Council Response
<b>Internal</b>		
<b>Statutory consultees</b>		
Beenham Parish Council (lpr1238)	Parish Councillors noted that Beenham was not deemed to be a service village, therefore had not been included. The Council would be open to considering small affordable housing developments in the village.	Comments noted, no change required.
Chieveley Parish Council (lpr1720)	Policy supported. Subject to comments on Appendix 3 Settlement Boundary Review, Chieveley Parish Council continues to support the settlement hierarchy approach in Policy SP3.	Support for the policy approach is noted. No change required.
Greenham Parish Council (lpr890)	Support for the policy. No further comment.	Support for the policy approach is noted. No change required.
Holybrook Parish Council (lpr1320)	Settlement Hierarchy Policy SP 3 ~Development in West Berkshire will comply with the spatial strategy set out in policy SP1.Eastern Urban Area (Tilehurst, Calcot, Purley on Thames). The urban areas will be the prime focus for housing and economic development. The parish of Holybrook is not mentioned specifically in this policy. Does that mean it is not included in SP3 or is it grouped with Calcot? It is difficult to engender the sense of space in terms of reference within in the document if it does not relate to the area in question. It also diminishes any credibility and reputation that the parish has built since its formation in 2020 (Holybrook is made up of two	Comments noted. The area covered by Holybrook Parish Council falls within the Eastern Urban Area for the purposes of the settlement hierarchy. The settlement hierarchy policy identifies the relative role and function of the different tiers, it does

Respondent	Response	Council Response
	<p>suburbs of Reading: Beansheaf Farm and Fords Farm, together with part of the older suburb of Calcot that lies south of the A4 Bath Road and a section of Southcote). The revised and updated settlement hierarchy ensures that new development planned throughout the Plan period continues to be directed to the more sustainable settlements, is appropriate for the settlement in question and is adequately supported by infrastructure and service. (4.28 p. 24) Infrastructure, in particular healthcare, schools and roads in the Eastern Area has not kept pace with development. The emerging Local Plan has the perfect ideology of stating that any development should be supported by infrastructure and service and yet does not seem to address the current deficiencies or potential future deficiency. How can the healthcare provision be improved when the doctor surgeries are full and the ECG states it has no plans for more surgeries, how can schools offer better service when they are full and are running out of land to develop, how can roads cope with more capacity when there is no space for widening and how can more sustainable transport modes be encouraged when there is no way for, for example, improved cycle lanes? There is no room on our roads for improved cycle lanes unless pavements are used and these are far too narrow for use by pedestrians and cyclists.</p>	<p>not in itself determine development. The policy lists the main settlements which fall within the Eastern Urban Area following the Settlement Hierarchy Topic Paper Methodology. It was decided not to list individual estates within the Eastern Urban Area, however the LPR will include a Policies Map which will show the boundaries of the Eastern Urban Area which will include Beansheaf Farm and Fords Farm.</p> <p>The LPR is read as a whole. All LPR policies should be viewed together and not in isolation in the preparation and consideration of planning applications. Development proposals will be judged against all relevant policies. All Development Plan policies will be taken into account in determining planning applications, along with other material considerations in a proportionate manner. No change required.</p>
Hungerford Town Council (lpr125)	Support for the policy. No further comment.	Support for the policy approach is noted, no change required.
Newbury Town Council (lpr2270)	We support the settlement hierarchy, especially the need to retain separate identity of adjacent settlements. We regret that the gap between Newbury & Greenham has already almost disappeared but strongly urge that the remaining gap around St Mary's Church Greenham is retained, also the gap east of the Community Hospital which is in Newbury despite having a Thatcham postal address.	Comments noted, Policy DM1: Development in the Countryside sets out a presumption against development outside of adopted settlement boundaries. The Council

Respondent	Response	Council Response
	<p>The expansion of Newbury settlement area into parts of Cold Ash, Shaw, Speen, and Enborne is of concern, especially with the introduction of CIL and the pressure that new development in those parishes puts on Newbury town centre community services, which are “supporting infrastructure”. Therefore, at the earliest opportunity we wish to see a Community Governance Review undertaken by the District Council to adjust parish boundaries, although we realise this is not part of the Local Plan process.</p>	<p>recognises in the LPR the pressure for development, and cumulative impact is an important consideration in the areas which face this pressure, as incremental changes when viewed collectively can significantly change the character of a landscape.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, is a ‘living document’ and will be updated regularly updated in consultation with infrastructure providers.</p> <p>As noted, parish boundary amendments cannot be considered through the LPR. No change required.</p>
Shaw-cum-Donnington Parish Council (lpr197)	<p>Support for the policy. Response from Shaw-cum-Donnington Parish Council on Local Plan Consultation. SP3 Settlement hierarchy. We support this policy. We note the scale of development proposals will be relative to the existing or proposed level of facilities and services in the settlement and the necessary supporting infrastructure. This is not true of the North Newbury development as almost no additional facilities are being provided apart from a school and existing facilities are only sufficient for the existing village population. Urban area, bullet 3, the retention of the individual identities of adjacent settlements what we see is that developments in villages at the edge of Newbury are seen as dormitory developments and not an integral part of the villages. We note the very poor relation of North Newbury development to Shaw-cum-Donnington with poor road access requiring a car journey via the Robin Hood roundabout to get to the existing village. We recognise that it obtained approval on appeal but in future possible development in this area the relation between it and the settlement must be suitable and enhanced. In bullet 4 we think the necessary support infrastructure should include convenience stores and allotments as well as enhancing</p>	<p>The Council welcomes the support and the contextual comments provided. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, it is a ‘living document’ and will be updated regularly and updated in consultation with infrastructure providers. No change required.</p>

Respondent	Response	Council Response
	<p>existing facilities such as village halls. 4.29 Under Urban Area we note they have a good level of accessibility and frequent public transport. We note that public transport struggles and results in infrequent services that encourage car use. The only ones that thrive are the ones on major routes such as Newbury to Reading. 4.30 We note that development will build on areas that have the infrastructure to support sustainable growth. This has tended to assume that infrastructure in the town centre and ignore the needs of adjacent settlements. For example, Shaw-cum-Donnington and Greenham where local infrastructure has not been enhanced with the addition of further social infrastructure.</p>	
Stratfield Mortimer Parish Council (lpr392)	Support for the policy. No further comment.	Support for the policy approach is noted. No change required.
Streatley Parish Council (lpr116)	<p>Policy is supported.</p> <p>Streatley Parish Council is pleased to note that WBC has determined that Streatley should remain classified as a smaller village, despite the initial classification based on overall scores alone placing it in the Service Village category.</p> <p>Streatley Parish Council supports the view of the Planning Inspectorate report from 2012 that Streatley should remain as a smaller village and confirms that since that report, there has been no material improvement in access to services and facilities; in fact there has been a reduction in transport services in the years following the previous report.</p> <p>Streatley Parish Council also agrees with the decision that the three sites in Streatley that were proposed for possible development have been ruled out in Stage 1 of the site selection process. Streatley is within the North Wessex Downs AONB so any small development, even of only a few additional houses, would have a significant impact on the village and the local environment. The landscape surrounding the village is a precious resource so great care should be taken to protect it and prevent it from being destroyed.</p>	Support for the policy approach is noted. No change required.
Thatcham Town Council (lpr1390)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p>The scale of development proposals will be relative to the existing or proposed level of facilities and services in the settlement, together with their accessibility." We agree that level of facilities,</p>	Comments relating to Policy SP17 are considered within the relevant Council Response Table.

Respondent	Response	Council Response
	<p>and accessibility are important factors. We note that "Thatcham underperforms other centres in terms of service provision including education - primary, secondary, and SEN; healthcare, community, leisure and sporting facilities", that "the A4 experiences congestion during peak periods", and that " "long queues often forming in peak periods on both sides of the railway, which sometimes do not clear before the barriers come back down". The selection of NE Thatcham is not justifiable based on its underperformance in services, and lack of suitable highways capacity, and is inconsistent with the policy. There is a conflict between the selection of NE Thatcham and the policy SP 3 which is necessary to resolve. Section 4.28 "is appropriate for the settlement in question and is adequately supported by infrastructure and services." Without a published Infrastructure Delivery Plan, it is impossible to evaluate whether there is supporting infrastructure. This is a serious omission from the consultation and failure to provide required evidence. It is necessary for the supporting text to describe the metrics used to assess whether the identified site has supporting infrastructure. What infrastructure has been assessed, and under what conditions is a site identified as being 'adequately supported'. Section 4.30 "The main focus for growth will therefore be Newbury, Thatcham." The comments made in section 4.10 apply here. Section 4.31 "they are still sustainable locations." It is unclear as to what defines an unsustainable location. The policy should indicate if any area in West Berkshire is considered unsustainable.</p>	<p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, it is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The review of the Settlement Hierarchy in West Berkshire assessed the relative sustainability of locations against a set of criteria. The assessment was positive in identifying the most sustainable locations in the District for development. The starting point was not from the perspective of asking where development could not go.</p> <p>The policy is applied to the different levels of the hierarchy. It concludes with reference to "smaller settlements outside the settlement hierarchy" being delivered in accordance with policies SP1 and DC1. [These locations could be considered the least sustainable locations.] No change required.</p>
Tilehurst Parish Council (lpr1981)	The Tilehurst NDP will not be allocating sites (SP1, SP3). It will instead focus on defining policies to ensure that wherever development happens in the Parish it meets the needs and wishes of the local community, takes due consideration of environmental and ecological impacts and protects	Comments relating to the approach being taken by the Tilehurst NDP are noted and the Council will continue to support the

Respondent	Response	Council Response
	green spaces. It will also define infrastructure projects to mitigate the impact and enhance the quality of life for residents.	Neighbourhood Plan Group. No change required.
<b>General consultation bodies</b>		
<b>Other stakeholders</b>		
Tim Hall (lpr640)	Support for the Policy:  Happy with the overall settlement hierarchy but not with the idea that development in Urban Areas be extended into greenfield sites	Support for the policy approach in regards to the settlement hierarchy is noted. No change required.
David Hill (lpr706)	Support for the Policy:  Broadly, the principles of this policy are supported. There is a need to keep the settlement boundaries of these areas under review. Development should be considered on its merits, rather than based upon which side of a line it falls.	Support for the policy approach is noted. No change required.
Councillor Alan Law (lpr1081)	I am in complete agreement with all of this section / Policy. At a personal local level I am pleased the Villages of Streatley and Upper Basildon remain classified as other villages. It is what the overwhelming majority of the residents and the two Parish Councils want in order to preserve their unique landscapes and settings.	Support for the policy approach is noted, no change required.
Councillor Alan Macro (lpr753)	Policy not supported: The imposition of the DEPZs around AWE sites mean that housing site allocations can no longer be made at two of the Rural Service Centres: Burghfield Common and Mortimer. This means that other RSCs and Service villages are being asked to take more housing and thus stretching their infrastructure and services.  [Preferred approach] Modest-sized housing allocations should be made at larger villages that have services such as convenience stores, pubs, primary schools, churches, village halls and/or public transport. Such allocations would increase the viability of the services and help such villages become more sustainable.	Comments noted. Policy SP4 Atomic Weapons Establishment (AWE) Aldermaston and Atomic Weapons Establishment (AWE) Burghfield sets out the policy context for the consideration of development within the DEPZs. The Local Plan must have regard to the DEPZ as set out in paragraphs 45 and 97 in the NPPF.

Respondent	Response	Council Response
		The principles which underlie the spatial distribution stem from the overriding objective of enabling sustainable development, development that will meet the social and economic needs of the District while conserving and enhancing the environmental assets of the District and meet the objective to mitigate and adapt to the effects of climate change and minimise demand for energy and other resources. No change required.
David Marsh (lpr1826)	Policy neither supported nor unsupported.  No further comment.	Comment noted, no change necessary. No change required.
Peter Norman (lpr1019)	Policy not supported.  SP3 has been derived from an consultation exercise conducted back in 2005 where in deciding where to allocate 10,500 new homes a policy of urban extension was adopted in preference to other measures without any reference to what this meant in practice or the sites which would be needed to deliver on the policy. It was a flawed consultation at the time that had a limited response and to continue with its assumptions under a new LPR to carry us forward to 2037 is a mistake that takes no account of the complete changed planning landscape in terms of environmental priorities (SP16) and the challenges posed by tackling climate change - both priorities that call for a greening of the landscape over greenfield development, and the additional challenges and changes to work patterns and shopping habits posed by Covid 19. To devise an LPR without this would be a fundamental mistake that will burden rather than enhance future generations.  SP3 should be subject to a major consultation exercise revisiting the ground covered in 2005 to reflect the change in priorities we now face to check whether the settlement hierarchy is still relevant	Comments noted. The settlement hierarchy has been reviewed and conclusions set out in the Topic Paper that accompanies the emerging Local Plan Review to 2039. The methodology was subject to consultation in 2018. This has been used to inform policy SP3.  In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be

Respondent	Response	Council Response
	<p>4.29 In the context of Covid 19 just looks wrong and with the change of emphasis to people working from home a major opportunity exists to revive villages to become major community hubs for work and pleasure</p> <p>4.30 Again the emphasis on major urban hubs looked misplaced. Both Newbury and Thatcham could do with major infrastructure investment to catch up with the growth in housing they have already seen but the whole scope of what is required of an urban centre should be revisited and how retail, work hubs and residential space should be provided for going forward</p>	<p>assessed through subsequent reviews, once such implications are realised.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, it is a 'living document' and will be updated regularly updated in consultation with infrastructure providers. No change required.</p>
Deborah Reynolds (lpr2469)	<p>Spatial strategy SP3 and 4 reflect many aspect of national policy. However there is no evidence that the policy alteration associated with exclusions around AWE Burghfield or Aldermaston have been taken into account centrally, thereby updating the national allocations. Residents can rightly expect the Council to have challenged this at the highest level, including by Judicial Review, before producing a plan B such as the Thatcham development. All the materials in the review predate the dramatic alterations associated with online shopping and the COVID-19 pandemic. Therefore it is clear that the housing allocations are flawed in several respects.</p> <p>Recommendation 4 – provide clear evidence of Up To Date national comparable figures for developable land. This must demonstrate that reassessment centrally has been undertaken, demonstrate the impact of this and COVID-19 are all accounted for in the Local plan review. Set demanding targets for conversion of brown field commercial property to residential.</p>	<p>Comments noted. The local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small decrease to 509 dwellings per annum due to slightly improved housing affordability ratios published in March 2021).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p>

Respondent	Response	Council Response
		<p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration. No change required.</p> <p>Up to date national comparable figures for developable land are available and reviewed annually, these are available in data provided for the assessment of the Council's Five Year Housing Land Supply and contained in the West Berkshire Council - Annual Monitoring Report (AMR) and Planning Commitments - Information available <a href="#">here</a>.</p>
Paula Saunderson (lpr954)	<p>Policy not supported:</p> <p>Why is Boxford not in the Service villages? it should be due to its proximity to the A34 &amp; M4? The overdevelopment of Thatcham looks like a completely politically motivated ploy and the Water &amp; Flood Management aspects of 2500 dwellings is poorly explained.</p>	<p>Comments noted. Boxford is assessed within the Settlement Hierarchy Review, the reason why it is not identified as a Service Village is that it lacks the necessary services and facilities to be classified as such following the established methodology. No change required.</p>
Nataliya Topliss (lpr795)	<p>Policy not supported.</p>	<p>Comments noted. Thatcham is correctly identified as an Urban Area</p>

Respondent	Response	Council Response
	<p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>in the Settlement Hierarchy following the established methodology set out in the Settlement Hierarchy Topic Paper. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR. The IDP is a 'living document' and will be updated regularly in consultation with infrastructure providers. No change required.</p>
<p>Councillor Tony Vickers (lpr528)</p>	<p>We support this policy. However the imposition of DEPZs around AWE sites (SP 4) is seriously skewing its application. Housing allocations that would otherwise go to Rural Service Centres (RSCs) in the DEPZs (Burghfield Common and Mortimer) are prevented during this Plan Period, as are allocations in some Service Villages such as Brimpton and Aldermaston. Meanwhile other settlements have to take a larger share, which stretches their infrastructure in some cases. The main impact of SP 4 on SP 3 is the imposition of an excessively large increase in the population of Thatcham (SP 17) in this Plan Period and the subsequent one. This shows no evidence of being sustainable. The imposition of the DEPZs also means that other RSCs and Service villages are being asked to take more housing and thus stretching their infrastructure and services. Modest-sized housing allocations should be made at larger villages that have services such as convenience stores, pubs, primary schools, churches, village halls and/or public transport. Such allocations would increase the viability of the services and help such villages become more sustainable.</p> <p>We want the Council to reconsider SP 4 and SP 17 and instead allocate more housing sites to Rural Service Centres and Service Villages in the Eastern Area and AONB to secure their future viability. This would actually mean following SP 3 in a more logical manner.</p>	<p>Support noted and comments regarding displacement effects of the AWE DEPZ also noted. Comments on SP4 and SP17 acknowledged and are addressed under those policies. No change required.</p>
<b>Landowners, site promoters and developers</b>		
<p>Armstrong Rigg Planning for Manor Oak Homes (lpr2420)</p>	<p>Manor Oak Homes supports the identification of Lambourn as a Rural Service Centre, which are the second tier of the settlement hierarchy. Lambourn is a settlement with a good range of key services and opportunities for employment, community and education and serves a wide catchment area with good accessibility and regular public transport provided to a number of</p>	<p>Support noted.</p> <p>The sites proposed for allocation have been subjected to a rigorous</p>

Respondent	Response	Council Response
	<p>destinations. It therefore meets the definition of a Rural Service Centre that offers development potential appropriate to its character and function.</p> <p>Manor Oak Homes is, however, concerned that the corresponding distribution of housing to Lambourn does not reflect its size or the important role it plays in providing services to a wider rural catchment area than many other Rural Service Centre. The table below (<i>in full representations</i>) provides a comparison between the population of the identified Rural Service Centres and the number of dwellings allocated in the adopted and emerging development plan. This demonstrates that despite being the 3rd largest in terms of population, Lambourn ranked second to last in terms of the number of dwellings it has been allocated. This is a significant concern for the ongoing sustainability of the settlement which is compounded by the unique housing needs of the settlement and the failure of existing allocations to deliver as set out in more detail below. To resolve this issue, we consider that Lambourn should be allocated its fair share of housing which would total c.120 dwellings.</p>	<p>HELAA and site selection process including many factors in assessing suitability rather than the singular measure of population size. Site allocations do not fall under Policy SP3. No amendments to Policy SP3 are required.</p>
<p>Bluestone Planning for Darcliffes Homes Ltd (lpr2426)</p>	<p><i>(comments repeated in lpr2425 under SP1)</i></p> <p>Darcliffes Homes Ltd (hereafter 'Darcliffes') support the principle stated in policy SP1 Spatial Strategy of identifying the locations as set out in the settlement hierarchy in policy SP3 where residential development may take place. This is consistent with the guidance on the general approach to the delivery of new homes, as set out in the NPPF.</p> <p>The densities as set out in the policy are generally supported, although it should also be noted that higher density may also be achievable in certain locations, particularly around the Eastern Area. Careful and sensitive design can deliver higher density, without leading to unacceptable intensification.</p> <p>The policy also refers to the significant commitments throughout the District and as explained below, there are concerns that these either may not come forward during the Plan period and/ or are being built out at a rate which would mean that they are not appropriate for inclusion in the Adopted Plan and therefore alternatives will have to be sought.</p> <p>Policy SP3 sets out the settlement hierarchy and identifies the urban areas which will be a prime focus for housing. It is supported that the Eastern Urban Area will be a focus, although there is a significant imbalance between the numbers allocated to Newbury and Thatcham when compared to Eastern Area, with over 4,000 homes to the former and under 1,000 homes to the latter. This is not considered appropriate given the level of services and facilities provided to the Eastern Area.</p>	<p>Comments noted.</p> <p>Support in principle for Policy SP1 and SP3 noted.</p> <p>Development densities are referred to in Policy SP1.</p> <p>Housing and employment commitments are monitored through the AMR.</p> <p>Policy SP3 does not seek to allocate housing or apportion. The policy purpose is to categorise settlements by their roles and quantum of local services.</p>

Respondent	Response	Council Response
	<p>With regard to the Eastern Area specifically, it is stated that new allocations for Tilehurst and Burghfield will be made through NDPs. This is clearly dependent on the NDP process, which is lengthy and sometimes fraught with difficulties.</p> <p>At the time of writing, Tilehurst for example have not yet published their draft Neighbourhood Plan and therefore it will still be some time before this can be taken to and approved at referendum, and housing can start to be delivered in accordance with such allocations. Although Policy SP14 sets out that the Designated Neighbourhood Area should allocate 175 dwellings, there is no timeframe for when this may come forward or whether this number will be agreed.</p> <p>It should also be noted that in the HELAA the text regarding Tilehurst makes it clear that allocations will be made within the Local Plan Review where not allocated by the NDP.</p> <p><i>“Tilehurst</i>  <i>8.31. Tilehurst Parish is designated as a Neighbourhood Area, and Tilehurst Parish Council are preparing a neighbourhood plan. The Parish Council have expressed an intention to include residential allocation(s) in the neighbourhood plan. The site selection work will therefore be undertaken by the Parish Council.</i>  <i>8.32. In the event that Tilehurst Parish Council choose not to include residential site allocations in the neighbourhood plan, then West Berkshire Council will pick up the site selection work and consider allocations through the LPR.”</i></p> <p>All other locations are to be treated as open countryside (as set out in Policy SP1) and therefore no sites in these areas could be brought forward in accordance with policy. It is therefore considered that housing allocations should also be made either independently or collaboratively in the Review Local Plan or the policy should be more flexibly worded in the urban areas.</p> <p>There is a concern that policies do not go far enough in bringing forward small and medium sized sites, particularly those located on the edge of the identified urban area settlements. As stated above, if such sites are not allocated in the Local Plan Review or in particular, a NDP, because an NDP has either not been developed or has been delayed, there is no mechanism for such sites to be approved in the future. This may be an issue of great concern where some of the larger strategic sites are not deliverable within the Plan period.</p>	<p>Refer to the Council’s responses to representations on SP14.</p> <p>These points are not relevant to SP3. The proposed allocation of sites has been the result of the HELAA and site selection process.</p>

Respondent	Response	Council Response
	<p>It is also unclear from the supply calculations whether or not there has been an undersupply from the Core Strategy 2012 which has been carried forward. Sandleford Park was allocated in the 2012 Core Strategy and has not yet been granted permission. Clarification is sought as to how this has been dealt with and whether further sites should be allocated in this regard.</p> <p>The table in Policy SP13 also sets out that Sandleford Park seeks to accommodate up to 1500 dwellings, whereas the text in paragraph 6.12 states that only 1,000 houses will be delivered by 2037 and the remainder in the following Plan period.</p> <p>This approach is also inconsistent with the encouragement of developers to bring forward small and medium sized sites. The HBF document (2017) 'Reversing the decline of small housebuilders: Reinvigorating entrepreneurialism and building more homes' notes (p.29) that:  <i>"For understandable political and financial reasons, planning authorities have increasingly sought to allocate very large strategic sites for residential development in order to satisfy its requirement to demonstrate a five-year land supply. Large sites on the edge of settlements can be less likely to spark political controversy as they are slightly removed from existing communities. For the very same reason, however, they may require substantial infrastructure and up-front financing resulting in relatively lower delivery rates in the early years of the site's existence making rapid delivery unrealistic."</i></p> <p>The latest research from Lichfields (February 2020) 'Start to Finish What factors affect the build-out rates of large-scale housing sites? Second edition' discusses the lead times on large sites and the data is not encouraging:</p> <ul style="list-style-type: none"> <li>• Schemes of 500-999 dwellings take on average approximately 5.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 1,000-1,999 dwellings take on average between 6.9 and 7.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 2,000+ dwellings take on average approximately 8.4 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years. 6.1 years of this are taken up with the planning application process. (see figure 4 of the Lichfields document)</li> </ul> <p>In contrast, smaller sites between 0 and 99 dwellings typically deliver within 3.3 years of the validation of the first application.</p> <p>On this basis it is considered that the following should be taken into consideration:</p>	

Respondent	Response	Council Response
	<ul style="list-style-type: none"> <li>• SP16 Sandlesford Park is allocated for 1,000-1,500 dwellings, taking the above into account, it would take between 6.9 – 7.0 years until the first dwelling is built based on the above assumptions. It should be noted however that the site has been allocated since 2012 and although a number of applications have been submitted, there remains outstanding issues and the site still does not have permission. It is therefore considered that given the length of time taken to date, that the site is unlikely to realistically deliver the numbers proposed.</li> <li>• SP17 North East Thatcham is allocated for 2,500 dwellings, taking the above into account, it would take 8.4 years from validation until the first dwelling is built, based on the above assumptions. There has been no application to date. It unlikely therefore that any dwelling would be built until approximately 2030 and following this, the average annual build-out rate for a scheme of 2,000+ dwellings is an average of 160 dpa (as set out in the aforementioned Lichfields report). On this basis, with the Plan period up to 2037, this would equate to 1,120 dwellings during the Plan period and not 2,500 as set out. It is unrealistic that on an allocation of this size that dwellings could be brought forward to the market at a faster rate.</li> </ul> <p>The HBF document goes on to advise that (p.29-39):  <i>“Once allocated, LPAs are systematically failing to assess on an ongoing or regular basis, the actual delivery achieved against the targets indicated in its local plan. For instance, by allocating one or several very large sites to achieve a five-year supply of land, delays progressing one site through planning will have a substantial impact on the ability of the authority to adequately plan for the number of homes required.....</i>  <i>..... To meet demand for housing, we need more sites of all sizes allocated. Indeed, large sites often deliver new homes at astounding rates, particularly in areas where the market is strong, but small sites are consistently efficient in their delivery. For this reason, the allocation of a wider range of sites within local plan allocations would not only help increase plurality in the housebuilding sector, it would also improve the chances of local authorities’ meeting ambitious supply trajectory plans.</i>  <i>Achieving this all-round positive outcome need not involve overly prescriptive diktats. A subtle shift in policy emphasis, along with a greater focus on ongoing delivery within a local plan period would help to achieve a positive change in behaviours at a local level.....</i>  The above is also irrespective of the fact that many of the smaller HSA sites are already near completion and at least some the numbers should have potentially been counted before the Plan period. Therefore, these numbers are unlikely to be taken forward in the Adopted Local Plan.</p>	

Respondent	Response	Council Response
	<p>In addition, based on last published WBC housing monitoring report (2019), there was a projected windfall allowance of 362 dwellings for the five years up to 2024. To cover the Local Plan Review period to 2037 would suggest a windfall figure of 1,231 dwellings should be included in the supply and not 1979 as currently stated in Table 2 Housing Supply at March 2020. Therefore, there is real danger that the delivery target will not be met due to a reliance on windfalls. This makes very clear that when combined with a lack of flexibility / unclear non-implementation allowance, that there is a need for more allocation sites to bridge the shortfall, in the order at least 700 units.</p> <p>In summary, there is a clear under provision for new sites and further small to medium sites should be considered with flexibility to allow sites on the edge of the urban areas identified to come forward to ensure that sufficient sites can be delivered within the Plan period.</p> <p>[Preferred approach] It is considered that policies SP1 and SP3 should be reworded to provide more flexibility.</p> <p>Other nearby Local Planning Authorities have recognised the issue that can arise where a NDP is not delivered. For example, South Oxfordshire District Council in their Policy H1 of the recently adopted Local Plan (but see also their Core Strategy which also contained a similar policy) set out that: <i>“Where Neighbourhood Development Plans are not progressed in larger villages and market towns, planning applications will be considered against the housing delivery targets for the towns and larger villages set out in this Plan.”</i></p> <p>A form of words reflecting the above, would ensure that there would be sufficient flexibility to take into account any NDP problems and Policy SP1 should be amended accordingly, with and SP3 and DC1 given clarification in this regard.</p> <p>To reflect this and the potential undersupply of housing, further small to medium sites should be also be added to policies SP13-14, with any update to SP12 as a result. Darcliffe Homes are proposing two such sites within the Eastern Urban Area, which would deliver up to 80 dwellings. The supporting text at paragraph 6.22 would also need to be updated in this regard.</p> <p>The addition of further small to medium sites such as these will require a re-consideration of the capacity of the strategic-scale sites to reflect realistic expectations. Revising the site capacities slightly downward to accommodate a shift of dwelling numbers will not however adversely affect the ability of the promoters to bring the strategic sites forward for development, but will allow a longer period for developing out the entirety of the site, which is likely to run into the following Plan period.</p>	<p>The preferred approach of including more flexible wording to facilitate NP allocations is noted. However, Policy SP3 is not the correct policy to consider this issue. Please refer to SP12 (SP13-14). No amendment to Policy SP3 is required.</p>

Respondent	Response	Council Response
	Allocating additional small to medium sites will also have a positive effect on the smaller scale and local housebuilding industry, which includes Darcliffe Homes, in providing opportunities that will help to continue to sustain this important re-emerging sector of the housebuilding industry.	
Carter Planning for RLA Jones (lpr1900)	Support. We welcome the re-incorporation of Lambourn as a Rural Service Centre with the ability to meet local housing needs through the allocation of housing sites.	Support noted. No changes to Policy SP3 are required.
Onalee Cubitt (lpr2190)	Regarding these specific representations as they relate to the emerging allocation at Kintbury, both the landowners and Sovereign support policy SP3 and the identification of Kintbury as a service village and one that is capable of supporting growth. We would add that the village also benefits from a main line train station, which sits on the Taunton to Reading line, with direct links to the south west and wider south east. Moreover, the St Mary's Primary School is very well respected and indeed received a Good rating from its most recent Ofsted report, whilst the Kintbury Surgery received a Good rating as part of its most recent CQC inspection. The village is therefore very sustainable, having a good range of quality services, as well as good infrastructure links with the wider District and beyond. Furthermore, as part of our comments regarding the school, we are aware that the school appears to be operating under capacity with regards new intakes. There is therefore a need for the village to take more growth, not only because the existing services have capacity, but because it is going to make these valuable services more sustainable.	Comments noted. Comments are not proposing any change to the policy per se but seeking an increase in the housing allocation for Kintbury. Kintbury has been assessed in the Settlement Hierarchy as a 'service village', having taken into account existing services in accordance with the agreed settlement hierarchy methodology that was subject to consultation in 2018. The settlement hierarchy methodology and the subsequent designation for Kintbury is not proposed to be changed. As a result no changes to Policy SP3 are required.
Fisher German for Musgrave and Begley (lpr1228)	The identification of Chieveley as one of the most sustainable settlements in West Berkshire is supported, as is its identification as a Service Village. As demonstrated by the Council's published supporting Settlement Audit, Chieveley benefits from a high level of service provision, which serves both the settlement itself and wider rural hinterland, particularly the smaller hamlets to the north and west. Policy SP3 states that Service Villages offer some limited and small-scale development potential, appropriate to the character and function of the village. Such development will be delivered to meet local needs through development within the settlement boundary and through new allocations. Whilst windfall infill development can be appropriate, it is vital to ensure there is sufficient land allocated to deliver housing needs for a number of reasons. First, the supply of infill land is likely to be highly constrained, particularly having regard for the level of such development	Support noted. No amendments to Policy SP3 are required.

Respondent	Response	Council Response
	<p>to date. Suitable infill land is a highly finite resource, and it cannot be expected to continue to deliver at past rates, as suitable sites and opportunities to deliver such development will have diminished by now historic windfall delivery. Secondly, there is considered to be significant benefit in seeking to positively meet local housing needs through housing allocations, as piecemeal development will not contribute to the funding of infrastructure through developer contributions nor contribute to the delivery of much needed affordable housing. The positive allocation of land, combined with robust site-specific policies will ensure the delivery of high-quality development, and the provision of funding for any infrastructure deficiencies and the provision of much needed affordable housing.</p>	
<p>Fowler Architecture and Planning Ltd for Denford Park Pastures East Ltd (lpr2212)</p>	<p>The town of Hungerford is designated as a rural service centre within the Settlement Hierarchy. It is the Representors' contention that Hungerford has been miscategorised within the hierarchy. Policy SP20 notes that Hungerford has a town centre. This is a correct reading of the centre of Hungerford, which hosts a wide range of services and facilities, across a significantly sized, urbanised, and easily accessible area. Hungerford and Thatcham are the only two such Town Centres within the District, with Newbury also having a Major Town Centre as defined by Policy SP20. This reflects the sustainability of the settlement and its suitability for intensification of commercial use across the town.</p> <p>The Settlement Hierarchy Review that forms part of the evidence base did not seek to reconsider the 'Urban Areas' tier of the hierarchy, assessing only those settlements defined within Policy C1 of the HSA DPD that already sit in the lower tiers. This is methodologically unsound. The town of Hungerford meets the definition of an Urban Area set out within this Review and has the strategic importance expected of such a settlement. Indeed, the SA/SEA Scoping Report notes that "approximately 73% of the population is concentrated in the Kennet Valley at strategic points along the A4 (Newbury, Thatcham and Hungerford) and on the western side of Reading".</p> <p>The Audit completed as a part of the Settlement Hierarchy Review found that the town of Hungerford attained a score of 46, higher than any other settlement audited. Qualitative assessment as to why Hungerford has not been re-designated an Urban Area is not available, and as such its exclusion from this tier is not justified. Policy SP3 is therefore considered to be unsound.</p>	<p>Comments noted. Disagree that Hungerford has been incorrectly defined within the settlement hierarchy. Hungerford has been correctly defined as a town rather than an urban area.</p> <p>The Topic Paper did not set a threshold for 'major urban areas'. The fact of Hungerford being considered the most sustainable location amongst the remaining settlements, does not mean it automatically needs to be re-classified. The reference to the concentration of population along the Kennet Valley does not imply that Hungerford is a major urban area merely by association with Newbury and Thatcham.</p> <p>No amendments to Policy SP3 are required.</p>
<p>Hallam Land Management (lpr2334)</p>	<p>The settlement hierarchy set out in the emerging draft identifies Mortimer as a Rural Service Centre, where non-strategic sites can be allocated for housing through other policies in this emerging Plan or in Neighbourhood Plans.</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>The hierarchy is not contested, and it is agreed that Mortimer, as a Rural Service Centre, has <i>a good range of key services and opportunities foremployment, community and education.</i></p> <p>When comparing the three Rural Service Centres of Mortimer, Theale and Burghfield Common, it is clear to see that Mortimer is less physicallyconstrained than the other two settlements. Theale is constrained to the east by the M4 and to the south by the River Kennet and surrounding wetlands. Burghfield Common has extensive woodland areas surrounding the settlement, including the Wokefield Common Nature Reserve, and is within the Atomic Weapons Establishment safeguarded zone for Burghfield. Consequently, Mortimer should be a focus for residential development, and it is inconceivable and inappropriate not allocate any housing in this emerging plan to Mortimer to meet the housing need in the Eastern Area or indeed to sustain the existing community.</p>	<p>This representation appears to refer to the site selection process rather than the settlement hierarchy policy. Agreement that Mortimer is correctly categorised as a Rural Service Centre is noted.</p> <p>These points are not relevant to SP3</p> <p>The proposed allocation of sites has been the result of the rigorous assessment through the HELAA and site selection process.</p> <p>No changes to Policy SP3 are required.</p>
Lichfields for North East Thatcham Consortium (lpr2393)	<p>Policy SP3 sets out the proposed settlement hierarchy which identifies the key urban areas in West Berkshire, including Newbury and Thatcham. Paragraph 4.30 of the supporting text sets out a narrative that “Focusing further growth in these areas has the potential to make the best use of previously developed land and house residents close to jobs, shops, leisure and cultural facilities and public transport.” While that may be the case, we consider that the sentence be amended (or supplemented) to reflect that much of the actual growth in principal urban areas will be met on greenfield sites as part of the strategy for delivering infrastructure and supporting the vitality of those settlement. This would align the narrative of Policy SP3 with policies later in the plan allocating sites primarily on the principal settlements urban edge.</p> <p><b>Review of the West Berkshire Settlement Hierarchy (background report)</b></p> <p>We have reviewed the report and note that it concludes that Thatcham (as well as Newbury and the Eastern Area to Reading) will continue to act as the District’s urban areas, providing a wide range of services and opportunities for employment, community and education and serving a large catchment area with good levels of accessibility and frequent public transport to a large number of destinations. We are therefore content that the report evidences that development in Thatcham would be sustainable on that basis. This is in conformity with the NPPF which states at paragraph 9 that “Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.” As set out below, the needs of Thatcham also relate to the role of strategic development to help regenerate the town.</p>	<p>Comments noted.</p> <p>The Council does not agree there is a need to amend paragraph 4.30. The paragraph explains one of consequences of the policy and the settlement hierarchy. In relation to the hierarchy and the strategy, it would be incorrect to refer in paragraph 4.30 to greenfield sites. No amendments to Policy SP3 or the supporting text is required.</p> <p>Comments on the Review of the Settlement Hierarchy Topic Paper noted.</p>

Respondent	Response	Council Response
<p>Nexus Planning for Pangbourne Beaver Properties Ltd (lpr1650)</p>	<p>We support the settlement hierarchy identified in Policy SP3 which is based upon the evidence provided in the document entitled Review of Settlement Hierarchy Topic Paper. We support the continued identification of Pangbourne as a Rural Service Centre which, based on the definition in Policy SP3, are larger rural settlements with development potential appropriate to the character and function of these settlements through infill development, non-strategic sites allocated in the Local Plan, and rural exception sites. Table 1 adds that these are Settlements with a good range of key services and opportunities for employment, community and education. They serve a wide catchment area and contain reasonable accessibility and regular public transport provided to a number of destinations. Para 4.31 adds that Rural Service Centres provide: a focal point for the surrounding villages and rural areas in terms of the provision of services and facilities. Although they do not have as wide a range of services as the urban areas, they are still sustainable locations. More specifically, Appendix 3 of the Review of Settlement Hierarchy Topic Paper identifies that Pangbourne scores 40 points in the Council's Audit Matrix and Settlement Scores, behind only Hungerford and Theale (and equal with Tadley/Pamber Heath) in terms of its sustainability. In common with Hungerford and Theale, but unlike the majority of the other Rural Service Centres, Pangbourne includes a mainline railway station with direct access to Oxford and Reading/London As we highlighted in our representations in 2018, given that some of the identified Rural Service Centres benefit from a railway station whilst others do not, we suggested that the classification could be divided in to two: Primary Rural Service Centres - comprising those with good access to a railway station ie Hungerford, Mortimer, Pangbourne and Theale Secondary Rural Service Centres comprising those that are distant from a railway station ie Burghfield Common and Lambourne. Development should be directed to Primary Rural Service Centres in the first instance. The Council has chosen not to do this. However, it is essential that the housing strategy that they adopt is consistent with these key principles i.e. focusing development in the most sustainable locations. In fact, as set out in further detail in our representations to Policy SP15, the Council is doing the opposite. They are making no allocations at the highly sustainable Rural Service Centre of Pangbourne whilst making allocations in less sustainable Rural Service Centres such as Burghfield Common(37) Lambourn(35) and Mortimer(36). Even more inappropriately, the Council in fact proposes to make housing allocations at settlements such as Bradfield Southend(21), Great Shefford(22), Cold Ash(23), Hermitage(24), Chieveley(26) and Compton(31) settlements identified only as Service Villages and, therefore, equally constrained but significantly less sustainable than Rural Service Centres such as Pangbourne. It is inconsistent, inappropriate and unsound to make allocations in such locations when making no allocations in a highly sustainable location such as Pangbourne. Climate change It is noted that Policy SP 5 Responding to Climate Change states The principles of climate change mitigation and adaptation will be embedded into new development, improving the resilience of land, buildings and existing and</p>	<p>Support for the settlement hierarchy as set out in the Topic Paper, Policy SP3 and the identification of Pangbourne as a Rural Service Centre is noted.</p> <p>Where a development is suitable and available, Policy SP3 helps steer development to the most sustainable locations befitting the role and function of particular settlement within the hierarchy. The policy itself does not generate suitable development sites nor does it rank the order in which development should be allowed, or directed, to come forward. Local housing need is distributed across the District.</p> <p>Responses to the representation for SP15 have been considered under that policy. No changes to Policy SP3 are required.</p>

Respondent	Response	Council Response
	<p>future communities to the opportunities and impacts arising from climate change. All development should contribute to West Berkshire becoming and staying carbon neutral by 2030. Depending on the nature and scale of proposals, development will be expected to satisfy all of the relevant following criteria: To withstand predictable effects from climate change for its expected lifetime; To withstand predictable effects from climate change for its expected lifetime; To achieve the highest viable levels of energy efficiency; To generate and supply renewable, low and zero carbon energy for its own use and/or local distribution networks in accordance with policy DC3; To provide for sustainable forms of vehicular and personal transport to and from the site and reduce car use in accordance with policies SP22, DC36 and DC37; In order to reduce car use it will be necessary to allocate housing to settlements that have railway stations and to allocate sites that are within walking distance of railway stations. This is a further justification for allocating PAN 8 in Pangbourne.</p> <p>To ensure that the Council's spatial strategy is applied correctly, having regard to the objective to accommodate appropriate and sustainable growth within the North Wessex AONB spatial area as identified in Policies SP1 and SP2, Policy SP 15 must be amended to ensure that a site/sites at Pangbourne are identified for housing. For the reasons set out in our representations to Policy SP15, this should include the allocation of 35 - 40 dwellings at Site Ref: PAN8 (Pangbourne Hill).</p>	
Pegasus Planning Group for Calcot Park Golf Club (lpr2321)	<p>This policy states that development in West Berkshire will comply with the spatial strategy set out in policy SP1. Development will be focused on the most sustainable settlements. The Urban Areas (including Calcot) will be the prime focus for housing and economic development, offering development potential through: regeneration of built-up areas; allocated sites in development plans; retention of settlement identity and necessary supporting infrastructure.</p> <p>In this case, we consider that land at Calcot Park Golf Club (CPGC) is suitable for allocation in a development plan, as it lies within the settlement of Calcot, which is considered to be a suitable and sustainable location for residential development, according to this policy.</p> <p><i>Policy SP3 – Settlement Hierarchy is supported.</i></p>	<p>Support noted. Agreement that Calcot is correctly categorised within the Eastern Urban Area is noted. Points relating to Calcot Park Golf Club are not relevant to SP3. The proposed allocation of sites has been the result of the rigorous assessment through the HELAA and site selection process. No changes to Policy SP3 are required.</p>
Pegasus Group for Donnington New Homes (lpr1942)	<p>As with Policy SP1, the identification of Newbury and Thatcham as the main focus for new development in West Berkshire is wholly supported. Both settlements are the most sustainable locations for new development providing a range of services. New development with the associated increase in population will support the viability of existing, and assist in supporting new,</p>	<p>Support noted.  Agreement that Newbury and Thatcham are correctly categorised</p>

Respondent	Response	Council Response
	services and facilities meaning both Newbury and Thatcham can continue to be the key economic and social hubs within the District.	as urban areas is noted. No changes to Policy SP3 are required.
Pegasus Planning Group for Newbury & Crookham Golf Club (lpr2049)	<p>Policy is supported.</p> <p>This policy states that development in West Berkshire will comply with the spatial strategy set out in policy SP1. Development will be focused on the most sustainable settlements. The Urban Areas (including Newbury) will be the prime focus for housing and economic development, offering development potential through: regeneration of built-up areas; allocated sites in development plans; retention of settlement identity and necessary supporting infrastructure.</p> <p>In this case, we consider that land at Newbury and Crookham Golf Club (NCGC) is suitable for allocation as a residential site in the development plan, as it lies on the edge of the settlement of Newbury and is adjacent to an existing bus stop on an established bus route (Number 2 and 8 services). As such, the proposed application site, the location of which is provided within Appendix 1 to this document, is a suitable and sustainable setting for residential development, according to this policy.</p> <p>Further, it is considered that the site qualifies for inclusion within the Newbury settlement boundary as part of the ongoing review set out in Appendix 3 of the Local Plan on the following grounds:  <i>“Boundaries will include:  Single plots or other similar small scale development opportunities which would provide infill and rounding off opportunities that are physically, functionally and visually related to the existing built up area, taking account of any environmental development constraints”.</i>  Policy SP3 – Settlement Hierarchy is supported and request is made for the land identified for development at NCGC to be included within the revised settlement boundary of Newbury.</p>	<p>Support noted.</p> <p>Points relating to land at Newbury and Crookham Golf Club are not relevant to SP3. The proposed allocation of sites has been the result of the rigorous assessment through the HELAA and site selection process.</p> <p>No changes to Policy SP3 are required.</p>
ProVision for Cala Group Ltd (lpr2412)	<p><i>In context of two sites: East and West of Salisbury Road, Hungerford. Full representations attached.</i></p> <p>Hungerford continues to be identified as a ‘Rural Service Centre’ (RSC), the second tier of settlements in the hierarchy (draft Policy SP3), second only to the main ‘Urban Areas’, including Newbury and Thatcham.</p> <p>RSCs are identified in the LPR as being suitable for proportionate growth, to sustain them and help meet local needs, including through non-strategic site allocations.</p> <p>Hungerford is therefore an appropriate location for development over the plan period.</p> <p>Given the town is entirely within the North Wessex Downs Area of Outstanding Beauty (AONB), development potential is constrained by landscape considerations.</p>	<p>Comments noted. No changes to Policy SP3 are required.</p>

Respondent	Response	Council Response
ProVision for Mr & Mrs Mathew Pittard (lpr1958)	<p><i>Representation promotes the allocation of Land at Lower Way Farm, Thatcham. Full representation is attached as a response to Policy SP13 Sites allocated for residential and mixed-use development in Newbury and Thatcham.</i></p> <p>In setting out the proposed settlement hierarchy for the District, policy SP3 builds upon the spatial strategy outlined in policy SP1. The Urban Areas are the most sustainable locations in the District and are therefore correctly identified as being the focus for growth. We agree with the hierarchy proposed, which has been informed by the Review of Settlement Hierarchy Topic Paper (November 2020).</p>	<p>Support noted.</p> <p>No changes to Policy SP3 are required.</p>
ProVision for Trustees of Allan Snook Will Trust (lpr1918)	<p><b>Development in the Smaller Villages</b></p> <p>The National Policy Framework ('the Framework'), at paragraph 78, confirms that to promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services.</p> <p>The Council's current approach to 'smaller villages' seeks to severely restrict any housing growth, such as at Boxford, to infill and minor development only within the settlement boundary. This approach is flawed and the effect of failing to permit any reasonable scale development in these villages will further raise house prices to levels which create cost barriers for residents and workers. Furthermore, the lack of affordable housing provision will determine who can live in these rural villages.</p> <p>In the 'smaller villages', the Council should seek to bring forward opportunities for transformational forms of growth to enhance their vitality and viability and to support the wider rural economy. Specifically, reasonable scale sites can provide a suitable housing mix and variety of tenures to meet local needs. Indeed, these sites may help attract and retain younger residents and provide housing for older residents to downsize and, as a result, potentially free up larger family housing in the village. Younger residents and larger households can generally put more money into the local economy through local shops, pubs and sporting facilities which in turn support older, less mobile residents by keeping facilities local and more accessible.</p> <p>Furthermore, reasonable scale development in the 'smaller villages' may be able to help rural communities deliver their aspirations for new local infrastructure either by providing a land resource or via S106/CIL contributions.</p>	<p>Comments noted.</p> <p>The objector appears to be seeking greater flexibility from the settlement hierarchy for the 'smaller villages' in the form of 'transformational forms of growth' of a 'reasonable scale'.</p> <p>Instead, this level of growth is assessed through Policy SP1 and DM1 with DM16 and 22 dealing with development in the countryside, rural exceptions housing and rural workers housing. It is considered that there is enough breadth in the LPR to account for such rural needs in light of the policy restrictions outside of the urban areas. No amendment to Policy SP3 is required.</p>

Respondent	Response	Council Response
	<p>Whilst a settlement boundary review may provide limited small-scale sites for development in the 'smaller villages', there is likely to be little opportunity for any significant housing within village confines. As such, we consider that, where possible, additional allocations of a reasonable scale should also be made in the 'smaller villages' with a defined settlement boundary. Alternatively, the Local Plan should require villages to prepare Neighbourhood Plans to allocate sites to deliver reasonable scale growth to enhance their vitality and viability and that can help deliver the aspirations of the community.</p>	
<p>ProVision for Sir Richard Sutton Ltd (lpr2080)</p>	<p>Whilst the draft LPR's spatial strategy allows for non-strategic housing to be allocated to smaller villages (either as allocations in the RLP or in a Neighbourhood Plan) the draft Plan only makes housing site allocations at Service Villages and above (although no reasoned justification for this is given). It is therefore relevant to examine the assessment of Stockcross to establish whether it was correctly categorised as a "Smaller Village".</p> <p>The evidence base that informed the preparation of the draft LPR includes a Review of Settlement Hierarchy Topic Paper. In the ranking process described in the Topic Paper, Stockcross scores 21 points. Bradford Southend also scores 21 points but is categorised as a Service Village. Great Shefford (22 points), Woolhampton and Cold Ash (both 23 points) are also categorised as Service Villages. There is therefore no, or only a marginal difference between the assessed level of services and facilities at Stockcross and other settlements that have been categorised as Service Villages, and where housing site allocations are proposed.</p> <p>The audit of services and facilities at Stockcross is summarised at Appendix 2 of the Topic Paper. In our view that is a comprehensive range of services and facilities and indicates that Stockcross is a thriving village community serving the surrounding area. The Audit confirms that a score of 21 is within the category of a Service Village but then goes on to arbitrarily conclude that Stockcross should nevertheless be categorised as a Smaller Village citing "<i>limited other community services</i>", "<i>minimal public transport links</i>" and its proximity to Newbury which "<i>mitigates against the potential of the village to function as a standalone Service Village to the surrounding area</i>". None of those comments and the consequential decision to downgrade Stockcross are justified.</p>	<p>Comments noted</p> <p>Stockcross has been correctly defined as a 'smaller village', scoring 21 points within the methodology.</p> <p>Appendix 5 of the methodology states: <i>Stockcross scores 21 points in the settlement hierarchy matrix, within the category of service village. It has access to four key services and facilities in the form of a post office, primary school, convenience store and village hall. Its remaining community services are limited and its public transport links are minimal. It has a very small population of 260. Its size relative to the major urban area of Newbury which is only 3 miles away mitigates against the potential for the village to function as a stand alone service village to the surrounding area. It should be classified as a smaller village outside of the settlement hierarchy.</i></p>

Respondent	Response	Council Response
	<p>In a rural context Stockcross has a good (certainly not minimal) bus service. It lies on the Lambourn – Newbury bus route which provides a two hourly service weekday service to Newbury. In addition, there is an active Community Bus serving the area.</p> <p>Contrary to the Audit’s conclusion, Stockcross has a good range of other community services. The eight acre recreation ground is at the heart of the community. This is a Queen Elizabeth II Field in Trust, ensuring that future generations will have access to outdoor space for sport, play and recreation. The site includes a children’s play area and is used extensively by dog walkers. AFC Newbury use the ground for Sunday Football League and training on weekday evenings. Stockcross Tennis Club has two tennis courts and a pavilion.</p> <p>The Speen Parish Council’s “Improvements Plan 2020/2021”, includes providing the provision of a new Pavilion at Stockcross Recreation Ground and a footpath to link it to the Stockcross School. There are also a number of local employment opportunities which the Council Audit fails to acknowledge (including Bayford Court Care Home, the Vineyard hotel and restaurant, and the Lower Woodspeen Court Business Centre as well as the Benham Estate itself). There are well used allotments in Glebe Lane.</p> <p>From the above it can be concluded that:</p> <ul style="list-style-type: none"> <li>• Stockcross should be categorised as a Service Village because the Council’s Audit itself scores the village at that level, and, furthermore, because that Audit does not properly reflect the nature and extent of the village’s services and facilities and vibrancy of the community.</li> <li>• The decision to categorise Stockcross as a Smaller Village is not justified.</li> <li>• As a Service Village, it would clearly be appropriate and consistent with the RLP’s spatial strategy, to allocate a housing site, or sites at Stockcross, to help sustain the existing range of services and facilities.</li> <li>• Notwithstanding and without prejudice to the above, even as a Smaller Village, Stockcross should be considered a suitable location for the allocation of small scale housing site to</li> </ul>	<p>Disagree that Stockcross has been incorrectly classified in relation to Great Shefford, Woolhampton and Cold Ash given the differences in services and facilities between them and Stockcross’ proximity to Newbury.</p> <p>Stockcross only has a 2 hourly bus service, Woolhampton for example has a train station in addition to a 30 minute bus service.</p> <p>The recreation ground was included in the scoring in accordance with the methodology as was the children’s play area.</p> <p>The audit of facilities and services looks at existing provision only. The 2km buffer zone for employment opportunities did not exceed 100 VAT registered businesses and thus was correctly scored as zero.</p> <p>In light of the above, there is no justification for a change in the status of Stockcross within the settlement hierarchy and therefore no amendments to Policy SP3 are required.</p>

Respondent	Response	Council Response
	<p>contribute to delivering a range of site sizes for residential development in accordance with Policy SP1.</p> <p>[Preferred approach]</p> <ul style="list-style-type: none"> <li>• Stockcross should be categorised as a Service Village because the Council’s Audit itself scores the village at that level, and, furthermore, because that Audit does not properly reflect the nature and extent of the village’s services and facilities and vibrancy of the community.</li> <li>• even as a Smaller Village, Stockcross should be considered a suitable location for the allocation of small scale housing site to contribute to delivering a range of site sizes for residential development in accordance with Policy SP1.</li> </ul>	
ProVision for The Wasing Estate (lpr2065)	<p><i>In relation to land at Manor Farm, Brimpton (full representation attached).</i></p> <p>SP3 categorises Brimpton as a ‘smaller village’ in the settlement hierarchy. Both policies permit (in principle) limited infill or minor development in ‘smaller villages’, acknowledging that “<i>some limited development is important for the long-term sustainability of rural communities</i>”.</p> <p>Draft Policy SP3 does (in principle) allow for non-strategic sites allocated for housing and economic development, albeit at the ‘service village’ level, through other policies in the Plan or in Neighbourhood Plans. We support this and would add that allocating non-strategic sites to ‘smaller villages’ would not be inconsistent with the draft LPR spatial strategy.</p> <p>The evidence base that informed the preparation of the draft LPR includes a review of the settlement hierarchy, set out within the ‘Settlement Hierarchy Review Topic Paper’. The methodology for the review comprised of a scoring system based on sustainability of settlements in terms of provision of services and facilities. The Topic Paper explains that ‘smaller villages’ score between 0-15 points, ‘service villages’ between 16-30 points and ‘rural service centres’ score over 30 points. Brimpton is placed at the higher end of the ‘smaller villages’ category, scoring 10 points. Brimpton has a good range of services and facilities, including a primary school, a village hall, a public house, a hairdresser and a church. The village shop unfortunately closed three years ago. There are also bus stops providing regular services to Thatcham, Beenham and Calcot, as well as a community transport scheme. Brimpton is also within close reach of Thatcham and Baughurst to access other services and facilities which are not available in the village, as and when required. Brimpton is a suitable location for the allocation of small-scale housing sites to contribute to a range of site sizes for residential development, in accordance with draft Policy SP1. Housing allocation sites should not be dependent on the level and extent of existing service and facilities but instead should be seen as a mechanism to support these services and facilities. Rural housing is essential to ensure their long-term viability and retention. If development in the ‘smaller villages’</p>	<p>Comments oted.</p> <p>The settlement hierarchy methodology was established in order to support the Core Strategy and Housing Site Allocations DPDs. The Review of Settlement Hierarchy Topic Paper has applied the criteria equally to all the settlements in order to ensure a consistent treatment in identifying the most sustainable locations for development. The criteria did not include an assessment of the level of development that might enable the development of more services and facilities. [It is conceivable that had such a criteria been possible to measure and included in the review that many other settlements might have also been scored and the hierarchy remained the same or similar.]</p>

Respondent	Response	Council Response
	<p>continues to be severely restricted, rural communities and their valued services and facilities will continue to decline. Brimpton has in fact already lost a post office and convenience store and so without opportunities for growth, it is conceivable that its remaining services and facilities will disappear. The pub has been struggling for a number of years, whilst Arkells, the brewery owner, are known to be trying to close it down, and there is also a lack of a community centre. It is vital therefore that essential community services can be supported by an appropriate population.</p> <p>Housing site allocations at Brimpton would be consistent with the LPRs overarching spatial strategy to promote the sustainability of villages and in turn, supporting the wider rural economy, noting that “where there are groups of smaller settlements, development in one village may support services in a village nearby”</p>	<p>Consequently it is not considered appropriate to amend the methodology at this stage given the two previous consultations on settlement hierarchy and therefore no amendments to Policy SP3 are required.</p>
<p>ProVision for The Wasing Estate (lpr2070)</p>	<p><i>In relation to Basingstoke Road, Aldermaston Wharf (ALD5)</i></p> <p>The categorisation of Aldermaston Wharf as a ‘smaller village’ in the settlement hierarchy review is not justified. It is clear that it meets the criteria for a ‘service village’, both in terms of its performance and function and its scoring.</p> <p>It is a sustainable rural settlement which not only offers key services and facilities, but is highly accessible, benefitting from excellent public transport, as well as a cycle and footpath link to the neighbouring Aldermaston Village. Aldermaston Wharf and Village should be considered holistically.</p> <p>Nonetheless, even as a ‘smaller village’, Aldermaston Wharf is suitable for housing allocations proportionate to the size and nature of the village.</p> <p>Housing allocations should not be precluded on the basis of limited existing services and facilities. Rural housing is essential to ensuring the long-term viability and retention of these services and facilities. Modest, sustainable growth helps to enhance the vitality of rural communities and the wider rural economy, with groups of settlements supporting each other.</p> <p>We consider the concerns raised in the HELAA can be addressed and overcome through a combination of the commissioning of technical reports and careful design, resulting in a suitable, available and achievable site.</p> <p>The site represents a logical opportunity for a small-scale housing allocation and extension to Aldermaston Wharf. It would contribute towards the delivery of a range of site sizes for residential development, assisting in meeting the Council’s housing requirements whilst facilitating sustainable rural growth.</p>	<p>Comments noted.</p> <p>The settlement hierarchy methodology was established in order to support the Core Strategy and Housing Site Allocations DPDs. The Review of Settlement Hierarchy Topic Paper has applied the criteria equally to all the settlements in order to ensure a consistent treatment in identifying the most sustainable locations for development. The criteria did not include an assessment of the level of development that might enable the development of more services and facilities. [It is conceivable that had such a criteria been possible to measure and included in the review that many other settlements might have also been scored and the hierarchy remained the same or similar.]</p> <p>Consequently it is not considered appropriate to amend the methodology at this stage given the</p>

Respondent	Response	Council Response
		two previous consultations on settlement hierarchy and therefore no amendments to Policy SP3 are required.
Rectory Homes Ltd (lpr1847)	<p>Established in the 1990s, Rectory is a small-medium sized housebuilder operating in Oxfordshire, Buckinghamshire, Berkshire and the wider Home Counties. Our focus is on small to medium sites in towns and villages and we specialise in high quality housing developments built to reflect the local vernacular using locally sourced natural and sustainable materials. We have an interest in the existing and emerging planning policies for West Berkshire District having secured land options for a number of sites within the District. Small sites are extremely important in rural areas such as West Berkshire, especially as they can be delivered quickly; small schemes generate little adverse impact and can deliver a range of positive benefits to local communities. The Government’s objective to increase the amount of housing delivered by small and medium sites is clear and the important contribution that such sites can make to meeting the housing requirement of an area is reflected in the NPPF. Whilst we generally agree with the strategic approach to development in the District as outlined in the settlement hierarchy and Policy SP3, the requirements for development in the service villages are considered unduly restrict. We consider directing small-scale development at these locations to be appropriate however the first bullet point then refers to minor development. It is generally accepted that minor development constitutes schemes of less than 10 dwellings therefore through the addition of the wording of minor development Policy SP3 restricts development schemes at service villages to a maximum of 9 dwellings on any specific site. This would discount the delivery of larger sites which are otherwise generally unconstrained or considered suitable for development. The wording of the policy already mentions small-scale development which is a more flexible terminology, requiring assessments to be made of the relative growth of the settlement through a development in terms of either settlement size or increase in existing stock for example. This is considered sufficient to guide development at the service villages. There is also a potential conflict with Policy SP1 which requires development schemes to achieve a minimum density of 30 dwellings per hectare in the service villages. If the wording of minor development is retained within Policy SP3 and therefore schemes are limited to 9 dwellings, this would mean that for sites any larger than 0.3ha in size the density of the development would be contrary to the required threshold of Policy SP1. Furthermore, in line with Paragraph 63 of the NPPF developments of less than 10 dwellings located outside of the designated areas are not required to provide affordable housing. This means that no affordable housing will be delivered in service villages located outside of designations such as the AONB and therefore this social benefit will be lost. In light of the above, the presence of the term small scale in</p>	<p>Comments noted. Noted that the strategic approach to development in the district is supported as outlined in Policy SP3.</p> <p>The objector appears to be seeking greater flexibility from the settlement hierarchy for the ‘smaller villages’. Disagree with the interpretation of ‘minor development’ in the policy. In ‘service villages’ the policy accepts ‘small scale development’. In the bullet points, this is clarified by meaning to include infill, change of use and minor development. Minor development in this case points to ‘householder development’.</p> <p>For clarity the policy will be amended as follows –  <b>‘Rural Service Centres: ...</b>  These larger rural settlements offer development potential appropriate to the character and function of the settlement through:  e. Infill <u>or</u> changes of use <del>or other development</del> within the settlement boundary....  <b>Service Villages: ...</b>  These smaller rural settlements may offer some limited and small-scale development potential, appropriate</p>

Respondent	Response	Council Response
	<p>guiding the scale of development at the service villages is considered sufficient and the requirement of minor development should be removed from the wording of the policy.</p>	<p>to the character and function of the village, in order to meet local needs through:  h. Infill <del>or</del> changes of use <del>or other</del> <del>minor development</del> within the settlement boundary.....’</p> <p>and the supporting text will be amended as follows –  ‘Settlements outside of the settlement hierarchy will deliver additional development but this will be limited to infill or <u>change of use</u> <del>minor development</del> within the settlement ....’</p>
<p>Rural Solutions for Karine Giannamore and Kathryn Fellowes (lpr2308)</p>	<p>Whilst it is important to establish a district-wide settlement hierarchy, this shouldn’t be seen as a general restraint of sustainable growth to those hinterlands not specifically identified. As indicated earlier, there should be a further category to the three identified, The Urban Areas, Rural Service Centres and Service Villages. The fourth would be called ‘Village Clusters’ enabling small-scale windfall development (3-6 dwellings depending on its location/context/parish) adjacent a recognisable group of dwellings. This would still need to ensure that village / hamlet identity remains distinct. This is achievable, and by way of an example, we are specifically promoting a small residential scheme in Hamstead Marshall through the HELAA. This can follow the established settlement pattern of ribbon development along the road frontage and still retains Hamstead Marshall as two distinct areas of established housing (rather than one consolidated village).</p> <p>A sustainable form of growth can help to ensure the local primary school is kept open, the local public house is viable (which often provides other services to the community) and the nearest village shop is still profitable as new families move into these areas.</p> <p>The supporting text states that:  <i>“Settlements outside of the settlement hierarchy will deliver additional development but this will be limited to infill or minor development within the settlement where a settlement boundary has been defined, and to rural exception schemes for affordable housing to meet local needs. Some limited development is important for the long-term sustainability of rural communities. Outside these settlements, in the countryside, a more restrictive approach to development will be taken as set out in other policies in this Plan.”</i></p>	<p>Comments noted.</p> <p>The Review of Settlement Hierarchy Topic Paper assessed the current settlement hierarchy. The settlement hierarchy for the Core Strategy and Housing Site Allocation DPDs did consider the options for different levels of classification which resulted in the current classifications, included in the Topic Paper. The Council saw no reason to re-visit that conclusion.</p> <p>Consequently, no amendments to Policy SP3 are required.</p> <p>Policy SP18 deals with housing mix and type with DC1 with DC16 and 27 dealing with development in the countryside, rural exceptions</p>

Respondent	Response	Council Response
	<p>Using the suggested forth category, some of this supportive text should be incorporated into the body of the main policy SP3.</p> <p>In line with the NPPF, market housing can be a catalyst for some affordable housing to be delivered in rural communities which again should be noted. Some market housing could facilitate the provision of affordable housing to meet local needs.</p> <p>To truly deliver a range of site sizes for residential development this policy is too restrictive. The NPPF recognises the important contribution that several small allocations have to the benefit of supporting small-scale builders, providing a choice for the market and delivery of housing in popular locations. It can also increase housing supply when compared to larger scale strategic sites, which are often complex and takes significant time to deliver.</p> <p>This is crucial to meet local needs and maintain vibrant and balanced communities, whilst still preserving their own sense of identity and protecting the environment.</p> <p>A way to achieve this would be to allow small-scale windfall housing developments in the parish. The site would need to be adjacent a settlement boundary or adjacent to a recognisable group of dwellings which do not have a settlement boundary, respect the character of the settlement and landscape, have a safe highway access and some flexibility applied to access to services due to very limited scale of development supported by the suggested policy. This would assist the long-term vitality and vibrancy of the wider village, given the interrelationships that they often have.</p> <p>Reliance on Neighbourhood Plans to deliver smaller sites is a burden to more dispersed areas and parishes given the limited resources and time / commitment required to deliver them. This should be facilitated at the strategic level, subject to clearly set-out criteria. This is more important in West Berkshire given it is characterised predominantly by rural areas.</p>	<p>housing and rural workers housing. It is considered that there is enough breadth in the LPR to account for such rural needs. No amendment to Policy SP3 is required.</p>
Savills for Englefield Estate (lpr1526)	<p>The overall settlement hierarchy, set out in draft LPR Policy SP3, also reflects the adopted Core Strategy. This includes continued identification of Burghfield Common, Mortimer and Theale as Rural Service Centres in the second tier of the hierarchy, which is supported. Each of these settlements scored consistently highly in the various stages of the settlement assessment (section 6 of the Settlement Hierarchy Review Topic Paper (November 2020)) and therefore this categorisation is justified and is supported. Table 1 of the LPR describes and emphasises the importance of Rural Service Centres as, Settlements with a good range of key services and opportunities for employment, community and education. They serve a wide catchment area and contain reasonable accessibility and regular public transport provided to a number of destinations. To inform the settlement hierarchy, it is noted that the settlement assessment considers only the settlements previously identified in the Core Strategy and Housing Site Allocations DPD (HSA DPD) and does not consider other smaller settlements (paragraph 4.2, Settlement Hierarchy Review Topic Paper (November 2020)). However, it is also understood that the Council is currently reviewing settlement boundaries across the district, including consideration of settlements that do</p>	<p>Comments noted.</p> <p>Englefield has been considered to fall outside the settlement hierarchy. This is consistent with the response to the 2018 consultation that has been referred to. Then, it was indicated that 'Englefield has been considered within the Settlement Boundary review which concluded that a boundary would not be appropriate.' Consequently, no amendments to Policy SP3 are required.</p>

Respondent	Response	Council Response
	<p>not currently have settlement boundaries (LPR Appendix 3). As set out in our representations to the second Regulation 18 consultation in December 2018, Englefield village has a range of local community services and facilities including St Marks Church, Englefield C of E Primary School, Englefield Stores and Tea Room, Englefield Garden Centre, market garden, social club and childrens nursery and local employment provision. Indeed the size of the village and its level of services and facilities exceeds that of other villages within the district with a settlement boundary. For this reason it is important to include Englefield within the Settlement Hierarchy Review. To do so would be consistent with the NPPFs encouragement for local authorities to promote sustainable development in rural areas and identify opportunities for villages for villages to grow and thrive (paragraph 78). In line with this, and given the level of services and facilities within the village, it is appropriate for a settlement boundary to be identified at Englefield to facilitate sustainable development. Whilst the settlement hierarchy helps to inform the appropriate location of development, in order to account for changes to local services and facilities, it is important that the suitability of individual settlements to accommodate development is kept under constant review and that the hierarchy is not applied rigidly.</p>	
<p>Savills for Newbury and District Agricultural Society ((lpr2044)</p>	<p>Policy is supported.</p> <p><i>(Part of wider representation, in relation to Newbury Showground)</i>  NADAS supports the identification of Newbury and Thatcham as two of three urban areas which will be the prime focus for housing and economic development to meet local needs. Our client recognises the importance of retaining Newbury’s traditional market town heritage (as set out in draft Policy SP1) and the retention of the individual identity of adjoining settlements as required by draft Policy SP3.  The development of the Land at Newbury Showground as a logistics hub is intended to respond to regional and national market need which is of a scale and nature that would not be appropriate to be met by sites adjacent to West Berkshire’s urban areas. The Showground site provides a balance of excellent links to the motorway network to limit HGV movements on the local road network, but also sufficient proximity to Newbury and surrounding settlements to develop an effective Green Travel Plan so that the workforce would have sustainable travel opportunities.</p>	<p>Support noted.</p> <p>Agreement that Newbury and Thatcham are correctly categorised as urban areas is noted.</p> <p>Points relating to land at Newbury Showground are not relevant to SP3. The proposed allocation of sites has been the result of the rigorous assessment through the HELAA and site selection process. No changes to Policy SP3 are required.</p>
<p>Solva Planning for Emily West (lpr1423)</p>	<p>Policy supported. No further comments.</p>	<p>Noted. No amendments to Policy SP3 are required.</p>
<p>Southern Planning Practice for The Saunders Family</p>	<p>Policy SP3 builds on the spatial strategy set out in Policy SP1. We support the Council’s approach to new development and emphasise that in addition to focusing growth in the key urban areas, the</p>	<p>Support noted.</p>

Respondent	Response	Council Response
(lpr1924)	<p>Council should also look to a range of settlements which can accommodate sustainable, proportional growth.</p> <p>Newbury is a highly sustainable settlement with a range of facilities and services together with excellent transport links. It is therefore capable of accommodating a significant amount of housing over the plan period. Whilst Policy SP3 sets out that the urban areas will be the prime focus for growth over the plan period and some sites have been allocated in and around the town, we believe that further sites need to come forward to provide a larger population to support the longevity of the town centre and Newbury's facilities and services. The allocation of land east of Stoney Lane would contribute a noteworthy population which would provide additional footfall and a valuable contribution to Newbury's facilities and services.</p>	<p>The proposed allocation of sites has been the result of the rigorous assessment through the HELAA and site selection process.</p> <p>No changes to Policy SP3 are required.</p>
Sovereign Housing Association (lpr 2186)	<p>Regarding these specific representations as they relate to the emerging allocation at Kintbury, both the landowners and Sovereign support policy SP3 and the identification of Kintbury as a service village and one that is capable of supporting growth. We would add that the village also benefits from a main line train station, which sits on the Taunton to Reading line, with direct links to the south west and wider south east. Moreover, the St Mary's Primary School is very well respected and indeed received a Good rating from its most recent Ofsted report, whilst the Kintbury Surgery received a Good rating as part of its most recent CQC inspection. The village is therefore very sustainable, having a good range of quality services, as well as good infrastructure links with the wider District and beyond. Furthermore, as part of our comments regarding the school, we are aware that the school appears to be operating under capacity with regards new intakes. There is therefore a need for the village to take more growth, not only because the existing services have capacity, but because it is going to make these valuable services more sustainable.</p>	<p>Comments noted.</p> <p>Comments are not proposing any change to the policy per se but seeking an increase in the housing allocation for Kintbury. Kintbury has been assessed in the Settlement Hierarchy as a 'service village', having taken into account existing services in accordance with the agreed settlement hierarchy methodology that was subject to consultation in 2018. The settlement hierarchy methodology and the subsequent designation for Kintbury is not proposed to be changed. As a result no changes to Policy SP3 are required.</p>
Turley Associates for A2 Dominion Housing Ltd (lpr1496)	<p><i>Part of full representations made by Turley on behalf of A2Dominion in relation to Land East of Reading Road, Streatley.</i></p> <p>A2Dominion do not support the proposed recognition of Streatley as a smaller village given the presence of services and facilities available both in Streatley and Goring. Notwithstanding this, South Oxfordshire District Council has consistently identified Goring as a Larger Village in their recently adopted Local Plan (December 2020). This has resulted in two settlements, very close together, having a different standing in terms of policy when in reality they have a functional</p>	<p>Comments noted.</p> <p>This same point was addressed in response to the 2018 consultation on the settlement hierarchy.</p>

Respondent	Response	Council Response
	<p>relationship. The Council Review of Settlement Hierarchy Topic Paper (November 2020) identifies Streatley as a Service Village stating Streatley scores 21 in the settlement hierarchy matrix, comfortably within the range for consideration as a Service Village with 4 key services and facilities in the form of post office and convenience store (in Goring), primary school and village hall. However, Appendix 5 of the report discusses the Council’s decision to identify Streatley as a smaller village, contrary to the score the village received during the audit. Appendix 5 concludes that without the benefit of the post office, train station and convenience store in Goring, Streatley’s overall score would reduce to 12, the post office would no longer be counted as a key service and facility and quality of access to public transport would drop significantly. If discounted, then Streatley could not be justified as a service village in the settlement hierarchy. In our submission, the Review of Settlement Hierarchy Topic Paper (November 2020) rightly acknowledges the relationship between the two settlements, but then discounts this (wrongly) so as to reduce the sustainability of the area. Furthermore, A2Dominion note that there has been very little recent growth in Streatley with a lack of residential schemes coming forward to support the supply of affordable housing in an area that is historically unaffordable. It is highly likely that the Council’s classification of Streatley as a smaller village has limited such opportunities for growth and the delivery of affordable housing. In order to support local needs and maintain vibrancy and support of services, we suggest the Local Plan acknowledges the initial audit score that would classify Streatley as a Service Village in order to allow for sustainable growth in the village. In doing so, that also ensures that the Local Plan reflects the evidence base regarding the sustainability of the settlement having regard to its functional relationship with Goring.</p> <p>We suggest the Local Plan acknowledges the initial audit score that would classify Streatley as a Service Village in order to allow for sustainable growth in the village. In doing so, that also ensures that the Local Plan reflects the evidence base regarding the sustainability of the settlement having regard to its functional relationship with Goring.</p>	<p>There has been no material change regarding access to services and facilities since the Planning Inspector of the Core Strategy 2006-2012 concluded that, “given the separation of these 2 settlements by the Thames and the single bridge linking them over the river, Goring does not justify any particular role in the settlement hierarchy of West Berkshire”.</p> <p>Consequently, no amendments to Policy SP3 are required.</p>
Turley for Richborough Estates Ltd (lpr2383)	<p>Similarly to the comment above (<i>on Policy SP1</i>), Policy SP3 should include reference to large settlements that cross the Council administrative boundary within the settlement hierarchy as these areas are considered to be sustainable locations for development.</p> <p>It is acknowledged that the whole of Tadley is not within the West Berkshire administrative boundary, with the majority of the town located within Basingstoke and Dene Borough Council, however, local residents within Tadley look towards facilities and services within West Berkshire, and vice versa. The division of Tadley across these two administrative boundaries does not limit the use of the town to those in the relevant administrative areas. As such the straddling settlements across West Berkshire should not be made exempt from the settlement hierarchy as the locations provide the same offers and benefits as the settlements listed in Policy SP3.</p>	<p>Comments noted.</p> <p>Disagree that Tadley should be included in the settlement hierarchy as it falls outside the administrative boundary of West Berkshire. Any similar cross boundary issues are addressed under the Duty to Co-operate. Furthermore, the East of the district is heavily constrained by the two AWE establishments</p>

Respondent	Response	Council Response
	<p>It is suggested that Tadley is included within the list of 'Urban Areas' in the wording of Policy SP3 to take into account the importance and sustainability of the settlement.</p>	<p>It is not considered appropriate to amend the methodology at this stage given the two previous consultations on settlement hierarchy, where similar objections were dismissed and therefore no amendments to Policy SP3 are required. (See West Berkshire Local Plan Review to 2036 - Consultation Statement (October 2018).)</p>
<p>Wey Planning for Neville Baker Estate (lpr1278)</p>	<p>1. We agree with the District Settlement Hierarchy set out in Policy SP3 and the identification of Hermitage as a Service Village. However, based on the analysis set out in the Settlement Hierarchy Topic Paper and appendices, it is apparent that the score ascribed to Hermitage does not take into account a number of services and facilities within or very closely related to the settlement and so understates its role and function.</p> <p>2. Our assessment of services and facilities within or very closely related to Hermitage identifies that the following have not been included in the settlement audit for Hermitage in Appendix 2 of the Topic Paper: a) The Co-Op store on Newbury Road which is nearing completion and will soon be in operation. According to the relevant planning permission (19/00029/FULD), the store has a net trading area of 325 square metres and according to Appendix 1 of the Topic Paper, this qualifies it as a supermarket = 3 extra points. b) Hermitage Village Hall provides opportunities for indoor sport and leisure (the website refers to keep-fit, dance, ballet, wine and horticultural society events etc) = 1 extra point. c) The multi-use games area (MUGA) adjacent to the Village Hall provides opportunities for outdoor sport and recreation = 1 extra point.</p> <p>3. In addition, it is noted from Appendix 2 that services and facilities located within a 1km radius (2Km diameter) of the centre of settlements are to be included in the individual settlement audits, whilst those lying outside are to be automatically excluded. We consider this approach to be an unduly rigid and arbitrary way of establishing the relatedness of a service or facility to a particular settlement and believe that it necessary to apply common sense judgement in such situations.</p>	<p>Comments noted. However, the Council does not agree that Hermitage has been incorrectly assessed within the hierarchy.</p> <p>It is disagreed that scoring (and subsequent implications for a settlement within the hierarchy) can be done retrospectively on the grant of a planning permission. This would introduce inconsistencies within the methodology. Services and facilities need to be existing.</p> <p>The classes that are held in a village hall do not count towards the scoring. The scoring for the village hall is as a facility for communal use and it would be disproportionate to ascribe a score for every possible use to which it could be put whilst making no difference to the hierarchy. Services and facilities</p>

Respondent	Response	Council Response
	<p>4. In the case of Hermitage, there are two services/ facilities which lie just outside the 1km radius/2km diameter of the catchment area, as measured from the centre of the settlement. However, because of the size and extended linear form of Hermitage, these services/facilities are located very close to the village and are within very easy walking distance for much of the village population. Furthermore, they are considerably closer to Hermitage than to Curridge (under which they are listed in Appendix 2) and in recognition of this, they both have a Hermitage postal address. Therefore, we consider that they should quite properly be included in the Hermitage settlement audit. These services/facilities are as follows: a) The Costcutter convenience store, Faircross, Hermitage (Denison Barracks) = 1 extra point. b) New Community Centre, Faircross, Hermitage (Denison Barracks) = 1 extra point. 4. Appendix 3 to the Topic Paper is an audit matrix which provides an overall score for each settlement and ranks the settlements based on their overall score. It currently shows that Hermitage is ranked in 4th place among the Service Villages in the District, with a total score of 24 points (behind Compton, Kintbury and Chieveley). However, if the services and facilities identified above are included in the settlement audit/audit matrix, the total score for Hermitage increases to 30 points, which puts it in 2nd place, behind Compton.</p> <p>5. Accordingly, we consider that the settlement hierarchy review process undertaken to inform the WBLPR understates the role and function of Hermitage. We request that this is corrected in the following ways: a) Including the services and facilities identified above in the settlement audit for Hermitage in Appendix 2 of the Topic Paper and the settlement audit matrix in Appendix 3. b) Amending the Service Villages section of Table 6 of the Settlement Hierarchy Review Topic Paper, which lists the settlements in descending order according to their score, to ensure that Hermitage is correctly ranked.</p> <p>The Settlement Hierarchy Review Topic Paper and Appendices 2 and 3 should be amended as detailed above, to ensure that the role and function of Hermitage in terms of services and facilities is fully recognised.</p>	<p>were assigned scores according to their principal/formal purpose. To classify a village hall as an indoor sport and leisure centre is not considered to be an accurate interpretation of the criteria in Appendix 1. The children's play area was given 1 point. MUGAs are not assessed within the methodology - only sports/playing grounds are included.</p> <p>This approach was included in the original methodology. The use of the 1km radius is ensure a consistency treatment of all settlements. It was considered a maximum across the range of services and facilities and proportionate for the purposes of reviewing the hierarchy.</p> <p>Hermitage has been consistently assessed within the methodology and no further changes to the methodology are proposed.</p> <p>The hierarchy concludes no further ranking between the Service Villages once the qualitative assessments had been completed in Appendix 5. [On revised scoring there is no further assessment needed for Hermitage.] No amendments to Policy SP3 are therefore required.</p>

Respondent	Response	Council Response
<p>Wey Planning for Neville Baker Estate (lpr1277)</p>	<p>Policy not supported.</p> <p>1. Policy SP3 Settlement Hierarchy states that the scale of development proposals will be relative to the existing or proposed level of facilities and services in the settlement, together with their accessibility. However, it does not acknowledge that the scale of development proposals at individual settlement level is also determined by the suitability and development potential of available sites. This omission is not consistent with PPG Paragraph 101 Reference ID: 41-101-20190509, Paragraph 4.33 of the supporting text, Paragraph 2.5 of the Settlement Hierarchy Topic Paper or Policy SP1 Spatial Strategy, which states that Allocations will be related to the role and function of settlements and the development opportunities identified through the HELAA . Policy SP3 should be amended accordingly.</p> <p>2. Policy SP1 makes it clear that the reference to allocations includes reference to non-strategic sites allocated in the WBLPR as well as those to be allocated in Neighbourhood Plans in order to (at least) meet the housing requirements for the designated Neighbourhood Areas identified in the WBLPR. It must follow that for the housing requirements set in the WBLPR for the designated Neighbourhood Areas to be justified and based on clear evidence, the setting of housing requirements must take account of the suitability and development capacity of available sites identified through the HELAA.</p> <p>3. Ascribing a housing requirement for a designated Neighbourhood Area without having regard to the suitability and development capacity of available sites is both arbitrary and unrealistic because it could result in a situation (as with Hermitage) where the housing requirement does not reflect the suitability and development capacity of available sites. An unintended and unacceptable outcome of this approach would be that the housing requirement is not realistic or achievable and so cannot be complied with or can only be complied with in a sub-optimal way. For example, it could lead to a situation where either there is no suitable site(s) with the required capacity, the development of a suitable site is not effective, or a site is allocated which is clearly less suitable than an alternative. As a consequence, the NDP could be found unsound.</p> <p>4. Failure to have proper regard to the suitability and development capacity of available sites is particularly concerning in relation to the housing requirements proposed for designated Neighbourhood Areas in the AONB under Policy SP15. In this case, most of the potential housing sites in the AONB identified in the HELAA are regarded as potentially developable because their suitability is unknown, pending further assessment of landscape impact in order to confirm the potential for sites to be developed without causing harm the natural beauty and special qualities of the AONB. Furthermore, in some cases, the development capacity of these sites can only be established by undertaking this work.</p> <p>5. Having regard to Paragraph 172 of the NPPF and the primacy given to the conservation and enhancement of the natural beauty of the AONB by Policy SP2, such further landscape</p>	<p>Comments noted.</p> <p>The availability of suitable development opportunities is implicit in the relevant policies in the LPR. Site allocations have come through the HELAA.</p> <p>The settlement hierarchy methodology is based on that contained in the Core Strategy and Housing Site Allocation DPDs and has been through vigorous consultation in 2018, 2019 prior to R18. Policy SP3 seeks to steer the scale of development in proportion to the role and function of the relevant settlement. The council does not consider any change in the policy wording is necessary.</p> <p>These following points are not an issue for Policy SP3. See response to SP15 given the references to Hermitage.</p> <p>The purpose of the policy is direct development to the most sustainable locations in accordance with the settlement hierarchy. Within these settlements, policy SP13-15 identify the sites that are considered suitable in relation to the hierarchy taking into account the assessment of sites carried out through the</p>

Respondent	Response	Council Response
	<p>assessment must be regarded as a necessary and proportionate precursor to setting the housing requirements for the designated Neighbourhood Areas in the AONB. However, this further landscape assessment work has not been undertaken by the Council and so the housing requirements for the designated Neighbourhood Areas set out in Policy SP15 are not justified.</p> <p>6. Identical concerns were expressed by the Core Strategy Inspector in relation to the Councils previous approach to assessing the scale of development to be accommodated in the various identified settlements in the AONB. At Paragraph 75 of his Report, it states that whilst the Landscape Sensitivity Assessment 2011 gave some support to the Councils view that the scale of development proposed in the AONB can be achieved whilst preserving and enhancing the landscape, achieving this policy objective will depend upon the intrinsic qualities of individual sites; the scale, density and design of new buildings; the integration of development with the existing built form and the wider countryside; and any cumulative impact with other planned development. He concluded at Paragraph 79 that Given the landscape led approach that has to be taken, there is not sufficient evidence to ascribe specific housing figures for the different settlements in the AONB.</p> <p>7. Therefore, it is clear that to meet the NPPF tests of soundness, the WBLPR housing requirements for the designated Neighbourhood Areas within the AONB set out in Policy SP15 must be based on further assessment of the landscape capacity of individual sites identified in the HELAA to establish an appropriate figure for each designated Neighbourhood Area.</p> <p>8. In anticipation of this work being undertaken, the Neville Baker Estate has commissioned a Landscape Capacity Assessment of the HER4 Land adjacent to Station Road, Hermitage site and have submitted it to the Council under cover. (Document attached to representation ) The Landscape Capacity Assessment provides a rigorous and up-to-date assessment of the capacity of the HER4 site to accommodate 55-60 dwellings without harm to the natural beauty and special qualities of the AONB and takes express account of the matters identified in Paragraph 75 of the CS Inspectors Report.</p> <p>We consider that the first paragraph of Policy SP3 should be amended to ensure that the scale of development will be related to the suitability and development capacity of available sites, as well as the existing or proposed level of services and facilities in the settlement, together with their accessibility.</p> <p>Having made this change, it is essential that the housing requirements for the designated Neighbourhood Areas in the AONB under Policy SP15 are re-assessed, to take account of the suitability and development capacity of available sites. This is to ensure that the individual housing requirements are realistic and achievable, and will result in the allocation of suitable housing sites in the NDP and the efficient use of land.</p>	HEELA. No changes to Policy SP3 are required.
Woolf Bond Planning for JPP Land &	Policy not supported.	Comments noted.

Respondent	Response	Council Response
Spitfire Bespoke Properties (lpr2318)	<p>Within the Settlement Hierarchy Background Paper accompanying the consultation the authority details the criteria and assessment which has resulted in the conclusions it suggests are valid. Although the assessment has been refined from that within Appendix B of the November 2018 Regulation 18 consultation document i.e. with respect of how the distances from specific facilities were derived, we nevertheless have concerns regarding the current appraisal. This includes unjustified conclusions over availability of services. This is illustrated by the information in appendix 3 with suggests Supermarkets are available in both Theale and Lambourne. However, a review of the stores in these villages confirms that the floor areas are less than 250m2 and consequently would only be categorized as convenience stores within the assessment process.</p> <p>Furthermore, although it is recognized that Lambourn has extensive racehorse industry nearby, no evidence has been provided that more than 100 business are registered in this employment segment to qualify as a significant employment opportunity in the parish (as suggested by the draft audit for Lambourn (page 38) in appendix 2 of the Settlement Hierarchy Topic Paper).</p> <p>Additionally, although appendix 3 of the Topic Paper acknowledges that Burghfield Common has access to significant employment opportunities, the village of Burghfield which is within the same parish has not been categorized consistently.</p> <p>Both settlements have ready access to the significant employment opportunities at AWE Burghfield and should therefore be classified accordingly.</p> <p>The above is purely an indication of how the current assessment does not reflect the approach envisaged by the authority. Nevertheless, if these changes were made, the scorings of Burghfield, Theale and Lambourn would be revised as follows:</p> <p>[See Table on page 5 of attachment 'W Berks Local Plan reps February 2021 Burghfield Common REDACTED']</p> <p>As a result of this, the classification of Lambourn as a Rural Service Centre would be incorrect and reflecting the approach in the Settlement Hierarchy Topic Paper it would instead be a Service Village.</p> <p>The Topic Paper (page 18) indicates that through the Council's assessment, the village of Burghfield would be categorized as a service village. This however is not repeated in the draft Plan due to the flawed assessment in appendix 5 This is a flawed assessment since it does not adhere to the advice in the NPPF (paragraph 78) especially given its proximity to the wider services in Burghfield Common together with its proximity to the extensive employment opportunities at AWE Burghfield.</p> <p>[Preferred approach]</p> <p>We would therefore advocate the reclassification of Burghfield village as a Service Village.</p>	<p>The floor area for the supermarkets are as follows: Theale – 285+sqm Lambourn – Co-op 286+sqm and so the Council does not consider they have been incorrectly classified.</p> <p>The ONS 'UK Business Counts' indicates 440 businesses in the Lambourn Super Output Area.</p> <p>Whilst part of Burghfield Village falls within a 2km buffer of Burghfield Common, AWE Burghfield only falls within the 2km buffer zone for Burghfield Village. This was taken into account for Burghfield Village when looking at the criteria for employment opportunities. Burghfield Village was found not to meet this criterion.</p> <p>In light of the above, no amendments to the scoring or settlement hierarchy is changed and no amendments to the settlement hierarchy or Policy SP3 are proposed.</p> <p>Notwithstanding how Burghfield village is defined within the settlement hierarchy, the inclusion of a site is not a matter to be considered under Policy SP3. Sites</p>

<b>Respondent</b>	<b>Response</b>	<b>Council Response</b>
	<p>Our clients site as previously advised is close to the village of Burghfield which has a range of facilities which make the settlement sustainable, including primary school, pubs, church and hall. The site is also accessible to the further facilities in Burghfield Common. The Council's determination of a planning application also confirmed that the site (and Settlement) represents a sustainable location. This was endorsed in the appeal decision (paragraph 52).</p>	<p>have been assessed through the HEELA No amendments to Policy SP3 are required.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP4 Atomic Weapons Establishment (AWE) Aldermaston and AWE Burghfield

### (Proposed Submission LPR Policy: SP4 Atomic Weapons Establishment (AWE) Aldermaston and AWE Burghfield)

Number of responses received: 21

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
<b>Statutory consultees</b>		
Aldermaston Parish Council (lpr1053)	Automatic Refusal should not be inevitable for small developments (eg less than 5 dwellings). It would be useful to see some comment as to how the number of additional employees and business clients that would come to the area during working hours would not have an adverse impact on the off-site emergency plan.	Comments noted.  However this is very much related to the Off-Site Plan and capabilities for both residential and commercial proposals
Hungerford Town Council (lpr126)	No comments recorded	Response noted
Newbury Town Council (lpr2269)	Acknowledge the constraint put on development and the knock on effect for Newbury and Thatcham	Response noted
Shaw-cum-Donnington Parish Council (lpr198)	We do not feel competent to comment	Response noted
Stratfield Mortimer Parish Council (lpr393)	Concern that it is not practical to express the ONRs likely advice, or the Council's response, to a range of scenarios covering likely possible futures making the plan worthless for this area.	Response noted
Thatcham Town Council (lpr1391)	Note that the Thatcham NE plan falls within the AWE outer zone, exceeds 200 dwellings, and that it is also located on a section of road prone to congestion.	Comments noted Thatcham does not fall within the AWE A Outer Consultation Zone (development management

	<p>Request that an accurate traffic flow assessment that reflects current level of congestion is used prior to consulting with the ONR on the viability of the proposed NE Thatcham site.</p> <p>Consideration is also given to the use of the A4 as a primary diversion route for the M4 when there are closures.</p> <p>Newbury Town Council Given that there is no evidence to indicate that this consultation with the ONR has commenced, it is necessary for West Berkshire Council to put forward alternative sites for the second phase of Draft Local Plan should future discussions with ONR restrict development.</p>	<p>purposes) but within the Outer Planning Zone (emergency planning purposes)</p>
Hart District Council (lpr50)	<p>It is noted that the outer consultation zone 5km buffer for AWE Burghfield comes close to the Hart boundary in the north of the District, but remains outside Hart. We would wish to be notified if there were any further changes to this in the future.</p>	<p>Comments noted</p> <p>Hart DC comes into the Outer Planning Zone for emergency planning (12km) and not the Outer Consultation Zone for development management purposes (5km)</p>
Environment Agency (lpr1658)	<p>The policy should add that Environmental Permitting Regulations 2016 (EPR) apply. Both sites generate radioactive wastes and the minimisation and disposal of these wastes is regulated under EPR permits.</p> <p>The regulator for EPR is the Environment Agency.</p>	<p>Comments noted and changes made</p>
<b>General consultation bodies</b>		
Office for Nuclear Regulation (ONR) (lpr1966)	<p>Please note that ONRs land use planning processes may apply to some of the developments within the West Berkshire Local Plan Review to 2037. If you are a Local Authority with areas that are within an ONR consultation zone please be aware that in order for ONR to have no objections to such developments we will require: confirmation from relevant Council emergency planners that developments can be accommodated within any emergency plan required under the Radiation (Emergency Preparedness and Public Information) Regulations 2019; and that the developments do not pose an external hazard to the site.</p> <p>Additional comments received 18th Feb 2021 - Since ONRs initial response to the emerging draft of the West Berkshire Local Plan Review to 2037 (attached) I have been made aware of an error within the draft plan ( Local Plan Review 2020 -2037: Emerging Draft (westberks.gov.uk) ). The plan includes an incorrect reference to ONR-LUP-NS-001 "Land Use Planning and the Siting of Nuclear Installations. The AWE sites centre points are not included in this document.</p> <p>The centre points are not yet published on the ONR Land Use Planning Website ONR - Land use planning , but will be Please note also, as per my letter of 24 April 2020 to Local Planning Authorities (attached), the Outer Consultation Zone (OCZ) for AWE Aldermaston will soon be amended from 8km to 5km.</p>	<p>Comments noted and changes made</p>

	Could you please update your Local Plan accordingly to remove reference to ONR-LUP-NS-001 Land Use Planning and the Siting of Nuclear Installations and also to include the OCZ for AWE Aldermaston as 5km.	
Sovereign Housing Association Ltd (lpr2159)	It is noted policy SP 4 seeks to revise the Emergency Planning Zone surrounding the two AWE sites located within WBDC. We understand this is following the advice of the ONR. Whilst we recognise the need for a robust emergency plan we urge the council to consider, where appropriate, to support the delivery of essential local affordable housing of a modest scale where it can be delivered in line with and support the local REPPiR.	Comments noted
<b>Other stakeholders</b>		
Tim Hall (lpr641)	Supports the policy	Support noted
Peter Norman (lpr1021)	It is noted in the supporting notes to SP4 that extensive quotes are taken from the NPPF to support the policy that helps enshrine the NPPF in the policy - this has not been done with the three preceding SPs and relevant sections of the NPPF should be quoted to support all the stated policies	Comments noted
Nataliya Topliss (lpr796)	If it is not possible to develop near AWE this does not mean that all developments have now to take place in Thatcham. The developments need to be spread evenly though the county to ensure that that there is no significant harm to a single town's infrastructure	Comment does not relate back to SP4
Councillor Tony Vickers (lpr529)	Note that a judicial review (JR) is likely to challenge the position this Council has taken to rule out any housing development in the DEPZs. .	Comment noted.
West Berkshire Green Party (lpr1827)	We broadly support this policy, while regretting the inevitable serious problems that are arising from locating the manufacture of the UK's weapons of mass destruction in the middle of West Berkshire.	Comments noted.
<b>Landowners, site promoters and developers</b>		
AWE (lpr2292)	Disagree in part. The draft policies do not go far enough. Express policy support is required for development at AWE A and AWE B, taking forward the proposals for a bespoke policy designation for these sites in current Core Strategy Policy CS9 (b). Executive Summary The Local Plan should provide direct policy support for development at AWE A and AWE B. This is required to allow AWE efficiently to develop, modernise, rationalise and consolidate its estate footprints in accordance with the Governments investment programme, which responds to the Government's policy commitment to a nuclear deterrent for the UK.	Comments noted.  Due to the unique nature of the employment at AWE, the Council is not able to assign it Designated Employment Area.  However, the Council is aware of the unique status of this significant employer and is proposing a separate policy to support the

	<p>Without such a policy, the Local Plan is unsound, does not reflect the requirements of Local Plan CS Policy CS9(b) and/or the NPPF  The Radiation (Emergency Preparedness and Public Information) Regulations 2019 has introduced the "Outline Planning Zone (OPZ)". We would therefore recommend that this term is used in the Local Plan in lieu of OCZ.  Policy SP4 does not recognise or support AWE's known land use and development needs at AWE A or AWE B. Function of Policy SP21 (Sites allocated for economic development Policy SP21 designates certain additional areas as Designated Employment Areas (DEAs), renaming and expanding upon the existing designated areas in the Local Plan, currently known as Protected Employment Areas (PEAs).  Policy SP21 should be interpreted and applied alongside Policy DC 31 (DEAs), which explains how planning permissions should be determined in DEAs.  Need for bespoke designation AWE A and AWE B have not been designated as PEAs (or now, DEAs), nor - in AWE's view - should be.  However, the Local Plan Review process should put forward an "alternative bespoke designation", in recognition of the sites' importance to the local economy and to national security, and to make the Local Plan consistent with Policy CS9(b) and, in any event, NPPF paragraphs 95 (b) (supporting development required for operational defence and security purposes) and 182 (reducing restrictions on existing businesses and facilities / agent of change).</p>	<p>development of AWE A and AWE B, reference DM33.   The term OCZ is one provided by ONR in relation to development management purposes and OPZ in REPPIR for emergency planning purposes.</p>
<p>Charlesgate Homes Limited  (lpr2340)</p>	<p>Are you able to advise if it is the likely intentions to blanket ban housing with the DPEZ at both Burghfield and Aldermaston?  Are you able to advise what evidence based has been used to change Policy CS8 from the current tiered system?  It is my belief that all polices are formed on the basis of evidence based information, but I am unable to find this within the proposed local plan evidence.  Have the WBC emergency planning team objected to SUL1, or just the Grazeley Green Garden village?  Have the ONR objected to SUL1 or just the Grazeley Green Garden Village?  Is there new documentation/ regulation outside of the RIPPIR 19 and Burghfield AWE consequences report that state no new houses can be build in the DPEZ zone, not matter how far away they are?  Why is the tier system being dropped, has these been deemed unsound at a recent appeal decsion or have the ONR objected to it?  As a resident that now lives within the DPEZ zone (was outside it before) should I be concerned that no more people are allowed to live in the DPEZ zone and is there something going on at AWE that impact us health wise?  If there is added risks will the residents within the DPEZ zone be made aware of this?</p>	<p>Comments noted.   The tier system is being dropped on the advice of ONR.</p>

	When Will the updated DPEZ report likely be published?	
<p>John Cornwall on behalf of Messrs I. Cheshire, R. Shaw and The Russell Trust (lpr1649)</p>	<p>Burghfield Common is a Rural Service Centre The village is relatively close to the Atomic Weapons Establishment ROF Burghfield, which lies to the north and east of the settlement. The Office for Nuclear Regulation (ONR) applies safety zones around such sensitive establishments (the other in the area is at Aldermaston) within which the relevant local authorities are required to prepare an Off-Site Emergency Plan.</p> <p>At either of these locations the reasoning behind the ONRs decision in May 2020 to extend the zones is vague and unclear, and justified by factors which do not appear to be appropriate.</p> <p>The proposed DEPZ extension at AWE Burghfield is therefore objected to. It will effectively prevent the local planning authority from allocating housing sites in the Burghfield Common area, which is now effectively wholly covered by the extended DEPZ, thus frustrating one of the policy objectives of this Consultation Document. Objection is also raised to the wording of Proposed Policy SP4. The opening sentence states that: In the interests of public safety, residential development in the Detailed Emergency Planning Zones (DEPZ) of AWE Aldermaston and Burghfield is likely to be refused planning permission by the Council, especially when the Office for Nuclear Regulation has advised against that development. The original 1.5 kilometres radius zone covered an area that is almost entirely rural and countryside. in planning policy terms, where there was a presumption against development in any case. The implications of the ONR approach to the issue was therefore probably not fully appreciated by West Berkshire Local Planning Authority. However, its impact will now become very apparent because of the reasons set out above in relation to Burghfield Common.</p> <p>I proposed a re-wording of their Policy SS7 along lines which are both appropriate and relevant to the emerging West Berkshire situation.</p>	<p>Comments noted.</p> <p>The zones identified in May 2020 have been subject to a Judicial Review, which found in favour of the Council.</p> <p>The proposed rewording does not align with national guidance and is therefore not proposed.</p>
<p>Green Park Reading (lpr2032)</p>	<p>GPR understands the reasons for limiting residential development within the Burghfield Atomic Weapons Detailed Emergency Planning Zone.</p> <p>GPR also understands the need to consult the ONR for non-residential planning applications within the DEPZ. However, it is unlikely that non-residential development would have a significant impact on the off-site emergency plan for the Burghfield Atomic Weapons Establishment.</p> <p>GPR therefore requests that clarification is added to Policy SP 4 that although the ONR will be consulted, it is unlikely this will restrict non-residential development in the DEPZ.</p>	<p>Comments noted.</p> <p>The statement non-residential development would be unlikely to have a significant impact on the off-site emergency plan cannot be substantiated and therefore changes cannot be made. Especially since under certain circumstances some employment can be changed to residential under permitted development rights.</p>

Richborough Estates Ltd(lpr2384)	It is noted that a High Court case is currently pending determination in respect of the extent of the DEPZ. This may impact whether or not the site Land North of Silchester Road, Tadley would still be located within the DEPZ, and the approach to be taken in terms of the acceptability of residential development in this locality. This High Court case is therefore considered to be of relevance to Policy SP4.	Comments noted.  The Judicial Review in the High Court of the designation of the DEPZ was found in the Council's favour.
Savills on behalf of Englefield Estate Office (lpr1527)	<p>It is important to note that the extension of the DEPZ is currently subject to Judicial Review (the outcome of which is not yet known).</p> <p>During the plan period there is likely to be changes of inputs to the ONR model which may result in, changes to the consultation zones. These will be kept under review. The potential for changes to the DEPZ is of major importance given the development potential of land currently located within the DEPZ, including for example land of strategic importance at Grazeley. We would therefore strongly support the need to maintain ongoing review throughout the plan period.</p> <p>Should the DEPZ change, this should be a trigger for a review of the LPR and reconsideration of appropriate sites for residential development, such as at the Estates land at Grazeley, Burghfield Common and Green. This should be clarified within the LPR.</p> <p>Draft LPR Policy SP4 states that residential development in the DEPZ is likely to be refused, and any new development in the DEPZ leading to an increase in population will be consulted upon with ONR; however, no specific guidance is provided regarding the likely suitability of commercial development in the DEPZ. In this regard we note recently that ONR did not object to an application for an energy recovery centre and data centre at Berrys Lane, Reading, located within the DEPZ, following review by the Councils Emergency Planners (ref. 20/02029/COMIND).</p> <p>Further clarity is needed in the LPR itself on the suitability of commercial development in the DEPZ, particularly given that the Eastern Area is identified as an important area for business development in draft LPR Policy SP1</p>	Comments noted.  The outcome of the Judicial Review was to support the position of the Council.

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP5 Climate Change

### (Proposed Submission LPR Policy: SP5 Climate Change)

Number of responses received: 43

Respondent	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr729)	Policy supported. Pleased to see mention of the historic environment in this - but NB an understanding of the evolution of our landscape and the significance of its historic character can also be used for positive enhancement that also responds to climate change. An example of this would be tree planting where it's known that ancient woodland has been lost.	Comments noted.
West Berkshire District Council Ecologist (lpr1689)	2nd and 3 <sup>rd</sup> bullet points in policy - Add a point about low tech solutions in terms of building materials. para 5.7 ....Using water more efficiently, reducing overheating and controlling high levels of rainwater run-off <u>in upper parts of the catchments</u> are all examples of adapting a development to respond to changes in our climate...	Comments noted.  SP5 is a strategic policy and low carbon technologies and innovation is a deliberately broad term to embrace known and unknown future developments in technology. To pick out 'building materials' would take the policy to level of detail not appropriate to SP5. Similarly, controlling high levels of water run-off is applicable to a range of development circumstances and not wanting to limit the controls just in upper parts of the [river] catchment.
<b>Statutory consultees</b>		
Greenham Parish Council (lpr892)	Policy not supported.	Comments noted. Placing the burden of net carbon positive on new development to compensate for past and present excesses

Respondent	Response	Council Response
	<p>Would like to see stronger environmental policies. Councillors agree to use Question 2 text from Section 5 of the document supplied by TV <i>[assumed to be Cllr Tony Vickers]</i></p> <p>New local plans should reflect the need to go beyond carbon neutrality, in new developments, in order to meet District wide carbon neutrality by 2030.</p>	<p>in not considered equitable and as the comment suggests the achievement of carbon neutrality will be a product of many plans as part of wider strategy to address the climate emergency. Measures to increase the adoption of retro-fitting energy efficiency measures for the existing housing stock may be explored in subsequent Local Plan Documents and other government policy programs.</p>
Newbury Town Council (lpr2268)	<p>Yes we support it – but we wish to strengthen it.</p> <p>We wish to positively encourage developments whose main purpose is to combat climate change, such as renewable energy projects.</p> <p>It is not enough that development proposals aim to be themselves carbon neutral. The Local Plan must reflect what is said in the Council’s Environment Strategy: “any carbon dioxide gas emissions within West Berkshire will be balanced with an equivalent of emissions that are either offset or prevented”.</p> <p>Developments should aim where possible to be carbon positive, to counterbalance the many existing developments – some still being built out – which are carbon negative. Developments that are specifically to provide renewable energy must be encouraged and supported, especially on Council owned land or when community-led to supply nearby settlements. Such developments should be considered as part of the essential infrastructure of the District and able to be part funded by CIL contributions from other developments.</p> <p>In this sentence: “All development should contribute to West Berkshire becoming and staying carbon neutral by 2030” the words “as much as possible” should be added after “contribute”.</p>	<p>Comments noted.</p> <p>The Environment Strategy is much broader in its scope than just new development notwithstanding the importance of new development being carbon neutral or better. For instance, development cannot offset carbon emissions from resident’s use of transport as a consequence of house building. However, the Local Plan Review policy does seek to develop in the most sustainable locations.</p> <p>The Council believes that this policy together with other related policies referred to within the Plan, is clear in its intent with respect to tackling climate change through sustainable development.</p> <p>Proposed Submission LPR Policy DM4 Building Sustainable Homes and Businesses addresses the requirement for renewable energy in new developments.</p> <p>The Council considers the addition of “as much as possible” would weaken the policy.</p>
Hermitage Parish Council (lpr1818)	<p>Policy supported.</p> <p>Hermitage Parish Council supports all of the aims of this policy but would like to see additions to better build sustainable communities.</p>	

Respondent	Response	Council Response
	<p>Set a baseline of standards that must be met for carbon emissions, not just from the finished home but from the entire building process.                      Aim to be at the forefront of innovation demonstrating best practice for other Local Authorities to learn from.                      As you say, much of West Berkshire is an AONB so provides an ideal opportunity to show how homes can be built without damage to the environment.                      Prioritise developers by green credentials to encourage all to meet the best standards.                      Require developers to state what the carbon emissions of a build will be, how this will be measured and when, with penalties if the original statement is not met.                      Include transport within the carbon emissions statement.                      Seek out best practice elsewhere with a view to following this so that WBC is not operating in a bubble.</p>	<p>SP5 is a strategic policy that must bring together other policies in the LPR to achieve its aims. For example, standards are set out in Proposed Submission LPR Policy DM4 (Building Sustainable Homes and Businesses) for construction and renewable energy. In others, such as Proposed Submission LPR Policy DM8 (Air quality) which will require air quality assessments.</p>
<p>Holybrook Parish Council (lpr2451)</p>	<p>Policy supported.</p>	<p>Support noted</p>
<p>Hungerford Town Council (lpr127)</p>	<p>We strongly support this policy and believe much greater urgency in implementing it is essential.</p>	<p>Comments noted and agreed.</p>
<p>Thatcham Town Council (lpr1392)</p>	<p>Policy neither supported nor not supported.</p> <p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p>We agree with the importance of responding to climate change and ensuring that the Draft Local Plan aligns with the statement mission of West Berkshire Council aligned with net-zero carbon.</p> <ul style="list-style-type: none"> <li>• "All development should contribute to West Berkshire becoming and staying carbon neutral by 2030."</li> </ul> <p>It is essential that this policy is consistent and aligns with the definition of the Environment Strategy that "any carbon dioxide gas emissions within West</p>	<p>Comments noted.</p> <p>Many other policies in the LPR complement and will be applied in conjunction with the Climate Change policy which is an 'umbrella' policy. Those policies such as Proposed Submission LPR Policy DM4 (Building Sustainable Homes and Businesses for construction and renewable energy and Proposed Submission LPR Policy DM8 (Air quality) which will require air quality assessments for example, illustrate the many measures within a development that can help achieve the aims of the policy and the reason that a Sustainability Statement is required. The policy requires developments to satisfy the criteria for approval and the Sustainability Statement should</p>

Respondent	Response	Council Response
	<p>Berkshire will be balanced with an equivalent of emissions that are either offset or prevented."</p> <p>On this basis the policy requires to be strengthened. The policy has good intentions but could easily be circumvented by a developer. For example: 'development should <u>contribute</u> to becoming carbon neutral' - could imply that a cycle lane or a bus-stop contributes to and fulfils the policy.</p> <p>'To achieve the highest <u>viable</u> levels of energy efficiency' - could lead developers to claiming that a higher level is unviable leading to poorer quality houses.</p> <p>'To generate and <u>supply</u> renewable' - could lead to a developer claiming that a single solar panel of one dwelling on 2,500 houses fulfils the policy.</p> <p>It is essential that this policy is substantially strengthened, the ambition is made clear, and that statements are quantifiable.</p> <ul style="list-style-type: none"> <li>'Proposals should be accompanied by a Sustainability Statement'.</li> </ul> <p>We note that the Sustainability Appraisal report, also under consultation, does not refer to the West Berkshire Environment Strategy. Nor does it include the clear statement that "any carbon dioxide gas emissions within West Berkshire will be balanced with an equivalent of emissions that are either offset or prevented." The stated issue within the Sustainability Appraisal is "reduce impacts on climate change through reduced emission of greenhouse gases". This issue in the SA is not consistent with the Environment Strategy of West Berkshire, because it does not define what level of reduced emission is considered acceptable, nor does it align with net zero.</p> <p>It is essential that the Sustainability Assessment reflects the approved motion on Net-Zero Carbon, the definition within the Environment Strategy. It is important that this policy is revised and aligned with the Environment Strategy. Similarly, so should the SA. The aspiration needs to be clear, and it will be necessary for West Berkshire to require large</p>	<p>demonstrate how this is to be achieved. Approval and any conditions attached at the planning application stage will ensure that token commitments will not succeed.</p> <p>The sustainability appraisal (SA) is a quite separate and prescribed process to the Council's Environment Strategy. The SA combines the requirements for a Strategic Environmental Assessment (SEA) of Local Development Documents in accordance with the European Directive (2001/42/EC)<sup>1</sup> which is enshrined in national law by the Planning and Compulsory Purchase Act 2004<sup>2</sup> and those requirements of the SEA Regulations (Statutory Instrument 2004 No. 1633: The Environmental Assessment of Plans and Programmes Regulations 2004)<sup>3</sup> The appraisal includes economic and social components of sustainable development as well as the environment.</p> <p>Proposed Submission LPR Policy DM4 Building Sustainable Homes and Businesses does include net zero</p> <p>The Government is in the process of consulting on a Future Homes Standard which it hopes to pass into legislation in 2024. An interim change to the Building Regulations occurred in June 2022</p>

Respondent	Response	Council Response
	<p>developments to conduct a carbon assessment and footprint exercise that predicts the carbon footprint of dwellings.</p> <p>If a development will lead to an excess (above) net-zero carbon we recommend that a penalty payment is made by developers to West Berkshire Council to enable it to invest in off-setting schemes which could include large scale solar, or windfarms (not necessarily on West Berkshire land). We recommend that an independent assessor is identified. We understand that a similar approach is taken by London Authority.</p> <p>We also recommend that this policy is aligned with the Building Homes Standard, recently published by central government “that local authorities will retain powers to set local energy efficiency standards for new homes” and therefore WBC should use its power to ensure it meets its own Environment Strategy objectives.</p> <p>We recommend that West Berkshire has an independent assessor or carbon footprints for major new developments. Where development exceeds net zero carbon beyond 2030 a developer should demonstrate how offsetting will be used to mitigate carbon emissions.</p> <p><b>Section 5.4</b></p> <p>"District sets a target for carbon neutrality by 2030 being achieved by reducing carbon emissions to 350kt/annum".</p> <p>It is unclear to us whether the 350kt/annum targets include the population growth to 2037. We think it does not as the Environment Policy appears to be referenced to a 2017 baseline.</p> <p>It is important that that this target is updated to reflect the growth forecasts for 2037.</p> <p><b>Section 5.6</b></p> <ul style="list-style-type: none"> <li>• Designing and constructing developments that are extremely energy efficient and/or make the best use of renewable energy technologies are both ways of helping to mitigate further climate change.</li> </ul> <p>The Thatcham NE site is SW facing and has elevated location. Such locations lend themselves to a good wind-resource (SW is the prevailing wind direction) and sites clear of woodland are fairly rare in West Berkshire. We would therefore encourage West Berkshire to conduct a survey of the</p>	

Respondent	Response	Council Response
	<p>wind and solar resource on site and to assess the level of renewable energy that can be harvested. This should be used to inform future development of the site with regards the potential for off-setting.</p> <p>We note that the Sustainability Assessment state that there is "clear evidence and justification that West Berkshire needs to do more to meet national targets in relation to CO2 emissions reduction." and that "current installed capacity is about 15% of the previously designated 2016 target". It is necessary to update the Sustainability Assessment which is now dated as the target of 2016 predates the commitments made in July 2019. Following this update, it is important to assess what is the current installed capacity relative to the new target and to understand the scale of challenge that remains.</p> <p><b>Section 5.8</b></p> <ul style="list-style-type: none"> <li>The principles of climate change adaptation and mitigation are embedded within this policy.</li> </ul> <p>We believe that the policy (or subsequent policies) must go further. Defining 'principles' without quantitative statements, or without enforcement policies, is unlikely to lead to the principles being achieved.</p> <p>We note that the Thatcham Strategic Plan makes virtually no reference to net zero carbon, or renewable energy schemes. If the policy were to have force, we would expect this to be a core part of the proposal.</p>	
Reading Borough Council (lpr1487)	RBC supports the principles of climate change mitigation and adaptation, as well as WBDC's declaration of a climate emergency in July 2019. RBC welcomes further co-operation across boundaries as both Councils seek achieve carbon neutrality by 2030.	Comments noted.
Tilehurst Parish Council (lpr1985)	Policy is neither supported nor not supported. It is good to see the Local Plan addressing the climate emergency although we feel there may be scope to go further (something we hope to cover in our NDP).	Comments noted.
Stratfield Mortimer Parish Council (lpr394)	<p>We support this policy overall but have reservations:</p> <p>The challenges we face from Climate change are well documented and it is good to see the local plan taking cognisance of those challenges. Even so the individual bullet points seem to vary from the very restrictive irrespective</p>	<p>Comments noted.</p> <p>The policy will apply to all development for which planning approval is required.</p>

Respondent	Response	Council Response
	<p>of cost, for example “To take advantage of the latest low and zero carbon technologies and innovations, including digital” to the rather weak or at the very least not clearly defined, for example.... “To achieve the highest viable levels of energy efficiency”.</p> <p>On a more general point the plan only envisages dealing with new development with regard to climate change while the introduction to the plan, and the supporting text to this policy, makes great play about carbon neutrality overall. Such neutrality will not be achieved by just affecting new development. Should there not be some mention of how existing development might be encouraged to adopt measures to reduce climate change. For instance, should it be made clear that this policy applies to all new development including permitted development?</p>	
Cold Ash Parish Council (lpr1732)	Policy is supported. No further comment.	Support noted
Shaw-cum-Donnington Parish Council (lpr199)	<p>We support the policy but we do not understand how these ambitious aims will be met. For example, how do you force a developer to “...recycle and waste reduction both during construction and occupancy”. A study of the North Newbury development (pre this policy) has no such requirements. There is no renewable energy requirements on this development. It will be recalled that the WBC had a policy of requiring dwellings to be BREEAM excellent but this had to be abandoned after an appeal was lost. Thus this policy is dependent on a change to building regulations or the gift of such powers to local authorities. The text gives no indication how these laudable aims will be achieved.</p>	<p>Comments noted.</p> <p>The Sustainability Statement and any subsequent conditions applied at the planning application stage and subsequently enforced along with Building Regulations, will ensure that the policy is complied with. Government guidance and policy has been constantly updated in recent years. The Government is in the process of consulting on a Future Homes Standard which it hopes to pass into legislation in 2024. An interim change to the Building Regulations occurred in June 2022.</p>
Vale of White Horse & South Oxfordshire District Councils (lpr1777)	<p>Policy is neither supported nor not supported.</p> <p>We are pleased to see the draft Plan’s acknowledgement of the urgent need to respond to climate change, which is a high priority corporate objective for the Vale of White Horse District. In particular, we support the criteria-based approach to the assessment of development proposals set out in Policy SP5 (Responding to Climate Change).</p>	Comments noted.

Respondent	Response	Council Response
South Oxfordshire District Council (lpr1782)	We are pleased to see the draft Plan's acknowledgement of the urgent need to respond to climate change, which is a high priority corporate objective shared with South Oxfordshire District Council. In particular, we support the criteria based approach to the assessment of development proposals set out in Policy SP5 (Responding to Climate Change).	Comments noted.
Environment Agency (lpr1659)	We recommend you strengthen the bullet point on flood risk: Include Natural Flood Management (NFM) measures where feasible, including re-connecting rivers to their floodplains. This is to ensure that development provides suitable mitigation and adaptation to climate change, taking into account the long-term implications for flood risk, and safeguards the future resilience of communities and infrastructure to climate change impacts. This is in accordance with Paragraph 149 of the National Planning Policy Framework (NPPF) We have mentioned NFM further under Policy SP6 – Flood Risk.	Comments noted.  Policy SP6 Flood Risk is more appropriate to consider this topic but SP5 does say "To demonstrate that flood risk from all sources can be avoided or managed in accordance with Policy SP6."
Natural England (Eleanor Sweet-Escott) (lpr1594)	We welcome consideration of Climate Change, as outlined in Policy SP5. The Local Plan should, in considering climate change adaptation, also recognise the role of the natural environment to deliver measures to reduce the effects of climate change, for example tree planting to moderate heat island effects. In addition, factors which may lead to exacerbate climate change (through more greenhouse gases) should be avoided (e.g. pollution, habitat fragmentation, loss of biodiversity) and the natural environment's resilience to change should be protected. Green Infrastructure and resilient ecological networks play an important role in aiding climate change adaptation. A list of useful links on consideration of climate change adaptation is provided in Annex B.	Comments noted.  Emerging Draft LPR Policy DC14 Trees woodlands and hedgerows, covers this. So do policies SP10 Green Infrastructure and SP11 Biodiversity and Geodiversity
<b>General consultation bodies</b>		
Heritage Forum (lpr70)	Policy is supported. The last bullet point, on the historic environment, would be better phrased if it referred to the harm caused by adverse environmental factors such as pollution and flooding.	The support is noted.  The policy acts on climate change for the protection of the historic environment amongst other benefits; it is not the place to rehearse the many adverse effects on the historic environment itself.

Respondent	Response	Council Response
Home Builders Federation (lpr1936)	<p>Policy not supported.</p> <p>The housebuilding industry, through the HBF, recognises that there is a need to move towards stronger measures to improve the environmental performance of new residential development. However, rather than have a variety of standards in each local plan, the HBF, and our members, consider a national and standardised approach to improving such issues as the energy efficiency of buildings, the provision of renewable energy and the delivery of electric vehicle charging points to be the most effective approach that balances improvements with the continued delivery of housing and infrastructure. The HBF considers a universal standard is necessary to allow research and development and supply chains to focus upon responding to agreed national targets, and for training providers to plan their programmes to equip the labour force to meet these new requirements. Therefore, the HBF do not agree with the requirement for all development to achieve the highest viable levels of energy efficiency. Firstly, this is not a standard but an aspiration. Such an approach will require a viability assessment to be provided with every application and lead to further negotiation as to the level of energy efficiency that can be achieved. This provides no certainty to the applicant or the decision maker as to what is expected and is contrary to paragraph 16 of the National Planning Policy Framework (NPPF) which states that policies should be unambiguous. The HBF recognises that the Government in their recent feedback on the responses to the consultation on the Future Homes Standard (1) will continue to allow Councils to set higher standards in their local plans. However, this should be seen within the context of the higher standards that the Government are proposing to be introduced from the start of 2022 and the statement in paragraph 2.41 of their response to the consultation on the Future Homes Standard that these standards will mean it is “less likely that local authorities will need to set local energy efficiency standards”. It is also important to note that Planning Practice Guidance (PPG) continues to state that energy standards should only be increased beyond building regulations to an equivalent of level 4 of the Code for Sustainable Homes – roughly a 20% improvement in emissions. This suggests that the proposed changes to the part L, which will see a 31% improvement in emissions, is the appropriate standard to be applied from</p>	<p>Comments noted.</p> <p>The detailed implementation of the approach is set out in Proposed Submission LPR Policy DM4 (Building Sustainable Homes and Businesses along with justification.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District’s target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>

Respondent	Response	Council Response
	<p>2022 and that further local uplifts are unnecessary. Importantly the approach taken by Government is one that ensures there is sufficient time for the development industry and relevant supply chains to deliver the Future Homes Standard from 2025. The Council must recognise that this not just an issue of viability but also one of deliverability and that, as the Government notes in paragraph 2.53 of their consultation response, the interim part L standards are a key stepping stone to implementing the higher standards from 2025.</p> <p>The HBF considers the most effective approach in achieving net zero commitments alongside the homes needed in any area is through the application of Building Regulations that allow for a transition to higher standards. The importance of a collective approach will also balance the cost of delivering the energy efficiency improvements required alongside other planning obligations and development aspirations that the Council are seeking to deliver through the West Berkshire Local Plan, such as meeting housing needs in full and improving the affordability of homes in this area. We would therefore suggest that the third bullet point of SP5 is removed.</p> <p><i>(1) The Future Homes Standard: 2019 Consultation on changes to Part L (conservation of fuel and power) and Part F (ventilation) of the Building Regulations for new dwellings - Summary of responses received and Government response (MHCLG, January 2021)</i></p> <p>The HBF considers the most effective approach in achieving net zero commitments alongside the homes needed in any area is through the application of Building Regulations that allow for a transition to higher standards. The importance of a collective approach will also balance the cost of delivering the energy efficiency improvements required alongside other planning obligations and development aspirations that the Council are seeking to deliver through the West Berkshire Local Plan, such as meeting housing needs in full and improving the affordability of homes in this area. We would therefore suggest that the third bullet point of SP5 is removed.</p>	
Canal & Rivers Trust (lpr866)	<p>The Canal &amp; River Trust fully support this policy and will comment further in relation to the relevant DC policies.</p> <p>Renewable energy</p>	Comments noted.

Respondent	Response	Council Response
	<p>We recognise the benefits that canals can bring in urban cooling and the Trust promote the use of canal water for heating and cooling new developments, and this can provide a valuable low carbon alternative. The water flowing through our waterways contains enough thermal energy to produce approximately 640 MW of energy. We consider that heating and cooling schemes can be delivered without any adverse impact on biodiversity. Any Energy Assessment proposing use of such technology should demonstrate evidence of consultation with the Canal &amp; River Trust. Water from our waterways may also be used for electricity generation through hydro-electric power schemes. These sources should be included as options within studies of renewable energy potential.</p> <p>Greater reference and promotion in the plan for water based renewable energy for larger scale projects. A requirement to discuss potential opportunities for this with the EA/ Canal &amp; River Trust in advance of submitting applications.</p>	
West Berkshire Green Exchange (lpr1551)	<p><b><i>"All development should contribute to West Berkshire becoming and staying carbon neutral by 2030."</i></b></p> <p>In order to do this all housing and other buildings should be built to the highest possible standards. This means that a very high Home Quality Mark (HQM) rating should be used with a very high Home Energy Performance Rating (HEPR) to minimise electricity use. If the highest HEPR isn't used from the outset it will mean that very much more expensive upgrades to the houses insulation will be needed at a later date. Once the house is built it would only be possible to upgrade insulation by external insulation which would completely alter the character of the housing, for instance changing brick elevations to rendered ones. Building high levels of insulation into new houses from the outset is very cheap compared to the cost of having to upgrade at a later date the cost of which would probably end up coming from the public purse rather than the developers.</p> <p>Affordable homes are not affordable if they have high fuel bills and these bills are likely to rise significantly if we have to build more nuclear power stations with their guaranteed energy prices three to four times the current cost of renewables.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>

Respondent	Response	Council Response
	<p>HEPR should be set at 0.900 or thereabouts to ensure the best quality building fabric possible.</p> <p>The HQM documentation makes the point that their low energy homes will be much more affordable to run and that this point should be taken in account by mortgage lenders if a higher price is demanded of the purchaser or renter. Adding to the cost of the build should not be a valid objection to a demand for high insulation standards through a high HEPR.</p>	
West Berkshire Green Party (lpr1828)	<p>Policy neither supported nor not supported.</p> <p>Responding to Climate Change. We broadly support this policy. As stated above, we believe Climate Change is the No 1 issue facing the council. Priority should be given to renewable energy and carbon-negative projects. In terms of building standards, we note the following recent statement from the Green Building Council: “The many local authorities that have declared climate emergencies will also be relieved that Government has confirmed that in the immediate term they can still set higher energy performance standards for new homes than those mandated by Building Regulations.” We would naturally hope that West Berkshire will set such standards. While we strongly support the aim “to improve wildlife habitat and species conservation and connectivity”, we do not believe this is compatible with the proposals elsewhere in the plan for Sandford and North-East Thatcham.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District’s target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p> <p>Policy SP11 Biodiversity and Geodiversity includes the requirement for biodiversity net gain.</p>
The Woodland Trust (lpr1014)	<p>Policy is not supported.</p> <p>The Woodland Trust does support the comprehensive approach to addressing climate change adopted by West Berkshire, including natural solutions such as sustainable urban drainage, use of blue and green infrastructure, and linking to habitat conservation.</p> <p>However we are disappointed that there is no specific reference to the role of trees in both sequestering carbon emissions and mitigating the impact of climate change.</p>	<p>Comments noted.</p> <p>Proposed Submission LPR Policy DM15 Trees woodland and hedgerows, covers this.</p> <p>Policy SP5 states as one of its bullet points: ‘To provide for green/blue infrastructure and open spaces within the layout for shading and cooling, to detain surface water run-off and absorb carbon dioxide emissions in accordance with policy SP10’</p> <p>Policies SP10, SP11 and DM15 with SP5 cover this area.</p>

Respondent	Response	Council Response
	<p>The climate crisis is paralleled by a nature crisis and we need solutions that will tackle both.</p> <p>A rapid increase in the rate of woodland creation has been proposed by the UK's Committee on Climate Change (CCC), to provide a key mechanism to lock up carbon in trees and soils, provide an alternative to fossil fuel energy and resource-hungry building material, and importantly to stem the declines in biodiversity. The Woodland Trust supports the CCC's recommended an increase in UK woodland cover from its current 13% of land area to 19% by 2050 to tackle this country's biodiversity and climate crises. More information can be found in the Trust's 2020 publication <a href="#">The Emergency Tree Plan</a>.</p> <p>In addition, trees and hedgerows help mitigate the impacts of climate change, delivering natural cooling in urban heat islands through transpiration as well as providing shelter and shade, and contributing to sustainable urban drainage systems. They also make a valuable contribution to the quality of the public realm, helping reduce air, noise and light pollution and improve people's mental health.</p> <p>We recommend including specific policy in support of new tree planting, hedgerows and urban woodland creation. We recommend setting a District-wide target for tree canopy cover, and a specific target for development sites, as part of this policy, to be pursued through the retention of important trees, appropriate replacement of trees lost through development, ageing or disease and by new planting to support green infrastructure.</p>	<p>Policy SP10 helps by stating: 'to mitigate the causes of and address the impacts of climate change through measures such as sustainable drainage, minimalizing urban heating, flood risk management, and maximise GI to sequester carbon and provide cooling and insulation functions'</p>
<b>Other stakeholders</b>		
Graham Storey (lpr565)	<p>Policy not supported. Priority should be given to renewable energy and carbon-negative projects.</p>	<p>Comments noted.</p>
Jane Halliday (lpr607)	<p>Policy not supported. Priority should be given to renewable energy and carbon-negative projects. As estates that would be dominated by car use, the Sandleford and NE Thatcham developments contravene the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in Vision section 3.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero</p>

Respondent	Response	Council Response
	<p>Priority should be given to renewable energy and carbon-negative projects. Any new developments must comply with the Council's Climate Change and Environmental Policies SP5, SP8, SP10 and SP11</p>	<p>carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
<p>Ian Halliday (lpr608)</p>	<p>Policy not supported.</p> <p>Priority should be given to renewable energy and carbon-negative projects. As estates that would be dominated by car use, the Sandford and NE Thatcham developments contravene the council's climate change and environmental policies (SP5, SP8, SP10 and SP11) and the connection to local facilities outlined in Vision section 3.</p> <p>Priority should be given to renewable energy and carbon-negative projects. <p>Tim Hall (lpr642)</p>	<p>The words "Depending on the nature and scale of proposals" provide a let-out clause.</p> <p>Delete the above words.</p>	<p>Comments noted.</p> <p>This statement is relating to the detail in the Sustainability Statement and not the mitigation or adaptation measures.</p>
<p>Ian Watson (lpr684)</p>	<p>This does not take adequate allowance for changes in rainfall patterns associated with climate change. In particular, more intense rainfall is likely to increase flood risk. Additional developments may lead to higher and/or faster run-off. While this may be compensated to some extent by SUDs this is by no means guaranteed, especially if SUDs are poorly designed or poorly installed.</p> <p>Ensure planning for increased rainfall and associated surface water run-off is properly accounted for. Both at the unit level and the development level there needs to be net-zero increase in run-off and preferable an increase in rainfall retention.</p>	<p>Comments noted.</p> <p>The policy does not endorse poor design and installation.</p> <p>Policy SP 6 Flood Risk takes a risk based and sequential approach to development proposals from the outset. It is considered that is what the policy sets out to do through the use of SUDs.</p>

Respondent	Response	Council Response
David Hill (lpr708)	<p>This policy fails to address the need to change attitudes in development. This falls short of prioritising or even encouraging sustainable development - particularly where development is shown to be carbon neutral of negative over its lifetime.</p> <p>Policy SP5 should deliver a presumption in favour of (environmentally) sustainable development. Development, including replacement property development that can demonstrate a net environmental gain should be supported.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
Councillor Tony Vickers (lpr530)	<p>We strongly support this policy but we wish to strengthen it further. Every possible way of using planning policy to mitigate climate change must be adopted proactively.</p> <p>We wish to positively encourage developments whose main purpose is to combat climate change, such as renewable energy projects. We think these should have their own DC policy.</p> <p>It is not enough that development proposals aim to be themselves carbon neutral. Developments should aim where possible to be carbon positive, to counter-balance the many existing developments – some still being built out – which are carbon negative. Such developments should be considered as part of the essential infrastructure of the District and able to be part funded by CIL contributions from other developments.</p> <p>We also believe that all development <b>must</b> (not “should”) be required to demonstrate that every opportunity to contribute to the aim of achieving carbon neutral by 2030”.</p> <p>In second sentence, change “development should contribute” to “development <b>shall</b> contribute <b>where possible</b>” [to West Berkshire becoming and staying carbon neutral by 2030].</p> <p>Add to the end of SP 5 the following:- “Any development proposals whose main purpose is to reduce the carbon footprint of West Berkshire and which are themselves carbon positive will be looked on favourably, even if they are in conflict with other policies in this</p>	<p>Support noted.</p> <p>The Council believes that this policy together with other related policies referred to within the Plan, is clear in its intent with respect to tackling climate change through sustainable development. Carbon positive development will not be precluded on its own merits.</p> <p>The policies are intended to steer applicants and decision makers towards a balanced judgements taking account of all relevant policy material to the case. The Council does not consider ranking policies or giving one primacy over another would fit the principle of sustainable development.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>

Respondent	Response	Council Response
	<p>Local Plan. In particular, proposals which retrospectively incorporate renewable energy into local homes and communities will be supported.”</p> <p>In the supporting text (5.5) we wish to add a sentence: “This Plan therefore takes a proactive approach and requires all developers to follow the same approach and put tackling climate change at the heart of every proposal.”</p>	
Councillor Alan Macro (lpr754)	<p>Policy not supported.</p> <p>There is no policy covering renewal energy development.</p> <p>A separate policy is needed to encourage renewal energy developments where they would not have an unacceptable impact on the landscape.</p>	<p>Comments noted.</p> <p>Proposed Submission LPR Policy DM4 Building Sustainable Homes and Businesses includes policy requiring the provision of renewable energy and assessment of landscape impact.</p>
Ian Parsons (lpr828)	<p>Policy supported.</p> <p>Making it economically worthwhile to develop unused industrial, office and retail spaced for housing should be a priority.</p>	<p>Comment noted.</p>
Peter Norman (lpr1023)	<p>Policy supported.</p> <p>SP5 is full of good intent but it needs to be deeply embedded in policy documents with particular reference to having an SPD on environmental considerations and the preservation of existing biodiverse habitats, ancient woodlands and other protected habitats as required by the NPPF. If this policy is enforced it is very hard to understand how it is compatible with SP16 and the development of Sandleford and under this provision alone there should be a review of the appropriateness of Sandleford as a strategic site for housing development, when it would be a natural area to meet the Council's targets for tree planting and enhancing the ancient woodlands and habitats contained therein.</p> <p><b>5.5</b> The National Planning Policy Framework (NPPF, 2019, paragraph 149) requires that local planning authorities adopt proactive strategies to mitigate and adapt to climate change - it is hard to see from this supporting text as to how a development of Sandleford which negates every requirement in Para 149.</p>	<p>Comments noted.</p> <p>The Council does not accept the premise that development and the conservation and enhancement of biodiversity are inherently incompatible. The policies in the Local Plan that complement the Climate Change policy are intended to ensure that development is sustainable and deliver biodiversity net gain.</p> <p>The proposed sites selected for allocation in the most sustainable locations available have been subject to a robust process of assessment including a Sustainability Assessment taking account of the NPPF, including Paragraph 149. Policies are included in the Plan with respect to biodiversity and landscape, flood risk, and water resources amongst others, which will help to mitigate and adapt to climate change in the long run.</p>

Respondent	Response	Council Response
	A review should be carried out to ensure that the current housing allocation meets the needs of the climate agenda both locally and nationally.	
Nataliya Topliss (lpr797)	<p>The proposal for development fails to make any specific requirement for the development to be net zero carbon. The proposal does not address air quality issues.</p> <p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	Comments noted.
John Steele (lpr519)	<p>Policy is supported.</p> <p>Policy DC37 as referenced in the fifth bullet point relates to open space and as such appears not relevant to sustainable forms of vehicular and personal transport.</p>	<p>The support is noted</p> <p>Proposed Submission LPR Policy DM40 will specifically encourage access to open spaces on foot, cycle or where necessary public transport, in an effort to reduce carbon emissions.</p>
Sue Millington (lpr461)	<p>Policy not supported.</p> <p>Any planning for the future of our district has to have the objectives of the Climate Emergency declaration and Environmental Strategy at its core.</p> <p>Priority must be given to renewable energy and carbon-negative projects.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p> <p>The policy criteria for developments within SP5 includes, "to take advantage of the latest low and zero carbon technologies and innovations".</p>

Respondent	Response	Council Response
Suzanne McLaughlin (lpr14)	Policy is supported. No further comment.	The policy support is noted
Sam Coppinger (lpr286)	<p>Policy is supported.</p> <p>We agree that the reduction of traffic to and from industrial sites is important. Development must be sustainable in line with WBC policies. There should be a move to zero carbon - developments which look unlikely to meet this, should be rejected.</p>	<p>Comments noted.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
<b>Landowners, site promoters and developers</b>		
Pegasus Group for Donnington New Homes (lpr1943)	<p>Policy is neither supported nor not supported.</p> <p><i>Representation on behalf of Donnington New Homes in support of continued allocation of Sandlesford Park</i></p> <p>Whilst my client supports the general premise of new development responding appropriately to climate change, the response as provided at each development site needs to be aligned with national policy requirements which are in force at the time. Taking into account the speed at which technology relating to carbon neutrality progresses, a development which commences in 2022, for example, cannot be expected to provide the same degree of climate resilience measures as a development that takes place towards the end of the Plan period. The Policy therefore, needs to acknowledge this in order to provide developers with more certainty regarding the extent of measures that need to be included.</p> <p>As drafted, the Policy is aspirational, requiring developments to deliver the highest viable level of energy efficiency. This provides a lack of certainty for developers and leaves much to the discretion of Officers on a case by case basis. This means it is not possible for developers to understand the extent to which the Policy may impact the viability of a development, which could in</p>	<p>Comments noted.</p> <p>The detailed implementation of the approach is set out in Proposed Submission LPR Policy DM4 Building Sustainable Homes and Businesses along with justification.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Respondent	Response	Council Response
	<p>turn negatively impact on both the commercial attractiveness of potential housing land and the speed of delivery of housing.</p> <p>The Policy needs to be redrafted to instead simply require conformity with the Building Regulations that are in force at the time of the development. Such a standardised national approach is the most appropriate way to balance continuing improvements in the energy efficiency of new housing with housing delivery, and it allows a transition in standards from the current interim Part L standards to the Government's proposed higher standards to be brought in from 2022 which will see a 31% improvement in emissions from the current 20%. Given that the Local Plan is likely to still be in preparation in 2022, Policy SP5 should be drafted in anticipation of these national requirements.</p> <p>The Policy needs to be redrafted to instead simply require conformity with the Building Regulations that are in force at the time of the development. Such a standardised national approach is the most appropriate way to balance continuing improvements in the energy efficiency of new housing with housing delivery, and it allows a transition in standards from the current interim Part L standards to the Government's proposed higher standards to be brought in from 2022 which will see a 31% improvement in emissions from the current 20%. Given that the Local Plan is likely to still be in preparation in 2022, Policy SP5 should be drafted in anticipation of these national requirements.</p>	<p>The main policies for tackling climate change have been developed by consultants, the potential costs have also been tested for their impact on viability. Policy SP5 sets out the overall strategic approach to the topic while Proposed Submission LPR Policy DM4 sets out very clear targets and standards which should be met in development.</p>
Rectory Homes (lpr1848)	<p>Policy is neither supported nor not supported.</p> <p>We object to the requirement of Policy SP5 for all development to achieve the highest viable levels of energy efficiency as such an approach will require a viability assessment to be submitted with every planning application, leading to further delays due to negotiations regarding what level of efficiency can be achieved. The planning process already takes a considerable amount of time and it is our experience that even small-scale developments can take in excess of a year to be determined. The requirement for a viability assessment to assess the maximum energy efficiency measures that can be provided will delay the timescales of planning applications from date of submission to determination further. Whilst Rectory are committed to responding positively to climate change and</p>	<p>Comments noted.</p> <p>The detailed implementation of the approach is set out in Proposed Submission LPR Policy DM4 Building Sustainable Homes and Businesses along with justification.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding</p>

Respondent	Response	Council Response
	<p>we strive to make improvements to the efficiency of our development schemes where possible, the requirements under Policy SP5 as drafted provides no certainty to the applicant or the decision maker as to what is expected. This is contrary to Paragraph 16 of the NPPF which requires local planning policies to be unambiguous.</p> <p>It is therefore considered that the most effective approach to achieving improvements to energy efficiency is through Building Regulations which can outline new and universally agreed standards of development. In light of the above, we consider the third bullet point of Policy SP5 should be deleted from the policy wording.</p>	<p>to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
<p>Lichfields for North East Thatcham Consortium (lpr2395)</p>	<p>We recognise that West Berkshire has a desire to become and stay carbon neutral from 2030 and we support this ambition. We have provided a more thorough response to this policy via work undertaken by Hilson Moran at Appendix</p> <p>1 As described under our response to policy SP17 (above) it would be useful to define what 'carbon neutral' means in the context of this policy in order that the implications of it are clear and that the realism and implications for what new development must achieve as part of this can be measured. In any event, we consider it is possible to "take advantage of the latest low and zero-carbon technologies including digital" and achieve "the highest levels of energy efficiency" and support these measures.</p> <p>2 It should also be possible to "generate and supply renewable, low and zero-carbon energy for its own use and/or local distribution networks in accordance with policy DC3" (notwithstanding our comments on Policy DC3 below). However, the energy hierarchy and all advice around creating sustainable communities dictates that we would expect to seek to reduce energy demand, and then improve energy efficiency before we consider generating renewable energy as part of the suite of potential solutions.</p> <p>3 On this basis we believe policy SP5 is achievable (in energy and carbon terms) except that "generate and supply renewable, low and zero-carbon energy for its own use and/or local distribution networks in accordance with policy DC3" should be clarified.</p>	<p>Comments noted.</p>
<p>Potential Planning for Aldi Stores (lpr2289)</p>	<p>Whilst we recognise that the overarching aim of Policy SP 5 'Responding to Climate Change' is for the principles of climate change mitigation and adaptation to be embedded into new development, the Council should</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>undertake further consideration of the policy requirements to meet the criteria. It is considered that policy could be more flexible to ensure that climate change mitigation can be delivered by new development, whilst not stifling development opportunities and making proposals unviable.</p>	<p>The main policies for tackling climate change have been developed by consultants, the potential costs have also been tested for their impact on viability. Policy SP5 sets out the overall strategic approach to the topic while Proposed Submission LPR Policy DM4 sets out very clear targets and standards which should be met in development.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the District's target is to become carbon neutral by 2030. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
<p>ProVision for Greenham Trust Ltd (lpr2374)</p>	<p>The importance of addressing climate change, and the Council's declaration of a Climate Emergency is recognised, and the LPR has an important role to play. It needs to have a clear policy on what is expected and how it can be achieved to provide certainty. It is important that policy requirements are not overly prescriptive, and so become a barrier to meeting identified development needs. Viability of development is an important consideration, and priorities need to be clearly set out in the LPR and the way that development is managed, so that the cumulative burden of developer obligations does not "undermine the deliverability of the plan"<sup>10</sup>. It is supported that development proposals should be accompanied and informed by a 'Sustainability Statement'. This policy requirement should allow for site/context specific factors and solutions, rather than a 'one size fits all' approach. The LPR should also be well evidenced in this regard, to ensure that the strategy is feasible. It appears that the LPR is not currently informed by any</p>	<p>Comments noted.</p> <p>The main policies for tackling climate change have been developed by consultants, the potential costs have also been tested for their impact on viability. Respondent	Response	Council Response
	<p>evidence on these matters, for example a plan-level viability assessment (other than the viability assessment of affordable housing)<sup>11</sup>. National planning policy guidance<sup>12</sup> states that: <i>“The role for viability assessment is primarily at the plan makings stage” and that it “should not compromise sustainable development but should be used to ensure that polices are realistic, and total cumulative cost of relevant policies will not undermine deliverability of the plan”.</i> The guidance also encourages local planning authorities to engage with landowners, developers and infrastructure providers to provide evidence to inform viability of plans<sup>13</sup>. It should recognise that some initiatives to combat the causes and impacts of climate change are best addressed through strategic initiatives rather than solely through individual developments. There may be a role for the Community Infrastructure Levy to play in delivering district solutions. The LPR should be reviewed in respect of viability and other relevant evidence to underpin policy requirements so that development needs are delivered over the plan period while also addressing key issues including tackling the causes and impacts of climate change.</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

## Emerging Draft LPR Policy: SP6 Flood Risk

Environment Agency (lpr1680)	<p>Water Cycle Study Phase 1 - Scoping</p> <p>There are some sites that would require further investigation and analysis in a Phase 2 Water Cycle Study (WCS). This would need to involve more in depth modelling to ensure any development did not contribute to deterioration of a waterbody, or prevent a waterbody getting to good status under the Water Framework Directive. The WCS Phase 1 scoping has also highlighted many WWTWs that may require upgrades, and we would expect to see further analysis of these sites in Phase 2 WCS.</p>	<p>Since the Regulation 18 consultation on the Local Plan Review, the Phase 2 Water Cycle Study has been completed. This can be viewed at: <a href="https://info.westberks.gov.uk/evidencebase">https://info.westberks.gov.uk/evidencebase</a>.</p>
	Level 2 Strategic Flood Risk Assessment:	The advice from the Environment Agency as part of the preparation of the Strategic Flood Risk Assessment (SFRA) is welcomed.

Respondent (with lpr ref)	Response	Council Response
	<p>We have reviewed the Local Plan alongside the Level 2 Strategic Flood Risk Assessment (SFRA) as part of our cost recovery framework agreement with West Berkshire. We provided our comprehensive comments separately on this document in October 2020. We appreciate you allowing us to provide detailed comments, we hope our review of this document at an early stage will inform you going forwards, and will continue to work with you on developing this document.</p> <p>There were a number of sites put forward in the Local Plan which do not appear to be discussed in the SFRA, despite some significant flooding issues relating to these sites. For example, The 'North East Thatcham' strategic site contains an area which is an existing flood risk management structure, recently completed by West Berkshire Council (Floral Way Flood Storage Area). In addition, further surface water management schemes are being planned by West Berkshire Council within this area, including 'East Thatcham'. This site does not appear to be included in the SFRA, however given the presence of flood defences guidance will be required (in the SFRA level 2 and the local plan) as to where development would, and would not be appropriate. It is crucial that both existing flood defences, and land proposed as future flood storage areas are safeguarded against future development. This is to ensure that flood risk is not increased elsewhere, and that development is appropriately flood resistant and resilient in accordance with Paragraph 163 of the NPPF.</p> <p>Furthermore any site specific Flood Risk Assessment would need to carefully consider the impact of the development on the surface water management scheme(s).</p> <p>There are a number of other sites need to be included in the level 2 SFRA (and are not currently included):</p> <ul style="list-style-type: none"> <li>• Land at Poplar Farm Cold Ash (Site Ref: HSA 6) - The local plan highlights the need for a surface water detention basin to accommodate development drainage</li> <li>• Land adjacent to Junction 12 of M4, Bath Road, Calcot (Site Ref HSA 12) – Contains an area of Flood Zone 2</li> <li>• Land off Stretton Close, Bradfield Southend (Site Ref: HSA 22) - The Local plan states that the site flooded during January/February 2014</li> </ul>	<p>Regarding the sites not discussed in the SFRA, North East Thatcham was considered within the Level 2 SFRA produced for the Core Strategy. This will be included on the Council's website alongside the other evidence for the Local Plan Review.</p> <p>In addition, extensive additional work on the location and safeguarding of flood defences is being done with the promoters of the North East Thatcham site.</p> <p>Sites HSA6, HSA12, HSA22, HSA24, HSA25, HSA19, HSA22, and TS2 are all allocations in the adopted Housing Site Allocations Development Plan Document (HSA DPD). The HSA DPD is a daughter document of the Core Strategy.</p> <p>Sandleford is allocated within the adopted Core Strategy.</p> <p>To inform the Core Strategy, a Level 1 SFRA was produced in 2008 with a Level 2 SFRA following in 2009. Sandleford was not identified as needing assessment within a Level 2 SFRA.</p> <p>As part of work on the HSA DPD, an update to the SFRA was published in 2015. This considered changes in legislation, information on flooding in the district, and changes that had taken place to flood mapping since 2008. This update did not result in any changes being made to the Level 2 SFRA meaning that none of the HSA DPD allocations were subject to a Level 2 SFRA.</p> <p>The Level 2 SFRA has been updated to include assessments of the sites highlighted by the Environment Agency. It should be noted that several of these sites now have planning permission, and in these instances the Level 2 SFRA</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Land West of Spring Meadows, Great Shefford (Site Ref: GS1)- While only a small area of site is at risk from surface water, it should be highlighted that the village has a significant history of groundwater/surface water flooding and this will need to be assessed in more detail in relation to the site with a site-specific FRA.</li> <li>• Land off Charlotte Close, Hermitage (Site Ref: HSA 24) - Part of the site falls within a critical drainage area</li> <li>• Land to the south east of the Old Farmhouse, Hermitage (Site Ref HSA 25) - Part of the site falls within a critical drainage area</li> <li>• Sandleford Strategic site allocation – a Main river runs to the south of the site, and parts of the site fall within Flood Zones 2 and 3</li> <li>• Land adjoining Lynch Lane, Lambourn (Site Ref: HSA 19) – a Main river runs along edge of site and parts of the site fall within Flood Zones 2 and 3.</li> <li>• Pirbright Institute Site, High Street, Compton (Site Ref: HSA 22) - parts of the site fall within Flood Zones 2 and 3</li> <li>• Long Copse Farm, Enborne (Site Ref: TS2) - parts of the site fall within Flood Zones 2 and 3</li> </ul>	<p>includes a summary of the planning history and flood risk and drainage considerations.</p> <p>Sandleford was not assessed in the 2009 Level 2 SFRA because the Level 1 SFRA identified that there were no known issues relating to flooding on the site or in the immediate area. Confirmation of this is set out in the Core Strategy Strategic Sites Sustainability Appraisal / Strategic Environmental Assessment paper.</p> <p>Prior to the commencement of the Level 2 SFRA, all of the sites were re-screened to take into account any changes in flood mapping. Following this, the consultants identified those sites that would need to be assessed further in the Level 2 SFRA. This did not identify North East Thatcham or GS1 Land West of Spring Meadows, Great Shefford as needing further assessment. Following the Environment Agency's comments, site GS1 has been assessed as part of the Level 2 SFRA.</p>
Greenham Parish Council (lpr893)	Support for policy	Support for policy noted.
Holybrook Parish Council (lpr1321)	Holybrook Parish Council would like to see the floodplain in the Eastern Area protected and, ideally, made into conservation areas. It is noted that the plan encourages Flood Risk mitigation measures but, in practise, these are rarely upheld. Many roads are flooded and stay that way for long periods of time because drainage trenches are not dug and those that are, are not maintained – often overgrown and full of litter.	<p>Comments noted</p> <p>The flood risk vulnerability table included in Table 3 of the Planning Practice Guidance (PPG) (para 079, ref ID: 7-079-20220825) states that within the functional flood plain only water compatible development (that has to be there and which has passed the Exception Test) is appropriate provided that it is designed and constructed to :</p> <ul style="list-style-type: none"> <li>• remain operational and safe for users in times of flood;</li> <li>• result in no net loss of flood plain storage; and</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>The Holybrook is in poor condition with many fallen trees, consequently it is silting up and, in some places, almost form a dam. The condition of the Holybrook is important for proper management of the Kennet.</p> <p>Preserving the floodplain should be an integral part of WBC's Climate Change Policy.</p>	<ul style="list-style-type: none"> <li>• not impede water flows and not increase flood risk elsewhere.</li> </ul> <p>Water compatible development is defined in the 3 of the NPPF as:</p> <ul style="list-style-type: none"> <li>• Flood control infrastructure.</li> <li>• Water transmission infrastructure and pumping stations.</li> <li>• Sewage transmission infrastructure and pumping stations.</li> <li>• Sand and gravel working.</li> <li>• Docks, marinas and wharves.</li> <li>• Navigation facilities.</li> <li>• Ministry of Defence installations.</li> <li>• Ship building, repairing and dismantling, dockside fish processing and refrigeration and compatible activities requiring a waterside location.</li> <li>• Water-based recreation (excluding sleeping accommodation).</li> <li>• Lifeguard and coastguard stations.</li> <li>• Amenity open space, nature conservation and biodiversity, outdoor sports and recreation and essential facilities such as changing rooms.</li> <li>• Essential ancillary sleeping or residential accommodation for staff required by uses in this category, subject to a specific warning and evacuation plan.</li> </ul>
Hungerford Town Council (Lpr131)	Support for policy	Support for policy noted.
Newbury Town Council (lpr2267)	<p>We support this policy but require more clarity around the meaning of when “the benefits of the development to the community outweigh the risk of flooding.”</p> <p><b>Reason:</b> For example, when an existing residential property in an area of high flood risk has extremely poor flood protection and is so structurally unsound as to be</p>	<p>Comments noted.</p> <p>PPG at paragraph 036 (ref id: 7-036-20220825) states that identifies examples of wider sustainability benefits to the community, and these include:</p>

Respondent (with lpr ref)	Response	Council Response
	<p>uninhabitable without extensive refurbishment, unless it has a heritage value the policy should regard the benefits to the community from replacing it with a modern, well insulated dwelling (or dwellings) that fully mitigate flood risk as well as significantly reducing the property's overall carbon footprint should mean that no sequential test is required. It is unreasonable to expect an owner to undertake work on such a property that costs more than it would to replace it. It can result in land in an otherwise sustainable location remaining out of use indefinitely, which cannot in the interests of the wider community.</p> <p><b>Change proposed:</b> In the paragraph beginning “A Sequential Test does not need ...” after “changes of use,” add “a site in a settlement that has remained unoccupied for more than three years”.</p> <p>We note in 5.14 the supporting text refers to Sequential/Exceptions Tests being needed for sites allocated within this Plan “when the proposed use and/or vulnerability classification” differs from the allocation. The LRIE DEA in Newbury is being promoted heavily for “residential led” redevelopment which ought to mean that Sequential and Exceptions Tests are needed for the whole site, since it already has a Master Plan approved by the Council as landowner. This needs to be stated explicitly somewhere, possibly here.</p>	<ul style="list-style-type: none"> <li>• The re-use of suitable brownfield land as part of a local regeneration scheme;</li> <li>• An overall reduction in flood risk to the wider community through the provision of, or financial contribution to, flood risk management infrastructure; and</li> <li>• The provision of multifunctional Sustainable Drainage Systems that integrate with green infrastructure, significantly exceeding NPPF policy requirements for Sustainable Drainage Systems;</li> </ul> <p>The PPG requires a sequential risk-based assessment to the location of development. Application of the sequential approach in the plan-making process, in particular application of the Sequential Test, will help ensure that development can be safely and sustainably delivered.</p> <p>The PPG outlines that the Sequential Test does not need to be applied for individual developments on sites which have been allocated in development plans through the Sequential Test, or for applications for minor development or change of use (except for a change of use to a caravan, camping or chalet site, or to a mobile home or park home site).</p> <p>The PPG does <u>not</u> state that a sequential test is not required for sites in settlements that have remained unoccupied for more than three years.</p> <p>The Exception Test is a method to demonstrate and help ensure that flood risk to people and property will be managed satisfactorily, while allowing necessary development to go ahead in situations where suitable sites at lower risk of flooding are not available.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The London Road Industrial Estate (LRIE) was promoted for consideration in the Council's Housing and Economic Land Availability Assessment (HELAA). The HELAA is an evidence document that makes a preliminary assessment of the suitability and potential of sites.</p> <p>Whilst the LRIE was originally promoted for a residential-led mixed use development, it is now being promoted for an industrial-led scheme. The LRIE site has been assessed within the Level 2 SFRA.</p>
Shaw-Cum-Donnington Parish Council (lpr200)	Support for policy	Support for policy noted.
Stratfield Mortimer Parish Council (lpr395)	<p>This policy is not strong enough. The design requirement should include ability to handle a short (30 mins) period of intense rainfall during the storm (&gt;25mm in 30 mins). This type of event causes flash flooding.</p> <p>The policy should also include local flood knowledge to ensure developments take local conditions into account. Reference Stratfield Mortimer Neighbourhood Development Plan.</p>	<p>Comments noted.</p> <p>The Council has a Sustainable Drainage Systems Supplementary Planning Document and this covers design parameters: <a href="https://info.westberks.gov.uk/sudsspd">https://info.westberks.gov.uk/sudsspd</a>. Design standards are for consistency, but all designs must allow for exceedance. It is good practice to look at historical events, although this is more usually done in a Flood Risk Assessment.</p> <p>The development plan needs to be read as a whole, and the Stratfield Mortimer Neighbourhood Development Plan forms part of the development plan.</p>
Thatcham Town Council (lpr1393)	<i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17 (lpr1401).</i>	<p>Comments noted.</p> <p>North East Thatcham was considered within the Level 2 SFRA produced for the Core Strategy. This will be included</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>"The sequential approach will be strictly applied across the District. Development within areas of flood risk from any source of flooding,"</i></p> <p>This policy appears to be written to reflect the Sequential Test as described in the Strategic Flood Assessment. We would expect that a Strategic Flood Assessment should include downstream flooding potential, in addition to fluvial flow and surface flooding.</p> <p>We do not understand why areas that contribute to downstream flooding are not considered with the same importance as flooding from fluvial flow. For example, Thatcham suffered from flooding in 2007 caused by water run-off on the hills to the North of Thatcham - the same hills that are now being proposed for development.</p> <p>The NE Thatcham site must be included as part of a strategic flood assessment, and the associated report updated.</p> <p>We recommend that the policy is strengthened to reflect the importance of run-off on downstream properties and that the Thatcham NE site is assessed on this basis.</p> <p>The area of NE Thatcham adjacent to the A4 (Siege Cross and Colthrop) leads to significant water runoff and flooding on the A4 and downstream towards Siege Cross dwellings and Colthrop industrial estate. It is likely that any flood alleviation would have to be significant and consume the lower part of the development area. This does not appear to be considered in the Thatcham strategic growth study, masterplan (Stage 3), yet it has significant implications because it is likely to overlap to the proposed areas for the school and playing fields.</p> <p>We note that the Thatcham NE site (the part that is named 'Dunston Park' to the West) includes an area where there is a public right-of-way and includes a flood alleviation scheme. During a recent inspection following a spell of dry weather it was notable that the land is saturated and extremely boggy (to the extent that the land towards the bottom of the slope is inaccessible). It is clear that the soil structure and landscape are leading to a high ground water, and this is also supported by a statement in the HELAA assessment. There is no explanation as to how a development would maintain an equivalent level of water absorption as a green-field</p>	<p>on the Council's website alongside the other evidence for the Local Plan Review.</p> <p>Extensive additional work on the location and safeguarding of flood defences is being done with the promoters of the North East Thatcham site.</p> <p>The LPR policy (SP17) for the North East Thatcham strategic site now includes the following criteria in respect of flood risk:</p> <p><u><i>An Integrated Water Supply and Drainage Strategy which will set out:</i></u></p> <ul style="list-style-type: none"> <li>• <u><i>Measure to ensure the provision of adequate and appropriate infrastructure for water supply and waste water, both on and off site; and</i></u></li> <li>• <u><i>Surface water management approaches that could deliver net gain for Thatcham town, including use of on-site sustainable drainage systems (SuDS).</i></u></li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>particularly given that the flat-ground which is the natural site for SUDS is already occupied. We believe it is essential that appropriate surveying is conducted before the site proceeds as a credible proposal for development.</p> <p><b>Section 5.9</b> <i>"This policy aims to achieve a planning solution to flood risk management wherever possible, steering vulnerable development away from areas affected by flooding."</i></p> <p>The policy must also achieve a solution that avoids shifting a flooding problem elsewhere. The existing developments on the slopes above Thatcham (such as Dunston Park) contributed to the flooding in Thatcham in 2007 due to a failure to include sufficient drainage and/or SuDS schemes on the higher ground.</p> <p>It is essential that the policy places equal priority on houses outside the proposed development area, as to the development itself. This statement requires to be reconsidered as a sequential approach that ignores downstream flooding would be unacceptable.</p> <p><b>Section 5.10</b> <i>"This study supports this policy and has been used to evaluate allocation sites."</i></p> <p>It is our understanding that the study is for fluvial flow and does not consider downstream flooding. We request that the SFRA is reworked for the Thatcham NE to include downstream flooding.</p> <p><b>Section 5.13</b> <i>"This has already been carried out for those sites allocated within this plan ... Development should therefore comply with the requirements of national planning policy alongside this policy."</i></p> <p>The single largest, and most significant site, of NE Thatcham does not appear to be assessed and is not considered in the Level 2 plan. We request clarification from West Berkshire that the site will be assessed both for downstream flooding potential as well as on-site flooding. If the national policy is insufficient, we would request that an additional policy or assessment is made by West Berkshire.</p>	

Respondent (with lpr ref)	Response	Council Response
Environment Agency (lpr1660)	<p>We welcome this policy and support its inclusion, as there is a proportion of West Berkshire at medium and high risk of flooding.</p> <p>We welcome the inclusion of: <i>‘All new development close to rivers and culverts should take advantage of the opportunity presented to improve and enhance the river environment, and contribute to biodiversity targets’.</i></p> <p>We recommend you strengthen this policy to mention NFM, and have provided some wording to strengthen the policy. We are happy to work with you through the local plan process to implement this into this. NFM is when natural processes are used to reduce the risk of flooding and coastal erosion. It has a range of benefits – alongside reducing flood risk it can also achieve multiple benefits for people and wildlife, helping restore habitats, improve water quality and helping make catchments more resilient to the impacts of climate change.</p> <p>We body of Policy SP 6 should include NFM measures as it will ensure that development provides suitable mitigation and adaptation to climate change, taking into account the long-term implications for flood risk. It would also assist in safeguard the future resilience of communities and infrastructure to climate change impacts. This is in accordance with Paragraph 149 of the National Planning Policy Framework (NPPF)</p> <p>In addition, the supporting text to this policy should be amended to reflect this:</p> <p><b>5.2.3</b> <i>“Development should look at opportunities for river restoration and enhancement, and projects which reconnect rivers with their floodplains. These ideas and plans should be incorporated into plans for new development from an early stage. Options include Natural flood management (NFM) measures such as backwater creation, <del>de-silting</del>, de-culverting and naturalising the channel through in-channel habitat enhancements and removal of structures.</i></p> <p>Delete ‘de silting’ as it is not a NFM measure, and it does not provide a benefit in flood risk terms.</p>	<p>Support noted.</p> <p>The policy will be updated to include a new criteria (criteria p) which will include reference to Natural Flood Management and will read as follows:</p> <p><u><i>Natural Flood Management measures can be implemented.</i></u></p> <p>The supporting text to the policy at paragraph 6.27 has updated to include the suggested wording and remove reference to de-silting. It now reads as follows:</p> <p><i>The policy seeks to ensure that the requirements of the Water Framework Directive are taken account of in site design and layout. Development should look at opportunities for river restoration and enhancement, and projects which reconnect rivers with their floodplains. These ideas and plans should be incorporated into the development plans from an early stage. Options include <u>Natural Flood Management (NFM) measures such as backwater creation, <del>de-silting</del>, de-culverting and naturalising the channel through in-channel habitat enhancements and removal of structures.</u> <u>There may be opportunities in river enhancement and restoration to</u></i></p>

Respondent (with lpr ref)	Response	Council Response
	<p>It is crucial that both existing flood defences, and land proposed as future flood storage areas are safeguarded against future development. We recommend adding this wording to policy SP 6. This is to ensure that flood risk is not increased elsewhere, and that development is appropriately flood resistant and resilient in accordance with Paragraph 163 of the NPPF.</p> <p><u>Specific Comments</u></p> <p>P.33, para 6 of policy SP6: However applications for these development types should still meet all the requirements for site specific Flood Risk Assessments, the West Berkshire Sustainable Drainage Systems Supplementary Planning Document.</p> <p>P.33, para 6 of policy SP6: The following would read better: However applications for these development types should still meet all the requirements for site specific Flood Risk Assessments, as outlined in the West Berkshire Sustainable Drainage Systems Supplementary Planning Document.</p> <p>P.36, bullet at top of page (under para 5.18): Suggest adding to the list “The potential impacts of Climate Change”</p>	<p><u><i>include historic water management features such as water meadows. Care should be taken when creating ponds and earthwork-moving to ensure fragile archaeological features are not destroyed heedlessly.</i></u></p> <p>The Sustainable Drainage Systems Supplementary Planning Document (SuDS SPD) provides guidance on the approach that should be taken to SuDS in new development. The SPD does not set out requirements for Flood Risk Assessments.</p> <p>Paragraph 6.22 has been updated to include an additional criteria (criteria h) which covers climate change. It reads as follows:</p> <p><u><i>(h) The potential impacts of climate change.</i></u></p>
<b>General consultation bodies</b>		
Canal and River Trust (lpr869)	<p>Support for policy.</p> <p>There may be locations where the Trust may be able to surface water drainage into the Kennet &amp; Avon Canal, subject to quality and quantity. We are pleased to note that the supporting text mentions that a FRA should consider flooding from artificial sources, and assume that this will cover the canal. The Canal &amp; River Trust will comment on drainage and flood related matters where appropriate however it should be noted that we are not a flood authority.</p>	Support for policy noted.

Respondent (with lpr ref)	Response	Council Response
Heritage Forum	The SFRA maps and the EA flood maps should be either included or referenced.	<p>Comments noted.</p> <p>Footnote 20 of policy SP6 includes a link to the SFRA. The maps are appended to the Level 1 and Level 2 SFRAs.</p> <p>A new paragraph has been included (paragraph 6.12) has been included to make reference to the Environment Agency maps and include a footnote (footnote 24) include the URL of the Environment Agency flood maps. The paragraph reads as follows:</p> <p><i>Information on flood risk is being updated continuously and flood risk identified in the SFRA may change. The most up-to-date flood risk information should always be used to inform planning applications, including future SFRAs and the Flood Zones identified by the Environment Agency Flood Map for Planning. (24)</i></p> <p><a href="https://flood-map-for-planning.service.gov.uk/">[https://flood-map-for-planning.service.gov.uk/]</a>.</p>
West Berkshire Green Exchange (lpr1552)	No low cost housing should be allowed to be built in the highest flood risk areas of any development with a flood risk.	<p>Comments noted.</p> <p>The National Planning Policy Framework states at para 159 that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, development should be made safe for its lifetime.</p> <p>The NPPF also requires that a sequential, risk-based approach to the location of development should be taken. This approach is reflected in policy SP6.</p>
West Berkshire Green Party (lpr1829)	No low cost housing should be allowed to be built in the highest flood risk areas of any development with a flood risk.	<p>Comments noted.</p> <p>The National Planning Policy Framework states at para 159 that inappropriate development in areas at risk of flooding</p>

		<p>should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, development should be made safe for its lifetime.</p> <p>The NPPF also requires that a sequential, risk-based approach to the location of development should be taken. This approach is reflected in policy SP6.</p>
<b>Other stakeholders</b>		
Piers Allison (lpr488)	<p>In the supporting text to Policy SP6 Water Resources, you wrote: <i>"Most of the water is abstracted from groundwater aquifers supported by some river extraction, notably the Rivers Kennet, Lambourn and Pang."</i></p> <p>Please remember that Thames Water no longer abstracts from the Pang or its chalk aquifers having ceased abstraction in Compton some years ago. Whilst Thames Water has a drought permit to abstract in Pangbourne (<a href="https://www.thameswater.co.uk/media-library/home/about-us/regulation/drought-plan/appendices/drought-plan-appendix-b.pdf">https://www.thameswater.co.uk/media-library/home/about-us/regulation/drought-plan/appendices/drought-plan-appendix-b.pdf</a>) that is only for drought reasons. In no account must any developments cause day-to-day abstraction from the Pang, within the AONB, to be restarted.</p> <p>I trust that West Berkshire Council will change its plans so that there are no new large development adjacent or almost adjacent to the AONB.</p>	<p>Comments noted.</p> <p>Consultation comments have been received from Thames Water however they have not commented on abstraction.</p> <p>The North Wessex Downs AONB covers 74% of West Berkshire and is an area where the landscape is managed to conserve and enhance its natural beauty in accordance with its national designation. It includes the rural service centres of Hungerford, Lambourn and Pangbourne, together with the service villages of Bradfield Southend, Chieveley, Compton, Great Shefford, Hermitage and Kintbury.</p> <p>The area makes a significant contribution to the uniqueness of West Berkshire with its primarily agricultural landscape and villages and small towns that have a strong sense of identity.</p> <p>The Core Strategy planned for the delivery of up to 2,000 homes over the period 2006 – 2026 in this area. The Inspector examining the Core Strategy required this to be expressed as a maximum amount in view of the national landscape designation. There are existing allocations in the AONB at the rural service centres and service villages that are still to be delivered and which will largely meet housing need in this rural area. Hungerford, Lambourn, Compton and</p>

Respondent (with lpr ref)	Response	Council Response
		Hermitage have designated neighbourhood areas for the preparation of Neighbourhood Plans and the rural service centre of Pangbourne, has limited development opportunities. Additional development for the period beyond 2026 will therefore be limited and will come in part through allocations within NDPs.
Tim Hall (lpr644)	No development should be permitted in Flood Zone 3 areas	<p>Comments noted.</p> <p>The National Planning Policy Framework states at paragraph 159 that inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, development should be made safe for its lifetime.</p> <p>The NPPF also requires that a sequential, risk-based approach to the location of development should be taken.</p> <p>The flood risk vulnerability table included in Table 2 of the PPG (para 079, ref ID: 7-079-20220825) states that within the functional flood plain only water compatible development (that has to be there and which has passed the Exception Test) is appropriate provided that it is designed and constructed to :</p> <ul style="list-style-type: none"> <li>• remain operational and safe for users in times of flood;</li> <li>• result in no net loss of flood plain storage; and</li> <li>• not impede water flows and not increase flood risk elsewhere.</li> </ul> <p>Water compatible development is defined in Annex 3 of the NPPF as:</p> <ul style="list-style-type: none"> <li>• Flood control infrastructure.</li> <li>• Water transmission infrastructure and pumping stations.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<ul style="list-style-type: none"> <li>• Sewage transmission infrastructure and pumping stations.</li> <li>• Sand and gravel working.</li> <li>• Docks, marinas and wharves.</li> <li>• Navigation facilities.</li> <li>• Ministry of Defence installations.</li> <li>• Ship building, repairing and dismantling, dockside fish processing and refrigeration and compatible activities requiring a waterside location.</li> <li>• Water-based recreation (excluding sleeping accommodation).</li> <li>• Lifeguard and coastguard stations.</li> <li>• Amenity open space, nature conservation and biodiversity, outdoor sports and recreation and essential facilities such as changing rooms.</li> <li>• Essential ancillary sleeping or residential accommodation for staff required by uses in this category, subject to a specific warning and evacuation plan.</li> </ul>
Keith Hoddinott (lpr1989)	<p><i>Full response attached to representation on Objective.</i></p> <p><b><u>Executive Summary:</u></b> I press the Council, through the MP (Mrs. Farris) &amp; the LGA (&amp; any other bodies they see fit – eg. professional &amp; consumer bodies), to ensure that Sections 3 &amp; 42 of the 2010 Flood &amp; Water Management Act be implemented &amp; be made mandatory for such infrastructures to be adopted alongside the outline planning approval &amp; subsequent detailed approvals, as a matter of urgency; or implement suitable planning conditions.</p> <p><b><u>1. Drainage Infrastructures</u></b> The main issues surrounding the drainage of the larger major proposed development sites is that they will all drain in some form or another into existing systems constructed in the 20th. century, when such expansions of the two Towns were not envisaged, &amp; therefore spare capacities in the infrastructures are limited &amp; will need to be enhanced (as you have demonstrated in paragraphs 10.45 &amp; 10.46). It is</p>	<p>Comments noted.</p> <p>The policy includes a requirement for all new development to include SuDS.</p> <p>The Council has an adopted Sustainable Drainage Systems Supplementary Planning Document which can be viewed at: <a href="https://info.westberks.gov.uk/sudsspd">https://info.westberks.gov.uk/sudsspd</a>. The SPD is also referenced within policy SP6.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>essential that Thames Water are consulted at an early stage &amp; that contractual arrangements to solve these deficiencies are set up alongside the first “outline planning approvals”.</p> <p>Any such capacity assessments may have an impact on the timetable for any phases of the proposed developments due to the timescale to design &amp; construct any required enhancements to the existing infrastructures.</p> <p>It is therefore essential that the intention &amp;/or provisions of Sections 3 &amp; 42 of the 2010 Flood &amp; Water Management Act should be enforced in conjunction with the outline planning approval. Failure to do so are explained &amp; detailed below.</p> <p>Any foul &amp; surface water sewers should be constructed in accordance with Thames Water requirements, &amp; subsequently “adopted as public sewers”.</p> <p>Where excess surface water/land drainage compromises the risk of flooding to properties, both on site or downstream, then appropriate SUDS shall be designed &amp; constructed to the approval of West Berkshire Council (&amp; Thames Water where appropriate), &amp; subsequently adopted by the Council. Future maintenance to be funded by an agreed commuted sum between the developer &amp; the Council. These SUDS provisions can well be incorporated into the open space &amp; tree planting requirements.</p> <p>Lack of such arrangements are of particular of concern to the Thatcham Town Council &amp; the Thatcham Flood Forum. Over the past 13yrs. (since the floods in 2007), considerable effort has been made by the Thatcham Flood Forum in partnership with West Berkshire Council’s Engineers (&amp; with the active support of the former MP. Richard Benyon) to develop &amp; construct a “ring” of flood alleviation/protection infrastructures around the north &amp; east of Thatcham. The Forum &amp; Town Council are concerned that uncontrolled drainage infrastructures by developers could compromise the flood defences, &amp; hence properties, downstream. Total control over these aspects are essential to prevent future <i>unintended consequences (see below)</i>.</p> <p><b><u>Unintended consequences of failure to adopt drainage &amp; highway infrastructures</u></b></p> <p>Major national developers/house builders have developed “novel” ways to create future “income streams” by way of leasehold/ground rents &amp; estate management charges (EMC) on new developments. This practice is about to be made unlawful</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>(recent announcement by Mr Jenrick MP – Minister for Housing, Communities &amp; Local Government).</p> <p>However, developers have already started to view the non-adoption of roads, sewers, SUDS &amp; open spaces as another way to create these “future income streams” through the imposition of EMC fees.</p> <p>Once the developer has completed the building, he transfers the future maintenance, repair, reconstruction onto the house owners through the EMCs. These charges are unregulated &amp; can increase unabated.</p> <p>A further scenario is that these financial “packages” are sold onto finance companies, which can easily disappear if legal, financial or public health issues arise. The property owners are then legally responsible for the issues which have been revealed.</p> <p>Property owners &amp; prospective purchasers would be faced with financial &amp; legal problems in difficulty in selling their homes &amp; obtaining mortgages because of these excessive EMC's. Also, they are paying twice, as they will still incur sewerage charges (&amp; also Council Tax if the roads remain as private streets with future maintenance &amp; reconstruction costs also within the EMC's).</p> <p>Local Authorities could be placed in the unenviable situation in the future of serving legal notices under Public Health Acts to abate public health nuisances on Council Tax Payers if the EMC contractor has “disappeared”.</p> <p>I, therefore, press the Council, through the MP (Mrs. Farris) &amp; the LGA (&amp; any other bodies they see fit), to ensure that these Sections 3 &amp; 42 be implemented &amp; be made mandatory for such infrastructures to be adopted alongside the outline planning approval &amp; subsequent detailed approvals, as a matter of urgency; or implement suitable planning conditions.</p> <p><i>Additional information submitted 8th Feb 2021 –</i> This report [House of Commons Environment, Food and Rural Affairs Select Committee report 'Flooding' Feb 2021] may be of some use in framing the strategy to 2037. A copy of the report can be found <a href="https://publications.parliament.uk/pa/cm5801/cmselect/cmenvfru/170/170.pdf">here</a> [https://publications.parliament.uk/pa/cm5801/cmselect/cmenvfru/170/170.pdf].</p> <p><b>Submission to the Food &amp; Rural Affairs Committee HC170 (1st. sept. 2020)</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Flood &amp; Water Management Act 2010. Section 42 (adoption of sewers on new developments) &amp; Section 3 (adoption of SUDS – Surface water Urban Development Systems).</b></p> <p><b>Executive Summary:</b></p> <ol style="list-style-type: none"> <li>1. To implement Schedule/Section 3 of the 2010 Flood &amp; Water Management Act to ensure the mandatory adoption of SUDS infrastructures by the appropriate public authority as part of planning approval at outline &amp; subsequent detailed stages.</li> <li>2. To implement Schedule/Section 42 of the 2010 Flood &amp; Water Management Act to ensure the mandatory adoption of foul &amp; surface water sewers by Water Companies as part of planning approval at outline &amp; subsequent detailed stages.</li> </ol> <p><b>1. My submission is in response to the comments made at the meeting by Mr. Hugh Ellis on Q.91,96,97,98 &amp; 104; &amp; by Mr. Innes Thomson on Q.84</b></p> <p><b>2. Introduction:</b></p> <p>I am a retired Local Authority Public Health/Drainage Engineer, for 40 years, predominately being responsible for aspects of Sewerage, Sewage Treatment, Water infrastructure &amp; abstraction, &amp; associated Land &amp; Surface Water drainage. For some 10 years I was responsible for vetting developers' sewerage infrastructure proposals, leading to the adoption of sewers &amp; obtaining offsite financial contributions to enhance the existing infrastructure. This was done using the existing (at that time) Public Health Acts &amp; Planning legislation agreements, prior to planning approvals being granted.</p> <p>After 1974 I was responsible for the Sewerage Agency agreement with the Thames Water Authority, &amp; then Contract Manger under the contractual arrangements between my Council &amp; Thames Water Co., until Thames Water terminated all such arrangements in 1998, &amp; took the duties &amp; responsibilities back in-house.</p> <p><b>3. Current situation:</b></p> <p>In 2016, (after a period of time living in Europe), I was co-opted onto the Thatcham Flood Forum (which was actively supported by local MP, Richard Benyon), because of my previous 35 years' experience of the various drainage issues in the town following the extensive flooding in 2007/8.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>I was shocked to learn at how the legislation had been weakened over the past years since 1998, such that control of developers with regard to “Sewer Adoptions” was setting back the progress made prior to 1989.</p> <p>4. Since 2016, I have attempted to get to the reason for this lack of control; &amp; have had a rather one-sided correspondence with various bodies, Ministries &amp; regulators. It was due to a response from DEFRA that I came across the Scrutiny Committee’s report &amp; recommendations, to which, <b><u>I most strongly agree in respect of the long overdue implementation of Sections 42 &amp; 3.</u></b></p> <p>(It should be noted that Welsh Water incorporated Section 42 into Welsh Government law in 2012).</p> <p><b>5. Definitions:</b>  A pipe serving one property is defined as a “drain”.  A pipe serving two or more properties is defined as a “sewer”.  By definition a drain can only be private, &amp; is the responsibility of the property owner (nb. certain exceptions for maintenance where the pipe is outside the curtilage of the property; eg. under a highway).  Private sewers are maintained &amp; repaired by the owner(s).  Public sewers are those constructed or adopted by Water Companies &amp; their predecessors (Local Authorities before 1974).</p> <p><b>6. Adoption of Sewers on new developments:</b>  Due to the increase in private sewers after the war, &amp; the public health &amp; legal issues these posed for the clearing of blocked pipes, Local Authorities (LA) used public health &amp; planning legislation to ensure that new sewers on new developments were designed &amp; constructed in accordance with good practice &amp; specifications. This was enforced at the planning approval stages with mandatory agreements. The design &amp; construction was supervised by LA staff, prior to the formal adoption, &amp; the infrastructure defined on the Sewer Records as public foul &amp; surface water sewers. A similar procedure was used for the adoption of the roads &amp; highway drains.</p> <p><b>After 1974</b> these procedures were continued under the direction of the Water Authorities with LA’s under Agency agreements, &amp; then under the direction of the privatized Water Companies through Sewerage Management Contracts with LA’s.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>These arrangements came to an end in 1998, when Water Companies took back in house these arrangements with LA's.</p> <p>7. However, after 2000, planning legislation has become less rigorous in respect of mandatory agreements to ensure the adoption of sewers &amp; SUDS (&amp; roads) on new developments. <b>The situation has been made worse due to omissions / loopholes in the Flood &amp; Water Management Act 2010. Section 42 (adoption of sewers on new developments) &amp; Section 3 (adoption of SUDS – Surfacewater Urban Development Systems) were not enacted by DEFRA. And despite a Parliamentary Scrutiny Committee's recommendations in April 2017 that these Sections should be enacted as a matter of urgency, no action has been taken to date by DEFRA.</b></p> <p>8. <b>On 1st.July 2011</b>, all private sewers (prior to this date) were transferred to the Water Authorities, &amp; the Government intended that <b>the 2010 Act (Sections 42 &amp; 3)</b> would in effect continue the mandatory adoption of all sewers being the responsibility of Water Companies.</p> <p>These omissions, &amp; the separation of planning controls from the legislation requiring sewers (&amp; roads) to be the subject of mandatory adoption has led to a situation which is being exploited by large developers.</p> <p>9. The recent leasehold arrangements devised by large developers have been exposed as a scam, &amp; Government is addressing this issue. However, developers are now turning to <b>Estate Management Charges (EMG)</b> as a way of creating an ongoing "income stream" for exploitation, &amp; selling on as an investment product. These charges, (&amp; the future legal, financial, &amp; public health issues) will inevitably rise in the future. <b>It should be noted that full Council Tax &amp; Water charges will still be payable in addition to the EMG.</b></p> <p>Water Companies wish to see these loopholes closed, as they do not wish to experience another retrospective "2011 legislation" to adopt private sewers, which may not have been designed or constructed to their specification &amp; good practice.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The SUDS infrastructures would come under the control of LA's. &amp; incorporated into open spaces, adopted with a commuted sum being paid by the developer for future maintenance (a practice previously adopted by LA's under planning conditions).</p> <p><b>10.</b> There are many nuances &amp; unintended legal, financial &amp; environmental consequences to the delays in the Government's inaction on these issues:-</p> <ul style="list-style-type: none"> <li>• Inevitable annual increases in the EMGs being paid by each property owner.</li> <li>• This is leading to some Mortgage lenders questioning the long term financial &amp; legal liabilities of these charges; &amp; declining the advance of mortgages on such properties.</li> <li>• This will lead to difficulty in selling &amp; reducing the value.</li> <li>• In the event of the management company ceasing to exist, the property owners will be legally &amp; financially responsible for any outstanding construction &amp; maintenance defects.</li> <li>• If pollution occurs downstream of the site, action could be taken by the LA or other property owners against the homeowners on the estate where the infrastructures have not been adopted.</li> </ul>	
Councillor Alan Macro (lpr756)	<p>A sequential test should be required for all major developments, including those involving a change of use. A change of use may be to a more vulnerable use.</p> <p>Developments should take the opportunity to improve <b>all</b> watercourses, not just rivers.</p> <p>The statement "a Sequential Test does not need to be applied for minor development, changes of use, or development sites allocated within the Local Plan Review" should be changed to "a Sequential Test does not need to be applied for minor development".</p> <p>The statement "all new development close to rivers and culverts should take advantage of the opportunity presented to improve and enhance the river environment, and contribute to biodiversity targets" should be changed to "all new development close to watercourses and culverts should take advantage of the opportunity presented to improve and enhance the river environment, and contribute to biodiversity targets"</p>	<p>Comments noted.</p> <p>The PPG requires a sequential risk-based assessment to the location of development. Application of the sequential approach in the plan-making process, in particular application of the Sequential Test, will help ensure that development can be safely and sustainably delivered.</p> <p>The PPG outlines that the Sequential Test does not need to be applied for individual developments on sites which have been allocated in development plans through the Sequential Test, or for applications for minor development or change of use (except for a change of use to a caravan, camping or chalet site, or to a mobile home or park home site).</p>

Respondent (with lpr ref)	Response	Council Response
David Marsh (lpr1829)	We broadly support this policy. It seems odd that the council is so intent on building flats on the football ground in Faraday Road given the risks of flooding and the fact that an adjacent planning permission has been refused because of this risk.	Support for policy noted.  The London Road Industrial Estate is owned by the Council. The Council as landowner is separate to the function of the Council as Local Planning Authority.
Paula Saunderson (lpr955)	I have no confidence that the approach outlined will be followed through especially with regard to down-stream impacts on the 2 main Chalk Rivers from development on the slopes above. And I suspect there is not enough allowance for Climate Change aspects and more frequent occurrences.	Comments noted. The Environment Agency published revised climate change allowances in July 2021. The Level 2 SFRA was updated to take these into account.
Charlotte Turner (lpr1897)	The land to the east of the A329 to the River Thames in Streatley is in Flood Zone 3B, the Functional Flood Plain and required for Flood Protection. This response is timely as we are currently in a serious flood situation and much of this land is now flooded by a combination of River and Groundwater and is functioning as a Flood Plain as designated. I have read Policy SP6 on Flood Risk. As the above land is within the most vulnerable Flood Zone 3B the mitigation measures listed which would allow development do not apply due to the highest level of Flood Risk.	Comments noted.  <i>Paragraph 159 of the NPPF states that “inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.”</i>  The flood risk vulnerability table included in Table 2 of the PPG (para 079, ref ID: 7-079-20220825) states that within the functional flood plain only water compatible development (that has to be there and which has passed the Exception Test) is appropriate provided that it is designed and constructed to : <ul style="list-style-type: none"> <li>• remain operational and safe for users in times of flood;</li> <li>• result in no net loss of flood plain storage; and</li> <li>• not impede water flows and not increase flood risk elsewhere.</li> </ul> Water compatible development is defined in Annex 3 of the NPPF as: <ul style="list-style-type: none"> <li>• Flood control infrastructure.</li> <li>• Water transmission infrastructure and pumping stations.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<ul style="list-style-type: none"> <li>• Sewage transmission infrastructure and pumping stations.</li> <li>• Sand and gravel working.</li> <li>• Docks, marinas and wharves.</li> <li>• Navigation facilities.</li> <li>• Ministry of Defence installations.</li> <li>• Ship building, repairing and dismantling, dockside fish processing and refrigeration and compatible activities requiring a waterside location.</li> <li>• Water-based recreation (excluding sleeping accommodation).</li> <li>• Lifeguard and coastguard stations.</li> <li>• Amenity open space, nature conservation and biodiversity, outdoor sports and recreation and essential facilities such as changing rooms.</li> <li>• Essential ancillary sleeping or residential accommodation for staff required by uses in this category, subject to a specific warning and evacuation plan.</li> </ul>
Councillor Tony Vickers (lpr531)	<p>We support many aspects of this policy.</p> <p>However a sequential test should be required for all <b>major</b> developments, including those involving a change of use. A change of use may be to a more vulnerable use.</p> <p>We want more clarity around what the specific exception to the Sequential Test “where the benefits of the development to the community outweigh the risk of flooding” means in the case of minor development proposals to improve the flood protection of housing in a flood risk area.</p> <p>What is “the community” when a proposed development only affects a small area that is already occupied by housing and has a main objective of achieving better flood protection through redevelopment of the site for new homes? Is it the whole District or is it just the occupants of the site and its near neighbours?</p>	<p>Support noted.</p> <p>The PPG requires a sequential risk-based assessment to the location of development. Application of the sequential approach in the plan-making process, in particular application of the Sequential Test, will help ensure that development can be safely and sustainably delivered.</p> <p>The PPG outlines circumstances when a sequential test will not be required. These circumstances changed in August 2022 following updates to the PPG. A sequential test is not required where:</p> <ul style="list-style-type: none"> <li>• The site has been allocated for development and subject to the test at the plan making stage (provided the proposed development is consistent with the use for</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>In some cases, this could result in otherwise highly sustainable sites becoming incapable of being occupied for any beneficial use, i.e. plan-led dereliction. Surely the “community benefit” in that locality can then far outweigh the need to avoid development in high flood risk areas?</p> <p>Developments should also take the opportunity to improve <b>all</b> watercourses, not just rivers.</p> <p>The statement “a Sequential Test does not need to be applied for minor development, changes of use, or development sites allocated within the Local Plan Review” should be changed to “a Sequential Test does not need to be applied for minor development”.</p> <p>The statement “all new development close to rivers and culverts should take advantage of the opportunity presented to improve and enhance the river environment, and contribute to biodiversity targets” should be changed to “all new development close to watercourses and culverts should take advantage of the opportunity presented to improve and enhance the river environment, and contribute to biodiversity targets”.</p> <p>In the supporting text, after 5.13 add a new paragraph:</p> <p>“In the case of proposals to redevelop poor quality residential properties in a high flood risk area where the main aim is to reduce flood risk without net loss of housing, a Sequential Test may not be required. In such cases, the community benefit from reduction in flood risk, together with other benefits and increased in number of habitable dwellings may significantly outweigh the guidance in the NPPF.”</p>	<p>which the site was allocated and provided there have been no significant changes to the known level of flood risk to the site, now or in the future which would have affected the outcome of the test).</p> <ul style="list-style-type: none"> <li>• The site is in an area at low risk from all sources of flooding, unless the Strategic Flood Risk Assessment, or other information, indicates there may be a risk of flooding in the future.</li> <li>• The application is for a development type that is exempt from the test, as specified in footnote 56 of the NPPF.</li> </ul> <p>Policy SP6 has been updated to take account of the above exceptions.</p> <p>In respect of what is meant by ‘the community’, the Flood Risk section of the PPG does not provide an explanation.</p>
Ian Watson (lpr686)	<p>Supporting documents reveal a number of weaknesses in this section of the plan. It is difficult to believe that housing can be built on the flood plain which does not adversely affect flood risk either at the development site or elsewhere.</p> <p>Evidence from Thames Water shows that in some areas the sewerage system is already struggling to cope with flows especially at times of high rainfall (particularly in those areas with older surface water and foul water combined drains) and that adding new housing will make this worse.</p>	<p>Comments noted.</p> <p>Paragraph 159 of the NPPF states that “<i>inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.</i>”</p>

Respondent (with lpr ref)	Response	Council Response
	<p>While Thames Water has identified a number of investments needed to upgrade existing sewers and to provide new sewers, it is not clear how this can fit into the existing "PR" investment cycle for capital spend.</p> <p>Care is needed to ensure that the development cycles take account of constraints on capital spend by Thames Water.</p> <p>Supporting documents stated how flood risk could be reduced by adding rainwater capture and/or grey water recycling to developments.</p> <p>The cost is high and cheaper measures such as rainwater harvesting from downpipes should be considered.</p> <p>Ensure that housing development timetables are in line with what Thames Water can deliver under the constraints imposed by OFWAT. Incentivise rainwater harvesting from new and existing properties to reduce run-off and reduce demand for water e.g. for watering gardens.</p>	<p>The flood risk vulnerability table included in Table 2 of the PPG (para 079, ref ID: 7-079-20220825) states that within the functional flood plain only water compatible development (that has to be there and which has passed the Exception Test) is appropriate provided that it is designed and constructed to :</p> <ul style="list-style-type: none"> <li>• remain operational and safe for users in times of flood;</li> <li>• result in no net loss of flood plain storage; and</li> <li>• not impede water flows and not increase flood risk elsewhere.</li> </ul> <p>Water compatible development is defined in Annex 3 of the NPPF as:</p> <ul style="list-style-type: none"> <li>• Flood control infrastructure.</li> <li>• Water transmission infrastructure and pumping stations.</li> <li>• Sewage transmission infrastructure and pumping stations.</li> <li>• Sand and gravel working.</li> <li>• Docks, marinas and wharves.</li> <li>• Navigation facilities.</li> <li>• Ministry of Defence installations.</li> <li>• Ship building, repairing and dismantling, dockside fish processing and refrigeration and compatible activities requiring a waterside location.</li> <li>• Water-based recreation (excluding sleeping accommodation).</li> <li>• Lifeguard and coastguard stations.</li> <li>• Amenity open space, nature conservation and biodiversity, outdoor sports and recreation and essential facilities such as changing rooms.</li> <li>• Essential ancillary sleeping or residential accommodation for staff required by uses in this category, subject to a specific warning and evacuation plan.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<p>Thames Water have provided comments on sites. As part of the preparation of the Phase 2 Water Cycle Study. Allocations will be phased so that development takes place after any upgrades.</p> <p>Policy DM7 of the LPR (Water Resources and Waste Water) requires in criteria b that development proposals should satisfactorily demonstrate that efficient use of water is made through recycling measures such as rainwater harvesting and grey water recycling.</p>
<p>Tony and Gail Woodhouse (lpr2023)</p>	<p><i>Extracted from main representation to SP17 Thatcham</i> Recent flood alleviation works to the North of Thatcham have been put in place to protect houses businesses and infrastructure in the areas most severely affected by the 2007 flooding event. The events will only increase. Whilst there are proposals included to manage the flow of surface water down into the valley (SUDS) they are not designed to support the heavy volume of water from such a large scale development scheme. In extreme weather events which it is recognised will only increase in frequency and intensity, SUDS will simply release their water into the existing flood management scheme adding pressure on it and increasing the risk of Thatcham flooding again.</p>	<p>Comments noted.</p> <p>The policy includes a requirement for all new development to include SuDS.</p> <p>The Council has an adopted Sustainable Drainage Systems Supplementary Planning Document which can be viewed at: <a href="https://info.westberks.gov.uk/sudsspd">https://info.westberks.gov.uk/sudsspd</a>. The SPD is also referenced within policy SP6.</p>
<b>Landowners, site promoters and developers</b>		
<p>Fowler Architecture and Planning (lp786)</p>	<p>Additional clarification is required at paragraph 5.15 concerning the Sequential Test and the area subject of an assessment to show that other reasonably available sites have been adequately considered. As an example, Policy SP3 defines that Service Villages and below in the settlement hierarchy are identified for a level of development 'in order to meet local needs'. As such, the Sequential Test should be limited to an area of search consistent with how local needs will be met and it would be helpful if Policy SP3 is referenced at 5.15.</p>	<p>Comments noted. The supporting text to the policy at paragraph 6.17 has been updated to provide further details on the sequential test area of search. Paragraph 6.17 reads as follows:</p> <p><i>In line with Planning Practice Guidance, the area of search for the sequential test should be defined by local circumstances relating to the catchment area for the type of development proposed. For some developments this may be clear, for example, the catchment area for a school. In other cases it may be identified from other policies contained within</i></p>

Respondent (with lpr ref)	Response	Council Response
		<p>the LPR, for example Policies SP1, SP3, SP20, and DM1. Alternatively it may be identified through evidence produced for the LPR, for example the 2016 Berkshire Functional Economic Market Area (FEMA) Study identified the Western Berkshire FEMA which comprises of West Berkshire District.</p>
<p>JSA Architects for Colthrop Village Consortium (lpr746)</p>	<p>Instead of saying: "Evidence provided within the Level 1 SFRA should be used to apply the Sequential Test as well as provide evidence to show that other reasonably available sites have been adequately considered." the text should read: "<i>Evidence provided within the Level 1 SFRA should be used to apply the Sequential Test as well as provide evidence to show that other reasonably available sites <b>appropriate for the proposed development</b> have been adequately considered.</i>"</p>	<p>Comments noted.</p> <p>The sixth paragraph has been reworded to reworded to read as follows:</p> <p><i>Evidence provided within the Level 1 SFRA should be used to apply the Sequential Test as well as provide evidence to show that other reasonably available sites <u>appropriate for the proposed development</u> have been adequately considered.</i></p>
<p>North East Thatcham Consortium (lpr2397)</p>	<p><i>Full representation attached to comment in Objective</i></p> <p>Weetwood has reviewed this policy requirement and note the site-specific flood risk assessment for all development that "<i>could be subject to other sources of flooding</i>" would effectively require a flood risk assessment to be undertaken for all proposed developments. The policy does go on to state that flood risk assessments should be proportionate to the proposal, but irrespective, the draft policy does appear to constitute a departure from national planning policy.</p>	<p>Comments noted.</p> <p>The Level 1 SFRA, which has been reviewed by the Environment Agency, states at paragraph 6.1 that "<i>the requirement for a Flood Risk Assessment is set out in paragraph 163 of the NPPF (footnote 50). The Flood Risk Assessment for Planning Application Applications guidance and Flood Risk Assessment for Planning Applications guidance describe when a FRA is needed as part of a planning application, how to do one and how it is processed. In West Berkshire, a site-specific FRA is required in the following circumstances:</i></p> <ul style="list-style-type: none"> <li>• <i>All developments greater than 1Ha located in Flood Zone 1.</i></li> <li>• <i>All developments located within Flood Zone 2 or 3 or, 1 in 100-year flood extent plus climate change. This includes standing advice for minor developments such as non-residential extensions, alterations which do not increase</i></li> </ul>

Respondent <i>(with lpr ref)</i>	Response	Council Response
		<p><i>the size of the building or householder developments. It also includes changes of use of an existing development.</i></p> <ul style="list-style-type: none"> <li>• <i>All developments where proposed development or a change of use in development type (e.g. conversion of commercial to residential) could be subject to other sources of flooding. This applies to those less than 1Ha in Flood Zone 1.</i></li> <li>• <i>All developments located in an area which has been highlighted as having critical drainage problems by the LLFA (e.g. the CDAs defined by the SFRA) or the Environment Agency.</i></li> </ul>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP7 Design Principles

### (Proposed Submission LPR Policy: SP7 Design Quality)

Number of responses received: 32

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team, West Berkshire Council (lpr737)	Heritage is a huge element of people's sense of place - high quality and carefully considered design will become the heritage of the future. Para 5.29 - the list of local documents could usefully be updated to better follow NPPF and practice guidance on the historic environment	Comments noted. The Council agrees that it would be helpful to update the Local List to reflect the expectations of this policy and others in the LPR. The Local List will be updated.
Ecologist, West Berkshire Council (lpr1691)	3 <sup>rd</sup> design principle - Richness in detail – development will utilise architectural design which is appropriate and sympathetic to its setting in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevational and where relevant, vernacular detailing. Hard and soft landscaping, curtilage and boundary treatment will also be appropriate and sympathetic ...and in keeping.... (I'm thinking about planting/species lists here) <del>to</del> with the natural setting;	Comments noted. The issues identified are already covered in the existing wording. 'Appropriate and sympathetic' includes 'in keeping with'. 'Setting' includes 'the natural' setting.
<b>Statutory consultees</b>		
Burghfield Neighbourhood Development Plan Steering Committee (lpr475)	The Burghfield Neighbourhood Development Plan Steering Committee support the design principle of "Opportunities for the planting of trees and other soft landscaping will be maximised." This is because this facet of development has been specifically identified during the work to produce an NDP.	Comments noted.

Respondent (with lpr ref)	Response	Council Response
Chieveley Parish Council (lp1721)	Chieveley Parish Council agrees that new development should strengthen a sense of place through high quality locally distinctive design and place shaping and take into account local context, character and identity. Where they exist, this should continue to include taking into account Village Design Statements (para 5.28).	Comments noted.
Greenham Parish Council (lpr894)	Supports the policy	Comments noted.
Holybrook Parish Council (lpr1323)	<p>'New development will strengthen a sense of place through high quality locally distinctive design and place shaping....development will be landscape-led, conserving and enhancing the landscape character and historic context of both the site and its wider surroundings in accordance with policies SP8 and SP9;'</p> <p>HPC welcomes this policy but would like to see it strengthened to state that 'cut and paste' design of substantial housing developments will not be permitted. By way of example, the Bellway sites at Dorking Way, Calcot and Old Forest Road, Wokingham are identical in format and yet are in very different localities. In addition, the permitted Dorking Way development is in stark contrast to the existing character and design of Holybrook detracting from the Parishes previous distinctive design and it changes the shape and character of the area.</p>	<p>Comments noted. Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy and the Council believes the policy sets this out in a positive way.</p> <p>The supporting text of the Proposed Submission LPR policy will be amended to read –  <u>'Identity – New development should be attractive and distinctive, complementing and enhancing</u> existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. <u>Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.</u>  <u>Built form – All forms of development should be designed appropriately in terms of nature, location and scale.</u>  When assessing an application consideration will be given to the impact of the scheme taking into account existing approved and proposed development in the same locality <u>and considering the cumulative impact of development over time.....'</u></p>
Hungerford Town Council (lpr128)	We support this policy. Outside of defined Conservation Areas and places with a particularly distinctive character and identity there should be more scope to also encourage innovation and creativity in visual	Comments noted. Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy.

Respondent (with lpr ref)	Response	Council Response
	design. Otherwise "Character and Identity" can too easily be used as an excuse for either bland pastiche heritage styling or for replicating pattern book designs from the last 70 years.	The supporting text of the Proposed Submission LPR policy will be amended to read – <u>'Identity – New development should be attractive and distinctive, complementing and enhancing</u> existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. <u>Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.'</u>
Newbury Town Council (lpr2266)	We support this policy while noting that not all the stated bullet points will be relevant or carry the same weight in any one development.	Comments noted.
Shaw cum Donnington Parish Council (lpr201)	We support this policy but we take the view that many large recent developments pay no respect to "high quality locally distinctive design". The developments are indistinguishable from many other developments built by the large building companies. They appear to be straight out of the companies catalogue of dwellings. It is difficult to see how a modern housing development can "conserve and enhance the character, appearance and quality of an area" that was previously open countryside. Developments appear to only accord with minimum building regulations. We are therefore sceptical to the achievement of this laudable policy.	Comments noted. However, achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy and the Council believes the policy sets this out in a positive way. The supporting text of the Proposed Submission LPR policy will be amended to read – <u>'Context – Proposals for new development should enhance the surroundings by beginning</u> with an understanding of an area's existing character and context and its design should evolve from West Berkshire's high quality and diverse landscape character and rich built and cultural heritage. <u>Identity – New development should be attractive and distinctive, complementing and enhancing</u> existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. <u>Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day</u>

Respondent (with lpr ref)	Response	Council Response
		visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.’
Stratfield Mortimer Parish Council (lpr396)	<p>Fully endorse this policy, seen as a vital element of new developments BUT:</p> <p>Para 5.28 “.actively encourages the production of <b>non-statutory</b> [our highlight] community planning documents such as Town and Village Design Statements and Parish” A major omission is the complete lack of reference to the contribution of an NDP. NDPs are a powerful mechanism to obtain local preferences. They are a legal/statutory document if adopted</p> <p>The requirement for developers to “how they have responded positively” is too weak to ensure developers do not water down/use own designs. Support the planting of trees but need to avoid using trees that are subject to major disease such as Ash die back.</p> <p>The policy and text should include a statement to the effect that “If an NDP is made that include statements about a sense of place through high quality locally distinctive design, place shaping, design guides, design codes these become statutory”. It is not enough to say, “to inform and support the policies contained within the Local Plan” (p39).</p>	<p>Comments noted. The Council agrees that the policy could helpfully refer to neighbourhood plans and the policy will be amended as follows:</p> <p><b>‘SP7 Design <u>Quality</u> Principles</b></p> <p>New development will <u>be required to</u> strengthen a sense of place through high quality locally distinctive design and place shaping. # <u>This will enable healthy place making, making creating places that are</u> better for people, taking opportunities available for conserving and enhancing the character, appearance and quality of an area and the way it functions.</p> <p>Development proposals <u>will be expected to</u> show how they have responded positively to both national and local design guidance. <u>At a national level this includes, including the National Design Guide (2021) or as superseded, and at a local level, this includes neighbourhood plans and</u> relevant community planning documents that identify the local character and distinctiveness of an area which is valued by local communities.....’</p> <p>Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy and the Council believes the policy and supporting text sets this out in a positive way.</p>
Thatcham Town Council (lpr1394)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p>We believe that West Berkshire and Thatcham has benefited from good policy and principles that in general have delivered buildings with distinctive styles.</p>	<p>Comments noted. However, Policy SP7 is a strategic level policy that makes clear that climate resilience is a key design principle and it is important that the LPR is read as a whole. The Council agrees that delivery of the LPR is essential and policy</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• "the siting and layout of development will promote the efficient use of land."</li> </ul> <p>The properties that follow this statement are all desirable. Nevertheless, the policy fails to consider how layout may impact on energy use - either due to orientation of building or shadowing. We recommend that this statement is reconsidered to include aspects of net-zero carbon. We agree with statements related to delivering character and identity, and richness in detail. Nevertheless, we are concerned that this is subjective and would like to understand how such statements are assessed.</p> <ul style="list-style-type: none"> <li>• Green infrastructure (GI) – development will be designed to maximise the potential for strengthening GI in accordance with policy SP10 and should include arrangements for its long-term maintenance and management;</li> </ul> <p>We welcome the statement that arrangements for long term maintenance and management are included. Nevertheless, we are aware that the Ancient Woodland ("The Plantation") associated with Dunston Park was also expected to have been adopted by West Berkshire for long term maintenance, but for whatever reason it was not adopted. Therefore, we are concerned there is insufficient follow-through on these statements and recommend that a process that allocates reserved funding sufficient for long term maintenance of green infrastructure is also defined.</p>	<p>expectations and requirements will need to be strongly implemented.</p>
Tilehurst Parish Council (lpr1987)	<p>We are concerned to see frequent use of the word "Quality" without any definition of the term. It needs to be made clear that quality reflects fitness for purpose not "luxury".</p>	<p>Comments noted. Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy and the Council believes the policy sets this out in a positive way.</p>
Historic England (lpr1562)	<p>We welcome and support policy SP7: Design Principles. In particular, we agree with references to strengthening sense of place through high-quality, locally-distinctive design, taking opportunities available for conserving and enhancing the character, appearance and quality of an area and the way it functions. We also welcome the references to context, character and identity and richness in detail.</p> <p>Para 5.27 - We agree with and support the assertion that new development should begin with an understanding of an area's existing</p>	<p>Comments noted. The issues raised regarding Conservation Area Appraisals are dealt with under Emerging Draft LPR Policies SP9 and DC8.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>character and context and its design should evolve from West Berkshire's high quality and diverse landscape character and rich built and cultural heritage.</p> <p>Para 5.28 - While it is true to state that conservation area appraisals exist to help guide and shape development in and around conservation areas, it is also true that out of 53 conservation areas in West Berks, only two have appraisals. We believe this is an issue to be addressed with urgency. This is also pertinent in relation to the Revised Settlement Boundary Criteria on p230, which states that conservation area appraisals will be consulted as part of the review of settlement boundaries. See also, our comments on Policy DC8.</p>	
Natural England (lpr1595)	<p>The North Wessex Downs AONB partnership have recently published '<a href="#">Guidance on the Selection and Use of Colour in Development</a>'. We advise this is taken into account and referenced within the policy or supporting text.</p>	<p>Comments noted. The Council agrees that a reference to this guidance would be helpful. The supporting text to the policy will be amended as follows -</p> <p><u>'For development which affects the North Wessex Downs AONB these documents also include 'Guidance on the Selection and Use of Colour in Development' (2021) and 'A Guide to Good External Lighting' (2021) published by the North Wessex Downs AONB.'</u></p>
<b>General consultation bodies</b>		
British Horse Society (lpr835)	<p>We strongly support <i>'Green infrastructure (GI) – development will be designed to maximise the potential for strengthening GI in accordance with policy SP10 and should include arrangements for its long term maintenance and management'</i></p> <p>Provision for horse activities must be included on the urban fringe and in rural areas to support policy DC34. One way to ensure new paths are available to horses and are maintained is to designate them as public bridleways so that maintenance liability falls to the local Highway Authority for Public Rights of Way. Lack of maintenance has been an issue elsewhere with the Milton Keynes path network and with Sustrans paths.</p>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
Canal and River Trust (lpr871)	<p>The Trust fully support this policy. However waterways sometimes present different design challenges requiring different treatment and good design plays a key role in creating attractive waterside places that will enhance and protect the waterway. Each waterside location needs to be considered individually, with no single design approach being appropriate in all locations. The following guiding principles should be taken into account so that, where appropriate, new waterside development should:</p> <ul style="list-style-type: none"> <li>• positively address the water</li> <li>• integrate the towing path and open up access to the water</li> <li>• link waterside space and the waterspace</li> <li>• use the waterspace itself</li> <li>• incorporate access and other improvements</li> <li>• engage with and tease out the qualities and benefits of being by water</li> <li>• reflect the scale of the local waterway corridor to the wider neighbourhood.</li> </ul> <p>The Trust are producing a document to better inform waterside placemaking, and this will be provided to the council as soon as it is published. The Trust wish the council to consider whether a specific waterways related DC policy would be appropriate which would include a section specific to waterside placemaking.</p>	<p>Comments noted. The supporting text will be amended to reflect the need to create attractive waterside places that enhance and protect the waterway as follows –</p> <p><u>' New waterside development adjacent to the Kennet and Avon Canal should seek to positively address the water, integrate the towing path and open up access to the water, link the waterside space to the water, make use of the water itself, incorporate access improvements, engage with the benefits of being by the water, and reflect the scale of the local waterway to the wider neighbourhood.'</u></p>
Mid & West Berkshire Local Access Forum (lpr1858)	<p>MWBLAF strongly supports the following element of this Policy: 'Green infrastructure (GI) – development will be designed to maximise the potential for strengthening GI in accordance with policy SP10 and should include arrangements for its long-term maintenance and management'</p> <p>One way to ensure new paths are maintained is to designate them as Public Rights of Way. Lack of long-term maintenance has been an issue for the Milton Keynes path network and Sustrans paths, and lessons should be learnt from these.</p>	<p>Comments noted.</p>

Respondent (with lpr ref)	Response	Council Response
North Wessex Downs AONB (lpr1623)	<p>Supports the policy. The AONB has had a colour study commissioned which aids local residents, developers and planners in understanding the natural colours of the different landscape character areas within this protected landscape and provides guidance on choosing the right materials and colour for the landscape. We would welcome a reference to it as we have unfortunately had a number of developments which look out of character and appear poor simply because the wrong materials or colour has been used.</p>	<p>Comments noted. The Council agrees that a reference to this guidance would be helpful. The supporting text to the policy will be amended as follows -</p> <p><u>'For development which affects the North Wessex Downs AONB these documents also include 'Guidance on the Selection and Use of Colour in Development' (2021) and 'A Guide to Good External Lighting' (2021) published by the North Wessex Downs AONB.'</u></p>
West Berkshire Green Exchange (lpr1553)	<p>The 'context' should also include the Climate Crisis and the Council's Climate Emergency Declaration which should take precedence over all the other items. This should set the tone for all other design decisions. <i>Character and identity – .....</i> Ancient street layouts suited the ways of living of the time often with the main fenestration of many houses orientated to the south to catch the sun and an almost blank elevation to the north which was sheltered by a long low thatched roof to provide insulation and to protect from the weather. A new 21st century vernacular should be developed using the same solar design principles to minimise energy consumption <i>Climate resilience – development will be designed to maximise the use of sustainable technologies and materials in accordance with policy SP5;</i> Developers should be required to look at the orientation of the houses to maximise winter solar penetration for best light levels and passive solar heating and to allow for the installation of a maximum number of PV panels for renewable electricity generation even if these are installed, as is easily done, at a later date. House should be built with the minimum obstructions on any south facing roofs and gable ends should be preferred to hipped roofs. <i>Parking – development will be designed to provide appropriate provision in terms of amount, layout and location in accordance with policy DC36;</i> Visitor only parking should be provided to pedestrian access points.</p>	<p>Comments noted. However, climate change is covered in Policy SP5.</p> <p>Emerging Draft LPR Policy DC35 on transport infrastructure sets out the requirements for the connectivity of new development. The policy already reflects the need to consider tree planting.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>Ease of movement – proposals will be designed to enhance the way an area functions in practical terms through a mix of land uses, by ensuring the development is well connected, accessible, safe and easy for people to find their way through and around;</i></p> <p>Developments should be designed so that no house is more than five minutes walk from a bus stop and direct walking and cycling routes should predominate. Cars should be given the lowest priority. Bus lanes should be provided at the exits to all estates with bus routes to allow priority bus passage.</p> <p><i>Clearly defined public realm - ....Opportunities for the planting of trees and other soft landscaping will be maximised</i></p> <p>Native deciduous trees, preferably edible fruit or nut trees, should be used to provide summer shading to south and west elevations of houses to prevent overheating.</p>	
West Berkshire Green Party (lpr1830)	Green Infrastructure (GI) – we would amend as follows: replace “maximise the potential for strengthening” with “strengthen”.	<p>Comments noted. The policy will be amended to refer to the National Design Guide as follows -</p> <p>‘Development proposals <u>will be expected to show how they have responded positively to both national and local design guidance.</u> <u>At a national level this includes, including the National Design Guide (2021) or as superseded, and at a local level, this includes neighbourhood plans and relevant community planning documents that identify the local character and distinctiveness of an area which is valued by local communities.....’</u></p> <p>and the supporting text will be amended to ensure that the wording is clear as follows –  ‘... <u>Nature – development will be designed to maximise the potential for strengthening green infrastructure in accordance with Policy SP10.....’</u></p>
West Berkshire Heritage Forum (lpr72)	Add text - SP7 In Conservation Areas, Conservation Area Appraisals will show us what sympathetic design, local character and identity, and historic context ought to look like.	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	5.27 In Conservation Areas, Conservation Area Appraisals will be central to achieving this objective.	
<b>Other stakeholders</b>		
Sam Coppinger (lpr288)	Supports the policy. Developments must be appropriate for a site - low impact in all senses; physically, environmentally, the infrastructure be able to support it.	Comments noted.
Tim Hall (lpr645)	Green Infrastructure (GI) - Delete " the potential to" so: "development will be designed to maximise GI in accordance with policy SP10".	<p>Comments noted. The policy will be amended to refer to the National Design Guide as follows -</p> <p><u>'Development proposals will be expected to show how they have responded positively to both national and local design guidance. At a national level this includes, including the National Design Guide (2021) or as superseded, and at a local level, this includes neighbourhood plans and relevant community planning documents that identify the local character and distinctiveness of an area which is valued by local communities.....'</u></p> <p>and the supporting text will be amended to ensure that the wording is clear as follows –</p> <p><u>'... Nature – development will be designed to maximise the potential for strengthening green infrastructure in accordance with Policy SP10.....'</u></p>
Keith Hoddinott (lpr1991)	<p><i>Full representation including comments relating to housing design and estate layouts is attached</i></p> <p>Clearly in a small country, such as the UK, horizontal space is at a premium. Therefore, there should be some vision to think vertically, such as more 3 floor properties, and the consideration of basements &amp; underground parking. Within the boundaries of the town, there are plenty of examples of this style of building from previous generations (West Mills, Porchester Rd., London Rd. areas).</p> <p>"With this in mind, I think there was an opportunity lost not to have more underground parking (than that proposed) on the redevelopment of the bus &amp; train station area. I did suggest this during the consultation</p>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	meetings organized by the developers.” Houses should be designed to be adaptable, & to be able to be extended (incl. use of roof space) at a later date to accommodate, say an elderly relative; live-in carers, sons/daughters living at home but working/studying.	
Peter Norman (lpr1025)	SP7 a requirement should be made of all developers/housebuilders to come up with designs that reflect the locality and architectural heritage of the area as well as ensure all new housing is carbon zero. We should avoid national housebuilders helicoptering in identikit housing that they are putting up all around the country so that it becomes impossible to know what part of the country you are in based on housing. This should reflect building materials to be used so that one avoids flats such as the development at the south end of Newtown Road where the flats have been built with bricks totally out of keeping with the local area. There needs to be a preference placed on the types of building materials to be used, however this should not be to the detriment of innovative design but to ensure where standards builds are put up their finishes are in keeping with the area and distinguishes from developments elsewhere in the country.	Comments noted.  The supporting text of the Proposed Submission LPR policy will be amended to read – <u>‘Context – Proposals for new development should enhance the surroundings by beginning with an understanding of an area’s existing character and context and its design should evolve from West Berkshire’s high quality and diverse landscape character and rich built and cultural heritage.</u> <u>Identity – New development should be attractive and distinctive, complementing and enhancing existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.’</u>
Graham Storey (lpr567)	Not strong enough. I propose the following amendment: “Development will be designed to strengthen GI in accordance with policy SP10” (replacing “designed to maximise the potential for strengthening ...”)	Comments noted. The policy will be amended to refer to the National Design Guide as follows -  <u>‘Development proposals will be expected to show how they have responded positively to both national and local design guidance. At a national level this includes, including the National Design Guide (2021) or as superseded, and at a local level, this includes neighbourhood plans and relevant community planning documents that identify the local character and distinctiveness of an area which is valued by local communities.....’</u>

Respondent (with lpr ref)	Response	Council Response
		<p>and the supporting text will be amended to ensure that the wording is clear as follows –</p> <p>‘... <u>Nature</u> – development will be designed to <del>maximise the potential for</del> strengthening green infrastructure in accordance with Policy SP10.....’</p>
Nataliya Topliss (lpr798)	<p>Every single development in Thatcham has never improved any landscaping. I have seen many times that all mature trees get cut and that developers plant a few new ones. The houses are built very tight with little green space left for any landscaping. The new occupants mostly destroy the newly planted trees to get more open space. Thatcham has turned into a grey derelict place with few mature trees left, with no park or green spaces.</p> <p>West Berks Council's strategy of 2012 indentified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>Comments noted.</p> <p>The supporting text of the Proposed Submission LPR policy will be amended to read –  <u>‘Context – Proposals for new development should enhance the surroundings by beginning with an understanding of an area’s existing character and context and its design should evolve from West Berkshire’s high quality and diverse landscape character and rich built and cultural heritage.</u>  <u>Identity – New development should be attractive and distinctive, complementing and enhancing existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.’</u></p>
Councillor Tony Vickers (lpr532)	<p>We support this policy. However we note that not all the points listed as ‘bullets’ will be relevant or carry the same weight in every development proposal.</p> <p>With many residential developments using cul-de-sacs, the “character and identity” factor will need to be given less weight than the “health and wellbeing” and “ease of movement” factors, especially when taking account of the overriding priority of tackling climate change.</p>	<p>Comments noted.</p> <p>Achieving high quality locally distinctive design which strengthens a sense of place is the main aim of this policy and the Council believes the policy sets this out in a positive way.</p> <p>The supporting text of the Proposed Submission LPR policy will be amended to read –</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Past housing developments have often failed to take account of the need for permeability or have given “Design out Crime” (privacy and security) a greater weight. This results in situations in urban areas where journeys that could easily be taken by active travel mode are made longer and are instead made by vehicular means. This is unhelpful in terms of achieving mitigation of climate change.</p> <ul style="list-style-type: none"> <li>2<sup>nd</sup> bullet “Character and identity” says “layout of development will promote the efficient use of land which integrates effectively with its surroundings, contributing to local distinctiveness and sense of place through its relationship to surrounding built and natural features, spaces, historic street patterns,”</li> </ul> <p>“Efficient use of land” can crowd out space for connecting paths between dwellings that “integrate effectively” a cul-de-sac to its surroundings, making journeys longer on foot. Also ....</p> <ul style="list-style-type: none"> <li>Last bullet “Amenity” on p.37 says “development will provide a high quality of amenity and privacy for both occupants of the development itself and neighbouring properties and land;</li> </ul> <p>Vehicle movements and parking within a quiet residential area caused by unnecessary journeys by vehicle can detract from “amenity and privacy” more than harmless travel on foot into or through the area.</p> <ul style="list-style-type: none"> <li>Bullet 1 on p.38 “Health &amp; Wellbeing” says development will “encourage healthier lifestyles ...” but goes on about “improving community safety”.</li> </ul> <p>Vehicles (moving or parked) create safety hazards for people – especially children at play and the elderly. Therefore providing short cuts through a residential area is not only good for health and wellbeing in itself but should improve community safety.</p> <ul style="list-style-type: none"> <li>Fifth bullet on p.38 “ease of movement” says a development must be “well connected” but doesn’t mention active travel.</li> </ul> <p>In the “ease of movement” bullet add to the end: “..., especially by active travel means”.</p> <p>Changes needed - In the light of the emerging Local Cycling &amp; Walking Infrastructure Plan and recent Government statements about Active Travel we feel that a new “supporting text” paragraph that pulls together all these references is needed:</p>	<p><u>‘Context – Proposals for new development should enhance the surroundings by beginning with an understanding of an area’s existing character and context and its design should evolve from West Berkshire’s high quality and diverse landscape character and rich built and cultural heritage.</u></p> <p><u>Identity – New development should be attractive and distinctive, complementing and enhancing existing areas, using architectural distinctiveness (through both the quality and choice of construction materials and techniques) and high quality design, to reinforce local identity and to create a sense of place; one that is successful and enjoyed. Architectural design should be appropriate and sympathetic to the setting, in terms of height, massing, scale, proportions, roof form, materials, night and day visibility, elevation, vernacular detailing (where relevant), hard and soft landscaping, curtilage and boundary treatment.’</u></p> <p>The Local Plan should be read as a whole and it will be for the decision maker to decide how much weight to accord to the Plan and its policies, along with other material considerations.</p> <p>Emerging Draft LPR Policy DC35 on transport infrastructure sets out the requirements for the connectivity of new development and expectations regarding active travel.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>“We expect permeability for walking and cycling to be considered at the earliest stage of planning for all new major developments, so that active travel choices for journeys will be more likely among all ages and levels of mobility. It should accommodate reasonable concerns of the police through ‘Design Out Crime’ but within settlement areas, especially where there is already a good network of pedestrian and cycle routes, all major developments will be expected to help expand the local network of these routes – both on and off site - and make navigating them easier.”</p>	
<b>Landowners, site promoters and developers</b>		
Fowler Architecture and Planning (lpr1788)	<p>It is unclear why 13 design principles are to be established and that these differ in wording and order from the National Design Guide, which has 10 characteristics. Policy SP7 should be revised to establish an overarching policy emphasis and framework that explicitly references the National Design Guide as the basis for defining the 10 characteristics for good design. Policy SP7 should be supported by a local design guide and it is disappointing to see the no reference to a commitment to prepare and adopt a new local design guide within Policy SP7 and the supporting text.</p>	<p>Comments noted. The Council agrees that the National Design Guide should provide the framework for this policy. The policy will be amended as follows:</p> <p><b>‘SP7 Design Quality Principles</b></p> <p>New development will <u>be required to</u> strengthen a sense of place through high quality locally distinctive design and place shaping. <del>‡ This will enable healthy place making, making-creating</del> places that are better for people, taking opportunities available for conserving and enhancing the character, appearance and quality of an area and the way it functions.</p> <p>Development proposals will <u>be expected to</u> show how they have responded positively to both national and local design guidance. <del>At a national level this includes, including the</del> <u>National Design Guide (2021) or as superseded, and at a local level, this includes neighbourhood plans and relevant</u> community planning documents that identify the local character and distinctiveness of an area which is valued by local communities’</p>

Respondent (with lpr ref)	Response	Council Response
Pegasus for Calcot Park Golf Club (lpr2322)	<p>This policy states that new development will strengthen a sense of place through high quality locally distinctive design and place shaping. It will make places better for people, taking opportunities available for conserving and enhancing the character, appearance and quality of an area and the way it functions.</p> <p>Calcot Park Golf Club (CPGC) consists of 81 hectares (200 acres) of gently sloping land and woodland located within the settlement of Calcot, which is surrounded on all sides by the built-up area of Greater Reading. The golf club contains considerable areas of woodland and green infrastructure. A modest housing development for up to 70 dwellings on 6.2 hectares (16.3 acres) of land at the north-eastern edge of the golf club, see Appendix 1 for details of the proposed site location, will offer the opportunity to make good use of this valuable green infrastructure to create a verdant and attractive “landscape-led” scheme, which will conserve and enhance the existing landscape character and historic context of the site and its wider surroundings. The location of the site within the built-up area and on land in leisure use at present will offer unique opportunities to improve access to verdant, open areas and leisure facilities for new residents and existing ones. The health and well-being benefits of the proposal for the local population, will be significant.</p> <p><i>Policy SP7 – Design Principles is supported.</i></p>	<p>Comments noted.</p> <p>Please see the Council’s response to lpr2328 under Policy SP14.</p>
Pegasus for Newbury and Crookham Golf Club (lpr2050)	<p>This policy states that new development will strengthen a sense of place through high quality locally distinctive design and place shaping. It will make places better for people, taking opportunities available for conserving and enhancing the character, appearance and quality of an area and the way it functions.</p> <p>Newbury and Crookham Golf Club (NCGC) consists of 50 hectares (123 acres) of undulating land immediately to the east of the built-up area of Newbury, as delineated by Pigeons Farm Road. NCGC contains considerable areas of woodland and green infrastructure. A modest housing development on 2 hectares (5 acres) of land at the western edge of NCGC, which sits on relatively flat land, will offer the opportunity to make good use of this valuable green infrastructure to create a verdant and attractive “landscape-led” scheme, which will</p>	<p>Comments noted.</p> <p>Please see the Council’s response to lpr2056 under Policy SP14.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>conserve and enhance the existing landscape character and historic context of the site, which is the seventh oldest golf course in England, as well as its wider surroundings. The location on the edge of the countryside and land in leisure use at present will offer unique opportunities to improve access to the countryside and leisure facilities for new residents and existing ones. The health and well-being benefits of the proposal for the local population will be significant.</p>	
<p>Southern Planning Practice for the Saunders family (lpr1925)</p>	<p>We support the design principles set out in Policy SP7 and can confirm that any future residential development on land east of Stoney Lane would ensure these principles are incorporated.</p> <p>The allocation of the site would strengthen the sense of place in this area of Newbury. Together with the land at Coley Farm, the site could provide a comprehensive development which would create a distinctive place. This approach would be in accordance with the recent NPPF consultation (January 2020) which focuses on place-making. The opportunities and constraints plan indicatively shows how the two sites would seamlessly integrate. The site is in a sustainable location and is of a scale which could deliver a high-quality landscape-led development with many public benefits. One key benefit the site could offer is the provision and strengthening of the Green Infrastructure in the area. The site could provide a large area of public open space together with creating links to the Copse to the east and the new residential development proposed at Coley Farm to the south west.</p>	<p>Comments noted.</p> <p>Please see the Council's response to lpr1928 under Policy SP13.</p>

**Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)****Emerging Draft LPR Policy: SP8 Landscape Character****(Proposed Submission LPR Policy: SP8 Landscape Character)**

Number of responses received: 24

<b>Respondent</b> <i>(with lpr ref)</i>	<b>Response</b>	<b>Council Response</b>
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr738)	Supports the policy. para 5.36 Though the landscape of West Berkshire has been subject to over 10,000 years of human activity, I don't think it's really true to say that 'most settlements can trace their origins back over many millennia'. Centuries would be a bit more accurate, as most of our towns and villages are certainly Saxon in origin, ie one millennium plus a few hundred years!	Comments noted.  Amend paragraph 5.36 of the Emerging Draft LPR as follows – '...most settlements can trace their origins back over many <del>millennia</del> <u>hundreds of years.</u> '
<b>Statutory consultees</b>		
Cold Ash Parish Council (lp1734)	Cold Ash Parish Council supports this policy and notes that there are many areas outside of the AONB that require protecting.	Comments noted
Greenham Parish Council (lpr895)	Supports the policy	Comments noted
Hungerford Town Council (lpr130)	Supports the policy	Comments noted
Lambourn NDP Steering Group (lpr1704)	The Lambourn Landscape Character Appraisal has identified the Lower Lambourn Valley Floor {between Bockhampton and the Parish boundary with East Garston} as a landscape character area (LCA6). Several of the	Comments noted

Respondent (with lpr ref)	Response	Council Response
	<p>recommendations for the management and protection of the river in LCA6 could also be applied to its course through the Parish from its source:</p> <ul style="list-style-type: none"> <li>• <i>Much scope to improve and enhance the water quality of the River Lambourn. In a catchment dominated by arable fields the potential for nitrates, potassium and phosphates to enter the water course is high. Opportunities to shield the river with appropriate land use that can help filter agricultural run-off will help improve water quality.</i></li> <li>• <i>Understand the requirements of the river in a changing climate and avoid planting trees that may interfere with the water course; altering the delicate hydrological and biological balance of this chalk river.</i></li> <li>• <i>Celebrate and recognise the river. At points it is almost entirely lost amongst the houses and buildings that live the river; let the river breathe and give it space.</i></li> </ul> <p>The River's importance as a landscape feature through the Parish cannot be overstated and it is "a valuable economic and recreational asset for the area".</p>	
Newbury Town Council (lpr2265)	<p>We support this policy but would like clarification as to what is meant by "perceptual components" of the character of the landscape. We would also like to see some reference to features that are widely regarded as eyesores in the landscape – even the urban scene – such as the former post office building (the BT Tower) at the junction of Bear Lane and A339. We would dearly like to see something in the Local Plan that provides strong encouragement for development that removes such eyesores.</p>	<p>Comments noted.</p> <p>Add the following definition of 'perceptual components of landscape character' to the glossary: '<u>Our own personal appreciation of landscape and how we relate to or make use of it as individuals and communities through sight, sound, smell and feel.</u>'</p> <p>As part of the evaluation of individual landscape character areas, the West Berkshire Landscape Character Assessment (LCA) 2019 identifies key detractors and issues including past, current and likely future trends that bring about change in the landscape and sets out landscape guidance focused on development management considerations to enhance the landscape of the area.</p>

Respondent (with lpr ref)	Response	Council Response
Shaw cum Donnington Parish Council (lpr202)	<p>We support this policy.</p> <p>Whilst the supporting text concentrates on the AONB and rural areas it should also apply to the urban areas since the urban areas are equally entitled to a high quality of landscape.</p>	<p>Comments noted</p> <p>The policy applies across the whole of the District. It complements and will be read alongside Policy SP7 Design Quality.</p>
Stratfield Mortimer Parish Council (lpr397)	<p>Supports the policy</p>	<p>Comments noted</p>
Thatcham Town Council (lpr1395)	<p><i>Part of full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <ul style="list-style-type: none"> <li>The natural, cultural, and perceptual components of the character of the landscape will be considered as a whole.</li> </ul> <p>With regards to the Thatcham NE site, the existing landscape is agricultural interspersed with well-maintained and historic hedgerows, a scattering of ancient trees, and bounded by well-established woodland or hedgerows. These natural landscape features provide the countryside feel towards the edge of the existing settlement and define the countryside landscape beyond.</p> <p>Historic hedgerows are valuable to the ecology of an area and support a wide range of biodiversity and wildlife. It is not possible to remove a historic hedgerow and claim a substitution of biodiversity elsewhere as the ecology may have developed over many decades, or hundreds of years. Therefore, these features should be retained wherever possible and natural wildlife corridors should be sought that lead to more of an 'ecovillage feel' built on principles of net-zero carbon.</p> <p><b>Section 5.33</b></p> <ul style="list-style-type: none"> <li>"A landscape does not have to have a designation to be valued locally."</li> </ul> <p>We agree with this completely. Nevertheless, little regard seems to have been made to the loss of countryside which is valued highly by residents of Thatcham. It is necessary that consideration is given to the &gt;2,500 residents that have made representation and objected to the development.</p>	<p>Comments noted. The issues raised are in relation to development at North East Thatcham and so will be considered as part of the Council's response to Policy SP17.</p>

Respondent (with lpr ref)	Response	Council Response
Historic England (lpr1563)	We support policy SP8: Landscape Character. In particular we welcome references to local character and distinctiveness, and conserving and enhancing historic character.	Comments noted
<b>General consultation bodies</b>		
Canal and River Trust (lpr872)	Supports the policy. Para 5.33 please include the canal: the Outside the AONB, the River Kennet and Kennet & Avon canal, from Newbury to Reading... LVIA's should recognise that views from canal towpaths and the canal itself are visually important, particularly due to the often slow moving nature of those using them, This is often forgotten about when a LVIA is being prepared.	Comments noted.  Amend paragraph 5.33 to the Emerging Draft LPR as follows: '.... Outside the AONB, the River Kennet and the inter-connected Kennet & Avon Canal from Newbury to Reading, lies within....'
North Wessex Downs AONB (lpr1624)	Supports the policy. The AONB has had a colour study commissioned which aids local residents, developers and planners in understanding the natural colours of the different landscape character areas within this protected landscape and provides guidance on choosing the right materials and colour for the landscape. We would welcome a reference to it as we have unfortunately had a number of developments which look out of character and appear poor simply because the wrong materials or colour has been used.	Comments noted.  Add a reference to ' <a href="#">Guidance on the Selection and Use of Colour in Development</a> ' as part of the supporting text to Policy SP7. This policy will be read alongside Policy SP7.
West Berkshire Green Party (lpr1831)	We broadly support this policy.	Comments noted
West Berkshire Heritage Forum (lpr105)	Supports the policy	Comments noted
<b>Other stakeholders</b>		
Sam Coppinger (lpr289)	Supports the policy	Comments noted
Tim Hall (lpr646)	Supports the policy	Comments noted
David Hill (lpr709)	Policy SP8 supports the preservation of the landscape and ignores the need for a landscape to evolve. It seeks to preserve properties and development	Comments noted. The policy and supporting text clearly set out that appropriate landscape-led development will be

Respondent (with lpr ref)	Response	Council Response
	<p>types which are now deemed inefficient and out of kilter with modern energy efficient development standards. It conflicts with policies relating to the climate crisis.</p> <p>Policy SP8 should encourage design which is sympathetic with the character of the landscape it sits within, rather than the buildings which are constructed within it.</p>	<p>supported. Its purpose is to ensure development proposals are informed by an understanding of the distinctive character of West Berkshire and that this understanding is used as a positive tool in accommodating change by ensuring the inherent qualities and valued features of the district's landscape will continue to be appreciated. It complements and will be read alongside Policy SP5 which sets out the Council's approach to Responding to Climate Change and Policy SP7 Design Quality.</p>
Peter Norman (lpr1027)	<p>Embedded in SP8 should be reference to preservation and enhancement of biodiversity in the local landscape</p>	<p>Comments noted. The policy makes clear that the natural, cultural and perceptual components of the landscape will be considered as a whole. This includes biodiversity.</p>
Nataliya Topliss (lpr799)	<p>No developments that took place in Thatcham have ever conserved or enhanced the local landscape. West Berks council consider these issues but nothing ever gets implemented on the developments.</p> <p>West Berks Council's strategy of 2012 identified that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>Comments noted. The issues raised are in relation to development at North East Thatcham and so will be considered as part of the Council's response to Policy SP17.</p>
Councillor Tony Vickers (lpr533)	<p>We support this policy. However we would like to understand what "perceptual components" of the landscape character are.</p> <p>We would also like to see reference to elements in the existing landscape that are regarded as eyesores (e.g. BT Tower in Newbury and overhead powerlines in the AONB) and some suggestion that proposals to remove or reduce the "perceptual harm" they cause will be welcomed.</p> <p>Some features within both the rural and urban landscape are almost universally regarded as ugly eyesores or at best inappropriate and detract from the landscape setting, although such judgements are perhaps subjective. It would seem desirable to be able to have a policy in the Local Plan that at least identifies them and states that proposals involving their removal or shielding from view would be welcomed.</p>	<p>Comments noted.</p> <p>Add the following definition of 'perceptual components of landscape character' to the glossary: <u>'People's perceptions have a key role in defining a landscape. These can vary depending on who they are and how they relate to it or how they make use of it as both individuals and communities. Landscape is perceived through sight, sound, smell and feel and can be influenced by the weather, the seasons or time of day.'</u></p> <p>As part of the evaluation of individual landscape character areas, the West Berkshire Landscape Character</p>

Respondent (with lpr ref)	Response	Council Response
	We are unsure whether such a policy is possible or if this is the place to mention it.	Assessment (LCA) 2019 identifies key detractors and issues including past, current and likely future trends that bring about change in the landscape and sets out landscape guidance focused on development management considerations to enhance the landscape of the area.
<b>Landowners, site promoters and developers</b>		
Fowler Architecture and Planning (lpr1787)	<p>The policy omits any reference to 'mitigation' when considering whether development will be appropriate to its landscape context. Inclusion of mitigation within the policy is important as the immediate impacts of development may have a degree of harm, yet they are capable of being mitigated over time as landscaping matures.</p> <p>The policy also needs be revised to enable the decision maker to distinguish between the hierarchy of international, national and locally designated sites (as per paragraph 171 of the NPPF) and identify those landscapes that are valued (as per paragraph 170). In this context, a linkage back to Policy SP2 would be useful in recognising the national value of the North Wessex Downs AONB which should be treated differently as per the Statutory Purposes for which it was designated.</p>	<p>Comments noted.</p> <p>The policy and supporting text make clear that proposals for development should be accompanied by an appropriate landscape assessment carried out in accordance with the current guidance from the Landscape Institute and IEMA. This should address both the potential landscape effects and also the potential visual effects that may result from the development. Detailed development proposals will then be expected to respond positively to this assessment to ensure they conserve and enhance landscape character by strengthening a sense of place in accordance with Policy SP7. Should mitigation be required either through the iterative design process, construction stage or to deal with any potential adverse effects following construction, this would be considered as part of this process.</p> <p>There is no definition of 'valued landscape' in the NPPF and the Council has adopted an evidence based approach.</p> <p>Amend third paragraph of the policy as follows: '<u>.....These assessments provide an understanding of the valued characteristics, features and qualities of identified local landscape character areas across West Berkshire.</u>'</p> <p>Paragraph 5.34 of the Emerging Draft LPR makes clear that 'Value can apply to areas of landscape as a whole or</p>

Respondent (with lpr ref)	Response	Council Response
		<p>to individual elements, features and aesthetic or perceptual dimensions which contribute to the character of the landscape. There are no locally designated landscapes in West Berkshire. All landscapes across the District have some degree of value and all development should therefore respond positively to the identified character and valued qualities inherent in that local landscape. The West Berkshire Landscape Character Assessment 2019 evaluates and provides an understanding of what is important and why, for each identified local landscape character area across the District.'</p> <p>Paragraph 5.32 makes clear that 'As a nationally valued and designated landscape the North Wessex Downs AONB will be conserved and enhanced in accordance with its national status and this is set out in Policy SP2.'</p>
JSA Architects on behalf of the Colthrop Village Consortium (lpr755)	<p>The Colthrop Village Consortium are concerned that the Landscape Character Assessment denotes the entire South Thatcham Valley Farmland as being uniformly sensitive to change and marks that sensitivity as "medium to high". There are great variations in sensitivity across the area and the Consortium's site (HELAA Ref. THA1) is affected by proximity to the industrial area, overhead pylons, brownfield land - being the former paper mill site, the railway and a lower level of tranquillity. The Thatcham Strategic Growth Study also shows much of the site as wooded, which it is not. Remove reference to the West Berkshire Landscape Character Assessment. The Consortium do not disagree with the policy per se except in reference to the West Berkshire Landscape Assessment which is a crude tool. Recognise that Area 8D is actually comprised of differing levels of sensitivity to change.</p>	<p>Comments noted.</p> <p>The comments relate to a specific site being promoted for development as part of the Housing and Economic Land Availability Assessment (HELAA).</p> <p>The Council considers the West Berkshire Landscape Character Assessment (LCA) 2019 forms a sound evidence base to conserve and enhance the varied character and valued attributes of the district's landscape when considering new development or land uses and to pursue opportunities to enhance and strengthen the local distinctiveness of West Berkshire's landscape. It also provides a robust framework for more detailed site specific landscape sensitivity and capacity studies to be undertaken for specific development proposals such as this.</p>

Respondent (with lpr ref)	Response	Council Response
Pegasus for Calcot Park Golf Club (lpr2324)	<p>This policy states that landscape-led development which conserves and enhances the biodiversity and local distinctiveness of the landscape character of the district will be supported. With regard to development proposals, particular regard will be given to: valued features and qualities; sensitivity and capacity of area to change and ensuring that new development is appropriate in terms of location, scale and design to the context of the existing settlement form, pattern and character.</p> <p>Calcot Park Golf Club (CPGC) does not lie in a sensitive landscape location. The site is remote from the AONB to the west and it is surrounded on all 4 sides by urban development. As stated above, the 81-hectare land holding contains substantial areas of woodland and Green Infrastructure (GI). The proposed development, of just 6.2 hectares, in the north-eastern corner of CPGC, adjoining the existing built-up area, will be screened by dense areas of woodland on all sides. The sloping topography and the existence of significant woodland and GI, means that there are few long-distance views into the site and the development site makes a modest contribution to the landscape setting of the settlement and the surrounding area.</p> <p>In this context, any planning application for development on the CPGC will be supported by a Landscape and Visual Impact Assessment (LVIA), which will demonstrate that the new buildings will not have a harmful impact on the existing settlement form, pattern and character and will come forward as part of a landscape-led scheme.</p> <p>Furthermore, the proposed replacement clubhouse, which will be funded by the new residential development, will be surrounded by additional landscape planting, to ensure that it blends into the landscape and does not result in any additional harm over that attributable to current built form being done to the site and its surroundings, including the Grade II* Calcot Court. The new homes and clubhouse will provide significant economic, environmental and social benefits for the local community, whilst not harming the landscape character of the area and its surroundings.</p> <p><i>Policy SP8 – Landscape Character is supported.</i></p>	<p>Comments noted.</p> <p>No changes proposed. The comments relate to a specific site being promoted for development as part of the Housing and Economic Land Availability Assessment (HELAA). The Council's response to this particular site is set out to lpr2328 under Policy SP14.</p>
Pegasus for Newbury and Crookham Golf Club (lpr2051)	<p>This policy states that landscape-led development which conserves and enhances the biodiversity and local distinctiveness of the landscape character of the district will be supported. With regard to development proposals, particular regard will be given to: valued features and qualities;</p>	<p>Comments noted.</p> <p>No changes proposed. The comments relate to a specific site being promoted for development as part of the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>sensitivity and capacity of area to change and ensuring that new development is appropriate in terms of location, scale and design to the context of the existing settlement form, pattern and character.</p> <p>Newbury and Crookham Golf Club (NCGC) does not lie in a sensitive landscape location. The site is remote from the AONB to the north, while closer to the north-west is the racecourse and to the south is the former Greenham Common Air Base. As stated above, the 50-hectare land holding contains substantial areas of woodland. Any development, of just 2 hectares, in the south-western corner of NCGC, adjoining the existing built-up area, will be screened by dense areas of woodland. The flat topography and the existence of significant woodland means that there are no long-distance views into the site and the development site will therefore make little significant impact to the landscape setting of the settlement or the surrounding area; development may arguably improve the setting.</p> <p>In this context, any planning application for development on the NCGC will be supported by a Landscape and Visual Impact Assessment (LVIA), which will demonstrate that the new buildings will not have a harmful impact on the existing settlement form, pattern and character and will come forward as part of a landscape-led scheme.</p> <p>Furthermore, the proposed demolition and replacement of the clubhouse, which will be funded by the new housing development, will be a wholly single-storey building, which will be surrounded by landscape planting, to ensure that it blends into the landscape and does not to any harm being done to the site and its surroundings. The new homes and clubhouse will provide significant economic, environmental and social benefits for the local community, whilst not harming the landscape character of the area and its surroundings.</p>	<p>Housing and Economic Land Availability Assessment (HELAA). The Council's response to this particular site is set out to lpr2056 under Policy SP13.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP9 Historic Environment

### (Proposed Submission LPR Policy: SP9 Historic Environment)

Number of responses received: 24

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr739)	Supports the policy. I don't agree with the first sentence of the policy - it can be the case that new development doesn't always sustain and enhance the historic character and environmental quality of a place. This needs to be qualified to say that the Council will support those proposals that do.	Comments noted.  Amend the first paragraph of the policy as follows – <u>'Positive action will be taken to ensure that opportunities for the conservation and enjoyment of the historic environment are maximised.</u> The historic character, sense of place, environmental quality and local distinctiveness of West Berkshire will <u>also</u> be sustained and enhanced through new development....'
<b>Statutory consultees</b>		
Aldermaston Parish Council (lpr1054)	Para 5.3 Annual Heritage at Risk Register. This should include Aldermaston Manor and Grounds	Comments noted. It is acknowledged that Aldermaston Manor is currently on the Heritage at Risk Register and is one of 15 such entries in West Berkshire. The supporting text does not name any individual entries but a hyperlink will be included in the Proposed Submission LPR to link to the Heritage at Risk Register where further details can be found.
Greenham Parish Council (lpr896)	Supports the policy	Comments noted

Respondent (with lpr ref)	Response	Council Response
Hungerford Town Council (lpr129)	Strongly agree with the conservation and enhancement of the historic character of the areas particularly in places such as Hungerford Town centre and Eddington and distinctive isolated buildings	Comments noted
Newbury Town Council (lpr2264)	<p>We support this policy but wish to add another category to the list of what constitutes “heritage”: “ancient ways”.</p> <p><b>Reason:</b> our precious rights of way network is not just an important transport and green infrastructure feature but also very largely an important vestige of the history of the area. Many footpaths, tracks, ‘green lanes’ and drove roads enhance our landscape and need to be preserved for the education as well as enjoyment and practical use by future generations. Too often their heritage value is destroyed with careless urbanising treatment by developers, if they are not altogether obstructed, neglected, or demolished entirely.</p> <p>Wherever possible all such historic routes should be preserved in the state they are found at the time a site is brought forward for development, or at least as much of them as possible incorporated in the public rights of way network through Definitive Map Modification Orders (DMMOs) to ensure they remain open for use, protected and well managed. This is as important within settlements as in the open countryside.</p> <p><b>Proposed changes:</b> add in “f)” after “areas” the words “historic routes”.</p>	<p>Comments noted</p> <p>The NPPF defines a heritage asset as ‘a building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest.’ This policy uses the same definition for consistency.</p> <p>Historic public rights of way would be considered under criterion g) of the policy.</p> <p>Amend criterion g) of the policy as follows – ‘.... or through the development management <u>or other planning processes.</u>’</p> <p>In the supporting text add a bullet point to the end of paragraph 5.46 of the Emerging Draft LPR as follows –</p> <ul style="list-style-type: none"> <li>• ‘<u>Historic Public Rights of Way</u>’</li> </ul>
Shaw cum Donnington Parish Council (lpr203)	We support the policy. In Shaw-cum-Donnington we have Donnington Castle and Shaw House. With Shaw House we particularly look forward to the restoration of the grounds of the building and some of the surrounding area particularly to the South. We expect to see details of this in the long expected CAMP document.	Comments noted
Stratfield Mortimer Parish Council (lpr398)	Supports the policy	Comments noted
Thatcham Town Council (lpr1396)	Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17. We agree that the historical environment should be maintained, and recorded, wherever possible. The	Comments noted. The issues raised are specific to North East Thatcham and so will be considered as part of the Council’s response to Policy SP17.

Respondent (with lpr ref)	Response	Council Response
	<p>area surrounding Dunston Park has historic and archaeological significance, and previous surveys have uncovered evidence of Bronze Age and Iron Age settlements. These findings have helped to support the hypothesis that Thatcham has justification for the claim of being the longest continuous habitation in England. "For known assets of archaeological interest, or on land where there is archaeological potential, an archaeological desk-based assessment will be required as a minimum." We expect that the existing evidence in NE Thatcham exceeds the minimum threshold of a desk-based assessment.</p>	
Historic England (lpr1564)	<p>We support the general historic environment policy being a strategic policy, complemented by a suite of non-strategic policies for the various types of heritage asset found in West Berks. This represents an appropriate balance between providing relevant detail and strategic direction and is in line with NPPF paragraph 20d. We welcome the general approach and specific content of policy SP9. We consider the policy and supporting text to present a robust approach that adds an appropriate level of detail and advice to national policy on the historic environment. However, we do have one specific area of concern about this policy. The first line of the policy states that 'the historic character, sense of place, environmental quality and local distinctiveness of West Berkshire will be sustained and enhanced through new development.' This implies that it is only through new development that the historic environment will be sustained. The NPPF (185) is clear that plans should set out a positive strategy for the conservation and enjoyment of the historic environment. Historic England understands this obligation to have a wider meaning that simply as a component of planning for new development. Our view is that this obligation includes taking proactive measures in relation to the historic environment. This is position is supported by the remainder of paragraph 185, which states that heritage at risk should be considered as part of the positive strategy, as well as more general elements of the strategy, which, on the face of it, are wider than simply a part of planning for new development. The requirement of the positive strategy to include wider, positive actions is tacitly acknowledged in the supporting text to this policy, through references to community ownership and collaboration with heritage and community organisations. In order to address this concern, we recommend that the first sentence of the SP9 is</p>	<p>Comments noted.</p> <p>Amend the first paragraph of the policy as follows –  '<u>Positive action will be taken to ensure that opportunities for the conservation and enjoyment of the historic environment are maximised.</u> The historic character, sense of place, environmental quality and local distinctiveness of West Berkshire will <u>also</u> be sustained and enhanced through new development....'</p>

Respondent (with lpr ref)	Response	Council Response
	amended to: 'The historic character, sense of place, environmental quality and local distinctiveness of West Berkshire will be sustained and enhanced both through new development and positive action by the Council.' Given that this is a strategic policy, we consider it is important to clarify this as part of the overall strategy. Without such an amendment, we would view the policy as inconsistent with national policy and therefore unsound.	
<b>General consultation bodies</b>		
British Horse Society (lpr837)	<p>This policy mentions registered parks and gardens but not registered commons. We feel more mention should be made of the West Berks Commons in the document. They are mentioned but briefly under Green Infrastructure. It should be borne in mind that many of the commons in West Berks are commons registered under the 1899 Commons Act eg. Bucklebury, Snelsmore, Padworth, Wokefield. Others are registered under other Acts of Parliament: Stroud Green, Greenham &amp; Crookham, West Ilsley, East Ilsley, Oare. Hungerford Common is in particular a historic asset dating back centuries. These are all historically registered commons, are protected by law and a much valued resource. These all have public access rights and several have equestrian rights and are important for the equestrian community. The Ridgeway is mentioned as a historic transport route but the Ridgeway is just one of the many historic drovers roads throughout West Berks which and are now part of the current public rights of way network. These routes are an historic asset, recorded in the Inclosure awards of the 18th century and reflect how our forefathers travelled through the area. We strongly suggest that these are mentioned as the historic asset they are. They allow people today to access historic features and explore and understand our heritage and the countryside today. They are protected by law but are at risk from present day agricultural practices which can remove ancient hedgerows, change the surface and nature of the way thus changing the nature of the environment. They need better protection.</p> <p>Policy Page 41: Add to the list: 'Registered commons' 'Historic public rights of way'</p> <p>Supporting text para 5.52 'The historic environment belongs to the whole community and everyone should be able to participate in sustaining this shared resource. One mechanism for achieving this is through the West</p>	<p>Comments noted.</p> <p>Registered commons and historic public rights of way would be considered under criterion g) of the policy.</p> <p>Amend criterion g) of the policy as follows – '.... or through the development management <u>or other planning processes.</u>'</p> <p>In the supporting text add bullet points to the end of paragraph 5.46 of the Emerging Draft LPR as follows –</p> <ul style="list-style-type: none"> <li>• <u>Registered commons</u></li> <li>• <u>Historic Public Rights of Way</u></li> </ul> <p>Amend para 5.52 of the Emerging Draft LPR as follows - These include Mesolithic sites in the Kennet Valley; transport routes such as the Ridgeway <u>and other old drove roads</u>, the Kennet and Avon Canal and the Great Western Railway....</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Berkshire Heritage Forum, a partnership established in 2009 to recognise, promote and protect the District's heritage. The West Berkshire Historic Environment Action Plan (HEAP), published by the West Berkshire Heritage Forum, describes the character and evolution of the area as a whole and identifies its significant historic components. These include Mesolithic sites in the Kennet Valley; transport routes such as the Ridgeway <u>and many other old drove roads such as Old Street and Green Hams Lane which connect the Newbury area to the Ridgeway</u>, the Kennet and Avon Canal and the Great Western Railway....'</p>	
Canal and River Trust (lpr873)	<p>SP9 The Canal &amp; River Trust support the heritage policies, but please see comment below.          Para 5.42 The Canal &amp; River Trust request that the Kennet &amp; Avon Canal is considered as a non- designated heritage asset in areas where no other formal designation such as a conservation area exists and that it be added to the list.          5.53. The Trust would welcome discussions with the West Berkshire Heritage forum to understand if the canal and its various designated and non-designated assets need further consideration.</p>	<p>Comments noted.</p> <p>The Council can confirm that the Kennet &amp; Avon Canal and all the associated locks and bridges are on the Historic Environment Record. In areas where no formal designation exists it would therefore be considered under criterion g) of the policy as a non-designated heritage asset.</p> <p>The Council agrees and would welcome discussions between the Trust and Heritage Forum.</p>
Mid and West Berkshire Local Access Forum (lpr1859)	<p>This policy mentions registered parks and gardens, but not registered commons. MWBLAF believes that greater emphasis should be given to the West Berkshire Commons in the Local Plan; they are mentioned but briefly under Green Infrastructure. It should be borne in mind that many of the Commons in West Berkshire are registered under the 1899 Commons Act, e.g. Bucklebury, Snelsmore, Padworth, Wokefield. Others registered under different Acts of Parliament include Stroud Green, Greenham &amp; Crookham, West Ilsley, East Ilsley and Oare. Hungerford Common is in particular a historic asset dating back centuries These are all historically registered commons, are protected by law and a much-valued resource. They all have public access rights and several have equestrian rights that are important for the equestrian community. The Ridgeway is mentioned as a historic transport route but the Ridgeway is just one of the many historic drover's roads throughout West Berks which and are now part of the current public rights of way network. They are protected by law but are at risk from present day agricultural practices which can remove ancient hedgerows, change the surface and nature of the way thus changing the nature of the environment. They need better protection.</p> <p>In the Policy, the Forum recommends adding to the list below the first paragraph:</p> <ol style="list-style-type: none"> <li>1. <u>f) Registered Commons;</u></li> <li>2. <u>g) Historic Public Rights of Way (and renumber following items)</u></li> </ol> <p>In paragraph 5.52 of the Sporting text, add examples of drove roads: ‘The historic environment belongs to the whole community and everyone should be able to participate in sustaining this shared resource. One mechanism for achieving this is through the West Berkshire Heritage Forum, a partnership established in 2009 to recognise, promote and protect the District’s heritage. The West Berkshire Historic Environment Action Plan (HEAP), published by the West Berkshire Heritage Forum, describes the character and evolution of the area as a whole and identifies its significant historic components. These include Mesolithic sites in the Kennet Valley; transport routes such as the Ridgeway <u>and many other old drove roads such as Old Street and Green Hams Lane which connect the Newbury area to the Ridgeway</u>, the Kennet and Avon Canal and the Great Western Railway.....’</p>	<p>Amend para 5.52 of the Emerging Draft LPR as follows - These include Mesolithic sites in the Kennet Valley; transport routes such as the Ridgeway <u>and other old drove roads</u>, the Kennet and Avon Canal and the Great Western Railway....</p>
Newbury Society (lpr1151)	<p>Conservation Area Appraisals. The emerging draft makes no commitment to the completion of any conservation area appraisals by 2037. West Berkshire has 53 conservation areas, introduced from 1970 onwards, yet 51 of them do not have the formal appraisals needed to protect them. This includes all of the Newbury conservation areas, such as one which includes most of Newbury town centre, and two more along the canal. The Local Plan should include an unequivocal commitment to the completion of a specific number of appraisals.</p>	<p>Comments noted.</p> <p>The Council recognises the importance of CAAs and is undertaking an active programme of CAAs as part of its strategy for the conservation and enjoyment of the historic environment. In 2019 funding was obtained to establish a prioritisation methodology to identify those Conservation Areas (CAs) within West Berkshire that are under the greatest level of pressure from development and which have been subject to the greatest level of change. A</p>

Respondent (with lpr ref)	Response	Council Response
		<p>priority list of all CAs was drawn up which forms the basis for a proposed phased programme of reviews up to July 2026, subject to resources. Phase 1, which sets out the top ten CAs most in need of review, includes the larger and more complex areas. The CAA for Newbury town centre is due to be complete in 2023 and CAAs for Thatcham and Hungerford will follow. Monitoring of the CAA review programme will be undertaken through the Council's Annual Monitoring Report (AMR).</p> <p>Amend the supporting text to Policy DM8 as follows – 'The Council has a statutory duty to pay special attention to the desirability of preserving or enhancing the character and appearance of the District's 53 Conservation Areas. As part of this duty <u>and as part of its strategy to maximise opportunities for the conservation and enjoyment of the historic environment</u> the Council is undertaking a <u>project phased programme of Conservation Area Appraisals (CAAs)</u>, in partnership with the West Berkshire Heritage Forum <del>to encourage community involvement in their review and adoption of further Conservation Area Appraisals.</del> <u>As well as helping to define what is special about a particular Conservation Area,</u> <del>The</del> project will provide local communities with an understanding of how and why Conservation Area status is appraised, designated, and applied in future development and conservation management decisions....'</p>
West Berkshire Green Party (lpr1832)	We broadly support his policy	Comments noted
West Berkshire Heritage Forum (lpr73)	Supports the policy. This comprehensive policy should also make specific reference to the conservation of the principal public open spaces such as Victoria Park and Goldwell Park, in order to protect them against further encroachment. We should not need to wait until they are locally listed.	Comments noted. There are a lot of historic assets in the District and unfortunately it is not practical to specifically mention them all. The policy should be read in conjunction with other policies in the LPR, including SP10 Green Infrastructure which sets

Respondent (with lpr ref)	Response	Council Response
	<p>On the same argument, it should also mention the Commons, not just Greenham and Crookham Commons, but also the other Commons across West Berkshire which have both historic and environmental importance.</p> <p>5.42 Victoria Park and Goldwell Park, and Greenham and Crookham Common, should be added.</p> <p>5.43 West Berks Council might consider delegating the Section 215 process in whole or part to the larger Town Councils. Newbury Town Council maintains and regularly reviews a record of properties at risk. The Heritage Forum is happy to continue its involvement.</p> <p>5.51 Dated references should be given to the Historic Landscape Characterisation, Historic Environment Character Zoning, and the Newbury Historic Character Study. We are only aware of the last of these.</p>	<p>out the Council's approach to the protection and enhancement of public parks such as Victoria Park and Goldwell Park.</p> <p>In the supporting text add a bullet point to the end of paragraph 5.46 of the Emerging Draft LPR as follows –</p> <ul style="list-style-type: none"> <li>• <u>Registered commons</u></li> </ul> <p>The request to delegate Section 215 notices is noted but is a matter that would need to be considered separately to the LPR.</p> <p>Amend paragraph 5.51 of the Emerging Draft LPR as follows – '...Historic Landscape Characterisation (<u>2007</u>), Historic Environment Character Zoning (<u>2007</u>)..... and the Newbury Historic Character Study (<u>2006</u>).</p>
<b>Other stakeholders</b>		
Sam Coppinger (lpr290)	It has always been a huge disappointment to us that Membury airfield has not been historically conserved. Much could be done to maintain the integrity of the hangars and site buildings. If these were kept in good order, they would provide fantastic office spaces. The site is being overwhelmed by the new which is destroying its character. Large scale development is not appropriate here - the infrastructure cannot support it.	Comments noted. The issues raised are specific to Membury Industrial Estate and so will be considered as part of the Council's response to Policy SP21.
Tim Hall (lpr647)	Supports the policy	Comments noted
David Hill (lpr712)	Whilst the need to protect heritage assets is acknowledged, it must also recognise a need for properties to be made more energy efficient. Listed building protection conflicts with energy efficiency. Priority for SP9 should be given to key heritage assets (Scheduled monuments and sites of national importance) but should be flexible enough to allow working or living listed buildings to be adapted to become more energy efficient whilst protecting the character of the building. The Listed	Comments noted. Policy SP5 Responding to Climate Change already includes the following criterion 'to manage the integrity of the historic environment and to respect the character and improve the environmental performance of heritage assets without compromising their significance, by adopting principles of reversibility and minimum intervention in accordance with Policy SP9.'

Respondent (with lpr ref)	Response	Council Response
	Building Control system is not fit for purpose and should align with the need for improved energy standards.	<p>The supporting text of Policy SP9, para 5.49 of the Emerging Draft LPR states - 'Heritage assets rarely prevent development schemes where their significance has been properly assessed and understood from the outset. Indeed, the most successful schemes often arise from this understanding and an appreciation of the social, cultural, economic, and environmental value that can be gained from their retention, sympathetic re-use and successful integration. Preserving embodied energy through the re-use and adaption of existing historic buildings for example, can be more sustainable than constructing new buildings. Proposals for energy saving measures should be designed with the knowledge and understanding of the building's significance. Getting the balance right and avoiding unintended consequences, is best done with a holistic 'whole building' approach. This helps to highlight and resolve uncertainties and reconcile conflicting aims, ensuring that energy efficient measures are suitable, robust, well integrated, properly coordinated and sustainable.'</p> <p>Amend para 5.49 of the Emerging Draft LPR as follows – 'Getting the balance right and avoiding unintended consequences, is best done with a holistic 'whole building' approach <u>in accordance with the current guidance from Historic England.</u>'</p>
Nataliya Topliss (lpr800)	<p>Thattham area has never been enhanced by the housing developments. It always results in green places been destroyed and mature trees and greenery cut. Please come to Thattham and see all unsightly new developments built one on top of another with no regard to the town's character and heritage.</p> <p>West Berks Council's strategy of 2012 indentified, that after a period of rapid housing growth, infrastructure in Thattham had failed to keep pace and there should be a period for regeneration and new facilities. Since then,</p>	Comments noted. The issues raised are specific to North East Thattham and so will be considered as part of the Council's response to Policy SP17.

Respondent (with lpr ref)	Response	Council Response
	there has been no such regeneration so the Council's conclusions of 2012 must still stand.	
Councillor Tony Vickers (lpr535)	We support this policy but would like to add another category of heritage: historic routes. West Berkshire has a relatively high number and mileage of public rights of way. Most of them are vestiges of a past way of life and have a very different function now compared with the one which they were created by previous generations: as drove roads or coaching routes, for example. They may be protected as rights of way under Highways legislation but they should also be protected. Add in after areas: historic routes.	<p>Historic public rights of way would be considered under criterion g) of the policy.</p> <p>Amend criterion g) of the policy as follows – ‘.... or through the development management <u>or other planning processes.</u>’</p> <p>In the supporting text add a bullet point to the end of paragraph 5.46 of the Emerging Draft LPR as follows –</p> <ul style="list-style-type: none"> <li>• <u>Historic public rights of way</u></li> </ul>
<b>Landowners, site promoters and developers</b>		
Barton Willmore for Copas Farms (lpr1970)	<p>Draft policy SP9 states “<i>Development which would harm the significance of a non-designated heritage asset or its setting will not be permitted, unless the scale of the harm or loss and the significance of the asset is outweighed by other public benefits that may result from the proposals.</i>”</p> <p>This does not accord with paragraph 197 of the NPPF which, for applications which directly or indirectly affects non-designated heritage assets requires a ‘<i>balanced judgement [...] having regard to the scale of any harm or loss and the significance of the heritage asset</i>’. On this basis we consider that the existing wording of the policy is not consistent with national policy and should be revised as follows (in bold and underlined):</p> <p><i>Development which would harm the significance of a non-designated heritage asset or its setting will <b><u>only not be permitted, on the basis of a balanced judgement having regard to the scale of any harm or loss and the significance of the asset.</u></b> <del>unless the scale of the harm or loss and the significance of the asset is outweighed by other public benefits that may result from the proposals.</del></i></p>	<p>Comments noted.</p> <p>Amend the policy as follows –</p> <p><del>‘Development which would harm the significance of a non-designated heritage asset or its setting will not be permitted, unless the scale of the harm or loss and the significance of the asset is outweighed by other public benefits that may result from the proposals.’</del></p> <p><u>‘Where development would affect the significance of a non-designated heritage asset a balanced judgement will be made which has regard to the scale of any harm or loss and the significance of the heritage asset.’</u></p>
Barton Willmore for Donnington Valley Group (lpr2433)	Part of the policy is inconsistent with National Planning Policy. Respondent (with lpr ref)	Response	Council Response
Fowler Architecture and Planning (lpr1789)	<p>There is no reference to 'setting' within (a) to (g). The following requirement goes beyond paragraph 197 of the NPPF: 'Development which would harm the significance of a non-designated heritage asset or its setting will not be permitted, unless the scale of the harm or loss and the significance of the asset is outweighed by other public benefits that may result from the proposals.' The NPPF requires only a 'balanced judgement' and this does not rely upon public benefits being necessary for this balance to be struck in favour of the scheme. The Local Plan must not treat non-designated heritage assets under paragraph 196 of the NPPF, which is what it is seeking to do.</p>	<p>Comments noted.</p> <p>Amend the policy as follows – 'All proposals affecting a heritage asset, <u>including its setting</u>, should.....'</p> <p>Amend the policy as follows –  <del>'Development which would harm the significance of a non-designated heritage asset or its setting will not be permitted, unless the scale of the harm or loss and the significance of the asset is outweighed by other public benefits that may result from the proposals.'</del>  <u>'Where development would affect the significance of a non-designated heritage asset a balanced judgement will be made which has regard to the scale of any harm or loss and the significance of the heritage asset.'</u></p>

**Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)****Emerging Draft LPR Policy: SP10 Green Infrastructure****(Proposed Submission LPR Policy: SP10 Green Infrastructure)**

Number of responses received: 34

Respondent	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr740)	<p>Why not actually include the phrase blue infrastructure under SP10? Mentioned briefly under SP5 and SP23, but could be clearer here.</p> <p>Suggest that the bullet points beneath Proposals for GI will be encouraged to include 'Restore and open up historic route ways such as hollow ways and drovers roads, avenues and access to historic parks'.</p> <p>Para 5.55 examples are practically all also historic landscape character types - woodland, parkland, gardens, village greens, allotments, cemeteries, canals, etc. have been created by people and could equally be classified as 'archaeological or historic' rather than having this as a separate category. SP10 is an example where cross-referencing between SP policies would make sense to pull them together, either in the body of each policy (eg in accordance with policy SP9) or in a table in an appendix.</p>	<p>Comments noted.</p> <p>For consistency, the Council is using the definition of Green Infrastructure (GI) which is set out in the NPPF. This refers to GI as 'a network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity.'</p> <p>Add the following text as a separate bullet point in the policy – <u>'restore and open up historic route ways such as hollow ways and drovers roads, avenues and access to historic parks'</u></p>
Tree Officer, West Berkshire Council (lpr1612)	<p>I note that Policy SP10 GI lists certain types of environment where trees occur. I would suggest it includes a bullet specifying:</p> <ul style="list-style-type: none"> <li>• Trees under preservation orders and within conservation areas and those in local and nationally designated sites;</li> <li>• Veteran trees – important in their own right and for their rare and vulnerable ecology.</li> </ul>	<p>Comments noted.</p> <p>These suggested bullet points mainly relate more to regulatory protection and conservation of natural features than to green infrastructure per se. They will be addressed</p>

Respondent	Response	Council Response
		<p>under Proposed Submission LPR Policies SP11 and DM15.</p> <p>Amend 3<sup>rd</sup> bullet of para 5.55 as follows –  ‘....., living roofs and walls, <u>trees and hedgerows</u> hedges, civic spaces....’</p>
<p>Ecologist, West Berkshire Council (lpr1692)</p>	<p>Depending on their location, nature and scale, all development proposals will:</p> <ul style="list-style-type: none"> <li>• protect or <u>and</u> enhance existing GI and the functions this performs, and</li> </ul> <p>Proposals for GI will be encouraged where they:</p> <ul style="list-style-type: none"> <li>• help to mitigate the causes of and address the impacts of climate change through measures such as sustainable drainage, minimalizing urban heating, flood risk management, and maximise GI to sequester carbon and provide <u>environmental</u> cooling and insulation functions;</li> </ul> <p>Long term - should be specified to be a minimum of 25-30 years</p> <p>Management arrangements for new and enhanced green infrastructure within major development sites <u>with quality/compliance checks at set intervals to meet BNG targets.</u></p> <p>5.54 Add a point for river renaturalisation seeking to slow flows of water particularly in the upper parts of catchments.</p> <p>5.55 Examples of GI assets include:</p> <ul style="list-style-type: none"> <li>• Natural and semi-natural rural and urban green <u>blue</u> spaces – ....., lakes and ponds need to be added</li> <li>• Amenity green space – Do public rights of way and bridleways need to be added here?</li> </ul> <p>5.56 Insulation isn't only about winter also about keeping cooler in the summer too.</p> <p>Maximising <u>...and extenuating...</u> the number of functions and benefits delivered by each GI asset;</p>	<p>Comments noted.</p> <p>Amend policy as follows – ‘protect <u>and/or</u> enhance existing GI... sequester carbon and provide <u>environmental</u> cooling and insulation functions’</p> <p>With the introduction of the Environment Act 2021, Biodiversity Net Gain will be considered under Policy SP11 Biodiversity and Geodiversity.</p> <p>This is a nature conservation issue and not directly appropriate for this policy.</p> <p>Amend 1<sup>st</sup> bullet point of para 5.55 as follows – ‘urban green <u>and blue</u> spaces....’</p> <p>For consistency, the Council is using the definition of Green Infrastructure (GI) which is set out in the NPPF. This refers to GI as ‘a network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity.</p> <p>Public rights of way are included under bullet point 6 of the Emerging Draft LPR.</p>

Respondent	Response	Council Response
<b>Statutory consultees</b>		
<p>Natural England (lpr1596)</p>	<p>Natural England welcome this policy. We are currently leading the Green Infrastructure Standards Project; a vital contribution to delivery of the Government's 25 Year Environment Plan. It is due to be launched in June 2021. Research within the project has identified key benchmarks that are informing the update of the Accessible Natural Greenspace Standards. This may be useful to inform design of Green Infrastructure across your area.</p> <p>In addition, we would like to see reference to well-designed SUDS as a general requirement, as well as for protecting and enhancing the SSSI/SAC rivers and wetlands within West Berkshire. This would probably sit best within Policy SP10 as opposed to SP6, and should reference the need to protect the rivers and residents from flooding, pollution run off and discharge impacts.</p>	<p>Comments noted.</p> <p>Insert a new paragraph after 5.55 of the Emerging Draft LPR as follows -</p> <p><u>'The government's 25 Year Environment Plan (2018) highlights that 'The provision of more and better quality green infrastructure, including urban trees, will make towns and cities attractive places to live and work, and bring about key long term improvements in people's health'. The document makes a commitment to the production of a GI Framework, <a href="#">Green Infrastructure Framework</a> currently being produced by Natural England, which will help to target the creation and/or improvement of GI across the District. The Framework complements Biodiversity Net Gain (BNG) and Nature Recovery Strategies which both form part of the Environment Act (2021). To ensure high quality multi-functional GI is delivered in West Berkshire as set out in the policy, development proposals will be expected to be designed having regard to the Natural England Framework, and any future relevant national regional or local guidance which could be brought forward. Proposals will be supported which use the most up to up to date recognised GI principles and standards. For example, The Building with Nature Standards developed by the Natural Environment Research Council (NERC) or the emerging Natural England Green Infrastructure Standards. In addition, if a development falls under BREEAM, consideration of Land Use and Ecology Credits should be undertaken at the design stage to ensure the requirements of Policy DM4 Building Sustainable Homes and Businesses is met.'</u></p> <p>SuD's are included in the penultimate bullet point of paragraph 5.55 of the Emerging Draft LPR.</p>

Respondent	Response	Council Response
		The protection and enhancement of SSSI's/SACs are covered in Policy SP11 Biodiversity and Geodiversity.
Environment Agency (lpr1661)	<p>We welcome the inclusion of this policy and the examples given of the many benefits of different Green Infrastructure measures. The policy wording should be strengthened: Delete 'where appropriate' because major developments should provide long term management of GI. This will ensure that major developments take into account risks arising from climate change can be managed through suitable adaptation measures in accordance with paragraph 150 of the NPPF <i>"Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites."</i></p> <p><u>Supporting Text</u></p> <ul style="list-style-type: none"> <li>• 'Forming buffers and wildlife corridors for key habitats and species'. We recommend referring to Policy SP 11 that expands on the need for buffer zones. Also we recommend altering 'buffers' to 'buffer zones', to provide greater</li> <li>• Please add 'The Environment Agency' to the list of organisations that the council will work in partnership with for</li> </ul>	<p>Comments noted.</p> <p>Amend the 6<sup>th</sup> paragraph of the policy as follows – <del>'Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites. Proposals for major development will be required to consider the long-term management and maintenance of GI infrastructure and should clearly demonstrate how these considerations have informed site proposals. Details of maintenance requirements and arrangements will be required to be set out, including who is responsible for these requirements. Appropriate funding arrangements for delivery of the long-term maintenance requirements should be clearly demonstrated to the Council before construction starts, including measures to secure biodiversity net gain through all phases and stages of the development.'</del></p> <p>Amend 3<sup>rd</sup> bullet point of paragraph 5.56 of the Emerging Draft LPR as follows – 'Forming buffers <u>zones</u> and .....</p> <p>Amend paragraph 5.57 of the Emerging Draft LPR as follows – '.....local community, <u>statutory advisors</u>,.....'</p>
Thatcham Town Council (lpr1397)	<ul style="list-style-type: none"> <li>• "Development will protect and enhance existing GI assets and linkages and add to the local network for the benefit of both the natural environment and the health and wellbeing of the community."</li> </ul> <p>As noted in SP 8, with regards to the Thatcham NE site, the existing landscape is agricultural and countryside interspersed with well-maintained and historic hedgerows, a scattering of ancient trees, and bounded by well-established woodland or hedgerows. These natural landscape features</p>	<p>Comments noted.</p> <p>Comments in relation to Policy SP17 will be considered as part of the Council's response under that policy.</p> <p>The Local Plan also includes of the Emerging Draft LPR policies DC14 Trees, Woodland and Hedgerows and SP11 Biodiversity and Geodiversity which will be utilised as part of the planning process.</p>

Respondent	Response	Council Response
	<p>provide the countryside feel towards the edge of the existing settlement and define the countryside landscape beyond.</p> <p>Historic hedgerows are valuable to the ecology of an area and support a wide range of biodiversity and wildlife. It is not possible to remove a historic hedgerow and claim a substitution of biodiversity elsewhere as the ecology may have developed over many decades, or hundreds of years.</p> <p>The natural landscape, and hedgerows provide wildlife corridors that support diverse wildlife in the remaining Ancient Woodland (The Plantation). The proposed site would encircle the remaining woodland and break the connection to the countryside.</p> <p>The proposed site of Thatcham NE would also hinder access to the countryside as it would subsume existing rights-of-way.</p> <p>We note that during the HELAA assessment the Thatcham NE carried a "High risk of adverse nature conservation impacts" due to "Areas of ancient woodland and Local Wildlife Sites adjacent to the site".</p> <p>The selection of Thatcham NE, being rural and countryside, is in conflict with the policy statement that is in the benefit of the natural environment. Nor is the selection aligned with the well-being for existing Thatcham residents.</p> <p>The conflict between the NE Thatcham site selection and the policy needs to be resolved.</p>	<p>Green infrastructure plays an important role in supporting habitat connectivity and this will be incorporated into the revised policy by amending the 7<sup>th</sup> bullet of the Emerging Draft LPR as follows – ‘...extend wildlife corridors <u>and provide habitat connectivity</u>, particularly...’</p> <p>The Council recognises the benefits that the public rights of way network has environmentally but also alongside this it aids well-being in terms of both physical and mental health. Public rights of way fall under separate legislation which means that highway authorities have a general duty ‘to assert and protect the rights of the public to the use and enjoyment’. In addition the West Berkshire Council Public Rights of Way Improvement Plan will be utilised to inform development proposals and forms part of the evidence base for the Local Plan.</p> <p>Strengthen the policy by adding an additional paragraph as follows –  <u>‘Development proposals must take account of existing access networks within and around the site. Opportunities should be sought to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. The addition of new connections and status upgrades to the existing rights of way network will be supported.’</u></p> <p>Policies contained within the Local Plan require that the necessary surveys are carried out and any corridors needed for wildlife are retained.</p>
Newbury Town Council (lpr2263)	We strongly support this policy. However, we wish to have more support for allotments here.	Comments noted

Respondent	Response	Council Response
	<p><b>Reason:</b> Developments in urban areas such as Newbury’s settlement area need to make specific provision for allotments at the earliest stage, in consultation with local councils which have statutory responsibility for providing them but have great difficulty finding land for them. In Newbury, there is currently a large waiting list for plots, and we believe the demand for allotments can only continue to grow as housing densities have increased in recent decades while we now see support for reducing “food miles” and the health and biodiversity value of allotments over that of some other forms of green infrastructure. Housing developments of more than 100 dwellings with densities greater than 30 should be required to make specific on-site provision for allotments according to the needs of surveys of demand carried out in partnership with surrounding parishes, or to contribute a financial contribution towards off-site provision. All other housing developments should contribute through the parish component of CIL. Allotment should not be taken as public open space. Rather they should be seen as an addition to public open space (see in the DC 37).</p> <p><b>Change proposed:</b> In the supporting text, we wish to see a paragraph that reflects the above</p>	<p>Allotments would be recognised by this policy and are included in the examples of GI assets in the supporting text.</p> <p>The provision of the most appropriate GI will vary in type and scale from site to site. The Council wishes to retain the flexibility to agree the best solutions with the developers rather than set out a detailed set of specification for all possible types of GI.</p>
Cold Ash Parish Council (lpr1735)	Policy is supported.	Comment noted.
Greenham Parish Council (Clerk) (lpr898)	<p>Policy is supported.</p> <p>Developments in Greenham need to make specific provision for allotments at the earliest stage, in consultation with local councils which have statutory responsibility for providing them but have great difficulty finding land for them.</p>	Comments noted.
Stratfield Mortimer Parish Council (lpr399)	Policy is supported.	Comment noted.
Shaw-cum-Donnington Parish Council	We support the policy.	Comments noted.

Respondent	Response	Council Response
(lpr204)	<p>What is meant in bullet 2 “create additional green infrastructure which is integrated into the overall development design from the outset”. It could mean anything from planting a couple of trees to providing wide swaths of open space.</p> <p>In bullet 3 it states “take opportunities to achieve multi functionality by bringing Green Infrastructure functions together”. What does this mean in plain English?</p> <p>The objectives are laudable. Can they be met in the face of developers with their need to maintain profits with high density developments and only achieving minimum building regulations?</p> <p>5.55 We note that church yards are regarded as green infrastructure. Many are in a dilapidated condition due to lack of maintenance and lack of resources. This leads to a loss of historic assets as monuments crumble.</p> <p>We would like the maintenance of assets to be listed in section 5.56.</p>	<p>The Council is committed to achieving high quality multifunctional green infrastructure assets. To overcome concerns raised in regards to policy ambiguity the 5th bullet point of the Emerging Draft LPR will be amended as follows –</p> <p><u>‘Create Generate high quality GI which creates an attractive and distinctive setting to new development, enhancing any existing asset that may be present. This should be planned and designed from the outset as a network of multifunctional green and blue spaces and other natural features which identify and respond to the site’s local context. Proposals for GI will be expected to be designed in accordance with the most up to date recognised GI standards;’</u></p> <p>The range of functions are set out in the policy and examples are included in the supporting text.</p> <p>The policy will provide an opportunity to address such circumstances if accepted as a priority.</p> <p>Amend the policy as follows –</p> <p><u>‘Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites.–Proposals for major development will be required to consider the long-term management and maintenance of GI infrastructure and should clearly demonstrate how these considerations have informed site proposals. Details of maintenance requirements and arrangements will be required to set out, including who is responsible for these requirements. Appropriate funding arrangements for delivery of the long-term maintenance requirements should be clearly demonstrated to the Council before construction starts, including measures to secure biodiversity net gain through all phases and stages of the development.’</u></p>

Respondent	Response	Council Response
Hungerford Town Council (lpr148)	Policy is supported. No further comments.	Comments noted.
<b>General consultation bodies</b>		
BBOWT (lpr713)	<p>Policy is supported but strengthening wanted.</p> <p>BBOWT welcome the proposed inclusion of a policy on Green Infrastructure to benefit biodiversity.</p> <p>BBOWT would like to see the wording on how GI can benefit biodiversity strengthened and suggest the following wording:</p> <ul style="list-style-type: none"> <li>• Green Infrastructure is expected to positively contribute to the conservation, restoration, re-creation and enhancement of networks of biodiversity on a landscape scale. The size and location of GI is expected to be suitable for the function it is intended to fulfil. Where required, GI should ensure permeability for wildlife through development and provide sufficient beneficial habitat to support target species, independent of its connective function.</li> <li>• Monitoring of GI and habitat creation to ensure that it develops in accordance with its stated intention, will be expected. If it is not achieving satisfactory condition within stipulated timeframes, remedial measures will be required. Mechanisms to achieve this must be outlined in development proposals.</li> </ul>	<p>Comments noted.</p> <p>The policy is designed to provide for the range of green infrastructure functions. It is not appropriate to specify in detail at this level all the stipulations that may apply to each stage. Detail as suggested would be more effective at planning application stage.</p> <p>Amend penultimate paragraph of the policy as follows – <del>'Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites. Proposals for major development will be required to consider the long-term management and maintenance of GI infrastructure and should clearly demonstrate how these considerations have informed site proposals. Details of maintenance requirements and arrangements will be required to set out, including who is responsible for these requirements. Appropriate funding arrangements for delivery of the long-term maintenance requirements should be clearly demonstrated to the Council before construction starts, including measures to secure biodiversity net gain through all phases and stages of the development.'</del></p>
North Wessex Downs AONB (lpr1625)	<p>Policy is supported.</p> <p>This will act as the back bone of developments linking all areas together in creating a sense of place.</p> <p>Biodiversity net gain has been included but this policy presents the opportunity to include natural capital within it as well.</p>	<p>Comments noted.</p> <p>Since the Plan was consulted upon the Environment Act 2021 has become law. As such the requirement for Biodiversity Net Gain will be included in Policy SP11.</p>

Respondent	Response	Council Response
		<p>Amend the 7<sup>th</sup> bullet point of the Emerging Draft LPR policy as follows –  <del>'contribute to biodiversity net gain</del> <u>enhance the natural environment and natural processes to improve biodiversity and increase natural capital whilst and seeking opportunities to use GI to extend wildlife corridors and provide habitat connectivity</u>, particularly in urban areas and where it contributes to nature recovery networks;'</p>
The Woodland Trust (lpr1009)	<p>We support this approach to protecting and extending Green Infrastructure, as part of wider net gain and biodiversity policies. We welcome the inclusion of green infrastructure as part of essential infrastructure and connectivity and urge a landscape-scale approach to maximise the benefits for nature and people.</p> <p>Design guidance should incorporate the protection and extension of green infrastructure including support for SuDS in all new developments, and encouragement of green links, such as tree lines and hedgerows, to frame residential areas and connect existing habitats.</p> <p>In particular, we note the importance of protecting and enhancing natural habitats around ancient woodland to improve connectivity with the surrounding landscape. The consequent increase in ecological connectivity between areas of ancient woodland will create the resilient landscapes recommended in Making Space for Nature (Defra 2010).</p> <p>In each type of area, green infrastructure should be protected, enhanced and integrated into development plans, including through local tree strategies, landscape management plans or urban development briefs. To achieve ongoing benefits, green infrastructure needs to be protected and maintained. CIL allocations should include green infrastructure, including management plans and funding for maintenance. Natural green infrastructure is cost-effective: for example, trees cost less to maintain than regularly-mown turf and have wider biodiversity benefits.</p>	<p>Comments noted.</p> <p>The policy will be read in conjunction with other policies in the Plan such as Emerging Draft LPR Policy DC14 which covers trees, woodland and hedgerows.</p> <p>Amend 4<sup>th</sup> bullet of the Emerging Draft LPR policy as follows – '<u>...extend wildlife corridors and provide habitat connectivity, particularly...</u>'</p> <p>Amend penultimate paragraph of the policy as follows – '<del>Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites.</del> <u>Proposals for major development will be required to consider the long-term management and maintenance of GI infrastructure and should clearly demonstrate how these considerations have informed site proposals. Details of maintenance requirements and arrangements will be required to set out, including who is responsible for these requirements. Appropriate funding arrangements for delivery of the long-term maintenance requirements should be clearly demonstrated to the Council before construction starts, including measures to secure biodiversity net gain through all phases and stages of the development.</u>'</p>
Canals and Rivers Trust	The Trust fully support this policy and we have been promoting the waterway corridor as one of the most important GI corridors throughout the	Comments noted and partnership working is welcomed.

Respondent	Response	Council Response
(lpr878)	<p>district. We ask for an amendment that ‘Green-blue corridors rivers and canals (including their banks and towpaths)...’</p> <p>The Trust look forward to involvement in the latest IDP update. We have not yet been contacted for input to date, however as always we wish to promote towpath improvement and improved linkages to the towpath throughout the district through the IDP, Local Transport plan, ROWIP and any local cycling and walking improvement plans.</p> <p>The towpath is well used for local walking and cycling and parts of it are including in the route of NCN4. The Trust will work with the council and other partners, including Sustrans to seek improvements and funding opportunities to achieve improvements to the towpath for walking and cycling whilst remembering that it is a multi-functional GI asset.</p> <p>Para 5.56 should include improving existing GI assets</p>	<p>Amend 6<sup>th</sup> bullet point of the Emerging Draft LPR paragraph 5.55 as follows – ‘...rivers and canals (including their banks <u>and towpaths</u>),...’</p> <p>The first paragraph of the policy refers to the enhancement of existing GI assets.</p>
Heritage Forum (lpr74)	<p>Policy is supported.</p> <p>5.55 GI assets include also:</p> <ul style="list-style-type: none"> <li>• Victoria Park, Goldwell Park, and other principal public parks;</li> <li>• Greenham and Crookham Common and other Commons across West Berkshire;</li> <li>• Ancient woodland, which should be surveyed and recorded if that has not already happened.</li> </ul>	Comments noted.
Mid and West Berkshire Local Access Forum (lpr1894)	<p>MWBLAF is disappointed that there is a specific policy on Public Rights of Way in the Minerals and Waste Local Plan, but not in the draft Local Plan. The Forum firmly believes that Public Rights of Way are equally important to both policies.</p> <p>The Forum therefore offers a proposal for a policy on Public Rights of Way for inclusion in the Local Plan. This is based closely on the Policy 23 in the Minerals and Waste Local Plan and clauses in policies RSA 3 and RSA 21 in this draft Local Plan.</p> <p>The Forum recommends that a policy on Public Rights of Way is added to the Local Plan: <b>Public Rights of Way</b></p>	<p>Comments noted.</p> <p>The Council recognises the benefits that the public rights of way network has environmentally but also alongside this it aids well-being in terms of both physical and mental health. The Council has considered the inclusion of a standalone policy on public rights of way but feels there is adequate legislation for rights of way outside of the Local Plan process. In addition the West Berkshire Council Public Rights of Way Improvement Plan which is currently being updated will be utilised to inform development proposals and forms part of the evidence base for the</p>

Respondent	Response	Council Response
	<p>Development proposals will be permitted where the proposals do not adversely affect the Public Right of Way (PROW) network and, where possible, enhance it. When considering the adverse impacts consideration will be given to whether:</p> <ul style="list-style-type: none"> <li>• The proposal maintains the character of the PROWs within the development or adjacent to it;</li> <li>• The proposal maintains the existing route during construction or, when this is impossible, propose an acceptable alternative route;</li> <li>• PROW should be reinstated as soon as is practicable; and</li> <li>• Opportunities are proposed that would secure appropriate, improved access, to the countryside.</li> </ul> <p><b>Supporting Text</b></p> <p>There are 1183 km (735 miles) of public rights of way in West Berkshire, compared to a Council road network of 1272 km (790 miles). Public rights of way are made up of the following:</p> <ul style="list-style-type: none"> <li>• 61% public footpaths, over which the right of way is on foot only.</li> <li>• 17% public bridleways, for use by the public on foot, bicycle and on horseback or leading a horse.</li> <li>• 8% restricted byways, used as bridleways but with the addition of non-mechanically propelled vehicles, thereby giving a right of access for horse-drawn carriages.</li> <li>• 14% byways open to all traffic, for use by all the above plus vehicular traffic, with the main use being by walkers and horse-riders.</li> </ul> <p>Public Rights of Way play an important role in enabling access to the countryside and the consequential benefits on health and wellbeing. Given the extent of the public rights of way in West Berkshire, proposed development sites will often be close to, or crossed by, rights of way. It is important that rights of way remain accessible to users during the construction of the development, and that users' safety is not compromised by the activity on site. In some circumstances it might be necessary for a right of way to be diverted during the period of construction, but this should be for the minimum possible period and for the least extra distance. Public rights of way within the boundaries of developments should be retained as separate routes for use by the currently permitted classes of</p>	<p>Local Plan. The Council agrees that rights of way have an important role in the green infrastructure network and so will strengthen the policy by adding additional wording to as follows –</p> <p><u>'Development proposals will be required to take account of existing access networks within and around the site. Opportunities should be sought to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. The addition of new connections and status upgrades to the existing rights of way network will be supported.'</u></p>

Respondent	Response	Council Response
	<p>user, and should not be ‘absorbed’ into the road network of the development. The rural character of existing Public Rights of Ways across a site should be protected.</p> <p>When determining planning applications consideration will be given to both the impacts of a proposal on the public rights of way network together with the impact on the amenity value of the public right of way.</p> <p>Where appropriate, policies addressing public rights of way may also be applied to other routes used by the public, including ‘other routes with public access’ (as indicated on Ordnance Survey maps), permissive footpaths and bridleways, and established paths on commons and access land (as defined by the Countryside and Rights of Way Act 2000).</p>	
<p>Mid and West Berkshire Local Access Forum (lpr1860)</p>	<p>MWBLAF strongly supports the excellent statement in the policy:</p> <p>Proposals for GI will be encouraged where they: ...</p> <ul style="list-style-type: none"> <li>• can provide pleasant and safe ‘green routes’ to commute on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors.</li> </ul> <p>It is vital that long term measures are put in place for maintenance and to prevent future development. Using existing legislation for public rights of way and open spaces would ensure that.</p> <p>However, this policy focuses on new green infrastructure that is created through the development; the preservation of existing green infrastructure such as public rights of way (PROW) is not sufficiently addressed. The strong preference of the Forum is for the Local Plan to include a specific policy on PROW, as is the case for the Minerals and Waste Local Plan; we have offered a proposal for this policy at the end of this response. If that is not possible, then the key elements of that proposed policy on PROW would need to be added to this policy.</p> <p>Supporting text:</p>	<p>Comments noted.</p> <p>The Council recognises the benefits that the public rights of way network has environmentally but also alongside this it aids well-being in terms of both physical and mental health. The Council has considered the inclusion of a standalone policy on public rights of way but feels there is adequate legislation for rights of way outside of the Local Plan process. In addition the West Berkshire Council Public Rights of Way Improvement Plan which is currently being updated will be utilised to inform development proposals and forms part of the evidence base for the Local Plan. The Council agrees that rights of way have an important role in the green infrastructure network and so will strengthen the green infrastructure policy by adding additional wording to the 5<sup>th</sup> paragraph of the policy as follows –</p> <p><u>‘Development proposals will be required to take account of existing access networks within and around the site. Opportunities should be sought to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. The addition of new</u></p>

Respondent	Response	Council Response
	<p>In paragraph 5.54: Horse riding / horseback is listed in the policy but not mentioned here. This is inconsistent with policy DC34, as horses need safe off-road paths too.</p> <p>In paragraph 5.56: The key to active travel is to provide traffic-free routes which link up without using roads.</p> <p>The Forum suggests adding to the Policy:</p> <p>Where appropriate, proposals must provide for long-term management arrangements for new and enhanced green infrastructure within major development sites. <b><u>Where new paths are created, they should become public rights of way. Where new public open space is created, measures must be taken to ensure they are protected for the future, for example, by becoming registered village greens.</u></b></p> <p>In the Policy, we recommend that ‘commute’ is replaced by ‘travel’, because many journeys are not for commuting but for shopping or recreation: can provide pleasant and safe ‘green routes’ to <b>commute travel</b> on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors;</p> <p>In paragraph 5.54 of the supporting text, we recommend adding ‘horse riding to the fourth bullet: Para 5.54 encourage walking, cycling, <b>horse riding</b> and other recreational and sensory experiences; In paragraph 5.56 we recommend emphasising the importance of off-road connectivity:</p> <p>Key opportunities include:- Interconnecting GI assets to form a strong GI network of green spaces and corridors which deliver the range of GI functions <b><u>and improve off-road connectivity</u></b></p>	<p><u>connections and status upgrades to the existing rights of way network will be supported.</u></p> <p>Amend 4th bullet point of paragraph 5.54 of the Emerging Draft LPR as follows – ‘encourage walking, cycling, <u>horse riding</u> and other recreational and sensory experiences;’</p> <p>Amend last bullet point of paragraph 5.56 of the Emerging Draft LPR as follows – ‘...range of GI functions <u>and improve off road connectivity;</u>’</p> <p>Amend 6<sup>th</sup> bullet point of the Emerging Draft LPR policy as follows – ‘to commute <u>or travel</u> on....’</p>
British Horse Society (lpr839)	Policy is supported.	Comments noted.

Respondent	Response	Council Response
	<p>We strongly support the excellent statement <i>'can provide pleasant and safe 'green routes' to commute on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors'</i>. We applaud the inclusion of equestrian needs and this supports policy DC34.</p> <p>Para 5.54: Horse riding / horseback is listed in the policy but not mentioned here. This is inconsistent and leads to problems for BHS officers as (1) they may have to make a case for the inclusion of horses (2) it is inconsistent with policy DC34 as horses need safe off-road paths too.</p> <p>Para 5.56: the key to active travel for equestrians and others is to provide traffic-free routes for all which link up without using roads</p> <p>To the Policy: We recommend that 'commute' is replaced by 'travel' because many journeys are not for commuting but for recreational travel and it is rare for horseback journeys to be for commuting.</p> <p>To the supporting text: Para 5.54 encourage walking, cycling, <b>horse riding</b> and other recreational and sensory experiences</p> <p>5.56 Key opportunities include:- <i>'Interconnecting GI assets to form a strong GI network of green spaces and corridors which deliver the range of GI functions <b>and improve off-road connectivity'</b></i>;</p> <p>We strongly support the excellent statement <i>'can provide pleasant and safe 'green routes' to commute on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors'</i>. Respondent	Response	Council Response
	<p>they may have to make a case for the inclusion of horses (2) it is inconsistent with policy DC34 as horses need safe off-road paths too.</p> <p>Para 5.56: the key to active travel for equestrians and others is to provide traffic-free routes for all which link up without using roads.</p>	
West Berkshire Green Exchange (lpr1554)	<p>Policy neither supported nor not supported.</p> <p>All developments of over twenty houses should provide space for allotments at a rate of one ten pole (250 sq. m) allotment for every twenty houses. This can either be on site or nearby preferably within walking distance. Where a site is broken up to avoid this measure the sites broken up should be aggregated together to ensure the provision is met from the developers. Where the allotments are not taken up initially the land should be made available as additional public open space until such time as the land is required for allotments.</p>	Comments noted. The Council welcomes the suggestion regarding allotment provision. The requirements for open space provision is set out in policy DC37 of the Emerging Draft LPR.
West Berkshire Green Party (lpr1833)	We would amend the first sentence as follows: replace “maximise the potential for strengthening” with “strengthen”.	<p>Comments noted.</p> <p>Amend the first paragraph of the policy as follows – ‘The Council will <del>maximise the potential for</del> strengthening both local and strategic Green Infrastructure (GI) <u>assets</u> across the District. <del>Development will protect and</del> <u>This will be achieved by protecting and enhancing</u> <del>enhance</del> existing GI assets and linkages and <u>adding</u> to the local network for the benefit of both the natural environment and the health and wellbeing of the community.....’</p>
<b>Other stakeholders</b>		
Sam Coppinger (lpr291)	<p>Policy is supported.</p> <p>We should be developing sites with climate change in mind. Good connectivity with public transport is essential as is the ability for people to take advantage of walking, cycling and riding safely. Areas that cannot provide this should be rejected.</p>	Comments noted.
Tim Hall	Policy not supported.	Comments noted.

Respondent	Response	Council Response
(lpr648)	<p>Delete "maximise the potential".</p> <p>Just say "will strengthen" local and strategic Green Infrastructure (GI) across the District.</p>	<p>Amend the first paragraph of the policy as follows – ‘The Council will <del>maximise the potential for</del> strengthening both local and strategic Green Infrastructure (GI) <u>assets</u> across the District. <del>Development will protect and</del> <u>This will be achieved by protecting and enhancing</u> <del>enhance</del> existing GI assets and linkages and <u>adding</u> to the local network for the benefit of both the natural environment and the health and wellbeing of the community.....’</p>
Nicholas Pflaeger (lpr1195)	<p>Policy not supported.</p> <p>I object to the section which states where a loss of, or negative impact on green infrastructure is unavoidable, development proposals will demonstrate what mitigation measures are proposed. Where provision is not possible financial contribution will be required.</p> <p>I object to the policy component that allows financial payment to mitigate removal of Green Infrastructure</p> <p>Delete the sentence ‘Where provision is not possible financial contributions will be required...’</p> <p>Mitigation should not include the option of financial payment.</p> <p>To the Policy: We recommend that ‘commute’ is replaced by ‘travel’ because many journeys are not for commuting but for recreational travel and it is rare for horseback journeys to be for commuting.</p> <p>To the supporting text: Para 5.54 encourage walking, cycling, <b>horse riding</b> and other recreational and sensory experiences</p> <p>5.56 Key opportunities include:- <i>‘Interconnecting GI assets to form a strong GI network of green spaces and corridors which deliver the range of GI functions <b>and improve off-road connectivity</b>’;</i></p>	<p>Comments noted.</p> <p>It may not be appropriate for every development to provide additional green infrastructure on site and therefore the Local Plan must build in flexibility to allow for off-site delivery, this can lead to the enhancement of existing green infrastructure assets which benefits the wider community.</p> <p>Amend 5<sup>th</sup> paragraph of the Emerging Draft LPR policy as follows – ‘<del>Where a loss of, or negative impact on green infrastructure functionality is unavoidable, development proposals will demonstrate what mitigation measures are proposed and/or replacement green infrastructure will be provided.</del> <u>Proposals involving the loss of green or blue spaces and other natural features will not be supported unless there is no longer a need for the existing infrastructure or an alternative is provided to meet the local needs that is both accessible and of equal or greater quality and benefit to the community.</u> Any replacement or mitigation measure must seek to secure a net gain in lost functionality and be deployed as closely as possible to the affected green infrastructure asset. Where <u>on-site</u> provision is not possible financial contributions will be required and be negotiated on a site by site basis <u>to support the delivery of enhancements or expansion of the GI network through off-site delivery.</u>’</p>

Respondent	Response	Council Response
	<p>We strongly support the excellent statement ‘<i>can provide pleasant and safe ‘green routes’ to commute on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors’</i>. Paula Saunderson (lpr 595)	<p>Not strong enough in execution. I see no protection of ancient hedgerows, or green roofing, or vertical planting, or hedgehog highways, or animal under or over passes. You will have to get developers to significantly up their game to hope to make any impact on the proposed concrete jungles that will replace green fields or derelict land or old buildings.</p>	<p>Comments noted. Not all features highlighted in the consultation response would necessarily fall under the remit of green infrastructure and would be more appropriately considered in other policies including Emerging Draft LPR Policies SP5 Climate Change, SP7 Design Principles, SP11 Biodiversity and Geodiversity and DC14 Trees, Woodland and Hedgerows The policies in the Plan will be read as a whole.</p>
Graham Storey (lpr569)	<p>Policy not supported.</p> <p>Not strong enough.</p> <p>I propose the following amendment: “Proposals for GI will be required that strengthen GI” (replacing “designed to maximise the potential for strengthening ...”)</p>	<p>Comments noted.</p> <p>Amend the first paragraph of the policy as follows – ‘The Council will <del>maximise the potential for</del> strengthening both local and strategic Green Infrastructure (GI) <u>assets</u> across the District. <del>Development will protect and</del> This will be <u>achieved by protecting and enhancing</u> <del>enhance</del> existing GI assets and linkages and <u>adding</u> to the local network for the benefit of both the natural environment and the health and wellbeing of the community.....’</p>
Nataliya Topliss (lpr801)	<p>There is always a negative impact on green infrastructure. We have no green infrastructure in Thatcham. West Berks councillor could come to</p>	<p>Comments noted.</p> <p>The aim of Policy SP0 is to ensure high quality multi-functional green infrastructure is delivered across the</p>

Respondent	Response	Council Response
	<p>Thatcham and see that there is no green infrastructure within development sites.</p> <p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>whole of the District, including in and around Thatcham.</p> <p>This policy will replace the existing Local Plan policies to achieve a better connected green infrastructure network up to 2039.</p> <p>Comments in relation to Policy SP17 will be considered as part of the Council's response under that policy.</p>
Councillor Tony Vickers (lpr536)	<p>We strongly support this policy. However we wish to see more support for allotments here.</p> <p>Hitherto allotments have been seen as part of 'public open space' but they are not 'public' because each plot is rented to a specific resident. If public open space is assigned to become allotment land, it constitutes a loss of public open space even though it remains GI.</p> <p>With the growth of demand for allotments caused by a variety of societal factors (less commuting; more interest in 'food miles'; recognition of the health benefit of gardening and growing food in particular), there is a need for a separate category of GI. Just as other kinds of GI are non-public (private gardens, sports clubs) but recognised in themselves as components to be provided through the Local Plan, we feel that there needs to be 'ring fenced' provision of allotments within the overall GI provision, in conjunction with local councils that have a statutory duty to provide them. Many local councils (e.g. Newbury and Greenham) have long waiting lists of would-be allotmenters and are unable to compete with housing developers for land.</p> <p>Large developments of, say, more than 100 dwellings and with densities greater than about 30dw/ha should have to consult local councils at the earliest stage to establish whether there is a local need and, if so, should be required to set aside land within the site for allotments. All other major (&gt;10dw) housing developments should contribute via the parish component of CIL.</p> <p>We wish to see supporting text that covers the above. Detail of a policy could be in DC 37.</p>	<p>Comments noted, allotments are referenced as a green infrastructure asset within the supporting text. It is agreed that the provision of such open space is better suited in an open space policy.</p>
Ian Watson (lpr687)	<p>Policy is supported.</p>	<p>Comments noted.</p>

Respondent	Response	Council Response
	<p>GI can provide multiple benefits. GI can incorporate multiple gains if properly planned especially in reducing flood risk and increasing biodiversity.</p> <p>Consider how GI can support threatened habitats such as wetlands and wet woodland.</p>	<p>Amend the first paragraph of the policy as follows – ‘The Council will <del>maximise the potential for</del> strengthening both local and strategic green infrastructure (GI) <u>assets</u> across the District. <del>Development will protect and</del> <u>This will be achieved by protecting and enhancing</u> <del>enhance</del> existing GI assets and linkages and adding to the local network for the benefit of both the natural environment and the health and wellbeing of the community.....’</p> <p>Add an additional bullet point to the policy as follows – ‘<u>protect, enhance and support the creation of integrated constructed wetlands, ‘wet woodland’ habitats, ponds, lakes, reed beds, raingardens, and floodplain meadows;</u>’</p>
<b>Landowners, site promoters and developers</b>		
Pegasus Planning Group for Calcot Park Golf Club (lpr325)	<p>This policy states that the council will maximise the potential for strengthening both local and strategic Green Infrastructure (GI) across the district. Development will protect and enhance existing GI assets and linkages and add to the local network for the benefit of both the natural environment and the health and wellbeing of the community.</p> <p>Calcot Park Golf Club (CPGC) is a land holding of 81 hectares (200 acres). Only 6.2 hectares (16.3 acres) is proposed for residential development in the north-eastern extremity of the land holding. There will be considerable scope available to use parts of the remaining landholding to plant new trees and other GI to enhance and protect the verdant character and appearance of the local area. Other sites that the council has selected for development do not have the scope for GI improvements on this scale. Allocation of land at CPGC will ensure that significant GI improvements will be provided as part of a landscape-led scheme. The availability of so much land in the same ownership and adjoining the proposed development will offer opportunities to make a significant net gain in GI, which will be to the benefit of the local community. Land could also be used to improve GI provision to compensate for the allocation of other small development sites in the Eastern Area, where opportunities are limited on the allocated sites. Given the location of the GI, on CPGC, which is managed by a team of</p>	Comments noted.

Respondent	Response	Council Response
	<p>experienced green keepers, it will be possible to ensure that any new planting is maintained and properly managed over the long-term, which will ensure that the GI improvements are there to be enjoyed by the local community for many decades to come.</p>	
<p>Pegasus Planning Group for Newbury &amp; Crookham Golf Club (lpr2053)</p>	<p>This policy states that the council will maximise the potential for strengthening both local and strategic Green Infrastructure (GI) across the district. Development will protect and enhance existing GI assets and linkages and add to the local network for the benefit of both the natural environment and the health and wellbeing of the community. Newbury and Crookham Golf Club (NCGC) is a land holding of 50 hectares (123 acres). Only 2 hectares (5 acres) are proposed for residential development in the south-west extremity of the land holding. There will be considerable scope available to use parts of the remaining 48 hectares of land to plant new trees and other GI to enhance and protect the verdant character and appearance of the local area on the south-eastern edge of the settlement. Other sites that the Council has selected for development do not have the scope for GI improvements on this scale. Allocation of land at NCGC will ensure that significant GI improvements will be provided as part of a landscape-led scheme. The availability of so much land in the same ownership and adjoining the proposed development will offer opportunities to make a net gain in GI, which will be to the benefit of the local community. Land could also be used to improve GI provision to compensate for the allocation of other small development sites on the edges of Newbury, where opportunities are limited on the allocated sites. Given the location of the GI on NCGC, which is managed by a team of green keepers, who are highly qualified in arboreal and ecological care, it will be possible to ensure that any new planting is maintained and properly managed over the long-term which will ensure that the GI improvements are there to be enjoyed by the local community for many decades to come.</p>	<p>Comments noted.</p>
<p>Savills for Engelfield Estate (lpr1528)</p>	<p>Draft LPR Policy SP10 requires development proposals to protect and enhance green infrastructure across the District. Whilst supporting paragraph 5.55 sets out 'examples of GI assets', further clarification is required to specify land which is GI and subject to this policy. This is based on the Estate's experience where the relevant Core Strategy policy (Policy CS18) relating to GI has previously been misapplied to restrict</p>	<p>Comments noted.</p> <p><u>Amend the start of the first paragraph of the supporting text to read – 'The NPPF defines green infrastructure as 'a network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of</u></p>

Respondent	Response	Council Response
	<p>development in rural areas. The NPPF glossary defines GI as land which can provide <i>'a wide range of environmental and quality of life benefits for local communities'</i> and therefore it is clear that such land must be publicly accessible. As such, it should be made clear that GI excludes for example open countryside, agricultural land and garden land, in line with the NPPF.</p>	<p><del>delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity. Green infrastructure (GI) is a network of multi-functional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities across the District...</del></p>
<p>Southern Planning Practice for The Saunders Family (lpr1926)</p>	<p>We support the design principles set out in Policy SP7 and can confirm that any future residential development on land east of Stoney Lane would ensure these principles are incorporated.</p> <p>The allocation of the site would strengthen the sense of place in this area of Newbury. Together with the land at Coley Farm, the site could provide a comprehensive development which would create a distinctive place. This approach would be in accordance with the recent NPPF consultation (January 2020) which focuses on place-making. The opportunities and constraints plan indicatively shows how the two sites would seamlessly integrate. The site is in a sustainable location and is of a scale which could deliver a high-quality landscape-led development with many public benefits. One key benefit the site could offer is the provision and strengthening of the Green Infrastructure in the area. The site could provide a large area of public open space together with creating links to the Copse to the east and the new residential development proposed at Coley Farm to the south west.</p>	<p>Comments noted.</p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP11 Biodiversity and Geodiversity

### (Proposed Submission LPR Policy: SP11 Biodiversity and Geodiversity)

Number of responses received: 34

Respondent	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr745)	Just wondering if there is a qualifier for this section that can apply to the phrase 'designated sites' to distinguish them from others, eg designated heritage assets - not my area but are they also called designated sites of importance for biodiversity?	Comments noted.  Amend the policy and supporting text to better reflect paragraph 175 of the NPPF which states 'Plans should: distinguish between the hierarchy of international, national and locally designated sites' and paragraph 179 a) which states 'Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity'. By aligning the Local Plan closer to the NPPF it will make the policy clearer that the designated sites relate to biodiversity rather than heritage assets.
West Berkshire Council Ecologist (lpr1693)	First line of policy - Development proposals will conserve and enhance biodiversity and/or geodiversity and will deliver a net gain <u>for those aspects</u> . 7 <sup>th</sup> bullet - Can we add something to the effect of dealing with non-natives at the catchment level as part of strategic approach? Last sentence of policy – long term should be specified to be a minimum of 25-30 years	Comments noted.  Amend the policy to set out that the applicant must demonstrate how they conserve and enhance biodiversity and/or geodiversity and achieve a net gain. It is felt it is clear that the net gain relates to biodiversity and geodiversity and therefore not necessary to add additional wording. In addition, biodiversity net gain has been drawn

Respondent	Response	Council Response
		<p>out into its own sub-section in the policy to ensure it has the prominence required and reflects the requirements of the Environment Act 2021.</p> <p>In regards to dealing with non-native species in the catchment area, the LPR can contribute to strategic action but it is not the right document to take a catchment level approach to this generic issue. However, criteria e) of the policy states 'seeks to eradicate or control any invasive non-native species present on site' which contributes to controlling non-native species.</p> <p>It is recognised that clarity on what is deemed 'long term maintenance' would be beneficial and provide certainty. The following text will be inserted into the supporting text of the policy:</p> <p><u>'...To ensure the successful delivery and conservation in perpetuity, management arrangements will also need to be considered. Policy SP11 requires the long term management and maintenance of a site, and this should be achieved through a Habitat Management Plan. Details of maintenance requirements and arrangements must be set out, including who is responsible for these requirements. Funding arrangements for delivery of the long-term maintenance requirements should be demonstrated to the Council before construction starts, including measures to secure biodiversity through all phases and stages of the development.</u></p> <p><u>The Environment Act 2021 sets out that in relation to biodiversity net gain any on-site or off-site biodiversity increase must be secured for 30 years. To allow for a consistent approach the Council will define long term management and maintenance to be a minimum of 30 years.'</u></p>
<b>Statutory consultees</b>		
Cold Ash Parish Council	Policy is supported. No further comment.	Noted.

Respondent	Response	Council Response
(lpr1736)		
Greenham Parish Council (lpr899)	Greenham would like to see this policy enhanced. Greenham would also like to see any Bio diversity gains and benefits, felt locally	Comments noted. Biodiversity Net Gain will be moved from being a criterion so it is considered in its own right to reflect its passage into the Environment Act 2021. The text will be amended to include reference to the net gain being measurable and also to make reference that in the first instance should be provided on site to ensure local gains are made.
Holybrook Parish Council (lpr2450)	Policy is supported. No further comment.	Noted.
Hungerford Town Council (lpr149)	Policy is supported. No further comment.	Noted.
Newbury Town Council (lpr2262)	We support this policy but again feel that it ought to mention the biodiversity value of allotments.	Noted, it is acknowledged that allotments can make a positive contribution to biodiversity.  The following text will be added to the supporting text to recognise the variety of spaces which can contribute to biodiversity value: <u>'The 2019 'State of Nature Report' indicates that biodiversity across the UK is continuing to decline and as such change is required in relation to how we manage land. The Report highlights that urbanisation can fragment landscapes by creating barriers between habitats, thus isolating some populations but also recognises the wide variety of green spaces which exist within urban environments including domestic gardens, parks, allotments, cemeteries, ponds, and road verges which can all add to biodiversity value.'</u>
Shaw-cum-Donnington Parish Council (lpr205)	We support the policy. There is no indication of where resources will come from. In bullet 4 what does a 10% gain in biodiversity mean and how do you measure it?	Comments noted. Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this

Respondent	Response	Council Response
		<p>should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p>
Stratfield Mortimer Parish Council (lpr400)	Policy is supported. No further comment.	Noted.
Thatcham Town Council (lpr1398)	<p>Policy is neither supported nor not supported.</p> <ul style="list-style-type: none"> <li>• Development proposals will conserve and enhance biodiversity and/or geodiversity and will deliver a net gain.</li> </ul> <p>As noted earlier, with regards to Thatcham NE we recognise that there are many kilometres of ancient hedgerows that support a range of biodiversity. The encircled Ancient Woodland is also a recognised Local Wildlife Site and is recorded on the Thames Valley Environment Record.</p> <p>Policy needs to reflect on how wildlife sites are not weakened but improved.</p>	<p>Comments noted. Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the</p>

	<p><i>The conflict between the NE Thatcham site selection and the policy needs to be resolved.</i></p>	<p>biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in ‘biodiversity units’, using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p>
<p>Environment Agency (lpr1662)</p>	<p>Policy is neither supported nor not supported.</p> <p>We welcome the inclusion of this policy. However, it should provide more protection for the water environment. We have serious concerns as the water environment is not mentioned adequately in this policy at the moment. Without a strengthened policy to support the water environment, or a separate policy, the local plan would be found unsound in the future. We would like to see a separate policy for the water environment, particularly given the nationally and internationally protected sites that includes the River Kennet Site of Special Scientific Interest (SSSI), the River Lambourn SSSI and Special Area of Conservation (SAC) and a number of SSSI and SAC wetland habitats within the Kennet floodplain. We would be happy to work with you to draft appropriate wording for a new policy. It its’ current form, Policy SP 11 is not in accordance with paragraph 170 of the NPPF as it does not do enough to contribute to and enhance the natural and local environment by:</p> <ol style="list-style-type: none"> <li>1. a) protecting and enhancing valued landscapes, sites of biodiversity or geological value.</li> </ol> <p>If you are unable to include a separate policy the policy wording of Policy SP 11 and its’ supporting text requires strengthening in the following ‘River Buffer Zones’ section.</p> <p>Second bullet point: should say ‘avoid’ rather than ‘minimises’ fragmentation to strengthen this policy</p>	<p>Comments on the water environment are noted, Emerging Draft LPR Policies DC4 and DC5 have regard to water quality and water resources. These policies will be strengthened following consultation.</p> <p>In the Proposed Submission LPR Policy DM6 Water Quality, an additional criterion will be added to ensure that proposals demonstrate ‘<u>how the proposal will support improving the status and overall health of the River Kennet and River Lambourn</u>’. This is elaborated on in the supporting text to include: ‘<u>Proposals which contribute to the protection and enhancement of the River Kennet and River Lambourn’s overall health and improved status under the Water Framework Directive will be supported</u>’. In addition criteria a) will be amended to incorporate the following wording a) that it causes no deterioration in the quality of waterbodies, surface and groundwater, nor that it will prevent future attainment of ‘<u>favourable condition</u>’ for <u>Sites of Special Scientific Interest (SSSI) rivers, waterbodies or wetlands (as required by Wildlife and Countryside Act 1981 (as amended), or ‘good status’ for other waterbodies</u> under the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 and Groundwater (Water Framework Directive)</p>

Respondent	Response	Council Response
	<p>Fourth bullet point regarding net gain: this should be strengthened to quantify that a minimum of 10% biodiversity net gain (BNG) should be achieved. This is recommended to futureproof your local plan in accordance with paragraph 149 of the NPPF to mitigate and adapt to climate change and take into account the long term implications for biodiversity and landscapes. Fifth bullet point – ‘provides or retains appropriate buffer zones between development proposals and designated sites’. Rather than just designated sites, it needs to be re- worded to include habitats of principal importance that may be outside of designated sites. This is where expect buffer zones for all watercourses to be added and a minimum a 10m for main rivers to be added, explained below.</p> <p><u>River Buffer Zones</u></p> <p>We require buffer zones for all watercourses, along with the specification of a minimum width of undeveloped buffer zone to statutory main rivers (including culverted rivers), in order to protect and enhance them as a wildlife asset. We recommend the following wording to strengthen the fifth bullet point in Policy SP 11, or as a new bullet point included after this. Development will be permitted where it:</p> <p>Retains or provides a minimum of 10 metre undeveloped buffer zone alongside river corridors (including culverted rivers). This buffer zone should be on both sides and measured from the top of the river bank at the point at which the bank meets the level of the surrounding land.</p> <p>Due to the importance of the designated rivers in West Berkshire, the River Kennet SSSI and River Lambourn SAC, some development sites would require much greater than a 10m buffer zone. We would be happy to provide justification if required and support you to implement these changes regarding the water environment throughout the local plan process.</p> <p><b>Supporting text:</b></p> <ul style="list-style-type: none"> <li>We expect more detail to be added for the three SACs in West Berkshire to explain why they are so ecologically important. There are details regarding the proximity to Thames Basin Heaths SPA, and SSSIs in West Berkshire, but no explanation of the ecological importance of the three SACs. Please include</li> </ul> <p>There should be wording as in 5.61 for SPAs, i.e. ‘Where a significant effect exists or cannot be excluded, an Appropriate Assessment under the Conservation of Habitats and Species Regulations 2010 would need to be</p>	<p>(England) Direction 2016 or subsequent amendment’. Greater protection will also be provided to SSSI’s through this policy with the following additional criteria: <u>‘where proposals are not connecting to the sewer network and are within 500 metres of a SSSI an assessment of the risk to water quality will be required’</u>; In addition to this an additional criteria will be added to include a buffer of at least 10 metres along all water courses: <u>‘Proposals for built development will be required to be at least 10 metres away from the top of the bank of the nearest watercourse or main river providing or retaining a natural or semi-natural habitat buffer’</u>;</p> <p>The supporting text will be expanded to provide greater guidance and sets out: <u>‘The Strategic Flood Risk Assessment (2021) has identified that to enable the preservation of a watercourse corridor there should be no built development within 10 metres from the top of a Main River and recommends this buffer is applied to all watercourses. The built environment refers to any man made structure and also includes formal landscaping, sports fields, footpaths, lighting and fencing and the buffer should be maintained for native biodiversity. This width of buffer allows for the enhancement of wildlife habitats, flood flow conveyance and future watercourse maintenance and/or improvement. It also ensures that the watercourse is buffered from land-based activities, reducing the levels of diffuse pollution reaching the watercourse’</u>.</p> <p>The supporting text will also be amended in SP11 to provide greater support to criteria d) provides or retains appropriate buffer zones between development proposals and designated sites; The supporting text will state: <u>A buffer zone is a landscape feature which can be used to protect a sensitive area from the impacts of development (or other harmful neighbouring land use.</u></p>

	<p>undertaken. Proposals will only be permitted if they do not adversely affect the integrity of the SAC’.</p> <p>For the River Kennet SSSI and River Lambourn SSSI, a minimum 10m wide undeveloped buffer zone must be retained and enhanced or provided.</p>	<p><u>Buffers which are linked to corridors will be supported as a means of increasing connectivity across the District to help nature thrive. Buffers should be appropriately designed and informed by an understanding of what needs to be protected and/or mitigated. Regard should be given to Policy DM5: Water Quality in regards to providing appropriate buffers along watercourses.</u></p> <p>Proposed Submission LPR Policy DM7: Water Resources and Wastewater will be strengthened and include a new criteria: <u>it will not adversely impact the water quality, ecological value or drainage function of water bodies in the District, including any adverse impacts on Source Protection Zones (SPZ).</u></p> <p>Applicants must also have specific regard to Policy SP10 Green Infrastructure. Policy SP10 Green Infrastructure will be clarified to make it clear that the policy also covers ‘blue spaces’.</p> <p>In regards to amending the Proposed Submission LPR Policy SP11 to read ‘avoids’ rather than ‘minimise in bullet point 2 the text will be amended to: <u>‘avoids <del>minimises</del> fragmentation and maximises opportunities for restoration, enhancements and connection of <del>natural habitats</del> linear features which enables strong connectivity of biodiversity as part of an integrated habitat network;</u></p> <p>The supporting text will also be amended as follows: <u>‘<del>These features are defined as</del> Linear features, or stepping stones, which <u>form part of the connected habitat includes networks of hedgerows and ditches; habitats along all water courses; roadside verges; and (cumulatively) private gardens (including links to habitats outside the District)</u>’</u></p>

Respondent	Response	Council Response
		<p>In regards to Biodiversity Net Gain, this will be moved from being a criterion so it is considered in its own right to reflect its passage into the Environment Act 2021. The text will be amended to include reference to the net gain being measurable and also to make reference to recognised biodiversity accounting metric. The latest version of the metric has not been referred to as it is anticipated future reiterations of the metric will be released.</p> <p>As highlighted above in regards to the comment relating to the inclusion of buffers this has been achieved in Proposed Submission LPR Policy DM6 Water Quality.</p> <p>Wording will be added to the supporting text to draw out the important ecological features of the SACs in the District as follows:</p> <p><u>'The Kennet and Lambourn Floodplain SAC is ecologically important as it contains a cluster of sites which supports one of the most extensive known populations of Desmoulin's whorl snail in the UK and is one of two sites representing the species in the south-western part of its range in the important chalk stream habitat. Integrity of the population is being maintained by taking measures, including habitat creation, to safeguard populations. The River Lambourn SAC is an example of a chalk river characterised by an abundance of water-crowfoots. These species help to modify water flow, promote fine sediment deposition and provide shelter and food for fish and invertebrate animals. The River provides a habitat which is only found in southern and eastern England. For part of its length it is a winterbourne, drying through the summer months. It is one of the least-modified rivers of this type, with a characteristic flora dominated by pond water-crowfoot upstream and water-crowfoot further downstream. It is adversely affected by nutrient enrichment, mainly from sewage inputs and agriculture, but is also vulnerable to</u></p>
