		<p><u>artificial reduction in river flows. In March 2022 Natural England advised that the SAC was in unfavourable condition due to unnaturally high levels of phosphorous. It also advised that future development within the hydrological catchment of the River Lambourn SAC must achieve 'nutrient neutrality' to ensure that it does not impact on the condition of the protected site. The Council's approach to nutrient neutrality is set out in Policy xx Water Quality and a more detailed Supplementary Planning Document will also be produced.</u></p> <p><u>The Kennet Valley Alderwoods SAC is an alluvial forest which contains the largest fragments of alder-ash woodland on the Kennet floodplain. The wettest areas are dominated by alder over tall herbs, sedges and reeds, but dryer patches include a base-rich woodland flora with much dog's mercury and also herb-Paris. The occurrence of the latter is unusual, as it is more typically associated with ancient woodland, whereas evidence suggests that these stands have largely developed over the past century</u></p> <p><u>The Council also has a duty to ensure that future development does not adversely affect the integrity of SACs outside of its geographical area. This includes the Solent Maritime SAC, which receives water from the River Test. The catchment for the River Test extends into a very small part of the district around Combe. It is also adversely affected by nutrient pollution and in March 2022 Natural England advised that the SAC was in unfavourable condition due to excessive levels of nitrogen. It also advised that future development within the hydrological catchment of the River Test must achieve 'nutrient neutrality' to ensure that it does not impact on the condition of the protected site.'</u></p> <p>The point regarding 'appropriate assessment' is noted and the following will be added to the policy and supporting text:</p>

Respondent	Response	Council Response
		<p>Policy inclusion:  <u>'Development likely to result in a significant effect on an internationally designated site will be subject to assessment under the Habitats Regulations and will not be permitted unless it can be demonstrated that there are no alternatives following/through appropriate derogation tests for the proposal and that any adverse effects on the integrity of the site can be fully avoided, mitigated and/or compensated and proposals are in the public interest.'</u></p> <p>Supporting text inclusion:  <u>'SACs are internationally important conservation sites which are protected under the Conservation of Habitats and Species Regulations 2017 (as amended). Under these regulations, it is a requirement to seek and protect the most valuable and threatened habitats and species. In accordance with the policy, any developments which are likely to have significant effects on SACs will be required to prepare an appropriate assessment to identify the implications for the site in respect of the site's conservation objectives. There are three SACs in the district (which are all sensitive to surface and groundwater quality and quantity).'</u></p> <p>In regards to the requirement for a 10 metre buffer, this will be included within Policy DM5 Water Quality in criteria e) as follows:  e) <u>'Proposals for built development will be required to be at least ten metres away from the top of the bank of the nearest watercourse or main river providing or retaining a natural or semi-natural habitat buffer';</u></p>
Natural England (lpr1597)	<p>Policy is neither supported nor not supported.</p> <p>Natural England welcome this policy, but would strongly encourage building on it and adding further detail. Comments below:</p>	<p>Comments noted.</p> <p>In regards to the comment relating to funding, this sentence will be incorporated into the policy through a new</p>

Respondent	Response	Council Response
	<ul style="list-style-type: none"> <li>• In the Policy SP11 box, the last sentence refers to ‘long term management and maintenance’ for compensatory measures’. We would insert the word ‘funded’ in here to ensure developer</li> <li>• Section 5.61 – Habitats Regulations should now be referred to as ‘<i>The Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019</i>’. This is an amendment of the 2017 Habitats Regulations to ensure the legislation operates post-Brexit.</li> <li>• In reference to SSSIs and Local Sites, it should be make clearer that development in all cases should adhere to the principles of the mitigation hierarchy – avoid, mitigate and, as a last resort, Development should demonstrate how this has been followed, and policy should make it clear that development will not be permitted unless the benefits clearly outweigh the harm, in line with paras. 174 (a) and 175 of the NPPF.</li> <li>• In reference to Biodiversity Net Gain, we advise the policy makes provision for development of a specific Supplementary Planning Document on net gain that will outline in detail Council expectations of developers and mechanisms for delivery, as well as ensuring net gain is delivered in a suitably strategic Natural England would be happy to engage with the Council on implementing net gain into local policy and to advise further on the development of such a SPD.</li> <li>• Please note that Biodiversity Metric 3.0 is due to be published in Spring 2021, which will supersede <u>Biodiversity Metric 0</u>. We advise that the policy is updated accordingly and that this metric is used to measure gains and losses to biodiversity resulting from development, and implement development plan policies on biodiversity net gain. Net gain specifically should derive strictly from habitat enhancement and creation, required as calculated using the metric, to be in line with para 174(b) of the NPPF which requires biodiversity net gains to be <i>measurable</i>.</li> <li>• We would encourage a priority species list to be produced and included within the Local Plan to facilitate targeting of net gain resources to species and habitats which are in most</li> </ul> <p>We would be happy to comment on such a list if produced. Rare arable plants are very important on the chalky and sandy farmland within West Berkshire. A few species which should absolutely be included are the Water</p>	<p>hierarchical approach. However, further information will be provided within the supporting text to expand on what is meant as compensatory measures as this was absent in the Emerging Draft.</p> <p>Reference to ‘the Conservation of Habitats and Species Regulations 2010’ will be replaced to reflect the current position.</p> <p>In regards to the mitigation hierarchy the policy will be amended to better reflect paragraph 179 of the NPPF. This will be achieved through making the hierarchy of sites clearer and setting out the mitigation hierarchy within the policy itself.</p> <p>In regards to Biodiversity Net Gain, this will be moved from being a criterion so it is considered in its own right to reflect its passage into the Environment Act 2021. The text will be amended to include reference to the net gain being measurable and also to make reference to recognised biodiversity accounting metric. The latest version of the metric has not been referred to as it is anticipated future reiterations of the metric will be released. The text reads: <u>‘All proposals should demonstrate a minimum net gain of 10% in biodiversity net gain via a Biodiversity Net Gain Plan using the most up to date biodiversity accounting metric developed by Natural England and provide details of the long-term maintenance and management of the net gain.’</u></p> <p>The policy will be amended to set out the hierarchy of international, national and locally designated sites of importance for biodiversity as per paragraph 179 a) of the NPPF, this will make the hierarchy clearer and the suggested wording ‘avoid prevention of future attainment of SSSI sites from meeting Favourable Condition, or to</p>

Respondent	Response	Council Response
	<p>vole, Desmoulin's whorled snail, Willow tit, Stone-Curlew, Curlew and Duke of Burgundy butterfly.</p> <p>Further advice on biodiversity net gain can be found within Annex A.</p> <p><b>Designated Sites</b></p> <p>Para. 171 of the NPPF states that 'Plans should: distinguish between the hierarchy of international, national and locally designated sites'. There is currently no specific policy for Designated Sites. Natural England strongly encourage the provision of such a policy, to read along the lines of 'avoid prevention of future attainment of SSSI sites from meeting Favourable Condition, or to provide enhancements to enable the designated sites (SSSI, SAC, SPA) to meet Favourable Condition as per their Conservation Objectives'.</p>	<p>provide enhancements to enable the designated sites (SSSI, SAC, SPA) to meet Favourable Condition as per their Conservation Objectives' will also be incorporated into this.</p>
<b>General consultation bodies</b>		
<p>Berkshire, Buckinghamshire and Oxfordshire Wildlife Trust (BBOWT) (lpr723)</p>	<p>BBOWT welcomes the policy on biodiversity and geodiversity aimed at conserving and enhancing biodiversity and delivering a net gain.</p> <p>BBOWT would like to make the following recommendations to strengthen and extend the protection and enhancement of biodiversity and provide comments below on the following topics:</p> <ul style="list-style-type: none"> <li>• Biodiversity net gain (BNG)</li> <li>• Survey effort</li> <li>• Habitat retention, protection and enhancement and monitoring</li> <li>• Protection and enhancement of river and stream corridors</li> </ul> <p><b>BNG:</b></p> <p>The NPPF advises at paragraph 174(b): "<i>To protect and enhance biodiversity... plans should promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing <b>measurable</b> net gains for biodiversity.</i>"</p> <p>It is recommended that the following wording is added to the policy to emphasise that net gains need to be measurable:</p> <ul style="list-style-type: none"> <li>• All proposals should be supported by evidence to demonstrate a biodiversity net gain using a recognised biodiversity accounting metric.</li> </ul>	<p>Comments noted. Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so it is clear that this can be exceeded and a flexible approach is taken. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and</p>

Respondent	Response	Council Response
	<p>It is recommended that the following wording is added to ensure habitat creation and enhancement measures continue to deliver net gain in the long-term:</p> <ul style="list-style-type: none"> <li>• Planning conditions/obligations will be used to secure net gains in biodiversity by helping to deliver Biodiversity Action Plan targets and/or meeting the aims of Biodiversity Opportunity Areas. Developments for which these are the principal aims will be viewed favourably.</li> </ul> <p>The government consulted on the introduction of mandatory biodiversity net gain into the planning system in late 2018 and confirmation of this was announced in spring 2019. The emerging Environment Bill will set-out the statutory obligations of this decision in detail. The consultation has suggested that legislation will set the minimum gain required in biodiversity units at 10% over base value. However, several leaders in this policy area have already adopted a 20% minimum gain, with robust justification for doing so (See; Lichfield District Council <a href="#">Biodiversity &amp; Development: Supplementary Planning Document 2016</a>, (p.17) &amp; <a href="#">Oxfordshire's Biodiversity Advisory Group proposals for the Oxfordshire Plan 2050</a>).</p> <p>BBOWT is of the opinion that similar justification applies locally in West Berkshire and will consequently promote a recommendation for adopting 20% minimum biodiversity net gain here. It is important that this position is made clear to West Berkshire at this timely stage in their plan-making. Relevant findings from Defra's Impact Assessment document (See; <a href="#">Biodiversity Net Gain Consultation Impact Assessment, Defra 2018</a>) (21/11/2018) include (our emphases):</p> <ul style="list-style-type: none"> <li>• “..In simple terms, [10%] is the lowest level of net gain that [Defra] could confidently expect to deliver genuine net gain, or at least no net loss, of biodiversity and thereby meet its policy objectives.”</li> <li>• “..Advice from some Natural Capital Committee members suggests that a level of net gain at or above 10% is necessary to give reasonable confidence in halting biodiversity losses.”</li> <li>• “..The department therefore favours as high a level of net gain as is feasible... The analysis undertaken in this Impact Assessment indicates that the level of requirement makes relatively little difference to the costs of mitigating and compensating for impacts.”</li> </ul>	<p>calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>The following text will be included within the policy:  <u>‘All proposals should demonstrate a minimum net gain of 10% in biodiversity net gain via a Biodiversity Net Gain Plan using the most up to date biodiversity accounting metric developed by Natural England and provide details of the long-term maintenance and management of the net gain.’</u></p> <p>Amend the policy so that the opening statement states that development proposals <u>‘will be required to demonstrate how they conserve and enhance biodiversity and/or geodiversity including their long-term future management and will deliver a minimum 10% biodiversity net gain’</u>.</p> <p>Amend the policy to include the following: <u>‘Development likely to result in a significant effect on an internationally designated site will be subject to assessment under the Habitats Regulations and will not be permitted unless it can be demonstrated that there are no alternatives following/through appropriate derogation tests for the proposal and that any adverse effects on the integrity of the site can be fully avoided, mitigated and/or compensated and proposals are in the public interest.’</u></p> <p>Supporting text inclusion:  <u>‘SACs are internationally important conservation sites which are protected under the Conservation of Habitats and Species Regulations 2017 (as amended). Under these regulations, it is a requirement to seek and protect the most valuable and threatened habitats and species. In</u></p>

Respondent	Response	Council Response
	<p>BBOWT’s position is therefore to support and active encourage the universal adoption of a required minimum 20% biodiversity net gain within policy in West Berkshire.</p> <p><b>Survey effort:</b> The policy currently contains no reference to the type of assessment that should support any planning application. Relevant habitat and species surveys and associated reports will be required to accompany planning applications which may affect a site, habitat or species of known or potential ecological value. It is recommended that the following wording is added:</p> <ul style="list-style-type: none"> <li>• In considering ecological information in support of planning applications the Council expects that surveys are undertaken by suitably qualified personnel and are consistent with nationally accepted standards i.e. British Standard 42020: Biodiversity – Code of practice for planning and development.</li> </ul> <p><b>Habitat retention, protection and enhancement and monitoring:</b> The policy recognises that there are many opportunities for biodiversity enhancement in all parts of the District and not just on identified sites. This should be extended to emphasis the importance of retaining features of biodiversity value as well as enhancing them and should set out measures for ensuring their long-term value. It is recommended that the following wording is added:</p> <ul style="list-style-type: none"> <li>• Development proposals should be expected to include features to encourage biodiversity and should retain and if possible enhance features of biodiversity value on site.</li> <li>• A monitoring and management plan will be required for biodiversity features on site to ensure their long-term suitable management.</li> </ul> <p>The policy currently states that development will be permitted where it “provides or retains appropriate buffer zones between development proposals and designated sites”. It is recommended that this wording is strengthened to state that appropriate buffers should be identified following robust site assessment. It is recommended that the wording is amended to read:</p> <ul style="list-style-type: none"> <li>• provides or retains appropriate buffer zones between development proposals and designated sites informed by detailed site-based assessment.</li> </ul> <p><b>Protection and enhancement of river and stream corridors:</b></p>	<p><u>accordance with the policy, any developments which are likely to have significant effects on SACs will be required to prepare an appropriate assessment to identify the implications for the site in respect of the site’s conservation objectives. There are three SACs in the district (which are all sensitive to surface and groundwater quality and quantity):’</u></p> <p>Amend the supporting text to state: ‘<u>Policy SP11 requires the long term management and maintenance of a site, and this should be achieved through a Habitat Management Plan. Details of maintenance requirements and arrangements must be set out, including who is responsible for these requirements.’</u></p> <p><u>‘To demonstrate that development proposals have met the requirements of Policy SP11, they will need to be accompanied by an appropriate ecological impact assessment (EclA) where this is relevant to the type of development proposed and its relationship with biodiversity and geodiversity interests. These assessments should be undertaken by a suitably qualified and/or experienced ecologist, be consistent with nationally accepted standards and guidance from the Chartered Institute of Ecology and Environmental Management, and will need to include a Biodiversity Gain Plan (including the completed Metric calculator) to measure the net gain achieved on site or loss that would need to be compensated. The assessment should be proportionate to the scale and impact of the development and so for householder and most minor applications this will initially involve a Preliminary Protected Species Survey or Preliminary Ecological Appraisal in order to assess if further work is required.’</u></p>

Respondent	Response	Council Response
	<p>It is recommended that an additional policy on the Protection and Enhancement of River and Stream Corridors be included. The river network of West Berkshire has considerable ecological and amenity value and the Local Plan should include policy to ensure the protection and enhancement of its watercourses. It is recommended that the following policy wording is used:</p> <ul style="list-style-type: none"> <li>• Planning permission will only be granted for development proposals which would not have an adverse impact on the functions and setting of any watercourse and its associated corridor.</li> <li>• Development should seek to conserve and enhance the biodiversity, landscape and recreational value of the watercourse and its corridor through good design. Opportunities for de-culverting of watercourses should be actively pursued.</li> <li>• Planning permission will only be granted for proposals which do not involve the culverting of watercourses and which do not prejudice future opportunities for de-culverting.</li> <li>• Development proposals adjacent to or containing a watercourse should provide or retain a 10m buffer between the top of the river bank and the development, and include a long term landscape and ecological management plan for this buffer.”</li> </ul>	<p>In regards to habitat retention and the inclusion of the following wording: <i>Development proposals should be expected to include features to encourage biodiversity and should retain and if possible enhance features of biodiversity value on site.</i> It is considered that this is already included within criterion c) of the Emerging Draft LPR and would therefore just repeat what is already drafted in policy.</p> <p>Additional wording relating to buffers will be added to the policy and the supporting text expanded:</p> <p><u>‘provides or retains appropriate buffer zones between development proposals and designated sites, habitats for protected or priority species or main rivers informed by detailed site-based assessment;’</u></p> <p>In regards to comments on the protection and enhancement of river and stream corridors. A number of amendments have been made to policies within the LPR which address concerns raised within this representation. These include Proposed Submission Policies DM6 Water Quality, DM7 Water resources and waste water and SP10 Green Infrastructure.</p> <p>In Proposed Submission Policy DM6 Water Quality, an additional criterion will added to ensure that proposals demonstrate <u>‘how the proposal will support improving the status and overall health of the River Kennet and River Lambourn’</u>. In addition criteria a) will be amended to incorporate the following wording a) that it causes no deterioration in the quality of waterbodies, surface and groundwater, nor that it will prevent future attainment of <u>‘favourable condition’ for Sites of Special Scientific Interest (SSSI) rivers, waterbodies or wetlands (as required by Wildlife and Countryside Act 1981 (as amended), or ‘good</u></p>

Respondent	Response	Council Response
		<p>status' for <u>other waterbodies</u> under the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 and Groundwater (Water Framework Directive) (England) Direction 2016 or subsequent amendment'. Greater protection will also be provided to SSSI's through this policy with the following additional criteria: <u>'where proposals are not connecting to the sewer network and are within 500 metres of a SSSI an assessment of the risk to water quality will be required'</u>; In addition to this an additional criteria will be added to include a buffer of at least 10 metres along all water courses: <u>'Proposals for built development will be required to be at least ten metres away from the top of the bank of the nearest watercourse or main river providing or retaining a natural or semi-natural habitat buffer'</u>; The supporting text will be expanded to provide greater guidance</p> <p>Proposed Submission Policy DM6: Water Resources and Wastewater will be amended and strengthened and include a new criteria: <u>f) it will not adversely impact the water quality, ecological value or drainage function of water bodies in the District, including any adverse impacts on Source Protection Zones (SPZ).</u></p> <p>Applicants must also have specific regard to Policy SP10 Green Infrastructure. Policy SP10 Green Infrastructure is to be clarified to make it clear that the policy also covers 'blue spaces'. It will also include the following:</p> <p><u>h. does not involve the culverting of watercourses, except where essential to allow highways and / or other infrastructure to cross;</u></p> <p><u>i. protects, enhances and supports the creation of integrated constructed wetlands, 'wet woodland' habitats, ponds, lakes, reed beds,raingardens, and floodplain meadows;</u></p>

Respondent	Response	Council Response												
		<p><u>j. makes appropriate provision to protect, enhance, improve and maintain accessible networks of blue corridors, including through de-culverting, back water creation, de-silting, naturalising the channel through in-channel habitat enhancements and removal of structures where appropriate;</u>  <u>k. maintains and enhances natural drainage features;</u>  <u>l. provides 'buffer strips' of vegetation along the banks of water courses.</u></p>												
<p>North Wessex Downs AONB (lpr1626)</p>	<p>Policy is supported.</p> <p>Fits within the vision of the AONB to enhance the AONB landscape for which biodiversity is central too, as address within our Management Plan.</p> <p>Need to be clear on the baseline for assessing net gain, unfortunately the AONB family has experienced issues whereby developers have cleared a site and made a baseline assessment on a cleared site, for which a 10% minimum gain can be achieved with minimal effort, yet had the original site been used with its flora and fauna in place then the proposed would only have achieved a 3% gain, which would be significantly inadequate. The NWD AONB have compiled a priority species list which may be of use.</p> <table border="1" data-bbox="436 981 1344 1332"> <thead> <tr> <th data-bbox="436 981 676 1021">Common name</th> <th data-bbox="676 981 996 1021">Latin name</th> <th data-bbox="996 981 1344 1021">Importance in NWDAONB</th> </tr> </thead> <tbody> <tr> <td data-bbox="436 1021 676 1157">Stone Curlew</td> <td data-bbox="676 1021 996 1157">Burhinus oedicephalus</td> <td data-bbox="996 1021 1344 1157">2. Heritage Forum (lpr75)	Policy is supported.  How will the minimum 10% net gain for biodiversity be measured and achieved?			<p>Comments noted, biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before</p>

Respondent	Response	Council Response
		<p>development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p>
<p>Local Nature Partnership (lpr34)</p>	<p>Policy neither supported nor not supported.</p> <p>The Berkshire Local Nature Partnership (BLNP) is the single voice of organisations across a variety of sectors who are working to achieve the protection and enhancement of the natural environment in Berkshire. The BLNP represents over 15 partner organisations (1) and is a source of valuable expertise and local knowledge on the natural environment. The National Planning Policy Framework 2019 (NPPF) encourages local authorities to work with LNPs in developing strategic policies for their area (2).</p> <p>The BLNP recommends that the following principles are applied in relation to the above referenced consultation -</p> <ul style="list-style-type: none"> <li>• Existing biodiversity should be protected</li> <li>• Decisions should be made using the best available information &amp; expertise</li> <li>• Development should deliver a measurable net gain for biodiversity</li> <li>• The planning process should conserve &amp; enhance ecological networks</li> <li>• Long-term &amp; cumulative impacts on biodiversity should be assessed &amp; minimised</li> <li>• Ensure best practice for the overall sustainability of developments</li> <li>• Recognise the benefits of nature in all forms to society</li> </ul> <p>These principles are described below.</p> <p><b>Existing biodiversity should be protected</b> in accordance with statutory duties (3). Existing biodiversity assets should first be identified and mapped.</p>	<p>The comments and information provided by the Local Nature Partnership are noted.</p> <p>In regards to the hierarchy of sites, the policy and supporting text will be updated to better reflect paragraph 175 which states 'Plans should: distinguish between the hierarchy of international, national and locally designated sites' and paragraph 179 a) which states 'Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity'. By aligning the Local Plan closer to the NPPF it makes the policy clearer that the designated sites relate to biodiversity rather than heritage assets.</p> <p>In relation to comments on biodiversity net gain, biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a</p>

Respondent	Response	Council Response
	<p>Biodiversity assets comprise all levels of designated sites, priority habitats, protected and priority species, wildlife corridors, 'stepping stone' habitats (described further in Principle 4) and any areas identified by local or national partnerships(4).</p> <p>Allocations of land for development should favour that with the least environmental value (5) and when determining planning applications the mitigation hierarchy (6) should be followed. This means that significant harm to biodiversity should be avoided altogether in the first instance. Impacts that cannot be avoided through relocating development should be mitigated. As a last resort, residual impacts should be compensated for by providing compensatory habitat such as an appropriately located biodiversity offset (described further in Principle 3).</p> <p>Local policies and procedures should be in place to adequately guide and regulate all activity likely to affect biodiversity.</p> <p><b>Decisions should be made using the best available information</b> and expertise to ensure compliance with statutory obligations and policy requirements (7), and to secure the best outcomes for biodiversity. All planning authorities should have access to specialist ecological advice, preferably that of an in-house ecology officer within the planning team. Planning applications should comply with BS42020 (8) and ecological reports should conform to industry recommended good practice (9). Current data from the Thames Valley Environmental Records Centre (TVERC) should be referenced.</p> <p><b>Development should deliver a measurable net gain for biodiversity</b> in line with government planning for the environment (10) and national planning policy (11). Biodiversity net gain should follow industry principles for good practice (12) and be measured objectively with a biodiversity impact assessment calculation ("biodiversity metric"), based on government guidance (13). A <i>de Minimis</i> approach to biodiversity net gain is not considered acceptable by this Partnership, and where there exists no locally-set minimum threshold for net gain, we consider an increase of at least 20% above the baseline biodiversity value should be required. This allows for error in measurements and embeds a contingency margin against failure.</p>	<p>10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so it is clear that this can be exceeded and a flexible approach is taken. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>In regards to biodiversity off-setting, further information will be included within the supporting text to set out how this should be achieved and to refer to Biodiversity Opportunity Areas as follows:</p> <p><u>'Compensatory measures refer to all measures designed to help offset the adverse effects that cannot be further reduced by mitigation measures. Compensation for residual harm is considered the last step and will be considered where it can be evidenced that on-site improvements are not possible, may result in piecemeal mitigation on small sites, or where better opportunities exist to secure net gain elsewhere. Compensatory measures (also known as biodiversity offsetting) will normally involve off-site measures to balance losses within the development site or to offset residual effects on affected wildlife sites. Compensatory measures should</u></p>

Respondent	Response	Council Response
	<p>This minimum net gain is implemented by local planning authorities elsewhere (14).</p> <p>Habitat creation should be guided by the objectives of the requisite local Biodiversity Action Plan, the Berkshire biodiversity strategy (15), and government biodiversity strategy (16).</p> <p>Where biodiversity offsets are required to enable a development to achieve a net gain these should be located in the places where they will deliver the greatest benefit for biodiversity. This means in locations identified within a local biodiversity offsetting strategy, where they will contribute to the nature recovery network. Where a development is located within a Biodiversity Opportunity Area (BOA) (17) it would be appropriate to deliver the biodiversity offset within the same BOA.</p> <p><b>The planning process should conserve and enhance ecological networks</b> in accordance with national planning policy (18). Ecological networks comprise existing biodiversity assets, the habitat that connects them, and any new areas identified for habitat restoration. They are the means of ensuring biodiversity resilience in the face of environmental change (e.g. climate, land use, etc.) enabling species to move across the landscape between core areas of habitat (e.g. existing designated sites) and to re-occupy newly restored habitat. Government planning for the environment refers to these networks as Nature Recovery Networks (10). These networks should be mapped and a plan of action to conserve and enhance them should be detailed in an appropriate strategy.</p> <p>Multifunctional green infrastructure (19) should be embedded in the design of all new development, and be guided by a local green infrastructure strategy. Green infrastructure should complement the ecological network. New development should contribute to the ecological network. The connectivity of habitats to be created should be assessed as part of the planning process using a biodiversity metric.</p> <p><b>Long-term and cumulative impacts on biodiversity should be assessed and minimised</b> in line with national planning policy requirements to ensure</p>	<p><u>provide a biodiversity net gain in accordance with Policy SP11. In addition newly created habitats should be in place in time to provide fully the ecological functions that they are intended to compensate for.</u></p> <p>Biodiversity Opportunity Areas (BOA) have been identified by the Berkshire Local Nature Partnership. There are 17 which have currently been identified, either whole or in part, across the District. BOAs do not represent a statutory designation or a constraint upon development, rather, they are the areas where biodiversity improvements are likely to have the most beneficial results at a strategic scale. The Council will pursue net gains for biodiversity in and around BOAs and projects which seek to enhance biodiversity within West Berkshire, particularly based on Biodiversity Opportunity Areas, will be supported.</p> <p>In regards to ecological networks to support climate resilience and reduce habitat fragmentation. Criteria c) of the Emerging Draft LPR policy will be expanded to support this:</p> <p><u>avoids <del>minimises</del> fragmentation and maximises opportunities for restoration, enhancements and connection of natural habitats linear features which enables strong connectivity of biodiversity as part of an integrated habitat network will be supported (including links to habitats outside the district);</u></p> <p>The supporting text will also be amended as follows:  <del>These features are defined as</del> Linear features, or stepping stones, which <u>form part of the connected habitat includes networks of hedgerows and ditches; habitats along all water courses; roadside verges; and (cumulatively) private gardens (including links to habitats outside the District)</u></p>

Respondent	Response	Council Response
	<p>biodiversity resilience (20). Any measures required to mitigate for development impacts on biodiversity must be in place for the foreseeable future ensuring biodiversity remains protected from those impacts for the whole lifetime of the development.</p> <p>Biodiversity offsets should be guaranteed permanently using appropriate legal agreements, to avoid a scenario whereby land set aside as compensatory habitat is later developed during the next planning cycle. Strategic plans should identify potential future, cumulative, or synergistic impacts arising over time from development and include mechanisms to minimise these. This could be in the form of developer contributions towards protecting biodiversity.</p> <p><b>Ensure best practice for the overall sustainability of developments</b> to minimise the environmental impacts of development throughout its lifecycle from land take, materials and sourcing, energy and water efficiency, emissions, and waste. All new housing development should be guided locally to achieve the highest standard of sustainability in line with industry best practice accreditation(21), in accordance with local authority statutory powers(22), and as recommended by national planning policy(23).</p> <p><b>Recognise the benefits of nature in all forms to society</b>, in the shape of direct and indirect benefits to public health, wellbeing, and the economy. Nature provides many benefits in the form of <i>goods</i> ('things', such as minerals, water, timber) and <i>services</i> (functions it performs, such as pollination, carbon sequestration, water filtration, flood prevention, recreation). When cast in economic terms, the value of these benefits to society is known as natural capital. A landscape-scale plan for enhancing natural capital should be developed as part of the strategic planning process to comply with national planning policy(24), using the approach recommended by government's Natural Capital Committee(25).</p> <p>Endnotes - Organisations currently represented by the Berkshire Local Nature Partnership: Berks, Bucks and Oxon Wildlife Trust, Berkshire Ornithological Club, Bracknell Forest Borough Council, British Entomological and Natural</p>	<p>The supporting text will be expanded to highlight how this policy aids climate resilience as follows: <u>'Habitat connectivity is a key challenge for biodiversity and linked to the challenge of the climate crisis it is important that habitats do not become isolated as species find themselves less able to respond to natural fluctuations where they can face heightened risk of decline and extinction.</u></p> <p><del>These features are defined as</del> Linear features, or stepping stones, which <u>form part of the connected habitat includes networks of hedgerows and ditches; habitats along all water courses; roadside verges; and (cumulatively) private gardens (including links to habitats outside the District)</u> are essential for the migration, dispersal, and genetic exchange of wild species. <u>Examples of linear features within West Berkshire include waterways such as the River Kennet, River Lambourn and the Kennet and Avon Canal and they play an important role in providing strong connecting links across the biodiversity network.</u> By protecting these natural habitats and networks across the District, the Council <del>will</del> <u>may</u> be able to avoid or repair fragmentation and isolation of natural habitats and ultimately conserve and enhance our priority natural areas and the connections between them. This element of the policy closely links with <del>the</del> <u>Policy SP10 Green Infrastructure policy.</u></p> <p>In terms of the reference to long term maintenance, this reference will be included in the opening sentence and also included in the hierarchy of sites. It is recognised that clarity on what is deemed 'long term maintenance' would be beneficial and provide certainty. The following text will be inserted into the supporting text of the policy: <u>'...To ensure the successful delivery and conservation in perpetuity, management arrangements will also need to be considered. Policy SP11 requires the long term</u></p>

Lambourn Neighbourhood Development Plan Steering Group (lpr1705)	The emerging Lambourn NDP will support measures to protect the River Lambourn. It is one of only 210 chalk streams in the world, designated both as a SSSI and an internationally protected Special Area of Conservation (SAC), yet the water quality is only "moderate". All parts of the catchment area need to be involved in measures to improve water quality.	Comments noted. In Proposed Submission Policy DM5 Water Quality, an additional criterion will be added to ensure that proposals demonstrate <u>'how the proposal will support improving the status and overall health of the River Kennet and River Lambourn'</u> . This is elaborated on in the supporting text to include: <u>'Proposals which contribute to the protection and enhancement of the River Kennet and River Lambourn's overall health and improved status under the Water Framework Directive will be supported'</u> . In addition criteria a) will be amended to incorporate the following wording a) that it causes no deterioration in the quality of waterbodies, surface and groundwater, nor that it will prevent future attainment of <u>'favourable condition' for Sites of Special Scientific Interest (SSSI) rivers, waterbodies or wetlands (as required by Wildlife and Countryside Act 1981 (as amended), or 'good status' for other waterbodies under the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 and Groundwater (Water Framework Directive) (England) Direction 2016 or subsequent amendment'</u> .

Respondent	Response	Council Response
		<p>Wording will be added to the supporting text to draw out the important ecological features of the three SACs in the District as follows:</p> <p><u>'The Kennet and Lambourn Floodplain SAC is ecologically important as it contains a cluster of sites which supports one of the most extensive known populations of Desmoulin's whorl snail in the UK and is one of two sites representing the species in the south-western part of its range in the important chalk stream habitat. Integrity of the population is being maintained by taking measures, including habitat creation, to safeguard populations. The River Lambourn SAC is an example of a chalk river characterised by an abundance of water-crowfoots. These species help to modify water flow, promote fine sediment deposition and provide shelter and food for fish and invertebrate animals. The River provides a habitat which is only found in southern and eastern England. For part of its length it is a winterbourne, drying through the summer months. It is one of the least-modified rivers of this type, with a characteristic flora dominated by pond water-crowfoot upstream and water-crowfoot further downstream. It is adversely affected by nutrient enrichment, mainly from sewage inputs and agriculture, but is also vulnerable to artificial reduction in river flows. In March 2022 Natural England advised that the SAC was in unfavourable condition due to unnaturally high levels of phosphorous. It also advised that future development within the hydrological catchment of the River Lambourn SAC must achieve 'nutrient neutrality' to ensure that it does not impact on the condition of the protected site. The Council's approach to nutrient neutrality is set out in Policy xx Water Quality and a more detailed Supplementary Planning Document will also be produced.</u></p> <p><u>The Kennet Valley Alderwoods SAC is an alluvial forest which contains the largest fragments of alder-ash</u></p>

Respondent	Response	Council Response
		<p>woodland on the Kennet floodplain. The wettest areas are dominated by alder over tall herbs, sedges and reeds, but dryer patches include a base-rich woodland flora with much dog's mercury and also herb-Paris. The occurrence of the latter is unusual, as it is more typically associated with ancient woodland, whereas evidence suggests that these stands have largely developed over the past century</p> <p>The Council also has a duty to ensure that future development does not adversely affect the integrity of SACs outside of its geographical area. This includes the Solent Maritime SAC, which receives water from the River Test. The catchment for the River Test extends into a very small part of the district around Combe. It is also adversely affected by nutrient pollution and in March 2022 Natural England advised that the SAC was in unfavourable condition due to excessive levels of nitrogen. It also advised that future development within the hydrological catchment of the River Test must achieve 'nutrient neutrality' to ensure that it does not impact on the condition of the protected site.'</p>
<p>The Berkshire Ornithological Club and Newbury District Ornithological Club (lpr1299)</p>	<p>Policy neither supported nor not supported.</p> <p>We welcome that the council is proposing (in line with national planning policy) in Policy SP11 to refuse as a matter of policy to refuse any planning application that would adversely impact any protected sites, species or habitats unless there are both very exceptional circumstances justifying the development and a suitable compensation strategy is secured. We trust that this will be read in conjunction with the fourth bullet point in the policy, namely that there will have to be a net 10% gain in biodiversity, and suggest that this is spelled out in the final paragraph of the policy.</p> <p>We would though ask that the council also supports the review of Local Wildlife Sites (LWS) and the Biodiversity Action Plan and Biodiversity Opportunity Areas (BOA). We have been endeavouring to promote new candidate LWSs and a revision to the boundaries of one of the BOAs based on the results of the Berkshire Bird Atlas project. It has proved a slow</p>	<p>Comments noted. The policy will be applied as a whole to any application.</p> <p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a</p>

Respondent	Response	Council Response
	<p>process. If biodiversity targets are to be set against an up-to-date action plan the latest Biodiversity Action Plan and the Local Nature Partnership's Biodiversity Strategy (whose plan period has now expired) need to be updated. This in turn needs to be done in conjunction with local wildlife groups like ourselves who hold and publish the data collected from members who collect and submit records or who contribute to the surveys we organise.</p>	<p>development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain. Whilst it is important that status of all habitats and species is kept up to date as more surveys are conducted, it is not the function of the Local Plan policies to manage this process.</p>
British Horse Society (lpr845)	<p>Policy is supported.</p> <p>We note the mention of SANGs to protect SPAs and that West Berkshire is not legally covered by these. However, West Berkshire does have similar issues on its commons where a balance between recreational use and conservation has to be made. Problems of disturbance of ground nesting birds from dog walking in particular is something which the land manager is constantly trying to balance. It might be noted that Hampshire Council has recognised the same issues and has produced a useful document. <a href="https://documents.hants.gov.uk/ccbs/countryside/planningfordogownership.pdf">https://documents.hants.gov.uk/ccbs/countryside/planningfordogownership.pdf</a> We are unsure how this issue can be reflected in this section of the Local Plan Review and thus have not made any suggestions for the text</p>	<p>Comments noted.</p> <p>Provision for green space is made through Policy SP10 Green Infrastructure. The detail for the design of multi-functional green infrastructure that takes into account dog ownership would be a matter for individual developments at the planning application stage.</p>
Mid and West Berkshire Local Access Forum (lpr1861)	<p>MWBLAF notes the mention of SANGs to protect SPAs, and that West Berkshire is not legally covered by these. However, West Berkshire does have similar issues on its commons, where a balance between recreational use and conservation has to be made. Problems of disturbance of ground nesting birds from dog walking in particular is an issue which the land manager is constantly trying to balance. Hampshire County Council has recognised the same issues and has produced a useful document:</p>	<p>Comments noted.</p> <p>Provision for green space is made through Policy SP10 Green Infrastructure. The detail for the design of multi-functional green infrastructure that takes into account dog ownership would be a matter for individual developments at the planning application stage.</p>

Respondent	Response	Council Response
	<p><a href="https://documents.hants.gov.uk/ccbs/countryside/planningfordogownership.pdf">https://documents.hants.gov.uk/ccbs/countryside/planningfordogownership.pdf</a></p> <p>We are unsure how this issue can be reflected in this section of the Local Plan Review and thus have not made any suggestions for the text.</p>	
<p>West Berkshire Green Party (lpr 1834)</p>	<p>We strongly support the aims of SP11, but we believe it is incompatible with proposals elsewhere in the plan for huge developments at Sandford and North-East Thatcham. For example, it is delusional to imagine that any “net gain” in terms of biodiversity can be achieved at Sandford – bats, badgers and other mammals, skylarks, woodpeckers and other birds, many species of butterflies, moths and other insects, will simply not be there any more, along with their wildlife corridors. No “off-site compensation” could in our view compensate for this permanent loss. The buffer zones of 15 metres envisaged between development and areas of ancient woodland is the bare minimum to protect the roots and neighbouring local authorities such as Wiltshire County Council and Basingstoke &amp; Deane have already established larger zones (in the latter case, a minimum of 20 metres for any development adjacent to woodland, and more when ancient woodland or nature corridors are affected)</p>	<p>Comments noted.</p> <p>The Council does not agree that large developments are incompatible with the conservation of biodiversity and achieving net gain. Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so it is clear that this can be exceeded and a flexible approach is taken. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in ‘biodiversity units’, using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p>

Respondent	Response	Council Response
		<p>In regards to biodiversity off-setting, further information will be included within the supporting to set out how this should be achieved as follows –</p> <p><u>‘Compensatory measures refer to all measures designed to help offset the adverse effects that cannot be further reduced by mitigation measures. Compensation for residual harm is considered the last step and will be considered where it can be evidenced that on-site improvements are not possible, may result in piecemeal mitigation on small sites, or where better opportunities exist to secure net gain elsewhere. Compensatory measures (also known as biodiversity offsetting) will normally involve off-site measures to balance losses within the development site or to offset residual effects on affected wildlife sites. Compensatory measures should provide a biodiversity net gain in accordance with Policy SP11. In addition newly created habitats should be in place in time to provide fully the ecological functions that they are intended to compensate for.</u></p>
The Woodland Trust (lpr1006)	<p>We welcome the strong wording in support of conserving and enhancing biodiversity, including a minimum 10% net gain, developed as part of a Biodiversity Action Plan, Local Nature Recovery Strategy or other relevant strategies.</p> <p>Before seeking net gain, planning policies must ensure that any proposed development minimises land take, and avoids damage to any existing high-quality habitats, including ancient woodland. Where ancient woodland or veteran trees are lost or damaged there will always be net loss of biodiversity and it is impossible to secure net gain.</p> <p>Net gain can be delivered through allowing natural regeneration and woodland restoration, as well as new planting, and this should be reflected in accompanying guidance.</p> <p>We would further encourage the specification where possible of UK sourced and grown tree stock for new planting, to support biodiversity and resilience.</p>	<p>Comments noted.</p> <p>Amend the policy and supporting text to better reflect paragraph 175 of the NPPF which states ‘Plans should: distinguish between the hierarchy of international, national and locally designated sites’ and paragraph 179 a) which states ‘Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity’. This includes irreplaceable habitats such as ancient woodland and ancient or veteran trees.</p> <p>In regards to biodiversity net gain, mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to</p>

Respondent	Response	Council Response
		enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so it is clear that this can be exceeded and a flexible approach is taken.
<b>Other stakeholders</b>		
Ailsa Claybourn (lpr733)	My concern is that ecological surveys must be thorough, detailed and comprehensive; having recently been involved in a planning application on Oxford Road/Oregon Avenue, Tilehurst, I was shocked and disappointed by the skimpy survey that the permission was about to be granted on fortunately, a more thorough survey was completed and submitted, which proved the ecological importance and value of the site. The application was then turned down. But it might have gone through because of a lack of due diligence. The proposed policy in this Local Plan appears sound; but it must be adhered to diligently.	Comments noted regarding the effective implementation of the policy.
Sam Coppinger (lpr292)	Policy is supported.	Noted
Nicholas Pflaeger (lpr1197)	Policy not supported.  Development that would have a direct or indirect adverse effect on designated sites, protected or priority species or habitats that are considered to have geological and biodiversity value, will be refused.	Comments noted.  Amend the policy and supporting text to better reflect paragraph 175 of the NPPF which states 'Plans should: distinguish between the hierarchy of international, national and locally designated sites' and paragraph 179 a) which states 'Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity'.
Deborah Reynolds (lpr2463)	There are several important and strategic statements to emphasise here, in particular:	Comments noted,  Amend the supporting text as follows –

Respondent	Response	Council Response
	<p>'To improve wildlife habitat and species conservation and connectivity to allow for movement in response to climate change in accordance with policy SP11</p> <p>Ecological distinctiveness – design proposals will create habitats and select species that are locally characteristic, taking opportunities to design wildlife habitats into the fabric of buildings and enhance wildlife connectivity in accordance with policy SP11</p> <p>A landscape does not have to have a designation to be valued locally. Outside the AONB, the River Kennet, from Newbury to Reading, lies within a distinctive broad corridor of an open lowland landscape characterised by a variety of wetland habitats including wet meadow, reed bed, and flooded gravel workings.</p> <p>Contribute to biodiversity net gain and seek opportunities to use green infrastructure to extend wildlife corridors, particularly in urban areas and where it contributes to nature recovery networks.</p> <p>However the absence of the strategic priority reduces their impact and will not ensure their delivery.</p> <p>Recommendation 5 – In addition to the new proposed Strategic Objective the Council should deliver its ambition by adding a new Chapter - The Nature Delivery Plan - to the document. This must demonstrate the design, commitment and resources it will allocate to Nature for the future generations. This is what residents of the existing and any new houses will expect.</p>	<p><u>'Local Nature Recovery Strategies are a new system of spatial strategies for nature they will: map the most valuable existing habitat for nature; map specific proposals for creating or improving habitat for nature and wider environment goals; and agree priorities for nature's recovery. Once the Local Nature Recovery Strategy is produced for the District it will guide the delivery of biodiversity net gain and other nature recovery measures through illustrating where the most valuable existing habitats are located and will focus on habitat creation and/or improvement where it will achieve the best outcomes. Prior to the Local Nature Recovery Strategies produced the Council will work with applicants and relevant stakeholders to identify strategic locations for the delivery of off-setting as part of the Local Nature Recovery Network. The Biodiversity Opportunity Areas are likely to be incorporated into the Local Nature Recovery Network'</u></p>
Paula Saunderson (lpr961)	Not strong enough. Need more than standard BNG	<p>In regards to biodiversity net gain, mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so it is clear that this can be exceeded and a flexible approach is taken.</p>

Respondent	Response	Council Response
Nataliya Topliss (lpr802)	<p>Policy not supported.</p> <p>The proposed development on 170 acres of green land will have devastating effect on biodiversity and wildlife habitat. West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>Comments noted.</p> <p>The comments relate to Policy SP17 and so will be considered as part of the Council's response to that policy. This policy and SP17 will safeguard biodiversity and seek a minimum 10% net gain in biodiversity.</p>
Councillor Tony Vickers (lpr537)	<p>We support this policy but would like to see mention of allotments here. Allotments have a high biodiversity value and therefore it is appropriate to specifically mention them here. They provide good wildlife mosaics and corridors between parks and private gardens in urban areas.</p> <p>It is best if the Council Ecologist advises on appropriate text. It is important that developers consider the need for allotments at a very early stage in site viability, as their location and size within a site can have major effects on layout.</p>	<p>Comments noted, it is acknowledged that allotments can make a positive contribution to biodiversity.</p> <p>Amend the supporting text to recognise the variety of spaces which can contribute to biodiversity value as follows -  <u>'The 2019 'State of Nature Report' indicates that biodiversity across the UK is continuing to decline and as such change is required in relation to how we manage land. The Report highlights that urbanisation can fragment landscapes by creating barriers between habitats, thus isolating some populations but also recognises the wide variety of green spaces which exist within urban environments including domestic gardens, parks, allotments, cemeteries, ponds, and road verges which can all add to biodiversity value.'</u></p>
Toby and Gail Woodhouse (lpr2021)	<p>Policy is not supported.</p> <p><i>(Extracted from main representation to SP17 Thatcham)</i>  Wildlife (SP11)  - the impact on local eco systems and wildlife will be significant. Whilst plans identify mitigating actions (open space) and reference sustainable development it is quite clear that this development of farmland and natural open habitat will destroy areas currently used and occupied by wildlife. The open spaces proposed in the development areas will not be enough either</p>	<p>Comments noted.</p> <p>The policy recognises the value and levels of importance of biodiversity in the District and requires development to conserve and enhance wildlife and additionally, provide for a net gain in biodiversity. It protects priority habitats and species of most importance and unless there are overriding reasons of public interest. Further, it seeks to improve the overall status of all wildlife in the future</p>

Respondent	Response	Council Response
	for the wildlife or the residents and the additional footfall, which is inevitable, will also impact wildlife on Bucklebury Common and the AONB.	through enhancement of existing habitats and providing more habitat to ensure the net gain.
<b>Landowners, site promoters and developers</b>		
Pegasus Planning for Calcot Park Golf Club (lpr2326)	<p>Policy is supported.</p> <p>This policy states that development proposals will conserve and enhance biodiversity and/or geodiversity and will deliver net gain. Development proposals across the district will be expected to deliver 10% net gain for biodiversity either within the site boundary or as off-site compensation where appropriate.</p> <p>On a landholding of 81 hectares, with only 6.2 hectares proposed for residential development, there will be considerable scope for the provision of biodiversity net gain. This will be available not only for the 70 dwellings proposed by Calcot Park Golf Club (CPGC), but it could potentially be available for other smaller residential sites to utilise. At the application stage, a bio and geodiversity assessment will be undertaken to establish what measures should and could be taken to provide at least a 10% net gain. The results of surveys and recommendations by ecologist experts will be submitted with the application. This will ensure that the proposal will make a positive contribution to bio and geodiversity in the local area to the benefit of the local community, both in visual and well-being terms. Such improvements will ensure that CPGC contributes positively the bio and geodiversity of the locality for the foreseeable future.</p>	Comments noted.
Pegasus Planning for Newbury and Crookham Golf Club (lpr2052)	<p>Policy is supported.</p> <p>This policy states that development proposals will conserve and enhance biodiversity and/or geodiversity and will deliver net gain. Development proposals across the district will be expected to deliver 10% net gain for biodiversity either within the site boundary or as off-site compensation where appropriate.</p> <p>On a land holding of 50 hectares, with only 2 acres proposed for residential development, there will be considerable scope for the provision of biodiversity net gain. This will be available not only for the 2 acres of residential development proposed by Newbury and Crookham Golf Club (NCGC), but it could potentially be available for other smaller residential sites to utilise. At the application stage, a bio and geodiversity assessment</p>	Comments noted.

Respondent	Response	Council Response
	<p>will be undertaken to establish what measures should and could be taken to provide a 10% net gain. The results of surveys and recommendations by ecologist experts will be submitted with the application. This will ensure that the proposal will make a positive contribution to bio and geodiversity in the local area to the benefit of the local community, both in visual and well-being terms. Such improvements will ensure that NCGC contributes positively the bio and geodiversity of the locality for many decades to come.</p>	
<p>Southern Planning Practice for The Saunders Family (lpr2118)</p>	<p>We support Policy SP11 and agree that new development proposals should seek to conserve and enhance the biodiversity on site.</p> <p>As mentioned earlier in the representations, the land at Coombe Bottom Farm is located within a Biodiversity Opportunity Area (BOA) on the current Local Plan Policy Map, and we believe its inclusion is an error. However we appreciate, as set out at paragraph 5.67 of the Local Plan Review Consultation Document, that the BOA does not represent a statutory designation or a constraint upon development, rather, they are the areas where biodiversity improvements are likely to have the most beneficial results at a strategic scale.</p> <p>The site currently comprises an area of maintained grassland used for grazing which is of low ecological value. If the site were to be developed for a residential use, the proposals could provide a significant biodiversity enhancement on site. The provision of trees and other native vegetation would create new habitats and encourage different species to use the site. Therefore, the site would help to achieve Policy 11 of the Local Plan review.</p>	<p>Comments noted.</p>
<p>Sovereign Housing Association (lpr2160)</p>	<p>Policy is neither supported nor not supported.</p> <p>SHA acknowledges there is a climate and biodiversity emergency and support local authorities who are aspirational with policies that seek to conserve and enhance valuable habitats through preservation, enhancement or replacement. It is noted the forth bullet point of policy SP11 requires new developments to deliver a minimum 10% biodiversity net gain (BNG). Whilst we fully support the principle of BNG we believe the LPR requirement duplicates emerging national policy set out in the Environment Bill (EB). The EB is currently passing through government and is likely to be enacted later this year. It is understood the EB proposal includes a transition period</p>	<p>Comments noted.</p> <p>In regards to biodiversity net gain, mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The Council will include the target of 10% as per the Environment Act 2021 but will express this as minimum so</p>

Respondent	Response	Council Response
	<p>where-by a statutory minimum 10% BNG will be required from all new development from Summer 2023.</p> <p>The Councils current LDS envisages adoption of the Local Plan in December 2022, meaning some schemes may be expected to implement the Councils BNG requirement a good 9 months earlier than the national statutory requirement. Whilst we recognise the benefits, we are concerned this could have an impact on housing delivery over the shorter term. This is likely to have a greater impact on those in housing need and could worsen local affordability.</p> <p>We believe the government's transition period is appropriate. We therefore suggest reference to BNG is either moved from SP11 to the supporting text and/or provided additional clarification around how it will be applied in line with national policy and guidance.</p>	<p>it is clear that this can be exceeded and a flexible approach is taken.</p> <p>The following text will be added to the supporting text: <u>'The Council will deliver Biodiversity Net Gain in line with latest national guidance and the Environment Act 2021.'</u></p>

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP12 Approach to Housing Delivery

#### (Proposed Submission LPR Policy: SP12 Approach to Housing Delivery)

Number of responses received: 83

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
Archaeology Team West Berkshire Council (lpr748)	Typo spotted in 6.12 - SPR3	The typo in paragraph 7.24 will be amended from SPR3 to SP3.
<b>Statutory consultees</b>		
Newbury Town Council (lpr2261)	<p>We neither support nor object to this policy because we are not able to comment adequately on the method of arriving at the target number of dwellings. We note (6.6) that this is liable to change in any case and accept that there has to be a number here.</p> <p>Some doubts about the current methodology are raised by the inclusion in the Local Plan of some sites that are already largely built out (parts of RSA 6), others that have been recently refused for numbers of dwellings smaller than stated in the Plan (RSA 5), yet more that have had planning consent for some time (remainder of RSA 6, RSA 2). On the other hand, there are sites not specifically mentioned in the Plan at all that have had planning consent including substantial amounts of housing for some years, seemingly because they are within a DEA (Faraday Plaza in LRIE). Nowhere is this explained.</p>	<p>The government's standard methodology is used to determine the Local Housing Need (LHN), which forms the starting point for the housing requirement. At the time of the consultation on the emerging draft Local Plan Review (LPR) Regulation 18 consultation the government was consulting on changes to the formula, which would have led to a higher number for West Berkshire. The government's response to their consultation has, however, resulted in no change to the standard methodology for West Berkshire.</p> <p>There are several sources that will ensure a continuous supply of land for housing across the plan period. These include:</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We wish to improve the aim of the policy in terms of climate change to allow loss of existing homes if it can be shown they are not habitable and that they can be replaced in situ with a net long-term gain in terms of tackling climate change and no net loss of habitable dwellings.</p> <p><b>Reason:</b> to assist with the aim of achieving carbon neutral by 2030 and also to upgrade properties that have unavoidably high carbon fuel usage, in accordance with the council's Housing Strategy.</p> <p><b>Change proposed:</b> add to last sentence "... including replacement of dwellings that are unavoidably expensive to heat by carbon fuels, where the net long-term cost (including cost in use) can be shown to be significantly reduced by re-build and there is no net loss in terms of numbers of dwellings on the development site."</p>	<ul style="list-style-type: none"> <li>• Retained Local Plan (ie. Core Strategy and Housing Site Allocation Development Plan Document) and Stratfield Mortimer Neighbourhood Development Plan (NDP) allocations;</li> <li>• Allocations in the Local Plan which are not being retained due to development being at an advanced stage of construction;</li> <li>• Existing planning commitments on unallocated sites</li> <li>• Existing planning commitments for communal accommodation (C2 use class);</li> <li>• Small site windfall allowance;</li> <li>• New sites allocated in the LPR; and</li> <li>• Sites to be allocated in neighbourhood plans.</li> </ul> <p>The contribution these sources of supply make to meeting the housing requirement are set in Table 2 of policy SP12.</p> <p>Several of the retained Local Plan allocations have been removed since the Regulation 18 consultation due to development being close to completion.</p> <p>The policy as it currently reads does not prevent redevelopment of dwellings and the policy for building sustainable homes and businesses (DM4) would apply to any redevelopment proposal as development plan policies need to be read together. No change is therefore proposed.</p>
Thatcham Town Council (lpr1399)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17.</i></p> <p>We are not in a position to comment on how the target dwelling number has been obtained</p>	<p>The government's standard methodology is used to determine the LHN, which forms the starting point for the housing requirement. At the time of the Regulation 18 LPR consultation the government was consulting on changes to the formula, which would have led to a higher number for West Berkshire. The government's response to their</p>

Respondent (with lpr ref)	Response	Council Response
	<p>However, we do question whether historic predictions of housing demand are still relevant given the extraordinary changes brought about by both Covid and the exit from the EU which might change the relative attractiveness of different regions. We also note from external sources (BBC, Dec 2020) that "A computer-based formula used to decide where houses should be located has been "updated" to focus more on cities and urban areas in the North and Midlands.". We therefore seek clarity as to whether recent changes are being reflected in the housing growth forecast.</p> <p>The dominant labour demand in West Berkshire is related to professional services and employment from large business that are predominantly European facing. However, with the lack of support for professional services in the EU trade agreements, it is clear that there will be shift in employment, and European based businesses may shift their employment overseas.</p> <p>Whether this means that West Berkshire remains such a desirable place, driven partly by employment prospects, remains unclear.</p> <p><b>Section 6.</b></p> <ul style="list-style-type: none"> <li>• "Several sources will ensure a continuous supply of land for housing."</li> </ul> <p>We do not agree with this statement. There is such a heavy focus on a small number of sites, such as Thatcham NE, that the policy is in grave danger of failing should unanticipated delays occur.</p> <p>We recommend that housing supply should be more evenly distributed over a greater number of sites to reduce the risk of a failure to supply, and also to ensure every area has the ability to respond to increased population growth with appropriate investment in services.</p>	<p>consultation has, however, resulted in no change to the standard methodology for West Berkshire, with an uplift over the previous LHN only in the larger cities and urban centres, which include Reading.</p> <p>The Council's evidence base was prepared prior to Covid and the exit from the EU and, as Thatcham Town Council acknowledge, the implications of these remain unclear. Evidence will be updated for future reviews of the Local Plan.</p> <p>Paragraph 7.13 of the LPR sets out the various sources of housing supply that will ensure a continuous supply of land for housing across the plan period. North East Thatcham is one of the new sites proposed for allocation in the LPR. Alongside Sandford Park, it is the largest site and therefore forms a significant proportion of the housing land supply.</p> <p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of over 7 years for the period to 2026/2027.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy</p>

Respondent (with lpr ref)	Response	Council Response
		which went through all stages of consultation, examination and adoption by the Council.
Wokingham Borough Council (lpr1466)	<p><i>Wokingham Borough Council's full representation is attached</i></p> <p><u>Housing need and supply</u></p> <p>Using the government's standard method, housing need within WBDC calculates as 513 dwellings per annum (dpa) at 1 April 2020. This equates to a total of 8,721 additional homes in the period 2020 - 2037.</p> <p>Policy SP 12 – 'Approach to Housing Delivery' states that:</p> <p><i>'Provision will be made for 8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520– 575 dwellings per annum.'</i></p> <p>The minimum provision of homes under Policy SP 12 exceeds the current calculation of housing need (513dpa), being based on the slightly higher outcome of the 2019-based calculation (520dpa). This, and the range up to 575dpa, provides some flexibility to changes in the calculation of housing need.</p> <p>Notwithstanding, Policy SP 12 notes that 575 is not a ceiling or cap to development. Ultimately, the Plan seeks to meet and exceed the current calculation of housing need in full in accordance with national policy and guidance.</p>	<p>Noted that Wokingham Borough Council acknowledges and supports the Council's position that need will be met in full within the district over the plan period.</p> <p>On the issue of Reading's unmet need, clarification has been sought from Reading Borough Council (see response to Reading Borough Council (lpr1488) and the following additional text is proposed to be added to the supporting text section of the policy at paragraphs 7.6 to 7.9:</p> <p><u><i>Reading Borough Council have identified a shortfall of 230 dwellings that is anticipated to arise in the latter part of their current Local Plan period. The Reading Local Plan considers the period through to 2036.</i></u></p> <p><u><i>The local authorities which make up the Western Berkshire HMA have agreed a Statement of Common Ground for the purposes of Local Plan-making. This continues to recognise Reading's unmet need set out in the Reading Local Plan and the principle that the need should be met within the West of Berkshire area. This agreement relates only to Reading's need as calculated by the SHMA, not by any alternative calculations of need.</i></u></p> <p><u><i>Reading have identified that a five yearly review is required by 2024 and that will need to consider how to deal with the housing needs generated by the standard methodology. Though the principle of meeting any unmet need within the Western Berkshire HMA is accepted, the distribution of that unmet need within the HMA has not been agreed and will be subject to further review, through the plan-making process, before the need arises.</i></u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>Taking account of existing commitments, allocations and anticipated windfall developments (which together total 8,114 dwellings), a land supply for a further 1,661 dwellings is needed against the requirement of 9,775 homes. This figure reflects the upper end of the range (i.e. 575 dpa) to allow for flexibility over the lower figure for nondelivery, phasing issues, etc. Analysis of the proposed spatial strategy and allocations to meet this is provided below under 'Proposed spatial strategy and housing site allocations'.</p> <p>The government's December 2020 changes to the standard need formula have no direct impact on WBDC.</p> <p>On the issue of housing need and supply, it is recommended that Wokingham Borough Council (WBC) acknowledges and supports the WBDC position that need will be met in full within the district over the plan period.</p> <p><u>Unmet housing need from Reading Borough Council</u></p> <p>Reading Borough Council's (RBC) Local Plan (adopted November 2019) identifies a shortfall of 230 dwellings over the plan period 2013 – 2036 against the housing need identified within the Berkshire Strategic Housing Market Assessment (2016).</p> <p>WBDC states in the Plan and supporting documents that there has been no request from other local authorities within the Western Berkshire Housing Market Area (HMA) (i.e. Bracknell Forest Council (BFC), RBC and WBC) to accommodate any unmet need and that the potential shortfall from RBC no longer exists.</p>	<p><u>No shortfall has been identified from other adjacent authorities or any of the other authorities within the Western Berkshire HMA.</u></p> <p>The comments relating to the expectation that West Berkshire Council and Bracknell Forest Council would accommodate any potential unmet need from Reading Borough Council is noted, but it is also recognised that Wokingham are still to undertake a review of their spatial options and it would seem premature to rule out the possibility of any contribution to meeting any unmet need from Reading.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Recent statements by the Deputy Leader for RBC suggest the view held by RBC is that unmet need still exists.</p> <p>It is important to note that the government's recent revision of the standard method (published 16 December 2020), now requires a 35% uplift to be applied to RBC's housing need to account for the authority being within the country's top 20 largest cities and urban centres. Whilst statements from government expect the increased need to be met within the largest cities and urban centres themselves, and not passed to neighbouring local authorities, engagement and clarification is required from RBC.</p> <p>As previously expressed to all local authorities within the Western Berkshire HMA, WBC expects any potential unmet need from RBC to be met by WBDC or BFC, given the existing comparatively higher level of housing need in WBC. In addition, the change in emergency planning arrangements around AWE Burghfield has resulted in substantial objections from the Ministry of Defence towards the Grazeley garden town proposal which was a central plank of WBC's Draft Local Plan. As a result of the changed circumstances, a review of spatial options for the WBC local plan will be undertaken.</p> <p>At the time of writing it is not possible to say how future developments needs will be accommodated within WBC, or indeed whether there will be any issues on which cooperation will be sought from neighbouring local authorities, such as unmet needs. Any housing delivered within the wider HMA is suitable in principle to address any shortfall from the other local authorities regardless of proximity.</p> <p>It is recommended that clarification is sought regarding the issue of unmet need arising from RBC. It is further recommended that WBC reaffirms that it</p>	

Respondent (with lpr ref)	Response	Council Response
	would expect WBDC and BFC to accommodate any potential unmet from RBC.	
Basingstoke & Deane Borough Council (lpr1481)	<p><i>Basingstoke and Deane Local Plan Update</i></p> <p>As you will be aware, Basingstoke and Deane Borough Council (BDBC) has started work on a Local Plan Update to cover the period to at least 2039. The council undertook an Issues and Options consultation in Autumn 2020 and intends to consult on a draft Plan (Regulation 18) in winter 2021/22. This would lead to submission in Spring 2023 and adoption in Spring 2024. Although policy development is at an early stage, at this time the council does not anticipate there being any unmet needs arising from Basingstoke and Deane borough that would need to be met by West Berkshire Council.</p> <p><i>Comments on WBC Plan</i></p> <p>BDBC wishes to ensure that West Berkshire Council is meeting its needs in full and that the Plan takes account of any potential impacts upon the borough and its residents.</p> <p>BDBC is keen to continue to engage in suitable discussions under the Duty to Cooperate, in relation to the issues set out above and those discussed at our meeting in late 2020.</p>	Comments noted, particularly that no unmet need from Basingstoke and Deane is anticipated.
Reading Borough Council (lpr1488)	Policy SP 12 makes provision for a total of 8,840 to 9,975 additional homes per annum between 2020 and 2037, which equates to 520 to 575 homes per annum. Whilst the 520 figure is derived from the standard methodology for assessing housing need based on most recent figures (as set out in paragraph 6.2), it is not clear from the Local Plan how the upper figure of 575 has been identified. Whilst the Council welcomes any commitment to deliver additional housing above the level set out in the standard	The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met. The upper end of the range has been proposed to allow for approximately 5% additional homes. The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against

Respondent (with lpr ref)	Response	Council Response
	<p>methodology (subject to other considerations, in particular the provision of the necessary supporting infrastructure) it would be important to understand how critical figures such as this have been arrived at, and whether it is expected that this would cover any of Reading's identified unmet need.</p> <p>Regarding Reading's unmet need, paragraph 6.3 makes the comment that "There has been no request to take unmet need from other authorities within the identified Housing Market Area, or from any other adjacent authority. In 2018 there was a possibility of some unmet need in Reading Borough, but this is no longer the case." RBC does not consider that this is an accurate reflection of the current circumstances, for the following reasons:</p> <ol style="list-style-type: none"> <li>1. A formal request was made by RBC to WBDC as well as to Wokingham Borough Council (WBC) on 24<sup>th</sup> January 2017 to consider meeting some of Reading's anticipated unmet needs for housing (which at the time was expected to be around 1,000 homes). WBDC had not yet carried out the capacity work to understand whether there would be scope to assist in meeting these needs. As you will be aware, the Reading Borough Local Plan was adopted in November 2019, and this continued to identify a shortfall in meeting Reading's needs, albeit much reduced from 1,000 homes to 230 homes, with the Local Plan stating that these needs were expected to be met elsewhere in the Western Berkshire Housing Market Area (comprising West Berkshire, Reading, Wokingham and Bracknell Forest). The formal duty to co-operate request from 2017 has never been withdrawn by RBC, and this matter was raised in RBC's response to the Regulation 18 consultation on West Berkshire Local Plan Review to 2036 submitted in December 2018. As far as RBC is concerned, this remains an open request.</li> <li>2. A Memorandum of Understanding was signed in October 2017 by all four authorities within the Western Berkshire HMA, including WBDC and RBC, regarding Reading's unmet housing need. This agreed that Reading had an unmet need to 2036, estimated at the time as 500-1000 dwellings, and agreed that this unmet need should be met within the Western Berkshire HMA. It further agreed that "the four</li> </ol>	<p>substantially higher numbers than the housing need based on the standard methodology.</p> <p>The local authorities which make up the Western Berkshire Housing Market Area (HMA) have agreed a Statement of Common Ground for the purposes of Local Plan-making. This continues to recognise Reading's unmet need set out in the Reading Local Plan and the principle that the need should be met within the West of Berkshire area. This agreement relates only to Reading's need as calculated by the Berkshire SHMA, not by any alternative calculations of need.</p> <p>As Reading Borough Council set out in their representation a five yearly review is required by 2024 and that will need to consider how to deal with the housing needs generated by the standard methodology.</p> <p>The shortfall of 230 dwellings was anticipated by Reading Borough Council to arise at the later part of their current plan period. Though the principle of meeting any unmet need within the HMA is accepted, the distribution of that unmet need within the HMA has not been agreed and will be subject to further review, through the plan –making process, before the need arises.</p> <p>The following additional text is proposed to be added to the supporting text section of the policy (paragraphs 7.6 to 7.9) in recognition of Reading's unmet housing need:</p> <p><u>Reading Borough Council have identified a shortfall of 230 dwellings that is anticipated to arise in the latter part of their current Local Plan period. The Reading Local Plan considers the period through to 2036.</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>Western Berkshire HMA authorities will continue to work together to ensure that Local Plans in the area set out policies and proposals that collectively provide for the full housing needs of the area, including unmet need from Reading.” This MoU has not been withdrawn, and has not been superseded by any new version, and as far as RBC is concerned remains the current position.</p> <p>3. It is understood that paragraph 6.3 was drafted under the understanding that Reading’s housing needs had reduced from the 699 per annum in the Reading Borough Local Plan to 649 under the standard methodology (using 2020 affordability ratios and 2014-based household projections), and that this could be argued to eliminate the unmet need within the Local Plan (although RBC does not necessarily agree with the position). However, on 16<sup>th</sup> December 2020, after this document had been published, the government amended Planning Practice Guidance to change the way that the standard methodology operates for the 20 largest urban areas. This includes Reading, and it has resulted in Reading’s annual need under the standard methodology based on the most up-to-date figures increasing to 876 homes per annum. There is no realistic prospect of Reading being able to accommodate this within its boundaries and this means that, judged on the standard methodology, there is likely to be significant unmet need. Between 2021 and 2036, this would be in the region of 2,800 homes. At the current time, the need is 699 dwellings as established in the Reading Borough Local Plan, which results in a shortfall of 230, but a five-yearly review is required by 2024 and that will need to consider how to deal with the housing needs generated by the standard methodology.</p>	<p><u>The local authorities which make up the Western Berkshire HMA have agreed a Statement of Common Ground for the purposes of Local Plan-making. This continues to recognise Reading’s unmet need set out in the Reading Local Plan and the principle that the need should be met within the West of Berkshire area. This agreement relates only to Reading’s need as calculated by the SHMA, not by any alternative calculations of need.</u></p> <p><u>Reading have identified that a five yearly review is required by 2024 and that will need to consider how to deal with the housing needs generated by the standard methodology. Though the principle of meeting any unmet need within the Western Berkshire HMA is accepted, the distribution of that unmet need within the HMA has not been agreed and will be subject to further review, through the plan-making process, before the need arises.</u></p> <p><u>No shortfall has been identified from other adjacent authorities or any of the other authorities within the Western Berkshire HMA.</u></p>
Bucklebury Parish Council (lpr1716)	<i>Extract from full representation on SP17 (lpr1688)</i>	The preparation of the evidence base for the Local Plan Review (LPR) was largely undertaken prior to the COVID

Respondent (with lpr ref)	Response	Council Response
	<p><b>9. Approach to Housing Delivery (SP 12)</b></p> <p>The world has changed in the last 12 months. We need to re-look at the assumptions on which plans were previously based to see if they are applicable now and if they will be relevant in the future.</p> <p><b>Housing Needs</b></p> <p>The local housing needs assessment requiring 520-575 dwellings pa to be built needs to be revisited in the light of changed circumstances. This target was set before the onset of the pandemic, the focus on rebalancing the economy and the UK's exit from the EU. We are already seeing changing working practices and higher rates of unemployment. There will be lower disposable incomes for many after tax rises to pay for the huge cost of the pandemic. The housing need methodology does not take account of the loss of the Grazeley site. Taken together all these new factors are highly likely to reduce the housing need in West Berkshire and call into question the numbers of houses required in Thatcham (THA20) to satisfy that need. Furthermore, the Government published the new standard method for assessing local housing need in December 2020. This included a spreadsheet containing the indicative figures for each local authority in the country. The figure for West Berkshire is 513 dwellings per annum.</p> <p><b>Housing Supply</b></p> <p>The requirement was to provide a land supply for approx. 9775 houses until 2037 now 8,721 under the December 2020 calculation. According to the consultation document 8,114 have been identified excluding the proposal for NE Thatcham (THA20).</p> <p>WBC's calculations have used approximately 114 houses per annum as windfall. If our understanding is correct, over the plan period between 2006 and 2020 there have been 2900 approved sites, some 190 per annum. WBC</p>	<p>19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p><b>Housing Needs</b></p> <p>The local housing need is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to the housing affordability ratios published in March 2022).</p> <p>Paragraph 61 of the 2021 NPPF states:</p> <p><i>To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</i></p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>have estimated 140 for this plan period but reduced it by the overage of approvals outstanding from the previous plan period. This would seem to be overly cautious and pessimistic and this reduces the windfall value in the WBC forecast by approximately 400 houses.</p> <p>The estimate also adjusts down the availability of housing in the Sandleford Park scheme by 1/3 and it states WBC are only expecting 1000 of 1500 home provision to be built within the plan period. Why is this adjustment necessary? If this process is about land supply for properties, there is no reason to adjust.</p> <p>Only looking at these two items potentially satisfies the shortfall in total. In addition, there is a long list of sites within the HELAA of which 122 hectares is on pre-developed land and not included for development. Why is WBC looking to use new Greenfield sites when there are clearly other options available?</p> <p>There is absolutely no need for 2,500 houses to be considered when the shortfall is a maximum of 607. There are many ways of mitigating the numbers that may be required from this development.</p>	<p><b>Housing Supply</b></p> <p>The proposed housing requirement is for 8,721 – 9,146 net additional homes for 2022 – 2039.</p> <p>The windfall allowance has been based on the historic rate of delivery on small sites of less than 10 units. These types of sites are difficult to identify in advance. An average allowance of 140 dwellings per annum has been used, but outstanding permissions (where dwellings are either not started or under construction) have been deducted in order to avoid double-counting. Over the plan period of 17 years the allowance would imply delivery of 2,380 units (17x140) but 431 of these already have permission and are therefore already included in the supply figures.</p> <p>We are unclear how Bucklebury Parish Council's figure of 190 per annum has been derived.</p> <p>The Council needs to ensure that there is sufficient flexibility to meet the housing requirement by the end of the plan period and evidence indicates that large strategic sites have longer lead- in times than small and medium sized sites. At the time of the Regulation 18 consultation, there had been uncertainty regarding the timing of delivery at Sandleford Park and the Council took caution in the estimates of potential delivery in the plan period. However, the eastern part of the site now has outline permission. There is a planning application pending determination on the western part of the site.</p> <p>The process of selection of sites for allocation was set out in the Site Selection Background Paper, which will be updated for the Regulation 19 proposed submission consultation.</p>

Respondent (with lpr ref)	Response	Council Response
Oxford and Country Planning Ltd for Bucklebury Parish Council (lpr1921)	<p><i>Full representation relating to North East Thatcham strategic site attached to the online representation (lpr1920)</i></p> <p><b>Housing requirement in the light of the publication of the new standard method</b></p> <p>The Local Plan proposes to provide for between 8,840 to 9,775 net additional homes in the period to 2037, which equates to between 520 and 575 dwellings per annum (Policy SP 12).</p> <p>The supporting text states that, <i>using the 2014-based housing projections, and an uplift based on the ratio of house prices to workplace-based earnings the local housing need figure is 513 dwellings per annum using a baseline of 2020 (520 dwellings per annum using a baseline of 2019)</i>. The text goes on to say at para 6.6 that, <i>The Government has recently consulted on a revised standard method for calculating local housing need but at this stage it is not known how this will be amended following analysis of the comments received. It will therefore be necessary to keep Policy SP12 under review.</i></p> <p>The Government published the new standard method for assessing local housing need in December 2020. This included a spreadsheet containing the indicative figures for each local authority in the country. The figure for West Berkshire is 513 dwellings per annum.</p> <p>Whilst the figures from the standard method are minimum estimates of local housing need, local authorities may set housing requirements greater than the standard method or provide for less housing, subject to the provisions of the NPPF. Environmental, infrastructure capacity and other factors will ultimately determine the final housing figure contained within the Local Plan. Given the above, it is considered that the Local Plan as drafted is, at the upper end of the range, potentially providing for 1,000 more homes than required (513 x 17 = 8,721). This has a fundamental implication for the strategy of the Plan as a whole, including the proposed strategic allocation at North East Thatcham. Therefore, the Parish Council urges West Berkshire</p>	<p>At the time of the consultation the LHN was 513 dwellings per annum. The current LHN using the affordability ratios published in March 2022 is 513 dwellings per annum.</p> <p>It is accepted that the Council are proposing a housing requirement that exceeds the LHN. The objective is to boost housing supply and include sufficient flexibility to ensure that, as a minimum, the LHN can be met.</p>

Respondent (with lpr ref)	Response	Council Response
	Council to review its housing requirement in the light of the publication of the new standard method.	
Tilehurst Parish Council (lpr1983)	<p><i>Full representation from Tilehurst Parish Council and Tilehurst Neighbourhood Development Plan Steering Group is attached to online representation.</i></p> <p>The plan has no policies covering empty/unoccupied homes and how these numbers might be reduced. In 2015 there were 739 vacant/empty/disused residential properties and 170 similar commercial properties in West Berks (obtained via FOI request). This was not broken down by ward or Parish. WBC should consider having plans/policies to get as many of these houses back into use as possible.</p> <p>The Plan contains little (if any) direct mention of providing accommodation for homeless people and rough sleepers.</p>	<p>These are issues that are largely outside the land use planning scope of the Local Plan. The LPR does have a focus on re-use of brownfield land and policies would support the redevelopment of housing which is no longer fit for purpose.</p> <p>The Council can offer financial assistance to owners of empty properties to help bring them back into residential use. The Council also has a Preventing Homelessness and Rough Sleeping Strategy.</p>
Cold Ash Parish Council (lpr1737)	<p>The upper number of the range of annual new build homes is stated as not a cap or maximum, which reduces certainty and the reliability of the Plan for residents and any other organisations wishing to know the impact of development over the life of the Plan.</p> <p>Moreover, with the new Government Planning Framework being trailed last year, it is highly likely that a new National Planning Policy Framework will take effect during the Local plan period, which presumably will increase the likelihood of extra housing targets being applied.</p>	<p>The upper end of the range can be seen as a target but it would not be appropriate to refuse otherwise acceptable applications should that target be achieved before the end of the plan period. There can never be certainty over numbers of homes that will be delivered and the plan will be subject to review.</p> <p>If the Government introduce a new planning system as it has proposed then the next review of the Local Plan will need to conform to the new national policies. The White Paper did propose that housing requirements for local authorities be set by central government, but there is as yet no clarity on how this calculation will be made.</p>

Respondent (with lpr ref)	Response	Council Response
Oxfordshire County Council (lpr2195)	<p>West Berkshire is a unitary authority which shares boundaries with Vale of White Horse District Council and South Oxfordshire District Council. Oxfordshire and West Berkshire both have the A34 running through them, which links the south coast with the midlands.</p> <p>Strategic cross boundary issues include matters relating to the A34 and provision for students who may cross our administrative boundary to access educational facilities. Oxfordshire County Council is also working with authorities in the area regarding crossing the Thames at Reading.</p> <p>This is the third Regulation 18 consultation for the West Berkshire Local Plan Review. The last Regulation 18 consultation was in November 2018. Whilst we haven't commented to date and have no particular comments to make now, please add us to your database to notify us of your consultations.</p> <p>Within West Berkshire the largest settlement is Newbury, then Thatcham and the urban areas of Tilehurst, Purley on Thames and Calcot, close to Reading. The population estimate of the District is 158,400 (mid 2019). The North Wessex Downs Area of Outstanding Natural Beauty (AONB) covers 74% of West Berkshire and parts of Oxfordshire too.</p> <p>Policy SP 12 'Approach to Housing Delivery' in the current consultation, details provision will be made for 8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037. This policy indicates the housing requirement as a range: 520-575 dwellings per annum.</p> <p>The Berkshire (including South Bucks) Strategic Housing Market Assessment (SHMA, Feb 2016) found that West Berkshire has a strong functional relationship with Wokingham Borough, Reading Borough and Bracknell Forest. As a result, there has been much collaborative working between these authorities on housing matters and associated infrastructure. It is understood that there is no unmet need from other authorities. The supporting text for Policy SP 12 'Approach to Housing Delivery' states: 'in</p>	<p>Comments are noted.</p> <p>The issue of unmet need is covered in the response to Reading Borough Council (lpr1488).</p> <p>The Grazeley proposal would have largely met the housing needs of the wider Reading area and would have only gone a limited way towards meeting West Berkshire's housing needs. Even without the concerns due to the proximity of AWE, the lead in time for this development meant that it was never considered appropriate to include in the housing supply for the Local Plan period to 2039.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>2018 there was a possibility of some unmet need in Reading Borough, but this is no longer the case.'</p> <p>We note that the main growth areas in West Berkshire are the Newbury and Thatcham areas, where two strategic urban extensions are proposed; the first a greenfield site to the south of Newbury (Sandleford Park), already allocated in the Core Strategy, where approximately 1,500 homes could be developed, and the second another greenfield site to the north east of Thatcham for approximately 2,500 homes.</p> <p>The proposed 'Garden Town' at Grazeley, which was a joint proposal by West Berkshire, Wokingham and Reading to accommodate up to 15,000 new homes on a site spanning the three boundaries, is no longer included in your Local Plan proposals due to concerns about the proximity of the site to the Atomic Weapons Establishment at Burghfield. It is understood that if new development at Grazeley progresses, it will be entirely within Wokingham Borough and Reading Borough. Given the significant size of the Grazeley Garden Town proposal, Oxfordshire County Council remains interested in how plans progress.</p>	
Greenham Parish council (lpr900)	The rules associated with housing allocation are under review and ever changing, which makes it hard to rely on this Housing delivery policy and support it.	Though we are going through a period of changes to national planning policy we are required to review the Local Plan and must work within the boundaries of current policy. In terms of the calculation of local housing need, it was confirmed shortly after this consultation commenced that the formula would not be amended for West Berkshire.
Hungerford Town Council (lpr147)	Agree with policy	Support noted.
Shaw-cum-Donnington Parish Council (lpr206)	<p>SP12 Approach to housing delivery.</p> <p>We support this policy.</p>	<p>Support noted.</p> <p>See response to Reading Borough Council (lpr1488) with regard to Reading's unmet need.</p>

Respondent (with lpr ref)	Response	Council Response
	6.3 We note that there is no request to take unmet needs from other authorities. We hope this continues. We believe new dwellings should be for the needs of the District and to provide them for other districts could encourage more commuting.	
Stratfield Mortimer Parish Council (lpr401)	Agree with policy	Support noted.
<b>General consultation bodies</b>		
Newbury Society (lpr1147)	<p><b>Total housing numbers.</b></p> <p>In the emerging draft of the Local Plan 2020-2037, West Berkshire Council has opted for a larger scale of development than indicated by following government calculations. These calculations assess local need as 513 houses per year, but WBC has opted for a target figure of 575 houses per year, 62 houses higher. In other words, over the 17 years of the plan WBC has chosen to increase the target by over 1,000 houses more than the assessed need. Reducing the total figure by this amount, or a substantial portion of it, would be much more sustainable, and lead to a higher quality of life for West Berkshire residents than the level of development currently proposed.</p>	<p>At the time of the consultation the LHN was 513 dwellings per annum. The current LHN using the affordability ratios published in March 2022 is 513 dwellings per annum.</p> <p>It is accepted that the Council are proposing a housing requirement that exceeds the LHN. The objective is to boost housing supply and include sufficient flexibility to ensure that, as a minimum, the LHN can be met.</p>
Reading West Berkshire Labour Party Branch (lpr1179)	<p>The local plan should include a commitment to return empty or unoccupied houses to housing stock. Figures from a few years ago showed over 700 empty houses and additional commercial properties that were empty in West Berkshire. Where necessary the council should use its powers to ensure that property is returned to the use for which it is intended. This could make a significant impact on meeting housing needs and reduce the pressure for new build.</p> <p>Add a new section under “Meeting Housing Need” covering the recovery of empty houses and adopting the points made in answer to question 2 above.</p>	<p>These are issues that are largely outside the land use planning scope of the Local Plan. The LPR does have a focus on re-use of brownfield land and policies would support the redevelopment of housing which is no longer fit for purpose.</p> <p>The Council can offer financial assistance to owners of empty properties to help bring them back into residential use.</p>

Respondent (with lpr ref)	Response	Council Response
Home Builders Federation	<p>Whilst we would agree with the Council's assessment that housing needs using the standard method results in a minimum requirement of 513 dwellings per annum (dpa) it will be important to recognise that there may be situation where the Council will be required to deliver more than this minimum. Firstly, the Council will need to engage closely with neighbouring areas to ensure that they are able to meet their own housing needs. The NPPF is clear in paragraph 60 that it will also need to take account of unmet needs in neighbouring areas. The Reading Local Plan for example identified a shortfall in their delivery that would need to be delivered in a neighbouring Borough. The Council will need to establish whether this is still the case as well as engaging with all other neighbouring areas to establish whether there are any unmet housing needs that could be addressed in West Berkshire.</p> <p>The Government have also recognised that there may be scenarios where needs are likely to be higher than that expressed in the standard method due to, for example, improvements in infrastructure or the adoption of growth strategies. These scenarios are outlined in paragraph 2a-010 of Planning Practice Guidance but the Council must recognise that these are just three examples and other situations may well need to be considered. Therefore, it will be important that strategic infrastructure improvements, such as Crossrail for example, which could see an increase in the jobs created in the region or increased in migration due to improved transport links to London are carefully considered and whether they will require the Council to plan for more homes than the minimum required.</p> <p>In addition, the Council will need to consider whether there will be sufficient homes to support its expectations and aspirations for economic growth. The Thames Valley and Berkshire Local Economic Partnership clearly has considerable growth aspirations for the area as a whole and has identified worsening affordability and availability of housing as a serious constraint on future growth (2). It is therefore essential that the Council is can show that it is providing sufficient housing to meet any economic growth aspirations for the area. For example, the 2018 report 'OAN Sensitivity Testing – Western Berkshire Housing Market Area' estimated that West Berkshire would need to deliver 556 new homes to meet the expected levels of jobs growth in the</p>	<p>See response to Reading Borough Council (lpr1488) with regard to Reading's unmet need.</p> <p>Support for housing requirement which exceeds the LHN is noted.</p> <p>A number of smaller sites are included in the plan and there is a healthy supply of permissions that are anticipated to deliver in the early years of the plan period. The Council is well aware of the NPPF requirement to demonstrate at least 10% of the housing requirement on sites no larger than one hectare. A Housing Background Paper will accompany the publication version of the Local Plan Review and will demonstrate how this requirement has been met through allocations in the development plan and land identified in the brownfield register.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Borough. Whilst this evidence is now slightly dated it does suggest that the lower end of the range set out in SP12 would not supply sufficient homes to meet the Council's economic growth expectations. As such it will be important for the Council to ensure that housing needs based on the standard method are sufficient to support the economic growth expectations for the HMA.</p> <p><i>Housing delivery</i></p> <p>We note and welcome the Council's decision to prepare a plan that seeks to exceed the minimum number of homes they are required to deliver. The National Planning Policy Framework (NPPF) is clear at paragraph 11 that local plans must be flexible to adapt to rapid change and as such it must be expected for plans to deliver more homes than the minimum required. If plans seek to meet development requirements with no buffer in supply, then there is a far greater risk that needs will not be met in full. Any slippage in the delivery timescales of any site, or lower than expected windfalls for example will lead to supply being less than the minimum requirement and the plan failing to deliver one of its key objectives. As such, should the minimum number of homes the Council are required to deliver increase then the Council will need to maintain the same degree of buffer within their planned supply.</p> <p>The Council recognise that they are required to include a housing trajectory in the local plan. This is an essential part of any local plan as it provides a clear and transparent outline of both delivery expectations and requirements. It would also appear that the Council are proposing to use the annualised average of need across the plan period against which to assess supply. We would consider this to be the correct approach given that the Council appear to be able to show that this plan would provide for a five-year land supply on adoption at present. However, in our experience this situation can change rapidly, and it will be important that the Council has sufficient flexibility in supply early in the plan period in order to maintain supply without having to resort to a stepped trajectory. In particular we would suggest that the Council</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>seeks to ensure it has a range of smaller sites allocated in the local plan that can come forward quickly once the plan is adopted.</p> <p>On a similar point the Council will need to show that it there are sufficient sites in the local plan or on its Brownfield Register to deliver at least 10% of the homes need in West Berkshire as required by paragraph 68 of the NPPF. Up until the 1980s, small developers once accounted for the construction of half of all homes built in this country, resulting in greater variety of product, more competition, and faster build-out rates. Since then, the number of small companies has fallen by 80% following the introduction of the plan-led system in 1990.</p> <p>The HBF has undertaken extensive consultation with its small developer members. One of the chief obstacles for small developers is that funding is extremely difficult to secure with a full, detailed, and implementable planning permission. Securing an implementable planning permission is extremely difficult if small sites are not allocated. Without implementable consents lenders are uneasy about making finance available or else the repayment fees and interest rates they set will be very high. Small developers, consequently, need to invest a lot of money and time up-front in the risky business of trying to secure an allocation and a planning permission, and this is money that many small developers do not have. This is why the Government, through the NPPF, now requires local authorities to allocate more sites of varying sizes and it is essential that the Council supports this objective.</p> <p><i>(2) Thames Valley Berkshire LEP Strategic Economic Plan 2011/16-2021</i></p>	
West Berkshire Green Party (lpr1835)	We believe that the potential contribution from windfall sites is underestimated, that as stated above there should be a push for mixed development in the industrial areas around Thatcham station, and that the proposed developments at Sandleford and NE Thatcham should be scaled back substantially or removed entirely. Given the council's stated plans for	The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does, though, support development of previously developed sites within the settlement boundaries and any large and medium sites that do come

Respondent (with lpr ref)	Response	Council Response
	<p>the future of the London Road Industrial Estate, the absence of the LRIE from the draft plan is baffling when, even if the football ground is retained as an Asset of Community Value (which we would wish to see), there is scope for hundreds of homes on the LRIE site. As stated in our submission to the council's housing strategy, we would give priority to social and affordable homes on this site.</p>	<p>forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met.</p> <p>The LRIE has been assessed in the HELAA and through the site selection process in the same way as other sites. The issues identified in the HELAA include the need to retain employment land, flooding risks, potential adverse nature conservation impacts, loss of Green Infrastructure and an Asset of Community Value. It is proposed to be retained in the plan as a designated employment area, although it is recognised within the supporting text to Policy SP20 that the area has scope for comprehensive regeneration to maximise the potential of the site and that office development may be appropriate. There may be scope for mixed development and any application would need to be assessed against the Local Plan policies as a whole.</p> <p>The housing supply at March 2022 does not include housing on Land off Faraday and Kelvin Road as this planning consent has now lapsed.</p>
The Woodland Trust (lpr1026)	<p>The Woodland Trust does not take a position on the calculation of housing need and housing numbers but does wish to see explicit protection for ancient woodland in site allocation policies.</p> <p>The Woodland Trust objects to ancient woodland areas being included in sites allocated as suitable for development.</p> <p>Areas of natural woodland, in particular ancient woodland, are vulnerable to pollution, encroachment from development, and habitat fragmentation. It is important that any development is located and designed to avoid damaging</p>	<p>Comments noted.</p> <p>The approach to ancient woodland within or adjacent to areas proposed for allocation is covered in the separate site allocation policies.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>ancient woodland, providing buffers for designated sites and protecting connectivity between wildlife habitats.</p> <p>We welcome the protection for ancient woodland reflected in policy DC 14, that development resulting in the loss or deterioration of ancient woodland or veteran trees which are irreplaceable will be refused except in exceptional circumstances: this should also be reflected in site selection.</p> <p>Rather than the 15 m minimum buffer for ancient woodland specified in the housing sites, we propose a minimum 50 m buffer as set out below.</p> <p>We recognise the intense pressure to identify and bring forward new sites for housing and employment uses. This pressure makes it all the more important that vital protections for ancient woodland and veteran trees are upheld.</p> <p>The Woodland Trust objects to ancient woodland areas being included in sites allocated as suitable for development.</p> <p>We recommend policy stating that where development proposals may affect ancient woodlands, including translocated woodlands (translocated ancient woodlands will be treated the same as if they are ancient woodland), veteran trees, and their immediate surroundings, the following principles shall be used to guide both site selection and the design of development:</p> <ol style="list-style-type: none"> <li>1. Avoidance of harm; and</li> <li>2. Provision of unequivocal evidence of need and benefits of the proposed development; and</li> <li>3. Provision of biodiversity net gain; and for the design of development:</li> <li>4. Establishment of the likelihood and type of any impacts; and</li> <li>5. Implementation of appropriate and adequate mitigation, compensation, and management measures that respect the features and characteristics of the veteran trees and/or ancient woodland; and</li> </ol>	

Respondent (with lpr ref)	Response	Council Response
	<p>6. Provision of adequate buffers; and 7. Provision of adequate evidence to support development proposals.</p> <p>Where it is deemed that there is going to be unavoidable residual damage or loss to ancient woodland, the measures taken to compensate for this must be of a scale and quality commensurate with loss of irreplaceable habitat. Where ancient woodland is to be replaced by new woodland, this should aim to create 30 hectares of new woodland for every hectare lost.</p> <p>Where development sites are adjacent to ancient woodland, we recommend that as a precautionary principle, a minimum 50 metre buffer should be maintained between a development and the ancient woodland, including through the construction phase, unless the applicant can demonstrate very clearly how a smaller buffer would suffice. A larger buffer may be required for particularly significant engineering operations, or for after-uses that generate significant disturbance.</p> <p>Further information is available in the Trust's <i>Planners' Manual for ancient woodland (2019)</i>.</p>	
Rural Solutions (lpr2307)	<p>We welcome the approach that the target figure of 575 dwellings per annum 'does not constitute a ceiling or cap to development' given the importance housing can bring a whole wealth of benefits to local people if delivered in the right way. This policy refers back to Policies SP1, SP3 and DC1 we have already provided commentary on suggesting an 'added' category in which development could be considered.</p> <p>The other option to explore is a "Community-Led Development" policy similar to COM9 in Test Valley's Local Plan. This seeks to take a positive approach to sustainable new development, in a strong rural economy, through the retention and development of local services and community facilities in villages, such as local shops, meeting places, schools, sports venues, cultural buildings, public house and places of worship. Proposals can be supported by evidence that there is a need for the development to maintain or enhance the sustainability of the settlement / wider village cluster through</p>	<p>Support for approach noted.</p> <p>Policy SP18 of the LPR does include reference to support for housing schemes initiated by local communities.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the delivery of community benefit. The scheme would need to demonstrate that the community has been involved in the preparation of the proposals. This is less cumbersome than preparing a Neighbourhood Plan, but can take into account the long-term aspirations of Village Design Statements or Parish Plans or views of the wider community. A small-scale residential scheme which is market-led can deliver indirect benefits in terms ensuring longevity of existing services.</p> <p>This type of small-scale windfall sites can be delivered quickly, something important when the construction industry and associated housing trajectories would have been impacted / output slowed significantly during the Covid-19 pandemic.</p> <p>The above ambitions, namely the Village Clusters approach, could be integrated in Policy SP15 as an overall windfall target. This would help to achieve the supporting text which states:</p> <p><i>“The special characteristics of the North Wessex Downs AONB mean that development will be modest, helping to meet local needs, support the rural economy and sustain local facilities in accordance with Policy SP2”.</i></p>	
CPRE (lpr2454)	<p><b>West Berkshire &amp; East Berkshire Combined Comments</b></p> <p><b>Housing Numbers and their effect:</b></p> <p>It is vital not to rush into new development so that we can ensure the infrastructure is in place and that environmental damage is prevented rather than rushing into unnecessary house building. The planned expansion needs to take account of roads, water conservation, waste disposal and energy resources as well as the social considerations. Once the infrastructure and environmental policies are in place housing can follow – not the other way round. Concentrating population in rural areas increases dependence on cars and roads and the effect this has on climate change. The AONB and rural areas need full recognition as they are vital</p>	<p>Infrastructure requirements will be set out in the Infrastructure Delivery Plan to ensure that infrastructure is in place at the appropriate time.</p> <p>It is considered that the LPR does contain policies for the rural areas which include the conservation and enhancement of nationally protected landscapes and the wider countryside. The Council does however, disagree with the CPRE that affordable housing is not compatible with the scale of transport and social infrastructure available in rural areas. It will continue to seek affordable housing to help meet the needs of those living in the rural areas of the District and in so doing support the vitality of those communities.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>components of “Quality of Life” with outstanding landscapes to be protected by everyone in the District and a boost to the economy. Active planning is needed for rural areas and recognition of their particular needs. Rural issues and the conservation and enhancement of nationally protected landscapes and the wider countryside should have stronger representation within the Review. Key workers and affordable housing in rural areas are not compatible with low-income households as public transport and social facilities are not as numerous as those in urban areas of West Berkshire.</p> <p>The use of Brownfield or previously developed land would solve the use of the destruction of greenfields and green gaps and provides an opportunity for removing some of the derelict and local eyesores to breathe new life into areas that need regeneration. A large number of sites could be transformed into the homes needed in West Berkshire.</p> <p>The Government target of 300,000 homes was based on information available from the 2014-based projections– the updated figures from ONS identify lower levels of household growth, which would reduce the number of homes required in West Berkshire and save unnecessary destruction of the green spaces. The current draft of the Local Plan proposes 8840-9775 net additional homes which is too high to be accommodated without sacrificing valuable agricultural land and land used for recreation and the housing calculations need to be reviewed. The ONS household data for 2018-2028 gives growth for West Berkshire as 2482 and with windfall sites this total is likely to be exceeded. West Berkshire is in a strong position to contest the number of housing units required with Government, especially against a backdrop of a seven-year land supply.</p> <p><b>General</b></p> <p>The WBC Local Plan consultation proposes 8,840 to 9,775 net additional homes; some 520– 575 pa. We think these figures are too high and the 'housing need' calculations need to be reviewed in the light of changing government guidance and the recent withdrawal of its 'algorithm'. Also the</p>	<p>Policies do encourage the use of brownfield land and direct development to settlements with settlement boundaries where there are opportunities for development on previously developed land. But the Council needs to be able to demonstrate that the housing requirement can be met in a plan- led fashion rather than relying on brownfield land to come forward at the appropriate time.</p> <p>Central government remains committed to the target of 300,000 homes per annum to help solve the housing crisis. The government's standard methodology, which remains based on the 2014-based household projections, is used to determine the Local Housing Need, which forms the starting point for the housing requirement. It is not considered that there are exceptional reasons to deviate from this methodology. The algorithm used to calculate local housing needs has not been withdrawn but only amended for the largest urban settlements in the country, which includes Reading.</p> <p>The housing requirement figure needs to show the extent to which the identified housing need can be met over the plan period. The HELAA assesses land availability and there is no evidence to show that the minimum housing need cannot be met in the district.</p>

Respondent (with lpr ref)	Response	Council Response
	most recent ONS household forecast data 2018 - 2028 gives West Berkshire's growth as 2482, There is the usual range of sites put forward in our towns and villages and we note WBC now has over 7-year land supply satisfying the >5 year need, and has done well with slight excess housing numbers in 2019 and 2020.	
<b>Other stakeholders</b>		
Peter Besnet (lpr30)	Philosophically I do wonder about the number of new houses required. Whilst the population at large is generally ageing, family sizes are probably at replacement level. Newbury is a busy town, but hardly booming with job creations.	The government's standard methodology, which remains based on the 2014-based household projections, is used to determine the Local Housing Need, which forms the starting point for the housing requirement. It is not considered that there are exceptional reasons to deviate from the standard method in establishing housing need.
Daniel Musker (lpr987)	<p><b>Development Strategy</b></p> <ul style="list-style-type: none"> <li>• The Local Housing Need (LHN) for West Berkshire is 513 dwellings per annum</li> <li>• The Local Housing Need Methodology and Household Projections in England (Office for National Statistics) are based on statistical modelling and do not take into account the amount of available developable land within each local authority.</li> <li>• 85% of the land within WBC is excluded from development potential (AONB and flood plains).</li> <li>• I believe that the figure of 513 dwellings per annum is disproportionate to the amount of available developable land in West Berkshire.</li> </ul>	<p>The assessment of local housing need takes no account of land supply. It is purely based on the 2014-based household projections with an uplift to reflect affordability issues.</p> <p>The housing requirement figure needs to show the extent to which the identified housing need can be met over the plan period. The HELAA assesses land availability and there is no evidence to show that the minimum housing need cannot be met in the district.</p>
Roger Frankum (lpr1189)	While I have some sympathy with the West Berks Council in finding space for its allocation of new houses, I really think the problem needs looking at again.	The housing requirement, as opposed to the local housing need, is not currently set by central government. The housing requirement figure needs to show the extent to which the identified housing need can be met over the plan period. The HELAA assesses land availability and there is

Respondent (with lpr ref)	Response	Council Response
	<p>I would have thought that the first thing to do following the elimination of the Grazeley area for possible housing, was to contact the government and point out the situation and request a reduction in its allocation.</p> <p>It appears that the policy is based on data that is already three years out of date. Since the time of its collection we have had Brexit and now the Covid crisis. Both of these events are leading to change demographics, partly because fewer people are needing to work in London, or need to visit their work-place every day. This must alter the spread of housing needs across the country.</p>	<p>no evidence to show that the minimum housing need cannot be met in the district.</p> <p>The preparation of the evidence base for the LPR was largely undertaken prior to the COVID 19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p>
Penny Allum (lpr1173)	<p>I am writing to voice my strong objection to the 2,500 housing development proposed for the rural area north of Thatcham. This proposal shows both weak leadership and lazy planning by West Berkshire Council. The argument given in favour of the proposal seems to be, “We have to build this number of houses and if we don’t accept we may have something worse forced on us by central government, and there are no better alternative sites”. West Berkshire Council should be challenging the annual building requirement, as other local authorities have done. Given the recently extended exclusion zone around AWE, together with the AONB and flood plains, you should be arguing forcibly for reduction in this building requirement.</p>	<p>West Berkshire Council did make representations to central government on its consultation on proposed changes to the standard method for calculating local housing need. The proposed formula, which would have meant a significant increase for West Berkshire, was not implemented and the formula amended only for the largest settlements in the country. West Berkshire’s figure did not change.</p> <p>As outlined in response to lpr1189, above, this figure is not necessarily the same as the requirement but there is no evidence to show that the minimum housing need cannot be met in the district.</p>
Maria Kelly (lpr1243)	<p><i>(Comment on housing needs contained in representation lpr1242 on SP17)</i></p> <p>Housing needs – finally, it has to be asked whether those forecasts of West Berkshire’s future housing needs are still accurate and relevant in the aftermath of Brexit and the coronavirus episode. The long-term economic and social consequences of both those major events are uncertain, but pointers seem to be towards less growth, less inward migration, a lessening</p>	<p>The government’s standard method is used to determine the Local Housing Need, which forms the starting point for the housing requirement. The standard method formula was updated in December 2020 (although it did not result in a change for West Berkshire).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>need for workers to concentrate in the south-east of the country etc. I believe it would be irresponsible of WBC to move forward with any major infrastructure changes at this time, but most especially with large-scale housing projects such as in its SP17 proposal.</p>	<p>The preparation of the evidence base for the LPR was largely undertaken prior to the COVID 19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years</p>
Jason Allum (lpr1248)	<p><i>(Comment on housing numbers contained in representation 1246 on SP17)</i></p> <p><b>1. Housing Numbers</b></p> <p>The projected figure of housing required in West Berkshire is debatable. It is known fact that the number of places at Primary Schools are undersubscribed; this can only be due to a reduction in numbers of the younger generation. This is backed up from the graph on the West Berkshire Website, the actual population curve is flattening. This single fact seems to have been ignored. The demographic of the population is therefore, obviously changing and this needs to be taken into account in any calculation of the required housing.</p> <p>As the cost of housing in the South is expensive the older generation have and will continue to move west, downsize and live comfortably off the proceeds and their retirement plans which again reduces the requirement.</p> <p>Wilson homes development at the Racecourse is committed to provide 1,500 dwellings over a ten-year build. This figure of sustained development seems to be had been totally ignored. What is more, it would appear that they have been constructed on the Kennet flood plain. However, evidently this is not the case, as the authority has given full approval and consent as the location was situated on well-draining gravel beds. This precedence opens a lot more areas that could be used for housing, rather than the restricted options illustrated in the proposed plan which is both misleading and ambiguous. Building can take place within the valley floor and have the</p>	<p>The government's standard methodology, which remains based on the 2014-based household projections, is used to determine the Local Housing Need, which forms the starting point for the housing requirement. It is not considered that there are exceptional reasons to deviate from the standard method in establishing housing need.</p> <p>It is recognised that more recent population and household projections show a less rapid growth in population and households. The government are however committed to the delivery of 300,000 homes per annum and the standard method has been formulated to result in this number at a national level in order to address the housing crisis.</p> <p>The Racecourse development has not been ignored in the calculation of housing land supply. Table 2 shows the 465 units still outstanding (under construction or not yet started) as part of the category of outstanding dwellings with permission. The Racecourse development lies in Flood Zone 1, whereas significant areas to the east lie within flood zone 3. LPR Policy SP6 is clear that the sequential approach will be strictly applied across the District, steering vulnerable development away from areas affected by flooding.</p> <p>The first strategic objective of the LPR relates to the mitigation and adaptation to the effects of climate change</p>

Respondent (with lpr ref)	Response	Council Response
	<p>advantages of the current infrastructure. Importantly the visual impact is very much reduced than building on the northern slopes of Thatcham and the area adjacent to the AONB.</p> <p>Brexit has reduced the number of Europeans legally seeking work and citizenship, and indeed, there has been an exodus of casual labour in all regions. Covid 19 will alter the shape of our county and the nature of future employment. This will particularly impact the younger generation seeking employment and the lure of jobs not only in our area but nationwide.</p> <p>Importantly most of us, particularly those making these important decisions, will have gone to their maker and will not be around in 2036. We have seen that the younger generation will not tolerate environmentally damaging decisions. Greta Thunberg and her followers are just the tip of an iceberg of a younger generation with valid concerns on the environment and green issues. Our legacy is to look long-term and provide an environment suitable for future generations not a short-term reaction to ill-advised imposed quotas.</p>	<p>and numerous policies within the LPR relate to environmental issues. The purpose of the planning system is to contribute to the achievement of sustainable development, which includes the social objective of ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations.</p>
Julian Dobbins (lpr1258)	<p><i>[Comments also in SP17 lpr1257]</i></p> <p><b>Failure to acknowledge housing needs based on household type, nor recognise the opportunities for commercial property re-use and town centre regeneration</b></p> <p>SP12 (Approach to Housing Delivery) states:</p> <p><i>Provision will be made for 8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520– 575 dwellings per annum. The target figure of 575 dwellings per annum does not constitute a ceiling or cap to development.</i></p> <p>In the most recent ONS household forecast data, which covers the period 2018 - 2028, the entirety of West Berkshire's housing growth is described as</p>	<p>See response to lpr1248 (above) regarding household projections and housing need.</p> <p>Regarding housing mix, this is covered in Policy SP18 where Table 3 forms part of the supporting text. See response to lpr2457 in the Council responses on SP18.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>2482, suggesting a 'necessary' annual figure (at least for the period covered) much lower than put forward in this proposal.</p> <p>Furthermore, regarding housing mix, the proposal (table 3 in SP12) shows that 60% - 70% of Market housing and 35% - 45% of Affordable housing will be 3 or 4 bedroom houses. ONS data shows that by far the highest growth in housing demand for West Berkshire will come from one-person households (10.7%, versus growth rates of -6%, -8.9% and -11.2% for families with 1, 2 or 3+ dependent children respectively).</p> <p>Given the housing mix suggested by the ONS forecast data, the proposal seems completely out of touch with the reality of local needs. In light of the changing nature of town centres, as retail moves on online, and an ageing population needing access to public transport, does it not make much more sense to repurpose unused commercial property for residential use, and in doing so change the declining nature of the high street, provide easier access to local facilities (especially for the ageing population) and reduce dependency on short car journeys clogging our streets and adding to the community's carbon footprint?</p>	
<p>Debby Reynolds (lpr1307)</p> <p>David Copas (lpr1433)</p>	<p><b>Response to consultation by West Berkshire Council on Emerging Draft West Berks LPR and Thatcham Growth Study Stage 3 report by David Lock Associates</b></p> <p><i>[NB. The response is recorded all together under lpr1305 for SP17 NE Thatcham, and separately in lpr 1306, 1308, 1309 and 1310. It keeps the original numbering of the recommendations.]</i></p> <p>Spatial strategy SP3 and 4 reflect many aspect of national policy. However there is no evidence that the policy alteration associated with exclusions around AWE Burghfield or Aldermaston have been taken into account centrally, thereby updating the national allocations. Residents can</p>	<p>The assessment of local housing need using the government's standard method takes no account of land constraints or supply. It is purely based on the 2014-based household projections with an uplift to reflect affordability issues. The Council made representations when consultation was undertaken on proposed changes to the methodology.</p> <p>The housing requirement figure needs to show the extent to which the identified housing need can be met over the plan period. The HELAA assesses land availability in West</p>

Respondent (with lpr ref)	Response	Council Response
	<p>rightly expect the Council to have challenged this at the highest level, including by Judicial Review, before producing a plan B such as the Thatcham development. All the materials in the review predate the dramatic alterations associated with online shopping and the COVID-19 pandemic. Therefore it is clear that the housing allocations are flawed in several respects.</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 4 – provide clear evidence of UpToDate national comparable figures for developable land.</b> This must demonstrate that reassessment centrally has been undertaken, demonstrate the impact of this and COVID-19 are all accounted for in the Local plan review. Set demanding targets for conversion of brown field commercial property to residential.</li> </ul>	<p>Berkshire and there is no evidence to show that the minimum housing need cannot be met in the district.</p> <p>The preparation of the evidence base for the LPR was largely undertaken prior to the COVID 19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.</p> <p>The recommendation to provide national comparable figures for developable land is not one that the LPR can address. The recent White Paper included the proposal that the housing requirements for Local Plans be set centrally in the proposed new planning system but contained little detail on how that would be calculated.</p>
Graham Storey (lpr571)	<p>Too dependent on the out of town estates around Sandford and NE Thatcham</p> <p>The contribution that windfall sites is underestimated. There should be a push for mixed development in the industrial areas around Thatcham station, and the proposed developments at Sandford and NE Thatcham should be scaled back substantially or removed entirely.</p>	<p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does support development of previously developed sites within the settlement boundaries and any large and medium sites that do come forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The Council, however, needs to be able to demonstrate that the housing requirement can be met in a plan-led fashion rather than relying on brownfield land to come forward at the appropriate time. The current protected employment areas are proposed to be retained as designated employment areas in order to support the needs of the local economy. This does not rule out appropriate mixed use development.</p>
<p>Jane Halliday (lpr614) Ian Halliday (lpr615)</p>	<p>There should be a much greater emphasis placed on the contribution that windfall sites can make, and consequently there should be a push for mixed development in the industrial areas around Thatcham station. The proposed developments at Sandford and NE Thatcham should be scaled back substantially or removed entirely.</p>	<p>See response to lpr571 (above)</p>
<p>Tim Hall (lpr649)</p>	<p>Over reliance on greenfield development</p> <p>Further study is required to assess existing uses and trends in:</p> <ol style="list-style-type: none"> <li>1. retail (shopping going online with major stores and chains folding and retail property values plummeting), and</li> <li>2. employment (more home working).</li> </ol> <p>With a view to finding substantially greater contribution to housing from brownfield sites and adaptation of property in town centres. Think of being another Chichester!</p>	<p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The preparation of the evidence base for the LPR was largely undertaken prior to the COVID 19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. Respondent (with lpr ref)	Response	Council Response
Chris Willett (lpr1450)	<p><b>Challenge the Need</b></p> <p>The reduction in available land to develop has been reduced recently by the 30% increase in the areas of the DEPZ's around Aldermaston and Burghfield and I would urge WBC to challenge Central Government on the housing allocation.</p>	<p>West Berkshire Council did make representations to central government on its consultation on proposed changes to the standard method for calculating local housing need. The proposed formula, which would have meant a significant increase for West Berkshire, was not implemented and the formula amended only for the largest settlements in the country. West Berkshire's figure did not change. This figure is one for need and takes no account of land availability.</p> <p>As outlined in response to lpr1189, above, the housing need is not necessarily the same as the housing requirement but there is no evidence to show that the minimum housing need cannot be met in the district.</p>
Nataliya Topliss (lpr803)	<p>There is excessive stock of homes in Thatcham and no infrastructure to support the housing.</p> <p>West Berks Council's strategy of 2012 identified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	See response to lpr807 on SP17 North East Thatcham.
Ian Parsons (lpr829)	<p>We hope that the formula for determining housing need is the same for all authorities.</p> <p>The replacement of old houses for new should be on a 'like for like' basis.</p>	<p>It is not the same for all authorities. The formula for determining local housing needs involves an uplift for the 20 largest urban centres in the country.</p> <p>Redevelopment of outdated housing with higher density development may be appropriate and result in greater efficiency of land use. Sites will be considered on a site by site basis.</p>
Councillor Tony Vickers (lpr538)	<b>Two Reasons:</b>	The housing requirement figure needs to show the extent to which the identified local housing need (LHN),

Respondent (with lpr ref)	Response	Council Response
	<p><b>1. The Numbers.</b> We are not confident that the total numbers of new dwellings required in the new Plan Period is stable enough for us to be able to comment adequately at this stage.</p> <p>Sites for far too many homes are proposed to be allocated. Section 6.12 under “Future Supply” says sites for a further 1,661 dwellings need to be found, however the sites proposed to be allocated would total 2039 homes an excess of 378.</p> <p>We note in 6.6 that the Council admits that the Government formula for deciding the target number is likely to change. We also query the figure for numbers of homes already delivered in the current Plan and await publication of the latest Annual Monitoring Report.</p> <p>We recognise that the target number is a minimum and not a ceiling. We also support making provision for more new homes than the minimum required in order to be sure that the Council can defend against any accusation that a 5-year housing supply cannot be met from allocated sites (6.18). However we believe the basis for the number should be understood more clearly by local people. At present it is not easy to understand even if one has been involved in the process.</p> <p>Currently it feels to us as though the number makes much insufficient allowance for ‘windfall’ and is too high – by up to 500 over the Plan Period, especially if London Road Industrial Estate alone is being promoted for at least 250.</p> <p>There is far too little allowance being made for windfall because only sites of under 10 units are being counted. ALL windfall sites should be included with the handful of large sites allocated elsewhere in the plan being subtracted. An allowance for homes converted from offices, etc. using permitted development rights should be included.</p>	<p>calculated using the government’s standard method, can be met over the plan period. The HELAA assesses land availability and there is no evidence to show that the minimum housing need cannot be met in the district. The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met. Though the LHN will change annually as affordability ratios are updated and the time period of the assessment rolls forward, these changes are not expected to be so significant that they would increase the LHN above the range proposed.</p> <p>The housing land supply does show a modest excess over the requirement target but there needs to be flexibility in the supply. Some sites may not deliver as expected or at all. Some may, as a result of this consultation and further evidence, not be allocated in the next version of the plan.</p> <p>The latest Annual Monitoring Report, for 2020/21 has been published and records the number of completions in the current plan period. The AMR for 2021/2022 will be published in January 2023.</p> <p>Support for provision of new homes above the minimum requirement is noted.</p> <p>A Housing Background Paper will accompany the publication version of the Local Plan Review and hopefully will clarify the basis for the housing requirement.</p> <p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does, though, support development of previously developed sites within the settlement boundaries and any large and medium sites that do come</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Although we realise there is already some flexibility in the Plan, we wish to see more. Our own amendments to certain policies are designed to give additional flexibility to the Plan, given the uncertainty about the post-Covid and post-BREXIT environment, which is likely to add to the number delivered through windfall.</p> <p>Among the selected minor sites (RSA policies) are several which are already largely built out and a few which have been refused for smaller numbers than they are said in this draft to be capable of providing. These are itemised in some cases later in our responses. We realise that the list of smaller sites in the Plan and numbers therein will change but would hope that the evidence submitted at Reg.19 stage to the Inspector will be more robust.</p> <p>The contribution from permitted development (PD) conversions from offices has been extremely high in recent years and this source of “new” homes may be exhausted. However we would like to see more clarity about how this source has been treated in the calculation, given that it is equally possible that many of them may never actually be occupied because of their poor quality and changes in the housing market. This could result in a technical loss of net housing numbers.</p> <p><b>2. We wish to see mention of Regeneration here.</b> In a "Housing delivery approach" the need to improve the quality of existing homes through regeneration, with a focus on tackling climate change through improved insulation and reducing fuel poverty, is as important as supply of new homes and will involve 'development'. Recent Government announcements have highlighted this. This policy should be linked to the Housing Strategy.</p> <p>This will assist with the aim of achieving carbon neutral by 2030 and also upgrade properties that have unavoidably high carbon fuel usage, in accordance with the council's Housing Strategy.</p>	<p>forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met. The Council needs to be able to demonstrate that the housing requirement can be met in a plan- led fashion rather than relying on brownfield land to come forward at the appropriate time.</p> <p>The LRIE has been assessed in the HELAA and through the site selection process in the same way as other sites. It is proposed to be retained in the plan as a designated employment area, although it is recognised within the supporting text to Policy SP20 that the area has scope for comprehensive regeneration to maximise the potential of the site and that office development may be appropriate. There may be scope for mixed development, including residential, and any application would need to be assessed against the Local Plan policies as a whole.</p> <p>Cllr Vickers argues for an allowance for permitted development of offices to homes but goes on to say that the supply may be exhausted. This highlights the uncertainty of relying on the continued delivery of this type of housing to meet the identified need. There is very little basis for calculating a windfall allowance for office conversions which would be applicable across the plan period.</p> <p>The existing housing allocations in the HSA DPD have been rolled forward, but where the site is completed or where construction is underway, they will be excluded from the LPR. All sites will also be reviewed to take account of any representations and/or additional information.</p> <p>With regard to the inclusion of permitted development in the calculation of housing supply, where prior approval has</p>

Respondent (with lpr ref)	Response	Council Response
	<p>No change to the numbers at this stage. We first wish to see the figures thoroughly checked by officers and the basis for windfall numbers – especially from PD - reviewed.</p> <p>We also wish to see a policy here to allow loss of existing homes if it can be shown they are likely not to remain habitable through the Plan Period but they can be replaced <i>in situ</i> with a net long term gain in terms of tackling climate change and no net loss of habitable dwellings.</p> <p>Suggestion: add to last sentence “.... including replacement of dwellings that are unavoidably expensive to heat by carbon fuels, where the net long-term cost (including cost in use) can be shown to be significantly reduced by re-build and there is no net loss in terms of numbers of dwellings on the development site.”</p>	<p>been granted, the units are included in the supply (see Table 2 in policy SP12). It is quite likely that not all these will be built out and of course more will be continue to be permitted. The uncertainty, particularly over the contribution of office to residential conversions is why the plan needs to have the flexibility to be able to show higher potential supply than the minimum requirement.</p> <p>Improvement to the quality of existing homes is largely outside the scope of the LPR although any development requiring planning permission would need to accord with the DM policies such as Proposed Submission Policy DM4 Building Sustainable Homes and Businesses.</p> <p>We note that no change is sought to the housing numbers. We can also assure Cllr Vickers that figures are carefully checked: monitoring is carried out on an annual basis. The Housing Background Paper to accompany the Reg 19 consultation will include the reasoning behind the windfall allowance that is proposed.</p> <p>The policy as it currently reads does not prevent redevelopment of dwellings and the policy for building sustainable homes and businesses (DM4) would apply to any redevelopment proposal as development plan policies need to be read together. No change is therefore proposed.</p>
Peter Norman (lpr1030)	<p>SP12 this entire section needs to be re-written in light of a review of the 2005 exercise as to how best to meet the districts housing requirements as the current housing delivery plan is based on outdated assumptions.</p> <p>Changes seeking: To review how we meet housing requirements in light of the environmental challenges and the changes to work/leisure balances brought about by Covid 19</p>	<p>It is presumed that the respondent is referring to the consultation on Options which was carried out in October 2005 as part of the preparation of the first Core Strategy, submitted in 2006 and then withdrawn. Since then the strategy has been reviewed through the subsequent Core Strategy, which was found sound at Examination and adopted in 2012.</p>

Respondent (with lpr ref)	Response	Council Response
		The preparation of the evidence base for the LPR was largely undertaken prior to the COVID 19 pandemic, the impact of which will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years.
Colin Duff (lpr456)	<p>Beg to point out a typographical error in 6.13</p> <p>"This includes the strategic allocation at North West Thatcham for up to 2,500 homes where delivery of at least 1,250 dwellings is anticipated within the plan period."</p> <p>Should this refer to North East Thatcham?</p>	Comments noted. The typo will be corrected.
Susan Millington (lpr462)	I believe the contribution that windfall sites is underestimated, there should be a push for mixed development in the industrial areas around Thatcham station, and the proposed developments at Sandleford and NE Thatcham should be scaled back substantially or removed entirely.	<p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does, though, support development of previously developed sites within the settlement boundaries and any large and medium sites that do come forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met. The Council needs to be able to demonstrate that the housing requirement can be met in a plan-led fashion rather than relying on brownfield land to come forward at the appropriate time.</p> <p>The industrial areas at Thatcham are proposed to be retained as designated employment areas. The plan must demonstrate that there is sufficient employment land to meet the economic needs of the District.</p>
Piers Allison (lpr489)	<b>The number of houses required in the overall plan</b>	The assessment of local housing need (LHN) using the government's standard method takes no account of land constraints or supply. It is purely based on the 2014-based household projections with an uplift to reflect affordability

Respondent (with lpr ref)	Response	Council Response
	<p>In the supporting text to Policy SP12, you explain the calculation basis from the NPPF that was defined and published in February 2019 (<a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/810197/NPPF_Feb_2019_revised.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/810197/NPPF_Feb_2019_revised.pdf</a>). However that calculation was established before the AWE REPIIR and the new DEPZ was set on 22 May 2019 (<a href="https://info.westberks.gov.uk/awe">https://info.westberks.gov.uk/awe</a>). Thus the 'housing demand number' set by the Government formula was determined before the area available for new housing in West Berkshire was shrunk by the enlarged safety zones around Aldermaston and Burghfield.</p> <p>The area of West Berkshire outside of the AONB is approx 182 km2. The areas of the two DEPZs within West Berkshire are approx 21 km2 (for Aldermaston) and 33 km2 (for Burghfield) = 54 km2 in total (using the smaller 'jagged edge DEPZ' rather than the larger OCZ 8km buffers).</p> <p>Thus the enlargement of the DEPZs has reduced the available West Berkshire non-AONB area by <math>54/182\% = 30\%</math>.</p> <p>West Berkshire Council should make representations to Government to argue for a reduced number of houses as a result of the DEPZ regulations coming in after the original demand calculations were made. The new provision should be for 6188-6842 (a reduction of 2652-2932 houses). In Policy SP4, West Berkshire is following the ONR's recommendation against development of 200 dwellings or greater from the larger Outer zone. If the reduction in available area due to that larger zone was to be considered, the number of houses in WBC's new provision should be even smaller.</p>	<p>issues. The Council made representations when consultation was undertaken on proposed changes to the methodology.</p> <p>The housing requirement figure needs to show the extent to which the identified LHN, calculated using the government's standard method, can be met over the plan period. The HELAA assesses land availability and there is no evidence to show that the minimum housing need cannot be met in the district.</p>
Cllr Alan Macro (lpr757)	<p>Sites for far too many homes are proposed to be allocated.</p> <p>There is far too little allowance being made for windfall sites because only sites of under 10 units are being counted.</p>	<p>See response to Cllr Tony Vickers above (lpr538)</p> <p>Comments regarding RSA16 and 17 noted and considered under Policy SP14</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Section 6.12 under “Future Supply” says sites for a further 1,661 dwellings need to be found, however the new sites proposed to be allocated would total 2039 homes, an excess of 378</p> <p>ALL windfall sites should be included with the handful of large sites allocated elsewhere in the plan being subtracted (to avoid “double-counting”). An allowance for homes converted from offices, etc. using permitted development rights should be included.</p> <p>Sites RSA16 and RSA17 should be removed from the plan.</p>	
<b>Landowners, site promoters and developers</b>		
Barton Willmore for Donfield Homes (lpr2098)	<p><i>See attachments for full response.</i></p> <p>We <u>do not agree</u> with the proposed policy on the basis that the housing target is insufficient.</p> <p>The Council’s target figure does not incorporate sufficient uplift to meet the “substantial” affordable housing need of 319 dwellings per annum identified within the West Berkshire District Updated Housing Needs Evidence, May 2020 (Paragraph 9.7, page 80). Whilst it is acknowledged that the Council are not required to meet this need in full, the PPG states that “an increase in total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes” (Reference ID: 2a-024-20190220). The Council should uplift their housing target through the allocation of additional sites in order to deliver additional affordable homes. Failure to do so will result in an increased year-on-year deficit in terms of the number of affordable homes provided across the district over the plan period.</p> <p>In addition to the affordable housing need, West Berkshire should also be increasing their housing target in order to seek to meet a proportion of</p>	<p>The housing requirement seeks to ensure that, at a minimum, the LHN can be met. While greenfield allocations are a major source of affordable housing and the Council is justified in seeking to maximise the provision of affordable housing on eligible development sites, the inter-relationship between the affordable housing need and overall housing need is important. The LHN takes account of both net household growth and an upward adjustment to improve affordability. This upward adjustment will in itself increase the delivery of market and affordable housing. The affordable need is in comparison a gross figure which includes existing households who require a different size or tenure of home. In moving to a new home, these households would release existing properties for other households.</p> <p>The affordable needs modelling is very sensitive to the housing costs and earnings at the time of the assessment. Theoretically, the delivery of housing in line with the standard method should over time improve the affordability</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Reading Borough Council's unmet housing need. Against the standard method minimum, Reading's unmet need equates to over 4,000 dwellings over the recently adopted Reading Local Plan period. Reading is a highly constrained local authority and, given that the Eastern Urban Area of West Berks is contiguous with the west of Reading, West Berkshire should seek to meet some of this need. In particular, opportunities to accommodate development within settlements to the east of West Berks including those within the AONB should be explored. Our client's site at Lower Basildon (reference BAS1 within the West Berkshire Housing and Economic Land Availability Assessment ('HELAA') (February 2020)) would represent a site which, together with others, would contribute to meeting Reading's unmet need.</p> <p>The Council should increase their housing target and allocate further sites for development.</p>	<p>of market housing and thus, over time, reduce the scale of affordable housing need.</p> <p>There are also other means of delivering affordable homes, including use of public sector land and, where appropriate, through First Homes and rural exception sites.</p> <p>The Updated Housing Needs Evidence (July 2022) concludes that the affordable housing evidence does not per se specifically justify a higher housing requirement above the standard method.</p> <p>Please see response to Reading Borough Council (lpr1488) regarding unmet housing need.</p> <p>The site at Lower Basildon that is being promoted has been assessed through the site selection process. See response to lpr2099 on SP15.</p>
Prosper Infinity Ltd (lpr178)	<ol style="list-style-type: none"> <li>1. Avoid using greenbelt or undeveloped land where possible.</li> <li>2. Suggesting a redevelopment site in Thatcham that is brownfield i.e. developed upon and entirely hardstanding and demonstrates it is in a sustainable location.</li> </ol>	<p>The plan does aim to focus development within existing settlements and predominantly on brownfield land. The site at Newbury Leisure Park will be considered through the site selection process.</p>
Fisher German LLP for Mr Musgrave and Mr Begley (lpr1229)	<p>We support the Council's aim to try and deliver housing levels (9,775 dwellings) in excess of base Local Housing Need (8,840 dwellings). This approach is robust and in accordance with the NPPF in respect of seeking to boost significantly the supply of housing. This approach also helps protect the authority against non-delivery, ensuring a robust five year housing land supply and also ensuring the Housing Delivery Test is satisfied. We also support the commitment that any target in the Plan does not represent a</p>	<p>Support for approach on overall requirement noted.</p> <p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. It is based on the rate of small site windfall delivery (excluding permitted development) over the plan period (2006 -2022).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>ceiling and cannot be used to restrict legitimate housing from coming forward.</p> <p>It is however imperative that the Council can demonstrate clearly that the Plan will contain sufficient sites, including sufficient lead in times, to deliver a robust five-year housing land supply at time of adoption and also the overall quantum of housing required over the entire Plan period.</p> <p>Concern is raised in that the Council's assumptions for windfall development, and that past trends of windfall delivery can accurately predict future supply, where every windfall development removes a potentially suitable site from future supply. It does not stand to reason that within the settlement boundaries which are not extended, with only a finite selection of sites, the number of windfalls will remain consistent, unless there is clear and compelling evidence that there remains enough suitable land available for such delivery.</p> <p>Whilst we would of course always support appropriate development within the settlement boundary, due regard must be had for the contribution green spaces and open gaps make within settlement boundaries, encouraging their development can urbanise settlement centres, having a damaging impact on their form and character. We do not consider the Council's approach to windfall development is sound, and we do not consider the methodology used is justified in light of the above, nor is likely to be effective. The expected rate of windfall delivery should be reduced on the above basis.</p> <p>Further concern is raised at the lack of a published trajectory to support the plan. Without this information there can be no clarity as to whether the Council will be able to demonstrate a five year housing land supply, or even deliver the quantum of housing required over the entire Plan period, through the delivery of this draft Plan. In particular, a trajectory is required to show how the Council expects its allocations to be delivered, including assumed</p>	<p>Though windfall delivery varies from year to year and the allowance is not intended to accurately predict future supply, it is apparent from the monitoring of permissions and completions that is a consistent source of supply and there is no indication of this supply falling away. Table A.9 of the 2020/2021 Annual Monitoring Report (AMR) shows completions on allocated and non-allocated sites since April 2000. There is no year in that period when windfall delivery has fallen below 140 units. Delivery will continue to be monitored through the AMR to ensure that assumptions remain robust.</p> <p>The Council seeks to focus development in the more sustainable settlements but development control policies will ensure that regard is given to green spaces and to urban form and character in determining applications.</p> <p>A trajectory will be prepared to accompany the next stage of consultation. The trajectory and Five Year Land Supply will be monitored annually.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>lead in times and annual rates of delivery. If there are issues with the Council's approach which only become apparent through Regulation 19, the only recourse will be main modifications at Examination, this is not in the interests of good plan making where such matters should be explored fully at Regulation 18, to ensure any Plan submitted is sound.</p> <p><b>Changes sought</b></p> <p>Amend the windfalls rates to a more appropriate rate, as discussed above.</p> <p>Publish a housing trajectory to support the Plan.</p>	
Solve Planning for Emily West (lpr1424)	<p>The policy seeks to delivery sufficient housing within the Borough. The policy needs to be build in some flexibility to take account of changes to the Borough's housing requirement. However, the policy states that the identified housing figure is a starting point and does not "constitute a ceiling or cap to development".</p> <p>A flexibility around the identified housing figure needs to be retained.</p>	Comments noted. It is considered that retaining the requirement as a range does introduce some flexibility.
Southern Planning Practice Ltd for the Saunders Family (lpr2119 and lpr1927)	<p>Paragraph 11 of the National Planning Policy Framework 2019 states that Local Plans should positively seek opportunities to meet the development needs of their area - as a minimum – but also be sufficiently flexible to adapt to rapid change as well as any needs that cannot be met within neighbouring areas. This stance is also reiterated in the Planning Policy Guidance. Policy SP12 sets out that provision will be made for 8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520– 575 dwellings per annum. It goes on to confirm that the figure of 575 dwellings per annum does not constitute a ceiling or cap to development. We are supportive of this approach, however, we believe the policy should be worded to set out that the objectively assessed housing</p>	<p>Support for approach noted. The supporting text does state that SP12 indicates the housing requirements as a range, with a minimum requirement of 513 dwellings per annum meeting the 2022 LHN.</p> <p>Please see response to Reading Borough Council (lpr1488) regarding unmet need in the wider area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>should be a <b>minimum</b> (our emphasis) figure in accordance with paragraph 11 b) of the National Planning Policy Framework.</p> <p>In addition to West Berkshire’s Housing need, the Local Plan Review should look to firstly be flexible to adapt to rapid change and secondly help to meet unmet need arising from neighbouring areas. West Berkshire falls within the Thames Valley area and therefore should look to help accommodate any unmet need which is arising in this area.</p> <p>The governments standard method for calculating objectively assessed housing needs was first consulted on in 2017 and adopted in 2018. This standard method intended to shift the focus away from the ‘numbers’ question and towards the how and where of building new homes. Subsequently in August 2020 the government consulted on a proposed new standard method which had a greater focus on affordability. However, this new standard was met with much criticism which resulted in the Government withdrawing the proposed standard method in December 2020 and reverting back to the method introduced in 2018 with the addition of a 35% ‘top up’ to the 20 largest cities and urban areas.</p> <p>Under the August 2020 proposed standard method, West Berkshire’s housing need increased from 513 (calculated under the original 2018 standard method) to 692. It has now been reduced to the original figure of 513 homes per annum. Whilst the housing need for West Berkshire has not changed, the housing need for Reading Borough Council has significantly increased. The 2018 standard method set out an objectively assessed need of 649 whilst the latest December 2020 method has increased this to 876 dwellings per annum. This figure results in an additional 227 dwellings per annum. Therefore, in accordance with paragraph 11 and the duty to cooperate, West Berkshire and other local planning authorities within the Thames Valley area should look to help accommodate some of Reading Borough’s needs.</p>	

Respondent (with lpr ref)	Response	Council Response
Pro Vision for Rivar Ltd (lpr1512 and lpr1635)	<p>The Council needs to ensure that there is sufficient flexibility in the Local Plan with regards to the overall housing strategy.</p> <p>The National Planning Policy Framework ('the Framework') acknowledges at paragraph 68 that small and medium sized sites '<i>can make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly</i>'. Accordingly, the Local Plan should identify a range of sites of various sizes – from small scale to large scale developments - to provide extra resilience and flexibility to the Local Plan.</p> <p>With this in mind, we welcome the proposed allocation of the 'Land north of Southend Road, Bradfield Southend' (lpr1512) for a small/medium scale development which will provide choice and contingency to the market. As suggested in the Policy, the site capacity will be subject to further assessment.</p> <p>With this in mind, we welcome the proposed allocation of our client's land for a small-scale development of around 10 dwellings at Newbury (lpr1635) which will provide choice and contingency to the market.</p>	Support for approach noted. The sites promoted are considered in the responses to comments on RSA5 and RSA25.
Pro Vision for Trustees of Allan Snook Will Trust (lpr1917)	<p><i>Full representation on behalf of the Trustees of the Allan Snook Will Trust promoting land to the south of the Recreation Ground, Boxford is attached.</i></p> <p><b>Housing Requirement</b></p> <p>The Government's standard housing method results in a minimum requirement of c. 513 dwellings per annum (dpa) in West Berkshire. The Consultation Document refers to a range of 8,840 to 9,775 net additional homes in West Berkshire up to 31 March 2037. This equates to between 520 to 575 dpa. The target of 575 dpa is a c.10% uplift on the local housing need, as calculated using the standard method.</p>	<p><b>Housing Requirement</b></p> <p>The housing requirement aims to ensure that the LHN is met at a minimum and thus boost the supply of housing. The housing requirement issues relating to affordable housing and un-met need from other authorities are covered in the responses to Barton Willmore for Donfield Homes (lpr2098) and Reading Borough Council (lpr1488). The Council does not consider the requirement for the LPR should be increased although the plan will be subject to periodic review.</p> <p><b>Housing Supply</b></p>

Respondent (with lpr ref)	Response	Council Response
	<p>However, it is considered that the level of housing currently proposed is:</p> <ul style="list-style-type: none"> <li>insufficient to support the Government’s objective of significantly boosting the supply of housing;</li> <li>significantly below the Council’s aspirations to achieve and address the affordability problem within West Berkshire; and</li> <li>does not take account of potential un-met need from neighbouring authorities (particularly from Reading) given the recent changes in local housing needs.</li> </ul> <p>With the above in mind, it is considered that West Berkshire’s housing requirements should be increased. In this respect, the Council should deliver this additional housing proportionately across the district, including identifying any reasonable scale opportunities at the ‘smaller villages’ with a defined settlement boundary, such as Boxford.</p> <p><b>Housing Supply</b></p> <ul style="list-style-type: none"> <li>need to apply a 10% non-implementation rate to the ‘committed’ housing supply where appropriate.</li> <li>the over-reliance on windfall provision, which by its nature is uncertain;</li> <li>the need to review the deliverability of Sandford Park as a strategic allocation given recent planning refusals and lack of evidence to address technical concerns;</li> <li>the need to undertake further evidence to demonstrate the deliverability and viability of NE Thatcham; and</li> <li>the unrealistic housing provision/trajectory during the plan period for the strategic allocations at both Sandford Park and NE Thatcham.</li> </ul>	<ul style="list-style-type: none"> <li>There is no evidence for a 10% non-implementation rate to the committed supply. The Council has introduced flexibility by proposing a range with a target some 5% above the LHN.</li> <li>The windfall allowance is considered modest in relation to past delivery. See response to Barton Willmore for Donfield Homes (lpr2098).</li> <li>The Council remains committed to the delivery of Sandford Park as the most appropriate location in Newbury for significant residential development. Outline planning permission was granted for the eastern part of the site in May 2022, and there is a planning application for the western part of the site pending determination.</li> <li>The Thatcham Strategic Growth Study has considered viability and further whole plan viability work has been undertaken and will be published with the Reg 19 consultation.</li> <li>The emerging plan assumes delivery of 1,500 units at Sandford Park and 1,500 at North East Thatcham by 2039. This is not considered unrealistic. Reference to the Lichfield’s research report has been made, and also the site deliverability forms submitted by the promoters and more importantly the progress being made on the applications which determines whether the site meets ‘deliverable’ definition in the NPPF. Progress will be continually monitored and adjustments made to the trajectory.</li> </ul> <p>Opportunities for limited development in the smaller villages of the District may arise through the review of settlement boundaries.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>It is considered that the Council needs to identify further development to reduce this potential housing shortfall and provide extra resilience and flexibility to the Local Plan in the event that the anticipated provision does not deliver. Accordingly, sites in the ‘smaller villages’ with a defined settlement boundary – such as Boxford – could help the Council meet any identified housing shortfall.</p>	
<p>Turley Associates for A2dominion Housing Group (lpr1497)</p>	<p><i>Full representations made by Turley on behalf of A2Dominion in relation to Land East of Reading Road, Streatley are attached.</i></p> <p>Emerging Policy SP12 (Approach to Housing Delivery) identifies the Councils plans to provide ‘8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520– 575 dwellings per annum. The target figure of 575 dwellings per annum does not constitute a ceiling or cap to development.’</p> <p>A2Dominion note that the historically low levels of housing delivery within Streatley has resulted in a significant restriction in the availability of affordable housing within the village. Subsequently, this has prevented the presence of younger residents settling into the village to contribute towards maintaining the vitality and vibrancy of the settlement.</p> <p>The NPPF states ‘Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby’. (NPPF Paragraph 77 (2019))</p>	<p>The proposed approach is to continue to focus development in the more sustainable settlements of the District as outlined in Policy SP3 Settlement Hierarchy. See response to this consultee’s representations lpr1496 on Policy SP3 and lpr1494 on SP15.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The emerging direction of housing delivery for Streatley would limit the opportunity for development and fail to address opportunity for the village to 'grow and thrive'.</p>	
<p>Pro Vision for Newbury Racecourse (lpr1681)</p>	<p><i>Full representations on behalf of Newbury Racecourse attached</i></p> <p><b>Context</b></p> <p>The Framework requires that the minimum number of homes needed should be determined by a local housing need assessment, conducted using the standard method in national planning guidance unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for (paragraph 60).</p> <p>It is noted that the Berkshire (including South Bucks) Strategic Housing Market Area (SHMA) study (dated, February 2016) indicates a need for an average of 665 dwellings per annum (dpa) for the period 2013 – 2036 across West Berkshire. This included key uplifts to support economic growth and to improve overall affordability.</p> <p>The Council's Regulation 18 Local Plan Review consultation in November 2018 refers to the standard method with respect to both the 2014 and 2016 based household projections. The minimum housing requirement was 635 and 551 dpa, respectively.</p> <p>In Summer 2020, the Government consulted on a proposed new standard method which placed a greater emphasis on addressing affordability. This standard method would result in a minimum requirement of 692 dpa for West Berkshire. However, due to political and mediapressure this proposed</p>	<p><b>Context</b></p> <p>The LHN calculated using the standard method results in a figure (509 at March 2021) that is substantially higher than the projected growth in households (an average of 223 households per annum is projected for the period 2021 – 2031 in the latest 2018-based ONS household projections).</p> <p>Pervious assessments of need were calculated in a different manner and using evidence that is now outdated. The Council does not consider that there is justification to deviate from the standard method to derive the figure of housing need.</p> <p><u>Affordable Housing and Affordability</u></p> <p>See response to Barton Willmore for Donfield Homes (lpr2098) regarding affordable housing and affordability.</p> <p><u>Interim Sustainability Appraisal (SA)</u></p> <p>Comments on the SA are noted. It is considered that the scenarios used are appropriate in indicating the potential impacts of different levels of growth.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>method was scrapped by the Government and replaced with the 2018 method, albeit with an adjustment to top up the number in the twenty largest urban areas in England by 35% (including Reading).</p> <p>The standard method now results in a minimum requirement of c. 513 dpa in West Berkshire. The Consultation Document refers to a range of 8,840 to 9,775 net additional homes in West Berkshire up to 31 March 2037. This equates to between 520 to 575 dpa. The target of 575dpa is a c.10% uplift on the local housing need, as calculated using the standard method.</p> <p>With the above in mind, it is considered that there is justification for additional need and demand for higher housing growth in West Berkshire.</p> <p><b>Critique</b></p> <p><u>Affordable Housing &amp; Affordability</u></p> <p>The Updated Housing Needs Assessment (dated, May 2020) prepared by Icenl (on behalf of the Council) confirms that there is a “notable need for affordable housing, and it is clear that provision of affordable housing is an important and pressing issue in West Berkshire” [our emphasis]. The conclusion adds that “the evidence does however suggest that affordable housing delivery should be maximised where opportunities arise” [our emphasis]. Further, with regards to affordability, the report confirms:</p> <ul style="list-style-type: none"> <li>• Median house prices in West Berkshire are 44% higher than the national median and 8% higher than the regional median.</li> <li>• Entry-level house prices in West Berkshire are 72% higher than the national equivalent and 11% higher than entry level prices across the South East.</li> <li>• Entry level housing is 10.4 times lower quartile earnings when compared with the national ration of 7.3 times lower quartile</li> </ul>	<p><u>Housing Delivery</u></p> <p>The Council believes a buffer of approximately 5%, expressed through the use of a range in the housing requirement is sufficient to provide flexibility to meet at least the LHN. The Council has a healthy five year supply of housing sites and the plan will be subject to continuous monitoring and 5 yearly review.</p> <p><u>Duty to Co-operate</u></p> <p>Please see response to Reading Borough Council (lpr1488) regarding unmet need in the wider area.</p> <p><b>Meeting Housing Need</b></p> <p><u>Existing Allocations</u></p> <p>The majority of allocated sites have planning permission or applications pending decision. The deliverability has also been assessed through the LPR process. It is not considered necessary to add a 10% non- implementation rate to those few sites that are yet to receive planning permission.</p> <p><u>Non-allocated Sites with planning permission</u></p> <p>Similarly for non-allocated sites it is not considered necessary to add a 10% non-implementation rate. There</p>

Respondent (with lpr ref)	Response	Council Response
	<p>earnings. Indeed, affordability ratios have risen sharply since 2013 from 7.6 to 10.4.</p> <p>The report advises that the scale of affordable housing need is c.319 dpa. This is c.55-61% of the overall housing need referred to in the Consultation Document. Accordingly, the report advises that theoretically if 35% of all new housing delivered was for affordable housing around 910 dpa would be needed to meet West Berkshire’s affordable housing need in full. Whilst it is acknowledged that the delivery of housing in line with the standard method figure may over time improve the affordability of market housing (and thus reduce affordable housing needs), West Berkshire’s past housing delivery rates have generally been in line with the current minimum local housing need and affordability problems remain pressing.</p> <p>The report concludes that “<b><i>the Council might consider through the plan making process whether higher housing provision would have positive benefits on affordable housing delivery...</i></b>”[our emphasis]. For this reason, it is considered that there needs to be a significant increase in the need for all tenures of dwellings above the local housing need to address affordability problems in West Berkshire. This is evidenced by the Council’s housing figures in the Berkshire SHMA (c.665 dpa) and the consulted standard method that placed greater emphasis on affordability (c. 693 dpa).</p> <p>The current proposed level of housing is not aspirational and will not help the Council deliver its Local Plan ‘Vision’ for “<b><i>making available housing of different types, sizes, tenures and affordability will be a priority</i></b> in order to provide West Berkshire residents with homes and environs at sustainable locations in towns and villages that meet their needs, whatever their income, stage of life and ability” [our emphasis].</p> <p><u>Interim Sustainability Appraisal (SA)</u></p> <p>The SA, at Appendix 4, assesses alternative levels of growth. This includes:</p>	<p>is no evidence to support a 10% rate and there is flexibility already built into the plan.</p> <p><u>Windfall Allowance</u></p> <p>The windfall allowance is considered modest in relation to past delivery. See response to Fisher German LLP for Mr Musgrave and Mr Begley (lpr1229)</p> <p><u>Large Strategic Sites</u></p> <p>See response to Pro Vision for Trustees of Allan Snook Will Trust (lpr1917) and Council’s response to this consultee on SP16 (lpr1683) and SP17 (lpr1687)</p>

Respondent (with lpr ref)	Response	Council Response
	<ol style="list-style-type: none"> <li>1. 'Baseline Need' (513 dpa);</li> <li>2. 'Boosting Supply' (Range 520-575 dpa); and</li> <li>3. Significantly Boosting Supply' (692 dpa).</li> </ol> <p>The SA appraisal demonstrates that significantly boosting the supply to 692 dpa has the greatest impact on meeting the affordable housing need and is scored 'significantly positive'. This option will also have significantly positive economic benefits and positive social benefits. Nonetheless, it is noted that this level of growth may have negative effects on several environmental objectives. Overall, this option is scored 'neutral', with the other two options scoring 'positively'. However, it is noted that the SA appraisal scores options ii and iii the same with regards to economic benefits (i.e. SA Objective 10), but clearly a significant increase in housing delivery more closely supports delivering this SA Objective.</p> <p>Furthermore, to assess all 'reasonable alternatives', the SA should include an assessment of the Berkshire SHMA figure and/or an appropriate 20-25% buffer to the standard method (i.e. 625 to 665 dpa). This approach would help address the Council's affordability issues and still deliver significant social and economic benefits. Furthermore, the environmental impacts would be less when compared to the higher figure of 693 dpa.</p> <p>Therefore, it is considered that the SA currently fails to provide clear and credible reasons for selecting the 520-575 dpa as its preferred approach, and which does not support the Council's 'Vision' for the Local Plan to address affordability as a priority. Accordingly, the current approach within the Consultation Document is not justified.</p> <p><u>Housing Delivery</u></p> <p>Furthermore, provision should be made within the Plan for additional development sites to provide for a higher rate between 625-665 dpa to significantly boost housing supply in accordance with the Framework (paragraph 59). As evidenced above, the provision of a 20% plus buffer to</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>the local housing need would help address affordability problems and demographic trends in line with the Council's evidence base. In addition, an appropriate buffer will support greater flexibility in the Plan if the anticipated housing provision does not deliver, particularly as the Council is relying on the delivery of two large strategic sites for delivering its housing need (see section 3 for further comments).</p> <p><u>Duty to Co-operate</u></p> <p>The Consultation Document advises that there has been no request to take any un-met housing need from neighbouring authorities. With regards to Reading, the document acknowledges that in 2018 there was a possibility of some un-met need from Reading Borough, but this is no longer the case.</p> <p>Further assessment is required to establish the housing requirement owing to the unmet need from the wider Housing Market Area (HMA). In particular, the revised standard method (December 2020) significantly increases housing need in Reading. Reading has seen a 35% uplift as one of the largest urban areas in England taking their housing requirement up to 876 dpa (from 689 dpa currently planned for). As such, given Reading's limited land capacity to deliver additional housing requirements, there is potential for some un-met need from Reading. In this regard, West Berkshire is well placed to meet any need from Reading.</p> <p>Furthermore, Wokingham consulted on a draft Local Plan Update in February/March 2020. The majority of the additional need for development was going to be met through the creation of a garden town at Grazeley for 10,000 new homes, with 3,750 dwellings provided during the plan period. As such, given that Wokingham need to now look at alternatives to Grazeley as it may no longer be achievable (due to the extension of the DEPZ at AWE Burghfield) there may be potential for some un-met housing need from Wokingham.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Conclusion</b></p> <p>With the above in mind, it is considered that the level of housing currently proposed is:</p> <ul style="list-style-type: none"> <li>• insufficient to support the Government’s objective of significantly boosting the supply of housing;</li> <li>• significantly below the Council’s aspirations to achieve and address the affordability problem within West Berkshire; and</li> <li>• does not take account of potential un-met need from neighbouring authorities (particularly from Reading) given the recent changes in local housing needs.</li> </ul> <p>It is considered that West Berkshire’s housing requirements should be increased to between c.625-665 dpa. As such, provision should be made for approximately 10,625 to 11,305 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037. This level of housing will ensure delivery of the minimum local housing need, but also provides for choice and contingency to the market and reflect current and future demographic trends and housing market signals and affordability in West Berkshire.</p> <p>A further increase to the housing requirement may also be required to make a significant contribution to meeting any un-met housing need from neighbouring authorities.</p> <p>With the above in mind, it is considered that there are still sufficient deliverable sites within the HELAA to deliver this additional housing proportionately across the district in line with the settlement hierarchy, including at ‘land south of Newbury Racecourse’.</p> <p><b>Meeting Housing Need</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Context</b></p> <p>The Consultation Document identifies several sources of housing supply across the plan period. These include: retained allocations; existing commitments on unallocated sites; windfall sites; and through new allocations in the Local Plan Review and Neighbourhood Plans.</p> <p>Table 2: Housing Supply at March 2020 of the Consultation Document confirms that 4,653 dwellings have planning permission, 1,482 dwellings are allocated without permission (with a 1,000 dwellings from Sandford Park and 482 dwellings carried forward from the HSA DPD); and a windfall allowance of 1,979 dwellings. This amounts to 8,114 dwellings – and therefore to meet the proposed requirement of 575 dpa there is a need to find a further 1,661 dwellings during the plan period.</p> <p>The Consultation Document includes the delivery of two strategic urban extensions: Sandford Park (1,500 dwellings) and North-East Thatcham (2,500 dwellings). The Council assumes that 1,250 dwellings are deliverable at NE Thatcham within the plan period.</p> <p>It is proposed that a further 315 dwellings will be allocated via Neighbourhood Plans and 490 dwellings on newly allocated sites.</p> <p><b>Critique</b></p> <p><u>Existing Allocations</u></p> <p>The Council's Site Selection Background Paper (December 2020) provides an update on the deliverability of sites that have already been allocated in the Core Strategy or HSA DPD, but not substantially completed.</p> <p>The history of some of these sites identified in the supply that do not currently have planning permission or where a site's delivery has been</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>continually delayed clearly does not support confidence in their timely delivery. As such, it is considered that a 10% non-implementation rate applied to this supply would provide a more robust position.</p> <p><u>Non-allocated Sites with planning permission</u></p> <p>Similarly, Table 2 shows that nearly 2,954 dwellings is provided on un-allocated sites (including prior approvals) with planning permission. Again, a 10% non-implementation rate should be applied to this figure to provide a more robust position as it is unlikely that all these permissions will be delivered.</p> <p><u>Windfall Allowance</u></p> <p>The Consultation Document includes a windfall allowance of 1,979 dwellings up to 2037. It has been based on the average annual delivery on small sites of less than 10 units (excluding prior approvals for permitted development) over the existing plan period 2006 – 2020.</p> <p>However, it is recommended that the Council remove or significantly reduce this windfall allowance to provide greater surety of supply through allocations and without having to rely on the use of a windfall allowance which by its nature is uncertain. In addition, it is also worth noting the windfall allowance is taken from smaller sites (i.e. less than 10 new homes) and, therefore, a reliance on sites for potentially between 1-4 dwellings will not deliver any affordable housing and further exacerbate affordable housing need within West Berkshire.</p> <p><u>Large Strategic Sites</u></p> <p>It is anticipated that Sandleford Park and North East Thatcham will provide 1,000 and 1,250 dwellings up to 2037, respectively. The Council therefore</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>rely greatly on the delivery of these two large strategic sites to deliver the housing need over the plan period.</p> <p><i>Sandleford Park</i></p> <p>The Council's Site Selection Background Paper (December 2020) and 'Deliverability Update' does not refer to the latest refusal at Sandleford Park regarding planning application ref:20/01238/OUTMAJ for up to 1,000 new homes in October 2020. This follows several previous refusals since 2017. A current application is still being considered on part of the site for around 500 new homes.</p> <p>With the above in mind, the deliverability of a strategic level of development (i.e. 1,500 new homes) at Sandleford Park is questioned. There appear to still be numerous issues that have not been resolved despite the first planning application for the site being submitted in 2015.</p> <p>The latest planning application was refused for some 14 reasons, including [inter alia]: failing to ensure the holistic comprehensive development of the Sandleford Strategic Site Allocation; impact on the environment, protected sites, trees and several ancient woodlands; impact on the local highway network (including the A34); and failure to secure necessary infrastructure improvements via a S106 Agreement.</p> <p>The Site is not re-assessed in the Site Assessment Site Selection Background Paper (December 2020) because the Council contend that the principle has already been accepted through the adoption of the Core Strategy. However, this approach is flawed as clearly issues have developed that the Inspector at the time would not have known. Without further evidence that these issues affecting deliverability can be resolved, the inclusion of Sandleford Park within the Local Plan Review is unsound.</p> <p>If additional technical evidence can demonstrate that the site is still deliverable, there are concerns regarding the expected delivery of 1,000</p>	

Respondent (with lpr ref)	Response	Council Response
	<p> dwellings across the Plan Period. It is noted that the Council, at this stage, has not provided the expected rate of housing delivery over the plan period through a housing trajectory. Nevertheless, the Council do not include Sandleford Park within the Council's five-year housing land supply - and therefore first completions are not expected before the end of the current plan period (i.e. up to 2026). This is also the approach taken in the Council's Annual Monitoring Report (January 2021) which confirms that timing of delivery of Sandleford Park is "<i>likely to be largely in the period post 2026</i>" and Phase 1 Local Plan Review Transport Assessment (December 2020).</p> <p>Evidence suggests that for sites of around 1,500 dwellings, a realistic average annual build out rate is between 100 dpa to 120 dpa (Source: Lichfield's Start to Finish (2nd Edition) – How Quickly to Large-Scale Housing Sites Deliver, February 2020). As such, to deliver 1,000 dwellings across the plan period, first completions would be needed from 2026/2027.</p> <p>As such, given that an outline application has recently been refused it seems unrealistic – particularly given the site's history - that first completions will deliver within these timescales. Indeed, evidence demonstrates that for schemes of around 1,500 dwellings, the lead-in time from validation of an application through to first completions is approximately 7 years (Source: Lichfield's Start to Finish (2nd Edition), February 2020) and, therefore, timescales may already have been missed to fully deliver the expected provision during the plan period.</p> <p>With this in mind, due to uncertainty over the delivery of the proposal it is recommended that Sandleford Park is removed from the Plan or the scale of housing provision over the plan period reduced.</p> <p><u>North East Thatcham</u></p> <p>NE Thatcham, on the face of it, provides an easy solution for the Council to increase housing numbers to meet the overall requirement, but further</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>information is required to demonstrate the deliverability and viability of the site for 2,500 dwellings. In particular, there are concerns that:</p> <ul style="list-style-type: none"> <li>• there is a need for further detailed technical evidence (transport, drainage, landscape, heritage, ecology etc.) to demonstrate the deliverability and capacity of the site;</li> <li>• the location of the site close to the North Wessex AONB may significantly reduce density of the site (particularly towards the edge) and, therefore, the delivery of 2,500 dwellings requires further assessment as more detailed evidence is prepared;</li> <li>• construction mineral deposits need to be investigated thoroughly to ensure development does not sterilise a workable resource. Indeed, prior extraction should occur where practicable;</li> <li>• there appears to be no assessment of the impact of much of the site being located within the Outer Consultation Zone (OCZ) for AWE Aldermaston; and</li> <li>• the proposals must be strongly grounded in viability to ensure that key infrastructure can be delivered alongside housing to deliver the objectives of the scheme and wider benefits to Thatcham.</li> </ul> <p>With regards to the build out rate the Thatcham Strategic Growth Study Stage 3 Report: Thatcham Future (September 2020), at Appendix B, assumes a total period of 17 years from first completions. For most of the build-out period, an average of 160 dwellings per year has been applied (apart from the first year of 50 dwellings).</p> <p>The market evidence demonstrates that for schemes of 2,000+ dwellings, the lead-in time from validation of an application through to first completions is approximately 8.4 years (Source: Lichfield's Start to Finish (2nd Edition), February 2020). As such, given the timescales for the adoption of the Plan (i.e. late 2022 in the LDS) and taking the view that the planning application for the site is submitted by the end of 2023/2024, first completions cannot be projected before 2032/2033. Further, this timescale may be optimistic if prior</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>mineral extraction is required and there are delays to the adoption of the Plan.</p> <p>With the above in mind, it is considered that the Council should take a cautious approach with the site identified as potentially delivering housing supply towards the latter end of the plan period. As such, the scale of development proposed in the plan period should be significantly reduced. Delivering completions in the last five years of the Plan would equate to around 690 dwellings (significantly less than 1,250 dwellings suggested) based on the build out rates in the Growth Study which are supported by market evidence.</p> <p><b>Conclusion</b></p> <p>With the above in mind, it is considered that the Council’s housing supply will lead to a significant housing shortfall across the plan period due to:</p> <ul style="list-style-type: none"> <li>• need to apply a 10% non-implementation rate on the ‘committed’ housing supply where appropriate.</li> <li>• the over-reliance on windfall provision, which by its nature is uncertain;</li> <li>• the need to review the deliverability of Sandford Park as a strategic allocation given recent planning refusals and lack of evidence to address technical concerns;</li> <li>• the need to undertake further evidence to demonstrate the deliverability and viability of NE Thatcham; and</li> <li>• the unrealistic housing provision/trajectory during the plan period for the strategic allocations at both Sandford Park and NE Thatcham.</li> </ul> <p>It is considered that the Council needs to identify further development sites spread proportionately across the district in line with the settlement hierarchy to reduce this potential housing shortfall and provide extra resilience and flexibility to the Local Plan in the event that the anticipated provision does</p>	

Respondent (with lpr ref)	Response	Council Response
	not deliver. In this respect, our client's 'land south of Newbury Racecourse' should be considered for allocation in the Local Plan.	
Pro Vision for Mr and Mrs Pittard (lpr1959)	<p><i>Representation promotes the allocation of Land at Lower Way Farm, Thatcham. Full representation is attached as a response to Policy SP13 Sites allocated for residential and mixed-use development in Newbury and Thatcham.</i></p> <p>Policy SP12 sets out that “Provision will be made for 8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520-575 dwellings per annum. The target figure of 575 dwellings per annum does not constitute a ceiling or cap to development.”</p> <p>Supporting text (paragraph 6.2) sets out that the Local Housing Need (LHN) for the District is 513 dwellings per annum (dpa). This accords with the Indicative LHN calculated based on the Government's revised Standard Method, which was published on 16 December 2020 (2).</p> <p>In reviewing the figures quoted above, the Council is planning to deliver 7-62 dpa above its LHN, which equates to an additional 119-1,054 dwellings over the 17-year plan period.</p> <p>The lower end of the Council's proposed housing target (520 dpa) is based on the 2019 LHN, while the upper end (575 dpa) represents a 12% uplift on the 2020 LHN (513 dpa). No justification is provided in the draft Plan – or its evidence base – for the proposed 12% uplift or why it is considered appropriate compared with a higher uplift.</p> <p>Paragraph 6.5 explains that “The allocation of sites in this DPD aims to meet delivery of a higher number of homes in order to both boost supply and have</p>	<p>The housing requirement is expressed as a range in order to increase the target housing requirement above the LHN and therefore boost housing supply. An uplift of approximately 10% is considered appropriate to allow flexibility in the supply.</p> <p>Pro Vision have set out how the assessment of housing need has changed over the past few years. Since the government introduced the standard method the LHN for West Berkshire has inevitably fluctuated as it is re-calculated each year, looking at a rolling ten year period for the household projections and using the latest published affordability ratios. West Berkshire has seen a consistent slight fall each year in the LHN with that for 2021 calculated as 509 dwellings per annum. The so called “mutant algorithm” was consulted on by the government but was not introduced and the figure of 692 dpa was therefore never West Berkshire's LHN.</p> <p>See response to Barton Willmore for Donfield Homes (lpr2098) regarding consideration of affordability issues and the assessment of need.</p> <p>Comments on the SA are noted. It is considered that the scenarios used are appropriate in indicating the potential impacts of different levels of growth.</p> <p>Please see response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>some built-in flexibility. The upper end of the range is a target but should not be considered a maximum amount. It is not intended to be a cap on development that would otherwise be acceptable.</i></p> <p>The aim to boost supply complies with paragraph 59 of the NPPF. Furthermore, built-in flexibility ensures that the Local Plan is sufficiently flexible to adapt to rapid change (paragraph 11(a) of the NPPF). However, to ensure that decisions regarding new development can remain Plan-led (paragraph 15) and land is brought forward at a sufficient rate (paragraph 23), it is necessary to ensure that there is enough flexibility in the Plan. Such a contingency is particularly important as the Council is relying upon two complex, large sites (Sandleford Park and North East Thatcham) to deliver a large proportion of the District’s housing need.</p> <p>Paragraph 6.5 correctly identifies that the upper end of the range (575 dpa) should not be considered a maximum amount and is not a cap on development that would otherwise be acceptable. This is confirmed by the PPG (3), which explains that <i>“the standard method for assessing local housing need provides a minimum starting point in determining the number of homes needed in an area”</i> and that <i>“there will be circumstances where it is appropriate to consider <b>whether actual housing need is higher than the standard method indicates</b> (our emphasis).”</i></p> <p>The PPG (4) goes on to explain that:</p> <p><b>“Circumstances where this may be appropriate include, but are not limited to situations where increases in housing need are likely to exceed past trends because of:</b></p> <ul style="list-style-type: none"> <li>• <i>growth strategies for the area that are likely to be deliverable, for example where funding is in place to promote and facilitate additional growth (e.g. Housing Deals);</i></li> <li>• <i>strategic infrastructure improvements that are likely to drive an increase in the homes needed locally; or</i></li> </ul>	<p>to Co-operate statement will be published alongside the Reg. 19 consultation.</p> <p>The Council has considered the allocation of reserve sites but has concluded that this would lead to some uncertainty and difficulty in managing the phasing of site delivery. The plan will be reviewed on a 5 year cycle and annual monitoring will indicate if changes are required.</p> <p><b>Housing Supply and Delivery</b></p> <p>The current Local Plan allocations were always intended to deliver towards the end of the plan period, with the strategic allocation at Sandleford Park originally phased for the latter half of the plan period. The HSA DPD was only adopted in 2017 and the vast majority of sites now have planning permission and delivery on those with permission is increasing, broadly in line with expectations.</p> <p>Regarding the contribution from windfall development, this does not suggest that a high proportion of planning decisions in West Berkshire have not been plan-led, conflicting with paragraph 15 of the NPPF. The Local Plan directs development to the more sustainable settlements and establishes the principle in favour of development within settlement boundaries. Though such sites are classified as windfall in that they are not <i>“specifically identified in the development plan”</i> (NPPF definition of windfall) planning decisions on non-allocated sites are definitely plan-led and determined in accordance with the development plan. Table 3.16 of the 2021 AMR shows that the vast majority of completions are within settlement boundaries to which development is directed. Additionally para 69 of the 2021 NPPF states that local planning</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• <b>an authority agreeing to take on unmet need from neighbouring authorities, as set out in a statement of common ground;</b></li> </ul> <p><b><i>There may, occasionally, also be situations where previous levels of housing delivery in an area, or previous assessments of need (such as a recently-produced Strategic Housing Market Assessment) are significantly greater than the outcome from the standard method (our emphasis)."</i></b></p> <p>It is therefore necessary to consider whether the amount of housing that the Council is planning to deliver is appropriate.</p> <p>In the first instance, as there has been a great deal of change recently regarding how housing need should be calculated, it is helpful to understand the housing numbers related to West Berkshire in recent years. In summary:</p> <ul style="list-style-type: none"> <li>• The adopted West Berkshire Core Strategy (July 2012) planned for <b>525 dpa</b> over the period 2006-2026.</li> <li>• The Berkshire (including South Bucks) Strategic Housing Market Assessment (SHMA) (February 2016) concluded that the Objectively Assessed Housing Need (OAN) for West Berkshire across the period 2013-2036 was <b>665 dpa</b>.</li> <li>• In September 2017(5) the Government published a consultation on the new Standard Method for calculating the LHN. This resulted in a minimum LHN for West Berkshire of <b>513 dpa</b>.</li> <li>• The OAN Sensitivity Testing carried out in the Western Berkshire Housing Market Area (March 2018), which considered the findings of the 2016 SHMA against more recent data, concluded that the OAN for West Berkshire was <b>600 dpa</b>.</li> <li>• The Council's Regulation 18 Local Plan Review consultation (November 2018) referred to a minimum LHN based on the 2016-based household projections of <b>631 dpa</b>, as well as a minimum LHN</li> </ul>	<p>authorities should 'support the development of windfall sites through their policies and decisions- giving great weight to the benefits of using suitable sites within existing settlements for homes'</p> <p>The windfall allowance is considered modest in relation to past delivery. See response to Fisher German LLP for Mr Musgrave and Mr Begley (lpr1229).</p> <p>A housing trajectory will be published and will be updated annually in the AMR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>based on the 2014-based household projections of <b>551 dpa</b> over the period 2018-2036.</p> <ul style="list-style-type: none"> <li>• In August 2020(6) the Government consulted on a revised Standard Method (colloquially known as the “mutant algorithm”) as part of its “<i>Changes to the current planning system</i>” consultation. This resulted in a minimum LHN of <b>692 dpa</b>.</li> <li>• In December 2020(7) the Government published its response to the LHN proposals in the “<i>Changes to the current planning system</i>” consultation. The Indicative LHN outlined for West Berkshire reverted back to the figure from 2017, with a minimum requirement of <b>513 dpa</b>.</li> <li>• The current draft Local Plan (December 2020) refers to a range of between <b>520-575 dpa</b>.</li> </ul> <p>Considering the above, it is clear that in recent years, the Council’s housing need has ranged considerably from 513 dpa (current LHN) to 692 dpa (“mutant algorithm”).</p> <p>Page 43 of the Council’s Updated Housing Needs Evidence (May 2020) explains that there is “a <i>notable need for affordable housing</i>” and that “<i>it is clear that provision of new affordable housing is an important and pressing issue in West Berkshire.</i>” It goes on to explain that the evidence suggests “<i>that affordable housing delivery should be maximised where opportunities arise.</i>”</p> <p>Paragraph 9.2 confirms that there are notable affordability issues in West Berkshire. Table 9.1 advises that there is an estimated affordable housing need in West Berkshire of 319 dpa over the period 2018-36, although this reduces to 272 dpa if affordable housing in the development pipeline (with planning permission) is included in the calculation of need.</p> <p>Paragraph 9.7 sets out that the scale of affordable housing need is substantial. This is underlined by paragraph 9.8, which explains that “<i>if notionally 35% of new housing delivered was of affordable housing around</i></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>910 dwellings per annum would be needed to meet the affordable housing need in full.” While the Standard Method takes account of affordability and therefore, as paragraph 9.10 explains, over time the affordability of market housing should improve and the scale of affordable housing need should reduce, there is a pressing need for affordable housing now, as there has been for a number of years.</p> <p>Paragraph 9.12 concludes by setting out that, for the reasons outlined in the Report, “the Council might consider through the plan-making process whether higher housing provision would have positive benefits on affordable housing delivery.” Furthermore, paragraph 9.13 explains that “The evidence clearly suggests that affordable housing delivery should be maximised where opportunities arise.” This would accord with paragraph 3.2 of the draft Local Plan, which explains that “Making available housing of different types, sizes, tenures and affordability will be a priority.”</p> <p>Appendix 4 of the Council’s Interim Sustainability Appraisal (SA) Report (December 2020) provides a SA of each of the policies in the draft Local Plan. In relation to policy SP12, the following alternative levels of housing growth (reasonable alternatives) in the District were assessed:</p> <ul style="list-style-type: none"> <li>• Option 1: Baseline need – 2020 LHN of 513 dpa.</li> <li>• Option 2: Boosting supply – Range of 520-575 dpa.</li> <li>• Option 3: Significantly boosting supply – “Mutant algorithm” LHN of 692 dpa.</li> </ul> <p>The SA assesses each option against the same ten sustainability objectives, followed by a commentary regarding the effect of each option, an overall summary and conclusion, including setting out the preferred option, and details of potential avoidance measures, mitigation, offsetting and enhancements.</p> <p>It is concluded that Options 1 (low growth) and Option 2 (medium growth) would result in overall positive effects, while Option 3 would have overall</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>neutral effects. Regarding Option 3 (high growth), it is noted that “<i>There are strong positive effects on the delivery of housing and economic growth but these are countered by the potential negative impacts on the environmental objectives.</i>” In conclusion, it is noted that:</p> <p>“<i>The preferred option SP12(ii) [Option 2 – medium growth] is for a level of growth that exceeds the current Local Housing Need, calculated according to the government’s standard method. This would boost supply of housing above the current development plan requirement and support economic growth, without significant negative environmental effects. <b>The level of growth in SP12(iii) [Option 3 – high growth] would require significant additional greenfield allocations, predominantly agricultural land, which would compromise sustainability objectives</b> while that in SP12(i) [Option 1 – low growth] would not lead to the boost to levels of housing delivery that are sought (our emphasis).</i>”</p> <p>When comparing Option 2 (520-575 dpa) with Option 3 (692 dpa), Option 3 has received a lower score against the following Sustainability Objectives:</p> <ul style="list-style-type: none"> <li>• 5b: To conserve and enhance the character of the landscape.</li> <li>• 5c: To protect or, conserve and enhance the significance of heritage assets.</li> <li>• 6a: To reduce air pollution.</li> <li>• 6c: To maintain and improve soil quality.</li> <li>• 7a: To maximise the use of previously developed land and buildings where appropriate.</li> <li>• 7b: To apply sustainable densities of land use appropriate to location and setting.</li> <li>• 8c: To reduce water consumption and promote reuse.</li> <li>• 8d: To reduce the consumption of minerals and promote reuse of secondary materials.</li> </ul> <p>No reasoned justification has been provided to explain why Option 2 has received a more favourable score against these Sustainability Objectives</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>than Option 3. Instead, it appears that Option 3 has the potential to score more favourably against some objectives than Option 2, or at the very least, have an equal scoring. In particular, the SA scores Option 2 and 3 the same in relation to economic benefits (SA Objective 10), but clearly an increase in housing would deliver considerably more economic benefits.</p> <p>The PPG explains that the SA should “<i>identify, describe and evaluate...[the] likely significant effects on environmental, economic and social factors using the evidence base (our emphasis).</i>” We therefore consider that further evidence and justification is required to inform the assessment of reasonable alternatives and derive a robust conclusion.</p> <p>Furthermore, there is a significant ‘jump’ between the level of housing need in Option 2 compared with Option 3. To ensure that the SA “<i>consider[s] and compare[s] all reasonable alternatives</i>”, in line with the PPG (8), we recommend that an additional reasonable alternative/ Option is assessed.</p> <p>A suitable alternative Option would be to assess housing growth in the region of a 20%-25% uplift to the 2020 LHN of 513 dpa (615-640 dpa) up to the OAN set out in the 2016 SHMA of 665 dpa. Such a range would provide additional positive economic, social and environmental effects, including the delivery of additional affordable housing and help address affordability issues, without the negative environmental effects that may be associated with Option 3 (692 dpa). Following a review of the SA and assessment of the additional Option recommended, there may be a need for additional housing allocations to meet any increase in the Council’s housing need.</p> <p><b>Duty to Co-operate</b></p> <p>In line with paragraphs 24-27 of the NPPF, the Council has a duty to co-operate with other Local Planning Authorities (along with other prescribed bodies), on strategic matters that cross administrative boundaries. Engagement with neighbouring authorities should take place early in the</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Plan-making process. Such engagement should be constructive, active and ongoing, as confirmed by the PPG(9).</p> <p>The duty to co-operate has the potential to significantly influence the Local Plan Review, particularly the number of homes that the Council is required to accommodate. For example, paragraph 11b of the NPPF explains that “<b>strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas</b> (our emphasis).” If neighbouring authorities are unable to meet their needs in full, they should ask West Berkshire to assist them, which could increase the District’s housing requirement.</p> <p>Paragraph 6.4 of the draft Local Plan explains that there has been much collaborative working with neighbouring authorities on housing matters and associated infrastructure. Furthermore, paragraph 1.23 explains that “<i>The Council will prepare a Duty to Cooperate Statement to accompany the LPR and which will set out in detail how we cooperate on strategic cross-boundary issues in order to create and deliver a positively prepared plan.</i>”</p> <p>Paragraph 27 of the NPPF, along with the PPG (10), are clear that Local Planning Authorities should document the co-operation that has taken place with other parties as part of the Planmaking process, in line with the Duty. Furthermore, the PPG (11) confirms that “<i>As <b>the duty to cooperate</b> relates to the preparation of the plan it <b>cannot be rectified post-submission</b>, so if the Inspector finds that the duty has not been complied with they will recommend that the local plan is not adopted and the examination will not proceed any further (our emphasis).</i>”</p> <p>The above confirms that the Duty is a fundamental part of the Plan-making process and is a legal requirement that several Local Planning Authorities across the country have failed to satisfy. In light of this, as the Council has</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>confirmed that co-operation has taken place, a record of this should be made publicly available as soon as possible.</p> <p>Pages 45-48 of the latest Annual Monitoring Report (AMR) (January 2021) provide a brief summary of the engagement that has taken place to date. This, however, does not refer to any recent discussions or provide any detail regarding strategic issues that need to be addressed or any agreements that have been made / ongoing discussions.</p> <p>Paragraph 6.3 of the draft Local Plan sets out that <i>“There has been no request to take unmet need from other authorities within the identified Housing Market Area(12), or from any other adjacent authority. In 2018 there was a possibility of some unmet need in Reading Borough, but this is no longer the case.”</i></p> <p>Shortly after the draft Local Plan was published for consultation, the Government published its response to the LHN proposals in the <i>“Changes to the current planning system”</i> consultation (13). In its response, the Government confirmed that a 35% uplift to the post-cap number generated by the Standard Method would apply to Greater London and to the Local Authorities which contain the largest proportion of the other 19 most populated cities and urban centres in England.</p> <p>The list of the most populated cities and urban centres in England includes Reading Borough Council. Consequently, Reading’s housing need has increased significantly compared with the housing need that it previously anticipated having to accommodate.</p> <p>In summary, the current Reading Borough Local Plan (November 2019) makes provision for 689 dpa, while the “mutant algorithm” (August 2020) increased its housing need slightly to 700 dpa. However, this has now increased considerably to 876 dpa (December 2020). To assist with understanding the scale of the increase in housing need in Reading, based on the Plan period for the adopted Local Plan (2013-2036), the overall</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>housing requirement would increase from 15,847 homes to 20,148 homes, requiring an additional 4,301 homes. This, coupled with Reading being a largely urban authority with limited options for greenfield development, is likely to result in Reading asking other authorities to help meet its housing need.</p> <p>West Berkshire District is located immediately to the west of Reading Borough and is therefore suitably placed to assist Reading with meeting any of its unmet housing needs. While approximately 74% of the West Berkshire comprises the North Wessex Downs Area of Outstanding Natural Beauty (AONB) and other constraints, particularly areas at risk of flooding and the presence of Atomic Weapons Establishments (AWE) at Aldermaston and Burghfield, significant opportunities remain to accommodate additional housing in sustainable locations. The District could and should therefore make a meaningful contribution to supporting any unmet needs of adjoining authorities, particularly Reading, given its excellent transport links and land availability.</p> <p>In addition to Reading, the other authorities in the Western Berkshire Housing Market Area include Bracknell Forest Borough Council and Wokingham Borough Council. Both authorities are in the process of preparing new Local Plans, which are yet to be submitted for examination. Both authorities are heavily constrained, with Bracknell Forest containing a large area of Green Belt and Special Protection Area (SPA), while Wokingham comprises a large area of Green Belt and Areas of Identified Biodiversity Interest. There are also significant concerns over the deliverability of the Grazeley Garden Town, which is a draft allocation in the emerging Wokingham Local Plan for a minimum of 10,000 dwellings within the Borough, with the Council anticipating that 3,750 of these will be delivered within the Plan-period up to 2036. There is therefore also the potential for Bracknell Forest and Wokingham to ask West Berkshire to assist it with meeting any of its unmet housing needs.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>As West Berkshire is currently only targeting the delivery of 9,775 new homes (upper range) over the Plan-period, discussions should be held with neighbouring authorities, particularly Reading, as early as possible, to understand the extent of any unmet housing need that West Berkshire may be required to assist with accommodating. This will ensure that the Local Plan is based on up-to-date evidence regarding potential unmet needs, in line with paragraph 1.24 of the draft Local Plan and paragraph 31 of the NPPF.</p> <p>If West Berkshire is required to accommodate any unmet housing needs from other authorities, additional sites should be allocated for housing. These should be distributed in line with the settlement hierarchy outlined in policy SP3.</p> <p>Furthermore, we encourage the Council to consider the allocation of reserve sites. Such a contingency is particularly important as the Council is relying upon two complex, large sites to deliver a large proportion of the homes required in the District.</p> <p>Reserve sites can be brought forward quickly in the event that there is a shortfall in housing supply against the Council's anticipated housing trajectory at any point over the Plan period. This will enable the Council to meet its Strategic Objective regarding housing, "<i>To ensure that the identified housing need will be met across the District <b>up to the end of the plan period</b> (our emphasis).</i>"</p> <p>The allocation of reserve sites will be particularly important if the unmet needs of other authorities is not clear as the West Berkshire Local Plan progresses. A working assumption as to the potential unmet needs that the District may be required to accommodate should be made – in collaboration with the respective authorities – to ensure that the Local Plan can be found sound in line with paragraph 35 of the NPPF.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Housing Supply and Delivery</b></p> <p>Paragraph 6.8 of the draft Local Plan explains that “<i>Of the approximately 5,000 units already allocated [in the adopted Development Plan], only 1,071 had been completed by March 2020.</i>” As the previous Plan-period extended from 2006-2026, the Council is 14 years in, with 6 years remaining. The Council has therefore only secured the delivery of 21.4% of its current housing allocations, despite 70% of the Plan-period already passing.</p> <p>In addition, Table 2 sets out the Council’s housing supply position at March 2020. This confirms that 1,482 dwellings included in its future housing supply are existing allocations that are yet to receive planning permission.</p> <p>Furthermore, paragraph 6.11 explains that “approximately 74% of completions in the period 2006-2020 were on unallocated, windfall sites.” This suggests that a high proportion of planning decisions in West Berkshire have not been plan-led, which conflicts with paragraph 15 of the NPPF.</p> <p>The draft Local Plan proposes a windfall allowance of 1,979 dwellings to 2037. To ensure that planning decisions remain Plan-led, alongside providing greater certainty of housing supply, we feel it would be more sensible to reduce the windfall allowance and increase the number of housing allocations. The inclusion of additional allocations for residential development now would assist with the aim to plan holistically as opposed to relying on piecemeal developments through windfall sites.</p> <p>The points outlined above underline the importance of ensuring that a deliverable Local Plan is achieved in line with paragraph 16 of the NPPF. Ultimately, for the Local Plan to be found sound, as required by paragraph 35 of the NPPF, it must be “<i>effective</i>” and therefore “<i>deliverable over the plan period</i>”. It is clear that the current plan for the District has so far not achieved its objectives.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Paragraph 73 of the NPPF explains that “<i>Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period</i>”.</p> <p>A housing trajectory is not included in the draft Local Plan or its evidence base. To address this, paragraph 6.15 of the draft Plan explains that “<i>The housing trajectory showing the projected timeline for the delivery of housing developments across the plan period in relation to the annual average requirement will be included in the Submission version of this development plan.</i>”</p> <p>At present, it is not possible to determine whether the draft Local Plan and the proposed housing allocations are an appropriate basis for planning for the future of the District, or deliverable within the Plan-period. A housing trajectory should therefore be published as soon as possible.</p> <p>(2) <a href="https://www.gov.uk/government/consultations/changes-to-the-current-planning-system">https://www.gov.uk/government/consultations/changes-to-the-current-planning-system</a></p> <p>(3) Paragraph: 010 Reference ID: 2a-010-20201216</p> <p>(4) Paragraph: 010 Reference ID: 2a-010-20201216</p> <p>(5) <a href="https://www.gov.uk/government/consultations/planning-for-the-right-homes-in-the-right-placesconsultation-proposals">https://www.gov.uk/government/consultations/planning-for-the-right-homes-in-the-right-placesconsultation-proposals</a></p> <p>(6) <a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/927157/200805_Changes_to_the_current_planning_system.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/927157/200805_Changes_to_the_current_planning_system.pdf</a></p>

	<p>(7) <a href="https://www.gov.uk/government/consultations/changes-to-the-current-planning-system">https://www.gov.uk/government/consultations/changes-to-the-current-planning-system</a></p> <p>(8) Paragraph: 018 Reference ID: 11-018-20140306</p> <p>(9) Paragraph: 029 Reference ID: 61-029-20190315</p> <p>(10) Paragraph: 031 Reference ID: 61-031-20190315</p> <p>(11) Paragraph: 031 Reference ID: 61-031-20190315</p> <p>(12) Paragraph 6.4 of the draft Local Plan confirms that West Berkshire has a strong functional relationship with Wokingham Borough Council, Reading Borough Council and Bracknell Forest Council and the Council has collaborated with these authorities</p> <p>(13) <a href="https://www.gov.uk/government/consultations/changes-to-the-current-planning-system">https://www.gov.uk/government/consultations/changes-to-the-current-planning-system</a></p> <p>Changes sought:</p> <p>We consider that further evidence and justification is required to inform the assessment of reasonable alternatives and derive a robust conclusion.</p> <p>We recommend that an additional reasonable alternative/ Option is assessed. A suitable alternative Option would be to assess housing growth in the region of a 20%-25% uplift to the 2020 LHN of 513 dpa (615-640 dpa) up to the OAN set out in the 2016 SHMA of 665 dpa.</p> <p>The District could and should make a meaningful contribution to supporting any unmet needs of adjoining authorities.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>We encourage the Council to consider the allocation of reserve sites. Such a contingency is particularly important as the Council is relying upon two complex, large sites to deliver a large proportion of the homes required in the District.</p> <p>We feel it would be more sensible to reduce the windfall allowance and increase the number of housing allocations.</p> <p>A housing trajectory should therefore be published as soon as possible.</p>	
Pegasus for Donnington New Homes (lpr1944)	<p><i>Representation on behalf of Donnington New Homes in support of continued allocation of Sandford Park</i></p> <p>Table 2 which supports this Policy identifies that Sandford Park will deliver 1,000 units within the Plan period. This target is considered to be a robust prediction which my client supports.</p> <p>As a technical point, para 6.13 of the supporting text to Policy SP12 refers to North West Thatcham. This is incorrect and should be amended to refer to North East Thatcham.</p>	Comments noted.
Barton Willmore for Copas Farms (lpr1971)	Draft policy SP12 sets the housing requirement for the District across the plan period. As indicated in our response to draft policy SP1 above, our client considers that the emerging plan should put further emphasis on the priority given to PDL, which supports the NPPF's emphasis on making as much use as possible of PDL or brownfield land. Such PDL can assist the District in meeting its housing needs, in particular the provision of small sites.	Comments noted. The plan does seek to optimise the use of previously developed land.

Respondent (with lpr ref)	Response	Council Response
<p>Montagu Evans for Royal &amp; Sun Alliance (lpr2445)</p>	<p><i>Full representation on behalf of Royal &amp; Sun Alliance Insurance promoting residential development at Greenham Road Retail Park is attached.</i></p> <p>We note that for a Plan to be found sound it must be positively prepared, which means the Plan must seek to meet the District's objectively assessed needs as a minimum. This is clearly stipulated by the NPPF under Paragraphs 11 and 35. We support that the Council has applied the Government's Standard Methodology for Housing Need to its housing targets in its emerging Plan, however we suggest the Council removes reference to the housing target being given as a range of "8,840 to 9,775 net additional homes". This would make it clear that the minimum target is 9,775 and ensure the Plan unambiguous to the reader. This is also important for monitoring the Council's performance in housing delivery once the Plan is adopted.</p> <p>In the draft Local Plan the Council identifies its housing supply under Table 2. This outlines that the Council can identify 6,135 homes from consented sites, currently allocated sites and through proposed allocations. This results in a shortfall of 3,640 against its target that will need to be met in the Plan period. We note that the Council suggests windfall sites would provide 1,979 units across the Plan period and the Council has explicitly excluded future windfall sites of 10 units or more (and prior approvals for permitted development) from this allowance. We therefore dispute whether sufficient large windfall sites will come forward because much of the District is rural in nature and heavily constrained. This is acknowledged by the Council in the draft Local Plan:</p> <p><i>"About 90% of the District is rural in character. The North Wessex Downs Area of Outstanding Natural Beauty (AONB) is a nationally important and legally protected landscape, designated for the quality of its scenic beauty. Approximately 74% of West Berkshire is within the AONB".</i></p> <p>It therefore follows that the Council will have exhausted much of the supply of windfall sites already, which is evidenced by the Council conceding that</p>	<p>Support for application of standard methodology noted.</p> <p>The Council believes that the range provides some flexibility to the plan and meets the objective of boosting housing delivery. The monitoring of delivery will be measured against this range.</p> <p>The windfall allowance is considered modest in relation to past delivery. See response to Fisher German LLP for Mr Musgrave and Mr Begley (lpr1229). The Council has not included a windfall allowance for medium and large sites, but these are anticipated to continue to come forward (some have been proposed and assessed through the HELAA). These will add flexibility to the supply but are not relied upon to meet the housing requirement. There is no indication that the supply of windfall sites is exhausted, the delivery on windfall sites continues to be high as evidenced in the AMR.</p> <p>The Council are prioritising development for residential uses in urban, accessible locations. The focus for development is on the more sustainable settlements, particularly on Newbury and sites that come forward within settlement boundaries, which are acceptable in principle for residential development, will be assessed against the Local Plan policies.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>74% of completions between 2006-2020 were on unallocated windfall sites. We therefore question the robustness of the windfall allowance. The NPPF (Paragraph 70) makes clear that local planning authorities must provide:</p> <p><i>“Compelling evidence that [windfall] will provide a reliable source of supply. Any allowance should be realistic having regard to... historic windfall delivery rates and <u>expected future trends</u>” (our emphasis).</i></p> <p>It is apparent that the windfall rate is not justified and so up to 3,640 homes are not yet accounted for by the Council in its emerging Plan. We remind the Council that the NPPF (Paragraph 123) makes clear that where there is an existing or anticipated shortage of land for meeting identified housing needs, policy-makers must:</p> <p><i>“Ensure that developments make optimal use of the potential of each site. In these circumstances... plans should contain policies to optimise the use of land in their area and meet as much of the identified need for housing as possible”.</i></p> <p>In order for the Council to meet its substantial minimum housing targets, the Council must properly assess and make allocations for sufficient development sites through the Local Plan. To achieve sustainable development, the Council must prioritise maximising development for residential uses in urban, accessible locations (as explained above). It follows that additional allocations should be prioritised in Newbury given it is established as the primary settlement in the District. This must also be done to avoid speculative applications in inappropriate and unsustainable locations in the District in the future.</p>	

Respondent (with lpr ref)	Response	Council Response
TOWN for Pincents Lane (lpr2117)	<p><i>Full representation promoting land to East of Pincents Lane, Tilehurst attached .</i></p> <p>It is unfortunate that nowhere in the Emerging Draft document is there an unpacking of the calculation of Local Housing Need. Given the complexity of parts of the formula, as set out in the PPG, in the interests of transparency it would have been helpful for the Council to “show its workings” on an issue at the heart of the key strategic policies of the plan.</p> <p>In the Updated Housing Needs Evidence, produced by Icenl (May 2020), at Table 5.1, there is a breakdown of calculation of the (presumably 2019) figure for LHN of 520 dpa. Although it is noted that the figure of 513 dpa (as a minimum) concurs with the figure published by MHCLG in December 2020, the latter publication contains the note that “<i>All figures presented are based on data available at the date of publication and should not be considered as definitive for local planning decision or plan making...</i>”</p> <p>Emerging Draft Policy SP12 translates these considerations into a ‘requirement’, stated as a range, with the supporting text noting that the upper end of the range of 575 dwellings ‘is a target’ but not a cap on development. The approach of regarding the housing requirement as a ‘floor’ rather than a ‘ceiling’ target is welcomed, though this should be strengthened in both policy and text (for example at paragraph 6.5).</p> <p>Furthermore, there is no explanation of how the LHN figure of 513 dpa has been translated into the target of 575 dwellings. It can be inferred that an uplift of approximately 10% has been applied but again there is no transparency or reasoning in the plan on this point.</p> <p>Table 1 (<i>in full representation</i>) sets out the numbers of units delivered in West Berkshire over the past four years, all below even that target level of 575 dwellings – as well as being below the target figure for each year.</p>	<p>The calculation of the LHN will be shown in the Housing Background Paper which will accompany the Reg. 19 consultation. A calculation is shown in Table 2.1 of the latest published Five Year Housing Land Supply. This has, however, now been superseded by the 2022 calculation which results in a LHN of 513 dpa.</p> <p>The support for the approach of regarding the housing requirement as a ‘floor’ rather than a ‘ceiling’ target is noted. It is, however, considered that the policy and text are clear on this issue.</p> <p>Additional text will be considered for the supporting text to briefly explain use of a range and further explanation will be given in the Housing Background Paper which will accompany the Reg.19 consultation.</p> <p>The representation argues that, though delivery has been broadly within the range proposed by draft policy SP12, the affordability ratio of median house prices to residence based earnings has grown, showing that delivery in the range proposed is doing little to curtail the increasing unaffordability of housing in West Berkshire. The affordability ratios have, however not changed significantly; the latest residence-based ratio, for 2022, is 9.73, which is below the ratio in 2017 and 2018. The LHN is calculated using the workplace-based ratio and this has fallen steadily, albeit by a small amount, since 2017. The LHN, calculated using this ratio as an uplift to the 2014 household projections over a ten year rolling period, has fallen year on year for West Berkshire. As the LHN factors in the affordability issue, resulting in a need that is substantially higher than projected household growth, it is not considered that a further increase in the requirement, which already slightly exceeds the LHN, is justified. It is</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Although below the respective target figures, in three out of the past four years delivery has been broadly within the range proposed by draft policy SP12. Yet during that period the ratio of median housing prices to residence-based earnings has grown as set out in Table 2 (<i>in full representation</i>).</p> <p>The figures in Table 2 therefore show that delivery in the range proposed is doing little to curtail the increasing unaffordability of housing in West Berkshire. Raising the housing target would create a greater supply and act to depress growth in house prices in the District. It would also meet the Government's objective, as enshrined in the NPPF, of significantly boosting the supply of homes.</p> <p><u>Provision for unmet need in neighbouring areas</u></p> <p>Paragraph 6.3 of the Emerging Draft notes the following:</p> <p><i>6.3 There has been no request to take unmet need from other authorities within the identified Housing Market Area, or from any other adjacent authority. In 2018 there was a possibility of some unmet need in Reading Borough, but this is no longer the case.</i></p> <p>The Submission Draft Reading Borough Local Plan identified a shortfall of 644 dwellings in the period 2013-2036, to be met by neighbouring authorities. This was reduced to 230 dwellings by the Local Plan Inspector in her Main Modifications to the draft Plan, subsequently adopted in November 2019. It is understood that no formal request has been made to the neighbouring authorities to absorb any of this unmet need.</p> <p>However, paragraph 6.6 of the Emerging Draft WB Local Plan recognises the need to keep policy SP12 under review. In December 2020, Government announced that it was abandoning its proposed changes to the Standard Method. For most local authority areas, the formula is to remain unchanged, but with an uplift of 35% of the figure for housing need to be applied across London and the largest 19 urban areas in England. This includes</p>	<p>also questionable whether developers would be prepared to deliver new housing to the extent that an increased supply would act to depress growth in house prices.</p> <p>Please see response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Reading, as recognised by an indicative housing need figure of 876 dpa for that Borough, published by Government the same month.</p> <p>Whilst the PPG suggests that the uplift only applies to the local authority which contains the largest proportion of population, it is inconceivable that the now-required full uplift could be met within Reading Borough area alone, given that a shortfall was recognised in 2019 for a target of 689 dpa and that has now increased to around 876 dpa.</p> <p>In the interests of prudent and effective plan making therefore, some provision for unmet need arising from Reading Borough should be made in the Local Plan Review. The eastern part of West Berkshire is functionally part of the Reading housing and employment market and this additional provision should therefore be met there.</p> <p>The housing target figures should be increased to provide a greater amount of supply for local needs (reflecting non- delivery on some allocated sites, flexibility and choice) and to provide for unmet need likely to arise in Reading Borough.</p>	
JSA Architects for Mark Berry (lpr767)	<p>The Colthrop Village Consortium do not disagree with the overall housing figure but they consider that the proposed urban extension to North East Thatcham is flawed for the reasons set out in the letter prepared on their behalf by JSA Architects dated 4 February 2021 along with the associated Technical Note prepared by Stuart Michael Associates on Transport.</p> <p><b>Look again at the relative merits of the THA1 site, recognise that parts of the proposed North-East Thatcham allocation are not suitable or appropriate and that sequentially there is a justification for re-looking at the Rainsford Farm/ former Colthrop Paper Mills site despite the</b></p>	<p>Comments regarding overall housing figure noted.</p> <p>See comments and responses to SP17 and SP13 regarding North East Thatcham and residential sites in the Newbury and Thatcham area.</p>

Respondent (with lpr ref)	Response	Council Response
	<b>flood risk affecting some of the land. Rebalance the growth of Thatcham and put more housing in proximity to the railway station.</b>	
Turley for Commercial Estate Group (lpr2358)	<p>Broadly agree.</p> <p>CEG generally supports the Council's strategic objective for housing and the approach to housing delivery in so far as it seeks to provide sufficient housing to meet identified needs whilst not curtailing the delivery of housing throughout the plan period (i.e. the housing figure is neither seen as a ceiling or a cap to development). This ensures that the plan provides flexibility and largely meets the requirements of the National Planning Policy Framework (The Framework).</p> <p>The Local Development Scheme currently envisages adoption in December 2022 but there are recent experiences where the Examination process has taken considerably longer than envisaged. Given the local plan are supposed to have a 15-year time horizon from adoption CEG consider that this emerging Local Plan should have an end date of 2038 rather than 2037 to build in some flexibility from the outset. This would require an additional year's worth of housing land to be identified, especially on the edge of sustainable settlements.</p> <p>Concern exists, however, about the Council's rigid approach to the allocation of sites for development. In particular the heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandleford Park and evidenced through consultant papers such as the 'Start to Finish' Report 2nd Edition prepared by Lichfields).</p> <p>In the absence of a Housing Trajectory within the documentation or</p>	<p>Support for approach noted.</p> <p>The Local Development Scheme published in June 2022 anticipates adoption of the LPR in September 2024. The LPR therefore covers a 15 year period through to 2039.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>A trajectory will be prepared to accompany the Reg.19 consultation and will be reviewed annually and reported in the AMR.</p> <p>It is not considered that a criteria-based policy for sites on the edges of sustainable settlements would be appropriate. The plan will be subject to five yearly review and annual monitoring will indicate if policy changes are needed.</p> <p>With regard to the promoted site see response to SP13 (lpr2359).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Appendices CEG therefore reserve the right to make more detailed comments on the delivery and lead in time of strategic sites at a later stage.</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner. Directing such to sustainable settlements would accord with the current spatial strategy.</p> <p>One example of this is the land to the North of Newbury. Part of the land benefits from planning permission for up to 401 dwellings, a local centre and a primary school and work has commenced to implement that permission. There is the opportunity for further housing to occur which would capitalise upon these new social and community facilities.</p> <p>Additional land in this location was covered by the Environmental Statement (ES) which was submitted in support of the application but did not form part of the development scheme itself. The ES demonstrated that the additional land was suitable for future development to assist in meeting the Council's housing needs in a location which is sustainable and where there are limited constraints to development.</p> <p>The Council's own assessment of the wider site within the HELAA (December 2020) stated that this site is well related to Newbury and that it should be considered as part of a future potential strategic site. The Council has accepted that the site is suitable for development and in positively preparing the plan should be considering the positive contribution that a flexible approach to additional housing in locations, such as North Newbury, can make to ensuring that the plan meets its objectives. This would</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Consideration should be given within Policies SP13 -15 to identifying additional sites to provide more flexibility for the plan to deliver the identified housing numbers (including up-to 2038), as a minimum, and to ensure that any delays to the delivery of large strategic sites does not adversely impact on the Council's ability to meet their housing needs.</p>	
Westbuild Homes (lpr2134)	<p>Westbuild broadly support the Council's approach to the delivery of housing set out within Policy SP12, but have some reservations about specific matters which are set out below.</p> <p>Westbuild generally supports the Council's proposed approach to the delivery of housing and specifically the recognition that the housing figure is neither seen as a ceiling, or a cap.</p> <p>Significant concern exists, however, about the Council's over-reliance on two large strategic sites. The Council's own experience, and that on a national level, is that strategic sites have lengthy lead-in times, and are inherently slow in delivery, and this should be reflected within the emerging plan review through the inclusion of criteria for sites not proposed for allocation to be considered, increasing the flexibility afforded to the Council and reducing the reliance upon strategic sites.</p> <p>Paragraph 6.10 of the draft emerging plan refers to paragraph 68 the National Planning Policy Framework (The Framework) and the weight that should be attributed to the benefits of using suitable sites within existing settlements for homes. What it fails to have any regard to, however, is the sub section <b>Paragraph 68(d)</b> which states that local planning authorities should:</p>	<p>Broad support noted.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>“work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes.”</i></p> <p>Westbuild contends that without reference to the part of the Framework, and the inclusion of such provisions within the proposed policies, the plan is flawed in its approach and does not fully meet the tests of soundness.</p>	
Lichfields for North East Thatcham Consortium (lpr2399)	<p>(Full representation attached)</p> <p>Policy SP12 of the draft local plan makes provision for between 520 and 575 dwellings per annum between 2020 and 2037:</p> <p>1 The lower end of the range (520 dpa) is based on the standard methodology as originally published in 2017 (figure calculated as of 2020); and</p> <p>2. The upper end of the range (575 dpa), although not explicit, appears to be similar to the figure arising from proposed changes to the standard method which were published for consultation in Autumn 2020. Ultimately these proposed changes were not taken forward and Government instructed authorities to continue progressing on the basis of the original standard methodology, published in 2017, until a new system of housing requirements is implemented through the longer-term changes set out in the Planning White Paper.</p> <p>Given the upper end of the range proposed in the draft local plan is based on a methodology which has now not been implemented, this would (in isolation) indicate the need for the Council to provide additional explanation for why it has articulated an upper range for its estimate of housing need.</p> <p>For the purposes of planning in West Berkshire, it would be prudent for the Council to consider that its housing needs may be higher than the range proposed in order to minimise the risk that an early review is needed to</p>	<p>The housing requirement is expressed as a range in order to increase the target housing requirement above the LHN and therefore boost housing supply. An uplift of approximately 5% is considered appropriate to allow flexibility in the supply. Additional explanation for the use of a range will be made in the Housing Background Paper that will accompany the Reg.19 consultation.</p> <p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p> <p>See response to Barton Willmore for Donfield Homes (lpr2098) regarding consideration of affordability issues and the assessment of need.</p> <p><b>Housing Supply</b></p> <p>Comment that it would appear that sufficient additional supply has been identified is noted.</p> <p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does, though, support development of previously developed sites within the settlement</p>

Respondent (with lpr ref)	Response	Council Response
	<p>assist in meeting future unmet housing needs from Reading, and to positively embrace the question of how that need might be met.</p> <p>The Council's Updated Housing Need evidence identifies an annual affordable housing need of 319 per annum which it describes as "<i>substantial</i>" and, if a notional 35% of all new housing was affordable, this would equate to a need for 910 dwellings per annum. The needs assessment states that "<i>the Council might consider whether higher housing provision would have positive benefits on affordable housing delivery.</i>" This provides a clear basis for recognising the basis of an increase, and we do not agree with the Updated Housing Need evidence conclusion (at para 9.12) that affordable housing does not specifically justify a higher housing requirement; it clearly does.</p> <p>In summary, the NPPF and PPG are clear that the standard method should form the basis of strategic policy requirements, albeit it should be treated as a minimum as it is not necessarily the definitive need figure for an area. Where evidence suggests needs within an area are higher, authorities should plan accordingly; such an approach is consistent with the Government's overarching "<i>objective to significantly boost the supply of housing</i>", including to deliver 300,000 homes per year nationally by the mid-2020s. In the case of West Berkshire, evidence produced to date (by the Council itself) suggests that housing need could be in excess of 665 dpa, it is also likely that Reading will now require assistance to meet its additional housing needs under the standard method, and there is an affordable housing need that, at a realistic proportion of housing delivery, would require an increased housing requirement figure.</p> <p><b>Housing supply</b></p> <p>Against the current minimum requirement for the plan period 1,979 dwellings, the Council already has sufficient supply to deliver 8,114 units from existing commitments<sup>10</sup> (equivalent to 92%). Policies SP13 to SP15</p>	<p>boundaries and any large and medium sites that do come forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met.</p> <p>The windfall allowance is based on past trends for small sites. This type of site is rarely submitted in advance in response to a Call for Sites and there are a limited number in the HELAA. There are, however, a number of medium sized sites within settlement boundaries that have been submitted for consideration, which are not proposed for allocation as they are already regarded as suitable in principle for residential use. These are the sites that can be evidenced to show the flexibility built into the plan and the additional justification for use of a windfall allowance as a component of the land supply.</p> <p>The typo will be corrected.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>allocate additional housing sites in order to bridge this gap. At this stage no trajectory has been published of expected supply within the plan period including emerging allocations; but it would appear that sufficient additional supply has been identified.</p> <p>We will consider the buffer above the minimum requirement, lead-in times and delivery rates proposed as and when a future trajectory is published.</p> <p>It is worth noting that the PPG states (at ID2a-015) that <i>“Where a strategic policy-making authority can show that an alternative approach identifies a need higher than using the standard method, and that it adequately reflects current and future demographic trends and market signals, the approach can be considered sound as it will have exceeded the minimum starting point.”</i>. This clearly points to the basis for LPAs to go above the minimum starting point.</p> <p>Of the existing commitments, the Council identifies a windfall allowance of 1,979 units. The total figure consists of a 140 dpa allowance across the whole plan-period starting in 2020 minus existing small permissions that area included in the supply. The proposed 140 dpa windfall allowance is equivalent to 27% of the current minimum annualised requirement figure (520 dpa). Regarding windfalls, the NPPF states that:</p> <p><i>“Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends. Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area.”</i> (Paragraph 70). Consequently, the default starting position is that there should be no windfall allowance. While that is the starting point, we do agree there is compelling evidence that a windfall allowance is justified. Indeed, much of West Berkshire’s supply has previously been delivered on windfall sites as set out in Paragraph 6.11 of the Reg.18 plan. However, it is not</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>clear that the assumed rate is necessarily justified with reference to the HELAA.</p> <p>3.23 We consider a more robust approach for the emerging plan would be to reduce the windfall allowance and in so doing rely more upon the delivery of homes from existing and proposed allocations. While undoubtedly windfalls will continue to deliver a significant proportion of West Berkshire's supply, relying more on existing and proposed allocations provides additional certainty to communities as to what development will occur in their area. Windfalls are likely to reduce as a new plan is adopted which will deliver West Berkshire's housing needs plus a buffer of sites above the minimum requirement to account for non-delivery. In this instance we therefore think that there is a case to place less of a reliance on unidentified windfall supply making up a significant proportion of the current minimum requirement and instead to rely on the delivery of identified supply including the allocations.</p> <p>There is a minor typo at para 6.13 of the supporting text which refers to North West Thatcham, as opposed to North East Thatcham.</p>	
Hallam Land Management (lpr2335)	<p><i>Full representation promoting the allocation of Land at Kiln Lane, Mortimer is attached.</i></p> <p>Hallam supports the use of the housing figures based on the 2014 household projections, in line with the latest guidance from the Ministry of Housing, Communities and Local Government and, in terms of West Berkshire housing need, a suitable range has been included in this emerging draft for the initial stages of consultation (note comments above regarding unmet housing need and the Duty to Cooperate).</p> <p>Although it is considered sensible within this policy to retain the allocation in the Mortimer NDP, it is important to distinguish this allocation, which</p>	<p>Support for approach noted.</p> <p>See response to representation on SP14 (lpr2337) regarding allocation of sites in Eastern Area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>addresses a need to 2026, from housing need for the subsequent 10-year period.</p> <p>Policy SP 14 highlights that of the 12 sites proposed for allocation in the Eastern Area in the emerging Local Plan, 9 are existing allocations which have not yet come forward. In short therefore there are only 3 new allocations in the Eastern Area. Policies SP 13 and 15 reflect similar trends. This does not demonstrate the 'positive' and 'aspirational' approach advocated in the NPPF or respond to the social and economic relationship this area has with Reading as described above, and which itself justifies the <b>need to provide additional allocations to ensure the Plan allocates a balanced and sustainable portfolio of sites which will be delivered in a timely manner and to ensure that a continuous and flexible supply of land is available throughout the Plan period.</b></p>	
Savills for Englefield Estate Office (lpr1529)	<p>The LPR Emerging Draft identifies a local housing need (LHN) of 513 dwellings per annum using a baseline of 2020 and 520 dwellings per annum using a baseline of 2019, which is broadly akin to the current Core Strategy housing requirement. Paragraph 60 of the NPPF (paragraph 60) states that the standard method for calculating housing need should be used to 'inform' the 'minimum number of homes needed'. Indeed it is noted that the housing target of 520-575 dwellings per annum to 2037 set out in draft LPR Policy SP12 includes additional provision above the LHN.</p> <p>However, as set out in the AMR (Table 3.4), the Core Strategy housing requirement of 525 dwellings per annum has not been met in 7 of the previous 13 years (with delivery averaging 503 dwellings per annum), and therefore there is currently a shortfall of 275 dwellings against the Core Strategy requirement. This is likely to worsen in the future given the lack of delivery at strategic sites such as Sandleford Park. Accordingly, in order to address the shortfall in delivery during the Core Strategy plan period and ensure sufficient supply and flexibility over the LPR plan period, it is recommended that the LPR housing target is set at a minimum of 575</p>	<p>The housing target is based on delivering the LHN at the minimum but with a target some 5% higher in order to boost supply and provide flexibility.</p> <p>The Core Strategy will continue to be monitored through the AMR until it is replaced by the LPR but guidance is clear that any shortfall is already accounted for in the calculation of the LHN.</p> <p>The shortfall in delivery against the Core Strategy is not anticipated to worsen; the latest Five Year Supply document shows that there is a deliverable supply to meet the Core Strategy target without any contribution from Sandleford Park. This demonstrates the flexibility that was built into the Core Strategy to meet the housing requirement.</p> <p>The LPR will be subject to ongoing monitoring.</p>

Respondent (with lpr ref)	Response	Council Response
	<p> dwellings per annum. It is also important that the target of 575 dwellings per annum is not a ceiling or cap to development as set out in draft LPR Policy SP12, but is expressed as a minimum in accordance with paragraph 60 of the NPPF (and in order to meet the objective of national policy to meet the housing needs of present and future generations (paragraph 8), and significantly boost the supply of new homes (paragraph 59)).</p> <p>The LPR should be subject to ongoing monitoring, in accordance with the NPPF, in order to ensure that sufficient housing is being delivered based on the LPR target, and be flexible enough to respond to non-delivery of identified sites or changing circumstances during the plan period. The Planning White Paper (paragraph 2.51) emphasises the need to review Local Plans every 5 years or <i>'sooner than five years where there has been a significant change in circumstances'</i>, e.g. issues with land supply or changes to the DEPZ</p>	
Pegasus Planning Group Ltd for Newbury & Crookham Golf Club (lpr2054)	<p>This policy states that at least 575 dwellings per annum (9,775 dwellings in total) will be provided from April 2020 to March 2037. It states that the target figure of 575 dwellings per annum does not constitute a ceiling or cap to development. New homes will be located according to policies SP1, SP3 and DC1. It is important for the council to ensure that the reference to the housing target figure not being a “ceiling or cap to development” is retained in the policy. This is because this is a positive message to send out whilst there is a nationally recognised shortage of housing in the UK and any policy that seeks to facilitate additional housing provision at this time is to be encouraged.</p> <p>The policy states that new housing will be focused in and adjoining the larger settlements, including the largest and most sustainable settlement of Newbury. Therefore, a development of c.35 dwellings on land at Newbury and Crookham Golf Club, on the eastern edge of Newbury, will comply with policies SP1 and SP3, which will enable housing to be provided to meet the council’s housing requirements, as set out in policy SP12. The proposed 35</p>	<p>Support for reference to the housing target figure not being a “ceiling or cap to development” is noted.</p> <p>See response to representation on SP13 (lpr2056) regarding promoted site.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>or so dwellings (potentially including affordable housing, subject to viability) will make a valuable contribution towards the housing needs of the district. The allocation of land on the edge of Newbury at NCGC will comply with this policy, by helping to provide much needed new housing in a sustainable location, where the impacts of development can be satisfactorily mitigated.</p> <p><i>Policy SP12 – Approach to Housing Delivery is supported. However, it is considered that the text should not be amended to remove reference to the delivery of housing over and above the “target figure” of 575 dwellings per annum.</i></p> <p><b>Table 2 Housing Supply at March 2020 referred to</b></p> <p>Paragraph 6.12 states that the requirement of 9,775 dwellings minus the supply of 8,114, means that sites for a further 1,661 homes need to be found. In addition, there needs to be some built-in flexibility to allow for phasing issues and to allow for non-delivery, particularly of larger sites, which need a great deal of up-front investment in roads and other infrastructure. Therefore, it is important to make it clear that the current shortfall of 1,661 dwellings should be a minimum and not a ceiling or a cap to development, as required by policy SP12 (see above).</p> <p>It is likely that larger sites identified in the Local Plan will have some problems with delivery. It is unlikely that they will deliver the housing numbers predicted in the suggested timescales, because all larger sites encounter issues with such matters as site assembly, ownership and title issues, capital funding, infrastructure costs and delivery, planning permissions and legal undertakings, such as section 38, 106 and 278 agreements.</p> <p>Some larger sites are also the subject of vehement objections from residents and may not actually come forward in the local plan. Overall, it should be expected that the larger sites will not deliver the housing numbers needed in a timely fashion and there is a real need for more medium-sized and smaller</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>sites, of less than 100 dwellings, to help to fill the gaps. Smaller sites can be delivered in short time frames, as they do not have the depth of issues that the larger sites have. Therefore, the council should allocate more smaller sites to ensure that housing needs are met in the short to medium-term.</p> <p><i>Table 2 and Paragraph 6.12 – Housing Supply at March 2020 is supported. However, it is considered that it should be made very clear that the current shortfall of 1,661 dwellings is a minimum provision and not a ceiling or cap on development.</i></p>	
Sovereign Housing Association (lpr2161)	<p>SHA broadly support WBDC approach to housing delivery where the LPR sets out a housing need figure for the Local Authority area of between 520-575 dwellings per annum. SHA believe housing targets should be aspirational, seeking not only to meet the minimum level of demographic growth but also support economic growth and address local affordable housing need. SHA support a minimum target of 575 homes per annum to deliver the necessary homes for WBDC. Whilst there has been much deliberation around the proposed revised methodology for assessing housing need and the proposed removal of the duty to co-operate, the NPPF still requires authorities to engage with their neighbours and take account of any adjoining unmet need. To avoid worsening affordability across the wider HMA we urge the council to engage proactively and positively with its neighbours where there is a clear unmet need to be addressed.</p>	<p>Support for approach noted.</p> <p>The minimum requirement is that to meet the LHN, with the upper end of the range representing the target figure.</p> <p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p>
LRM Planning for Bloor Homes & Sandlesford Farm (lpr2172)	<p>The NPPF expects the planning system to significantly boost the supply of new housing by providing, in the first instance, a sufficient amount of development land where it is needed (para 59 refers).</p> <p>It is clear that a Local Plan's housing requirement is to be calculated by reference to the Government's Standard Method, unless exceptional circumstances can be proven (para 60 refers).</p>	Support for approach noted.

Respondent (with lpr ref)	Response	Council Response
	<p>In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.</p> <p>In December 2020, the Government published its revisions to the Standard Method. The indicative level of local housing need for West Berkshire is recorded as 513 dwellings per annum. This is comparable to the lower end of the range in Policy SP20 of 520 dwellings per annum.</p> <p>When considering neighbouring authorities in the Western Berkshire Housing Market Areas, Reading has been subject to the ‘cities and urban centres uplift’, and its’ requirement has increased by 230 dwellings per annum. This could give rise to unmet need that may result in a duty to co-operate consideration and for West Berkshire’s housing requirement being increased. Equally, there may be economic and infrastructure reasons why additional housing should be located in West Berkshire.</p> <p>For these reasons, we agree the Local Plan should be based on a minimum requirement and we recognise that the allocation of sites aims to meet delivery of a higher number of homes in order to both boost supply and have some built-in flexibility.</p>	
Carter Planning Ltd for Mr R L A Jones (lpr1901)	<p>The overall housing requirement of between 8,840 to 9,775 between 1 April 2020 and 31 March 2037 or 520 to 575 dwellings per annum is unlikely to be inadequate to meet housing needs.</p> <p>Whilst it is understood that these figures are not a ceiling or cap, nevertheless as a minimum requirement reflecting need they are unlikely to be adequate.</p>	<p>The housing requirement is based on meeting the minimum requirement of the LHN with a target some 10% higher.</p> <p>Regarding the two principal reasons why Carter Planning feel the requirement is inadequate to meet needs:</p> <ul style="list-style-type: none"> <li>• See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area.</li> <li>• The Government did not amend the LHN formula for West Berkshire. It stands at 513 in 2022.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>There are two principal reasons for this. The first is that (as we have stated elsewhere) there is no information on the housing requirement likely to have to be met from adjoining Boroughs such as Reading, Wokingham or Swindon through the Duty to Cooperate etc.</p> <p>Secondly it is appreciated that the Council made the housing needs calculation based upon the mechanism appertaining at the time but of course the Government's new mechanism from 16 December 2020 for housing need calculation is likely to result in a higher figure.</p> <p>Notwithstanding our comments on the overall housing figure in respect of Policy SP12 we wish to raise a specific objection to "Table 2 – Housing Supply at March 2020". This Table includes "Allocations without permission". In detail, and in particular under sites in Lambourn at policies RSA 22 and 23, and in separate representations we have explained why two sites included in the previous Plan have not come forward and indeed one of them has been refused planning permission. Therefore it should not be assumed that Sandleford Park and in particular "HSA DPD sites" which are to supply a total of 1,482 dwellings will come forward. These should be re-examined and if necessary new/additional sites allocated. In addition to have a quarter of the sites as uncertain windfalls (1,979 of 8,114) is unacceptable.</p> <p>Additional sites should be allocated to provide the certainty expected of a new Plan</p> <p>Update the overall housing requirement to meet the need arising from the duty to cooperate and based upon the Government's latest mechanism for calculating housing need dated 16 December 2020.</p> <p>Re-examine HSA DPD Sites to see whether they are still available and can be developed and, if not find additional, replacement sites which should</p>	<p>With regard to issues related to sites in Lambourn please see responses to SP15 (lpr1902).</p> <p>The deliverability of existing allocations has been re-assessed and sites that are not considered developable, that is with a reasonable prospect that they could be viably developed at the point envisaged, will not be included in the Local Plan.</p> <p>The windfall allowance is a modest one in comparison to the level of windfall development over the plan period so far. The Plan does, though, support development of previously developed sites within the settlement boundaries and any large and medium sites that do come forward will contribute to the windfall element of supply and add to the flexibility needed to ensure housing needs can be met.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>include our Client's site LAM007 "Land between Folly Road, Rockfel Road and Stork House Drive".</p> <p>Reduce the element of windfalls in the Draft Plan from the high level of one quarter of all sites.</p>	
<p>Woolf Bond Planning for JPP land &amp; Spitfire Bespoke Properties (lpr2317)</p>	<p><i>See attachments for full response.</i></p> <p><b><u>Assessment of Local Housing Need.</u></b></p> <p>Paragraph 4.4 acknowledges that the current assessment of housing need for the district results in a minimum annual requirement of at least 513dpa, using a 2020 base date. The NPPF (paragraph 60) is clear that an authority should address the minimum annual need arising from the calculation of local housing need (currently 513dpa for West Berkshire) alongside any needs that cannot be meet in adjoining authorities.</p> <p>The neighbouring authority of Reading Borough adopted its Local Plan for the period 2013 to 2036 in November 2019. This requires the delivery of at least 689 dwellings annually over this period (equating to 15,847 dwellings over the 23 year plan period).</p> <p>The current version of the PPG (ID ref 2a-004-202001216) indicates that Reading borough is one of the selected authorities whose housing requirement is uplifted by 35%. Applying the same 2020 base date as West Berkshire Council have applied results in a minimum annual need for 876 dwellings in Reading Borough. This is 187 dwellings annually above that which Reading Borough have committed to delivering. Although paragraph 6.3 suggests that there is no unmet need arising from Reading Borough, this would not reflect an assessment of that authority's need under the latest version of the PPG.</p>	<p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p> <p>The Local Development Scheme published in June 2022 anticipates adoption of the LPR in September 2024. The LPR therefore covers a 15 year period through to 2039.</p> <p>The existing housing allocations in the HSA DPD have been rolled forward, but where the site is completed or where construction is underway, they will be excluded from the LPR (eg RSA6 will be amended to exclude that part that is now complete). All sites will also be reviewed to take account of any representations and/or additional information.</p> <p>Where units on HSA DPD allocations were completed by 31 March 2022 they have not been included in the housing supply figures for 2020 -2037. The figures in Table 2 show only the outstanding dwellings with permission (those under construction or not started at 31 March 2022). The supply at 31 March 2022 and progress on allocated sites is reported in the 2022 AMR, which will be published in January 2023.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Additionally, the NPPF (paragraph 22) is clear that “Strategic policies should look over a minimum 15 year period from adoption”, which pursuant to paragraph 20 includes the overall scale of residential development.</p> <p>The current Local Development Scheme (April 2020) indicates that adoption of the emerging Local Plan is expected for December 2022, following a consultation of the pre-submission version in May 2021 and submission to the Secretary of State in October 2021.</p> <p>The Council’s expectation of adoption in December 2022 does not support the envisaged end date of the document in March 2037 as this would provide for only 14 years post adoption, and discounts any event delays the ongoing preparation. Such delays are considered likely as our review of the timeframe for the adoption of Local Plans covering strategic matters since the original NPPF was published in March 2012 [<i>Footnote 1: Data from Local Plans: the examination process - GOV.UK (www.gov.uk)</i>] indicates that for those where consultation of a draft Submission document occurred from March 2012 until January 2021 took on average 749 days to reach adoption. This is therefore just over 2 years and consequently should consultation of a draft Submission Plan take place in May 2021 as envisaged, adoption could realistically be envisaged for May 2023.</p> <p>Therefore, West Berkshire should consider further extending the Plan period to ensure that it remains consistent with national policy, whilst providing greater flexibility for revisions to the timetable and a realistic timeframe from consultation on a submission document through to adoption.</p> <p>Since West Berkshire adjoins Reading Borough, consideration should be given to the potential to accommodate further homes in the district, notwithstanding the current approach. Whilst we acknowledge that the draft Local Plan includes a number of allocations, for the reasons outlined in this statement, it is not considered that sufficient land has been identified, especially to meet an extended plan period consistent with the minimum</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>requirements of the NPPF together with unmet needs from adjoining authorities i.e. Reading Borough.</p> <p>Provision of additional sites would also address the uncertainty with respect of the realism associated with the Council's expectations of delivery from the various sources since the authority has not published the full details of the supply at 1st April 2020.</p> <p>The failure to publish the full details is illustrated by the incorrect assessment of sites within the emerging Local Plan, such as the land at Pyle Hill, Greenham, Newbury (Previously recorded under SHLAA Ref NEW047C).</p> <p>The Council's Site Selection Background Paper (page 41) for this parcel within the wider HSA4 allocation of the Site Allocations Local Plan notes that the 71 dwellings permitted on this area were not started. This supposedly reflects the Council's contact with the site promoter in summer 2020 as per paragraph 9.3 of the Background Paper. However, the Council's published assessment of Housing Land Supply for 1st April 2019 (issued in January 2020) is clear (page 5 of appendix 1), that construction on the parcel with permission for 71 dwellings was underway with 10 of the dwellings already completed. The extent of construction on the site is further illustrated in the aerial photo from July 2020 (obtained from Google Earth). <i>[See attachment 'W Berks Local Plan reps February 2021 Burghfield Common REDACTED']</i></p> <p>This is an illustration of where the authority has unjustifiably contended that development has not started whereas some where completed by 31st March 2019 with further units finished in the April 2019 to March 2020 period. This site should therefore have been omitted as an allocation within the emerging Local Plan and the resulting reduction in dwellings should be addressed through further allocations.</p>	

Respondent (with lpr ref)	Response	Council Response
<p>Pegasus Planning Group Ltd for Calcot Park Golf Club (lpr2327)</p>	<p>This policy states that at least 575 dwellings per annum (9,775 dwellings in total) will be provided from April 2020 to March 2037. It states that the target figure of 575 dwellings per annum does not constitute a ceiling or cap to development. New homes will be located according to policies SP1, SP3 and DC1. It is important for the council to ensure that the reference to the housing target figure not being a “ceiling or cap to development” is retained in the policy. This is because, this is a positive message to send out, whilst there is a nationally recognised shortage of housing in the UK and any policy that seeks to facilitate additional housing provision at this time is to be encouraged.</p> <p>The policy states that new housing will be focused in and adjoining the larger settlements, including the three growth areas, of which the Eastern Area is relevant to CPGC. Therefore, a development of up to 70 dwellings on land at CPGC, on the eastern edge of Calcot, will comply with policies SP1 and SP3, which will enable housing to be provided to meet the council’s housing requirements, as set out in policy SP12. The proposed 70 dwellings will make a valuable contribution to the housing needs of the district (potentially including affordable housing, depending on agreed development quantum and subject to viability). The allocation of land at CPGC within the built-up area of Calcot will comply with this policy, by helping to provide much needed new housing in a sustainable location, where the impacts of development can be satisfactorily mitigated.</p> <p><i>Policy SP12 – Approach to Housing Delivery is supported. However, it is considered that the text should not be amended to remove reference to the delivery of housing over and above the “target figure” of 575 dwellings per annum.</i></p> <p><b>Table 2 Housing Supply at March 2020 (in Policy SP12 referenced)</b></p>	<p>Support for approach noted.</p> <p>See response to representation on SP14 (lpr2328) regarding promoted site. The site is within the settlement boundary and any application would be determined according to the policies in the Local Plan. Should an application here be approved it would be additional windfall supply and contribute to the flexibility in the numbers. The Council does not propose to allocate within settlement boundaries other than for more strategic sites (the Kennet Centre in Newbury is the only proposed allocation within a settlement boundary).</p> <p>The Council’s strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites that can deliver housing sooner.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Paragraph 6.12 states that the requirement of 9,775 dwellings minus the supply of 8,114, means that sites for a further 1,661 homes need to be found. In addition, there needs to be some built-in flexibility to allow for phasing issues and to allow for non-delivery, particularly of larger sites, which need a great deal of up-front investment in roads and other infrastructure. Therefore, it is important to make it clear that the current shortfall of 1,661 dwellings should be a <u>minimum</u> and not a ceiling or a cap to development, as required by policy SP12 (see above).</p> <p>It is likely that larger sites will have some problems with delivery. It is unlikely that they will deliver the housing numbers predicted in the suggested timescales, because all larger sites encounter issues with such matters as site assembly, ownership and title issues, capital funding, infrastructure costs and delivery, planning permissions and legal undertakings, such as section 38, 106 and 278 agreements. Some larger sites, such as North-East Thatcham, are also the subject of vehement objections from residents and may not actually come forward in the local plan. Overall, it should be expected that the larger sites will not deliver the housing numbers needed in a timely fashion and there is a real need for more medium-sized and smaller sites, of less than 100 dwellings, to help to fill the gaps. Smaller sites can be delivered in short time frames, as they do not have the depth of issues that the larger sites have. Therefore, the council should allocate more smaller sites to ensure that housing needs are met in the short to medium-term.</p>	
Gerald Eve LLP for Fairhurst Estate (lpr2368)	<p>Our client owns and controls land situated to the East of Shaw Farm Road, Newbury. A site location plan of this land is included at Annex 1 (<i>attached to online representation</i>). The land would be accessed from the roundabout adjacent to the Vodafone Headquarters as an extension to the already permitted housing development, and would not rely upon vehicular access from Shaw Farm Road/Love Lane itself.</p> <p>We share the concerns of others in respect of the approach to the identification and allocation of sites for development. In particular the heavy</p>	<p>See response to lpr2371 on SP13 regarding site to the East of Shaw Farm Road.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites,. Strategic sites in Newbury and Thatcham are expected to deliver in the medium to long</p>

Respondent (with lpr ref)	Response	Council Response
	<p>reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandford Park and evidenced through background papers such as the 'Start to Finish' Report prepared by Lichfields).</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner.</p> <p>The Council's own assessment (within the HELAA (December 2020) of the wider area, within which the land is situated, stated that it is well related to Newbury and that it should be considered as part of a future potential strategic site (site reference SCD4). The Council has accepted the principle that the general location is suitable for development and, in positively preparing the plan, should be considering the positive contribution that a flexible approach to additional housing in locations such as this can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Further consideration of the whole site assessed as SCD4 within the HELAA should be undertaken. The site, as shown within SCD4, and specifically including the area as identified on the enclosed plan, merits further investigation and consideration for inclusion as a suitable site for the delivery of additional new homes.</p>	<p>term, while the smaller allocations and existing permissions will deliver throughout the plan period. A trajectory will be prepared to accompany the Reg.19 consultation and will be reviewed annually and reported in the AMR.</p> <p>It is not considered that a criteria-based policy for sites on the edges of sustainable settlements would be appropriate. The plan will be subject to five yearly review and annual monitoring will indicate if policy changes are needed.</p>
<p>Armstrong Rigg Planning for Manor Oak Homes (lpr2421)</p>	<p><i>Full representation promoting development of Land at Fairview, Greenways, Lambourn is attached.</i></p>	<p>The minimum requirement as set out in the LPR is for 513 dwellings per annum (dpa), slightly above the LHN. The target figure, which the Council is planning to meet is 538 dpa.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Manor Oak Homes object to Policy SP12 for 3 reasons:</p> <p><b>1. It fails to set a clear housing requirement for the plan period:</b></p> <p>NPPF paragraph 65 requires strategic policy-making authorities to establish a housing requirement figure for their whole area, which shows the extent to which their identified housing need (and any needs that cannot be met within neighbouring areas) can be met over the plan period. <b>Policy SP 12</b> fails in this regard primarily due to a lack of clarity. The policy refers to both a range of 520-575 dwellings per annum (dpa) being required and to a target figure of 575 dwellings, but it is unclear whether the proposed housing requirement is 520 dpa, 575 dpa or somewhere in between.</p> <p>The supporting text suggests that the Council intends its housing requirement to be 520 dpa and that the 575 dpa figure is intended as a supply buffer. If this is the case it needs setting out clearly to ensure that the Local Plan sets a specific housing requirement for the purposes of monitoring delivery and assessing its 5 year supply position. We would also raise concern that this represents an insufficient supply buffer. In our experience, Council's that apply a 20% supply buffer are more successful in maintaining delivery and achieving a 5 year supply of housing for the lifetime of the plan.</p> <p><b>2. It fails to take into account the unmet needs of Reading in reaching its housing requirement:</b></p> <p>The NPPF at paragraph 60 sets out that to determine the minimum number of homes needed, strategic policies should take into account any needs that cannot be met within neighbouring authority areas. In response to this requirement, the supporting text to <b>Policy SP 12</b> simply states that there has been no request to take unmet need from other authorities and the "<i>In 2018 there was a possibility of some unmet need in Reading Borough, but this is no longer the case</i>". We recognise that this statement was correct at the</p>	<p>For the purpose of monitoring the 5 year supply position, the PPG is clear that, if using a range, the requirement should be based on the lower end of the range.</p> <p>The use of a range for the requirement introduces some flexibility and there is also flexibility on the supply side, with the projected supply slightly exceeding the target requirement and with the use of a relatively modest windfall allowance.</p> <p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p> <p>The Local Development Scheme published in June 2022 anticipates adoption of the LPR in September 2024. The LPR therefore covers a 15 year period through to 2039.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>time the emerging LPR was published for consultation, but there has been a significant change in circumstances since the consultation started that must now be accounted for.</p> <p>In December 2020, the government published its new standard method for calculating Local Housing Need (LHN) which introduces a 35% uplift to LHN for the 20 largest cities and urban areas (including Reading). The new standard method increases Reading's LHN from 649 to 876 dpa in the context of a recently adopted Local Plan in Reading that already fails to meet its housing requirement. The Reading Borough Local Plan was adopted in November 2019 and its Policy H1 identifies a shortfall in delivery of 230 dwellings between 2013 and 2036 against a housing requirement of 15,847 dwellings (or 689 dpa). This housing requirement is 187 dpa lower than the new standard method which demonstrates that there will be a significant unmet need in Reading of c.3,000 dwellings<sup>1</sup> during the emerging LPR plan period. Given the recent adoption of the Reading Local Plan there is a risk that this unmet need will not be formally identified until preparation begin in earnest for a review of the Reading Local Plan. Such a review is required by the NPPF to be completed within 5 years and it is therefore expected that Reading will commence this work prior to the adoption of the West Berkshire Local Plan. In order to provide maximum flexibility at this stage of the plan making process we would therefore recommend that West Berkshire increase their supply buffer to 20% (as set out above). This will ensure sufficient flexibility in supply to account for any unmet needs from Reading.</p> <p><b>3. Failure to Plan for 15 Years from Adoption:</b></p> <p>NPPF Paragraph 22 requires strategic policies to look ahead over a minimum 15 year period from adoption. The supporting text to <b>Policy SP 12</b> states that: "<i>As the estimated adoption date of this Local Plan Review is 2022, the plan period has been extended to 2037</i>". This estimated adoption date is based on the Council's most recent Local Development Scheme (LDS) which was published in April 2020 and forecasts the publication of a Regulation 19 Proposed Submission Local Plan in May 2021 and adoption in</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>December 2022. Timescales have clearly slipped since the publication of the LDS, such that reaching Regulation 19 stage in May 2021 seems highly unrealistic. It is therefore unlikely that the Local Plan will be adopted in 2022 and there will be a requirement to plan for an additional year to 2038.</p> <p>The policy should be revised to specifically state what the Council's annual housing requirement is for the plan period is and then to separately set out what the intended supply buffer is over and above this housing requirement. We recommend that a supply buffer of 20% is used to ensure the delivery of the housing requirement. The housing requirement will also need reviewing in discussion with Reading Borough Council to take account of their significant unmet need and the plan period will need extending 2038 to ensure a 15 year period on adoption.</p>	
Turley for Richborough Estates Ltd (lpr2385)	<p><i>Full Representation promoting allocation of land north of Silchester Road, Tadley is attached at Policy SP14</i></p> <p>The provision for additional homes within West Berkshire for the period 1st April 2020 to 31st March 2037 is supported, however, the provision of housing should be listed as a <u>minimum</u> of 9,775 net additional homes, rather than providing a range. The provision of a minimum should also be reflected in the dwellings per annum, i.e. providing at least 575 dwellings per annum. This provides a clearer housing provision target.</p> <p>In order to provide flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner.</p>	<p>See response to lpr2390 on SP14 regarding the promoted site north of Silchester Road, Tadley.</p> <p>The 538 dpa figure is intended as a target but the minimum housing requirement is 2022 LHN (which is 513 dpa).</p> <p>It is not considered that a criteria-based policy for sites on the edges of sustainable settlements would be appropriate. The plan will be subject to five yearly review and annual monitoring will indicate if policy changes are needed.</p>

Respondent (with lpr ref)	Response	Council Response
Barton Willmore for Sulham Estate (lpr2439)	<p>We do not agree with the proposed policy on the basis that the housing target is insufficient.</p> <p>Please refer to the Housing Need Technical Note prepared by Barton Willmore, dated February 2021 submitted with these representations for our full response in relation to SP12. A brief summary follows but this should be read in the context of the full Technical note.</p> <p>The Council’s target figure does not incorporate sufficient uplift to meet the “substantial” affordable housing need of 319 dwellings per annum identified within the West Berkshire District Updated Housing Needs Evidence, May 2020 (Paragraph 9.7, page 80). Whilst it is acknowledged that the Council are not required to meet this need in full, the PPG states that “an increase in total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes” (Reference ID: 2a-024-20190220). The Council should uplift their housing target through the allocation of additional sites in order to deliver additional affordable homes. Failure to do so will result in an increased year-on-year deficit in terms of the number of affordable homes provided across the district over the plan period.</p> <p>In addition to the affordable housing need, West Berkshire should also be increasing their housing target in order to seek to meet a proportion of Reading Borough Council’s unmet housing need. Against the standard method minimum, Reading’s unmet need equates to over 4,000 dwellings over the recently adopted Reading Local Plan period. Reading is a highly constrained local authority and, given that the Eastern Urban Area of West Berks is contiguous with the west of Reading, West Berkshire should seek to meet some of this need in this area.</p> <p>Our client’s site at Hall Place Farm (reference TIL18 within the West Berkshire Housing and Economic Land Availability Assessment (‘HELAA’)</p>	<p>See response to Barton Willmore for Donfield Homes (lpr2098) regarding consideration of affordability issues and the assessment of need.</p> <p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.</p> <p>See response to the consultee’s representation lpr2441 on SP14 regarding promoted site at Hall Place Farm.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>(February 2020) directly adjoins the Eastern Urban Area and, therefore, has a functional relationship with Reading and is exceptionally well-placed to contribute towards meeting Reading's unmet need.</p> <p>The Council should increase their housing target and allocate further sites for development including our client's site at Our client's site at Hall Place Farm (reference TIL18 within the West Berkshire Housing and Economic Land Availability Assessment ('HELAA') (February 2020).</p>	
Turley for Pangbourne college (lpr2350)	<p>Emerging Policy SP12 (Approach to Housing Delivery) identifies the Council's plans to provide '8,840 to 9,775 net additional homes in West Berkshire for the period 1 April 2020 to 31 March 2037; 520– 575 dwellings per annum. The target figure of 575 dwellings per annum does not constitute a ceiling or cap to development', which is welcomed and considered appropriate to ensure that the Council allows itself sufficient flexibility to maintain a 5 year housing land supply position.</p> <p>The Framework states 'Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services'. The lack of any proposed housing in Pangbourne, despite its position within the settlement hierarchy will limit the opportunities for the village to 'grow and thrive', contrary to national planning guidance and misses an opportunity to provide housing within an identified rural service centre.</p>	<p>Support for approach noted.</p> <p>There is a lack of suitable sites adjoining Pangbourne; those that have been promoted have been assessed in the HELAA. There may be opportunities for brownfield development and the strategy is to direct development to the more sustainable settlements, in particular to opportunities within the settlement boundaries.</p>
Barton Willmore for Donnington Valley Group (lpr2434)	<p>We do not agree with the proposed policy on the basis that the housing target is insufficient.</p> <p>The Council's target figure does not incorporate sufficient uplift to meet the "substantial" affordable housing need of 319 dwellings per annum identified within the West Berkshire District Updated Housing Needs Evidence, May 2020 (Paragraph 9.7, page 80). Whilst it is acknowledged that the Council are not required to meet this need in full, the PPG states that "an increase in total housing figures included in the plan may need to be considered where it could help deliver the required number of affordable homes" (Reference ID:</p>	<p>See response to Barton Willmore for Donfield Homes (lpr2098) regarding consideration of affordability issues and the assessment of need.</p> <p>See response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation</p>

Respondent (with lpr ref)	Response	Council Response
	<p>2a-024-20190220). The Council should uplift their housing target through the allocation of additional sites in order to deliver additional affordable homes. Failure to do so will result in an increased year-on-year deficit in terms of the number of affordable homes provided across the district over the plan period.</p> <p>In addition to the affordable housing need, West Berkshire should also be increasing their housing target in order to seek to meet a proportion of Reading Borough Council's unmet housing need. Against the standard method minimum, Reading's unmet need equates to over 4,000 dwellings over and above the recently adopted Reading Local Plan (Nov 2019) figure. Reading is a highly constrained local authority and, given the strong physical and operational connections between Reading and West Berks, West Berkshire should seek to take a significant proportion of this unmet need. Our client's site at Donnington Valley Golf Course could accommodate housing development which would help the Council to meet an increased housing target.</p> <p>The Council should increase their housing target and allocate further sites for development across the district.</p>	
Rectory Homes Ltd	<p>Policy SP12 sets out the Council's approach to the delivery of housing over the emerging Plan period. The policy sets out that 520-575 dwellings per annum should be delivered between the years 2020 – 2037. We agree with the Council that the figure of 575 dpa should not be considered a maximum or cap to development and that further sustainable development that accords with the development plan and the NPPF should be delivered even if the figure of 575 per annum is exceeded.</p> <p>Paragraph 68 of the NPPF states local planning authorities should identify land to accommodate at least 10% of their housing requirement on sites no</p>	<p>Support for approach noted.</p> <p>A Housing Background Paper will accompany the Reg. 19 consultation and will set out how the housing supply meets the NPPF requirement regarding identifying sites under 1 hectare.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>larger than a hectare in size. This process should be conducted through the development plan.</p> <p>As a SME, the ability to secure the planning permission of and deliver schemes on small sites is crucial to the success and sustainability of our business. Due to their scale and low infrastructure costs, such sites can be delivered quickly to assist the Council's housing land supply position and can deliver tangible benefits to local communities, such as enhancing and maintaining the vitality of local services and facilities in accordance with Paragraph 78 of the NPPF. This is why the Government now requires local authorities to allocate more sites of varying sizes and it is critical that the Council supports this objective.</p> <p>Currently, the Council have not demonstrated that at least 10% of their housing requirement. This will need to be reflected in the forthcoming versions of the emerging Local Plan.</p>	
Origin 3 for Sandtrend Ltd (lpr2398)	<p>For Newbury and Thatcham the Plan considers these urban areas positively as locations to deliver growth.</p> <p>The spatial strategy maintains its approach delivering sites against a settlement hierarchy – with the LPR explicit that Newbury, as part of the Newbury and Thatcham urban area, is a sustainable location for development. For Newbury, the LPR's Vision seeks to maintain its market town heritage.</p> <p>The West of Berkshire Spatial Framework Plan (SFP), December 2016 (prepared by the authorities of West Berkshire, Bracknell Forest, Reading and Wokingham) set out the basis against which the four authorities would work in demonstrating strategic priorities and projects. It would have informed the earlier (2018) LPR consultation. This earlier consultation identified areas of search within West Berkshire for delivering planned growth: (i) 'Land north of Newbury within the M4 corridor; and (ii) at Grazeley</p>	<p>Since the West of Berkshire Spatial Framework Plan was published, further work was carried out on assessment of sites, including through the HELAA and the SA/SEA. The reasons why further development to the north of Newbury are outlined in the site assessment work.</p> <p>Though Grazeley had been identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield.</p> <p>The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town</p>

Respondent (with lpr ref)	Response	Council Response
	<p>in east of the district (south of Reading). In respect of (i) it presented a significant area of search to the north of Newbury - extending northwards along the A339 and A34 towards the M4. In being prepared to support the collaborative working of the authorities and to meet housing market area needs, the SFP initiative was welcomed by our client as a positive approach to identifying growth options focused to the north of Newbury. This was reflected in our client's submissions to the LPR Consultation, March 2018 in which we identified and supported the principle of the West Berkshire Core Strategy's (2012) spatial strategy – in directing growth towards key urban areas in being the most sustainable locations for new housing.</p> <p>However, the outputs of this SFP work do not appear to be evidenced in the work informing the current LPR consultation. There seems little point in committing to such an exercise as a joint initiative between four neighbouring authorities and not clearly referencing the outcome of the work nor responding to it in preparing the emerging LPR. Indeed, the exercise by the authorities was to identify needs within the authorities and, through collaboration, "<i>shape the approach to early delivery of key infrastructure and help secure investment in the area</i>".</p> <p><b>iii. Suggested Strategic Growth to the North of Newbury</b></p> <p>The spatial strategy recognises the need for development growth to meet the district's needs with Newbury (and Thatcham) fundamental in accommodating growth. Whilst brownfield development sites will inevitably be available, other development areas that respond positively to opportunities and can draw from existing and established infrastructure should also be deliverable.</p> <p>A strategic area of search with readily identifiable development areas is situated to the west of the B4494 at Donnington and north of Grove Road/Lambourn Road. This wide area sits in an advantageous strategic location proximate to the A339 with ready access to the M4 and into Newbury. Well planned, sensitively sited development can be</p>	<p>proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation.</p> <p>See response to the consultee's representation lpr2400 on SP13 regarding promoted site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>accommodated in this strategic area. It can respond to local sensitivities including the proximity of designated heritage and other assets and features ensuring that place-making principles are adopted and the wider connectivity benefits are the basis of a masterplan.</p> <p>This area, for further consideration by the Council, aligns fully with the area of search endorsed in the aforementioned SFP. Indeed, it presents an opportunity for development parcels to be identified, considered and allocated. In the context of the surrounding area, there would be a number of development parcels – readily developable for housing and capable of delivering development promptly.</p>	
Bluestone Planning for Darcliffe Homes Ltd (lpr2427)	<p>Darcliffe Homes Ltd (hereafter 'Darcliffe') support the principle stated in policy SP1 Spatial Strategy of identifying the locations as set out in the settlement hierarchy in policy SP3 where residential development may take place. This is consistent with the guidance on the general approach to the delivery of new homes, as set out in the NPPF.</p> <p>The densities as set out in the policy are generally supported, although it should also be noted that higher density may also be achievable in certain locations, particularly around the Eastern Area. Careful and sensitive design can deliver higher density, without leading to unacceptable intensification.</p> <p>The policy also refers to the significant commitments throughout the District and as explained below, there are concerns that these either may not come forward during the Plan period and/ or are being built out at a rate which would mean that they are not appropriate for inclusion in the Adopted Plan and therefore alternatives will have to be sought.</p> <p>Policy SP3 sets out the settlement hierarchy and identifies the urban areas which will be a prime focus for housing. It is supported that the Eastern Urban Area will be a focus, although there is a significant imbalance</p>	<p>See response to consultee's representation lpr2425 on SP1.</p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here. The Eastern Area is very constrained, with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston. Sites promoted have been assessed through the HELAA and site selection process.</p> <p>The Tilehurst Neighbourhood Development Plan Steering Group have responded to the consultation and stated that they do not now intend to allocate sites for development.</p> <p>As part of the work on proposed submission (Regulation 19) version of the LPR, sites in Tilehurst have been considered for allocation through SA/SEA and more detailed site selection work. Site TIL13 (Land at Pincents</p>

Respondent (with lpr ref)	Response	Council Response
	<p>between the numbers allocated to Newbury and Thatcham when compared to Eastern Area, with over 4,000 homes to the former and under 1,000 homes to the latter. This is not considered appropriate given the level of services and facilities provided to the Eastern Area.</p> <p>With regard to the Eastern Area specifically, it is stated that new allocations for Tilehurst and Burghfield will be made through NDPs. This is clearly dependent on the NDP process, which is lengthy and sometimes fraught with difficulties.</p> <p>At the time of writing, Tilehurst for example have not yet published their draft Neighbourhood Plan and therefore it will still be some time before this can be taken to and approved at referendum, and housing can start to be delivered in accordance with such allocations. Although Policy SP14 sets out that the Designated Neighbourhood Area should allocate 175 dwellings, there is no timeframe for when this may come forward or whether this number will be agreed.</p> <p>It should also be noted that in the HELAA the text regarding Tilehurst makes it clear that allocations will be made within the Local Plan Review where not allocated by the NDP.</p> <p><i>“Tilehurst</i></p> <p><i>8.31. Tilehurst Parish is designated as a Neighbourhood Area, and Tilehurst Parish Council are preparing a neighbourhood plan. The Parish Council have expressed an intention to include residential allocation(s) in the neighbourhood plan. The site selection work will therefore be undertaken by the Parish Council.</i></p> <p><i>8.32. In the event that Tilehurst Parish Council choose not to include residential site allocations in the neighbourhood plan, then West Berkshire</i></p>	<p>Lane, Tilehurst) was recommended by officers as being suitable for allocation. However, the Member decision was that the site should not be proposed for allocation due to the impact that development would have on the local highway network.</p> <p>Regarding the supply calculations, there is no undersupply carried forward from the Core Strategy. National guidance is clear that this is factored into the standard method.</p> <p>SP13 proposes the allocation of up to 1,500 homes at Sandford Park.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites that can deliver housing sooner. The Council is not relying on the total allocation at either Sandford Park or North East Thatcham to meet the need up to 2039.</p> <p>Any completions on the sites allocated in the HSA DPD before April 2022 have not been included in the supply set out in Table 2.</p> <p>The small site windfall allowance included is 140 units per annum. It is not applied across the whole plan period as that would involve double-counting with existing permissions. Permissions on small sites are already included in the supply, within the first five years, so the windfall allowance is only included later in the five year supply and beyond.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>Council will pick up the site selection work and consider allocations through the LPR.”</i></p> <p>All other locations are to be treated as open countryside (as set out in Policy SP1) and therefore no sites in these areas could be brought forward in accordance with policy. It is therefore considered that housing allocations should also be made either independently or collaboratively in the Review Local Plan or the policy should be more flexibly worded in the urban areas.</p> <p>There is a concern that policies do not go far enough in bringing forward small and medium sized sites, particularly those located on the edge of the identified urban area settlements. As stated above, if such sites are not allocated in the Local Plan Review or in particular, a NDP, because an NDP has either not been developed or has been delayed, there is no mechanism for such sites to be approved in the future. This may be an issue of great concern where some of the larger strategic sites are not deliverable within the Plan period.</p> <p>It is also unclear from the supply calculations whether or not there has been an undersupply from the Core Strategy 2012 which has been carried forward. Sandford Park was allocated in the 2012 Core Strategy and has not yet been granted permission. Clarification is sought as to how this has been dealt with and whether further sites should be allocated in this regard.</p> <p>The table in Policy SP13 also sets out that Sandford Park seeks to accommodate up to 1500 dwellings, whereas the text in paragraph 6.12 states that only 1,000 houses will be delivered by 2037 and the remainder in the following Plan period.</p> <p>This approach is also inconsistent with the encouragement of developers to bring forward small and medium sized sites. The HBF document (2017) ‘Reversing the decline of small housebuilders:</p>	<p>See response to the consultee’s representation lpr2429 on SP14 regarding promoted sites.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Reinvigorating entrepreneurialism and building more homes' notes (p.29) that:</p> <p><i>“For understandable political and financial reasons, planning authorities have increasingly sought to allocate very large strategic sites for residential development in order to satisfy its requirement to demonstrate a five-year land supply. Large sites on the edge of settlements can be less likely to spark political controversy as they are slightly removed from existing communities. For the very same reason, however, they may require substantial infrastructure and up-front financing resulting in relatively lower delivery rates in the early years of the site’s existence making rapid delivery unrealistic.”</i></p> <p>The latest research from Lichfields (February 2020) ‘Start to Finish What factors affect the build-out rates of large-scale housing sites? Second edition’ discusses the lead times on large sites and the data is not encouraging:</p> <ul style="list-style-type: none"> <li>• Schemes of 500-999 dwellings take on average approximately 5.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 1,000-1,999 dwellings take on average between 6.9 and 7.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 2,000+ dwellings take on average approximately 8.4 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years. 6.1 years of this are taken up with the planning application process. (see figure 4 of the Lichfields document)</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>In contrast, smaller sites between 0 and 99 dwellings typically deliver within 3.3 years of the validation of the first application.</p> <p>On this basis it is considered that the following should be taken into consideration:</p> <ul style="list-style-type: none"> <li>• SP16 Sandleford Park is allocated for 1,000-1,500 dwellings, taking the above into account, it would take between 6.9 – 7.0 years until the first dwelling is built based on the above assumptions. It should be noted however that the site has been allocated since 2012 and although a number of applications have been submitted, there remains outstanding issues and the site still does not have permission. It is therefore considered that given the length of time taken to date, that the site is unlikely to realistically deliver the numbers proposed.</li> <li>• SP17 North East Thatcham is allocated for 2,500 dwellings, taking the above into account, it would take 8.4 years from validation until the first dwelling is built, based on the above assumptions. There has been no application to date. It is unlikely therefore that any dwelling would be built until approximately 2030 and following this, the average annual build-out rate for a scheme of 2,000+ dwellings is an average of 160 dpa (as set out in the aforementioned Lichfields report). On this basis, with the Plan period up to 2037, this would equate to 1,120 dwellings during the Plan period and not 2,500 as set out. It is unrealistic that on an allocation of this size that dwellings could be brought forward to the market at a faster rate.</li> </ul> <p>The HBF document goes on to advise that (p.29-39):</p> <p><i>“Once allocated, LPAs are systematically failing to assess on an ongoing or regular basis, the actual delivery achieved against the targets indicated in its</i></p>	

Respondent (with lpr ref)	Response	Council Response
	<p><i>local plan. For instance, by allocating one or several very large sites to achieve a five-year supply of land, delays progressing one site through planning will have a substantial impact on the ability of the authority to adequately plan for the number of homes required.....</i></p> <p><i>..... To meet demand for housing, we need more sites of all sizes allocated. Indeed, large sites often deliver new homes at astounding rates, particularly in areas where the market is strong, but small sites are consistently efficient in their delivery. For this reason, the allocation of a wider range of sites within local plan allocations would not only help increase plurality in the housebuilding sector, it would also improve the chances of local authorities' meeting ambitious supply trajectory plans. Achieving this all-round positive outcome need not involve overly prescriptive diktats. A subtle shift in policy emphasis, along with a greater focus on ongoing delivery within a local plan period would help to achieve a positive change in behaviours at a local level.....</i></p> <p>The above is also irrespective of the fact that many of the smaller HSA sites are already near completion and at least some the numbers should have potentially been counted before the Plan period. Therefore, these numbers are unlikely to be taken forward in the Adopted Local Plan.</p> <p>In addition, based on last published WBC housing monitoring report (2019), there was a projected windfall allowance of 362 dwellings for the five years up to 2024. To cover the Local Plan Review period to 2037 would suggest a windfall figure of 1,231 dwellings should be included in the supply and not 1979 as currently stated in Table 2 Housing Supply at March 2020. Therefore, there is real danger that the delivery target will not be met due to a reliance on windfalls. This makes very clear that when combined with a lack of flexibility / unclear non-implementation allowance, that there is a need for more allocation sites to bridge the shortfall, in the order at least 700 units.</p> <p>In summary, there is a clear under provision for new sites and further small to medium sites should be considered with flexibility to allow sites on the</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>edge of the urban areas identified to come forward to ensure that sufficient sites can be delivered within the Plan period.</p> <p>It is considered that policies SP1 and SP3 should be reworded to provide more flexibility.</p> <p>Other nearby Local Planning Authorities have recognised the issue that can arise where a NDP is not delivered. For example, South Oxfordshire District Council in their Policy H1 of the recently adopted Local Plan (but see also their Core Strategy which also contained a similar policy) set out that:</p> <p><i>“Where Neighbourhood Development Plans are not progressed in larger villages and market towns, planning applications will be considered against the housing delivery targets for the towns and larger villages set out in this Plan.”</i></p> <p>A form of words reflecting the above, would ensure that there would be sufficient flexibility to take into account any NDP problems and Policy SP1 should be amended accordingly, with and SP3 and DC1 given clarification in this regard.</p> <p>To reflect this and the potential undersupply of housing, further small to medium sites should be also be added to policies SP13-14, with any update to SP12 as a result. Darcliffe Homes are proposing two such sites within the Eastern Urban Area, which would deliver up to 80 dwellings.</p> <p>The supporting text at paragraph 6.22 would also need to be updated in this regard.</p> <p>The addition of further small to medium sites such as these will require a re-consideration of the capacity of the strategic-scale sites to reflect realistic expectations. Revising the site capacities slightly downward to accommodate a shift of dwelling numbers will not however adversely affect the ability of the promoters to bring the strategic sites forward for</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>development, but will allow a longer period for developing out the entirety of the site, which is likely to run into the following Plan period.</p> <p>Allocating additional small to medium sites will also have a positive effect on the smaller scale and local housebuilding industry, which includes Darcliffe Homes, in providing opportunities that will help to continue to sustain this important re-emerging sector of the housebuilding industry.</p>	
Barton Willmore for Wilson Enterprise Ltd & Hallam Land Management (lpr2455)	<p><i>Extract from representation relating to approach to Grazeley</i></p> <p>In addition to preparing to fully meet its own needs, West Berkshire must also factor in unmet need from adjacent/nearby areas, including:</p> <p><u>West of Berkshire authorities:</u></p> <p>The Memorandum of Understanding (MoU) between the Berkshire Local Authorities (July 2018) includes West Berkshire within the Western Berkshire Housing Market Area along with Bracknell Forest Borough Council, Reading Borough Council and Wokingham Borough Council. Paragraph 4.2 of the MoU states that the “<i>Berkshire Authorities will use their best endeavours to ensure that the full objectively assessed need for housing...</i>” is met.</p> <p>Under the MoU, the four authorities undertook a great deal of joint work. One of the key pieces of work was the West of Berkshire Spatial Planning Framework, which identified Grazeley on the boundary of Wokingham and West Berkshire as being able to accommodate 15,000 homes, together with supporting infrastructure and facilities.</p> <p>The Reading Local Plan was adopted in November 2019. It reflected the MoU and joint work undertaken with the other Western Berkshire authorities. Paragraph 10.1.12 of the Local Plan states, “In particular, Reading Borough</p>	Please see response to Reading Borough Council (lpr1488) regarding unmet need in the wider area. A Duty to Co-operate statement will be published alongside the Reg. 19 consultation.

Respondent (with lpr ref)	Response	Council Response
	<p>Council is working with its neighbours in examining how growth can take place within the Western Berkshire Housing Market Area, in particular in view of the expectation that Reading's unmet housing need will be accommodated within the rest of the HMA. <b>The publication of the West of Berkshire Spatial Planning Framework is an important starting point and context for this plan</b>, but this joint work will continue into the future". (Author's emphasis).</p> <p>Although the Reading Local Plan sought to accommodate the vast majority of its own housing need, there was unmet need that needed to be allocated elsewhere in the HMA, and a significant requirement for family housing which cannot be provided within Reading's boundary given its urban nature and tightly drawn boundaries. Further, the latest Government Standard Methodology, published in December 2020, shows Reading's housing requirement increasing to 876 dwellings per annum, an increase of 35% from the adopted local plan figure. That future requirement is highly unlikely to be met in full within Reading Borough and will create an unmet need that will need to be accommodated under the Duty to Cooperate or as part of future joint working by the neighbouring authorities.</p> <p>It is quite clear from the West of Berkshire Spatial Planning Framework that the study area has significant physical constraints (Green Belt, Area of Outstanding Natural Beauty, Special Areas of Conservation, Special Protection areas, flood areas) yet has very good connections with London and the surrounding area, making it a very desirable place to live, which in turn makes affordability an issue. The identification of a new settlement of Grazeley will ensure an appropriate number of new homes will be developed in the right place to serve existing and future residents.</p> <p>This draft Local Plan and its housing target, however, seem to have stepped back from the HMA work and is 'inward looking'. We suggest that greater clarity is needed to quantify the unmet needs of surrounding boroughs within the Housing Market Area (HMA) with clear direction as to how and</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>where these unmet needs can be appropriately accommodated, because if not at Grazeley, where?</p> <p><u>London</u></p> <p>The London Plan Examination recognised the London Plan’s inability to meet its own needs and highlighted its dependence on the wider region to accommodate the unmet need. Even with the latest (likely to be adopted) London Plan housing target of 52,000 dwellings per annum there will be an annual shortfall of 14,000 homes per year. However, using the Government’s proposed Standard Methodology this figure could be as high as 60,000 homes per year.</p> <p>Given the importance to the protection of the Metropolitan Green Belt, the vast majority of the unmet need inevitably falls to those areas immediately beyond the Green Belt. This includes the housing market area of the West of Berkshire authorities, which in turn includes West Berkshire. The extent of this need has not been specifically quantified for this area, but that does not result in such needs disappearing. We consider that the emerging West Berkshire Local Plan should take account of any such unmet need and continue the work of the West of Berkshire Strategic Spatial Framework to accommodate a proportion of this need.</p> <p>The impact of the pandemic on the London housing market should also be considered, as the significant increase in people looking for homes outside the capital will only create more pressure in West Berkshire.</p> <p><u>Heathrow</u></p> <p>Despite recent events, the planned expansion of Heathrow airport is still a long-term ambition and an essential element to the future prosperity of the UK economy. The economic impact of this proposal is well documented.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Less well documented is the housing needs that will arise from the economic growth projected.</p> <p>However, despite its importance and very real impact on the wider area, including the West of Berkshire housing market areas, no reference appears to have been given to what this could mean for the emerging Local Plan.</p> <p>In this regard, it is worth highlighting the Interim Inspectors Findings for the Aylesbury Vale Local Plan (August 2018), where the Inspector raised particular concerns that there are many events and planning-related issues occurring outside of the Local Plan area that would have an effect on how the Local Plan area was shaped in the future. In this context, it was the relationship of the Local Plan area to the Oxford-Cambridge growth arc and the planned Heathrow expansion, wherein he stated that “Predictable events should be planned for. Both Heathrow expansion and the Oxford-Cambridge expressway are predictable, known, events. Only the route of the latter is not yet fixed. To be sound, VALP should make contingency plans to accommodate them, not simply abandon its function to a future review of uncertain timescale” (paragraph 7).</p> <p>In a similar manner, it is essential that the West Berkshire Local Plan takes account of predictable and known events such as the London unmet need, planned infrastructure provision (Crossrail etc) and Heathrow expansion.</p> <p>This is why the cross-boundary working of the LPA’s in the West of Berkshire (for example to produce the West of Berkshire Spatial Planning Framework) is so important - to identify large scale opportunities meeting the identified future development needs in the area for the local plan and beyond; and plan for any cross-boundary implications. We believe that working collaboratively will help all authorities to meet their identified housing need and that of the wider area.</p> <p><b>Conclusion</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The West Berkshire Local Plan should be positively prepared and have a justified long- term strategy for the development needs of its district or the wider area, in collaboration with its neighbouring authorities.</p> <p>The Local Plan should reflect and continue the joint work undertaken over at least the last five years in the West of Berkshire Spatial Planning Framework and more recently.</p> <p>West Berkshire should be clear in the Local Plan about its approach to Grazeley, but whichever option is pursued, the Council needs to undertake the requisite evidential work to make the Local Plan sound.</p>	
Pro Vision for CALA Group Ltd (lpr2456)	<p><i>In context of two sites: East and West of Salisbury Road, Hungerford. Full representations attached</i></p> <p>The proposed spatial strategy makes policy decisions about how to apportion the development needs across the spatial areas. “Modest”, or more accurately, very modest, growth is proposed to be directed to the AONB area.</p> <p>Specifically within Hungerford, the main settlement of the AONB area, what does the evidence base say about local need?</p> <p><b>Affordable housing</b></p> <p>In terms of the published evidence base, noting that the Strategic Housing Market Assessment has not been updated since 2016, a key evidence document for the LPR is the Updated Housing Need Evidence (UHNE)9, which provides information on the need for affordable housing.</p> <p>This report does not appear to drill down to specific settlements, but does give useful information of need by spatial area.</p> <p>The UHNE identifies a need for 101 affordable homes per annum in the AONB spatial area. That equates to 1,515 affordable homes over the plan period.</p>	<p>See response to the consultee’s representation lpr2415 on SP1 Spatial Strategy.</p> <p>Though SP15 shows a total of 389 units proposed for allocation in the AONB spatial area through the LPR, Hungerford Neighbourhood Plan the total number in the supply is higher, as this includes existing commitments and an element of windfall allowance. The AONB is a nationally valued landscape and growth must be appropriate and sustainable, conserving and enhancing the special landscape qualities.</p> <p>Housing needs have not been assessed for specific settlements within the District. The spatial strategy sets out the approach to meeting the overall need in the District.</p> <p>With regard to Hungerford, the existing HSA DPD allocation is not being retained as the site is well under construction. Additional allocations in Hungerford will come forward through the Hungerford Neighbourhood Plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>This need is described as “substantial” and “the Council is justified in seeking to maximise the provision of affordable housing on eligible development sites, subject to viability”.</p> <p>Indeed, the report invites the Council to “consider through plan-making process whether higher housing provision would have positive benefits on affordable housing delivery”.</p> <p>Noting the proposed spatial strategy is for 500 homes in total (open market and affordable) across the spatial area, there is no prospect whatsoever of the need being met through this plan. The draft plan is planning to fall well short of meeting the need, especially in the AONB spatial area.</p> <p><b>Need in Hungerford</b></p> <p>There appears to be no published evidence behind the LPR on specific need for Hungerford.</p> <p>In summary therefore, there is likely to be capacity for more development in Hungerford than the proposed housing requirement, a requirement which falls well short of meeting local need. The proposal to constrain the amount of development in the AONB, and Hungerford in particular, is likely to have significant social and economic impacts. A more balanced approach to meeting the three strands of sustainable development is needed.</p> <p><b>Sustainability Appraisal</b></p> <p>The SA appraisal demonstrates that significantly boosting the supply to 692 dpa has the greatest impact on meeting the affordable housing need and is scored ‘significantly positive’.</p> <p>Nonetheless, it is noted that this level of growth may have negative effects on several environmental objectives. Overall, this option is scored ‘neutral’, with the other two options scoring ‘positively’. However, it is noted that the SA appraisal scores options ii and iii the same with regards to economic benefits (i.e. SA Objective 10), but clearly a significant increase in</p>	<p>Comments on the SA are noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing delivery more closely supports delivering this SA Objective. The Council should be concerned that limiting the housing supply to deliver the minimum requirement or with only a 10% buffer will significantly restrict the housing supply and therefore, amongst other issues, will further raise house prices to levels which create cost barriers to local residents and workers. As a result, not adequately addressing the affordability problems and lack of affordable housing across West Berkshire in this plan period could have significant social and economic consequences which do not appear to have been appropriately considered within the SA appraisal.</p> <p>it is considered that the SA, an important part of the evidence base that will require scrutiny at examination stage, currently fails to provide clear and credible reasons for selecting the 520-575 dpa as its preferred approach, and which does not support the Council's 'Vision' for the Local Plan to address affordability as a priority. Accordingly, the current approach within the LPR is unlikely to be justified and the plan would be vulnerable to be found unsound at examination</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP13 Sites allocated for residential and mixed-use development in Newbury and Thatcham

### (Proposed Submission LPR Policy: SP13 Sites allocated for residential and mixed-use development in Newbury and Thatcham)

Number of responses received: 56

<b>Statutory consultees</b>		
Cold Ash Parish Council (lpr1738)	<p>The allocation of 40 houses for the Cold Ash Neighbourhood Area is out of keeping with the allocation that has been specified for other NDPs. Of the 8 NDPs, Cold Ash has a much higher allocation than more than half of the others. The only two that are higher are Hungerford (55, but a rural service centre, not a service village, so one would anticipate a higher number) and Tilehurst (175, but it is urban).</p> <p>We recognise Cold Ash village's designation as a service village, but in reality, we do not have many facilities in the village. Cold Ash village has a village shop/PO with car parking for four cars and a village hall. The hamlet of Ashmore Green has nothing except for a parish notice board and a salt bin. Moreover, our road network needs to be taken into account and seen for what it is – basically a network of adopted farm tracks, one unclassified main road, with very limited off- street car parking and pavements. Consider Lambourn, which is a service centre and has significantly more facilities and yet has only been allocated 25 dwellings; this is not fair or consistent with the settlement hierarchy and</p>	<p>The emerging draft West Berkshire Local Plan Review to 2037 (LPR), which was published for consultation in December 2020, included indicative housing requirements for the Neighbourhood Areas that were designated at the time and where a NDP group had expressed an intention to allocate. The indicative requirements are included within strategic policies SP13 (Sites allocated for residential and mixed-use development in Newbury and Thatcham), SP14 (Sites allocated for residential and mixed-use development in Eastern Area), and SP15 (Sites allocated for residential and mixed-use development in the North Wessex Downs Area of Outstanding Natural Beauty (AONB)).</p> <p>There is no set method identified in national planning policy and guidance for calculating the housing requirement, however national planning practice guidance (PPG) does state that local planning authorities will need to take into account their own housing requirement, the spatial strategy set out in the Local Plan, evidence such as the Housing and Economic Land Availability Assessment (HELAA), and the characteristics of the</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>appears to be another result of the skewing caused by the spatial strategy.</p> <p>So, to summarise, we are very concerned that our indicative requirement is double the number allocated to Hermitage (20) and Lambourn (25) parishes (which have more facilities than Cold Ash village), with the remaining three parishes actually receiving an allocation of zero. We are concerned that our allocation of 40 dwellings does not sufficiently take into account all the issues and pressures uniquely faced by our parish.</p>	<p>neighbourhood area, eg. population, its role in providing services. Past delivery performance is not taken into account.</p> <p>No further changes to Policy SP13 are proposed. The indicative requirements were based on available development opportunities identified in the Council’s February 2020 HELAA. The HELAA is an evidence document that makes a preliminary assessment of the suitability and potential of sites that have been promoted to West Berkshire Council.</p> <p>Consideration was also given to the placing of a settlement within the settlement hierarchy and constraints.</p> <p>The justification for Cold Ash’s requirement was set out in an email to the steering group dated 2 October 2020, and is included below:</p> <p><i>The Parish of Cold Ash contains the village of Cold Ash, the hamlet of Ashmore Green, and small parts of the towns of Newbury and Thatcham.</i></p> <p><i>Cold Ash village is identified as a Service Village within the settlement hierarchy meaning that it has a limited range of services and has some limited development potential. Ashmore Green is not included within the settlement hierarchy and is instead a ‘smaller village with a settlement boundaries’ therefore only suitable for limited infill development subject to the character and form of the settlement. Newbury and Thatcham are both identified as ‘Urban Areas’ because of the wide range of services they offer and subsequently both will be the focus for the majority of development.</i></p> <p><i>Cold Ash sits on the southern edge of the North Wessex Downs AONB. Much of the village is just outside of the boundary, however the houses to the north and east of The Ridge are within the boundary. The AONB is a nationally important and</i></p>

Respondent (with lpr ref)	Response	Council Response
		<p><i>legally protected landscape and the NPPF is clear that great weight should be given to conserving landscape and scenic beauty in AONBs.</i></p> <p><i>Within the HSA DPD [Housing Site Allocations Development Plan Document] there are 3 allocated sites in Cold Ash Parish for a total of between 90-100 dwellings. One site is being built out, however 2 have yet to come forward. Of the two outstanding sites, two have outline permission whilst the landowner of the third has expressed their intention for the site to be developed and they are in the process of appointing a planning consultant.</i></p> <p><i>The February 2020 HELAA identifies five sites as having potential. Taking the development potential of these sites into consideration alongside the placing of the towns/villages in Cold Ash parish within the settlement hierarchy, existing allocations, as well as the AONB, officers consider that a housing requirement of 40 dwellings would be appropriate.</i></p> <p><i>In respect of HELAA site CA15, the eastern site parcel falls within Cold Ash Parish and the western parcel within Shaw-Cum-Donnington Parish. The Council's Highways Team have identified that for this site as well as site SCD4, the provision of a through route from the B4000 to the A339 is required. This site along with SCD4 will only be supported by Highways if this is provided. Combined sites CA15 and SCD4 are of a strategic scale. It is for the local planning authority to plan for strategic sites.</i></p> <p>The information published in the HELAA was at a point in time. As work has progressed on the LPR and more evidence has been gathered, some of the development opportunities we originally identified have changed. Some Neighbourhood Development Plan (NDP) steering groups have therefore found they are unable to allocate the housing numbers they have been given, and are</p>

Respondent (with lpr ref)	Response	Council Response
		<p>looking to allocate sites in settlement boundaries instead, which is the case with Cold Ash.</p> <p>Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan does not include allocations within settlement boundaries because the principle of development is considered acceptable. Were NDPs in West Berkshire to include allocations within the settlement boundary, then this approach would be inconsistent with the approach taken in the Local Plan and draft emerging LPR.</p> <p>NDPs must meet a set of tests known as Basic Conditions, and one of these is that the policies in a NDP must be in general conformity with the strategic policies in a Local Plan.</p> <p>The site selection work undertaken by the Cold Ash NDP steering group has identified just one suitable site, and this site is located within the settlement boundary. In light of this, the housing requirement for Cold Ash Parish will be amended to zero.</p> <p>No further changes to Policy SP13 are proposed.</p>
Greenham Parish Council (lpr901)	<p>Object to policy.</p> <p>Delete RSA5 altogether as undeliverable.</p>	<p>Policy RSA5 (Land adjoining New Road, Newbury) is proposed to be removed as an allocation. This is due to the adverse impact on the surrounding Ancient Woodland. Standing advice in relation to ancient woodland has changed recently. There is significant</p>

Respondent (with lpr ref)	Response	Council Response
		<p>pressure from all sides on the adjacent wood which would be close to residential areas within the site. The buffer zone required would be greater than 15 metres. The loss of green infrastructure cannot be enhanced. Following the National Planning Policy Framework (NPPF) which states at paragraph 180 c) that 'development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists', and further to the refused planning application for four dwellings, it is considered that the impact on the ancient woodland would be so great that the site is not suitable for development.</p> <p>Delete reference to RSA5 in Policy SP13. No further changes to Policy SP13 are proposed.</p>
Network Rail (lpr2296)	<p>Following my comments previously sent to the council in response to the West Berkshire Local Plan Review to 2036 on the 26<sup>th</sup> March 2018 regarding any future development and how it might impact the railway. We advised that the council should undertake viability testing for any proposed allocated site which it considers would have an impact on the railway infrastructure, so that any mitigation required would be provided for.</p> <p>In particular, but not necessarily exclusively we would be looking at any adversely impacted level crossings. I provided scenarios which we believe are susceptible to fall into this category, as shown below.</p> <ul style="list-style-type: none"> <li>• By a proposal being directly next to a level crossing</li> <li>• By the cumulative effect of development added over time</li> <li>• By the type of crossing involved</li> <li>• By the construction of large developments (commercial and residential) where road access to and from site includes a level crossing</li> </ul>	<p>Support for the closure of the Thatcham level crossing noted.</p> <p>None of the sites proposed for allocation or their accesses are directly next to a level crossing.</p> <p>The representation mentions that several sites have been put forward for allocation in and around Thatcham Level Crossing. This is incorrect.</p> <p>Several sites in and around Thatcham Level Crossing were promoted as part of the 'call for sites' for the Council's HELAA. The HELAA is a technical assessment that makes a preliminary assessment of a sites suitability and potential. It does not make recommendations on which sites should be allocated. The allocation of sites will only take place through statutory plan processes (eg. Local Plan and Neighbourhood Plans) which undergo public consultation and independent examination.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• By developments that might impede pedestrians ability to hear approaching trains</li> <li>• By proposals that may interfere with pedestrian and vehicle users' ability to see level crossing warning signs</li> <li>• By any developments for schools, colleges or nurseries where minors in numbers may be using a level crossing.</li> </ul> <p>There have been several sites put forward for allocation in and around Thatcham Level Crossing. The Rainsford Farm and former Colthrop Paper Mill site in the Local Plan Review being put forward by Colthrop Village Consortium includes the provision of a bridge over the railway, so that Thatcham level crossing can be closed.</p> <p>We support the closure of Thatcham level crossing, therefore fully support any development that includes mitigation in the form a bridge</p>	<p>The sites in and around Thatcham Level Crossing were assessed in the HELAA as being 'not developable within the next 15 years' and therefore were not considered as part of the LPR site selection work.</p> <p>No further changes to Policy SP13 are proposed.</p>
Newbury Town Council (lpr2260)	<p><i>See attachment on objective for full response to the LPR.</i></p> <p>We do not support this policy. We comment separately on SP 16 &amp; 17.</p> <p><b>Reasons:</b> As stated above in SP 12, there appear to be inconsistencies in the selection of sites to include in the Plan. For the Newbury settlement area and a bit beyond, we list all sites in the draft Plan, the HELAA, the 2013 SHLAA and the HSA DPD in a separate document to be read with this response (<i>attached</i>).</p> <p>Changes sought:</p> <ul style="list-style-type: none"> <li>• Delete these sites and include them instead in "sites with planning consent and/or under construction" in the explanation of total housing numbers required in SP 12 supporting text: RSA2, RSA3, RSA4,</li> <li>• Delete RSA5 altogether as</li> </ul>	<p>The existing housing allocations in the Housing Site Allocations Development Plan Document (HSA DPD) have been rolled forward, but where the site is completed or where construction is underway, they will be excluded from the LPR (eg RSA6 will be amended to exclude that part that is now complete). All sites will also be reviewed to take account of any representations and/or additional information.</p> <p>Sites that have an extant planning permission are included in the supply. This includes both allocated and non-allocated sites.</p> <p>Allocation RSA5 (Land adjoining New Road, Newbury) is no longer proposed for allocation. This is due to the adverse impact on the surrounding Ancient Woodland. Standing advice in relation to ancient woodland has changed recently. There is significant pressure from all sides on the adjacent wood which would be close to residential areas within the site. The buffer zone required would be greater than 15 metres. The loss of green infrastructure cannot be enhanced. Following the National Planning Policy Framework</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Add the following HELAA sites with appropriate RSA numbering, maps, and descriptive text:               <ol style="list-style-type: none"> <li>1. NEW02 land south of Phoenix Centre, Newtown Road – 24 dwellings</li> <li>2. NEW07 former Magistrates Court, Mill Lane – 13 dwellings</li> </ol> </li> <li>• Include NEW01 HELAA site housing numbers taken from promoter's Council approved Master Plan – minimum 258 We would like to see a higher figure of around 550, taking account of the consented development Faraday Plaza and without removing the DEA status of the site in this Plan but accepting that it can deliver both a major increase in employment and significant new housing.</li> </ul> <p>These changes taken together would go a considerable way towards meeting the overall housing need in the District. None of them should be considered 'windfall' sites because all have been promoted for housing and are shown in the HELAA as deliverable in this Plan period.</p>	<p>(NPPF) which states at paragraph 180 c) that 'development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists', and further to the refused planning application for four dwellings, it is considered that the impact on the ancient woodland would be so great that the site is not suitable for development.</p> <p>Sites NEW1, NEW02, and NEW07 are not proposed for allocation as they are all located within the settlement boundary. Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan does not include allocations within settlement boundaries because the principle of development is considered acceptable.</p> <p>For the reasons above it is not proposed to amend the LPR to include sites NEW1, NEW2, and NEW7 as allocations. Therefore no further changes to Policy SP13 are proposed.</p>
Shaw-cum-Donnington Parish Council (lpr207)	Support policy.	Support noted. No further changes to Policy SP13 are proposed.

Respondent (with lpr ref)	Response	Council Response
Thatcham Town Council (lpr1400)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation on SP17. (lpr1401)</i></p> <p><b>POLICY SP 13 Sites Allocated</b></p> <p><b>(And reference to Site Assessment and Thatcham Strategic Growth)</b></p> <p>As noted earlier, we do not agree that there should be such a single large site responsible for providing housing supply. The policy is in grave danger of failing should unanticipated delays occur.</p> <p>The Thatcham Strategic Growth study appears to be, at least partly, based on the read-through of the appeal and response by the Secretary of State to the Siege Cross development (Stage 1 Report, section 4.5). This was a proposal for 495 dwellings that did not encroach into the areas now being proposed (Dunston Park, and Colthrop Village) for NE Thatcham, and there were many issues identified in the appeal where the balance of one was outweighed by the balance of another.</p> <p>It cannot be assumed that the same outcome would apply for a different proposal that is approximately five times the scale.</p> <p>We do not agree with the dismissal of alternative sites because "only growth of a strategic scale could support the service provision and regeneration that Thatcham requires". This statement is not backed up with evidence because there has been no publication of the Infrastructure Delivery Plan and there has been no publication that explains how the congestion on surrounding roads would be mitigated. We therefore disagree that neighbouring sites can be discounted when there is a failure of evidence that THA20 can be delivered.</p> <p><b>Section 6.19</b></p>	<p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of over 7 years for the period to 2026/27.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>The Council is not relying on the total allocation at either Sandford Park or North East Thatcham to meet the need up to 2039.</p> <p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>Strategic development in Thatcham will bring considerable benefits to the town, not only in the provision of new housing, including affordable housing, but in the provision of new schools, community facilities and recreational provision."</li> </ul> <p>We are concerned that in the context of development there appears to be no consideration given to transport and highways, including air quality. This surprises us because the proposed site, being in an existing rural area, and at distance from proposed employment centres will unavoidably be reliant on private vehicle use. The evidence base provided recognises congestion on the A4, at the station crossing, and surrounding roads yet this evidence appears to have been ignored in the Local Plan.</p> <p>This appears to be a serious omission.</p> <p>It is essential that these omissions are corrected to reflect correctly the balance between benefit and detriment to existing residents.</p>	<p>contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that 'in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy' (paragraph 67 of the Core Strategy Inspector's Report). As additional housing is required, and given Thatcham's status as an 'Urban Area' in the development plan is it considered appropriate to consider Thatcham for housing.</p> <p>Importantly, the site provides an opportunity to deal with the issue of secondary school provision across the town by providing a site to facilitate a new school, in addition to contribution its share of the cost of the construction of a new school.</p> <p>The concern regarding infrastructure provision is noted. The updated version of the proposed allocation policy will ensure this is addressed. The council will not permit development which does not provide the infrastructure to support it.</p> <p>The Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development,</p>

Respondent (with lpr ref)	Response	Council Response
		<p>including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p>
<b>General consultation bodies</b>		
Canal and river Trust (lpr879)	SP13- SP17 inclusive	Comments noted. If sites come forward that are in close proximity to the Kennet and Avon Canal, then the Planning Policy Team will consult the Canal and River Trust.

Respondent (with lpr ref)	Response	Council Response
	<p>At the present time there do not appear to be any sites allocated for housing in close proximity to the Kennet &amp; Avon Canal. If other sites come forward, either via a Planning Policy allocation planning consultation or through the Neighbourhood plan process the Trust will comment further.</p> <p>Furthermore, the Trust may provide additional comments on the suggested sites if it becomes clear that they will have an impact on the canal. Even if a site is not directly adjacent to the canal there may still be an impact on the canal towpath for commuting and leisure purposes which will need to be considered and addressed.</p>	No further changes to Policy SP13 are proposed.
Heritage Forum (lpr80)	<p>Object to policy</p> <p>SP16 We have doubts about this policy in one respect. When the full 1500 dwellings are built and occupied, Warren Road will be the obvious exit for the A34 for all of them, which will cause problems. The volume of traffic will significantly interfere with the local Andover Road traffic for schools, shops, the garage, churches, and community centres. In her comments on 18/00828, Jenny Graham of Transport Policy has already made this point. A more strategic approach is needed to connect the Sandeiford estate to the A34 trunk.</p> <p>Secondly, environmental interests have expressed a preference for a 50 m buffer around the ancient woodland. A recommended buffer distance should be given.</p>	<p>Comments noted. Please see response in SP16 under lpr77.</p> <p>No further changes to Policy SP13 are proposed.</p>
Kennet Primary Care Network (lpr2194)	Further to our conversations last spring and the discussion at Berkshire West CCG Local Management Committee this January, I shared the consultation details with my colleagues in Primary Care for their consideration. Kennet PCN Management Team met this week to review the proposals and would like the following response to be noted and recorded on behalf of the Kennet Primary Care Network including Burdwood Surgery, Thatcham Medical Practice and Falkland Surgery	Comments noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the master planning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers. However, it is noted that the CCG have not submitted any representation against the Emerging IDP, which specifically

Respondent (with lpr ref)	Response	Council Response
	<p>representing their patient populations and staff teams serving those catchments.</p> <p><u>Size of the development</u></p> <p>We recognise that majority of the development fall within the PCN as described in your words:</p> <ul style="list-style-type: none"> <li>• <i>Meeting the majority of development needs through an increased focus on Newbury and Thatcham area, with a specific focus on Thatcham delivering development of a strategic nature. Sandleford will also roll forward as a strategic allocation.</i></li> </ul> <p><u>Impact to general practice</u></p> <p>Whilst we understand the need for development and affordable housing we are not clear how the infrastructure will be developed to respond to that need, in particular to the health – primary care services - GP, medical services and wider health services in the community. The size of the impact this development will have on local services cannot be underestimated. We are just beginning to stabilise from the last planned growths of significance at Kennet Heath and the Racecourse. There does not appear to be a plan to manage the structural changes that will need to occur to address this gap.</p> <p><u>Delivery of Health Services</u></p> <p>We were encouraged that you recognised the need for health and wellbeing to be considered in the wider sense but feel the lack of provision for primary care health services is a major omission and would cause further pressure in an already under resourced system potentially impacting service provision.</p>	<p>refers to GP surgeries. Therefore the IDP remains quiet on this matter.</p> <p>No further changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I am writing on behalf of the PCN to stress the impact of this development needs to be considered in more detail with the PCN. I would suggest we seek to understand, plan and strategically build in an appropriate response that will meet the health needs of the population in a sustainable way and would see this as the start of a dialogue.</p>	
<p>Newbury Society (lpr1149)</p>	<p><b>Individual sites.</b></p> <p>We think that the proposed development sites need to be handled with sensitivity, with the views of existing residents taken into account. In relation to Newbury, we are in favour of flats being built above the Kennet Centre, but would need to see designs before we can assess appropriate numbers. We are not yet convinced that the centre can comfortably take 250, let alone the 400 currently proposed by a developer. We think that development approval should be conditional on spending a significant part of the financial return from the flats on revitalising the ground floor premises, whether for shops or other uses. This could be an opportunity to improve the appearance of this part of Newbury.</p>	<p>Consultation forms a key part of the preparation of the LPR. To date three 'Regulation 18' consultation have been held which considered the proposed scope and content of the plan. There will be a consultation on the proposed submission version of the plan (the final draft), and individuals and organisations will be able to participate in the independent examination of the plan.</p> <p>The LPR proposed for allocation the Kennet Centre for a mixed use development comprising of approximately 250 dwellings. Separate to the LPR, two planning applications have been submitted for the site – one of the applications (ref: 21/00379/FULMAJ) proposes a phased redevelopment for a flexible-use commercial spaces, a headquarters office building, and 381 dwellings. The second application (ref: 21/00380/FUL) proposes 91 retirement living apartments in lieu of the office building in the first application.</p> <p>It is no longer proposed to allocate the Kennet Centre as the site is located within the settlement boundary. Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>Newbury town centre is covered by a Conservation Area and there are many Listed Buildings within the centre as well. Comments</p>

Respondent (with lpr ref)	Response	Council Response
		<p>from Historic England, who are a statutory consultee will be inform the planning applications.</p> <p>A Conservation Area Appraisal for Newbury Town Centre is being produced and this will act as a framework that guides future development within the Conservation Area.</p> <p>The conditions to a planning approval cannot stipulate what the financial return from a development must be spent on as this falls outside the scope of planning. The NPPF states that planning conditions should be kept to a minimum and should only be used where they satisfy the following tests which include amongst others, relevance to planning.</p> <p>It is now proposed to remove the site as the site is located within the settlement boundary whereby there is a presumption in favour of development. Further details of this are set out in the Council's response to representation lpr765.</p> <p>Delete RSA1 from Policy SP13.</p>
West Berkshire Green Exchange (lpr1555)	<p>COVID-19 may not have a long term impact on people's working and shopping habits, but with more people working from home and with the retail sector under pressure, the future of the high street will change and some buildings should be repurposed for housing rather than building new. The energy footprint of converting an existing building is often far lower than building a new one. For example, Historic England has shown that the refurbishment of older buildings can reduce both energy footprint and carbon footprint (<a href="#">There's No Place Like Old Homes, 2019</a>).</p>	<p>The sites that have been identified for allocation were selected from sites put forward to the Council for the HELAA. The sites proposed for allocation in the emerging draft LPR have been assessed by the Council as the most sustainable sites for development. While there may be other sites / buildings, these may not be available. For example, they may not have been submitted to the Council through the HELAA so are not deliverable, or they are not in accordance with other strategic policies in the LPR.</p> <p>Sites can only be allocated if they are deliverable. The NPPF states that <i>"to be considered deliverable, sites should be available now..."</i>.</p> <p>No changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
West Berkshire Green Party (lpr1836)	The major developments in Sandford and NE Thatcham should in our view be substantially scaled back or removed.	<p>The principle of development at Sandford Park has been established through the Core Strategy process and the site has been accepted as a location to provide a long-term urban extension which will deliver up to 2000 homes. The Core Strategy went through all stages of consultation, independent examination, and adoption by the Council.</p> <p>Outline planning permission has been granted for 1000 dwellings at Sandford Park.</p> <p>No changes to Policy SP13 are proposed.</p>
<b>Other stakeholders</b>		
Paul Little (lpr3)	<p>Object to policy.</p> <p><b>The plan states the following:</b></p> <p><b>Economy</b></p> <p>To facilitate and support a strong, diverse and sustainable economic base across the District, including the provision of employment land which provides for a range of local job opportunities.</p> <p><b>Town Centres</b></p> <p>To enhance the vitality and viability of town, district and local centres in West Berkshire as places for shopping, leisure and community activities.</p> <p><b>Green Infrastructure and Healthy Living</b></p>	<p>A masterplan for Thatcham town centre is to be prepared, and it will consider ways to improve the town centre and how it works. The aim is that the masterplan will ensure that infrastructure and town centre facilities can be upgraded to meet the demands of Thatcham Town Council, and the town's residents and businesses.</p> <p>Following changes to the NPPF in the summer of 2021, local planning authorities must now prepare a 30 year vision for where larger scale developments such as new settlements or significant urban extensions form part of the strategy. 30 year vision work is now underway which will consider Newbury and Thatcham and this will inform the next draft of the LPR.</p> <p>The LPR makes provision for employment.</p> <p>In regards to concerns raised about surface water flood risk, new flood alleviation measures would be built into the development. There is a planning application for a basin on the corner of Floral</p>

Respondent (with lpr ref)	Response	Council Response
	<p>To ensure that West Berkshire contains a strong network of multi-functional green infrastructure which provides health and environmental benefits and enhances the overall quality of life of sustainable communities.</p> <p><b>Transport</b></p> <p>To make provision for transport networks that support sustainable growth in West Berkshire and to promote low emission transport choices.</p> <p>Whilst Newbury and Thatcham are separate and distinct towns with their own character, they are geographically close and functionally related. Both towns have significant employment provision and Newbury provides many of the major services, including retail and leisure facilities. There is significant movement between the two towns and transport linkages, by rail and road are vital.</p> <p>The area is well located in terms of access to rail and to the strategic road network. There are train stations at Newbury, Newbury Racecourse and Thatcham enabling rail access to Reading and London and to the West Country.</p> <p>The Newbury and Thatcham urban area is the main focus for development in the current Local Plan and will remain the focus in the Local Plan Review. Though there are constraints of flood zone and designated heritage assets, including the registered battlefield of the Battle of Newbury 1643 immediately to the west of Newbury, there are also opportunities for brownfield development, particularly in Newbury, and for allocation of additional greenfield sites.</p> <p>Town centres will continue to play a vital role for communities and will need to adapt to meet the changing needs of communities. Main town centre uses will be directed to the town and district centres set out in Policy SP20. Within town, district and local centres, schemes will be of</p>	<p>Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation measures are included in the IDP.</p> <p>All new developments must include sustainable drainage measures, and development must be avoided on areas that are at risk of surface water flooding. Development on the North east Thatcham site will be expected to deliver surface water management approaches that could deliver a net gain for Thatcham town. Drainage and flood attenuation works are included in the IDP.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>an appropriate scale and character to respond to the role and function of the centre with village centres a focus for facilities aimed at supporting sustainable rural communities.</p> <p>Thatcham will be a focus for regeneration, for new housing and for improved provision of services and facilities. A new urban extension to the north east of the town will provide a new residential neighbourhood with supporting facilities and green infrastructure (Policy SP17). Opportunities will be taken to maintain and enhance the identity of Thatcham separate to that of Newbury and its surrounding rural settlements.– <b>Little to no mention of Thatcham Town Centre. This means the focus is to feed Newbury and not develop Thatcham at all. This being the case, why not bulldoze the awful town centre, build houses there and have us all travel to Newbury and further enrich their town?</b></p> <p><b>I refer to now superseded spatial strategy. This was 2012. What has happened since?</b></p> <p><b>We have a Town Centre comprised entirely of Kebab takeaways, Pizza restaurants &amp; Hairdressers. What kind of “destination” is this?</b></p> <p><b>Where are the employment opportunities for the thousands of new inhabitants?</b></p> <p><b>North East Thatcham Strategic Site Allocation</b></p> <p><b>The site, as identified on the map, is allocated for a residential-led development comprising approximately 2,500 dwellings.</b></p> <p><b>These are areas that suffer massive water and soil run off. This then causes flooding down Floral Way and Harts Hill Road and</b></p>	<p>The proposed strategic site allocation at North East Thatcham will include not solely housing. The site will also provide local centres, a GP surgery, early year’s provision, a primary school, secondary school provision, a community indoor facility, outdoor formal and informal sports pitches and areas, open space, and a new community park.</p> <p>The representation comments that the plan needs to consider what local residents want and that Thatcham needs better leisure facilities. As mentioned above, the allocation will include a community indoor facility, outdoor formal and informal sports pitches and areas, open space, and a new community park.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>subsequently the A4. Build on this land, and where will all that water go?</b></p> <p><b>The Councils record on highways, A4 from Midgham to Newbury always underwater, is poor. This makes it impossible to cycle along, which wipes out any claims for sustainable transport.</b></p> <p><b>Even worse are the cycle lanes that end with nowhere to go. My personal favourite is the stop start cycle lanes from Thatcham to Newbury that only go one way (to Newbury). The A4 East has no such return lane.</b></p> <p><b>This plan only creates housing. The proposal is for a mini Lower Earley. As anyone who is familiar with Lower Earley will know, J11 and surrounding areas come rush hours is a hideous place to be. That is because people only live in Lower Earley. To work, they have to travel out to other places.</b></p> <p><b>The plan seeks to replicate this dreadful experience, unlearnt, to West Berkshire, and Thatcham is totally neglected aside from a couple of mini shop jobs. This doesn't foster community, it creates a huge housing development of nomads.</b></p> <p><b>West Berkshire's new tagline "Thatcham, a great place to leave"</b></p> <p>Changes sought:</p> <p>Any plan needs to consider what people need locally. Thatcham needs better leisure facilities. Anyone playing Rugby or Football is at the mercy of the Council and Henwick Fields being continually closed. Support for our incredibly talented Amateur sports clubs needs to be given with improved facilities.</p>	
Simon Spellar (lpr8)	Object to policy.	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>Whilst I recognise AONB and flood constraints of the district it is a concern that the Council has yet again defaulted to Thatcham to provide its housing need. This is to a large extent due to a complete failure to deliver the Sandleford site (the Council claim to be Plan led - that means delivering the Plan) as well as the issues around Grazeley. There should be a better balance of locations for housing in the District including the built up areas of Tilehurst and Theale which is more sustainable than Thatcham for a number of reasons.</p> <p>Having said the above I can accept that there may be a need for more housing in Thatcham and NE Thatcham is an option for this and in which case the test of acceptability is more about it not being 'just another mediocre housing estate'.</p> <p>The main concerns I have with the existing policy are as follows (these are not in order of importance - all are important) :</p> <ol style="list-style-type: none"> <li>1. The need for trees - this is a huge development and needs a real commitment to tree planting up front and of a scale to make an environmental and biodiversity impact. There is a real scope here to do things differently and plan further ahead given the large scale of the development and that it will be delivered across 2 Plan periods. Rather than planning to create green barriers and wildlife corridors during the construction of large scale development, managed forests could be planted at the outset - resulting in mature areas of trees before the latter phases of development and this would also help with achieving a better balance towards carbon neutrality.</li> <li>2. Northern boundary and comprehensive development</li> </ol> <p>I do not consider that present allocation provides a sensible and long term northern boundary. As the Local Plan also relies upon a large number of windfall sites coming forwards I would suggest it is inevitable</p>	<p>Development in West Berkshire must consider numerous constraints, most notably the constraints posed by the North Wessex Downs AONB, AWE and the associated DEPZs and flooding. As part of the LPR, all sites promoted to the Council have been assessed in the HELAA.</p> <p>The principles which underpin the spatial distribution of new development stem from the overriding objective of enabling sustainable development, development that will meet the social and economic needs of the District while respecting the environmental assets of the District and meet the objective to mitigate and adapt to the effects of climate change and minimise demand for energy and other resources.</p> <p>The LPR aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus is on existing settlements, using the settlement hierarchy to steer development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity.</p> <p>The Council responses to SP17 consider the specifics of the policy requirements. It is proposed to deliver a package of infrastructure. The NPPF will also need to be taken into account when designing a masterplan and in determining a planning application. As well as specific policies within the Local Plan Review (eg design, trees, green infrastructure, affordable housing) this includes requirements for tree planting, building beautiful. First Homes is now in place, which is a form of affordable housing, placing a cap on the price of housing, and are purchased or rented by buyers or tenants who meet the eligibility criteria set out in the Council's First Homes Policy.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>that land around the north of Thatcham / Cold Ash border will be developed in time. This should be accepted and planned for now in a comprehensive manner not ignored hoping it will go away. It won't. The Council should be looking comprehensively at development around the edges of Thatcham. The land north of Thatcham has been promoted for housing for 15+ years with various planning applications - it is time to be truly comprehensive in planning the towns expansion including thinking of what infrastructure needs and delivery opportunities this brings given it is inevitable the northern areas will be developed too in time. This may mean that the artificial cap of 2,500 dwellings may be more - as long as done correctly sobeit.</p> <p>3. Building beautiful</p> <p>There is nothing in poilicy on quality of the housing and architecture. This needs to to be high on agenda to create a quality place</p> <p>3. Sports and obesity</p> <p>We live in a time of an obesity crisis in young and old alike. Unyet our sports facilities are full up. Henwick has no capacity and there needs to be a more comprehensive Plan for sports in the town. These could be shared facilities with the secondary school (as at Kennet School) – but if so needs to be provided much earlier on and not to the ‘bare minimum’ educational need but be truly aspirational facilities for the town (and surrounding villages) to be proud of - not an insular provison to meet the needs to the new housing alone – we need bigger and better.</p> <p>4. Health</p> <p>We have a town with health facilities at capacity. there is a requirement for expanded / new GPs and dentists to serve expanded town. This</p>	<p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have been confirmed and any necessary infrastructure improvements will be taken forward.</p> <p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p> <p>No further changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>doesn't need to be in the expansion area and could be used as a catalyst to redevelop Broadway or other parts of town, but is needed early on.</p> <p>5. Key worker not affordable housing</p> <p>The policy requirements for affordable housing need to be more nuanced. There is a desperate need for Key Worker housing for doctors, nurses and other key workers - we all clapped them in the summer months - time to start to plan for them too in the future. Key Worker housing should be a significant proportion of the social housing - perhaps 2/3rds</p> <p>6. Biodiversity</p> <p>We need insect-friendly planting with minimum maintenance plants that flower and produce nectar followed by berries later in the year.</p> <p>Summary</p> <p>The above are measures of what people value and impact on the town - this is an opportunity to deliver on elements that will impact the quality of community life and the policy is not aspirational enough in that regard</p> <p>I am not against allocating growth. I am not even against that being around Thatcham but it needs to be better than this Plan says is the requirement.</p> <p>It is better to have a strategic allocation if it delivers more than just basic housing. So the real question is whether it will.</p> <p>Phasing and delivering core infrastructure is key, especially health and sports. The present Plan is also not bold enough on climate emergency or Biodiversity – it is not about just achieving some net gain over existing</p>	

Respondent (with lpr ref)	Response	Council Response
	– lets actually look to achieve something positive for nature and people to be proud of.	
David Bridle (lpr20)	<p>Object to policy.</p> <p>The Thatcham North East allocation would need to address / mitigate the following existing and subsequent adverse impacts. There is surely opportunity to redress some of these issues:</p> <ol style="list-style-type: none"> <li>1. Telecommunications Infrastructure - already telecommunications infrastructure (e.g mobile phone signal strength is relatively poor for a 'town'. Additional 4G &amp; 5G masts with good coverage are required.</li> <li>2. Traffic volumes &amp; road safety especially outside schools! Already existing poor provision of effective vehicle speed reduction measures outside high risk sites/routes such as North Thatcham Childrens Centre &amp; Park Primary on Park Lane (RG18 3BZ). Narrow pavement, no automated vehicle speed/warning signage or speed camera, no safe crossing points, ineffective speed pillows. All such roads needs to be 20MPH to change driver behaviour. (There is reference in SP other policies that new developments should not have adverse affect on the health and safety of existing communities). Higher volumes on these high risk routes will create an adverse impact.</li> <li>3. The development needs to provide adequate on site childrens services/centre and not increase the numbers using the existing North Thatcham Childrens Centre where there is already high pedestrian/vehicle conflict/risk. A new doctors surgery also required to avoid 2000 people having to travel through local roads to the A4 surgery further compounding traffic and road safety issues.</li> </ol>	<p>Comments noted.</p> <p>See response to SP17 (lpr21) as these are specific to the policy for North East Thatcham.</p> <p>The allocation for SP17 has now been amended in Policy SP13 to 1500 dwellings.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>4. Construction Traffic Management plans (working with West Berks Highways) should be effective in preventing use by construction traffic of nearby residential through roads such as Park Lane.</p> <p>5. Emergency Services and associated indirect noise impact - Thatcham Central and North residents already have to tolerate almost constant siren noise from predominantly ambulances using A4 to get to the Reading Hospital. Ambulances from Newbury station (the West) should use the Northern ring road to access this new development as it has the higher 40mph limit and should be facilitate faster access in and out to the Reading Hospital instead of trying to navigate an already conjested Thatcham Town centre A4 bottleneck. Have SC Ambulance Service been consulted and what are there repsonse plans re access?</p> <p>6. Housing provision - affordable housing (40% planned). Thatcham North already has an over-concentration of 'affordable and especially social' housing - refer to National Indeces of Deprivation maps, Sovereign Housing Association maps, and house price maps for West Berkshire (e.g Park Avenue Estate and Sagecroft Estate). There should be a balance/mix of housing provision accross West Berkshire and Thatchams already high concentration of such housing should not be compounded by additioanal provision of low quality / social / affordable housing - the mix should redress the balance by allocating a percentage that adjusts the mix to counter this overconcentration.</p> <p>7. Areas of open space should have clear mamagement and maintenance responsibilities clearly contracted and understood. There are many areas in Thatcham where land ownership is unclear and threfore such areas fall into disrepair. Any SUDS features would also come into this.</p> <p>8. Leisure provision - North Thatcam has very few and low quality areas for leisure, especially for children. For exexample, Memorial Park, Sagecroft and Park Avenue estates have no/very poor provision. There</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>is an over reliance on the 'Discovery centre' as a leisure destination. North Thatcham would benefit (as there are high proportion of young families) from creation of a high quality childrens adventure play area opportunity for example in the Memorial Park.</p> <p>9. Cycles often use public footpaths instead of local roads - better highways management and traffic claming / management to make local residential through roads/highways safer for sustainable transport.</p> <p>10. NE Thatcham would benefit from adequate provision of retail centres with appropriate parking capacity where food retailers such as Lidl / Aldi can operate. Currently everyone from East, Central and North Thatcham has to travel to East Newbury, Tesco, Lidl, Aldi (for lower cost food) increasing pressure on our already congested local road network which suffers high pollution levels, especially along the A4 Town centre and residential through roads.</p> <p>11. The Town centre and local 'destinations' and surrounding access routes would benefit from better (dropped kerb surveys and dedicated cycling paths) for walking and cycling access, as well as additional (frequent) local small bus service routes.</p> <p>12. Litter. Provision of more waste bins, in and around the town centre which is already dominated by takeaway provision, leading to local residents suffering from persistent rubbish along paths and streets surrounding the town centre where Thatcham Council do not operate regular litter picking rotas.</p> <p>13. Opportunity to enhance Thatcham appearance through biodiversity - through better management of unmanaged grass areas. There are many unkept small roadside areas which are grass which could be planted (with support from local residents to take ownership of maintenance). Such areas could be removed from grass cutting contracts saving council £ as they are often hard to access with</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>machinery. North Thatcham Sagecroft Estate and Park Avenue has such areas, often uncut, covered in litter and with no locals taking responsibility to enhance their own living environments.</p>	
Susan Millington (lpr463)	<p>Object to policy.</p> <p>The proposed developments at Sandford and NE Thatcham should be scaled back substantially or removed entirely.</p>	<p>Comments noted.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>The allocation for SP17 North East Thatcham is proposed to be reduced to 1500. Policy SP13 has been amended to reflect this.</p>
David Kiff (lpr1631)	<p>SP13 and para 6.19 and SP16</p> <p>The application by Bloor Homes for planning permission to build 1000 homes at Sandford Park was refused by West Berkshire Council in October 2020. They stated that they have been unable to find an acceptable solution to the problems with the development so that the development can be said to improve the economic, social and environmental conditions of the area. The Council listed 14 reasons for refusal ranging from a lack of a holistic approach, its impact on the environment and ancient woodland, impact on the A34 and failure to secure delivery of necessary infrastructure.</p> <p>The application fails to provide adequate certainty and confidence that the proposal will deliver the comprehensive development of the Sandford strategic site allocation as a whole along with coordinated and timely delivery of the associated infrastructure, services and facilities necessary to mitigate its impact across the entirety of the SSA and</p>	<p>Comments noted.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>It will remain as an allocation and therefore remains within Policy SP13.</p> <p>No further changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>beyond. Another reason was the failure of the development to meet the Council's aim for making the district net carbon zero by 2030, as declared in their climate emergency.</p> <p>It is considered to be an unsustainable and harmful development by failing to reduce carbon dioxide emissions. In addition, other reasons cited for refusal were potential harm to the ancient woodland on the site and the potential severe impact on the A34. Also failure to secure satisfactory planning obligations for infrastructure and mitigation measures.</p> <p>In the light of all of the above Sandford Park Newbury is a totally unsatisfactory site for a major housing development and therefore be removed from the list of sites allocated for residential and mixed use development.</p>	
<p>Debby Reynolds (lpr1308) David Copas (1434)</p>	<p>Object to policy.</p> <p>[Letter attached. Other comments added to other relevant consultation points]</p> <p><b>Response to consultation by West Berkshire Council on Emerging Draft West Berks LPR and Thatcham Growth Study Stage 3 report by David Lock Associates</b></p> <p>[NB. The response is recorded all together under lpr1305 for SP17 NE Thatcham, and separately in lpr 1306,1307,1309 and 1310. It keeps the original numbering of the recommendations.]</p> <p><b>Chapter 6 Delivering housing</b></p> <p>SP 13 lists the sites for residential and mixed use in Newbury and Thatcham for sites 1 ha or more. Here it adds in NE Thatcham as SP17 for the first time. This draft local plan review and associated</p>	<p>Comments noted.</p> <p>The Local Plan Review seeks to carry forward housing allocations from the Housing Site Allocations Development Plan Document which have not yet come forward or have commenced, and seeks to allocate new sites in order to meet the housing target for West Berkshire. Provision will be made for 8,721 to 9,146 net additional homes in the District over the plan period. Thatcham is in the Urban Area, as set out in the Settlement Hierarchy, which, along with Newbury and the Eastern Urban Area, is a focus for housing and economic development.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>report therefore set out a huge increase in development area and house numbers.</p> <p>There is no justification for such an increase in allocation, and in SP17 the proposal of 2500 houses is completely disproportionate for Thatcham and surrounding areas. In the opinion of Bucklebury Parish Council the figures are flawed and therefore withdrawal for a fundamental review and meaningful justification is essential.</p> <p>The impact on the local setting and breach of the Floral Way boundary, objections raised by the North Wessex AONB, are not addressed. No case has been made for ribbon development and the 'Colthrop village' concept is a completely unacceptable joining up of Midgham and Bucklebury Parishes with Thatcham and should be removed from any future considerations.</p> <p>Any housing allocation must demonstrate local benefits to the natural environment.</p> <p>The model for infrastructure provision is dependent on realising house sales, therefore is not 'baked-in' or inevitable. A transparent, enforceable commitment to ensure fair share of profit and investments in local assets is an essential pre-commencement commitment which should be policy for any development.</p> <p>The level of ambition for infrastructure provision and biodiversity gain is insufficient. No budget is allocated to achieving 10% biodiversity gain in the appraisal of viability, the design features do not demonstrate any input from conservation professionals, nationally or locally.</p> <p>Green and biodiverse are not equivalent. The concept, beneficiaries and impact of a new strategic country park are unclear. Any future</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>consideration of the idea must make clear that is outside the area of allocation and protected in perpetuity.</p> <p>If land at 'Colthrop village' is no longer needed for farming it should be entirely devoted to biodiversity net gain and used to establish a fully functional wildlife corridor between the Kennet valley and Bucklebury heathland.</p> <p>Numerous aspects of the Bucklebury vision have been ignored. It appears that the views of residents on the edge of the proposed area were either not sought or not taken into account.</p> <p>Changes sought:</p> <ul style="list-style-type: none"> <li>• <b>Recommendation 6 – SP13 is unacceptable and needs alteration, particularly removal of the proposed NE Thatcham line item.</b> All the reasons are set out above and in the Bucklebury Parish Council and Thatcham Town Council submissions.</li> </ul>	<p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>As part of the submission version of the Local Plan Review the housing number to be delivered in the plan period has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p> <p>No further changes to Policy SP13 are proposed.</p>
Graham Storey (lpr573)	<p>Object to policy.</p> <p>Too dependent on Sandlesford and NE Thatcham</p> <p>Changes sought:</p> <p>The major developments in Sandlesford and NE Thatcham should be substantially scaled back or removed</p>	<p>Comments noted.</p> <p>The Sandlesford development now has the benefit of outline planning consent for 1000 dwellings, following an allowed appeal. It will remain as an allocation and therefore remains within Policy SP13.</p> <p>With regard to North East Thatcham, as part of the submission version of the Local Plan Review the housing number to be delivered in the plan period has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p>
Ian Halliday (lpr616) Jane Halliday (lpr617)	<p>Object to policy.</p> <p><b>SP13 Sites allocated in Newbury and Thatcham.</b> The major developments in Sandlesford and NE Thatcham should be substantially scaled back or removed for the environmental reasons stated above and because there is too heavy a reliance on these two sites and insufficient focus on developing brownfield and windfall site opportunities.</p> <p>Changes sought:</p> <p>The major developments in Sandlesford and NE Thatcham should be substantially scaled back or removed.</p>	<p>With regard to North East Thatcham, as part of the submission version of the Local Plan Review the housing number to be delivered in the plan period has been amended to 1500. Respondent (with lpr ref)	Response	Council Response
Tim Hall (lpr650)	<p>Object to policy.</p> <p>Reasons: Sandford, Thatcham NE</p> <p>Changes sought:</p> <p>Many more other opportunities for adaptation, intensification and beautification within existing built up areas and brownfield sites are needed to provide attractive more sustainable locations for excellent living conditions instead.</p>	<p>With regard to North East Thatcham, as part of the submission version of the Local Plan Review the housing number to be delivered in the plan period has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p>
Allison Butcher (lpr2126)	<p>SP 13, in Chapter 6, introduces <b>NE Thatcham (SP 17), and the development of 2500 houses</b>. Such a disproportionately large development will have an unacceptable impact on a town the size of Thatcham and on the surrounding rural area and villages. I agree with the findings of the BPC that the housing demand analysis is flawed, and that the effects of the Covid-19 pandemic in relation to the proposed housing needs have not been taken into consideration.</p> <p>Changes sought:</p> <p>SP13 : to be retracted and extensively amended in line with reasons submitted by the BPC and individual residents to the WBC.</p> <p>Consultation with all stakeholders on changes and improvements to the LPR, with a fair and realistic timeline for all</p>	<p>With regard to North East Thatcham, as part of the submission version of the Local Plan Review the housing number to be delivered in the plan period has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p> <p>No further changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
Richard Foster (lpr2452)	<p>Object to policy.</p> <ol style="list-style-type: none"> <li>1. Thatcham has suffered from over-development and lack of infrastructure over the years since the 1970s. This is acknowledged in the document, but the town is not going to get the new infrastructure it needs from just building new houses , as the CIL money will not cover the deficit in infrastructure as well as the new infrastructure required for the development itself.</li> <li>2. The document gives the feel that 2,500 houses have been dumped on Thatcham because the planners cannot think of anywhere else to put them. That is not a sound basis for planning. The document explains that 74% of the area is AONB, which leaves essentially only the Kennet Valley from Newbury eastwards as available for substantial development. But even that is constrained at the east end by the proximity to Burghfield and Aldermaston nuclear sites. So the available space is shrunk to Newbury and Thatcham, and Newbury already has a controversial planning site on its hands at Sandleford. Hence the requirement to find land is focussed on Thatcham even though it is already over-developed.</li> <li>3. The document makes reference to the need to develop in a sustainable way, and references West Berks Council's environmental plan with its intention of achieving carbon zero by 2030. But the implementation plan that will show how the environmental plan's objectives will be met, has not yet been written. Until it is, the local development plan should be withheld because it will need to include policies on planning that emerge from the environmental implementation plan. The LDP must be subservient to the environmental implementation plan.</li> </ol> <p><b>Transport</b></p> <ol style="list-style-type: none"> <li>1. Policy SP 22 states that a full Transport Assessment will be required where 60 or more dwellings are proposed. There is no indication that such an assessment has already been made.</li> </ol>	<p>As part of the submission version of the Local Plan Review the housing number to be delivered in the plan period in North East Thatcham has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p> <p>The LPR is the statutory land use plan for the area and has regard to all of the Council's strategies.</p> <p>Transport modelling for the site has been undertaken on the assumption of 2500 dwellings. The associated infrastructure</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Access to Thatcham from the south is solely via the level crossing which is already saturated at peak times. Similarly, from the north, access is mainly via Cold Ash which also has queueing at peak times. Traffic heading west from Thatcham will take either Floral Way or the A4 and then London Road into Newbury, which again, already queues at peak times.</p> <ol style="list-style-type: none"> <li>2. Travel to Basingstoke from Thatcham has to be via either the level crossing or via Brimpton. Neither of these routes can take significant extra traffic. To suggest that it is practical to travel from Thatcham to Basingstoke by any other method than by car shows ignorance of the options available.</li> <li>3. An extra 2,500 Homes in Thatcham can only exacerbate that queueing in those three directions. A preliminary transport assessment is urgently needed, not by a developer but by West Berks Council, and almost certainly it would show that excessive queueing will make the proposed development impractical.</li> <li>4. Furthermore there is no recognition of the current restrictions on driving to the station: you can't depend on getting there without queueing, and when you do get there there is nowhere to park. So you abandon your car on a street. Building more houses will only exacerbate this problem.</li> </ol> <p><b>Infrastructure</b></p> <ol style="list-style-type: none"> <li>1. Paragraph 6.36 acknowledges that “the provision of social infrastructure has not kept pace with housing population growth”. I assume this to mean leisure, sports and entertainment facilities including the library.</li> <li>2. Paragraph 6.39 acknowledges that Thatcham is deficient in services provision, “including public services and commercial services”. I assume that means services such as medical centres, schools, retail shops and public transport.</li> <li>3. Paragraph 6.40 claims that “only growth of a strategic scale can support the service provision and regeneration that Thatcham requires.” There is no support for that statement and it is hard to</li> </ol>	<p>requirements, including highway and transport improvements are reflected in the Emerging Draft Infrastructure Delivery Plan (August 2021).</p> <p>The associated infrastructure requirements, social infrastructure, are reflected in the Emerging Draft Infrastructure Delivery Plan (August 2021).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>see how a town that is deficient in infrastructure and services can have that remedied by building even more houses, causing even more of a deficiency. I would expect the deficiency to be remedied first before considering substantially more housing.</p> <p>4. In fact the whole strategy is a complete volte face from the vision for Thatcham described in Paragraph 6.37 where housing expansion was centred on Newbury. It needs much more public explanation and debate before being turned into a plan, at a time when Covid restrictions are no longer a constraint on people's geographic movement.</p>	<p>No further changes to Policy SP13 are proposed.</p>
<p>Tony Vickers (lpr539)</p>	<p>Support policy.</p> <p>In general, we support the policy of having the main focus for growth in this area. However we think the total number is too high in absolute terms as well as relative to the rest of the District.</p> <p>Our detailed comments on this policy are in other parts of our LPR response, especially SPs 16 &amp; 17. We expect the list of non-strategic housing sites to have changed before the Reg. 19 draft, with some deletions, amended numbers and additions.</p> <p>Changes sought:</p> <p>Delete SP17, RSA5. Reconsider other sites, as detailed later in the document.</p>	<p>Support noted.</p> <p>As part of the submission version of the Local Plan Review the housing number to be delivered in the plan period in North East Thatcham has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p> <p>No further changes to Policy SP13 are proposed.</p> <p>SP17 (North East Thatcham) is not proposed to be deleted but will be amended to reflect 1500 dwellings.</p>

Respondent (with lpr ref)	Response	Council Response
		RSA5 (Land adjoining New Road, Newbury) is proposed to be deleted and this will be reflected in the Policy SP13.
Cllr Alan Macro (lpr758)	<p>Object to policy.</p> <p>The proposal to allocate a 2,500 homes strategic housing allocation at NE Thatcham (SP17) risks "putting all eggs in one basket" making it subject to risks such as have been experienced with the strategic allocation at Sandleford.</p> <p>The proposed strategic housing allocation at NE Thatcham (SP17) would greatly increase the level of traffic on the A4. Many vehicles would head east along the A4 to Reading and to the M4 leading to increased, unacceptable congestion at junctions, particularly with the A340 in Theale, with Hoad Way and Waterside Drive in Theale and at M4 Junction 12. There is already significant delays of 165 seconds for traffic emerging from Waterside Drive onto the A4 in the evening peak (TomTom data for April 1-4 2019).</p> <p>Changes sought:</p> <p>Strategic allocation SP17 should be removed from the plan and modest allocations made at larger villages around the district (as described in comment on SP3), thus spreading traffic increases around the district and reducing the extra traffic on the A4.</p>	<p>As part of the submission version of the Local Plan Review the housing number to be delivered in the plan period in North East Thatcham has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p> <p>Transport modelling for the site has been undertaken on the assumption of 2500 dwellings. The associated infrastructure requirements, including highway and transport improvements are reflected in the Emerging Draft Infrastructure Delivery Plan (August 2021).</p> <p>No further changes to Policy SP13 are proposed.</p>
Nataliya Topliss (lpr789)	<p>Object to policy.</p> <p><i>Some personal details and references have been removed from representation</i></p> <p>3.1 Thatcham has not had any significant infrastructure investments despite recent rapid residential growth. There has been failure over many years by the Conservative lead West Berks Council to invest in the area and most basic infrastructure of the town center. As a resident of</p>	<p>As part of the submission version of the Local Plan Review the housing number to be delivered in the plan period in North East Thatcham has been amended to 1500. Therefore Policy SP17 as referred to in Policy SP13 has been amended to 1500 dwellings.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thatcham, I notice over the years that the town has extensive developments taking place all over the town but town's infrastructure and facilities do not improve.</p> <p>3.2 The only thing that Thatcham is not lacking is housing. Town has numerous developments over the years but no investments whatsoever into any kind of facilities or infrastructure. West Berks council do everything to finally completely destroy this town. If you ask local residents then they will say that the council uses Thatcham as the dumping place for their development targets. The only thing that has changed over the last 20 years in this town is the endless growing development sites. I have have to travel to work in Reading. My husband aslo was not able to get a job in Thatcham. There are no local jobs and the majority of town's population travel to Reading or other towns to get employment. The transport links are of full capacity with congestion on the A4. Before pandemic, my husband and I spend 1 hour 30 min daily to travel from Thatcham to Reading by using the A4. This trip should take 25 min but due to daily congestions we had to spend up to 2 hours one way on the A4 every day in order to get from Thatcham to Reading. The trains were also always full. The last thing Thatcham needs is housing.</p> <p>3.3 The proposal makes no real commitment to town centre regeneration nor does it do anything to address air quality. The proposal for development fails to make any specific requiremts for the development to be net zero carbon. Town has no parks or large green spaces for its population. Tree officers from West Berks council always approve for mature trees to be cut down to accommodate all developments. Of course, no new trees get planted as no checks on whether conditions of the planning permissions relating to landscaping and trees are fulfilled. All mature trees get destroyed.</p> <p>3.4. Thatcham is a grey derelict place with no parks or greenery. West Berks council do not do anything to make Thatcham healthy and green</p>	<p>Transport modelling for the site has been undertaken on the assumption of 2500 dwellings. The associated infrastructure requirements, including highway and transport improvements are reflected in the Emerging Draft Infrastructure Delivery Plan (August 2021).</p> <p>Separate policies in the LPR deal with air quality and net zero carbon.</p> <p>Part of the proposal for NE Thatcham includes a new park plus additional open spaces.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>place to live. New plans for development on 170 acres of green land will destroy Thatcham's countryside.</p> <p>Changes sought:</p> <p>West Berks Council's strategy of 2012 indentified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand.</p>	<p>No further changes to Policy SP13 are proposed.</p>
<b>Landowners, site promoters and developers</b>		
<p>Prosper Infinity Ltd. (lpr179)</p>	<p>Object to policy.</p> <ol style="list-style-type: none"> <li>1. Avoid using greenbelt or undeveloped land where possible.</li> <li>2. Suggesting a redevelopment site in Thatcham that is brownfield i.e. developed upon and entirely hardstanding and demonstrates it is in a sustainable location.</li> </ol> <p>Changes sought:</p> <p>Having also reviewed the current West Berkshire local plan (which includes the core strategy development plan and Housing site allocations plan), and the National Planning Policy Framework, I agree with the purpose of the LPR in achieving sustainable development that meets the needs of the present and future generations. <i><u>I would like to focus my comments on the sections of the proposed development strategy in the spatial areas of Newbury and Thatcham.</u></i></p> <p>I would respectfully like to draw your attention to a brownfield parcel of land known as 'Newbury Leisure Park' which should be considered for redevelopment to assist in meeting the housing needs over the coming</p>	<p>Comments noted.</p> <p>There is no Green Belt in West Berkshire. There is a general presumption in favour of developing brownfield land, and there are opportunities to make use of such land within settlement boundaries.</p> <p>Greenfield sites are needed, and at the scale of NE Thatcham and Sandleford, this seeks to deliver the infrastructure needed to support development and benefit the local community.</p> <p>The site at Newbury Leisure Park has been assessed through the HELAA, to be published alongside the submission version of the Local Plan. The HELAA assessment identifies that the site is potentially developable in part. However, this would be limited by the extent of the area within Flood Zones 2 and 3. Ecology assessments would be required, given the proximity of the site to the SSSI and SAC. It is not proposed to allocate the site in the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>years. I enclose with these representations 2 title plans identifying the site which is in our ownership and control. The reason I would like to draw your attention to this parcel of land is because the site has exhausted its usefulness as a leisure facility. The current operator of the tenpin bowling centre has been struggling to make it a successful business over the last 2 and a half years, and is taking advice on dissolution processes. Prior to that, the previous 2 owners, namely MFA Bowl Ltd and Newbury Leisure Ltd also went into administration. As the owner of the land, I can prove that a financially stable and experienced leisure operator has been impossible to identify at each liquidation juncture when the previous three operators have failed to make this a profitable site over the last 8 years. The land is brownfield land {as confirmed by the Council in the Officer's report for application ref 09/01988/COMIND) and is available, deliverable and developable.</p> <p>I strongly feel that the site meets the strategic objectives of the LPR and has capacity for approximately 100 units of housing. It is sustainable being previously developed land on the edge of the settlement and historic an active destination in its own right, and by replacing the leisure use with residential it would fit with the LPR strategy of focusing leisure uses in the Town Centres of Newbury and Thatcham and reusing previously developed land (in accordance with the NPPF).</p> <p>Additionally, the existing use demonstrates that it is a sustainable location which already uses existing transport and infrastructure.</p> <p>Policy SP1, SP3 and Policy SP17 suggests Thatcham will be a focus for regeneration. The LPR Policy SP3 also states '...the urban areas will be the prime focus for housing and economic redevelopment of suitable previously developed sites for housing purposes...'. Policy SP12 also states the approach to housing delivery uses the opportunity to use developed land. I would like to suggest that the council considers redevelopment of the land on Lower Way called Newbury Leisure Park where 4 of the 4.25 acres sits on either Flood Zone 1 or 2, and therefore a managed development within WBC guidelines would not pose a flood</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>risk for residential dwellings. Indeed, given the site is presently almost entirely hardstanding and buildings, the redevelopment provides the opportunity for betterment in terms of flood management, landscaping and biodiversity net gain.</p> <p>Policy SP13 and particularly Policy SP17 suggests a number of large sites that are either green belt or undeveloped land at present. The Newbury Leisure Park site should be considered ahead of greenfield development given it is previously developed land in a sustainable location on the edge of the settlement (the settlement boundary runs along Lower Road, the site's northern boundary).</p> <p>I will make time to discuss this opportunity with the planning team in further detail should they have any additional questions. I admire the fact that the whole strategy of the <b>LPR</b> talks about West Berks focusing on previously developed land (PDL), and this parcel of land on Lower Way fits this description exactly. I look forward to hearing from the Planning Policy team.</p>	
Pro Vision for Sir Richard Sutton Ltd. (lpr2081)	<p>Object to policy.</p> <p><i>Full representation on behalf of Sir Richard Sutton Ltd promoting land for development at Stockcross is attached.</i></p> <p>Representation makes the case for alignment of the settlement boundary to include HELAA site SPE3, allocation of SPE4, SPE5 and SPE6. Representation covers highways and access issues and conclude that all four sites can be developed without a severe impact on highway capacity and that safe and suitable access can be provided to each site.</p>	<p>Comments noted (please see response to Appendix 3 lpr2080).</p> <p>As part of the LPR the Council has undertaken a review of the existing settlement boundaries across the District and these sites were considered as part of that process. Whilst acknowledging the arguments put forward by the site promoter, the Council does not believe the sites meet the criteria for inclusion within the boundary. It is not the role of the settlement boundary review to allocate sites for development.</p> <p>Maps of individual settlements showing the finalised new settlement boundaries will be set out in the proposed submission version of the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>A housing allocation (or allocations) at Stockcross would accord with the NPPF's and the RLP's objectives to 1) provide development in rural areas to maintain and enhance the long-term sustainability of rural communities, and 2) contribute to delivering a range of site sizes for residential development.</p> <p>All four sites are deliverable (in the terms of the NPPF's definition) in that they are available now, offer a suitable location for development and are achievable (given that the sites and the land required to implement the identified highway improvements are owned by SRSL - with no legal or commercial impediments to delivery).</p> <p>Changes sought;</p> <p>Extension of settlement boundary and allocation of sites at Stckcross.</p>	
Fisher German LLP for M and W Musgrave and Begley (lpr1230)	<p>Object to policy.</p> <p><i>Complete representations from Fisher German LLP are attached</i></p> <p>A critical part of the Council's supply equating to 40% of the housing requirement derives from two large scale allocations in Newbury and Thatcham; Sandlesford Park, Newbury (1,500 dwellings) and North East Thatcham (2,500 dwellings). We have a number of concerns relating to the reliance on these sites, as clearly if there were to be issues in delivering these strategic sites this would mean the Plan would underdeliver significantly against even base Local Housing Need, let alone any uplift, only delivering circa 7,620 dwellings if all other sites delivered and the windfall rate maintained.</p> <p>Sandlesford Park is a locally difficult site, with multiple applications refused in the previous five years. There is currently an ongoing appeal in relation to the most recent application, which was submitted in May 2020 and refused in October 2020. The record of uncooperative working</p>	<p>The Council's strategy is for a mix of sites: strategic sites such as Sandlesford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandlesford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandlesford Park site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>and multiple refusals leads to severe concerns of any positive permission being received on this site. If the Council continues with this allocation, it will find itself in the situation where it is simultaneously promoting a site for development whilst defending a refusal at appeal for the same site. This situation must be highly confusing and frustrating for local residents and must cast serious doubt as to whether a suitable scheme can be advanced on the site.</p> <p>The Council has not provided any clear indication of a change of approach from the applicants that would enable a suitable scheme to come forward, and the ongoing appeal would appear to suggest that there remains a conflict between the two parties. Given this site has been allocated for 9 years, with a supporting DPD for 8 years, the lack of a suitable planning permission or even application places severe doubt as to the delivery of this site. Unless evidence can be provided that there is a clear agreement in place between the promoters and the Council as to how this site can be delivered in the Plan period, in a way acceptable to the Council, this site cannot be considered deliverable.</p> <p>North East Thatcham also has a chequered planning history, with the Council refusing an application for part of the site in February 2015. Ref 15/00296/OUTMAJ, with a multitude of reasons for refusal, including impacts on landscape. The applicants appealed this decision and following a public inquiry the appeal was to be allowed due to Paragraph 14 of the NPPF being engaged due to a lack of housing land supply. However, the decision was called in by the Secretary of State who dismissed the appeal in July 2017, against the recommendation of the Inspector.</p> <p>It is understood that the Council consider this site will deliver at least 1,250 dwellings over the Plan period, although due to a lack of a published trajectory it is not clear when they consider a start will be made and what the assumed delivery rates are. As acknowledged by the Site Selection Background Paper (2020), there is a lack of evidence as to the ability to service the site and what works would be required to ensure that there is utilities capacity to deliver the site at the rate the site is</p>	<p>The Council is not relying on the total allocation at either Sandleford Park or North East Thatcham to meet the need up to 2039.</p> <p>For Sandleford, see responses to Policy SP16. The principle of development on the site for up to 2000 dwellings has been established through the Core Strategy process. The site has been accepted as a location to provide a long-term urban extension which will deliver up to 2000 homes. The Core Strategy went through all stages of consultation, independent examination, and adoption by the Council.</p> <p>In light of the progress that has been made on the site since the Regulation 18 consultation, the Council are confident that the site will deliver within the LPR period.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>expected to deliver. There is currently no comprehensive application for the delivery of the site, and it is unclear when one will be submitted. Given the various issues associated with the delivery of Sandleford Park, and the time taken thus far, it is vital that realistic and robust assumptions are made for the delivery of the North East Thatcham site.</p> <p>Considering the above, we do not consider that the Council has made sufficient housing provision to ensure the Plan is robust. The Plan's housing delivery hinges on the delivery of these two strategic sites, and there is a lack of published evidence to suggest that things have changed from historic applications to give any confidence that acceptable schemes will be brought forward. Ultimately, the Council risks being forced into approving housing on these sites, even if the applications do not meet its standards, as the Plan needs them to deliver. Additional allocations would enable sufficient lead in times for these sites to be developed robustly and come forward, without placing the Council under undue pressure to accept what would otherwise be unacceptable applications. Additional allocations would also safeguard the Council's rolling five-year housing land supply and ensure the Housing Delivery Test is satisfied if these sites do not deliver.</p>	
Solve Planning Ltd for Emily West (lpr1425)	<p>Object to policy.</p> <p>Policies SP13 and RSA4 identify a site at Stoney Lane for the delivery of up to 75 dwellings. This site is well placed on the edge of Newbury but, alongside an additional site has the potential to deliver more dwellings on the edge of the main settlement of Newbury.</p> <p>Previous representations have been made relating to the additional site to the north and this has the potential to increase further the level of housing delivery from this site.</p> <p>Changes sought:</p>	Comments noted. See response to Policy RSA4. The site is not proposed to be extended.

Respondent (with lpr ref)	Response	Council Response
	Extension of allocation HSA3 to increase the extent of the allocation. See additional information that accompanies this submission.	No further changes to Policy SP13 are proposed.
Pro Vision for Rivar (lpr1633)	<p>Support policy.</p> <p><i>Full representation on behalf of Rivar Ltd. attached</i></p> <p>It is considered that developing the 'Land adjoining New Road, Newbury' is a developable option for the following reasons:</p> <p>a) There is a need to identify small/medium scale sites for housing in West Berkshire to meet the indicative housing requirements during the plan period.</p> <p>b) The site is located in the 'Newbury and Thatcham Area' which is capable of accommodating significant levels of growth given the range of services and facilities it currently offers and is therefore a sustainable location for development.</p> <p>c) The land has a strong relationship with the existing residential development to the north and follows the existing pattern of the settlement.</p> <p>d) The site is visually well contained by existing woodland and trees which affords a degree of separation from the wider landscape.</p>	<p>Comments noted.</p> <p>The allocation (RSA5) is proposed to be removed from the LPR, due to the adverse impact on the surrounding Ancient Woodland. Standing advice in relation to ancient woodland has changed recently. There is significant pressure from all sides on the adjacent wood which would be close to residential areas within the site. The buffer zone required would be greater than 15 metres. The loss of green infrastructure cannot be enhanced. Following the NPPF which states at paragraph 180 c) that 'development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists', and further to the refused planning application for four dwellings, it is considered that the impact on the ancient woodland would be so great that the site is not suitable for development.</p> <p>Policy SP13 to be amended to include the deletion of RSA5.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>e) An appropriate buffer (i.e. 15 metres) can be maintained to the Ancient Woodland.</p> <p>f) The site is not subject to any specific environmental or statutory designations such as Green Belt, Special Protection Area (SPA), Area of Outstanding Natural Beauty (AONB) or Site of Special Scientific Interest (SSSI).</p> <p>g) The site is located in Flood Zone 1 (i.e. low probability of flooding) and a sustainable drainage system would be provided.</p> <p>h) The site has access to local employment opportunities within Newbury, Greenham and beyond;</p> <p>i) The site is in close proximity to local bus routes, and within walking distances of key facilities and services available. Future residents would therefore benefit from these existing services.</p> <p>j) A vehicular access and appropriate visibility splays can be delivered from New Road;</p> <p>k) The scale of dwellings proposed (i.e. around 10 new homes) is capable of delivering housing in line with local objectives, such as need for affordable housing.</p> <p>l) Further opportunity to deliver new areas of green infrastructure and the</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>creation of areas of green amenity/open space for recreation, ecological and biodiversity enhancements.</p> <p>m) The site is greenfield - therefore it is likely that there are no significant constraints (such as contamination) which would preclude development of the site on viability grounds.</p> <p>n) The site is available for a residential development immediately. The land is within single landownership and Rivar have an option to purchase the site which will facilitate its timely development early in the plan period.</p> <p>o) Furthermore, as far as we are aware, there are no legal problems which would prevent this site coming forward for residential development.</p> <p>Accordingly, it is considered that there are no identifiable constraints that would prevent the delivery of the site for a small-scale residential development. The site is therefore suitable, available, and achievable for around 10 new homes, in a timely and sustainable manner.</p>	
Woolf Bond Planning for Donnington New Homes (lpr2100)	<p><i>Full representation on behalf of Donnington New Homes is attached.</i></p> <p>It is noted that this policy and supporting paragraph 6.21 commits to an identification of 40 dwellings through the Cold Ash Neighbourhood Plan process. Consistent with paragraph 6.21, it is understood that these will form an additional allocation to those identified for allocation within Policy SP 13 as proposed. For the reasons set out (<i>in full representation</i>) and in submissions made direct to the Neighbourhood Plan Group it is considered that our client's site at Ashmore Green Farm, Stoney Lane offers a deliverable and appropriate development opportunity to</p>	<p>The site 'Ashmore Green Farm, Stoney Lane' (CA1) has been assessed through the HELAA.</p> <p>The site is available and achievable.</p> <p>There are constraints which mean the site is unlikely to be suitable within the next 15 years - development would be inappropriate in the context of the existing settlement form and pattern.</p> <p>There are preferable sites elsewhere in Newbury and Thatcham, and includes those sites highlighted above with the benefit of planning permission, or with a resolution to approve.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>contribute towards a substantive proportion of the identified Cold Ash Neighbourhood Plan requirement.</p>	<p><u>Cold Ash Neighbourhood Plan</u></p> <p>The information published in the HELAA was at a point in time. As work has progressed on the LPR and more evidence has been gathered, some of the development opportunities we originally identified have changed. Some Neighbourhood Development Plan (NDP) steering groups have therefore found they are unable to allocate the housing numbers they have been given, and are looking to allocate sites in settlement boundaries instead, which is the case with Cold Ash.</p> <p>Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan does not include allocations within settlement boundaries because the principle of development is considered acceptable. Were NDPs in West Berkshire to include allocations within the settlement boundary, then this approach would be inconsistent with the approach taken in the Local Plan and draft emerging LPR.</p> <p>NDPs must meet a set of tests known as Basic Conditions, and one of these is that the policies in a NDP must be in general conformity with the strategic policies in a Local Plan.</p> <p>The site selection work undertaken by the Cold Ash NDP steering group has identified just one suitable site, and this site is located</p>

Respondent (with lpr ref)	Response	Council Response
		<p>within the settlement boundary. In light of this, the housing requirement for Cold Ash Parish will be amended to zero.</p> <p>No further changes to Policy SP13 are proposed.</p>
Pro Vision for Newbury Racecourse (lpr1682)	<p>Object to policy.</p> <p><i>Full representation and supporting documentation on behalf of Newbury Racecourse and promoting allocation of land south of Newbury Racecourse is attached.</i></p>	<p>The site 'Land south of Newbury Racecourse' (GRE3) has been assessed through the HELAA. There are constraints which mean the site is unlikely to be suitable within the next 15 years - a Landscape Sensitivity and Capacity Assessment concludes that the site has a low capacity for development due to the site being constrained by in a number of ways where any development would affect views and characteristics which would cause harm to the landscape. The Assessment therefore recommends that the site is not developed for housing.</p> <p>There are preferable sites elsewhere in Newbury and Thatcham, and includes those sites highlighted above with the benefit of planning permission, or with a resolution to approve.</p> <p>No further amendments to Policy SP13 are proposed.</p>
Southern Planning Practice Ltd for the Saunders Family (lpr1928)	<p><i>Full representation on behalf of the Saunders Family promoting development to the east of Stoney Lane is attached.</i></p> <p>It is pertinent to note the number of site allocations which are being carried forward from the current Local Plan. Whilst it is understandable that some sites will be included within the Local Plan Review, as they may have been forecast to be in the later years of the currently adopted Local Plan period, it is slightly concerning that main strategic allocation, Sandleford Park is being carried forward together with six of the existing site allocations. In fact, the Local Plan Review only proposes to allocate three new sites. These sites include a large strategic site at North East</p>	<p>Comments noted.</p> <p>Several sources will ensure a continuous supply of housing across the plan period. These include retained allocations in the Local Plan. Sandleford Park has the benefit of outline planning permission for 1000 dwellings.</p> <p>The allocation of the Kennet Centre is no longer being progressed due to the location of the site within the settlement boundary. Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thatcham, the redevelopment of the Kennet Centre and a small site for 10 dwellings on land adjoining new road.</p> <p>Sandleford Park has been allocated since 2006 yet but to date is yet to deliver any new homes.</p> <p>In 2006, Winchester City Council allocated a city site centre known as Silver Hill for redevelopment. However, due to the complexities involved in bringing such sites forward, this allocation has not progressed. It is considered that the same is likely to occur with the proposed allocation of the Kennet Centre which is likely to require the assembly of multiple landownerships before a viable scheme can be progressed.</p> <p>The proposed allocation of another strategic allocation plus the allocation of the Kennet Centre and the re-allocation of Sandleford Park results in an “all your eggs in one basket” approach is likely to result in a plan which has not been positively prepared and is unlikely to deliver the identified requirement.</p> <p>We consider that the council should be less reliant on major strategic allocations and look to allocate a range of additional small, medium and large sites to provide a more flexible, responsive and deliverable range of allocations. Such an approach is encouraged at Paragraph 68 of the National Planning Policy Framework which acknowledges that small and medium sized sites can make an important contribution to meeting the housing requirement of an area and are often built-out relatively quickly.</p> <p>By allocating more sites for housing development, the Council will bolster their housing land supply. Through the allocation of sites which link to existing allocations, the Council will achieve comprehensive development which will be far more beneficial, particularly around the urban areas, opposed to piecemeal development. We therefore encourage the Council to review their site allocations in line with their spatial strategy and together with the most recent objectively assessed</p>	<p>boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan will not include allocations within settlement boundaries because the principle of development is considered acceptable.</p> <p>No further changes to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	housing need to ensure they are planning for the right homes in the right places over the plan period and beyond.	
Pro Vision for Mr and Mrs Mathew Pittard (1962)	<p><i>Representation promotes the allocation of Land at Lower Way Farm, Thatcham. Full representation is attached.</i></p> <p>Draft policy SP13 sets out the sites allocated for residential and mixed-use development in the Newbury and Thatcham spatial area. Site allocations totalling 4,825-4855 new homes, plus 24 plots, are proposed within the spatial area, compared with the overall requirement outlined in policy SP12 of 8,840-9,775 new homes over the Plan-period.</p> <p>9 out of 13 of the allocations in the spatial area, including Sandleford Park, are existing allocations that the Council proposes carrying forward into the next Local Plan.</p> <p>Paragraph 3.6 of the Site Selection Background Paper (December 2020) explains that “<i>The contribution to housing supply from existing allocations has been reviewed to take account of changes in capacity and reassessment of site deliverability in the light of progress since original allocation.</i>” It goes on to note that “<i>Section 9 of this background paper provides an update on the deliverability of the Core Strategy and HSA DPD sites, and identifies which allocations will be rolled forward into the LPR.</i>”</p> <p>Paragraph 9.3 explains that “<i>The promoters of all of the sites allocated in the Core Strategy and HSA DPD were contacted in the summer of 2020 for an update on deliverability.</i>” Paragraphs 9.3 and 9.4 confirm that the existing allocations have been subject to Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) and it was concluded that “<i>all sites will have either a predominantly neutral effect or positive effect.</i>” Furthermore, paragraph 9.4 notes that “<i>The existing</i></p>	<p>The site ‘Land at Lower Way Farm, Thatcham’ (THA9) has been assessed through the HELAA and also subject to more detailed site selection work.</p> <p>The Core Strategy was clear that Thatcham was to receive a lower allocation than other Urban Areas given the rapid expansion that had taken place in the town over recent years. This was to allow a period of consolidation, ensuring the infrastructure and town centre facilities could be upgraded to meet the demands of the existing population. In reviewing the vision for Thatcham as part of the Local Plan Review, and to best understand how to plan for growth in Thatcham within the plan period, the Council commissioned masterplanning work.</p> <p>The masterplanning work considered all of the HELAA sites promoted in Thatcham as well as other evidence studies produced for the LPR. It identified that only growth of a strategic scale could support the service provision and regeneration that Thatcham requires. The indicative development potential at THA9 is 36 dwellings. The development potential at other sites in Thatcham is far greater. The masterplanning work recommended that if strategic development were to occur in Thatcham, the most appropriate location would be north east Thatcham.</p> <p>There are concerns that development may reduce the open countryside between Thatcham and Newbury / Greenham, and introduce built form to south of Lower Way. The site is a buffer to development and forms part of the open character along this side of Lower Way. There is further concern that development would</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>allocations have not been subject to site assessment because the principle of development has been accepted through the adoption of both the Core Strategy and HSA DPD. In addition, the majority of allocations have grant of planning permission.”</i></p> <p>The West Berkshire Core Strategy was adopted in July 2012 while the Housing Site Allocations Development Plan Document (DPD) was adopted in May 2017. As these documents were adopted some time ago, the Council's decision not to carry out a site assessment of the retained allocations as part of the Local Plan Review does not appear to be a robust approach. Furthermore, it seems unlikely that such an approach would comply with the tests of soundness set out in paragraph 35 of the NPPF, particularly in relation to the Plan being justified and effective.</p> <p>Without this evidence, it is not clear how the Council is able to determine that the Local Plan is “<i>an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence</i>” (justified) and “<i>deliverable over the plan period</i>” (effective).</p> <p>While the principle of the development of these sites has previously been established, they have not been delivered (in full or in part) in line with the Council's original housing trajectory. The Site Selection Background Paper – and the Council's evidence base as a whole – do not explore the reasons for this. The Council's “<i>Deliverability update</i>” is wholly insufficient, merely comprising a limited number of bullet points for each site. Further justification, alongside evidence, is therefore required to achieve a sound Plan.</p> <p>The planning context, alongside the local environment, has changed significantly since the existing allocations were made. It is therefore also necessary to confirm that the previous allocations remain the most sustainable options for the future growth of the District, to ensure that the Local Plan is “underpinned by relevant and up-to-date evidence” as</p>	<p>not be appropriate in the context of the existing settlement form, pattern and character of the landscape.</p> <p>Development would have a significant impact on education provision in Thatcham. It is the preference of the Council's Education Team that there is a scale of housing (either from a single or a number of developments) that can yield new secondary provision.</p> <p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>required by paragraph 31 of the NPPF. Simply because the Council consider that an existing allocation remains deliverable does not mean that it should automatically be carried forward without taking account of the passage of time, changing circumstances and the current built and natural environment. That is not to say that the retained allocations are not suitable, but without the evidence, it simply cannot be determined.</p> <p>The onus is on the Council to demonstrate that all allocations in the Local Plan Review (existing and proposed) are deliverable. In this context, it is particularly relevant to note that the PPG(14) explains that in considering all reasonable alternatives, it is necessary to employ the same level of detail for each alternative option. As each new allocation benefits from a detailed site assessment in the Site Selection Background Paper, based on the latest evidence, it is also necessary for the same detailed site assessment, based on the latest evidence, to apply to the retained allocations. As this is currently missing, it is not possible to make a comparison between the options for development and confirm the suitability and deliverability of both the retained and proposed allocations.</p> <p>Paragraph 6.19 of the draft Local Plan confirms that two strategic urban extensions are proposed to meet the majority of housing need (approximately 4,000 homes) in the spatial area. These involve approximately 1,500 homes at Sandford Park to the south of Newbury(1,000 within the Plan-period), and approximately 2,500 homes to the north east of Thatcham (1,250 within the Plan-period), as identified in policy SP13.</p> <p>For the reasons outlined below in response to policy SP16 and SP17, we do not consider that these allocations are sound. We recommend that the allocation at Sandford Park is removed, or at the very least, the amount of housing that it is anticipated will come forward within the Plan-period is reduced significantly. Furthermore, we recommend that the</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>amount of housing that it is anticipated within the Plan-period on land to the north east of Thatcham, is, at the very least, reduced significantly.</p> <p>As noted in response to policy SP12, a housing trajectory is not included in the draft Local Plan or its evidence base. Therefore, at present, it is not clear whether the draft Local Plan and its allocations are an appropriate basis for planning for the future of the District, or deliverable within the Plan-period.</p> <p>In light of the above, we recommend that additional sites should be allocated for housing, focused on small / medium sized sites that can come forward quickly, particularly in the early part of the Plan-period. This will provide additional flexibility, ensuring that decisions regarding new development can remain Plan-led and land is brought forward at a sufficient rate, in line with the NPPF.</p> <p>(14) NPPG: Paragraph: 018 Reference ID: 11-018-20140306</p> <p>Changes sought:</p> <p>We recommend that the allocation at Sandford Park is removed, or at the very least, the amount of housing that it is anticipated will come forward within the Plan-period is reduced significantly.</p> <p>we recommend that the amount of housing that it is anticipated within the Plan-period on land to the north east of Thatcham, is, at the very least, reduced significantly.</p> <p>We recommend that additional sites should be allocated for housing, focused on small / medium sized sites that can come forward quickly, particularly in the early part of the Plan-period.</p>

Pegasus Planning for Donnington New Homes (lpr1945)	<p><i>Representation on behalf of Donnington New Homes in support of continued allocation of Sandleford Park</i></p> <p>This Policy is <u>supported</u>; however, the supporting text should be amended to clarify the existing status of Sandleford Park. The text '<i>..a greenfield site to the south of Newbury, already allocated in the Core Strategy</i>' should be replaced with, '<i>.....<u>the existing Core Strategy allocation at Sandleford Park, south of Newbury, which is carried forward with a redefined policy boundary....</u></i>'. This amended text provides greater clarity around the existing status of the site and the Council's intentions regarding the extent to which the allocation applies to land.</p>	<p>Sandleford has the benefit of outline planning permission for 1000 dwellings and 80 extra care units.</p> <p>Agree that the suggested wording more readily reflects the existing allocation in the Core Strategy.</p> <p>Amend Policy SP13 to say <i>.....<u>the existing Core Strategy allocation at Sandleford Park, south of Newbury, which is carried forward with a redefined policy boundary...</u></i> in para 6.19.</p>
Royal & Sun Alliance Insurance PLC (lpr2113)	<p><i>Full representation on behalf of Royal &amp; Sun Alliance Insurance promoting residential development at Greenham Road Retail Park is attached.</i></p>	<p>The site at Greenham Road Retail Park (site ref NEW12) has been assessed through the HELAA. The HELAA concludes that the site is 'potentially developable'.</p> <p>The site is not being proposed for allocation as it is located within the settlement boundary. Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan will not include allocations within settlement boundaries because the principle of development is considered acceptable.</p> <p>No further changes to Policy SP13 are proposed.</p>
TOWN for Pincent's Lane (lpr2121)	Object to policy.	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>Full representation promoting land to East of Pincent's Lane, Tilehurst attached .</p> <p>The spatial strategy of focusing development on existing centres as the most sustainable locations for growth is noted. However, West Berkshire is not an island, and the presence of Reading as a significant location for jobs and higher order services is as a result significantly underplayed. An increased focus for development in the Eastern Area close to Reading is needed to address this. A more sustainable pattern of growth as a whole could be achieved whilst still retaining the individual identities of the settlements within the Eastern Area.</p> <p>In the case of Thatcham, the Emerging Draft plan suggests only development at a strategic scale of a sustainable urban extension (SUE) will support the service provision and regeneration that Thatcham requires. Delivery of “at least 1,250 dwellings is anticipated within the plan period.”</p> <p>However, this timescale seems bravely optimistic. There is plenty of evidence<sup>1</sup> that large SUEs take much longer to plan and deliver – and this has certainly been borne out locally by the experience at Sandford Park.</p> <p>A realistic programme for delivery of housing in a new SUE at Thatcham, allowing for no infrastructure or other barriers to growth and accepting the Council’s bravely optimistic timescale for adoption of the Local Plan review of 2022, is set out in table 3 (in full representation):</p> <p>Assuming that the above timelines can be met, a ‘reasonable best case’ delivery trajectory for the proposed NE Thatcham SUE during the remaining plan period is set out in Table 4 (in full representation, suggesting best case delivery of 700 units in plan period).</p>	<p>The Council’s strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR. The allocation for North East Thatcham has been reduced to 1500 dwellings, to be delivered in the plan period.</p> <p>For Sandford, see responses to Policy SP16. The principle of development on the site for up to 2000 dwellings has been established through the Core Strategy process. The site has been accepted as a location to provide a long-term urban extension which will deliver up to 2000 homes. The Core Strategy went through all stages of consultation, independent examination, and adoption by the Council.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site. The site will remain in Policy SP13.</p> <p>There are a significant number of constraints within the Eastern Area, meaning that provision for new development is more limited. Nonetheless several sites are proposed for allocation within the Eastern Area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The suggested trajectory above would be typical of market-led approach to delivering a major SUE such as that proposed. Even with 2,500 units to be delivered, a maximum of four outlets would not be seen until well into the delivery period and each developer would not expect to deliver more than around 0.8 units per week. Where less competition exists then delivery would be expected to be around, or slightly above, one unit per week (see references in footnote 1, p.4 of <i>full representation</i>).</p> <p>Given these factors, it is our view that it would be extremely unwise for the Council to rely on the delivery of more than an absolute maximum of <b>750</b> units at North East Thatcham during the plan period.</p> <p>Furthermore, it should be noted that the Emerging Draft Plan relies on the delivery of 1,000 units at Sandleford Park during the Plan Period. The experience in recent years would suggest that this is another bravely optimistic assumption by the Council.</p> <p>These factors, together with the likely need to meet additional unmet demand arising in Reading, suggest the need for an increased reliance on small and medium sized sites across the District – and in particular in the Eastern Area. Such sites need to be of a sufficient size to deliver community infrastructure and other benefits such as affordable housing. Many brownfield sites in particular are too small to deliver these benefits – as well as attracting additional costs in the form of demolition, clean-up and other infrastructure challenges.</p> <p>Changes sought:</p> <p>SP13 relies overly on large strategic allocations which are highly unlikely to deliver to the numbers projected within the Plan Period. SP13 should make greater provision for growth to accommodate these factors and to benefit from the proximity to the Reading urban area.</p>	<p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
JSA Architects Ltd for Colthrop Village Consortium (lpr743 and 773)	<p>Object to policy.</p> <p>The Colthrop Village Consortium do not disagree with the overall housing figure but they consider that the proposed urban extension to North-East Thatcham is flawed for the reasons set out in the letter prepared on their behalf by JSA Architects dated 4 February 2021 along with the associated Technical Note prepared by Stuart Michael Associates on Transport.</p> <p>The HELAA is factually incorrect in regard to THA1 and does not apply criteria consistently where THA20 is deemed to have major constraints and is recorded as "Suitability Unknown" and yet is progressed to be assessed against availability, deliverability and achievability. The Colthrop Consortium's site Ref. THA1 was rejected too readily and on factually incorrect information. See JSA Architects letter on behalf of the Consortium setting out the detail of their objections to the current draft Local Plan, dated 4 February 2021.</p> <p>Changes sought:</p> <p>A reappraisal of the THA1 site and a correction of the factually incorrect and misleading comments in the current version of the HELAA.</p> <p>Look again at the Rainsford Farm/former Colthrop Paper Mill Site which, although partly within the flood plain, is in proximity to the station and is sequentially preferable to parts of the proposed North-East Thatcham allocation which are not appropriate for the proposed development.</p>	<p>Comments noted.</p> <p>Significant parts of the site are located within Flood Zones 2 and 3, and this will limit the developable area. The presence of high voltage power lines and high risk of contamination further limit the developable area. There is no evidence to the contrary to this HELAA assessment. The Highways Authority comment that the impact of the development will be overwhelming and unacceptable on the level crossing, Thatcham and Crookham Hill. Furthermore, a single point of access is unacceptable for a development of this size. There is no firm evidence that a bridge over the railway line and the closure of the level crossing could be delivered, and would be viable, particularly given the restraint on the potentially developable area outside of the constraints listed above.</p> <p>The site is not proposed for allocation and no changes are necessary to the policy.</p>
Turley for Commercial Estate Group (lpr2359)	<p>Support policy.</p> <p>Broadly agree.</p> <p>CEG generally supports the Council's strategic objective for housing and the approach to housing delivery in so far as it seeks to provide sufficient</p>	<p><u>Housing and the approach to housing delivery:</u></p> <p>Support for approach noted.</p> <p><u>Local Development Scheme / LPR timeframe:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing to meet identified needs whilst not curtailing the delivery of housing throughout the plan period (i.e. the housing figure is neither seen as a ceiling or a cap to development). This ensures that the plan provides flexibility and largely meets the requirements of the National Planning Policy Framework (The Framework).</p> <p>The Local Development Scheme currently envisages adoption in December 2022 but there are recent experiences where the Examination process has taken considerably longer than envisaged. Given the local plan are supposed to have a 15-year time horizon from adoption CEG consider that this emerging Local Plan should have an end date of 2038 rather than 2037 to build in some flexibility from the outset. This would require an additional year's worth of housing land to be identified, especially on the edge of sustainable settlements.</p> <p>Concern exists, however, about the Council's rigid approach to the allocation of sites for development. In particular the heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandleford Park and evidenced through consultant papers such as the 'Start to Finish' Report 2nd Edition prepared by Lichfields).</p> <p>In the absence of a Housing Trajectory within the documentation or Appendices CEG therefore reserve the right to make more detailed comments on the delivery and lead in time of strategic sites at a later stage.</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing</p>	<p>The Local Development Scheme as published indicates that the LPR will be submitted in March 2023 with adoption in September 2024. The LPR end date has been amended to 2039.</p> <p>The housing land supply, and housing trajectory has been updated to reflect the plan period and plan end date.</p> <p><u>Reliance on strategic sites:</u></p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandleford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandleford Park site.</p> <p><u>Flexibility:</u></p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met. The upper end of the range has been proposed to allow for approximately 5% additional homes.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner. Directing such to sustainable settlements would accord with the current spatial strategy.</p> <p>One example of this is the land to the North of Newbury. Part of the land benefits from planning permission for up to 401 dwellings, a local centre and a primary school and work has commenced to implement that permission. There is the opportunity for further housing to occur which would capitalise upon these new social and community facilities. Additional land in this location was covered by the Environmental Statement (ES) which was submitted in support of the application but did not form part of the development scheme itself. The ES demonstrated that the additional land was suitable for future development to assist in meeting the Council's housing needs in a location which is sustainable and where there are limited constraints to development.</p> <p>The Council's own assessment of the wider site within the HELAA (December 2020) stated that this site is well related to Newbury and that it should be considered as part of a future potential strategic site. The Council has accepted that the site is suitable for development and in positively preparing the plan should be considering the positive contribution that a flexible approach to additional housing in locations, such as North Newbury, can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Changes sought:</p> <p>Consideration should be given within Policies SP13 -15 to identifying additional sites to provide more flexibility for the plan to deliver the</p>	<p>The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p><u>Land north of Newbury:</u></p> <p>The land north of Newbury site has planning permission, and is currently under construction. The outstanding dwellings to deliver have been factored into the housing supply.</p> <p>As dwellings are under construction, with houses being actively marketed, it is not considered necessary to allocate the land for residential development. The settlement boundary would be reviewed to encompass the land, and will be consulted on as part of the consultation exercise for the submission version of the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>No further amendments are proposed to Policy SP13.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>identified housing numbers (including up-to 2038), as a minimum, and to ensure that any delays to the delivery of large strategic sites does not adversely impact on the Council's ability to meet their housing needs. The contribution that the CEG's site at North Newbury can make, to both housing delivery and infrastructure provision (i.e. links between the A339 and B4009), should carry significant weight and means that it should be formally allocated for residential purposes. Such an allocation would accord with the spatial strategy and the available technical evidence concerning the site's suitability for development.</p> <p>For the avoidance of doubt, the extent of the proposed allocation is identified on the accompanying plan</p>	
West Build Homes (lpr2135)	<p>Westbuild broadly support the Council's approach to the delivery of housing set out within Policy SP12, but have some reservations about specific matters which are set out below.</p> <p>Significant concern exists, however, about the Council's over-reliance on two large strategic sites. The Council's own experience, and that on a national level, is that strategic sites have lengthy lead-in times, and are inherently slow in delivery, and this should be reflected within the emerging plan review through the inclusion of criteria for sites not proposed for allocation to be considered, increasing the flexibility afforded to the Council and reducing the reliance upon strategic sites.</p> <p>Paragraph 6.10 of the draft emerging plan refers to paragraph 68 the National Planning Policy Framework (The Framework) and the weight that should be attributed to the benefits of using suitable sites within existing settlements for homes. What it fails to have any regard to,</p>	<p>Support for approach noted.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable more settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>however, is the sub section <b>Paragraph 68(d)</b> which states that local planning authorities should:</p> <p><i>“work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes.”</i></p> <p>Westbuild contends that without reference to the part of the Framework, and the inclusion of such provisions within the proposed policies, the plan is flawed in its approach and does not fully meet the tests of soundness.</p> <p>Changes sought:</p> <p>Policies SP13 -15 should be amended to provide the potential for additional sites to come forward within the plan period and to ensure that any delays to the delivery of the large strategic sites is mitigated.</p>	<p>There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>The site allocations set out in SP13-15 are based on the evidence base including the HELAA.</p> <p>No further amendments are proposed to Policy SP13.</p>
Carter Jonas for C Graham (lpr2142)	<p>Object to policy.</p> <p>The land at Henwick Manor, Tull Lane, Newbury is not allocated for residential development. (THA18 of the HELAA)</p> <p>The site amounts to 4.9ha and is currently in agricultural use. The site is accessed from Tull Lane to the east and has a gentle slope down from west to east. The site is in flood zone 1 with a low probability of flooding.</p> <p>There is no known contamination or protected species on the site but further investigation can be carried out as required.</p> <p>There is a public right of way footpath along part of the western boundary, and Lower Henwick, Farmhouse and Barns are Grade II listed and are located to the south west of the site. A development scheme</p>	<p>Comments noted.</p> <p>The HELAA concludes that there are constraints which mean the site is unlikely to be suitable within the next 15 years - the site has a distinctive open character, contributing greatly to the open countryside between Newbury and Thatcham. Site relatively flat but Tull Way increases in height away from the A4. Development would have an adverse impact on the existing settlement form, pattern and character of the landscape.</p> <p>Further evidence has been prepared in the form of the ‘Appropriate Countryside Designation Study’. This study recommends the safeguarding of open land around Newbury and Thatcham.</p> <p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>could be designed to protect the setting of the listed buildings. There are no planning designations that impact the development of the site.</p> <p>The HELAA 2020 notes that the “Council's Highways Team would consider that there would be some impact on Tull Way and the A4 / Tull Way Roundabout. They would not anticipate that the impact would be severe, but a Transport Assessment with modelling using the Thatcham VISSIM would need to be submitted in the usual way to assess the impact.” A Transport Assessment can be carried out in due course, but it not envisaged that there would be any insurmountable issues.</p> <p>The site could be delivered on its own or part of a larger site alongside the land promoted to the south west (THA13).</p> <p>The site is available immediately and could deliver in the order of 100-110 dwellings.</p> <p>Changes sought:</p> <p>Allocation of land at Henwick Manor for up to 110 dwellings.</p>	
Thames Water (lpr2148)	<p><i>Full representation and supporting documentation by Thames Water, as landowner promoting land east of Hill Road, Speen, is attached.</i></p> <p>Given that large sites at Newbury and Thatcham that were allocated in the Core Strategy and HSADPD (including the 2,000 home allocation at Sandleford Park) have been delayed in coming forward it is important therefore that this shortfall is addressed. The allocation of the sustainably located KPL site at Speen would help address this shortfall in line with the spatial strategy in Policy SP 1 and should be allocated accordingly.</p> <p>Changes sought:</p> <p>The allocation of the sustainably located KPL site at Speen.</p>	<p>The site at Hill Road, Speen has been assessed through the HELAA (SPE2). The HELAA concludes that the site is unlikely to be suitable within the next 15 years - Council's Highways Team has concerns over safe access to the site due to gradient and sight lines and does not support development.</p> <p>There are preferable sites elsewhere in Newbury and Thatcham, and includes those sites highlighted above with the benefit of planning permission, or with a resolution to approve.</p> <p>It is considered that the Council is allocating an adequate number of sites to meet its requirement.</p>

Respondent (with lpr ref)	Response	Council Response
		No further amendments to Policy SP13 are required.
Savills for Englefield Estate Office (lpr1530)	<p><u>Policies SP13 – SP15: Sites allocated for residential development in Newbury and Thatcham, Eastern Area and North Wessex Downs AONB</u></p> <p>LPR paragraph 6.12 identifies a need for an additional 1,661 dwellings to 2037, taking into account existing commitments for 8,114 dwellings. Notably this includes 1,000 dwellings at Sandford Park, which was allocated in 2012 and has been twice refused planning permission, most recently in October 2020, and so it is questionable whether 1,000 dwellings will be delivered on the site during the LPR plan period. In total over 3,000 dwellings which are identified to support future housing supply are at sites currently without planning permission. As such it is considered that an additional supply of housing is likely to be required in the LPR, above the stated requirement of 1,661 dwellings, and this should be met through smaller sites distributed throughout the District to avoid similar delays to that experienced at Sandford Park. It is important therefore that the LPR therefore identifies a sufficient supply of deliverable sites to meet the local housing target, taking into the previous shortfall in delivery and the potential that identified sites do not come forward as envisaged.</p> <p>It is noted that draft LPR Policies SP13-SP15 make provision for 3,010 new dwellings in excess of the stated outstanding requirement for 1,661 dwellings. However, it is crucial that the LPR is subject to ongoing monitoring to ensure that sufficient housing is being delivered in light of the above, and particularly given the reliance on the strategic allocation for 2,500 dwellings at North West Thatcham.</p> <p>The LPR (paragraph 6.22) acknowledges that Grazeley has been identified as a possible location for a new garden settlement, but is not currently proposed as a strategic allocation due largely to the extension of the DEPZ. As noted above, the extension of the DEPZ is subject to review (the outcome of which is not yet known) and indeed LPR paragraph 4.47 notes that the DEPZ may be subject to change in the</p>	<p>Comments noted.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandford Park site.</p> <p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>future. In light of this, and given the significant benefits that this location could bring to the housing and development needs of the area, the LPR should include reference to the on-going cross-Authority support for a new settlement at Grazeley, subject to overcoming this constraint, and the position should be kept under review. Should the DEPZ change, a review of the LPR should be undertaken to include consideration of development at Grazeley.</p> <p>The NPPF also emphasises that small and medium sites <i>'can make an important contribution to meeting the housing requirements of an area, and are often built out relatively quickly'</i> (paragraph 68). Indeed the Estate's landholdings across the eastern part of the district include a number of small and medium land parcels (as noted further below) which are suitable to accommodate sustainable development and contribute to the district's housing land supply. This includes the Estate's land at Burghfield Common, Theale and Mortimer as noted further below. A number of these sites are currently located within the DEPZ, however should this change during the plan period (as noted above) and additional housing be required, these sites are well placed to accommodate this need.</p>	
<p>Pegasus Planning for Newbury &amp; Crookham Golf Club (lpr2056)</p>	<p>Object to policy.</p> <p>The policy lists a number of sites of varying sizes, which are proposed to be allocated for residential development. Irrespective of the current planning position, it is considered that some of these sites are less ideally suited or justified than that proposed at Newbury and Crookham Golf Club (NCGC). In particular, the following:</p> <ol style="list-style-type: none"> <li>1. Coley Farm, Stoney Lane, Newbury – 75 dwellings</li> <li>2. Lower Way, Thatcham – 85 dwellings</li> <li>3. New Road, Newbury – 10 dwellings</li> </ol> <p>All of these sites are small and currently in use as open fields. Although they each adjoin the edge of the settlement, they offer very limited</p>	<p>Comments noted.</p> <p>Planning permission now exists for Coley Farm and there is a committee resolution to approved Lower Way subject to a Section 106 Agreement. It is no longer proposed to allocate the 10 dwellings at New Road, Newbury.</p> <p>The site at the Newbury and Crookham Golf Club (GRE11) has been assessed through the HELAA, and this concludes that there are constraints which mean the site is unlikely to be suitable within the next 15 years - there are access issues and the site is not supported by the Council's Highways Team.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>opportunities for landscaping, as well as biodiversity and geodiversity net gain. The plans in the local plan show a c.95% development coverage with a narrow “landscaped buffer” on the site edges. These sites are less suitable for allocation and are poorer choices for new housing to help meet the local need in the next few years than that proposed at NCGC.</p> <p>In contrast, the 2 hectares of land at NCGC, is relatively flat with no long distant views. It is well-screened and fully enclosed by existing woodland, both around the development parcel and at site boundaries and there are considerable opportunities available to provide a landscape-led scheme that will enhance and improve the visual amenity of the local area and at least 10% bio and geodiversity net gain. Use of land owned by the golf club to enhance the natural environment on the edge of Newbury, as part of a modest development of c.35 family houses, will lead to considerable improvements to the amenities, wellness and mental health of both existing, and future, local residents.</p> <p>In its current form, it is therefore considered that Policy SP13 has not allocated sufficient sites to help meet the District-wide shortfall of 1,661 dwellings identified in the Local Plan. The allocations identified are also considered to be sequentially inferior to that at NCGC, whilst providing less quantifiable benefit in terms of meeting other policy aspirations of the Local Plan relating to support for the rural economy (in this regard, please also see our additional comments against Policy DC32).</p> <p><i>Policy SP13 – Sites allocated for residential and mixed-use development in Newbury and Thatcham is Objected to, because a number of the proposed allocations are considered to be less suitable than land at NCGC, which also needs to be included in the list of larger sites (1ha or larger) for the allocation of c.35 dwellings.</i></p> <p>Changes sought:</p>	<p>There are preferable sites elsewhere in Newbury and Thatcham, and includes those sites highlighted above with the benefit of planning permission, or with a resolution to approve.</p> <p>It is considered that the Council is allocating an adequate number of sites to meet its requirement, meeting its Local Housing Need requirement.</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>Should the Council consider the representations made in support of allocation of land at NCGC for residential development to have merit, NCGC respectfully suggest the following policy wording:</p> <p><b>Policy RSA XX – Land at Newbury and Crookham Golf Club, Greenham, Newbury (Site Ref: GRE10 and GRE11)</b></p> <p><i>The site, as identified on the indicative map, has a developable area of 2 hectares and is proposed to be allocated for residential development comprising c. 35 dwellings, made up primarily of family-sized homes.</i></p> <p><i>Development will be delivered in accordance with the following parameters:</i></p> <ol style="list-style-type: none"> <li><i>1. The provision of c.35 dwellings will be developed at a mass and density that reflects the character of the adjoining settlement.</i></li> <li><i>2. The site will be developed in accordance with the Landscape Sensitivity Assessment (2011).</i></li> <li><i>3. The design and layout of the development will be further informed by a full detailed LVIA as required by policy SP8.</i></li> <li><i>4. The scheme will provide significant Green Infrastructure improvements in accordance with policy SP10.</i></li> <li><i>5. The scheme will include at least 10% bio and geodiversity net gain in accordance with policy SP11.</i></li> <li><i>6. The scheme will be supported by an extended phase 1 habitat survey, together with further detailed surveys arising from that as necessary.</i></li> <li><i>7. The scheme will be informed by a FRA, which will advise on any necessary flooding and drainage mitigation measures.</i></li> <li><i>8. A Transport Assessment will be required to establish the appropriate locations for access onto the wider road network and to ensure appropriate measures are put in place to mitigate impacts on the highway network.</i></li> </ol>	

Respondent (with lpr ref)	Response	Council Response
	<p>9. <i>As the proposal is 'enabling' development, a section 106 agreement will be required to ensure that capital released by the development is only spent on the redevelopment of the CPGC clubhouse and other improvements to the golf course to improve its long-term viability.</i></p> <p>10. <i>A Viability Report will be required to identify the level of affordable housing capable of being supported by the enabling residential development.</i></p>	
Lochailort Newbury Ltd (lpr2039)	<p>Changes sought;</p> <p>To ensure consistency across policies, the table at draft Policy SP13 should be amended in respect of site RSA1 to read "400-500" rather than "250".</p>	<p>Comments noted.</p> <p>The LPR proposed for allocation the Kennet Centre for a mixed use development comprising of approximately 250 dwellings. Separate to the LPR, two planning applications have been submitted for the site – one of the applications (ref: 21/00379/FULMAJ) proposes a phased redevelopment for a flexible-use commercial spaces, a headquarters office building, and 381 dwellings. The second application (ref: 21/00380/FUL) proposes 91 retirement living apartments in lieu of the office building in the first application.</p> <p>It is no longer proposed to allocate the Kennet Centre as the site is located within the settlement boundary. Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable. The LPR will not include allocations within settlement boundaries.</p>

Respondent (with lpr ref)	Response	Council Response
Pro vision for CALA Homes (lpr2364)	<p>Rep made in reference to Land at Waller Drive, Newbury (CA10 HELAA reference), part of wider representation. The site is bisected by the Cold Ash Parish Boundary and within the settlement boundary. The site is previously developed and operating as a mixed use commercial site, including scrap yard and slaughter house.</p> <p>It is noted that for Cold Ash, the LPR is deferring to the emerging Neighbourhood Plan to identify 40 new homes (draft policy SP13 and paragraph 6.21).</p> <p>As noted in the first section of this representation (<i>SP1 reps</i>), the site is dissected by the parish boundary, and is entirely within the settlement boundary of Newbury. Therefore, its spatial planning relationship is clearly with Newbury rather than Cold Ash – i.e. a site in one of the district's main urban centres, rather than part of the rural area, with two quite different built environment contexts. In which case, a site allocation would be appropriate in the LPR rather than the Neighbourhood Plan.</p> <p>Allocation in the LPR would be in line with the proposed strategy to direct development to the main settlements, principally Newbury. Inclusion in the LPR would also provide greater certainty over delivery of the site compared to the neighbourhood plan process, which is not guaranteed to proceed through referendum to adoption.</p> <p>Furthermore, we have reservations that that procedure would allow allocation of this land in as it is at least partially outside the designated Neighbourhood Plan Area (which follows the parish boundary).</p>	<p>The site at Waller Drive, Newbury (CA10) has been assessed through the HELAA. The HELAA conclusion for the site is that it is 'potentially developable'.</p> <p>The information published in the HELAA was at a point in time. As work has progressed on the LPR and more evidence has been gathered, some of the development opportunities we originally identified have changed. Some Neighbourhood Development Plan (NDP) steering groups have therefore found they are unable to allocate the housing numbers they have been given, and are looking to allocate sites in settlement boundaries instead, which is the case with Cold Ash.</p> <p>Settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p> <p>The West Berkshire Local Plan does not include allocations within settlement boundaries because the principle of development is considered acceptable. Were NDPs in West Berkshire to include allocations within the settlement boundary, then this approach would be inconsistent with the approach taken in the Local Plan and draft emerging LPR.</p> <p>NDPs must meet a set of tests known as Basic Conditions, and one of these is that the policies in a NDP must be in general conformity with the strategic policies in a Local Plan.</p> <p>The site selection work undertaken by the Cold Ash NDP steering group has identified just one suitable site (Land at Waller Drive,</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Newbury), and this site is located within the settlement boundary. In light of this, the housing requirement for Cold Ash Parish will be amended to zero.</p> <p>No further amendments to Policy SP13 are proposed.</p>
LRM Planning for Bloor Homes & Sandford Farm (lpr2357)	<p><i>Representation promoting the allocation of land south of Gorse Covert, Sandford (GRE2) attached.</i></p>	<p>The site at land south of Gorse Covert, Sandford (GRE2) has been assessed through the HELAA.</p> <p>The site is potentially available and achievable.</p> <p>There are constraints which mean the site is unlikely to be suitable within the next 15 years - development would be inappropriate in context of settlement form, pattern and character of the landscape.</p> <p>There are preferable sites elsewhere in Newbury and Thatcham, and includes those sites highlighted above with the benefit of planning permission, or with a resolution to approve.</p> <p>No further amendments to Policy SP13 are proposed.</p>
Gerald Eve LLP for Fairhurst Estate (lpr2371)	<p>Object to policy.</p> <p>Our client owns and controls land situated to the East of Shaw Farm Road, Newbury. A site location plan of this land is included at Annex 1 (<i>attached</i>). The land would be accessed from the roundabout adjacent to the Vodafone Headquarters as an extension to the already permitted housing development, and would not rely upon vehicular access from Shaw Farm Road/Love Lane itself.</p> <p>We share the concerns of others in respect of the approach to the identification and allocation of sites for development. In particular the</p>	<p>The site to the east of Shaw Farm Road, Newbury (SCD4) has been assessed through the HELAA. The HELAA concluded that the site is 'potentially developable in part'. The site was subject to more detailed site selection work which did not recommend the site for allocation. Access via The Connection, a private road, seriously inhibits development of site. Highway Officers consider that a route through site CA15 to the B4009 would need to be provided. Development of this site should be considered as part of a future potential strategic site to the north of Newbury in order to ensure the most sustainable outcomes. Development would require access from the B4009 to the A339. A further strategic site</p>

Respondent (with lpr ref)	Response	Council Response
	<p>heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandford Park and evidenced through background papers such as the 'Start to Finish' Report prepared by Lichfields).</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner.</p> <p>The Council's own assessment (within the HELAA (December 2020) of the wider area, within which the land is situated, stated that it is well related to Newbury and that it should be considered as part of a future potential strategic site (site reference SCD4). The Council has accepted the principle that the general location is suitable for development and, in positively preparing the plan, should be considering the positive contribution that a flexible approach to additional housing in locations such as this can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Changes sought:</p> <p>Further consideration of the whole site assessed as SCD4 within the HELAA should be undertaken. The site, as shown within SCD4, and specifically including the area as identified on the enclosed plan, merits further investigation and consideration for inclusion as a suitable site for the delivery of additional new homes.</p>	<p>at Newbury would be a consideration for a future review of the Local Plan.</p> <p>No further amendments to Policy SP13 are proposed.</p>
Barton Willmore for Sulham Estate (lpr2442)	Object to policy.	The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and

Respondent (with lpr ref)	Response	Council Response
	<p>Disagree with the reliance on large sites.</p> <p>23% of the Council's supply of dwellings is anticipated to be delivered from Sandlesford Park (1,000 dwellings) and North West Thatcham (1,250 dwellings). Whilst the principles of delivering large sites with accompanying infrastructure is supported by national planning policy, and we do not object to these allocations, we raise concern that the numbers suggested may not be delivered within the plan period. In particular with these large allocations, substantial infrastructure will need to be delivered prior to any housing delivery. Increased small and medium scale sites would complement these larger sites by ensuring a constant stream of delivery whilst larger sites start to mobilise. Hall Place Farm, Tilehurst (TIL18) which would deliver approximately 80 dwellings is the scale and location of site which the Council should be seeking to allocate. Due to the medium scale of development and edge of settlement location, the site can be delivered in the short to medium term utilising existing infrastructure including public transport, schools and local shops.</p> <p>The need for further small/medium sized sites to compliment the delivery of larger sites is also compounded by the need for an increased housing target and the necessity for further allocations in order to meet this target. Please refer to the Housing Need Technical Note which accompanies these representations for greater detailed justification and reasoning as to why the housing target figure is insufficient.</p> <p>Changes sought;</p> <p>Further sites small and medium sized sites should be allocated to ensure that any delays to delivery of larger allocations do not undermine the Council's delivery of sufficient housing across the plan period.</p>	<p>smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandlesford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandlesford Park site.</p> <p>The site 'Hall Place Farm, Tilehurst' was assessed through the HELAA, and the HELAA concluded that there are constraints which mean the site is unlikely to be suitable within the next 15 years - development would be inappropriate in the context of the existing settlement form, pattern and character of the landscape.</p> <p>No further changes to Policy SP13 are proposed.</p>
Barton Willmore for Donnington Valley Group (lpr2435)	Object to policy.	The site at Donnington Valley Golf Club (SCD7) has been assessed through the HELAA, and the HELAA concluded that the site is 'potentially developable in part'.

Respondent (with lpr ref)	Response	Council Response
	<p>We do not agree with the Council's approach of ruling out sites within smaller settlements and only allocating sites which fall within the service villages, rural service villages or urban areas.</p> <p>In considering sites promoted within the call for sites, the Council have ruled out all sites which do not fall within the service villages, rural service villages or urban areas (i.e. the settlement hierarchy). At paragraph 78, the NPPF states:</p> <p>“To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby.”</p> <p>The Council's approach to rule out sites which are outside of the settlement hierarchy (at stage 3 of the site selection process), without considering the site-specific benefits of such site, is inconsistent with the above paragraph of national planning policy. The approach also overlooks the circumstances relevant to settlements such as Donnington which, whilst below the Council's settlement hierarchy, has a close functional relationship to Newbury and, therefore, benefits from the services and facilities in Newbury which are readily accessible.</p> <p>The Council's approach also overlooks the site-specific landscape character and sensitivity of our client's site, Donnington Valley Golf Course (HELAA site reference SCD 7). The Landscape and Visual Appraisal Note which accompanies these representations includes detailed landscape consideration and concludes that landscape and visual considerations to not represent a significant constraint to development. The site is visually well contained and could accommodate</p>	<p>The site has been subject to more detailed site selection work, however it was not proposed for allocation due to the location of the site in a settlement that lies outside of the settlement hierarchy.</p> <p>The settlement hierarchy guides the broad location of new and sustainable development, and takes account of the function and sustainability of settlements across the district. Such an approach is in conformity with the NPPF which states at paragraph 9 that <i>“Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.”</i></p> <p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>smaller parcels of development or across the whole site. Given the contained nature of the site, relationship to Newbury, and location outside of the AONB, Donnington Valley Golf Course offers the potential to support more substantial growth than many other smaller villages which are below the settlement hierarchy. As such, we would welcome the opportunity for discussions with the Council as to the best way that this can be delivered. One option would be for the comprehensive development of the site which would delivery approximately 500-550 dwellings along with modest services and facilities for the benefit of the existing and future the community. This would help to ensure the long-term sustainability of Donnington. Alternatively, development of a more modest scale (50-100 dwellings) could be allocated within the plan which would enable delivery in the short-term and would support the viability of the existing leisure use on the site.</p> <p>The Council's approach to housing delivery includes reliance two large allocations (Sandford Park (1,000 dwellings) and North West Thatcham (1,250 dwellings)). These sites are relied upon to contribute 23% of the housing target. Whilst the principles of delivering large sites with accompanying infrastructure is supported by national planning policy, and we do not object to these allocations, we raise concern that the numbers suggested may not be delivered within the plan period. In particular with these large allocations, substantial infrastructure will need to be delivered prior to any housing delivery. Increased small and medium scale sites would complement these larger sites by ensuring a constant stream of delivery whilst larger sites start to mobilise. A modest area of development (50-100 dwellings) at Donnington Valley Golf Course would provide a suitable additional allocation to be delivered in the short term and compliment the longer-term allocations.</p> <p>Finally, we note that the settlement boundary review for settlements below the hierarchy (including Donnington) is yet to be undertaken. In</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>undertaking the settlement boundary review, we would encourage the Council to consider the benefits of the inclusion of all or part of Donnington Valley Golf Course within the settlement boundary to enable residential development in this location. We would also request that, in reviewing the settlement boundary of Donnington, the Council refer to the Landscape and Visual Appraisal Note which support this submission and provides detailed consideration of the landscape sensitivity of the site.</p> <p><b>Donnington Valley Golf Course -</b></p> <p>For context, the Site which measures approximately 45Ha in area, is situated directly to the north of the defined settlement of Donnington and comprises two separate parcels of land separated by Wantage Road. The largest parcel of land comprises an 18-hole golf course as well as a hotel with associated spa and restaurant. The golf course has recently ceased to be a Golf Club. This area is contained by Oxford Road to the east, the A34 to the north and Wantage Road to the west. The smaller parcel to the west of Wantage Road is a greenfield site surrounded by hedgerows.</p> <p>The site is entirely within Flood Zone 1 and is to the south of the North Wessex Downs AONB.</p> <p>The site provides the opportunity for a comprehensive residential development of family housing in an area of the district which is well related to Newbury. If the Council were to agree that the site should be delivered holistically, 500-550 dwellings could be delivered on the site. Alternatively, a smaller area of the site (c. 50-100 dwellings) could be delivered in order to support the ongoing viability of the golf course and hotel.</p> <p>The Landscape and Visual Appraisal Note which accompanies this submission concludes that the site is well-contained and could</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>successfully accommodate development in a number of locations across the site including the whole site. Of particular note is that the site is well-screened from the AONB and, therefore, would not result in a harmful impact upon this area.</p> <p>In summary, we are continuing to promote the Site at Donnington Valley Golf Course for either a holistic development of approximately 500-550 dwellings or a more modest development of c. 50- 100 dwellings could be delivered on part of the site in order to support the viability of retaining the existing leisure uses on the site. We would welcome the opportunity to discuss the site further with the Council and the contribution which the site could make to the delivery of housing within West Berkshire.</p> <p>The Council should seek to accommodate further growth across the district including seeking opportunities for development through the settlement boundary review.</p>	
Origin 3 for Sandtrend Ltd (lpr2400)	<p>It is noted in the LPR that delivery at Newbury focusses upon major development sites to deliver a significant proportion of the housing requirements for the district. Emerging policies SP16 ('Sandleford Park', Newbury) proposes approximately 1500 homes, whilst Policy SP17 ('North East Thatcham') proposes up to 2500 homes – and the LPR clearly sees these as important allocations.</p> <p>In the LPR consultation we note that at Sandleford Park, the emerging LPR places emphasis on ensuring that a comprehensive approach to development is achieved. An SPD for the site was adopted in 2013 and it was subsequently amended in 2015 in response to concerns over it not being developed in a comprehensive manner. However, the LPR (at para 6.30) notes that Sandleford is still yet to deliver new homes. Further at LPR para 6.35, whilst criteria are identified in the policy for delivering development at the site, these will need refinement to include specific mitigation measures. It appears therefore that even alongside a revised SPD, important issues require exploration to assist in the delivery of homes at the site. It is noted in the LPR that planning applications have</p>	<p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandleford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandleford Park site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>been made to deliver new development. However none have been granted. It is noteworthy that an appeal has recently been lodged by Bloor Homes following the refusal of planning permission for 1000 homes in October 2020.</p> <p>Turning to North East Thattham, this is a location to receive a significant amount of growth as an urban extension. It is identified for some 2,500 homes with 1250 homes to be delivered by the end of the plan period. It is allocated as a means of supporting the Council's initiative for Thattham's regeneration. As with Sandford, where development is of a significant scale, concerns will arise over the timescales for over co-ordinated, masterplanned delivery – particularly where aligned with associated key infrastructure. In respect of the latter, it is notable that new infrastructure which includes a secondary school and two primary schools are a policy requirement. As with Sandford the note that the emerging Policy SP17 specific to North East Thattham requires a co-ordinated approach in delivering a 'sustainable, comprehensive and landscape-led development'. Clearly reliance is placed upon the timely delivery of these sites.</p> <p>With the Council placing great emphasis upon these larger sites to deliver a significant proportion of the housing requirement, we consider that a more robust and deliverable strategy would be to allocate land north of Newbury having undertaken a fuller search of this area.</p> <p><b>1. Direction of Development</b></p> <p>In advance of the Regulation 19 consultation later in 2021, further consideration should be given to the development potential of land directly north of Newbury. This area's connectivity to the M4 corridor and into Newbury presents an opportunity for carefully planned growth.</p> <p>To the north of Newbury and west of the B4494 new development can be readily accommodated – supported by existing facilities. To the east of</p>	<p>The site 'Land west of Wantage Road, Shaw, Newbury' was assessed through the HELAA (site ref SCD2), and the HELAA concluded that the site is 'potentially developable in part'.</p> <p>The site has been subject to more detailed site selection work, however it was not proposed for allocation due to the location of the site in a settlement that lies outside of the settlement hierarchy.</p> <p>The settlement hierarchy guides the broad location of new and sustainable development, and takes account of the function and sustainability of settlements across the district. Such an approach is in conformity with the NPPF which states at paragraph 9 that <i>"Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area."</i></p> <p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the area is the head offices of Vodafone – a major local employer; and other local facilities are accessible and could be supported further by additional residential development. Connectivity to Newbury is also good, with the centre less than a 1km by road from the edge of the area for wider assessment (that is from the junction of the B4944 and Grove Road).</p> <p>Through this assessment development sites can be identified to meet needs and address any shortfall in planned delivery in the short-medium term.</p> <p>Changes sought:</p> <p>Our client requests that West Berkshire Council re-assesses the development potential of land north of Newbury – west of the B4944 and north of Grove Road/Lambourn Road at Donnington. Through further analysis and in advance of a Regulation 19 consultation, energies should be directed to assessing options for sites to come forward to deliver residential development in the short to medium term.</p>	
Bluestone Planning for Darcliffe Homes Ltd (lpr2428)	<p>Darcliffe Homes Ltd (hereafter 'Darcliffe') support the principle stated in policy SP1 Spatial Strategy of identifying the locations as set out in the settlement hierarchy in policy SP3 where residential development may take place. This is consistent with the guidance on the general approach to the delivery of new homes, as set out in the NPPF.</p> <p>The densities as set out in the policy are generally supported, although it should also be noted that higher density may also be achievable in certain locations, particularly around the Eastern Area. Careful and sensitive design can deliver higher density, without leading to unacceptable intensification.</p> <p>The policy also refers to the significant commitments throughout the District and as explained below, there are concerns that these either may</p>	<p>Support noted.</p> <p><u>Concern about the non-delivery of committed developments:</u></p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met. The upper end of the range has been proposed to allow for approximately 5% additional homes.</p> <p>The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>not come forward during the Plan period and/ or are being built out at a rate which would mean that they are not appropriate for inclusion in the Adopted Plan and therefore alternatives will have to be sought.</p> <p>Policy SP3 sets out the settlement hierarchy and identifies the urban areas which will be a prime focus for housing. It is supported that the Eastern Urban Area will be a focus, although there is a significant imbalance between the numbers allocated to Newbury and Thatcham when compared to Eastern Area, with over 4,000 homes to the former and under 1,000 homes to the latter. This is not considered appropriate given the level of services and facilities provided to the Eastern Area.</p> <p>With regard to the Eastern Area specifically, it is stated that new allocations for Tilehurst and Burghfield will be made through NDPs. This is clearly dependent on the NDP process, which is lengthy and sometimes fraught with difficulties.</p> <p>At the time of writing, Tilehurst for example have not yet published their draft Neighbourhood Plan and therefore it will still be some time before this can be taken to and approved at referendum, and housing can start to be delivered in accordance with such allocations. Although Policy SP14 sets out that the Designated Neighbourhood Area should allocate 175 dwellings, there is no timeframe for when this may come forward or whether this number will be agreed.</p> <p>It should also be noted that in the HELAA the text regarding Tilehurst makes it clear that allocations will be made within the Local Plan Review where not allocated by the NDP.</p> <p><i>“Tilehurst</i></p> <p><i>8.31. Tilehurst Parish is designated as a Neighbourhood Area, and Tilehurst Parish Council are preparing a neighbourhood plan. The Parish Council have expressed an intention to include residential allocation(s) in</i></p>	<p><u>Imbalance in numbers between the Eastern Area and Newbury/Thatcham:</u></p> <p>There are a significant number of constraints within the Eastern Area, meaning that provision for new development is more limited. Nonetheless several sites are proposed for allocation within the Eastern Area.</p> <p><u>Reliance on allocations in neighbourhood plans:</u></p> <p>Allocations in Tilehurst had been proposed to be included within the neighbourhood plan that is being prepared by Tilehurst Parish Council and which will cover the whole of Tilehurst Parish. It is for this reason that the draft emerging Local Plan Review (LPR) did not propose any allocations in Tilehurst. Since the consultation on the emerging draft LPR, Tilehurst Parish Council has decided not to include any allocations within the neighbourhood plan, and it will instead comprise of development management policies.</p> <p>As part of the work on proposed submission (Regulation 19) version of the LPR, sites in Tilehurst have been considered for allocation through SA/SEA and more detailed site selection work. Site TIL13 (Land at Pincents Lane, Tilehurst) was recommended by officers as being suitable for allocation. However, the Member decision was that the site should not be proposed for allocation due to the impact that development would have on the local highway network.</p> <p>In Burghfield, the entirety of the Parish falls within the AWE Burghfield Detailed Emergency Planning Zone (DEPZ) whereby there are restrictions around new residential development. Because of this, a housing requirement of zero has been given to the designated Neighbourhood Area.</p> <p><u>Reliance on strategic sites:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>the neighbourhood plan. The site selection work will therefore be undertaken by the Parish Council.</i></p> <p><i>8.32. In the event that Tilehurst Parish Council choose not to include residential site allocations in the neighbourhood plan, then West Berkshire Council will pick up the site selection work and consider allocations through the LPR.”</i></p> <p>All other locations are to be treated as open countryside (as set out in Policy SP1) and therefore no sites in these areas could be brought forward in accordance with policy. It is therefore considered that housing allocations should also be made either independently or collaboratively in the Review Local Plan or the policy should be more flexibly worded in the urban areas.</p> <p>There is a concern that policies do not go far enough in bringing forward small and medium sized sites, particularly those located on the edge of the identified urban area settlements. As stated above, if such sites are not allocated in the Local Plan Review or in particular, a NDP, because an NDP has either not been developed or has been delayed, there is no mechanism for such sites to be approved in the future. This may be an issue of great concern where some of the larger strategic sites are not deliverable within the Plan period.</p> <p>It is also unclear from the supply calculations whether or not there has been an undersupply from the Core Strategy 2012 which has been carried forward. Sandlesford Park was allocated in the 2012 Core Strategy and has not yet been granted permission. Clarification is sought as to how this has been dealt with and whether further sites should be allocated in this regard.</p> <p>The table in Policy SP13 also sets out that Sandlesford Park seeks to accommodate up to 1500 dwellings, whereas the text in paragraph 6.12</p>	<p>The Council's strategy is for a mix of sites: strategic sites such as Sandlesford Park and North East Thatcham can deliver infrastructure, facilities and significant numbers of affordable homes over the medium to long term. A number of medium and smaller sites will deliver housing in the short to medium term. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The proposed strategic allocation at North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p> <p>Outline planning permission has been granted for 1000 dwellings and 80 extra care units on the eastern part of Sandlesford Park. There is an outline planning application pending determination for 500 dwellings on the western part of the Sandlesford Park site.</p> <p>The Council is not relying on the total allocation at either Sandlesford Park or North East Thatcham to meet the need up to 2039.</p> <p><u>Core Strategy undersupply:</u></p> <p>Regarding the supply calculations, there is no undersupply carried forward from the Core Strategy. National guidance is clear that this is factored into the standard method.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>states that only 1,000 houses will be delivered by 2037 and the remainder in the following Plan period.</p> <p>This approach is also inconsistent with the encouragement of developers to bring forward small and medium sized sites. The HBF document (2017) ‘Reversing the decline of small housebuilders: Reinvigorating entrepreneurialism and building more homes’ notes (p.29) that:</p> <p><i>“For understandable political and financial reasons, planning authorities have increasingly sought to allocate very large strategic sites for residential development in order to satisfy its requirement to demonstrate a five-year land supply. Large sites on the edge of settlements can be less likely to spark political controversy as they are slightly removed from existing communities. For the very same reason, however, they may require substantial infrastructure and up-front financing resulting in relatively lower delivery rates in the early years of the site’s existence making rapid delivery unrealistic.”</i></p> <p>The latest research from Lichfields (February 2020) ‘Start to Finish What factors affect the build-out rates of large-scale housing sites? Second edition’ discusses the lead times on large sites and the data is not encouraging:</p> <ul style="list-style-type: none"> <li>• Schemes of 500-999 dwellings take on average approximately 5.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 1,000-1,999 dwellings take on average between 6.9 and 7.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 2,000+ dwellings take on average approximately 8.4 years from validation of the initial outline application to delivery of</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>the first house. These do not contribute any completions in the first five years. 6.1 years of this are taken up with the planning application process. (see figure 4 of the Lichfields document)</p> <p>In contrast, smaller sites between 0 and 99 dwellings typically deliver within 3.3 years of the validation of the first application.</p> <p>On this basis it is considered that the following should be taken into consideration:</p> <ul style="list-style-type: none"> <li>• SP16 Sandford Park is allocated for 1,000-1,500 dwellings, taking the above into account, it would take between 6.9 – 7.0 years until the first dwelling is built based on the above assumptions. It should be noted however that the site has been allocated since 2012 and although a number of applications have been submitted, there remains outstanding issues and the site still does not have permission. It is therefore considered that given the length of time taken to date, that the site is unlikely to realistically deliver the numbers proposed.</li> <li>• SP17 North East Thatcham is allocated for 2,500 dwellings, taking the above into account, it would take 8.4 years from validation until the first dwelling is built, based on the above assumptions. There has been no application to date. It is unlikely therefore that any dwelling would be built until approximately 2030 and following this, the average annual build-out rate for a scheme of 2,000+ dwellings is an average of 160 dpa (as set out in the aforementioned Lichfields report). On this basis, with the Plan period up to 2037, this would equate to 1,120 dwellings during the Plan period and not 2,500 as set out. It is unrealistic that on an allocation of this size that dwellings could be brought forward to the market at a faster rate.</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>The HBF document goes on to advise that (p.29-39):</p> <p><i>“Once allocated, LPAs are systematically failing to assess on an ongoing or regular basis, the actual delivery achieved against the targets indicated in its local plan. For instance, by allocating one or several very large sites to achieve a five-year supply of land, delays progressing one site through planning will have a substantial impact on the ability of the authority to adequately plan for the number of homes required.....</i></p> <p><i>..... To meet demand for housing, we need more sites of all sizes allocated. Indeed, large sites often deliver new homes at astounding rates, particularly in areas where the market is strong, but small sites are consistently efficient in their delivery. For this reason, the allocation of a wider range of sites within local plan allocations would not only help increase plurality in the housebuilding sector, it would also improve the chances of local authorities’ meeting ambitious supply trajectory plans. Achieving this all-round positive outcome need not involve overly prescriptive diktats. A subtle shift in policy emphasis, along with a greater focus on ongoing delivery within a local plan period would help to achieve a positive change in behaviours at a local level.....</i></p> <p>The above is also irrespective of the fact that many of the smaller HSA sites are already near completion and at least some the numbers should have potentially been counted before the Plan period. Therefore, these numbers are unlikely to be taken forward in the Adopted Local Plan.</p> <p>In addition, based on last published WBC housing monitoring report (2019), there was a projected windfall allowance of 362 dwellings for the five years up to 2024. To cover the Local Plan Review period to 2037 would suggest a windfall figure of 1,231 dwellings should be included in the supply and not 1979 as currently stated in Table 2 Housing Supply at March 2020. Therefore, there is real danger that the delivery target will not be met due to a reliance on windfalls. This makes very clear that when combined with a lack of flexibility / unclear non-implementation</p>	<p>No further amendments to Policy SP13 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>allowance, that there is a need for more allocation sites to bridge the shortfall, in the order at least 700 units.</p> <p>In summary, there is a clear under provision for new sites and further small to medium sites should be considered with flexibility to allow sites on the edge of the urban areas identified to come forward to ensure that sufficient sites can be delivered within the Plan period.</p> <p>Changes sought:</p> <p>It is considered that policies SP1 and SP3 should be reworded to provide more flexibility.</p> <p>Other nearby Local Planning Authorities have recognised the issue that can arise where a NDP is not delivered. For example, South Oxfordshire District Council in their Policy H1 of the recently adopted Local Plan (but see also their Core Strategy which also contained a similar policy) set out that:</p> <p><i>“Where Neighbourhood Development Plans are not progressed in larger villages and market towns, planning applications will be considered against the housing delivery targets for the towns and larger villages set out in this Plan.”</i></p> <p>A form of words reflecting the above, would ensure that there would be sufficient flexibility to take into account any NDP problems and Policy SP1 should be amended accordingly, with and SP3 and DC1 given clarification in this regard.</p> <p>To reflect this and the potential undersupply of housing, further small to medium sites should be also be added to policies SP13-14, with any update to SP12 as a result. Darcliffe Homes are proposing two such</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>sites within the Eastern Urban Area, which would deliver up to 80 dwellings.</p> <p>The supporting text at paragraph 6.22 would also need to be updated in this regard.</p> <p>The addition of further small to medium sites such as these will require a re-consideration of the capacity of the strategic-scale sites to reflect realistic expectations. Revising the site capacities slightly downward to accommodate a shift of dwelling numbers will not however adversely affect the ability of the promoters to bring the strategic sites forward for development, but will allow a longer period for developing out the entirety of the site, which is likely to run into the following Plan period.</p> <p>Allocating additional small to medium sites will also have a positive effect on the smaller scale and local housebuilding industry, which includes Darcliffe Homes, in providing opportunities that will help to continue to sustain this important re-emerging sector of the housebuilding industry.</p>	
Deborah Reynolds (lpr2465)	<p>SP 13 lists the sites for residential and mixed use in Newbury and Thatcham for sites 1 ha or more. Here it adds in NE Thatcham as SP17 for the first time. This draft local plan review and associated report therefore set out a huge increase in development area and house numbers.</p> <p>There is no justification for such an increase in allocation, and in SP17 the proposal of 2500 houses is completely disproportionate for Thatcham and surrounding areas. In the opinion of Bucklebury Parish Council the figures are flawed and therefore withdrawal for a fundamental review and meaningful justification is essential.</p> <p>The impact on the local setting and breach of the Floral Way boundary, objections raised by the North Wessex AONB, are not addressed. No case has been made for ribbon development and the 'Colthrop village'</p>	<p>Comments noted.</p> <p>The Local Plan Review seeks to carry forward housing allocations from the Housing Site Allocations Development Plan Document which have not yet come forward or have commenced, and seeks to allocate new sites in order to meet the housing target for West Berkshire. Thatcham is in the Urban Area, as set out in the Settlement Hierarchy, which, along with Newbury and the Eastern Urban Area, is a focus for housing and economic development.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>concept is a completely unacceptable joining up of Midgham and Bucklebury Parishes with Thatcham and should be removed from any future considerations.</p> <p>Any housing allocation must demonstrate local benefits to the natural environment.</p> <p>The model for infrastructure provision is dependent on realising house sales, therefore is not 'baked-in' or inevitable. A transparent, enforceable commitment to ensure fair share of profit and investments in local assets is an essential pre-commencement commitment which should be policy for any development.</p> <p>The level of ambition for infrastructure provision and biodiversity gain is insufficient. No budget is allocated to achieving 10% biodiversity gain in the appraisal of viability, the design features do not demonstrate any input from conservation professionals, nationally or locally.</p> <p>Green and biodiverse are not equivalent. The concept, beneficiaries and impact of a new strategic country park are unclear. Any future consideration of the idea must make clear that is outside the area of allocation and protected in perpetuity.</p> <p>If land at 'Colthrop village' is no longer needed for farming it should be entirely devoted to biodiversity net gain and used to establish a fully functional wildlife corridor between the Kennet valley and Bucklebury heathland.</p> <p>Numerous aspects of the Bucklebury vision have been ignored. It is appears that the views of residents on the edge of the proposed area were either not sought or not taken into account.</p> <p>Recommendation 6 – SP13 is unacceptable and needs alteration, particularly removal of the proposed NE Thatcham line item. All the</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>reasons are set out above and in the Bucklebury Parish Council and Thatcham Town Council submissions.</p>	<p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>

Shaw-cum-Donnington Parish Council (lpr208)	Support policy.	Support for policy noted.
Aldermaston Parish Council (lpr1055)	APC remains of the view that there is insufficient space for 8 new (permanent) pitches at New Stocks Farm, Paice's Hill	Comments noted. It is considered that there is sufficient space on site. The GTAA 2021 recommends further pitches on site. A planning application has been submitted for 8 pitches.
Stratfield Mortimer Parish Council (lpr402)	Support policy.	Support for policy noted.
Wokingham Borough Council (lpr1468)	<i>Wokingham Borough Council's full representation is attached</i>	Comments noted.

Respondent (with lpr ref)	Response	Council Response
	<p>There are no significant new allocations bordering WBC that are considered likely to have significant impacts for its residents or the delivery of WBC services. However, it is recommended that clarification is sought on the following residential sites carried forward from the HSA:</p> <ul style="list-style-type: none"> <li>Land adjoining Pondhouse Farm, Clayhill Road, Burghfield Common – proposed for around 100 dwellings and, as stated in the Site Selection Background Paper, benefits from planning permission. However, construction has not begun and the applicant has provided no deliverability update. It is located within the DEPZ surrounding AWE Burghfield which was updated in May 2020. WBC understands additional development within the DEPZ will not be compatible with the AWE Off-Site Emergency Plan. In the event that the extant permission lapses, WBC requests clarity from WBDC, as the emergency planning authority for the area, on whether this site is a deliverable including the advice of the emergency planning officer with regard to the AWE Off-Site Emergency Plan.</li> <li>Land to the rear of The Hollies Nursing Home and land opposite 44 Lamden Way, Burghfield Common – proposed for around 60 dwellings, of which 28 dwellings have planning permission and construction has begun. As above, this site is located within the DEPZ surrounding AWE Burghfield; accordingly WBC would welcome clarity as to whether the remainder of the site without planning permission is deliverable, with reference to the AWE Off-Site Emergency Plan.</li> </ul> <p>WBC wish to remain fully engaged with WBDC's transport modelling and Infrastructure Delivery Plan work moving forward to ensure that there are no significant adverse impacts of cumulative planned development on Wokingham Borough.</p>	<p><u>Land adjoining Pondhouse Farm, Clayhill Road, Burghfield Common</u></p> <p>Planning permission on this site (ref: 22/00325/RESMAJ) was approved before the new DEPZ for AWE Burghfield was determined. The Council's Emergency Planning Team have not objected to the development of the site.</p> <p><u>Land to the rear of The Hollies Nursing Home and land opposite 44 Lamden Way, Burghfield Common</u></p> <p>The allocation is proposed to be removed from the Local Plan Review (LPR) following objections by Emergency Planning.</p> <p>The site was included as an allocation within the Housing Site Allocations Development Plan Document (HSA DPD) which was adopted in May 2017. At Regulation 18 it had been proposed to retain the allocation in the LPR as development had not yet been built out. The site does not have planning permission for residential development.</p> <p>At the time of the preparation of the HSA DPD, Council Emergency Planners allowed for the 60 units. However, since 2019 the Government advised following further technical research that the inner Detailed Emergency Planning Zone (DEPZ) for the Burghfield Atomic Weapons Establishment (AWE) site under the REPPiR Radiation [Emergency Preparedness and Public Information] Regulations 2019 be revised.</p> <p>The site lies in the inner DEPZ of AWE Burghfield. Development will increase the population density of the area, which will inevitably compromise the effectiveness of emergency evacuation procedures in the event of an</p>

Respondent (with lpr ref)	Response	Council Response
		<p>incident at the AWE. There is potential harm to future public safety.</p> <p>The Council's Emergency Planning Team and the AWE object to the development.</p>
Reading Borough Council (lpr1489)	<p>In terms of the sites identified, our main interest lies in the Eastern Area, comprising Purley on Thames, Tilehurst, Calcot and Theale. Policy SP 14 states that this area will accommodate approximately 730-780 homes during the plan period.</p> <p>Reading Borough Council can only support the identification of the proposed housing site allocations to accommodate up to 780 dwellings in this area if the impact of the development of those sites is properly mitigated, which would include impact on infrastructure and services within Reading Borough. In particular, the significant impacts on transport, healthcare and education must be considered and reflected in Local Plan.</p> <p>It is difficult for RBC to properly assess the effects of these developments without the publication of the Infrastructure Delivery Plan (IDP) or a Policies Map. It is particularly unclear where "EMP6: Land north of Arlington Business Park" is located exactly. Once the IDP and Policies Map are published, RBC will likely have further and more detailed comments. With regard to infrastructure, the following sites are of particular concern:</p> <ul style="list-style-type: none"> <li>• RSA10: Stonehams Farm, Tilehurst EUA008 (60 dwellings)</li> <li>• RSA11: Stonehams Farm, Tilehurst EUA003 (85 care home bedspaces)</li> <li>• RSA12: 72 Purley Rise, Purley on Thames (35 dwellings)</li> <li>• RSA13: Land adjacent to Junction 12 of M4, Bath Road, Calcot (150-200 dwellings)</li> <li>• RSA14: Land adjacent to Bath Road and Dorking Way, Calcot (35 dwellings)</li> <li>• RSA15: Land Between A340 and The Green, Theale (100 dwellings)</li> </ul>	<p>Comments noted.</p> <p><u>Infrastructure Delivery Plan:</u></p> <p>An emerging draft Infrastructure Delivery Plan was published in October 2021.</p> <p><u>Allocations:</u></p> <p>Several of the allocations referenced in the response are no longer proposed for allocation for the following reasons:</p> <ul style="list-style-type: none"> <li>• RSA10 Stonehams Farm, Tilehurst: development is under construction.</li> <li>• RSA13 Land adjacent to Junction 12 of M4, Bath Road, Calcot: development is under construction and close to completion.</li> <li>• EMP6 Land north of Arlington Business Park: the site has been subject to a Landscape Capacity and Sensitivity Assessment. This recommends that if the site was developed, either in whole or in part, it would compromise the setting of Theale and its separate identity and character from Calcot. In light of the recommendations, the site is no longer being proposed for allocation.</li> </ul> <p>The development potential at two of the sites is being produced to take account of recommendations in Landscape Capacity and Sensitivity Assessments:</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• RSA16: Whitehart Meadow, Theale (100 dwellings)</li> <li>• RSA17: Former sewage treatment works, Theale (70 dwellings)</li> <li>• EMP6: Land north of Arlington Business Park (20,000 sqm employment floorspace)</li> </ul> <p>In terms of transport, continued investment in non-car modes of transport, including buses and cycling, will be key in minimising the transport effects of these allocated sites. For developments on the edge of Reading, this may include park and ride to connect into central Reading and fast-track public transport corridors across Reading, other public transport measures as well as active travel such as walking and cycling. Reading’s draft Local Transport Strategy, published in May 2020, sets out the proposals for travel across Reading and it will be vital that development on the edge of Reading links into these wider objectives, and makes use of any opportunity for inclusion of on-site transport infrastructure to support these objectives.</p> <p>Additional housing will result in an increase in school-age children in the Eastern Area. There is already substantial cross-boundary movement of pupils between Reading and West Berkshire, with existing strains on education infrastructure in the wider west Reading area. The need for new school places must be therefore be considered and addressed in co-operation with Reading Borough Council.</p> <p>New housing provision will also result in an increased need for additional health facilities in the West Reading area. In particular, there is a need for increased GP capacity in the area. This must also be recognised and properly addressed.</p> <p>Reading Borough Council considers it essential to agree with West Berkshire Council a protocol to ensure that, in planning and approving developments with cross-boundary implications such as those listed above, proper and adequate contributions are delivered towards future education,</p>	<ul style="list-style-type: none"> <li>• RSA16 Whitehart Meadow, Theale: the development potential is now approximately 40 dwellings.</li> <li>• RSA17 Former sewage treatment works, Theale: the development potential is now approximately 60 dwellings.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	health and transport infrastructure, whether this is through the Community Infrastructure Levy process, or through Section 106 contributions.	
Reading Borough Council (lpr1493)	<p><b>Grazeley</b></p> <p>Since 2016, WBDC, RBC and Wokingham Borough Council have undertaken considerable amounts of joint work on developing proposals for around 15,000 new homes at Grazeley Garden Town, south of Reading and within Wokingham and West Berkshire. Regrettably, the bid to the Housing Infrastructure Fund for forward funding of the necessary infrastructure was unsuccessful, and the extension of the Detailed Emergency Planning Zone for the Atomic Weapons Establishment Burghfield to cover the Grazeley site has cast considerable doubt on the future of the proposal and resulted in an objection to its inclusion in Wokingham's Local Plan by the Ministry of Defence. Whilst these circumstances make it almost impossible for WBDC to rely on a strategic allocation at Grazeley as part of the Local Plan, and the Local Plan rightly pursues other options, the document as drafted does not give any indication that it would support the advancement of these proposals in the future if the considerable constraints can be overcome. Grazeley only merits a passing mention in paragraph 6.22.</p> <p>RBC wishes to ensure that the Grazeley option remains on the table should circumstances change in the future. There are limited opportunities to meet the housing needs of the area, including affordable housing need, in a location where it can be easily accessed by high quality new public transport connections and served by substantial investment in new infrastructure, and Grazeley was one such opportunity. RBC suggests that the Local Plan should state that the constraints of the site should remain under review by WBDC, WBC and RBC, and that, should conditions allow for the site to be brought forward, this will not be in conflict with the overall strategy of the plan. RBC commits to continuing to work with WBDC on this site or other strategic options for meeting the needs of the wider area.</p>	<p>Comments noted.</p> <p>Though Grazeley was identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation.</p> <p>Given that the Council are removing sites for previously allocated residential sites in the DEPZ, which have not yet been implemented, or do not benefit from outline or full planning permission, it would not be appropriate, at least in this version of the Local Plan Review, to keep Grazeley as a 'reserve site'. Furthermore, there are other housing allocations which would aid in meeting the District's housing needs.</p>

Respondent (with lpr ref)	Response	Council Response
Tilehurst Parish Council (lpr1982)	<p><i>Full representation from Tilehurst Parish Council and Tilehurst Neighbourhood Development Plan Steering Group is attached.</i></p> <p>We have reservations about the figure of 175 dwellings in SP14. Whilst we accept the need for housing, particularly affordable housing, in the Eastern Area, it is difficult to see where this scale of development could be located in the Parish given its existing concentration of housing and boundary with the AONB.</p>	<p>Comments noted.</p> <p>The indicative housing requirements for the designated Neighbourhood Areas have been based on the available development opportunities identified in the Housing and Economic Land Availability Assessment (HELAA). Consideration has also given to the placing of a settlement within the settlement hierarchy.</p> <p>Tilehurst is a suburb of Reading and forms part of the Eastern Urban Area alongside Calcot and Purley on Thames. Within the settlement hierarchy it is identified as an 'Urban Area' because of the wide range of services offered and subsequently will be the focus for the majority of development.</p> <p>The February 2020 HELAA identified four sites as having potential, and this remained unchanged in the updated HELAA that was published in December 2020. Taking the development potential of these sites into consideration alongside the placing of Tilehurst within the settlement hierarchy as part of its location within the AONB, it was considered that a housing requirement of 175 dwellings would be appropriate.</p>
Holybrook Parish Council (lpr1324)	<p>Object to policy.</p> <p><b>Policy SP 14 Sites allocated for residential development in Eastern Area</b></p> <p>This list is out of date and misleading. The HSA12 development is underway and was approved for 199 homes.</p> <p>HPC's concerns and objections to development Site Ref HSA 12 were not listened to and yet the objections made were in line with the policies outlined</p>	<p>As part of the preparation of the draft emerging (Regulation 18) LPR, regard was given to the residential planning commitments data for the period 1 April 2019 to 31 March 2020 (and which had a base data of 31 March 2020). This indicated that development of the site had not yet commenced.</p> <p>Since the Regulation 18 consultation, development has progressed on the site and it is now close to completion. It is therefore proposed to remove the allocation HSA12.</p>

Respondent (with lpr ref)	Response	Council Response
	in the Local Plan. Therefore, although the Emerging Local Plan looks and sounds good on paper there is little confidence that the policies will be properly implemented and that any concerns and objections be heeded.	
<b>General consultation bodies</b>		
Heritage Forum (lpr76)	Object to policy. SP14 RSA20. The correct name of the road is New Road Hill. The development of 14 houses on land on this road and north of the A4 has recently been turned down because of the dangerous access.	Comments noted.  <u>Road name:</u>  The road name in the policy will be corrected as follows:  <i>#New Road Hill.</i>  <u>Access:</u>  The site has been subject to two planning applications (19/01942/OUTMAJ and 20/03028/OUTMAJ), both of which were refused. Access did not form a reason for refusal.
West Berkshire Green Party (lpr1837)	We broadly support this policy.	Support for policy noted.
CPRE Berkshire (lpr1702)	<b>existing permission</b>  Theale by-pass - an application for 350 homes was allowed on appeal in 2007 on this partially restored old railway sidings site. Since then, nothing has been built. The location is well connected with Reading for employment and has good transport links: we think it is time WBC did something to gain this large housing number by using its compulsory powers to purchase the site and get on with it.	Comments noted.  Theale bypass (Lakeside) has an extant consent. The permission was implemented. There are further applications pending consideration for the detailed design, and there are indications that the site will be delivered without the need for Council intervention.  It is agreed that development should be limited for the sites at THE1 and THE7, to keep development west of the

Respondent (with lpr ref)	Response	Council Response
	<p>Theale sites THE1, 7 at the end of Theale we have previously objected to where land comes up against the M4 and lies under a major pylon line - the worst area for quality of life for residents. Building here should be kept well away from the Pylon line and we recommend a woodland planting between the M4 and the Pylon line as part of WBC Climate emergency strategy.</p> <p>Further east we recommend re-instating the small sites in the Grazeley area now that the government is not going forward with a major Garden Village in this area.</p>	<p>overhead power lines. Landscape Sensitivity and Capacity Assessments have been undertaken for both sites, and recommend certain parameters for the design of the sites. To this end the development potential has reduced. In the case of the former Sewage Treatment Works this has reduced to 60, and for Whitehart Meadows this has reduced to 40. The policy will be updated to reflect the changes in the housing numbers.</p> <p>The Council are led by its Spatial Strategy and Settlement Hierarchy. Grazeley, due to its size, would have been a New Town, with the associated infrastructure and services. The Spatial Strategy and Settlement Hierarchy seeks to place the majority of development in the main urban areas, and to a lesser degree in the rural service centres and service villages. The settlements around Grazeley fall outside of the settlement hierarchy and it would not be considered appropriate to allocate sites for residential development in and around them. Furthermore, such settlements are likely to be included in the updated Detailed Emergency Planning Zone (DEPZ) which would advise against residential development.</p>
<b>Other stakeholders</b>		
Martin Vile (lpr18)	<p>Object to policy.</p> <p>The two sites in Theale allocated for residential development (RSA16 and RSA17) are totally inappropriate in their scale and position.</p> <p>RSA 16 will decrease the buffer between Theale and Calcot and overcrowd that area of the village. In addition this area is prone to flooding and has overhead power lines that would compromise the viability of any housing.</p>	<p>Comments noted.</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate sites in Theale.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>RSA 17 is a development of inappropriate size where the access road is via Blossom Lane and Crown Lane, this increased traffic will cause more congestion in these narrow roads, this in tern will increase the risk to residents. This also impacts on Theale conservation areas.</p> <p>The area is also prone to flood risk and has high voltage overhead power lines making it unsuitable for housing development.</p> <p>There are numerous other housing developments in Theale that already have planning permission both large and small and these additional 400 plus properties will strain the local infrastructure that is already creaking. RSA16 and RSA17 are not required and would have a substantial negative impact to the existing residents of Theale on top of those developments already passed.</p> <p>There are also numerous other housing development sites in West Berkshire that are more appropriate and better positioned.</p> <p>Changes sought: remove RSA16 and RSA17 from the list of sites allocated for residential development.</p>	<p>The Local Plan is landscape-led. Since the publication of the Local Plan Review (LPR) further landscape work has been undertaken, as part of a Landscape Sensitivity and Capacity Assessments (LCA) for a number of sites in the LPR, including the proposed two allocations at Theale. The developable areas are limited to the settlement side of the overhead power lines, which also responds to comments of the National Grid. Certain design parameters are recommended, including a density of 30 dwellings per hectare, limit to 2 storey development; and creating a positive interface to the existing public open space. To this end the development potential has reduced. In the case of the former Sewage Treatment Works this has reduced to 60, and for Whitehart Meadows this has reduced to 40. The policy will be updated to reflect the changes in the housing numbers.</p> <p>A successful challenge was made to the extent of the flood risk zone to RSA16. Much of the site has therefore been removed from Flood Zone 2 and now falls within Flood Zone 1. The developable area would only be in Flood Zone 1, and sustainable drainage methods would be required.</p> <p>Access to RSA17 will be via Blossom Lane, with appropriate mitigation. The Council's highways officers do not object to this.</p> <p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have</p>

Respondent (with lpr ref)	Response	Council Response
		<p>been confirmed and any necessary infrastructure improvements will be taken forward.</p> <p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p>
Kathryn Bassant (lpr55)	<p>Could you please explain why the following areas are included in Policy SP 14 Sites allocated for residential development in Eastern Area:</p> <p><b>RSA18 HSA15</b> Land adjoining Pondhouse Farm, Clayhill Road, Burghfield Common 100</p> <p><b>RSA19 HSA16</b> Land to the rear of The Hollies Nursing Home and land opposite 44 Lamden Way, Burghfield Common 60 (Some development has already taken place on this site but as far as I am aware planning permission has not been granted for further development)</p> <p>Both sites fall within the DEPZ of Burghfield AWE and Policy SP 4 Atomic Weapons Establishment (AWE) Aldermaston and Atomic Weapons Establishment (AWE) Burghfield states "In the interests of public safety, residential(9) development in the Detailed Emergency Planning Zone (DEPZ)(10) of AWE Aldermaston and AWE Burghfield is likely to be refused planning permission by the Council, <b>especially when the Office for Nuclear Regulation (ONR) has advised against that development.</b>"</p>	<p>Comments noted.</p> <p><u>Land adjoining Pondhouse Farm, Clayhill Road, Burghfield Common</u></p> <p>Planning permission on this site (ref: 22/00325/RESMAJ) was approved before the new DEPZ for AWE Burghfield was determined. The Council's Emergency Planning Team have not objected to the development of the site.</p> <p><u>Land to the rear of The Hollies Nursing Home and land opposite 44 Lamden Way, Burghfield Common</u></p> <p>The allocation is proposed to be removed from the Local Plan Review (LPR) following objections by Emergency Planning.</p> <p>The site was included as an allocation within the Housing Site Allocations Development Plan Document (HSA DPD) which was adopted in May 2017. At Regulation 18 it had been proposed to retain the allocation in the LPR as development had not yet been built out. The site does not have planning permission for residential development.</p> <p>At the time of the preparation of the HSA DPD, Council Emergency Planners allowed for the 60 units. However,</p>

Respondent (with lpr ref)	Response	Council Response
		<p>since 2019 the Government advised following further technical research that the inner Detailed Emergency Planning Zone (DEPZ) for the Burghfield Atomic Weapons Establishment (AWE) site under the REPPiR Radiation [Emergency Preparedness and Public Information] Regulations 2019 be revised.</p> <p>The site lies in the inner DEPZ of AWE Burghfield. Development will increase the population density of the area, which will inevitably compromise the effectiveness of emergency evacuation procedures in the event of an incident at the AWE. There is potential harm to future public safety.</p> <p>The Council's Emergency Planning Team and the AWE object to the development.</p>
Helen Marek (lpr56)	<p>Object to policy.</p> <p>Theale is no longer a village. There have been so many planning applications granted over the past few years, that should not have been granted.</p> <p>The planning applications to build on land between the north end of Theale High Street and the M4 are totally unacceptable. The application for 170 houses would stretch limited resources, e.g. for The Medical Centre, beyond capability. The application to build offices on land which is highly susceptible to flooding is preposterous and consequently puts houses in that area in greater risk of being flooded. This is a housing area, not an industrial estate.</p> <p>Changes sought: The above applications should NOT be granted. Offices should be put on the other side of the A4 in the Industrial estate, not in the housing area.</p>	<p>Comments noted.</p> <p>Following the publication of the Regulation 18 version of the Local Plan the three Theale sites have been subject to a Landscape Sensitivity and Capacity Assessment (LCA). The developable areas of the two residential sites are limited to the settlement side of the overhead power lines, which also responds to comments of the National Grid. Certain design parameters are recommended, including a density of 30 dwellings per hectare, limit to 2 storey development; and creating a positive interface to the existing public open space. To this end the development potential has reduced. In the case of the former Sewage Treatment Works this has reduced to 60, and for Whitehart Meadows this has reduced to 40. The policy will be updated to reflect the changes in the housing numbers.</p>

Respondent (with lpr ref)	Response	Council Response
		Further to landscape advice the proposed offices on land at Hoad Way will not form part of the submission version of the Local Plan.
Zoe Freedman (lpr61)	<p>Object to policy.</p> <p>I object to two sites which are local to me and so I know details about them. I am only not commenting re. other sites as I do not have information on them.</p> <p>Whitehart Meadow, Theale. The reasons to object to this as a site for homes are:</p> <ul style="list-style-type: none"> <li>• Flood risk</li> <li>• High voltage overhead power lines cross the site</li> <li>• Noise and pollution from the motorway</li> <li>• Possible land contamination</li> <li>• Need to preserve the gap between Theale and Calcot/Tilehurst</li> </ul> <p>Former sewage treatment works, Theale. The reasons to object to this site as a place for homes are:</p> <ul style="list-style-type: none"> <li>• Flood risk</li> <li>• High voltage overhead power lines cross the site</li> <li>• Noise and pollution from the motorway</li> <li>• Contaminated land</li> <li>• Need to preserve the gap between Theale and Calcot/Tilehurst</li> <li>• Unsuitable access via single-track Blossom Lane and Crown Lane</li> <li>• Impact on the Area of Outstanding Natural Beauty.</li> </ul>	<p>Comments noted.</p> <p><u>Whitehart Meadow (RSA16):</u></p> <ul style="list-style-type: none"> <li>• The site has been the subject of a challenge to the Flood Zone designation (landowner led), where the Environment Agency has altered the area of flood risk. The developable area would not be within Flood Zone 2, and the policy includes a criterion that no development would be permitted in this area. A FRA and SuDS scheme would also need to accompany a planning application;</li> <li>• A buffer would be maintained between the overhead power lines and residential development, as guided by the National Grid. Respondent (with lpr ref)	Response	Council Response
		<p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>
Gary Miles (lpr242)	<p>Object to policy.</p> <p>Objection: Why is Theale yet again on the list? Why is Theale earmarked for a 'large site'? Over the past 10 years lots of small developments have happened in the village most of which have gone unnoticed by majority of residents. Circa 111 homes built to date with planning already past for North and South Lake of circa 350 plus the recently passed plans for circa 100 homes on The Green, total already past for building 450! I object for the following reasons: 1. our sewerage system is already overcrowded - the sewage backs up and we constantly have Thames Water in the village moving the sewage around, pulling it through or pumping it out. We have personally had TW out for this exact reason. 2. Infrastructure such as roads are narrow, the High Street is a conservation area and already heavily used by large overweight vehicles as a short cut when the A4 bypass is queuing. 3. It currently takes 4 weeks to get a face to face doctors appointment and 2 weeks for a phone call appointment! Are you planning on building a new surgery with more doctors? We recently fought for the new school for the reasons that they had outgrown their previous site - if we have more housing built in Theale then we will be right back where we started - overcrowded classrooms of 40 kids and add-ons built to the school to accommodate the new houses. We feel let down by WBC as it always feels like they push any developments all the way to the Eastern end of the county. I ask you this- where are all the proposed houses for neighbouring villages such as: Englefield? Tidmarsh? Sulham? Upper Basildon? Bradfield? Chapel Row? Beenham? Brimpton? East Ilsley? Lambourne? to name a few. I object mainly because we have already got planning for circa 450 without the</p>	<p>Comments noted.</p> <p>It is appreciated that Theale has development proposed on the western side, and has yet to be built.</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate sites in Theale. All of the settlements suggested, bar Lambourn and Bradfield, fall outside of the settlement hierarchy and are not suitable locations for housing of such numbers. Housing allocations are proposed for Lambourn and Bradfield Southend.</p> <p>Landscape evidence for the two proposed sites result in a reduction in housing numbers, to approximately 40 on Whitehart Meadow and approximately 60 on the former Sewage Treatment Works.</p> <p>Thames Water commented that the scale of both sites would require upgrades of the water supply network and drainage infrastructure. It is recommended that the site</p>

Respondent (with lpr ref)	Response	Council Response
	<p>additional 170 without any mention of updating any infrastructure/school and Doctors surgery!</p> <p>Changes sought: I am asking WBC to leave Theale alone on this occasion and concentrate on building and spoiling the other villages listed above. My preferred approach would be for the passed planning to be built circa 450 homes and then we can see how it affects the village before committing us to more homes. Take for instance Mortimer - They had Strawberry Field built circa 12 years ago with approx 125 homes and I see there is another 110 homes planned for up to 2026 a total of 235 homes in the past 10 years (Wow) but this is still considerably less than the 450 planned plus 111 built plus 170 homes planned for Theale? it just does not make sense.</p>	<p>specific policies will include a requirement for the applicant to provide a water supply and drainage strategy, and for the development to be occupied in line with the strategy.</p> <p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). L Bahrani (lpr502)	<p>Object to policy.</p> <p>I wish to formally register my comments and objections in respect to the West Berkshire Local Plan Review referenced above.</p> <p>The plan, specifically the sites proposed for residential and commercial development, raises many serious concerns with respect to its impact on the village of Theale, the residents of the village, and the wider area.</p> <p>A non-exhaustive list of comments and objections is presented as follows:</p>	<p>Comments noted.</p> <p><u>Conservation Area:</u></p> <p>The Council has a duty to consider the setting of the Conservation Area as all three sites are near to the eastern boundary. No trees would be affected by the developments. There are concerns regarding the proposed employment site on land at Hoads Way and its impact on the conservation area, and is one reason for removing this site for the submission version of the plan.</p> <p><u>Neighbour impact:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>Conservation Area</b></p> <p>Sites identified for inclusion in the LPR (Local Plan Review) encompass those designated as a <b>Conservation Area</b> and setting, and is thus subject to protection as an area of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance as per Section 69 of The 1990 Planning (Listed Buildings and Conservation Areas) Act and as designated under Article 50 of the Planning (NI) Order 1991.</p> <p>Conservation Areas are also notable for their biodiversity value. Protected species and habitats need to be addressed when reviewing buildings, sites and planning works. See further point on <b>Destruction of wildlife habitat and protected species</b>.</p> <p>In addition, trees in a Conservation Area are automatically protected as if a Tree Preservation Order (TPO) was in place.</p> <p><b>Invasion of privacy of Theale residents (esp. 60-89 High Street)</b></p> <p>The overlook that will result from the sites identified for inclusion in the LPR will pose serious privacy issues especially for the surrounding properties i.e. 60-89 High Street, Theale. As per Article 8 of the Human Rights Act states a person has the substantive right to respect for their private and family life. In the case of Britton vs SOS the courts reappraised the purpose of the law and concluded that the protection of the countryside falls within the interests of Article 8. Private and family life therefore encompasses not only the home but also the surroundings.</p> <p><b>Agricultural Land Classification (ALC)</b></p> <p>Natural England records that sites identified and proposed for inclusion in the LPR are graded ALC and thus the land should be protected from development under the government policies and legislation to preserve the</p>	<p>Detailed design would be considered through the assessment of a planning application. The design would need to consider Local Plan policies as well as the site allocation policies, including residential amenity, and design.</p> <p><u>Agricultural Land Classification:</u></p> <p>The sites are Grade 3 agricultural land, though it is not known whether this is Grade 3a or 3b. However, the previous planning applications were not refused/withdrawn based on use of Best and Most Versatile Land.</p> <p><u>Flooding:</u></p> <p>The developable area for any proposed sites would not be within Flood Zone 2, and each site allocation policy includes a criterion that no development would be permitted in this area. A Flood Risk Assessment and SuDS (Sustainable Drainage Systems) scheme would also need to accompany a planning application.</p> <p><u>Ecology</u></p> <p>An Ecological Impact Assessment will be needed for each of the allocated sites.</p> <p><u>Highway safety:</u></p> <p>The Council's Highways department has reviewed the sites in Theale and do not object in principle. Transport Assessments and appropriate mitigation will be required for each development.</p> <p><u>Noise/Air/Light/Visual Pollution</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>best and most versatile (BMV) agricultural land and soils in England from significant, inappropriate or unsustainable development proposals.</p> <p><b>Flood Risk, Ground Stability and Drainage</b></p> <p>The Environment Agency designates sites identified for inclusion in the LPR as at <b>HIGH RISK</b> from surface water flooding. The eradication of natural ground absorption inherent to this proposal will heighten this risk status for Theale village and adversely affect the foundational integrity of nearby properties and subsequently elevate Home &amp; Buildings insurance premium rates for the surrounding area.</p> <p><b>Destruction of wildlife habitat and protected species</b></p> <p>The destruction of habitation required for the sites identified and proposed for inclusion in the LPR development would lead to a further decline in wildlife species such as deer, rabbit, birds, bats and hedgehogs.</p> <p>Hedgehogs are listed as a <b>Species of Principle Importance in England</b> under the Natural Environment and Rural Communities (NERC) Act 2006 Section 41 making hedgehogs a material consideration for Local Planning Authorities (LPAs) during the planning process.</p> <p><b>Highway safety, inadequate parking and access</b></p> <p>Theale village is already vastly strained with traffic and parking issues; development on the sites identified and proposed for inclusion in the LPR proposal will only serve to escalate these issues and stands in direct contradiction with both government and local council policies on congestion and pollution alleviation. Parking facilities in Theale are already oversubscribed and the proposed development would lead to an increase in traffic and parking issues correlating inversely with a decrease in highway safety.</p>	<p>This policy considers housing development, not commercial. Residential development will be expected to respond to climate change, in terms of sustainable construction. A noise and air quality assessment will be required for the two new proposed allocations, with appropriate mitigation. The design will need to be respectful of neighbour amenity as required by other development management policies.</p> <p><u>Natural light:</u></p> <p>Right to Light is a separate legal matter to planning. As highlighted above, detailed design would be subject to consideration of other Local Plan policies, such as residential amenity and design.</p> <p><u>Character</u></p> <p>It is important for the newly proposed development to respect the character of the area, the gap between Theale and Calcot, and the setting of the AONB. Landscape work has been commissioned and has recommended development is focused to part of each site. The policies contains criteria which guide development and associated landscaping. The dwelling number has been reduced to approximately 60 on the former sewage treatment works and 40 on Whitehart Meadow.</p> <p><u>Post-pandemic:</u></p> <p>See responses to SP21. SP14 is a housing based policy.</p> <p><u>Housing numbers:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>Noise/Air/Light/Visual Pollution</b></p> <p>Additional development of both commercial and residential nature will increase noise, air, light and visual pollution in Theale village both during and post-construction, with particular impact on residents of 60-89 High Street and Woodfield Way as the parallel properties to two of the sites included.</p> <p><b>Loss of natural light</b></p> <p>Sites identified and proposed for inclusion in the LPR are in extremely close proximity to numerous residential properties that have benefited from natural space and light for over 20 years. The proposed development would contravene the fair and reasonable 'right to light' claim by residents resulting from the obscuration of a South-East solar trajectory.</p> <p><b>Negative alteration to the character and nature of Theale village</b></p> <p>The encroachment on green space and increased commercial development will erode the character of the village as a predominantly residential settlement.</p> <p><b>Requirement for Post-Pandemic Reconsideration</b></p> <p>The LPR is based on studies and requirement predictions based on a pre-pandemic environment and as such are now invalidated due to the rapidly shifting socioeconomic conditions. It is increasingly apparent that more people are now working from home thus reducing the demand for commercial office related premises which is of particular pertinence to the proposal for 20,000 sqM of office space in Theale.</p> <p><b>Excessive/Exaggerated Targeting</b></p>	<p>There are no planned dwellings at the Newbury London Road Industrial Estate.</p> <p>It is accepted that the Council are proposing a housing requirement that exceeds the LHN. The objective is to boost housing supply and include sufficient flexibility to ensure that, as a minimum, the Local Housing Need can be met.</p> <p><u>Development Management policies:</u></p> <p>The submission version of the Plan includes detailed criteria for the new site allocation policies, including those at Theale.</p> <p><u>Sustainability Appraisal:</u></p> <p>The Sustainability Appraisal will be updated for the submission version of the Plan.</p> <p><u>Changes to the policy</u></p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The LPR proposes an excess of proposed residential developments beyond the targeted 520 - 575 homes per year and instead contains proposals for a pro-rata development of 599 homes per year which represents an excessive and unrealistic overreach.</p> <p>Further, the LPR allocation fails to account for the up to 500 flats West Berkshire Council intends to build in Newbury at the London Road Industrial Estate.</p> <p>In addition, the 170 homes proposed for Theale would be above the 440 homes on the western side of Theale that have been given planning permission but not yet built.</p> <p><b>Deficient Development Control Policies</b></p> <p>The development control policies relating to some sites identified for inclusion in the LPR, which include all those affecting Theale, are incomplete.</p> <p><b>Deficient Sustainability Appraisal</b></p> <p>There is current no completed sustainability appraisal of the plan which would doubtless reveal the detrimental impact to the environment due to the proposals and details contained in the LPR for the environment.</p> <p>In conclusion this LPR should be roundly rejected as it stands in direct contradiction to myriad land/heritage conservation policies and would also be to the detriment of the quality, character, safety and amenity value of the area, as outlined in the points above.</p>	
Mario Grana (lpr505)	<p>Object to policy.</p> <p>Theale is slowly losing its village character as more homes/offices are being built. Such projects normally do not involve any provision for extra health</p>	<p>Comments noted.</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and</p>

Respondent (with lpr ref)	Response	Council Response
	<p>care or sanitation. Theale has a very small GP that can barely cope with demand as it is. Traffic is increasing. Totally oppose any extra housing or offices in our village.</p> <p>Such plans should be cancelled.</p>	<p>Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate further sites in Theale.</p> <p>By seeking to place development in existing settlements with good transport links, and access to services, this may aid in reducing the need to travel. Development will need to mitigate it's impact on highway junctions, and transport assessments</p> <p>Thames Water commented that the scale of both sites would require upgrades of the water supply network and drainage infrastructure. It is recommended that the site specific policies will include a requirement for the applicant to provide a water supply and drainage strategy, and for the development to be occupied in line with the strategy.</p> <p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have been confirmed and any necessary infrastructure improvements will be taken forward.</p> <p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Following landscape advice the proposed offices on land at Hoads Way will not form part of the submission version of the Local Plan.</p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>
Rhona Johnson (lpr516)	<p>Object to policy.</p> <p>The planned proposals for Theale - whitehart meadow, on the old sewage works and between J12 and Hoad way are going to be horridous for three main reasons,</p> <p>Firstly - all the sites are presently green open spaces used to exercise, dog walk and take in outside -- non concreted land... unlike pavements, roads and motorways. It is also full of wildlife, hedgerows and shrubs and trees in places which the population of the village value having as communal outdoor space.</p> <p>Secondly the village schools, doctors and dentists are full - the roads v.busty at rush hour time -- Theale cannot support extra housing.</p> <p>Thirdly the green open land between the motorway and the start of the present housing is the break before Reading starts -- Calcot. --- Theale would just join up with the motorway and Calcot, Reading --- just a whole mass of concrete and urban sprawl -- with the M4 + 2 massive electricity masts in the middle of the proposed land in Whitehart meadow.</p> <p>Getting out of Theale with the business park traffic in rush hour is v.hard as it with this amount of population.</p> <p>The 3 proposals for extra housing at whitehart meadow, Theale sewage works and the land by J12 and Hoad way are totally out of keeping with the</p>	<p>Comments noted.</p> <p>Comments relating to offices can be found under the Council responses to SP21.</p> <p>Since the publication of the Local Plan Review (LPR) further landscape work has been undertaken, as part of a Landscape Sensitivity and Capacity Assessments (LCA) for a number of sites in the LPR. Whitehart Meadow and the former Sewage Treatment Works are subject of a LCA. The LCAs identifies a number of landscape receptors which could be affected by development on site.</p> <p>Development only across the plan period could be accommodated without totally compromising the separate settlement identity of Theale from Calcot. This is subject to limiting the developable area to extend up to the pylons (to the east), and the watercourse (to the south), with the area beyond left for open space, and that development to be limited to two storeys in height. Landscaping features should be incorporated including buffer planting along the north eastern edge; development to be a lower density to allow significant tree planting; adequate buffer space to the watercourse, and to enhance the existing public right of way.</p> <p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be</p>

Respondent (with lpr ref)	Response	Council Response
	<p>layout of the village next to J12. We need the green space as a buffer to the motorway and to keep the sense of Theale being a village -- split away from the M4 -- just a little -- and knowing we are seperate from Calcot / Reading.</p>	<p>required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have been confirmed and any necessary infrastructure improvements will be taken forward.</p> <p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>
<p>Harvey Fletcher (lpr542)</p>	<p>Object to policy.</p> <p>I object to RSA16, the proposed allocation for mixed-use development in Whitehart meadow for the following reasons:</p> <ul style="list-style-type: none"> <li>• Inadequate road access will put too much traffic through the small roundabout on Theale high street and cause excess noise pollution</li> <li>• The development will negatively affect the Theale High Street conservation area</li> <li>• I do not want to look out my window and see offices and houses, I would much rather see the open green space which is there now. The proposed site is right next to my residence.</li> <li>• There is no demand for office space in this area. Half of the current existing Arlington business park is vacant.</li> <li>• The noise levels from the motorway (M4) would make it uncomfortable for residents of the proposed housing.</li> </ul>	<p>Comments noted.</p> <p><u>RSA16 Whitehart Meadow</u> The Highways Authority comment that the site should be accessed from the High Street, entailing the removal of the road block facilities. The Highways Authority also comment that in highway capacity terms there is support for the use of the High Street and the mini-roundabout at Hoads Way. There is a need for a Transport Assessment to model the junctions at the A4 and M4 to fully assess the capacity of the A4.</p> <p>The conservation officer has not objected to the proposal based on the impact on the conservation area.</p> <p>The development will be visible from existing dwellings, though planning policies are in place in the Local Plan to protect amenity. Sufficient distances shall be maintained and good design will be required. It is important that the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I object to the proposed development for RSA17 "former sewage works" on the following grounds:</p> <ul style="list-style-type: none"> <li>• Too close to M4 (noise pollution too much for housing)</li> <li>• Not enough access, all traffic would be sent down Blossom lane, which is a single lane track</li> <li>• The site is a flood risk</li> <li>• Housing would negatively impact area of natural beauty</li> </ul> <p>Changes sought: I do not want the proposed changes for RSA16 or RSA17 approved.</p>	<p>development integrates with existing development, rather than as a stand alone development.</p> <p>It is recognised that the site is in close proximity to the M4. Given the restraint on the location of housing, to the west of the pylons, the buffer, together with some landscaping, should soften the impact. As with the development at Dorking Way, which is closer to the road network, the policy will require a noise and air quality survey, with appropriate mitigation.</p> <p>The site would not accommodate any offices.</p> <p><u>RSA17 former Sewage Treatment Works</u> It is recognised that the site is in close proximity to the M4. The restraint on the location of housing and landscaping should soften the impact. As with the development at Dorking Way, which is closer to the road network, the policy will require a noise and air quality survey, with appropriate mitigation.</p> <p>The Highways Authority identify that improvements would be required to Blossom Lane to allow appropriate access, and would be deemed suitable in principle. The Highways Authority comment that the impact of the trips from the development to Blossom Lane and Crown Lane would not find an objection. A transport assessment would be required to assess the impact on Blossom Lane leading into Theale. Such investigation and mitigation would be set out in the policy. Further work was undertaken as part of the planning application 16/02850/OUTMAJ where access issues were overcome.</p> <p>The developable area would not be within Flood Zone 2, and the policy includes a criterion that no development</p>

Respondent (with lpr ref)	Response	Council Response
		<p>would be permitted in this area. A FRA and SuDS scheme would also need to accompany a planning application.</p> <p>It is important for the development (and taking into account Whitehart Meadow) to respect the character of the area, the gap between Theale and Calcot, and the setting of the AONB. Landscape work has been commissioned and has recommended development is focused to part of the site. The policy contains criteria which guide development and associated landscaping.</p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>
Zoe Benford (lpr633)	<p>Object to policy.</p> <p>Theale has always been a village with its own community, this building work would remove the gap between Theale and Calcot. we would lose some of our history. We want to remain a village.</p> <p>That field regularly has flooding, with global warmer not going away, flooding is only going to get worst. It is unsuitable land for this use. There is also overhead high voltage power lines and an electricity pylon in that area.</p> <p>This would have a very negative effect on the Theale High Street (more traffic congestive, more pollution, busier shops) It may also make our services such as the doctors even busier than they already are.</p> <p>Deer, pheasants, birds use the field, we do not want to lose more green space</p> <p>The council REALLY needs to stop trying to build on any tiny bit of green space that we have left here.</p>	<p>Comments noted.</p> <p>Since the publication of the Local Plan Review (LPR) further landscape work has been undertaken, as part of a Landscape Sensitivity and Capacity Assessments (LCA) for a number of sites in the LPR. Whitehart Meadow and the former Sewage Treatment Works are subject of a LCA. The LCAs identifies a number of landscape receptors which could be affected by development on site. Development only across the side of the site closest to the existing built up area could be accommodated without totally compromising the separate settlement identity of Theale from Calcot. This is subject to limiting the developable area to extend up to the pylons (to the east), and the watercourse (to the south), with the area beyond left for open space, and that development to be limited to two storeys in height. Landscaping features should be incorporated including buffer planting along the north eastern edge; development to be a lower density to allow significant tree planting; adequate buffer space to the watercourse, and to enhance the existing public right of way.</p>

Respondent (with lpr ref)	Response	Council Response
	I do not want this to go ahead, there is no compromise on this for me	<p>An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have been confirmed and any necessary infrastructure improvements will be taken forward.</p> <p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p> <p>No development would be within Flood Zone 2 or permitted within this zone. A FRA and SuDS scheme would also need to accompany a planning application.</p> <p>Ecology surveys would be required together with any mitigation.</p> <p>The number of dwellings would be reduced for both sites, based on the landscape evidence, as outlined above.</p>
Alisa Claybourn (lpr732)	<p>Object to policy.</p> <p>I had agreed with the site allocation, but the application to build on Pincents Hill, published just before the Local Plan consultation closes, has thrown a whole different light on the Plan. I live on the western edge of Tilehurst and am a naturalist and walker. The developments at Stoneham Farm, and , earlier, at The Ridings, have put my local environment under much added pressure. Sulham Woods are suffering from increased footfall as a result of</p>	<p>Comments noted.</p> <p>Development in West Berkshire is required to comply with the spatial strategy as set out in policy SP1, and the focus of development will follow the District-wide settlement hierarchy. The purpose of the settlement hierarchy is to direct development towards the most sustainable locations.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Covid and exhortations to us all to care for our well-being by walking in the countryside. Parking on Sulham Hill has caused serious traffic safety issues during the current Lockdown, and though yellow lines have been added (thank you) parking is still an issue. Footpath erosion and trespassing on fields of crops are increasing.</p> <p>Building 265 houses at the southern end of Sulham Woods is going to lead to this vital outdoor amenity, crucial greenspace and area of conservation importance (particularly as it abutts the SSSI at Moor Copse, one of BBOWT's nature reserves) suffering a substantial "squeeze" from each end. I could, albeit grudgingly, accept the building at Stoneham's Farm in the Local Plan, as well as the Care Home on the same site, but the Pincent's Lane proposal is the ton of straw that's broken this camel's back.</p> <p>Changes Sought: Limit development in Tilehurst/Calcot to what's in the Local Plan as it stands. Please don't put any more pressure on the Sulham Woods/Moor Copse area.</p>	<p>At the top of the settlement hierarchy are Urban Areas. These are the focus for housing and economic development due to the level of facilities/services, together with accessibility. The Urban Areas in the District include the Eastern Urban Area which comprises of Tilehurst, Calcot, and Purley on Thames.</p> <p>No new allocations in Tilehurst were included in the emerging draft of the Local Plan Review, and this is because Tilehurst Parish Council had expressed an intention to include residential allocations in the Neighbourhood Plan that they are developing.</p> <p>A planning application for up to 165 dwellings on Land East of Pincent's Hill (ref: 19/00113/OUTMAJ), in Tilehurst was received in 2019. It was refused at Eastern Area Planning Committee on 19 January 2022 contrary to the officer recommendation. It was subsequently considered at District Planning Committee whereby it was refused.</p>
Matthew Mackmin (lpr751)	<p>Object to policy.</p> <p>I write raising a number of issues for consideration in relation to the review of the local plan that is currently out for consultation. These issues relate to the following specific proposals:</p> <ul style="list-style-type: none"> <li>• 100 homes on Whitehart Meadow (RSA16);</li> <li>• 70 homes on the site of the old Theale sewage works (RSA17);</li> <li>• 20,000 square metres of new office space on the field next to M4 junction 12 (EMP6). (see lpr818)</li> </ul> <p>In relation to the development at the old Theale sewage works (RSA17) my objections are:</p>	<p>Comments noted (comments for office under SP21)</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate further sites in Theale.</p> <p><u>Previous rejection of the site</u></p> <p>Since the Housing Site Allocations examination both sites have been subject of planning applications. A number of</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>1: Previous rejection of the site in the Local Plan</b></p> <p>The site has previously been rejected (as THE001) for inclusion in the local development plan for the Eastern Spatial Area and previous applications for development on the site have been rejected and the site is no longer recommended for allocation. There is nothing included in this review that is materially different from previous applications for development that have been rejected for inclusion in the local development plan. The proposal for development also offers no material change from the one rejected (for a number of reasons) by the Secretary for State, nor have any of the reasons for rejection been addressed within this proposal.</p> <p><b>2: Proposed number of dwellings and density</b></p> <p>The site (as THE001) was previously assessed under the “Eastern Area – Site Assessments” as potentially partially suitable for development for 57 dwellings (1.9ha at 30 dph), revised downward from 138 dwellings (3.45ha at 40dph). This application is for 77 dwellings, a 36% increase on the number in the submission rejected for inclusion in the local development plan.</p> <p><b>3: Viability of access during development</b></p> <p>The site (as RSA17) of the former sewage works is located at the end of Blossom Lane. Blossom Lane narrows to single track once past Chestnut Close and is not suitable for construction traffic. Blossom Lane in general suffers from width restrictions due to on-road parking and overhang/protrusion of vehicles parked off-road into the right of way. Blossom Lane also leads into Crown Lane for access to the High Street. Crown Lane also suffers from width restriction due to on-road parking and is not suited to construction traffic.</p> <p>Alternate access from Blossom Lane might be sought via Blossom Avenue (to Play Platt and the Englefield Road) to avoid parts of Blossom Lane and</p>	<p>technical matters have been resolved, including access. The Whitehart Meadow site has been subject of a challenge to the Flood Zone designation, where the Environment Agency has amended the area of flood risk. Landscape Sensitivity and Capacity Assessments (LCA) have been undertaken for both Theale housing sites, recommending a developable area, and a number of parameters to take account of, in terms of dwelling height, landscape buffer, tree planting, and integration of development with the adjacent public open space.</p> <p><u>Proposed housing numbers</u> Both sites have been subject to further landscape assessments which limit the developable area. Housing numbers will be reduced to approximately 40 on Whitehart Meadow and approximately 60 on the former Sewage Treatment Works.</p> <p><u>Access</u> By seeking to place development in existing settlements with good transport links, and access to services, this may aid in reducing the need to travel. Development will need to mitigate its impact on highway junctions, and transport assessments. The Council's highway engineers do not object to the accesses for the sites in principle.</p> <p><u>Infrastructure</u> An interim Infrastructure Delivery Plan (IDP) has been produced that considers all the infrastructure that will be required to support the development required through the LPR (including the scale of development allocated to each of the spatial areas). The IDP will be updated in partnership with service providers once the sites have been confirmed and any necessary infrastructure improvements will be taken forward.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Crown Lane, but Blossom Avenue is also afflicted by the same issues of on-road parking and attendant width restrictions as Blossom Avenue and Crown Lane.</p> <p><b>4: Viability of access post construction and pedestrian safety</b></p> <p>With 77 dwellings and an average of 1.4 cars per dwelling (based on the South-East Region of the U.K. according to Government statistics [nts9902] the development shall deliver at least 108 additional vehicles onto Blossom Lane in the AM and PM peaks with additional traffic being predictable throughout the day at weekends. With 40% of households having two or more cars/vans (rising to 42% for rural towns such as Theale) it is feasible that actual additional vehicles and attendant traffic shall be much higher. Blossom Lane and Crown Lane (providing the only viable access from the proposed development to the high street) are ill-suited to additional volumes of traffic for the reasons stated in (3). It is unlikely that additional traffic shall egress the site of the proposed development via Blossom Lane and Blossom Avenue as this routes to the Englefield Road and represents a less convenient means of access to the High Street and routes out of the village to the A4, M4 and beyond. Blossom Avenue also has issues with on-street parking reducing the available width for traffic flow. It is therefore likely that the vast majority, if not all, of this additional vehicular traffic shall seek to traverse Blossom Lane and Crown Lane.</p> <p>The pavement along Blossom Lane is non-existent past Chestnut Close and extremely narrow along the Southern edge for the entirety of Blossom Lane, meaning people including those with young children on bicycles or in buggies/pushchairs and prams are often and frequently required to enter the road. It is also the case that there shall be no contiguous footpath access from the site of the proposed development to the High Street.</p>	<p>Service providers are aware of the potential sites for future development and discussions are taking place as to the provision of additional services/facilities to serve the new population. New facilities/services as a result of development would also benefit the existing community.</p> <p><u>Technical objections</u></p> <p>The site at Whitehart Meadow has been subject of a flood risk zone challenge. No development will occur in flood zone 2 on either RSA16 or RSA17. The Environment Agency commented, in response to the proposed allocations, that a buffer zones will be required either side of Sulham Brook, and an ecological assessment will be required. Both requirements are set out in the policies for RSA16 and RSA17.</p> <p>National Grid advised of the buffer zones at the overhead power lines, and this has been built into the policy criterion for RSA16 and RSA17.</p> <p>Thames Water comment that upgrades to the water and wastewater network infrastructure will be required. This has been built into the policy criterion for RSA16 and RSA17.</p> <p><u>Character</u></p> <p>Since the publication of the Local Plan Review (LPR) further landscape work has been undertaken, as part of a Landscape Sensitivity and Capacity Assessments (LCA) for a number of sites in the LPR. Whitehart Meadow and the former Sewage Treatment Works are subject of a LCA. The LCAs identifies a number of landscape receptors</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I also question the ability to ensure safe and unfettered access for blue light Emergency services to the proposed site given the aforementioned restrictions on Crown Lane and Blossom Lane.</p> <p>Widening Blossom Lane and Crown Lane shall prove impossible given the proximity of private property to both sides of both Lanes, and this becomes even more problematic when one considered the need to increase the width of the footpath(s).</p> <p><b>5: Infrastructure</b></p> <p>West Berkshire Council's own Core Strategy and Local Development Plan for the Eastern Area, as well as the Submission for Housing Site Allocation DPD (November 2015) state that given the extant planning permission for 350 dwellings at Lakeside along with inclusion in the plan for development [100 dwellings] at The Green (land adjacent to The Green/A340) there would need to be a period of consolidation to allow the infrastructure, facilities and services of the village to catch up with the rate of development and population growth. Given that:</p> <ul style="list-style-type: none"> <li>• Theale Library is apparently still under review for closure by West Berkshire Council;</li> <li>• The village no longer has a Bank following the closure of the Lloyds branch;</li> <li>• It is possible that the Post Office might close;</li> <li>• It is possible that the Pharmacy on the High-Street might close;</li> <li>• Theale Medical Centre is extremely busy and appointments are very hard to come by;</li> <li>• Extant planning permission for Lakeside and proposals already agreed within the Local Development Plan will deliver an additional 435 dwellings within the settlement boundary which will place an immediate burden on the current infrastructure including the current and proposed new primary school;</li> <li>• There is limited provision for young children within the village;</li> </ul>	<p>which could be affected by development on site. Development only across the side of the site closest to the existing built up area could be accommodated without totally compromising the separate settlement identity of Theale from Calcot. This is subject to limiting the developable area to extend up to the pylons (to the east), and the watercourse (to the south), with the area beyond left for open space, and that development to be limited to two storeys in height. Landscaping features should be incorporated including buffer planting along the north eastern edge; development to be a lower density to allow significant tree planting; adequate buffer space to the watercourse, and to enhance the existing public right of way. This is to protect the setting of the AONB as well as the space between Theale and Calcot.</p> <p><u>Proximity to M4</u></p> <p>It is recognised that the site is in close proximity to the M4. Given the restraint on the location of housing, to the west of the pylons, the buffer, together with some landscaping, should soften the impact. As with the development at Dorking Way, which is closer to the road network, the policy will require a noise and air quality survey, with appropriate mitigation.</p> <p><u>Cumulative development</u></p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate further sites in Theale.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• There is limited provision for older children within the village;</li> <li>• Rail services from Theale to Reading and (direct to) London Paddington are already extremely busy in the AM and PM peak periods as well as at weekends with limited capacity to increase capacity;</li> <li>• Thames Water has stated that the current infrastructure is unlikely to be able to provide supply (clean and wastewater service) to the site;</li> <li>• The sewage system in Theale is already unable to cope effectively.</li> </ul> <p>It is plausible that one might make the argument that the local infrastructure, facilities and services are likely to be inadequate to accommodate the already agreed development, let alone development extraneous to the agreed local plan.</p> <p><b>6: Objections from official agencies and bodies</b></p> <p>The Environment Agency has expressed a strong recommendation that the site should not be used for development. Fully 40% of the site falls within “Flood Zone 2”. There is an ordinary watercourse on the site and the site sits atop a major aquifer and is a site subject to groundwater emergence and regular and extensive surface flooding. The Environment Agency has also indicated that there is a high risk of ground water contamination.</p> <p>National Grid has previously expressed its objection to development at the site as the site is beneath high voltage transmission lines and a pylon is presently situation on the site and has stated the following:</p> <p>Potential developers of the sites should be aware that it is National Grid policy to retain our existing overhead lines in-situ. Because of the scale, bulk and cost of the transmission equipment required to operate at 400kV National Grid only supports proposals for the relocation of existing high voltage overhead lines where such proposals directly facilitate a major development or infrastructure project of national importance which has been identified as such by central government. Therefore, we advise developers</p>	<p><u>Contamination</u> The site specific policies for RSA16 and RSA17 requires the submission of a contamination report, identifying any mitigation should it be necessary.</p> <p><u>Economic benefits</u> There are short term economic benefits in the construction phase. An increase in residents aids in supporting local services and public transport infrastructure.</p> <p>The remaining comments have already been responded to above.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>and planning authorities to take into account the location and nature of existing electricity transmission equipment when planning developments.</p> <p>National Grid prefers that buildings are not built directly beneath its overhead lines. This is for two reasons, the amenity of potential occupiers of properties in the vicinity of lines and because National Grid needs quick and easy access to carry out maintenance of its equipment to ensure that it can be returned to service and be available as part of the national transmission system. Such access can be difficult to obtain without inconveniencing and disturbing occupiers and residents, particularly where properties are in close proximity to overhead lines.</p> <p>The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. To comply with statutory safety clearances the live electricity conductors of National Grid's overhead power lines are designed to be a minimum height above ground. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.</p> <p>Thames Water has expressed the opinion that the current infrastructure is unlikely to be able to provide supply (clean and wastewater service) to the site.</p> <p><b>7: The site is poorly suited to development from an ecological perspective and is poorly related to the existing settlement at Theale</b></p> <p>The site is adjacent to ancient woodland and adjacent to an Area of Outstanding Natural Beauty (AONB). It is highly likely that the development of additional dwellings at this site shall have a negative impact on the view from areas within this AONB.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>There are no positive ecological benefits to the proposed development according to the Council’s own “SA/SEA (Appendix 9B) Eastern Area Site Assessment” document.</p> <p>The site is also poorly related to the existing settlement and falls outside of the existing settlement boundary for Theale. It would also erode the “strategic gap” between Theale and the M4 motorway and buildings at the eastern edge of Reading (namely the Pincents Lane development and the Ikea superstore). The landscape assessment states that buffers would be required between the existing settlement edge and the site (to Blossom Lane and Woodfield Way) further increasing the distance between the proposed development and the existing settlement. A buffer would also be required to the Sulham Brook bank.</p> <p>Additional traffic related to the propose dwellings at the site will contribute to worsening the air quality for residents of the Blossom Lane/Crown Lane areas of Theale as well as contribute to additional traffic on the High-Street which is already congested in the AM and PM peak periods and at weekends.</p> <p><b>8: Proximity of the M4 and A4, traffic and air quality</b></p> <p>The proximity of both the M4 and A4 which are both be adjacent to the site raises questions of air quality at the site.</p> <p>The additional traffic attributable to the development is likely to contribute to the existing congestion on the High-Street and at the junction to join the A4 at the Northern end of the village and to join the A4/A340 at the Southern end of the village. This traffic will also contribute to exacerbating congestion at Junction 12 of the M4 adjacent to the village – a situation unlikely to be helped by the inclusion of sites EUA025 (150-200 dwellings) and EUA026 (35 dwellings) adjacent to the junction for allocation in the local development plan for the Eastern Area (under Calcot).</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The additional traffic is also likely to exacerbate congestion on the High Street, already frequently used as a “rat run” for those seeking access to Englefield and Pangbourne whilst avoiding the junction with the A4/A340 (Roundabout) at the Southern end of the village.</p> <p><b>9: Substantive existing development, extant planning permission and allocation within the local plan</b></p> <p>Theale has already seen substantive development in recent years with development at The Lamb, Play Platt, Cumber Place, Angel Court and Fletcher Court. There is extant planning permission for 350 dwellings at Lakeside and allocation within the local development plan for a further 115 dwellings (15 at THE003 and 100 at THE009 as was in the previous version of the local plan). This represents a substantive contribution (33%) of the 1400 dwellings required by the Core Strategy between 2006 and 2026 across the Eastern Area comprising of Calcot, Tilehurst, Purley-on-Thames and Theale. It should be possible for the remaining 67% of the 1400 dwellings called for within the Core Strategy over the next decade (through 2026) to be distributed across the areas of Calcot, Tilehurst and Purley-on-Thames.</p> <p>Further, the level of development already agreed (extant permission) and considered within the agreed local plan amounts to 465 dwellings, including the major development at Lakeside which is proposed to be predominately flatted. On a conservative estimate of 2 persons per dwelling this is an additional 930 residents on top of a population of 2835 (2011 census) – an increase of 33%. On a more reasonable assumption of an average 2.5 persons per dwelling this represents an increase of 1163 additional residents – an increase of over 40% on the present population.</p> <p>The additional number of dwellings (465) represents an increase of 38% on the existing 1252 dwellings (2011 census).</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>This is not sustainable for a small village.</p> <p><b>10: Contamination at the site (land contamination)</b></p> <p>It is widely acknowledged that there is substantial land contamination at the site of the proposed development. Whilst this will undoubtedly be addressed during the construction phase of the proposed development, it must be considered that this presents a risk to the health of local residents during any construction as the contaminants are exposed to and released into the atmosphere.</p> <p><b>11: The proposed development offers no economic benefit to the local area</b></p> <p>The proposed development offers no economic benefit to the village of Theale or the surrounding area. It will not create jobs or bring significant additional economic activity to the village or the businesses therein.</p> <p>In relation to the development at Whitehart Meadow (RSA16):</p> <p><b>1: Flood risk (as-per above objection to RSA17);</b></p> <p><b>2: High voltage lines overhead (as-per above objection to RSA17);</b></p> <p><b>3: Noise and pollution from the motorway (as-per above objection to RSA17);</b></p> <p><b>4: Possible land contamination</b></p> <p>This land is in close proximity to that covered by RSA17 – contamination of this land is a possibility.</p>	

Respondent (with lpr ref)	Response	Council Response				
	<p><b>5: Erosion of the strategic gap between Theale and Calcot/Tilehurst (as-per above objection to RSA17).</b></p> <p>Thank-you for taking the time to read and consider my concerns and objections in relation to this proposed development.</p>					
Cllr Alan Macro (lpr760)	<p>Object to policy.</p> <p>1. Section 4.35 of the Core Strategy contained the following statement: “The Lakeside development has planning permission to provide 350 homes in a range of different sizes and types, which would become a well-integrated part of the Theale community. If this development goes ahead, Theale would need to undergo a period of consolidation to provide an opportunity for facilities and services to be upgraded”. Housing construction on this development has not yet commenced, although the permission has been implemented and Reserved Matters approved. Therefore, that statement is still valid and Theale will still need that “period of consolidation” once construction has been completed.</p> <p>Traffic generated from proposed housing sites RSA16 and RSA17 and employment site EMP6 would greatly exacerbate existing traffic problems in Theale. Traffic data provided by TomTom for the period 1st to 4th April 2019 show the following problems:</p> <table data-bbox="432 1145 896 1276"> <thead> <tr> <th data-bbox="432 1145 604 1177">Morning peak</th> <th data-bbox="734 1145 896 1177">Delay (Secs)</th> </tr> </thead> <tbody> <tr> <td data-bbox="432 1244 571 1276">High St EB</td> <td data-bbox="761 1244 801 1276">78</td> </tr> </tbody> </table>	Morning peak	Delay (Secs)	High St EB	78	<p>Comments noted.</p> <p>The Highways Authority do not object in principle to the development of the sites. Whitehart Meadow should be accessed from the High Street, entailing the removal of the road block facilities. The former sewage treatment works should be accessed from Blossom Lane. The Highways Authority also comment that in highway capacity terms there is support for the use of the High Street and the mini-roundabout at Hoads Way. There is a need for a Transport Assessment to model the junctions at the A4 and M4 to fully assess the capacity of the A4. Mitigation will be required for the creation of the accesses.</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations. Therefore, it is appropriate to allocate further sites in Theale.</p>

Tony Vickers (lpr747)	<p>Object to policy.</p> <p>We feel the change in DEPZs (SP4) may change early in the Plan Period and this will make Grazeley a more suitable strategic site than NE Thatcham (SP 17) as well as unlock several potential and desirable smaller sites in the lower Kennet valley.</p> <p>Traffic generated by SP 17 will have far-reaching impacts on the highway network along the A4 east to J12 of M4 and into Reading, leading to unacceptable congestion on junctions in Theale, adding to traffic congestion from newly allocated sites there. A340 junctions, Hoad Way and Waterside</p>	<p>Comments noted.</p> <p>Though Grazeley was identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Drive will also see tailbacks. We do not believe traffic modelling so far is adequate.</p> <p>Changes sought: SP 17 should be removed from the Plan and modest allocations made instead at larger villages in the settlement hierarchy across the District, to secure their future viability. See also SP 3 comments.</p>	<p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. As an Urban Area, Thatcham should be a focus for development. The HSA DPD allocated Lower Way only, and it is therefore appropriate to allocate further development, particularly in a sustainable and accessible location. Traffic modelling has been undertaken and junction improvements will be required as part of SP17.</p>
<b>Landowners, site promoters and developers</b>		
Charlesgate Homes Ltd (lpr2341)	<p>I am writing to you to see if you able to advise the situation regarding proposed site SUL1 of the draft local plan.</p> <p>I have reviewed the site assessment stuff, and it would appear our site was deemed overall in a positive sense. In March 2020 the Burghfield AWE DPEZ was reviewed and increased by 1.6km from where it was originally, and it would appear that our site being now included in this area has meant the site not currently being put forward as an allocated site at this moment, as the West Berkshire Emergency planners are waiting on a report to come out at some point in January.</p> <p>I am a bit confused as to why 160 houses had been consented within the old 3160m zone (100 of these in outline form at the moment), and yet it is suggested that the WBC emergency planners had suggested that no new multiple housing sites should be proposed if they are within the increased DPEZ zone, but outside of the original 3160m zone?</p> <p>I have sent an email to the emergency planning team, and the ONR to seek if they are applying a blanket ban on new multiple housing sites on basically all of Burghfield common, although I cannot see any thing with the AWE consequences report that suggest that the area needed to be as far out as it</p>	<p>In terms of the situation regarding SUL1, it's essentially as you have summarised – in assessing the site, limited constraints were identified apart from the extension of the AWE Burghfield DEPZ. The starting point for any planning application received within the DEPZ is that permission is likely to be refused on emergency planning grounds. Given this, we have not proposed any sites within the DEPZ for allocation.</p> <p>This doesn't apply retrospectively, as housing developments already identified in the local plan (including the Housing Site Allocations DPD) were identified prior to the zone extending and taken account of by emergency planners. HSA 15 Land adjoining Pondhouse Farm, and HSA16 Land to the rear of The Hollies Nursing Home, were allocated in the HSA DPD. The Local Plan Review is consolidating all previous documents into one so rather than omit these sites from the Local Plan Review, we are proposing to roll-forward the allocations as they have yet to be built out and we want to be able to continue to rely on the policies for applications on the sites.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>has been put, and that all new housing is now forbidden, and I am waiting for a reply to this from WBC emergency planners.</p> <p>I am of course aware that the Grazeley garden village was objected to by the ONR, but at least 60/70% of this proposed 15000 houses sat within the old 3160m zone, but not sure if they have actually objected to the inclusion of SUL1 as a site, as I cannot see anything within any of the site assessments or local plan evidence that WBC emergency planners objected to this site being included within the draft local plan as they never objected to the 100 houses on clay hill road (within the 3160m zone) or the ones on the Reading road (also within the 3160m zone).</p> <p>I know WBC is seeking response via the consultation portal, but I am finding it difficult to respond to this consultation as cannot see any evidence that supported an objection for this site, as there is nothing within the consultation documents for me to respond to.</p> <p>Are you able to advise what this report that is due out in Jan re AWE and emergency planning, and if there has been a formal objection from either WBC emergency planners or The ONR?</p> <p><i>(These queries were responded to directly by the Council on 2nd February 2121 but have been recorded here for completeness. Further queries were then sent in on 8th February 2021 and have been recorded under SP4)</i></p>	<p>We note that you have contacted the emergency planning team about your site. Understandably they have limited capacity to deal with non-Covid issues at the moment. However, our understanding is that some work will be done by them to understand if there is capacity within the DEPZ for a limited number of new dwellings. We understand that this work will be undertaken this year, although we do not know if it will align with the production of the Local Plan Review.</p> <p>We would suggest that you respond to the Local Plan Consultation, outlining the merits of your site. Policy SP14 sets out the sites that are proposed for residential development in the Eastern Area, so comments in relation to sites in that area which have not been proposed could logically go there. All responses, including any received from AWE and emergency planning will be considered as the Local Plan Review progresses.</p>
John Cornwell (lpr1648)	<p>Support policy.</p> <p><b>Submissions on behalf of Messrs I. Cheshire, R. Shaw and The Russell Trust.</b></p> <p>These submissions are made on behalf of the above landowners who own land on the southern part of the adopted housing allocation Ref: HSA16 'Land to the rear of The Hollies Nursing Home and land opposite 44 Lamden Way, Burghfield Common' in the current West Berkshire Housing Site</p>	<p>Comments noted.</p> <p>The allocation is proposed to be removed from the Local Plan Review (LPR) following objections by Emergency Planning.</p> <p>The site was included as an allocation within the Housing Site Allocations Development Plan Document (HSA DPD) which was adopted in May 2017. At Regulation 18 it had been proposed to retain the allocation in the LPR as</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Allocations Development Plan Document, adopted May 2017. Phase 1 of this allocation, at the northern end, is currently nearing construction completion by Crest Homes Plc. The above landowners together own the southern Phase 2 part of this allocation for circa 30 or so dwellings.</p> <p><b>Support for the retention of Housing Allocation Ref: RSA19 ‘Land rear of The Hollies Nursing Home and land opposite 44, Lamden Way, Burghfield Common in Proposed Policy SP14 ‘Sites Allocated for Residential Development in Eastern Ares – Sites 1.0 hectares or larger</b></p> <p>The area of land owned by the above landowners has dwelling capacity for 30 or so new dwellings (depending on the final approved layout). The Phase 1 Crest scheme is now nearly complete, with the estate access road in to sub-base level up to the boundary of the Phase 1 and Phase 2 sites.</p> <p>The above landowners are in the final stages of entering into a Development Agreement with T A Fisher Homes of Reading to develop Phase 2. The great majority of technical assessments and surveys for this work have already been carried out, and a significant amount of civil engineering work has been undertaken to devise the most appropriate estate road route through the site, given the levels differences across it.</p> <p>The only outstanding technical requirement is the updating of the Phase 1 Habitats Assessment carried out in 2015 by GreenLink Ecology Ltd. That assessment found evidence of common reptiles which will need translocating before any development takes place. The update can not take place until mid-April to allow for revised bat surveys. It is therefore anticipated that a detailed planning application for this land will be submitted around July 2021.</p> <p>The land is therefore very well placed to commence implementation late 2021, and be completed during 2022.</p>	<p>development had not yet been built out. The site does not have planning permission for residential development.</p> <p>At the time of the preparation of the HSA DPD, Council Emergency Planners allowed for the 60 units. However, since 2019 the Government advised following further technical research that the inner Detailed Emergency Planning Zone (DEPZ) for the Burghfield Atomic Weapons Establishment (AWE) site under the REPPiR Radiation [Emergency Preparedness and Public Information] Regulations 2019 be revised.</p> <p>The site lies in the inner DEPZ of AWE Burghfield. Development will increase the population density of the area, which will inevitably compromise the effectiveness of emergency evacuation procedures in the event of an incident at the AWE. There is potential harm to future public safety.</p> <p>The Council's Emergency Planning Team and the AWE object to the development.</p>

Respondent (with lpr ref)	Response	Council Response
TOWN for Pincent's Lane (lpr2130)	<p>Object to policy.</p> <p>Full representation promoting land to East of Pincent's Lane, Tilehurst attached.</p> <p><b>Spatial distribution of housing within the Eastern Area</b></p> <p>The Emerging Draft Local Plan Review notes the Eastern Area is diverse and including both a) a number of urban areas with a close functional relationship with Reading and b) a number of service centres with a rural setting. The characteristics of different parts of that Area are indeed very different. It was for this reason that we proposed that the Council retain the previous spatial approach of defining a separate Eastern Area and East Kennet Valley.</p> <p>Since the Council is not minded to retain its previous spatial approach, we propose that within the Eastern Area, development at an uplifted rate as recommended in these representations should be targeted at those parts of the Area most appropriate for growth – in particular to sites that are free from constraints on the edge of the Reading urban area.</p> <p>It is acknowledged that the presence of safeguarding for AWE establishments, flooding and other constraints means that the identification of suitable sites for development in this area is not straightforward. It also necessitates the efficient use of sites that do come forward for development in order to optimise delivery (within appropriate levels of density, height and so on).</p> <p>The land east of Pincent's Lane should be viewed within this context. Sustainably located close to the Reading urban area and with good public transport accessibility; a landscape-led masterplanning approach has led to the current proposal for 265 units together with an extensive range of community benefits including the provision of a large community parkland; a 450sqm 'healthcare hub' to be offered to the Clinical Commissioning Group</p>	<p>Comments noted.</p> <p><u>Spatial distribution within the Eastern Area:</u></p> <p>The Eastern Area is very constrained, and in Tilehurst the AONB abuts the built up area to the west. The AONB is a nationally valued landscape and growth must be appropriate and sustainable, conserving and enhancing the special landscape qualities.</p> <p>Landscape assessment will therefore be key in determining what can be accommodated without resulting in harm to the AONB and the setting of the AONB.</p> <p>It is not proposed to introduce development at uplifted rates.</p> <p><u>Principle of allocating housing via the Tilehurst Neighbourhood Plan:</u></p> <p>Work has gathered momentum and the consultation on the draft submission version of the plan (Regulation 14) is taking place between 12 September and 24 October 2022.</p> <p>Since the Regulation 18 consultation on the draft emerging LPR, Tilehurst Parish Council have chosen not to include allocations in the neighbourhood plan and it will instead comprise of development management policies.</p> <p>As part of work on the preparation of the proposed submission (Regulation 19) version of the LPR, site selection work will consider sites in Tilehurst to establish if any should be proposed for allocation.</p> <p><u>Changes sought:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>as well as provision for self- and custom-build housing and homes for older people. At the time of writing (with the views of the Council's Highways Officer still awaited), no objections have been raised by the Councils technical consultees and advisers.</p> <p>Under the Council's HELAA process using the blanket 'Pattern Book' approach to density, a development potential of up to 138 dwellings was identified but the HELAA report stated that "...known issues exist which are likely to decrease this number."</p> <p>However, it is now clear that with careful design, appropriate to landscape and other constraints, efficiency of land use can drive up the potential number of dwellings to be achieved in the Eastern Area, and indeed across the District.</p> <p><b>Principle of allocating housing via the Tilehurst Neighbourhood Development Plan</b></p> <p>As promoters of the site to the east of Pincents Lane, we have held a number of discussions with the Tilehurst Neighbourhood Plan Group, most recently in January 2021.</p> <p>We note that the Neighbourhood Plan Area was designated in May 2015. Progress has been slow, with the results of a Parish survey published in September 2020, more than five years later. It is evident that there is a generally strong anti-development stance in the wider community (even if there is considerable support for development of the Pincents Lane site, with c. 200 letters of support for the application having been received by the Council).</p> <p>One way of preventing development from coming forward would be to continue at the present slow pace of production of the Plan. If the Local Plan has effectively delegated decision-making to the Neighbourhood Development Plan then that slow process becomes a de facto</p>	<p>Following the decision of Tilehurst Parish Council to not include residential allocations in the neighbourhood plan, sites in Tilehurst will now be considered further through the Sustainability Appraisal / Strategic Environmental Assessment and site selection work for the proposed submission (Regulation 19) version of the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>mechanism for halting development in the Parish. We are sure that this would not be the intention of West Berkshire Council as it would risk the delivery of a significant amount of housing proposed for the Eastern Area.</p> <p>At our January 2021 meeting with the Neighbourhood Plan Group, we set out how our proposals for the land east of Pincents Lane fit well with a good number of the objectives of the community expressed in the recent survey. Although there is strong consensus against any development, this is not a realistic stance – in particular given the allocation of a minimum of 175 units proposed in the Emerging Draft Local Plan. It was gratifying to note that, of the sites suggested by residents for development, the Pincents Lane site accounted for 20% of those suggestions – the highest figure.</p> <p>We further note that the January 2021 consultation on revisions to the NPPF sets out the following:</p> <p><i>Paragraph 69 has been amended to remove any suggestion that neighbourhood plans can only allocate small or medium sites. This was not the policy intention, so the wording has therefore been amended to clarify that neighbourhood planning groups should also give particular consideration to the opportunities for allocating small and medium-sized sites (of a size consistent with paragraph 68a) [that is below 1ha in size] suitable for housing in their area.</i></p> <p>In essence therefore, the Government is acting to correct the suggestion that neighbourhood plans should only allocate sites below 1ha in size, encouraging them as well to focus on larger sites such as ours, which are able to provide a wide range of community benefits.</p> <p>One option would be to identify a larger allocation for Tilehurst NP, with the bulk of this allocation to be provided by our site east of Pincents Lane. However, given the strong policy arguments set out earlier in these representations, and the lack of certainty surrounding the progress of the Tilehurst NP, our strong preference remains for a standalone allocation for</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>our site under Policy SP14, as was intended to happen under the Housing Sites Allocation Development Plan Document until late in the process.</p> <p><b>Application of other key aspects of the emerging plan to the site at Pincents Lane</b></p> <p>A key and direct mechanism in delivering an effective District-wide response to climate change will be the allocation of sites in the most sustainable locations, particularly in respect of public transport links to major employment areas. This cross-references to our earlier commentary on the close relationship with the major centre of Reading, with its wide range of services and facilities.</p> <p>In support of our application for the land east of Pincents Lane, we have also submitted proposals to produce a site-specific Climate Change and Resilience Strategy with a commitment to achieve a number of stretched targets in construction.</p> <p>Because of the wide range of community benefits proposed, allocation of the site at Pincents Lane would also help to deliver on the following policies of the Emerging Draft Local Plan Review:</p> <ul style="list-style-type: none"> <li>• SP10, Green Infrastructure</li> <li>• SP22, Transport</li> <li>• SP23, Infrastructure requirements and delivery</li> <li>• DC2, Health and wellbeing</li> <li>• DC14, Trees, woodland and hedgerows</li> <li>• DC17, Self and custom build</li> <li>• DC18, Specialist housing</li> <li>• DC35, Transport infrastructure</li> <li>• DC37, Public open space</li> <li>• DC39, Local shops, farm shops and community facilities</li> </ul>	

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>It is also in accordance with the remaining strategic and development management policies of the Emerging Draft plan.</p> <p>In conclusion, on behalf of the promoter of the site east of Pincents Lane, we object to the Emerging Draft Local Plan Review on the grounds that:</p> <ul style="list-style-type: none"> <li>• Insufficient provision is made for housing supply for local needs under the plan;</li> <li>• Provision should be made for unmet needs likely to arise from Reading Borough;</li> <li>• Over-reliance is made on housing to be delivered from large strategic sites;</li> <li>• The spatial distribution across the District is overly focused on Newbury and Thatcham to the detriment of areas in more sustainable locations closer to Reading;</li> <li>• The spatial distribution within the Eastern Area underplays the importance of sustainable functional relationships with Reading, including its services, facilities and non-car modes of access; and</li> <li>• That the land east of Pincents Lane should be allocated for a site of up to 265 units (40% affordable) under policy SP14, alongside a commitment to deliver a substantial area of new local public open space.</li> </ul> <p>Changes sought:</p> <p>The land east of Pincents Lane should be allocated under this policy as a Large Site with an allocated figure of 265 units in line with the extant planning application. Consequently, the allocation for the Tilehurst NP under SP14 could be reduced and apply largely to brownfield and other redevelopment sites in the Parish.</p>	

Respondent (with lpr ref)	Response	Council Response
West Build Homes (lpr2137)	<p>Westbuild broadly support the Council’s approach to the delivery of housing set out within Policy SP12, but have some reservations about specific matters which are set out below.</p> <p>Significant concern exists, however, about the Council’s over-reliance on two large strategic sites. The Council’s own experience, and that on a national level, is that strategic sites have lengthy lead-in times, and are inherently slow in delivery, and this should be reflected within the emerging plan review through the inclusion of criteria for sites not proposed for allocation to be considered, increasing the flexibility afforded to the Council and reducing the reliance upon strategic sites.</p> <p>Paragraph 6.10 of the draft emerging plan refers to paragraph 68 the National Planning Policy Framework (The Framework) and the weight that should be attributed to the benefits of using suitable sites within existing settlements for homes. What it fails to have any regard to, however, is the sub section <b>Paragraph 68(d)</b> which states that local planning authorities should:</p> <p><i>“work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes.”</i></p> <p>Westbuild contends that without reference to the part of the Framework, and the inclusion of such provisions within the proposed policies, the plan is flawed in its approach and does not fully meet the tests of soundness.</p> <p>Changes sought: Policies SP13 -15 should be amended to provide the potential for additional sites to come forward within the plan period and to ensure that any delays to the delivery of the large strategic sites is mitigated.</p>	<p>The Council’s strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites (including brownfield sites within settlement boundaries) that can deliver housing sooner.</p>
Hallam Land Management (lpr2337)	<p><i>Full representation promoting the allocation of Land at Kiln Lane, Mortimer is attached.</i></p>	<p>There are a significant number of constraints within the Eastern Area, meaning that provision for new development is more limited.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Policy SP 14 highlights that of the 12 sites proposed for allocation in the Eastern Area in the emerging Local Plan, 9 are existing allocations which have not yet come forward. In short therefore there are only 3 new allocations in the Eastern Area. Policies SP 13 and 15 reflect similar trends.</p> <p>This does not demonstrate the ‘positive’ and ‘aspirational’ approach advocated in the NPPF or respond to the social and economic relationship this area has with Reading as described above, and which itself justifies the <b>need to provide additional allocations to ensure the Plan allocates a balanced and sustainable portfolio of sites which will be delivered in a timely manner and to ensure that a continuous and flexible supply of land is available throughout the Plan period.</b></p> <p>It is also important to note that the two sites which are carried forward in Burghfield Common now fall within the amended AWE consultation zone and as such are no longer suitable for housing.</p> <p>In terms of additional allocations, we urge the Authority to consider the land promoted by Hallam to the west of Mortimer which would provide a suitable location to deliver up to 110 dwellings over the Plan period.</p> <p>The land controlled by Hallam was assessed through the Housing and Economic Land Availability Assessment (December 2020) (HELAA). The outcome of this assessment concluded that the site (ref: SM7) was not developable within the next 15 years. We disagree with this conclusion which is drawn from a conclusion that “development would not be appropriate in the context of the existing form, pattern and character of the landscape” This conclusion is not supported by any evidence and is not robust. The HELAA assessment itself shows that the Site has no constraints in respects to flooding, ecology, heritage or access. The site is adjacent to the settlement boundary and as demonstrated in our March 2020 Technical Note, development can be assimilated into the settlement character, form and landscape. Conversely the site was assessed (ref: MOR001) as having potential in the Strategic Housing Land Availability Assessment (2013).</p>	<p>The LPR will not include allocations in Stratfield Mortimer. The adopted Stratfield Mortimer NDP includes an allocation for up to 110 dwellings. The allocated site has outline planning permission, and there is Reserved Matters permission for two parts of the site (it is coming forward in phases).</p> <p>The Parish of Stratfield Mortimer contains the village of Mortimer which is identified as a Service Village within the settlement hierarchy meaning that it has a limited range of services and has some limited development potential. Given the outstanding dwellings still to deliver, it is considered that there should be not any additional allocations in the plan period. It is however recognised that windfall development may come forward over the plan period.</p> <p>Within the HELAA, the site SM7 (Land off Kiln Lane, Mortimer) has been assessed as ‘not developable within the next 15 years’, and this in light of the recommendations of a 2017 Landscape Capacity Assessment (LCA, in which the site had the reference MOR001) which were:</p> <p><i>None of this site would be suitable for housing. Despite the fact that the existing development in The Avenue to the west extends down the hillside to a similar extent, this is not a suitable model for future development if the distinctive character of the settlement pattern and the valued attributes of the open rural landscape character are to be conserved. The only part of the site that relates well in any way to the settlement pattern is the most north-westerly corner above 90m AOD but to develop this would adversely affect the area of pasture, a valued feature of this landscape. The northern parcel is better contained,</i></p>

Respondent (with lpr ref)	Response	Council Response
	<p>There have been no significant changes subsequently to justify a different conclusion.</p> <p>On reviewing the other potential sites within Mortimer (SM1 – SM7) it is considered this site (ref: SM7) would be the most suitable site to allocate for future development. From this review it is noted that sites SM1, SM4, SM6 are subject to overriding constraints including flood risk, areas of Local Green Space and Tree Protection Orders. SM3 is already allocated in the NDP. SM2 could have potential for development although the site has capacity for only 47 dwellings and is subject to uncertainty regarding its ecological value and SM5 is remote from the centre of the settlement and if allocated would deliver a less sustainable development than SM7.</p> <p>SM7 is approximately 480m walking distance from the centre of the settlement, which is identified in the NDP as St John's Church, whereas SM2 is approximately 700m from the centre and SM5 is approximately 1.15km from the centre. Demonstrating that SM7 is the most sustainably located site, with the ability to deliver a meaningful number of houses over the plan period following the delivery of SM3.</p> <p>Changes sought:</p> <p>Recommended that West Berkshire Council reconsider the Policies for the Eastern Area, and include further allocations including Land at Kiln Lane, Mortimer.</p>	<p><i>both visually and physically, but this does not outweigh the harm to the landscape character and views from the adjoining rural footpaths.</i></p>
Savills for Englefield Estate Office (lpr1531)	<p>The approach of draft LPR Policy SP14 to carry forward for allocation the Estate's land at The Green, Theale (ref. HSA14, now RSA15) and at Pondhouse Farm, Burghfield Common (ref. HSA15, now RSA18) is supported. As you will be aware, outline planning permission was granted for up to 104 homes at The Green, Theale in December 2020 (WBC ref.</p>	<p>Comments noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>19/01172/OUTMAJ), in line with Policy HSA14. Similarly, outline planning permission was granted for up to 100 homes at Pondhouse Farm, Burghfield Common in December 2019 (WBC ref. 18/02485/OUTMAJ), in line with Policy HSA15. Reserved matters applications will be submitted for both sites in due course prior to development on site. As the HSA DPD and Core Strategy will be replaced by the LPR Emerging Draft on adoption, the approach to carry forward these two site allocations will help to inform the forthcoming reserved matters applications and is therefore supported.</p> <p>As explained above, draft LPR Policy SP14 should make provision for future housing supply at Burghfield through the NDP and also make additional provision for housing at Mortimer to cover the LPR plan period to 2037.</p>	
Barton Willmore for Wilson Enterprise Ltd & Hallam Land Management (lpr2410)	<p><b>Grazeley: The Opportunity</b></p> <p>The area promoted as the Grazeley Garden Town was identified as one of the main development opportunity areas in The West of Berkshire Spatial Planning Framework (December 2016) and subsequently supported by Homes England funding and more recent joint studies such as the Wokingham Strategic Growth Locations report, June 2018. The strategic site, most of which lies in Wokingham brings opportunities to deliver housing in both Wokingham Borough (around 10,000) and West Berkshire (around 5,000) if the Council still wanted to promote future housing on its land. Clearly Grazeley can proceed without the West Berkshire land, but the Council will still need to consider and plan for cross boundary implications and mitigation.</p> <p>The site is relatively unconstrained in environmental terms. It is not within the Green Belt and does not have any areas of high-quality agricultural quality.</p>	<p>Though Grazeley was identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation. The site is therefore no longer suitable.</p> <p>The High Court challenge has not resulted in any amendments to the boundaries of the DEPZ for AWE Aldermaston and Burghfield.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>It is well located between two significant transport corridors: the A33 trunk road (with access to junction 11 of the M4) and the Reading to Basingstoke railway line. It is well related to existing employment opportunities in central Reading, Green Park, and the wider Thames Valley. Grazeley therefore clearly has exceptional connectivity and offers the opportunity to provide sustainable transport links to the M4/A33, to the Reading-Basingstoke/Paddington and Waterloo main lines as well as to national cycle routes and can offer many pedestrian and cycle routes to key employment areas, such as central Reading, Green Park, and the wider Thames Valley.</p> <p>The new community would also be situated in an area of high labour supply need, accessibility, housing need and poor affordability. A new settlement at Grazeley offers the opportunity to:</p> <ul style="list-style-type: none"> <li>• Deliver a range of types and tenures of homes in a sustainable location that will support the economic growth of the sub-region.</li> <li>• Offer genuine sustainable travel</li> <li>• Provide a mix of uses and a sustainable form of</li> <li>• Provide jobs to support economic growth, targeted to the sectors projected to grow in the sub-region.</li> <li>• Deliver much needed affordable housing that will help address the affordability</li> <li>• Provide additional local expenditure and GVA growth to support the</li> </ul> <p>In addition, if properly planned and designed, this new community will represent a new Garden Community of the highest quality offering those who live, work, and visit a thriving, interesting, exciting place, providing the best of both town and country in a convenient and well-connected location.</p> <p>In accordance with national planning policy, the proposals at Grazeley therefore offer a sub-regional opportunity to create a high quality self-contained new settlement in an ideal location that will optimise sustainability</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>and support the local economy, whilst benefitting from excellent connectivity to the wider region.</p> <p>Within its boundary, Grazeley offers a unique opportunity to provide a new settlement which could bring many benefits to Wokingham and the wider area, which could include:</p> <ul style="list-style-type: none"> <li>• A high-quality series of neighbourhoods set in a network of open</li> <li>• A variety of different types and tenures of homes which will contribute to Wokingham's and West Berkshire's housing land supply whilst creating a balanced and sustainable community, from self-build to retired living, including all types of affordable housing (shared ownership, social rented, affordable rented, starter homes, discounted market sales, rent to buy, key worker) to provide an inclusive and balanced</li> <li>• 7 primary schools and 2 secondary schools to provide for its</li> <li>• A range of employment spaces to nurture new ventures as well as providing bespoke space for companies supporting the economic growth of the Thames Valley.</li> <li>• A 'campus' which provides a setting for potential hubs for knowledge, health, science and the 'Art of Making'.</li> <li>• Generous opportunities for walking and cycling with easy access to open space to enhance the wellbeing of resident's and enhance</li> <li>• Local and strategic SANG for residents and visitors to optimise the opportunity of The AWE Burghfield Detailed Emergency Planning</li> <li>• A number of significant infrastructure improvements: <ul style="list-style-type: none"> <li>○ A bridge over the M4 to connect Green Park to Grazeley, providing pedestrian, cycle and public transport links to Green Park Station and employment</li> <li>○ New access, junctions, roads, extension to the existing park and ride and a new park and ride</li> <li>○ Improvements to Junction 11 of the</li> <li>○ A potential new rail</li> </ul> </li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>○ Major water and utility infrastructure</li> </ul> <p><b>The DEPZ</b></p> <p>It is recognised that there is some uncertainty regarding the current DEPZ at this point in time. The publication of this draft local plan just before the High Court challenge hearings has not been able to benefit from the judgement on that case (which is still awaited, at the time of writing). As development of a new settlement at Grazeley can still be planned and designed within the ONR demographic siting criteria, irrespective of the High Court decision, this current uncertainty should not prevent the Council properly planning for its area in the longer term, preparing its evidence base and taking into account a new settlement on its boundary within Wokingham Borough in this local plan.</p>	
Carter Jonas for Mrs and Mr Wickens (lpr2277)	<p>Mrs J Wickens &amp; Mr A Wickens generally agree with the proposed vision for the Local Plan. However, the vast majority of allocations and dwellings are allocated in Newbury and Thatcham. However, there is a need to balance the requirements to deliver a range of housing and opportunities across the district, which this plan overlooks. It is suggested therefore, that through the development of the plan a more locational vision is considered with a wider range of sites and locations coming forward to meet the housing needs for West Berkshire</p> <p>The NPPF sets out that Local Plans should be aspirational but realistic and that housing sites should either be deliverable or developable. The glossary to the NPPF states that to be deliverable sites should be available now, offer a suitable location for development and be achievable with a realistic prospect that housing will be delivered on site in 5 years and is</p> <p>The PPG notes on Local Plans set out that policies in a Local Plan should recognise the diverse types of housing needed in their area and where</p>	<p>Though Grazeley was identified as a possible location for a new garden settlement, changes to legislation (Radiation (Emergency Preparedness and Public Information) Regulations 2019) have resulted in the redetermination of the emergency planning arrangements around AWE Aldermaston and AWE Burghfield. The Detailed Emergency Planning Zone (DEPZ) for AWE Burghfield now covers the area of Grazeley. The change resulted in objections to the Grazeley garden town proposal from the Defence Nuclear Organisation (part of the Ministry of Defence) and the Office for Nuclear Regulation. The site is therefore no longer suitable.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>appropriate identify specific sites for all types of housing to meet anticipated housing</p> <p>The project at Grazeley provides a unique opportunity in West Berkshire (and Wokingham) for a comprehensively planned new settlement. This settlement is backed by both Homes England and a successful Housing Infrastructure Fund bid. The new settlement will be planned and delivered with a comprehensive package of infrastructure, and services and facilities. This will support significant housing delivery that will not only help West Berkshire to meet future housing needs, but it could also play a role in helping the neighbouring authorities of Reading and Wokingham meet their needs – and unmet needs which could</p> <p>Mrs J Wickens &amp; Mr A Wickens confirm that their land is available now, and can be developed during the plan period, but it is also accepted that it is part of the wider Grazeley project. Pierce’s Farm could come forward once access has been established from the A33, and as such could be allocated for development.</p> <p>It is further noted that at present, there are limited options that will preclude development for the land at Grazeley and so it would be unlikely that any proposals would preclude the delivery of the new settlement project. However, for the Council to demonstrate that it is committed to this exciting and sustainable project, Mrs J Wickens &amp; Mr A Wickens suggest that if the Council does not consider allocation to be appropriate at this time, the land in West Berkshire’s boundary for Grazeley is ‘reserved’ or ‘safeguarded’ for its future development</p> <p>Explicitly identifying the land for Grazeley in the Local Plan would help the Council to clearly articulate how it is discharging its obligations towards the Duty to Cooperate with neighbouring authorities. Moreover, it would give some certainty to the community that change should be expected in the area. The deliverability of the site in the plan period, need not be demonstrated at this stage, in order to identify the land in the Plan and on</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>the Policies Map because it could rightly be recorded as an area for growth, which is not making a (significant) contribution to the housing needs of the area up to This would allow for monitoring of the site through the Authority Monitoring Report and should the delivery of homes be needed to support the five year land supply – ways to accelerate delivery at Grazeley could be explored.</p> <p>Conclusion: Mrs J Wickens &amp; Mr A Wickens are pleased to have had the opportunity to comment on this early stage of West Berkshire Council’s Local Plan review. The general provisions of the vision and strategy a broadly supported, and further detail is awaited with interest. In the meantime, Mrs J Wickens &amp; Mr A Wickens confirm that their land is available and suitable for development and this could be achieved at any point during the plan period.</p> <p>Mrs J Wickens &amp; Mr A Wickens look forward to further and continued dialogue with the Council (and other key stakeholders as appropriate) regarding development options on their land associated with wider growth options at Grazeley</p> <p>Changes sought:</p> <p>Mrs J Wickens &amp; Mr A Wickens recommend the inclusion of Pierce’s Farm as an allocation or ‘reservation’ for development. Under draft Policy SP14, the Council confirms that Grazeley has been identified as a possible location for a new garden settlement stating “<i>Grazeley has been identified as a possible location for a new garden settlement, there are uncertainties regarding the proximity to AWE Burhangghfield, funding for infrastructure and delivery timescales</i>” (paragraph 22).</p> <p>As of March this year, West Berkshire took a delegated decision to enact a revised Detailed Emergency Planning Zone in relation to AWE Burghfield. This has effectively doubled in extent and now covers all of the proposed</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Grazeley allocation, parts of south Reading including Green Park and the Madejski stadium as well as 15,000 residents (previously it was around 500).</p> <p>This decision is subject to legal challenge as it is believed the Council has acted unlawfully in establishing a revised DEPZ without any further consideration of the appropriateness of the minimum area for Urgent Protection Actions because of a lack of any adequate enquiry into the necessity for the substantially increased</p> <p>Given that the Grazeley has previously been included identified as an area suitable for substantial growth through the construction of a garden town, Pierce's Farm should be included as an allocation or 'reservation' for development. This is particularly pertinent given the legal challenge facing the AWE Detailed Emergency Planning Zone.</p>	
Pro Vision for TA Fisher (lpr2028)	<p>Object to policy.</p> <p><i>Full representations attached</i></p> <p>Our client has an option on the land at West End Road, Mortimer (HELAA ref. SM2; SHLAA ref. MOR005) and is promoting this land for development with the consent of the landowner, Englefield Estate.</p> <p>Our client's land has not been allocated for development in the draft Local Plan. This is due to Policy SP14 of the draft Local Plan not allocating additional housing to the village beyond that already accommodated in the current Stratfield Mortimer Neighbourhood Development Plan (NDP) (June 2017), which extends until 2026.</p> <p>These representations therefore respond to Policy SP14 regarding the absence of a housing allocation to Stratfield Mortimer beyond 2026. We consider that it is necessary for the Local Plan Review to allocate additional</p>	<p>The LPR will not include allocations in Stratfield Mortimer. The adopted Stratfield Mortimer NDP includes an allocation for up to 110 dwellings. The allocated site has outline planning permission, and there is Reserved Matters permission for two parts of the site (it is coming forward in phases).</p> <p>The Parish of Stratfield Mortimer contains the village of Mortimer which is identified as a Service Village within the settlement hierarchy meaning that it has a limited range of services and has some limited development potential. Given the outstanding dwellings still to deliver, it is considered that there should be not any additional allocations in the plan period. It is however recognised that windfall development may come forward over the plan period.</p> <p>It is the intention of Stratfield Mortimer Parish Council to undertake a full review of the Neighbourhood Development Plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing to the village, which can be accommodated through a NDP Review, up to the end of the Plan-period in 2037.</p> <p>In this regard, the land owned by our client at West End Road, Mortimer, is suitable, available and achievable for housing development, as well as being deliverable in full within the next five years. It is well located to assist with meeting the village's housing needs.</p> <p>The site offers the potential for a sustainable and logical residential development of approximately 47 dwellings, alongside associated development, in line with the Council's strategy for growth and settlement hierarchy. The Site Promotion Document provided in Appendix A of these representations is re-submitted in support of the development opportunity.</p> <p>We consider our client better placed than most to bring forward development in Mortimer given their existing and established working relationship with the Parish and community. Our client wishes to work collaboratively with the District and Parish Council with the aim of securing the sustainable development of the site – through the NDP process – following an allocation of additional housing to the village within the Local Plan Review. These representations therefore respond to the draft Local Plan and its evidence base with reference to the need to allocate additional housing to Stratfield Mortimer, alongside the wider matters identified within the Document, building upon the information previously submitted.</p> <p>In summary, our main comments in relation to the draft Local Plan are as follows:</p> <ul style="list-style-type: none"> <li>• The need to recognise the role that Stratfield Mortimer can play beyond 2026, given that it is identified as a Rural Service Village that is suitable for growth in line with the Council's spatial strategy and settlement hierarchy.</li> <li>• The need to allocate additional housing to Stratfield Mortimer beyond that already accommodated in the current Stratfield Mortimer NDP, which extends until 2026. This can be accommodated through a NDP Review, up to the end of the Plan-period in 2037.</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• The need for the Council to engage with Stratfield Mortimer Parish Council regarding its aspirations for the future of the village.</li> <li>• The need to review the level of housing that the Council is looking to accommodate to ensure that it assists with addressing the pressing need for affordable housing in the District, as well as the additional economic, social and environmental benefits associated with a higher level of growth, alongside the potential need to assist neighbouring authorities with meeting any of their unmet housing needs.</li> <li>• The need for additional housing allocations to ensure that planning decisions remain Plan-led throughout the whole Plan-period, there is sufficient flexibility in the Council's housing supply and the Plan is deliverable.</li> <li>• Confirmation that land owned by our client at West End Road, Mortimer is suitable, available and achievable for housing development, as well as being deliverable in full within the next five years.</li> <li>• Compliance with national planning policy and guidance.</li> </ul>	
Pegasus Planning for Calcot Park Golf Club (lpr2328)	<p>Object to policy.</p> <p>The policy lists a number of sites of varying sizes, which are proposed to be allocated for residential development. It is considered that some of these sites are not ideally suited or justified and they should be removed from the list. In particular, the following:</p> <ol style="list-style-type: none"> <li>1. RSA 16 – Whitehart Meadow, Theale (Site Ref THE1)</li> <li>2. RSA 17 – Former Theale Sewage Treatment Works, Theale (Site Ref THE7)</li> </ol> <p>All of these sites are small and currently in use as open fields. Although they each adjoin the edge of a settlement, they offer very limited opportunities for landscaping, as well as biodiversity and geodiversity net gain. The plans in the local plan show they have issues with flooding, motorway noise or they are 95% covered in new development with a narrow "landscaped buffer" on</p>	<p>Comments noted.</p> <p>The Spatial Strategy for West Berkshire promotes development on three spatial areas: Newbury and Thatcham, Eastern Area and North Wessex Downs AONB. Theale is included in the Eastern Area and is a sustainable location, with good public transport links and active travel links. Theale, as a Rural Service Centre, is identified as a focus for additional housing through existing commitments and new allocations.</p> <p>Allocations in Tilehurst had been proposed to be included within the neighbourhood plan that is being prepared by Tilehurst Parish Council and which will cover the whole of Tilehurst Parish. It is for this reason that the draft emerging</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the site edges. These sites are less suitable for allocation and they are poor choices for new housing to help meet the local need in the next few years than that proposed at Calcot Park Golf Club (CPGC).</p> <p>In contrast, the 6.2 hectares of land at CPGC, is gently sloping with limited long distant views. It is heavily screened and fully enclosed by existing woodland and there are considerable opportunities available to provide a landscape-led scheme that will enhance and improve the visual amenity of the local area and at least 10% bio and geodiversity net gain. Use of land owned by the golf club to enhance the natural environment within a sustainable location, as part of a modest development of up to 70 dwellings, which may include up to 28 (40%) affordable units, will lead to considerable improvements to the amenities, wellness and mental health of both existing, and future, local residents.</p> <p>In its current form, it is therefore considered that Policy SP14 has not allocated sufficient sites to help meet the District-wide shortfall of 1,661 dwellings identified in the Local Plan. The allocations identified are also considered to be sequentially inferior to that at CPGC, whilst providing less quantifiable benefit in terms of meeting other policy aspirations of the Local Plan relating to support for the rural economy (in this regard, please see our additional comments against Policy DC32, below).</p> <p><i>Policy SP14 – Sites allocated for residential and mixed-use development in Eastern Areas is Objected to, because a number of the proposed allocations are not suitable and land at CPGC needs to be included in the list of larger sites (1ha or larger) for the allocation of up to dwellings.</i></p> <p>Changes sought:</p> <p><b>Policy RSA 16 – Whitehart Meadow, Theale (Site Ref: THE 1)</b></p> <p>This policy states that this site should be allocated in the local plan for approximately 100 dwellings. The plan shows only a red line around the site.</p>	<p>Local Plan Review (LPR) did not propose any allocations in Tilehurst.</p> <p>Since the consultation on the emerging draft LPR, Tilehurst Parish Council has decided not to include any allocations within the neighbourhood plan, and it will instead comprise of development management policies. A part of the work on proposed submission (Regulation 19) version of the LPR, sites in Tilehurst will now be considered for allocation through SA/SEA and more detailed site selection work.</p> <p>Policy SP12 of the emerging draft LPR made provision for 8,840 to 9,588 net additional dwellings (520 to 575 dwellings per annum. The target figure was 564 dwellings. The supporting text to policy SP12 identified a supply of 11,439 dwellings over the plan period.</p> <p>It is not proposed to remove the allocations at Whitehart Meadow and at the former Theale Sewage Treatment Works. Technical evidence supports the allocations, and the comments received through the consultation to each site can be found under the Council responses to RSA16 and RSA17.</p> <p>Land at Calcot Park Golf Course has been assessed as 'potentially developable in part' in the update of the Housing and Economic Land Availability Assessment (HELAA), and the site has the reference TIL19. The HELAA assessment of the site recognises that the site is located within the settlement boundary whereby there is a presumption in favour of development. However, the site is covered by a blanket Tree Preservation Order (TPOs). Trees cover much of the site, apart from the south western area of the site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>No “landscape buffers” are indicated on the boundaries of the site. Without any details on the plan, it must be assumed that these boundary treatments will be narrow and/or weak in their likely effectiveness. Such unsubstantial boundary treatments will not provide the 10% bio and geodiversity net gain required by policy SP11. Also, they will not provide the level of landscape and visual impact mitigation that is required by policy SP10. Boundary screening will be especially important in this location, which is low-lying land to the north of Theale and will therefore be visible in several long-distance views. In addition, the area is known to be very low-lying and liable to flooding, given proximity to the Sulham Brook, as well as being close to the M4, which will create problems of noise and air quality.</p> <p>The site, which has been previously refused by the Council in 2017 on grounds of being located within the countryside and flood risk, ref: 16/03613/OUTMAJ, provided a landscape strategy, but it is considered that in the form as previously submitted the scheme would not effectively overcome issues relating to proximity to the M4 nor would it adequately mitigate flooding and drainage concerns.</p> <p><i>Policy RSA 16 – Whitehart Meadow, Theale (Site Ref: THE 1) should be removed from the local plan, because the site is not suitable for residential development.</i></p> <p><b>Policy RSA17 – Former Sewage Treatment Works, Theale (Site Ref: THE7)</b></p> <p>This policy states that this site should be allocated in the local plan for 70 dwellings. The plan shows only a red line around the site. No “landscape buffers” are shown on the plan, so it must be assumed that these boundary treatments will be weak and ineffective. Such unsubstantial boundary treatments will not provide the 10% bio and geodiversity net gain required by policy SP11. Also, they will not provide the level of landscape and visual impact mitigation that is required by policy SP10. Boundary screening will be especially important in this location, which is low-lying land to the north of</p>	<p>The LPR is not proposing the allocation of sites that are located within the settlement boundary. This is because settlement boundaries are a long established planning tool. They identify the main built up area of a settlement within which development is considered acceptable in principle, subject to other policy considerations. While allowing for development, settlement boundaries protect the character of a settlement and prevent unrestricted growth into the countryside. They create a level of certainty about whether or not the principle of development is likely to be acceptable.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Theale, which will be visible in several long-distance views. A large part of the site will be sterilised by high voltage cables running across it. In addition, the area is known to be very low-lying and liable to flooding, as well as being close to the M4, which will create problems of noise and air quality.</p> <p>An application for development of 88 dwellings was made in 2017, ref: 16/02850/OUTMAJ, but was withdrawn further to objection from Highways Officers in respect of substandard road access and width, as well as concerns raised in respect of landscape and visual impact. It is considered that on the basis of the quantum of dwellings still proposed, it is unlikely that a technical solution can be found that would deliver development as envisaged.</p> <p><i>Policy RSA 17 – Former Sewage Works, Theale (Site Ref: THE7) in its current form should be removed from the local plan, because the site is not suitable for residential development. Alternatively, the proposed allocation should be reduced in quantum to a level that can be technically accommodated taking into consideration known site access and landscape matters</i></p> <p>Should the LPA consider the representations made in support of allocation of the land at CPGC for residential development to have merit, CPGC respectfully suggest the following policy wording:</p> <p><b>Proposed Policy RSA XXX – Land at Calcot Park Golf Course, Calcot</b></p> <p><i>This 6 hectare site lies within the north eastern perimeter of Calcot Park Golf Club, adjacent to the residential area of Churchend. The site will deliver high quality, sustainable development that will:</i></p> <ol style="list-style-type: none"> <li>1. a) Provide for up to 70 dwellings at a mass and density that reflects the character of the adjoining settlement;</li> <li>2. b) Respond positively to the special characteristics and sensitivities of the landscape to minimise any visual impacts;</li> </ol>	

Respondent (with lpr ref)	Response	Council Response
	<ol style="list-style-type: none"> <li>3. <i>c) Respond positively to the surrounding heritage assets, particularly Grade II* Listed Building Calcot Court, to avoid harm to the significance of the Listed Building and its setting;</i></li> <li>4. <i>d) Provide significant Green Infrastructure improvements in line with the council's Local Plan policy SP10;</i></li> <li>5. <i>e) Avoid or mitigate adverse impacts on key species and habitats whilst ensuring at least 10% bio and geodiversity net gain;</i></li> <li>6. <i>f) Ensure adequate infrastructure is provided for sewage and surface water drainage;</i></li> <li>7. <i>g) Ensure appropriate measures are put in place to mitigate impacts on the highway network;</i></li> <li>8. <i>h) Improve the long-term viability of the golf course through the production of a section 106 agreement to require that capital released by the development is spent on the redevelopment of the Calcot Park Golf Club clubhouse and other improvements to the Golf Course.</i></li> <li>9. <i>i) A Viability Report will be required to identify the level of affordable housing capable of being supported by the enabling residential development</i></li> </ol>	
Gerald Eve LLP for Fairhurst Estate (lpr2372)	<p>Object to policy.</p> <p>Our client owns and controls land situated to the East of Shaw Farm Road, Newbury. A site location plan of this land is included at Annex 1 (<i>attached</i>). The land would be accessed from the roundabout adjacent to the Vodafone Headquarters as an extension to the already permitted housing development, and would not rely upon vehicular access from Shaw Farm Road/Love Lane itself.</p> <p>We share the concerns of others in respect of the approach to the identification and allocation of sites for development. In particular the heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandford Park and</p>	<p>The site 'East of Shaw Farm Road, Newbury' has been assessed as 'potentially developable in part' in the update of the Housing and Economic Land Availability Assessment (HELAA), and the site has the reference SCD8.</p> <p>There are constraints which mean the site is unlikely to be suitable within the next 15 years, namely that there is no suitable access to the site, and the Council's Highways Team have advised that they would not support this development as it is reliant on other sites that often leads to ransom situations and roads not be adopted under the Section 38 process.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>evidenced through background papers such as the 'Start to Finish' Report prepared by Lichfields).</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner.</p> <p>The Council's own assessment (within the HELAA (December 2020) of the wider area, within which the land is situated, stated that it is well related to Newbury and that it should be considered as part of a future potential strategic site (site reference SCD4). The Council has accepted the principle that the general location is suitable for development and, in positively preparing the plan, should be considering the positive contribution that a flexible approach to additional housing in locations such as this can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Changes sought:</p> <p>Further consideration of the whole site assessed as SCD4 within the HELAA should be undertaken. The site, as shown within SCD4, and specifically including the area as identified on the enclosed plan, merits further investigation and consideration for inclusion as a suitable site for the delivery of additional new homes.</p>	
Turley for Richborough Estates Ltd. (lpr2390)	<p><i>Full Representation promoting allocation of land north of Silchester Road, Tadley is attached.</i></p> <p>Richborough Estates Ltd are promoting the site Land North of Silchester Road, Tadley as an allocation for residential development. Therefore we request the site be included in Policy</p>	<p>The site 'Land north of Silchester Road, Tadley' has been assessed as 'potentially developable in part' in the 2022 update of the Housing and Economic Land Availability Assessment (HELAA), and the site has the reference ALD9.</p> <p>There are constraints which mean the site is unlikely to be suitable within the next 15 years, namely that the site is</p>

Respondent (with lpr ref)	Response	Council Response
	<p>SP14 as a Larger Site allocation, which can provide approximately 400 dwellings.</p> <p>As highlighted in the letter above, the site is within a highly sustainable location with limited environmental and historic site constraints. The site is also available for development.</p> <p>It is noted that no strategic allocations have been made within the Eastern Area. Therefore, allocating the site Land North of Silchester Road, Tadley for residential development within the Local Plan would contribute towards meeting the housing numbers in this area and the wider District. It may also be able to contribute to the Needs of Basingstoke and Deane Borough Council.</p> <p>Work undertaken so far has not highlighted any technical reasons that would prevent the site coming forward. It is also considered that the site can viably deliver policy-compliant levels of affordable housing and other policy requirements of the current and emerging Local Plans.</p>	<p>located within the AWE Aldermaston DEPZ, and residential development which increases the population density of the area is likely to compromise the effectiveness of the emergency evacuation procedures in the event of an incident at the AWE.</p>
Barton Willmore for Sulham Estate (lpr2441)	<p>Object to policy.</p> <p>We do not agree with the Council's approach on the basis that no additional sites within Tilehurst are allocated.</p> <p>We note that the Local Plan Review does not include any additional site allocations at Tilehurst. The only additional site allocations within the Eastern Urban Area in the Regulation 18 draft are at Theale and Woolhampton. Noting "the close functional relationship" between the urban area of Tilehurst and Reading (as stated at paragraph 4.11 of the draft plan), the development of Hall Place Farm represents a highly appropriate location to contribute to meeting the significant unmet needs of Reading Borough Council (please refer to our comments in relation to SP12 and the Housing Need Technical Note which accompanies these representations). Further, there is a particular need for family housing with gardens in Reading due to</p>	<p>The Eastern Area is very constrained, and in Tilehurst the AONB abuts the built up area to the west. The AONB is a nationally valued landscape and growth must be appropriate and sustainable, conserving and enhancing the special landscape qualities.</p> <p>Landscape assessment will therefore be key in determining what can be accommodated without resulting in harm to the AONB and the setting of the AONB.</p> <p>Allocations in Tilehurst had been proposed to be included within the neighbourhood plan that is being prepared by Tilehurst Parish Council and which will cover the whole of Tilehurst Parish. It is for this reason that the draft emerging Local Plan Review (LPR) did not propose any allocations in Tilehurst.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the vast majority of housing allocations within Reading to be delivered as high-density flatted schemes. The absence of further allocations in Tilehurst within the draft plan and consequential lack of geographical spread of sites across the Eastern Urban Area misses an important opportunity to support the growth of Reading.</p> <p>The most sustainable areas within this location should be allocated for development. Hall Place Farm on the edge of Tilehurst represents an appropriate location for growth on a site which is deliverable within the short term. The site is well-related to existing infrastructure and services including public transport and schools. Please refer to the Vision Document submitted with these representations for further details.</p> <p>Land at Hall Place Farm (TIL18) was ruled out through the site selection process on the basis that “development would be inappropriate in the context of the existing settlement form, pattern and character of the landscape”.</p> <p>This is an incorrect assessment of the site and relationship to the settlement/wider landscape. As set out in the accompanying Landscape and Visual Appraisal for Land at Hall Place Farm, the Site not only immediately adjoins the existing western settlement boundary of Reading, but is physically and visually separated from the wider open countryside to the north-west and west of the Site. This is by the combination of the existing topography and the containment provided by the substantial woodland and vegetation to the west of the Site, such that the Site is orientated to and well related to the existing settlement of Reading, rather than to that the open or wider countryside.</p> <p>Furthermore, as a consequence of the above, the Site is physically, visually and functionally related to the existing residential area of Tilehurst on the western edge of the settlement of Reading. Set within the existing residential development to the north and south the Site, provides the opportunity for the</p>	<p>Since the consultation on the emerging draft LPR, Tilehurst Parish Council has decided not to include any allocations within the neighbourhood plan, and it will instead comprise of development management policies. A part of the work on proposed submission (Regulation 19) version of the LPR, sites in Tilehurst will now be considered for allocation through SA/SEA and more detailed site selection work.</p> <p>The site ‘Land at Halls Place Farm, Tilehurst’ was assessed as not developable within the next 15 years in the HELAA. The site is enclosed by Clay Copse to the north and west, and whilst part of the site comprises of hardstanding, the AONB Board and Natural England have identified that development has the potential to create harm to the AONB. Little Heath Road forms a boundary to the settlement, as does the trees and hedges which run along the western side of Little Heath Lane.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>continuing rounding off of the settlement edge of Reading. It is inappropriate for the Council to discount sites purely on basis of AONB without detailed landscape consideration. West Berkshire is dominated by AONB (74% of the district) which leads to large swathes of urban areas directly abutting the AONB. As a result, some of the most sustainable locations for small and medium scale development, well related to existing services and facilities are within the AONB. This is the case with Tilehurst as this part of the Eastern Urban Area directly abuts the AONB. Consideration of development opportunities in these areas should be based on sound landscaping principles.</p> <p>The Site should be included within the settlement boundary and allocated for development for the following reasons:</p> <ul style="list-style-type: none"> <li>• It is visually well contained, and whilst on rising ground is not highly visible, nor located on an exposed ridge, landform or open slope.</li> <li>• It is well contained by boundary vegetation and is developed in part, and is therefore not an open undeveloped parcel.</li> <li>• It is not a recreational or amenity open space which extends into the countryside.</li> <li>• Existing woodland and tree belts on the western edge of the Site would form a natural western boundary to the settlement, and already assist in screening views of the western edge of Reading from the wider countryside.</li> <li>• It immediately adjoins the western settlement boundary of Reading and is set within the context of existing residential areas to the immediate north, north-east, east, south-east and south, and is therefore not an isolated area of potential development and is not physically or visually detached from the settlement of Reading.</li> <li>• Whilst the Site comprises areas of horse paddocks, these are physically and visually enclosed by the immediately surrounding woodland and vegetation, such that they do not visually relate to the open countryside, but more to that of the adjoining settlement edge of Reading.</li> <li>• It does not form an important gap between developed areas in</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>fragmented settlements.</p> <p>On this basis, the site presents an opportunity for development which is consistent with the existing settlement form and, could be successfully and sympathetically accommodated within the landscape.</p> <p>Changes sought:</p> <p>The Council should seek to accommodate further growth within and on the edge of the Eastern Urban Area in order to support Reading Borough Council's unmet need. Hall Place Farm in Tilehurst should be allocated to provide approximately 80 dwellings.</p>	
Bluestone Planning for Darcliffes Homes Ltd. (lpr2429)	<p><i>Representations and supporting plans, promoting allocations of land east of Sulham Hill between Barefoots Copse &amp; Cornwell Copse and Land to the east of Long Lane &amp; South Blackthorn Close, Tilehurst, are attached.</i></p> <p>Darcliffes Homes Ltd (hereafter 'Darcliffes') support the principle stated in policy SP1 Spatial Strategy of identifying the locations as set out in the settlement hierarchy in policy SP3 where residential development may take place. This is consistent with the guidance on the general approach to the delivery of new homes, as set out in the NPPF.</p> <p>The densities as set out in the policy are generally supported, although it should also be noted that higher density may also be achievable in certain locations, particularly around the Eastern Area. Careful and sensitive design can deliver higher density, without leading to unacceptable intensification.</p> <p>The policy also refers to the significant commitments throughout the District and as explained below, there are concerns that these either may not come forward during the Plan period and/ or are being built out at a rate which</p>	<p><u>Non-delivery of planning commitments:</u></p> <p>Policy SP12 of the emerging draft LPR made provision for 8,840 to 9,588 net additional dwellings (520 to 575 dwellings per annum). The target figure was 564 dwellings. The supporting text to policy SP12 identified a supply of 11,439 dwellings over the plan period.</p> <p>The NPPF expects authorities to follow the standard method to assess need, and it is considered that a housing requirement that is slightly higher than the Local Housing Need, demonstrating that the assessed need can be met, is appropriate. The use of a range to express the requirement introduces some flexibility.</p> <p><u>Imbalance between the numbers allocated to Newbury and the Eastern Area:</u></p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here. The Eastern Area is very constrained,</p>

Respondent (with lpr ref)	Response	Council Response
	<p>would mean that they are not appropriate for inclusion in the Adopted Plan and therefore alternatives will have to be sought.</p> <p>Policy SP3 sets out the settlement hierarchy and identifies the urban areas which will be a prime focus for housing. It is supported that the Eastern Urban Area will be a focus, although there is a significant imbalance between the numbers allocated to Newbury and Thatcham when compared to Eastern Area, with over 4,000 homes to the former and under 1,000 homes to the latter. This is not considered appropriate given the level of services and facilities provided to the Eastern Area.</p> <p>With regard to the Eastern Area specifically, it is stated that new allocations for Tilehurst and Burghfield will be made through NDPs. This is clearly dependent on the NDP process, which is lengthy and sometimes fraught with difficulties.</p> <p>At the time of writing, Tilehurst for example have not yet published their draft Neighbourhood Plan and therefore it will still be some time before this can be taken to and approved at referendum, and housing can start to be delivered in accordance with such allocations. Although Policy SP14 sets out that the Designated Neighbourhood Area should allocate 175 dwellings, there is no timeframe for when this may come forward or whether this number will be agreed.</p> <p>It should also be noted that in the HELAA the text regarding Tilehurst makes it clear that allocations will be made within the Local Plan Review where not allocated by the NDP.</p> <p><i>“Tilehurst</i></p> <p><i>8.31. Tilehurst Parish is designated as a Neighbourhood Area, and Tilehurst Parish Council are preparing a neighbourhood plan. The Parish Council have expressed an intention to include residential allocation(s) in the</i></p>	<p>with the AONB abutting the built up area of Tilehurst to the west of Reading and with substantial areas of floodplain to the south of Reading. In addition development is constrained by the presence of the AWE establishments at Burghfield and Aldermaston.</p> <p>Such constraints have been considered when assessing sites through the HELAA, SA/SEA, and site selection process.</p> <p><u>Tilehurst NDP and time taken to come forward:</u></p> <p>Allocations in Tilehurst had been proposed to be included within the neighbourhood plan that is being prepared by Tilehurst Parish Council and which will cover the whole of Tilehurst Parish. It is for this reason that the draft emerging Local Plan Review (LPR) did not propose any allocations in Tilehurst.</p> <p>Since the consultation on the emerging draft LPR, Tilehurst Parish Council has decided not to include any allocations within the neighbourhood plan, and it will instead comprise of development management policies. A part of the work on proposed submission (Regulation 19) version of the LPR, sites in Tilehurst will now be considered for allocation through SA/SEA and more detailed site selection work.</p> <p><u>Policies do not go far enough in bringing forward small and medium sized sites:</u></p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>neighbourhood plan. The site selection work will therefore be undertaken by the Parish Council.</i></p> <p><i>8.32. In the event that Tilehurst Parish Council choose not to include residential site allocations in the neighbourhood plan, then West Berkshire Council will pick up the site selection work and consider allocations through the LPR.”</i></p> <p>All other locations are to be treated as open countryside (as set out in Policy SP1) and therefore no sites in these areas could be brought forward in accordance with policy. It is therefore considered that housing allocations should also be made either independently or collaboratively in the Review Local Plan or the policy should be more flexibly worded in the urban areas.</p> <p>There is a concern that policies do not go far enough in bringing forward small and medium sized sites, particularly those located on the edge of the identified urban area settlements. As stated above, if such sites are not allocated in the Local Plan Review or in particular, a NDP, because an NDP has either not been developed or has been delayed, there is no mechanism for such sites to be approved in the future. This may be an issue of great concern where some of the larger strategic sites are not deliverable within the Plan period.</p> <p>It is also unclear from the supply calculations whether or not there has been an undersupply from the Core Strategy 2012 which has been carried forward. Sandleford Park was allocated in the 2012 Core Strategy and has not yet been granted permission. Clarification is sought as to how this has been dealt with and whether further sites should be allocated in this regard.</p> <p>The table in Policy SP13 also sets out that Sandleford Park seeks to accommodate up to 1500 dwellings, whereas the text in paragraph 6.12 states that only 1,000 houses will be delivered by 2037 and the remainder in the following Plan period.</p>	<p>medium and smaller sites (including brownfield sites within settlement boundaries) that can deliver housing sooner.</p> <p><u>Core Strategy undersupply and Sandleford Park:</u></p> <p>Regarding the supply calculations, there is no undersupply carried forward from the Core Strategy. National guidance is clear that this is factored into the standard method.</p> <p>Policy SP13 proposes the allocation of up to 1,500 homes at Sandleford Park. Table 2 includes only 1,000 units within the plan period to 2037, as delivery is expected to extend beyond the plan period.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites (including brownfield sites within settlement boundaries) that can deliver housing sooner. The Council is not relying on the total allocation at either Sandleford Park or North East Thatcham to meet the need up to 2027. Para 6.45 of the ELPR states that delivery of at least 1,250 dwellings is anticipated within the plan period.</p> <p>Outline planning permission (20/01238/OUTMAJ) was granted in May 2022 for up to 1,000 dwellings on the eastern part of the site.</p> <p><u>Small and medium sized sites:</u></p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant</p>

Respondent (with lpr ref)	Response	Council Response
	<p>This approach is also inconsistent with the encouragement of developers to bring forward small and medium sized sites. The HBF document (2017) 'Reversing the decline of small housebuilders: Reinvigorating entrepreneurialism and building more homes' notes (p.29) that:</p> <p><i>“For understandable political and financial reasons, planning authorities have increasingly sought to allocate very large strategic sites for residential development in order to satisfy its requirement to demonstrate a five-year land supply. Large sites on the edge of settlements can be less likely to spark political controversy as they are slightly removed from existing communities. For the very same reason, however, they may require substantial infrastructure and up-front financing resulting in relatively lower delivery rates in the early years of the site’s existence making rapid delivery unrealistic.”</i></p> <p>The latest research from Lichfields (February 2020) 'Start to Finish What factors affect the build-out rates of large-scale housing sites? Second edition' discusses the lead times on large sites and the data is not encouraging:</p> <ul style="list-style-type: none"> <li>• Schemes of 500-999 dwellings take on average approximately 5.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 1,000-1,999 dwellings take on average between 6.9 and 7.0 years from validation of the initial outline application to delivery of the first house. These do not contribute any completions in the first five years.</li> <li>• Schemes of 2,000+ dwellings take on average approximately 8.4 years from validation of the initial outline application to delivery of the first house. These do not contribute any</li> </ul>	<p>numbers of affordable homes and a larger number of medium and smaller sites (including brownfield sites within settlement boundaries) that can deliver housing sooner. The Council is not relying on the total allocation at either Sandleford Park or North East Thatcham to meet the need up to 2027. Paragraph 6.45 of the draft emerging LPR states that delivery of at least 1,250 dwellings is anticipated within the plan period.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>completions in the first five years. 6.1 years of this are taken up with the planning application process. (see figure 4 of the Lichfields document)</p> <p>In contrast, smaller sites between 0 and 99 dwellings typically deliver within 3.3 years of the validation of the first application.</p> <p>On this basis it is considered that the following should be taken into consideration:</p> <ul style="list-style-type: none"> <li>• SP16 Sandford Park is allocated for 1,000-1,500 dwellings, taking the above into account, it would take between 6.9 – 7.0 years until the first dwelling is built based on the above assumptions. It should be noted however that the site has been allocated since 2012 and although a number of applications have been submitted, there remains outstanding issues and the site still does not have permission. It is therefore considered that given the length of time taken to date, that the site is unlikely to realistically deliver the numbers proposed.</li> <li>• SP17 North East Thatcham is allocated for 2,500 dwellings, taking the above into account, it would take 8.4 years from validation until the first dwelling is built, based on the above assumptions. There has been no application to date. It is unlikely therefore that any dwelling would be built until approximately 2030 and following this, the average annual build-out rate for a scheme of 2,000+ dwellings is an average of 160 dpa (as set out in the aforementioned Lichfields report). On this basis, with the Plan period up to 2037, this would equate to 1,120 dwellings during the Plan period and not 2,500 as set out. It is unrealistic that on an allocation of this size that dwellings could be brought forward to the market at a faster rate.</li> </ul> <p>The HBF document goes on to advise that (p.29-39):</p>	

Respondent (with lpr ref)	Response	Council Response
	<p><i>“Once allocated, LPAs are systematically failing to assess on an ongoing or regular basis, the actual delivery achieved against the targets indicated in its local plan. For instance, by allocating one or several very large sites to achieve a five-year supply of land, delays progressing one site through planning will have a substantial impact on the ability of the authority to adequately plan for the number of homes required.....</i></p> <p><i>..... To meet demand for housing, we need more sites of all sizes allocated. Indeed, large sites often deliver new homes at astounding rates, particularly in areas where the market is strong, but small sites are consistently efficient in their delivery. For this reason, the allocation of a wider range of sites within local plan allocations would not only help increase plurality in the housebuilding sector, it would also improve the chances of local authorities’ meeting ambitious supply trajectory plans.</i></p> <p><i>Achieving this all-round positive outcome need not involve overly prescriptive diktats. A subtle shift in policy emphasis, along with a greater focus on ongoing delivery within a local plan period would help to achieve a positive change in behaviours at a local level.....</i></p> <p>The above is also irrespective of the fact that many of the smaller HSA sites are already near completion and at least some the numbers should have potentially been counted before the Plan period. Therefore, these numbers are unlikely to be taken forward in the Adopted Local Plan.</p> <p>In addition, based on last published WBC housing monitoring report (2019), there was a projected windfall allowance of 362 dwellings for the five years up to 2024. To cover the Local Plan Review period to 2037 would suggest a windfall figure of 1,231 dwellings should be included in the supply and not 1979 as currently stated in Table 2 Housing Supply at March 2020. Therefore, there is real danger that the delivery target will not be met due to a reliance on windfalls. This makes very clear that when combined with a lack of flexibility / unclear non-implementation</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>allowance, that there is a need for more allocation sites to bridge the shortfall, in the order at least 700 units.</p> <p>In summary, there is a clear under provision for new sites and further small to medium sites should be considered with flexibility to allow sites on the edge of the urban areas identified to come forward to ensure that sufficient sites can be delivered within the Plan period.</p> <p><b>Omission Sites</b></p> <p>Darcliffe Homes are promoting two omission sites for inclusion as allocation sites in the emerging Local Plan. They are located in the Eastern Area of the District on the edge of the built-up area and are not affected by the 'significant constraints' referred to in paragraph 4.13. The sites lie outside of the AONB designation, are not affected by flood zone 2/3 and nor are they within the SEPZ area for Aldermaston or Burghfield (including as extended).</p> <p>Paragraph 4.13 also states that in regard to the Eastern Area, <i>"There are also limited opportunities for redevelopment of brownfield land within existing settlement boundaries"</i>. Whilst the omission sites are greenfield sites, they are directly adjacent to the built-up area and are well contained with trees and screening.</p> <p>They are both sites which will achieve a sustainable form of development, being well located to benefit from proximity to local services and facilities. It is highlighted in paragraph 4.11 of the emerging Plan that these urban areas have a <i>"close functional relationship with Reading and will continue to benefit from the facilities and services it provides"</i>. This would certainly be the case in each of the sites proposed and further details are set out below.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Each site will contribute to the range of smaller sites that are needed to complement the larger scale sites that are currently allocated in the emerging Local Plan.</p> <p>Plans of each of the sites are enclosed with these representations. Darcliffe Homes request that these sites be allocated in substitution of some of the capacity of the larger sites as discussed above, because by allocating them this will:</p> <ul style="list-style-type: none"> <li>• help to deliver housing within the first five years of the Plan period, in contrast with the 5-8.4 year period to commence development following submission of an application on the larger allocated sites (500+ dwellings), thus helping to maintain a buoyant housing land supply</li> <li>• provide a wider portfolio of small / medium sites which will support local housebuilding, thus complying with paragraph 68a of the NPPF</li> <li>• enable development to take place in the otherwise heavily constrained Eastern Area, not only taking advantage of the services and facilities that this location has to offer, but also the significant employment opportunities and transport links, thus ensuring that those areas of the District with the highest local demand for dwellings are provided for in terms of appropriate housing development</li> <li>• provide benefits for the local economy through the employment of local trades and professionals during the planning, construction and sales processes</li> <li>• provide much-needed affordable housing on one of the sites due to their size (see representation on Policy SP19).</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>Changes sought:</p> <p>It is considered that policies SP1 and SP3 should be reworded to provide more flexibility.</p> <p>Other nearby Local Planning Authorities have recognised the issue that can arise where a NDP is not delivered. For example, South Oxfordshire District Council in their Policy H1 of the recently adopted Local Plan (but see also their Core Strategy which also contained a similar policy) set out that:</p> <p><i>“Where Neighbourhood Development Plans are not progressed in larger villages and market towns, planning applications will be considered against the housing delivery targets for the towns and larger villages set out in this Plan.”</i></p> <p>A form of words reflecting the above, would ensure that there would be sufficient flexibility to take into account any NDP problems and Policy SP1 should be amended accordingly, with and SP3 and DC1 given clarification in this regard.</p> <p>To reflect this and the potential undersupply of housing, further small to medium sites should be also be added to policies SP13-14, with any update to SP12 as a result. Darcliffe Homes are proposing two such sites within the Eastern Urban Area, which would deliver up to 80 dwellings.</p> <p>The supporting text at paragraph 6.22 would also need to be updated in this regard.</p> <p>The addition of further small to medium sites such as these will require a re-consideration of the capacity of the strategic-scale sites to reflect realistic expectations. Revising the site capacities slightly downward to accommodate a shift of dwelling numbers will not however adversely affect the ability of the promoters to bring the strategic sites forward for</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>development, but will allow a longer period for developing out the entirety of the site, which is likely to run into the following Plan period.</p> <p>Allocating additional small to medium sites will also have a positive effect on the smaller scale and local housebuilding industry, which includes Darcliffe Homes, in providing opportunities that will help to continue to sustain this important re-emerging sector of the housebuilding industry.</p> <p>Darcliffe Homes request that the promoted sites (<i>see attached representation and location plans</i>) be allocated in substitution of some of the capacity of the larger sites.</p>

However the allocated site boundary does not now match the approved development site boundary and should be adjusted.</p> <p>The NDP housing delivery requirement of approx. 55 for the period to 2037 is realistic.</p>	<p>Support for policy noted</p> <p><u>HSA18/RSA21:</u></p> <p>Policy HSA18 of the Housing Site Allocations Development Plan Document (HSA DPD) and policy RSA21 of the emerging draft Local Plan Review (LPR) relate to the allocation Land East of Salisbury Road in Hungerford.</p> <p>It is proposed to remove the allocation from the LPR as development at the site is now close to completion.</p>
Shaw-cum-Donnington Parish Council (lpr209)	<p>Support policy.</p> <p>No comment.</p>	Support for policy noted.

Respondent (with lpr ref)	Response	Council Response
Kintbury Parish Council (lpr1724)	<p>(Same comments for RSA31) subject to planning</p> <p>Kintbury Parish Council acknowledges that there is in West Berkshire a need/requirement for more housing and, in particular, Affordable and Social Housing. In this respect, Kintbury has to play its part, on a limited basis, in accordance with the Plan.</p> <p>Kintbury Parish Council does raise the following concerns:</p> <ul style="list-style-type: none"> <li>• Kintbury residents are very concerned about the increasing traffic through the Village centre and, particularly, the effect on the Conservation Area where the streets are of C18th origin or earlier, are extremely narrow with many streets without footways or ones that are inadequate. There are a number of pinch-points which result in congestion and create pollution where homes are close to the highway. In addition the growth of traffic already traversing the Village has resulted in long queues trying to cross the railway creating more congestion and pollution in the centre together with a difficult access to the A4, where most of the traffic is headed. Any development will have a deleterious effect on the level of traffic needing to pass through the centre of the Village.</li> <li>• The proposed site (KIN 6) at The Haven is located outside of the Village Settlement Boundary and is in the AONB where the scenic quality is high and is a valued landscape. The site is surrounded by open fields and the Recreation Ground forming a part of the surrounding countryside and landscape. There is concern that the development could cause harm to the landscape quality and the value of the AONB. The site will be visible from highways and public rights of way.</li> <li>• Access to KIN 6, via The Haven, could worsen the environment for residents of The Haven and the resulting</li> </ul>	<p>Comments noted.</p> <p>Comments noted.</p> <p><u>Traffic:</u> The site was promoted through the 'call for sites' for the Council's Housing and Economic Land Availability Assessment (HELAA). The HELAA forms part of the evidence base for the Local Plan Review (LPR) and it makes a preliminary assessment of the suitability and potential of sites.</p> <p>The site was assessed as 'potentially developable' in the HELAA, and it was then subject to more detailed site assessment work.</p> <p>The Highways Authority provided comments as part of the HELAA and site assessment work. They advised that extensive on street parking within the High Street limits potential for additional traffic flow. There are already problems with getting bus and other larger vehicles through High Street, Newbury Street, Holt Road and the northern end of Inkpen Road due to road width, parking, hedges and adjoining land uses. Double yellow lines in High Street, Newbury Street, Holt Road and the northern end of Inkpen Road could help mitigate the effects of additional development in the village. It is not considered that the increase in traffic at the Inkpen Road/High Street junction (in relation to the existing traffic using the junction) is of significant concern.</p> <p>Any future planning application will need to be accompanied by a Transport Statement, and the requirement for this will be included in the site specific policy for the site and worded as follows:</p> <p><u>'A Transport Statement will be required as part of any planning application.'</u></p> <p><u>AONB:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>removal of the garage site could create more on street parking unless it is replaced as part of the development. If the development is included in the Local Plan Review thought should be given to improving the environment within The Haven including providing additional parking and other facilities to take account of the environmental damage caused by the development.</p>	<p>A Landscape Sensitivity Assessment (LSA) was prepared in 2011. The LSA advised that development on the site would be acceptable, subject to certain recommendations. The recommendations from the LSA will be incorporated into the policy as follows:</p> <p>(a) <u>'The scheme will be developed in accordance with the Landscape Sensitivity Assessment (2011):</u></p> <ul style="list-style-type: none"> <li>(i) <u>Replacement of the conifer hedge to the western boundary with more appropriate planting;</u></li> <li>(ii) <u>Views from the surrounding countryside, Public Right of Way, and the neighbouring recreational field would need to be carefully considered; and</u></li> <li>(iii) <u>New planting to integrate the buildings into the landscape.'</u></li> </ul> <p>In addition, the policy will also include the following requirement for a Landscape and Visual Impact Assessment: <u>'The development design and layout will be in accordance with policy SP7 and further informed by a full detailed Landscape and Visual Impact Assessment.'</u></p> <p>As part of the assessment of the site for the HELAA, the AONB Unit commented that there is the potential for development and that a landscape assessment would be required.</p> <p><u>Access:</u> The Highways Authority provided comments as part of the HELAA and site assessment work. They advised that an acceptable access onto The Haven should be achievable via the existing garages. Any parking lost to the garages will need to be relocated. Sight lines at The Haven / Inkpen Road junction will need to be improved but a technical note provided in July 2015 has shown that land is available. The policy for the site will include the following criteria as follows: <u>'Access to the site will be provided from The Haven via the existing garages. Any parking lost will need to be relocated. A Transport Statement will be required as part of any planning application.'</u></p>

Respondent (with lpr ref)	Response	Council Response
Chieveley Parish Council (lpr1722)	<p>Object to policy.</p> <p>site ref, RSA26 Land at Chieveley Glebe</p> <ol style="list-style-type: none"> <li>1. There is insufficient information on this proposed allocation and how the form of development proposed. This is evident when compared to other allocation proposals set out in the Plan. The issues mentioned below are of particular concern.</li> <li>2. Following the Parish Plan consultation there is a need in the Chieveley to provide a new burial ground. Site RSA 26 is also the site of the most likely location for a new burial ground. There is no mention as to how this will be achieved if RSA 26 goes ahead and as currently proposed the allocation would prevent the future development of a burial ground in this location.</li> <li>3. It is not clear how the site and/or individual dwellings would be accessed from East Lane, including whether there would be individual accesses to East Lane from the 15 dwellings.</li> <li>4. Traffic is already an issue in Chieveley, notably at the East Lane/High Street junction and around the Doctor's surgery. More development and accesses in this location would need full assessment.</li> <li>5. Impact on the environment including the landscape impact of the loss of hedgerows and trees and their protection.</li> </ol> <p>That said, Chieveley Parish Council agrees with the Council and its landscape assessment that the larger area of land at RSA 26 which is shown edged blue on the inset plan for this site should not be developed.</p> <p>Changes sought:</p>	<p>Comments noted.</p> <p><u>Information on the proposed allocation:</u></p> <p>Within the Regulation 18 draft emerging Local Plan Review (LPR) it was made clear that the detailed policy criteria for the new allocations was still to be developed.</p> <p>In the time available to prepare the draft emerging LPR for a Regulation 18 consultation in December 2020, it was unfortunately not possible to prepare detailed policies for the new residential allocations.</p> <p>A number of residential allocations within the draft emerging LPR have been retained from the Housing Site Allocations Development Plan Document (HSA DPD), which forms part of the current Local Plan. It is for this reason that some allocation policies were more detailed than others.</p> <p><u>Burial ground:</u></p> <p>At the time of the Regulation 18 consultation on the draft emerging LPR, West Berkshire Council (WBC) were unaware that the burial space available at St. Mary's Church was running out.</p> <p>As part of their Regulation 18 representations, the landowner of proposed allocation 'Land at Chieveley Glebe' suggested that a burial ground could be accommodated within the wider area of land originally promoted for development.</p> <p>A Landscape Sensitivity Assessment (LSA) carried out in 2011 (which considers the wider area of land promoted for development) advises that the site is large in scale in comparison to the settlement, and extends further back from the roads than typical elsewhere. The LSA goes on to advise that the site has a strong relationship with countryside to the north.</p>

Respondent (with lpr ref)	Response	Council Response
	Removal of site RSA 26 from the Local Plan.	<p>The LSA recommends that the whole site would be unsuitable for development because it would not be possible to repeat the linear pattern of the rest of Chieveley.</p> <p>The proposed allocation is for a line of linear development along East Lane to ensure that the existing settlement pattern is reflected.</p> <p><u>Access and traffic:</u></p> <p>The dwellings would front onto East Lane, and a number of private accesses would be provided. The Local Highway Authority have not raised any objections to this.</p> <p>The Local Highway Authority have advised that they have no concerns regarding the provision of 15 dwellings with regards to traffic impact.</p> <p><u>Environmental impact:</u></p> <p>The site was promoted through the ‘call for sites’ for the Council’s Housing and Economic Land Availability Assessment (HELAA). The HELAA forms part of the evidence base for the Local Plan Review (LPR) and it makes a preliminary assessment of the suitability and potential of sites.</p> <p>As part of this work, a desktop assessment of the impact that development might have on nature conservation was undertaken by the Thames Valley Environmental Research Centre (TVERC). Comments were also sought from Natural England and the Berkshire, Buckinghamshire and Oxfordshire Wildlife Trust (BBOWT).</p> <p>The assessment by TVERC highlighted there was a medium risk of adverse impacts. Natural England advised that the site was unlikely to have an impact on a Site of Special Scientific Interest, whilst there might be water quality impacts on the River Lambourn Special Area of</p>

	<p>neighbours or anyone that could give us guidance, please forgive our lack of understanding.</p> <p>This is land and outside the village settlement and an area of outstanding natural beauty. If the land is to loose it's protection we would like to see the look of the lane preserved. That is of individually designed homes set back from the lane with ample parking and in a pretty leafy country village. It would be very sad to see urban footpaths and street lighting.</p> <p>The hedge to the south of the site is a feature of the lane and gives that country village feel to the lane and the village. It also holds back the rain water from the field that is in some parts 1meter higher than the road surface. Flooding would be concern should it be removed. When heavy rain falls in the High Street the drains in East Lane overflow and the lane becomes a torrent. Many of the bungalows to the south of the lane would be at risk of flooding if this water was any deeper.</p> <p>We would not want the existing homes on the south of the lane to loose any of their land to enable a road realignment to facilitate the added traffic and parking created by added development.</p> <p>Any new dwelling built here will be in the very best of locations we would like to see it add to the look of the lane and the village rather than detract from it. The proposed plots would be slightly smaller than the existing and on a deceptively sharp bend in the lane given that all vehicles associated with the building and occupation of the new dwelling will need to be parked on site, as there is no on street parking in the lane 15 dwellings may be a bit of a squeeze.</p> <p>Changes sought: The population continues to grow at an alarming rate housing is needed everywhere equally at the other end of the scale people</p>	<p>clear that boundaries will include sites allocated through the Local Plan process.</p> <p>The policy for the site will include a criteria that requires that the development design and layout will be informed by a Landscape Visual Impact Assessment:</p> <p><i><u>e. The development design and layout will be further informed by a full detailed Landscape and Visual Impact Assessment (LVIA).</u></i></p> <p><u>Location of site within AONB:</u></p> <p>The National Planning Policy Framework is clear that great weight should be given to conserving landscape and scenic beauty in AONBs. To this end, a Landscape Sensitivity Assessment was carried out for the wider site area that was promoted for development. This advised against development across the whole site because it would not be possible to repeat the linear pattern of the rest of Chieveley.</p> <p>The proposed allocation is for a line of linear development along East Lane to ensure that the existing settlement pattern is reflected.</p> <p><u>Flood risk:</u></p> <p>The Environment Agency's surface water flood risk data does not show the site nor any of the properties along the south of East Lane to be at risk of surface water flooding.</p> <p>The emerging draft LPR policy on flood risk requires that on all development sites, surface water will be managed in a sustainable manner through the implementation of sustainable drainage systems.</p> <p><u>Road realignment:</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>die. This is church land and outside the village settlement. The village grave yard is nearing fullness, this land was proposed to become the new grave yard for the village. If we are to lose an area of outstanding natural beauty this would be the better option for the people of the village for today and the future.</p>	<p>There are no proposals to re-align East Lane, and the Local Highway Authority have not advised that the road needs re-aligning.</p> <p><u>Church land / burial ground:</u></p> <p>The site was promoted to the Council by the landowner, the Diocese of Oxford.</p> <p>At the time of the Regulation 18 consultation on the draft emerging LPR, West Berkshire Council (WBC) were unaware that the burial space available at St. Mary's Church was running out.</p> <p>As part of their Regulation 18 representations, the landowner of proposed allocation 'Land at Chieveley Glebe' suggested that a burial ground could be accommodated within the wider area of land originally promoted for development.</p> <p>A Landscape Sensitivity Assessment (LSA) carried out in 2011 (which considers the wider area of land promoted for development) advises that the site is large in scale in comparison to the settlement, and extends further back from the roads than typical elsewhere. The LSA goes on to advise that the site has a strong relationship with countryside to the north.</p> <p>The LSA recommended that the whole site would be unsuitable for development because it would not be possible to repeat the linear pattern of the rest of Chieveley.</p> <p>In light of the recommendations of the LSA, only a small amount of linear development is proposed along the frontage of East Lane.</p>
Tony Vickers (lpr540)	<p>Support policy.</p> <p>We believe many villages in the AONB could benefit from additional housing without compromising the landscape qualities. Kim Lloyd (lpr1854)	<p>Representation on proposed allocation RSA 28</p> <p>The development is likely to be detrimental to the Parish in a number of areas:</p> <ol style="list-style-type: none"> <li>1. It will add cumulatively to existing flood impacts in the village. The area was withdrawn from the WBC Local Plan in the last review on this point alone – nothing has substantially changed since this</li> <li>2. Adding a number of dwellings (15+) to this end of the village will lead to additional foul/sewage system impacts and flood potential impacts. We had significant sewage issues last winter, despite years of Thames Water ‘mitigation’ in the valley. The issue is real and unresolved, and this development would add to it.</li> </ol>	<p>Comments noted.</p> <p>Please see responses to Policy RSA28.</p> <p><u>Flood risk:</u></p> <p>The existing Local Plan did not include any allocations in Great Shefford. This was because there has been significant flooding in the village when the Housing Site Allocations Development Plan Document was being prepared. Since then, there are proposals for a flood mitigation scheme within Great Shefford.</p> <p>As part of the preparation of the Local Plan Review (LPR), Level 1 and Level 2 Strategic Flood Risk Assessments (SFRA) have been prepared which consider the site. Sites within Great Shefford were not specifically considered within the SFRA prepared for the Core Strategy or HSA DPD.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>3. The proposed development area is on substantially higher ground than the existing development and will have a significant impact on existing dwellings at this point in the village. It will also lead to an increased view of new development in the village from surrounding footpaths and the A338 as this height will make a new development here more prominent, creating a landscape impact in the AONB.</p> <p>4. The location is unsustainable, it is in a rural village with no substantial public transport links, our public transport has been gradually reduced by WBC over the last 20 years</p> <p>Great Shefford Parish Council agrees that the area of land at RSA 28 which is shown edged red on the inset plan for this site should not be developed.</p> <p>Changes sought: Removal of site RSA 28 from the Local Plan.</p>	<p>The site itself lies within Flood Zone 1 whereby there is a low risk of flooding. The boundary of the site at its northern corner is at low risk of flooding from a surface water flow path during a 1 in 1000 year rainfall event. Development would need to be avoided on this part of the site, and this will be specified within the policy for the site.</p> <p>Groundwater emergence modelling identifies that the north eastern corner of the site is predicted to be affected by groundwater emergence during a 1 in 30 year and 1 in 100 year event. Development would need to be avoided on this part of the site, and this will be specified within the policy for the site.</p> <p>The site allocation for the policy will also require a Flood Risk Assessment as part of any planning application.</p> <p><u>Wastewater:</u> A Phase 1 and Phase 2 Water Cycle Study have been prepared and will be reflected in Policy RSA28 as follows</p> <p><i>i. <u>An integrated water supply and drainage strategy will be provided in advance of development to ensure the provision of adequate and appropriate infrastructure for water supply and waste water, both on and off site. Development will be occupied in line with this strategy. Infiltration from groundwater into the network has been identified as a strategic issue within this catchment; therefore development on the site will connect to the mains sewerage system. A housing phasing plan will be required to ensure development does not outpace delivery of essential network upgrades to the East Shefford Sewage Treatment Works;</u></i></p> <p><u>Visual impact</u> A Landscape Sensitivity Assessment (2011) indicated that development on the site would not cause significant harm to the</p>

Respondent (with lpr ref)	Response	Council Response
		<p>landscape character, and subject to a number of mitigation measures development would be acceptable. It is a small site that is well contained by landform and housing, with hedges along the western and northern boundaries. Development could be accommodated and retain small scale pattern and not intrude into the wider AONB. The site lies on the lower valley side, mostly below 115m AOD, with just the north corner rising slightly above.</p> <p><u>Unsustainable location</u> Policy SP1 of the LPR sets out the spatial strategy for the district. The overall approach to development will be based on three spatial areas, one of which includes the North Wessex Downs AONB. The focus of development in each spatial area will follow the district-wide settlement hierarchy set out in policy SP3.</p> <p>Within the settlement hierarchy, Great Shefford is identified as a 'Service Village'. Service Villages are smaller rural settlements which offer some limited and small-scale development potential appropriate to the character and function of the village in order to meet local needs.</p>
<b>Landowners, site promoters and developers</b>		
Fisher German LLP for Mr M and W Musgrave and Begley (lpr1231)	<p><i>Complete representations from Fisher German LLP promoting land at Oxford Road, Chieveley are attached to representation.</i></p> <p>Object to policy</p> <p>We welcome and support the Council's acknowledgement that Chieveley should receive residential allocations. This will assist to ensure its long-term vitality and vibrancy by meeting local housing needs. Whilst in the AONB, high quality new development which fits with existing settlements is considered to have a limited impact on this designation. The failure to deliver sufficient housing will however have very real impacts on the day to day lives of residents, forcing young people away due to rising house prices</p>	<p>Comments noted.</p> <p><u>Additional development in Chieveley:</u></p> <p>Support for principle of residential allocations in Chieveley noted.</p> <p><u>Proposed allocation Land at Chieveley Glebe:</u></p> <p><i>Heritage impact:</i></p> <p>The Council is in the process of preparing Conservation Area Appraisals.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>and lack of suitable available homes. Populations in rural areas will likely age, trends which can be seen locally and nationally, and average house occupancy will lower as children grow up and move away. This lowering and ageing of the rural population will have repercussions on the ability of services and facilities to stay open, which will lead to a gradual decline of sustainability. Chieveley has a high level of service provision, as demonstrated by the Settlement Audit, and this is something which must be supported by commensurate new housing, ensuring the vitality of the community.</p> <p>Concern is however raised at the Council's preferred choice of allocation, and it is not considered sufficient consideration has been had for the impacts of this scheme on the Chieveley Conservation Area and Grade II Listed Vicarage, as well as other listed buildings in the centre of Chieveley. The north of East Lane is the only open approach to the centre of Chieveley, its historic core. The development of this site will fundamentally change the transition into the village, reducing the sense of openness prior to arriving at the village's central crossroads, creating a more urban feel.</p> <p>This part of East Lane already has issues with on street parking associated with the centre of Chieveley, the existing housing and where the GP practice's car park overflows. New housing in this location will add to the burden, by adding to the number of cars parked here and forcing on-street parking onto the south side of the road to facilitate access to the dwellings. This will cause issues both in terms of traffic, but also in terms of having a damaging impact on this important approach to the conservation area, further creating an urban feel and having a negative impact on the character of the settlement. Draft Policy SC8 sets out that development proposals that affect the setting of a Conservation Area should assess and clearly demonstrate how the character, appearance and significance of the Conservation Area will be preserved and enhanced. It does not appear that this has been undertaken to support this allocation. It is not appropriate to await a</p>	<p>The site allocation policy will include a requirement for a Heritage Impact Assessment:</p> <p><u><i>g. The development design and layout will be further informed by a Heritage Impact Assessment.</i></u></p> <p><i>Highways impact:</i></p> <p>The Local Highway Authority provided comments on the site as part of work on the Housing and Economic Land Availability Assessment and site assessment work. No concerns were raised around safety, although they have specified that to achieve the required sightlines, accesses may be needed to serve more than one property.</p> <p>The dwellings would front onto East Lane, and a number of private accesses would be provided. The Local Highway Authority have not raised any objections to this.</p> <p>The Local Highway Authority have advised that they have no concerns regarding the provision of 15 dwellings with regards to traffic impact.</p> <p><i>Biodiversity impact:</i></p> <p>The site was promoted through the 'call for sites' for the Council's Housing and Economic Land Availability Assessment (HELAA). The HELAA forms part of the evidence base for the Local Plan Review (LPR) and it makes a preliminary assessment of the suitability and potential of sites.</p> <p>As part of this work, a desktop assessment of the impact that development might have on nature conservation was undertaken by the Thames Valley Environmental Research Centre (TVERC). Comments were also sought from Natural England and the Berkshire, Buckinghamshire and Oxfordshire Wildlife Trust (BBOWT).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>planning application, as the suitability of allocated sites is an issue that relates to this Plan's soundness and is vital to ensure the Plan is internally consistent.</p> <p>To facilitate the site, significant areas of mature hedgerow will need to be removed. This will have significant impacts on biodiversity, whilst further causing damage to the settlement character on the approach to Chieveley. The removal of such a large amount of mature, tall vegetation must be afforded significant weight, and serious concerns about the suitability of this allocation. It is noted that this is not even mentioned in the Site Proforma, which raises concerns to the extent that this has been considered in formulating the allocation.</p> <p>On the basis of the above, whilst we support the Council's decision to allocate in Chieveley, we do not support the Council's preferred choice and consider it should be deleted for the reasons listed above. We contend, that our client's land offers a suitable opportunity to allocate a smaller site, as has been the approach for the current draft allocation, although would be free from many of the constraints which impact the current allocation. It is not clear why a smaller parcel of the allocated site has been considered, when this approach would clearly overcome many of the issues which form the basis of other site omissions.</p> <p>It is also noted that the draft allocation site is not currently available, as there is an ongoing lease for the land. Whilst this is only to 2023, it does mean that the site is not available now and cannot be used in five-year housing land supply calculations.</p> <p>In respect of our client's site, the Council's stage 1 sieving document concludes:</p>	<p>The assessment by TVERC highlighted there was a medium risk of adverse impacts. Natural England advised that the site was unlikely to have an impact on a Site of Special Scientific Interest, whilst there might be water quality impacts on the River Lambourn Special Area of Conservation which would need to be considered through the Habitats Regulations. BBOWT advised that a net gain in biodiversity must be delivered.</p> <p>The policy for the allocation will include a requirement for surveys, and the final developable area will be dependent upon the extent of any appropriate evidence and mitigation measures. The wording of the requirement will be as follows:</p> <p><i><u>f. The scheme will be informed by an extended phase 1 habitat survey with further detailed surveys arising from that as necessary.</u></i></p> <p>All development sites will be required to provide a minimum 10% net biodiversity gain as per policy SP11 (Biodiversity and Geodiversity).</p> <p><u>Alternative site (CHI20):</u></p> <p>Site CHI20 (Land adjacent to Oxford Road, Chieveley) was promoted to the Council as part of the call for sites for the Housing and Economic Land Availability Assessment (HELAA). The HELAA is one of the evidence documents for the Local Plan Review (LPR) and it makes a preliminary assessment of the suitability and potential of sites.</p> <p>Site CHI20 was assessed as 'not developable within the next 15 years' in the HELAA, and it was therefore not subject to further site selection work.</p> <p>Development of the whole site would be out of keeping with the existing settlement pattern, which is characterised by houses closely associated with the main roads.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>“Development would result in harm to the AONB, and would be inappropriate in the context of the existing settlement form and pattern.</i></p> <p><i>Highways concerns about the lack of pedestrian route into Chieveley, and difficulties in providing one.”</i></p> <p>Linear development similar to that allocated by the Draft Local Plan, on Graces Lane and/or East Lane would have no more impact in terms of harm to the AONB than the preferred allocation, and arguably even less so when having regard for the potential harm to historic designated assets associated with the current allocation. Linear development would also not be inappropriate in terms of existing settlement form and pattern, it would be entirely in accordance with the prevailing settlement form, which is frontage developments onto the existing road network. Whilst the highways concern is noted, it is clearly not a demonstrable issue for existing residents, and it would equally be applicable to the draft allocation, so cannot reasonably form a reason for exclusion.</p> <p>Development on our client’s site would have a highly limited impact on the historic core of Chieveley, unlike the draft allocation, by virtue of being located away from the historic core of the settlement, its Conservation Area and Listed Buildings. Development here would also not impact on highways, as on street parking is less of an issue here, and there isn’t the pressure for parking from the services and facilities in the village centre.</p> <p>Whilst there would need to be some removal of hedgerow, it is considered the ecological impact would be far less than the draft allocation. Particularly so on land north of Graces Lane, as access could be gained from east of the public right of way, where there is only low-level scrub. This would have a significantly less impact than that proposed by the draft allocation. The removal of this</p>	<p>The 2011 Landscape Sensitivity Assessment identified that the northern section of the site adjacent to the road is important open countryside at the entrance to the village, and would not be suitable for development. It went on to note that if the north west corner of the site was developed, thus extending housing back from the roads, the straight, strongly vegetated edge of the settlement would be lost.</p> <p>As part of the assessment of the site within the HELAA the Local Highway Authority advised that a further pedestrian route is possible onto East Lane, but the footway would need to be completed along East Lane to link with existing footways to the west. However it is not possible to provide a convenient pedestrian route along Graces Lane into Chieveley which is a desirable pedestrian route. On this basis the Local Highway Authority advised that they did not support the site.</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>vegetation is considered to have a limited impact on settlement character, unlike the removal of the mature vegetation on the draft allocation, which will have more significant impacts.</p> <p>On the basis of the above, it is considered that there is compelling justification to remove the allocation and replace it with land under our client’s control. As referenced above, we do not consider sufficient justification has been provided as to why the Council have considered a smaller section of the draft allocation, and seemingly not any omission sites. This approach is prejudicial to those landowners whose sites have been excluded, as the approach taken has not been consistent. Clearly, we contend if that approach is adopted in respect of our client’s land, there are two opportunities to allocate land (linear development along Graces and East Lane) which are demonstrably preferable to the Council’s preferred allocation, for the reasons set out above.</p> <p>We also consider that land under our client’s control can be allocated to assist and deliver any shortfall of housing land supply, particularly to assist in meeting any needs arising in respect of the Council’s preferred allocations, particularly the strategic allocations. Despite being in the AONB, Chieveley is a sustainable settlement which can deliver a higher quantum of growth than is currently proposed, without causing any undue harm to the AONB.</p> <p>Changes sought:</p> <p>On the basis of the above, it is considered that there is compelling justification to remove the allocation and replace it with land under our client’s control. Wey Planning Ltd for Neville Baker Estate (lpr1273)	<p>Object to policy.</p> <p><b><i>Landscape Capacity Assessment for Land at Station road, Hermitage attached to representation.</i></b></p> <ol style="list-style-type: none"> <li>1. We support the retention of sites RSA 29 and RSA 30 in the list of housing sites in the AONB allocated under Policy SP15 and the inclusion of a housing requirement for the Hermitage Neighbourhood Area. However, in light of our comments in relation to Policies SP1, SP2 and SP3, it is considered that an increase in the amount of new housing development on new allocated sites in the AONB, including an increase in the housing requirement for the Hermitage Neighbourhood Area to reflect the role and function of Hermitage and the availability of suitable development opportunities at the settlement, is necessary to deliver the housing and other objectives of the Spatial Strategy in respect of the AONB.</li> </ol>	<p>Support for the retention of sites RSA29 (Land off Charlotte Close, Hermitage) and RSA30 (Land adjacent to The Haven, Kintbury) noted.</p> <p>The Council was informed in February 2022 that the Hermitage NDP will no longer be allocating housing sites and so the Council has considered if there are appropriate opportunities for development as part of the LPR.</p> <p>The site at HER5 (Land adjacent Station Road, Hermitage) has been subject to a Landscape Sensitivity and Capacity Assessment that was prepared in May 2022. This concludes that development across the whole site would have a significant impact on key landscape characteristics and valued features of this area of the AONB and would not be appropriate. Development across a small area in the eastern part of the site could be considered further, subject to the retention of boundary vegetation and the careful consideration of the footpath route. Development should be contained in the eastern part of site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>2. Policies SP1 and SP2 state that the North Wessex Downs spatial area will have “appropriate and sustainable growth” but are silent on what constitutes appropriate and sustainable growth in terms of the amount of new housing development to be provided in the AONB over the plan period. Nevertheless, it is clear from Paragraphs 4.16 and 6.23 of the WBLPR supporting text and from Paragraph 4.4 of the Interim Sustainability Appraisal Report that the Council is proposing a reduction in the amount of new housing development in the AONB over the plan period 2020 – 2037 compared with current planned levels of provision (Policy ADPP5 of the CS makes provision for up to 2,000 net additional dwellings between 2006 - 2026 at an average rate of 200 dwellings per annum), even though the level of provision in the CS represents a shortfall against the local housing needs of the AONB to 2026.</p> <p>3. In addition, as Paragraph 4.4 of the Interim Sustainability Appraisal makes clear, the amount of housing provision in the AONB represents a reduction in the proportion of new dwellings to be delivered in the AONB relative to the overall housing requirement for West Berkshire over the plan period 2020 – 2037, due to an increased urban focus on new housing provision, especially upon the Newbury/Thatcham urban area.</p> <p>It is considered that the proposed reduction in the amount of new housing to be delivered in the AONB (both absolute and relative) will not achieve “appropriate and sustainable growth” because it will result in significant under-provision of new dwellings in the AONB over the plan period. This will have unacceptable consequences in terms of meeting local housing needs (both market and affordable), supporting the local economy, facilities and services and maintaining vibrant and balanced communities.</p>	<p>In relation to Policy SP15, the housing requirement for the Hermitage Neighbourhood Plan is proposed to be amended to zero in light of the above.</p> <p>It is noted that an increase in the amount of new housing is sought in the AONB. Potential opportunities for development have been identified in the HELAA with the focus for development in the LPR following the settlement hierarchy set out in policy SP3.</p> <p>Allocations for individual settlements will depend on the availability of suitable land for development and each settlement at the same level in the hierarchy will have different opportunities and constraints.</p> <p>However, the conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of all development proposals in the AONB.</p> <p>Sites have been allocated in the AONB, and policy SP2 allows appropriate and sustainable growth that conserves and enhances its special landscape qualities. This is in line with the national planning policy context.</p> <p>Newbury and Thatcham are the largest settlements in the district and it is appropriate that the focus for development should be here.</p> <p>Development opportunities are constrained in the AONB, a nationally designated exceptional landscape. The conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of all development proposals in the AONB.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>4. Paragraph 35 of the NPPF requires that for the Spatial Strategy to be justified, it should be an appropriate strategy, taking into account reasonable alternatives, and based on proportionate evidence.</p> <p>6. The only “evidence” in the WBLPR seeking to justify the low and reduced level of new housing proposed in the AONB overall, and on sites allocated under Policy SP15 in particular, is to be found at Paragraph 6.23 of the supporting text, which seeks to justify the limited and reduced scale of new housing development on the basis of the need to respect the special characteristics of the AONB.</p> <p>7. In this regard, the HELAA identifies a total of 42 housing sites in the AONB which the Council regards as “potentially developable”, subject mainly to the need for further landscape assessment and yet the Council has not undertaken any further landscape assessment of these sites to establish the potential of sites within the AONB to deliver additional housing development without causing harm to its special characteristics. In short, there is no evidence to support the Council’s approach.</p> <p>8. In the absence of such evidence, it is not possible to conclude that an alternative strategy based on an increased level of housing provision in the AONB would not respect the special characteristics of the AONB. Therefore, it is considered that the limitation on the (existing low) level of new housing provision in the AONB implied by Paragraphs 4.16, 4.18 and 6.23 of the WBLPR and confirmed by Paragraph 4.4 of the Interim Sustainability Appraisal is not an appropriate strategy and is unsound.</p> <p>9. Paragraph 6.54 of the WBLPR confirms that the Council regards the provision of affordable housing as a priority throughout the District and allocated housing sites will likely be an important, if not</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>the primary, source of affordable housing in the AONB over the WBLPR plan period. However, the total amount of new housing provision to be delivered in the AONB on sites allocated in the WBLPR and sites to be delivered in NDP's in accordance with Policy SP15 is 500 dwellings, of which approx. 182 dwellings will be affordable (based on Policy SP19), at an average rate of less than 11 affordable dwellings per annum. This compares with an identified need for 1,717 affordable dwellings in the AONB over the period 2018 - 2036, at an average delivery rate of 101 dwellings per annum (Table 9.1 of the Updated Housing Needs Evidence Final Report). In other words, the total supply of affordable housing coming from the sites allocated under Policy SP15 will meet little more than 10% of the affordable housing needs of the AONB over the plan period.</p> <p>10. In addition, there is no prospect of any increase in the supply of affordable housing in the AONB as a result of Policy DC 15 Entry Level Exception Sites because the exception does not apply in the AONB and because Policy DC 16 relating to Rural Exception Housing identifies that the conservation and enhancement of the natural beauty and special qualities of the AONB is an overriding consideration, it is likely that few, if any, such sites will come forward. Furthermore, it is unrealistic to rely on windfall sites to bolster significantly or even provide a steady supply of affordable housing. Accordingly, as the CS Inspector acknowledged in Paragraph 78 of his Report, the need for affordable housing in the AONB is most likely to be met by securing a proportion of such housing from market housing developments. Realistically, this can only be achieved by increasing the number of new housing sites allocated under Policy SP15 and increasing the housing requirements for the designated Neighbourhood Areas, such as Hermitage, in a manner consistent with its role and function and the suitability and development capacity of available sites.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>11. As noted in our comments on Policy SP2, subject to further landscape assessment of potential housing sites to establish that they are capable of being developed without causing harm to the natural beauty and scenic qualities of the AONB, the number of additional new housing sites and/or the housing requirements for the designated Neighbourhood Areas identified in Policy SP15 should be increased, with the aim to deliver an overall housing requirement for the AONB of up to 1,680 – 1,870 new dwellings over the WBLPR plan period.</p> <p>12. Whilst the inclusion of a housing requirement for Hermitage of 20 dwellings in Policy SP15 confirms that the Council considers Hermitage to be an appropriate and sustainable location for new housing development, no justification has been given for this figure or evidence to support it. In this context, it should be noted that in terms of services and facilities, our analysis identifies Hermitage as the second ranked Service Village in the AONB and West Berkshire overall, after Compton (see comments on Policy SP3). The Pirbright Institute site at Compton is allocated under Policy SP15 for 140 dwellings and whilst acknowledging that special circumstances applied to the allocation of the Pirbright Institute site, it is clear that notwithstanding its poor accessibility, the Council regards Compton as a sufficiently sustainable location to accommodate 140 dwellings. On that basis, we consider that Hermitage has the potential to accommodate more than the 45 dwellings currently proposed under Policy SP15 (25 on WBLPR sites and 20 on an NDP site(s)).</p> <p>13. The HELAA identifies two sites in Hermitage as “potentially developable” or “potentially developable in part”. These are HER4 Land adjacent to Statin Road and HER5 Land at Kiln Farm, west of B4008.</p> <p>14. In relation to the HER4 site, the Neville Baker Estate is promoting a development of 55 – 60 dwellings on a net developable</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>area of 2.9 hectares at a density of 20 dwellings per hectare net (ie excluding the land required to provide public open space, land for a community facility, the access feeder road from Newbury Road, a substantial landscape buffer and the retention of Station Road and heritage assets of local significance), in accordance with a masterplan submitted to the Council on 16th August 2018. In this regard, the officer's calculation of development potential undertaken at Stage 2a of the HELAA is incorrect because it mistakenly assumes that the developable area of 2.9 hectares is a gross figure, from which land for public open space etc needs to be deducted. We request that the HELAA is amended accordingly.</p> <p>15. The HELAA regards the HER4 site as “potentially developable” on the basis that the suitability of the site is currently unknown. This is because the HELAA identifies the need for further assessment of the impact of development on the landscape is necessary and had not been undertaken at the time the HELAA was last updated. A robust and up-to-date assessment of the Landscape Capacity of the site has now been undertaken on behalf of the Neville Baker Estate and submitted to the Council, which clearly demonstrates that the site is able to accommodate 55 – 60 dwellings without causing harm to the natural beauty and special qualities of the AONB. As a result, we consider that the site is suitable for development and that it should be regarded as developable.</p> <p>16. The HELAA regards the HER5 site as “potentially developable in part” because development on the whole site (5.8 hectares) would result in the coalescence of Hermitage with Oare (a historic settlement). The site promoter proposes a net developable area of 3.7 hectares, which the HELAA states could accommodate 74 dwellings. It goes on to say that development of part of the site may be acceptable, subject to further landscape assessment, but this work has not yet been undertaken. Therefore, until further</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>landscape assessment has been undertaken, it is not possible to establish the suitability and development capacity of the HER5 site.</p> <p>17. Our comments on Policy SP3 highlight the importance of ensuring that the housing requirements for designated Neighbourhood Areas are based on robust and up-to-date evidence of the suitability and development potential of available sites. This particularly applies to the Policy SP15 housing requirements for designated Neighbourhood Areas located within the AONB, where further assessment of landscape capacity is required to confirm the suitability and development capacity of sites and ensure that the special characteristics of the AONB are respected. In this regard, it is apparent that the housing requirement of 20 dwellings currently proposed for the Hermitage Neighbourhood Area is not justified or supported by proportionate evidence on the basis that the Council has not undertaken the further landscape assessments required to establish the suitability and development potential of available sites.</p> <p>18. To address this shortcoming, we have submitted a Landscape Capacity Assessment of the HER4 site to the Council under separate cover, which demonstrates that a development of 55 – 60 dwellings can be accommodated on the HER4 site without causing harm to the natural beauty and special characteristics of the AONB. Therefore, should further landscape assessment of the HER5 site by the Council establish that it is suitable and has a development potential of more than 20 dwellings, the housing requirement for the Hermitage Neighbourhood Area should be increased.</p> <p>19. The increased requirement will contribute towards the necessary increase in housing provision in the AONB over the plan period to better meet local housing needs, support the local economy, facilities and services, and maintain vibrant and balanced communities.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Changes sought:</p> <p>1. Subject to the further landscape assessment of potential housing sites identified in the HELAA to establish the overall capacity of the AONB to accommodate new housing development without causing harm to its special characteristics, the number of housing site allocations and the housing requirements for the designated Neighbourhood Areas identified in Policy SP15 should be increased, in order to maintain the current level of housing provision for the AONB set out in the Core Strategy over the WBLPR plan period. (See our comments on Policy SP2 for further detail).</p> <p>2. The proposed housing requirement of 20 dwellings for Hermitage is not justified and is not based on any robust and up-to date evidence of the suitability and development capacity of available housing sites identified in the HELAA. Should further landscape assessment of the HER4 and HER5 sites confirm one or both are suitable and have a development potential of more than 20 dwellings, the housing requirement for Hermitage should be increased.</p>	
Colin and Jacqueline Maclean (lpr1336)	<p>Object to policy.</p> <p>We would like to comment on Site Allocation for Residential and Mixed Use Development in the North Wessex Downs AONB Policy SP15.</p> <p>We have read the HELAA Report and would like to comment on para 8.79, 'The remaining 4 sites (Brad2-3, Brad5-6)' were considered reasonable alternatives for development.....'</p> <p>We are the owners of the land in Brad 2 and Brad 3 which 'are not recommended for allocation'. We are puzzled by this because</p>	<p>Comments noted.</p> <p>It is proposed to expand the settlement boundary around much of BRAD2 and BRAD3. Consultation will occur at the time of consultation on the submission version of the Local Plan Review. This would then allow the principle of development to be acceptable, subject to compliance with development plan policies.</p> <p>Now that the site at Stretton Close (RSA24) has been allocated, and outline and reserved matters permission granted, RSA25 is proposed to be allocated, and would be read alongside this site. The AONB Board comments the site would be a logical extension. Appropriate landscaping would be required in the site specific criteria.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>when HM Inspector over-rode the Council's decision not to allow RSA 24 / HSA22 land off Stretton Close to be allocated for house building, the Inspector made the point that the land referred to in Brad 3 was also suitable of building, similarly to land off Stretton Close, but it had no access. It is quite possible for us to provide access, in several ways, through our land at Crack Willow.</p> <p>Furthermore, as the Montessori school has full planning permission for its one main building and three lodges, which have been there and in use for many years, this site (Brad2) must also be a very serious contender for allocation</p> <p>We note that the Michael Wheat Report on the access options to the land to the North of Stretton Close (Brad 5), observed that access through the land of Crackwillow would not be acceptable unless the Crack Willow residence was demolished and because although this standard of access could serve up to 50 dwellings, this could not be possible without improvement to Cock Lane. He also refers to the fact that traffic generated by the Montessori Nursery School could be offset by the traffic generated by the residential development. He goes on to conclude that a smaller number of dwellings would be considered acceptable in terms of traffic impact or a greater number of further improvements could be made to Cock Lane.</p> <ol style="list-style-type: none"> <li>1. We are therefore surprised that considering HM Inspector's opinion that housing could be allowable on Brad 3 and, because we now know that access could be available via land at Crack Willow, that this site has not been allocated for consideration, we wish to know why Brad 2 and 3 were not recommended for allocation.</li> <li>2. We would also observe that the Montessori School had permission to accommodate 36 pupils meaning that for over 20 years traffic movements of well over 50 per day were generated without any adverse incidents of any sort.</li> </ol>	<p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Secondly, during the planning permissions for the Montessori School, we obtained a professional assessment, by a road and traffic expert, that showed that Cock Lane could easily accommodate this increased movement of traffic. The real issue faced in Cock Lane is the inappropriate parking by parents and services accessing Bradfield Primary School.</p> <p>Please also note that we are concerned and dismayed that this Consultation has only been brought to our attention within the past three days by the Chair of our Parish Council and the consultation ends at the end of this week!</p>	
Barton Willmore for Donfield Homes Ltd.	<p>Object to policy.</p> <p><b>See attachments for full response.</b></p> <p>We <u>do not agree</u> with the Council's approach of ruling out sites within smaller settlements and only allocating sites which fall within the service villages, rural service villages or urban areas.</p> <p>In considering sites promoted within the call for sites, the Council have ruled out all sites which do not fall within the service villages, rural service villages or urban areas.</p> <p>At paragraph 78, the NPPF states:</p> <p><b><i>“To promote sustainable development in rural areas, housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of</i></b></p>	<p>Comments noted.</p> <p>In some smaller settlements, which includes Upper and Lower Basildon, settlement boundaries are drawn around the built up areas. The principle of development is acceptable within the settlement boundaries of such areas, and therefore aid in supporting local communities and services.</p> <p>Settlement boundaries have been reviewed as part of the Local Plan Review, and will be consulted on as part of the submission version of the Local Plan Review.</p> <p>Policy DM1, which follows the NPPF, allows limited infill development in settlements with no settlement boundaries. The Local Plan Review is therefore flexible in relation to the provision of housing.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b><i>smaller settlements, development in one village may support services in a village nearby.</i></b></p> <p>The Council's approach to rule out sites which are outside of the settlement hierarchy (at stage 3 of the site selection process), without considering the site-specific benefits of such site, is inconsistent with the above paragraph of national planning policy. In particular, the final sentence above which refers to development in one village supporting services in nearby villages. In the case of our client's site at Lower Basildon, a minor development proposal for 9 dwellings within this village would support the services and vitality of the nearby settlement of Pangbourne which has numerous independent shops, cafes and restaurants.</p> <p>At paragraph 4.34 the Council acknowledges that for settlements outside of the settlement hierarchy, "<b><i>some limited development is important for the long-term sustainability of rural communities</i></b>". Given the Council's recognition of the benefits associated with this development, it appears an inconsistent approach for appropriate allocations on the edge of existing settlements not to have been considered.</p> <p>It is acknowledged that the majority of the small villages within West Berkshire will be within the AONB. On this basis, consideration of additional sites should be informed by careful consideration of landscape impacts. We also note that whilst the Landscape Character Assessment (2019) includes the whole borough, the Landscape Sensitivity Study 2009, Landscape Sensitivity Assessment (2011) and Landscape Capacity Assessments (2014 and 2015) have not included the consideration of development opportunities within smaller rural villages within the AONB and have only considered settlements within the settlement hierarchy. By excluding these sites from consideration, sites which would be acceptable in landscape terms have been overlooked. Our client's site at Lower Basildon provides an appropriate location</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>for development, on a site which is already bounded by existing residential uses with a linear layout in-keeping with the existing settlement. Our representations are accompanied by a Report on Landscape and Visual Matters prepared by David Williams Landscape Consultancy (dated October 2020) which confirms the suitability of our client's site for development from a landscape and visual perspective.</p> <p>Changes sought:</p> <p>The Council should allocate sites within smaller villages across the AONB.</p> <p>It is noted that the Council are yet to undertake settlement boundary reviews. When undertaking this work; we would encourage the Council to have regard to sites promoted for development within settlements which are not within the settlement hierarchy and utilise the settlement boundary review as an opportunity to allocate further sites for development. Given the absence of settlement specific landscape capacity work, we would encourage the Council to have regard to landscape work undertaken in relation to site promotions where this has been prepared in accordance with best-practice and undertaken by suitably qualified professionals.</p>	
Pro Vision for RivarLtd (lpr1514)	<p>Support policy.</p> <p><b>Full representation by Pro Vision on behalf of Rivar Ltd. attached.</b></p> <p>Support for allocation of land north of Southend Road, Bradfield Southend.</p>	Support for policy noted.

Respondent (with lpr ref)	Response	Council Response
Pro Vision for Trustees of Allan Snook Will Trust (lpr1915)	<p>Object to policy.</p> <p><i>Full representation on behalf of the Trustees of the Allan Snook Will Trust promoting land to the south of the Recreation Ground, Boxford is attached.</i></p> <p>The representation makes the case that the housing requirement is insufficient, the expected housing supply will lead to a significant housing shortage, the approach to smaller villages is flawed and the site to the south of the Recreation Ground, Boxford should be considered for allocation.</p>	<p>Comments noted.</p> <p>Policy SP12 of the emerging draft LPR made provision for 8,840 to 9,588 net additional dwellings (520 to 575 dwellings per annum. The target figure was 564 dwellings. The supporting text to policy SP12 identified a supply of 11,439 dwellings over the plan period.</p> <p>The NPPF expects authorities to follow the standard method to assess need, and it is considered that a housing requirement that is slightly higher than the Local Housing Need, demonstrating that the assessed need can be met, is appropriate. The use of a range to express the requirement introduces some flexibility.</p> <p>The site 'land to the south of the Recreation Ground, Boxford' has been assessed in the HELAA. The HELAA assessment of the site concludes that the site is not developable within the next 15 years, and this is because development would be inappropriate in the context of the existing settlement form and pattern. Development would also fail to conserve and enhance the AONB</p> <p>Nonetheless, Boxford is a village located outside of the settlement hierarchy and only limited appropriate development would be permitted in accordance with Policy DM1. Sites in settlements outside of the settlement hierarchy are not proposed for allocations.</p> <p>No further charges to the LPR are required.</p>
Turley Associates for A2 dominion Housing Group Ltd. (lpr1494)	<p><i>Full representations made by Turley on behalf of A2Dominion in relation to Land East of Reading Road, Streatley are attached.</i></p> <p>These representations promote land east of Reading Road, Streatley for development and set out the agent's reasons why it should be allocated to help meet West Berkshire's housing delivery over the plan period, or the need for extra care</p>	<p>Comments noted.</p> <p>The suggested site STR3 is not considered suitable for allocation in the LPR. The HELAA indicated that it was not suitable - <i>Development would result in harm to the AONB, and would also be inappropriate in the context of the existing settlement form, pattern and character of the landscape.</i> Streatley is a village located outside of the settlement hierarchy. Therefore, only limited appropriate development would be permitted in accordance with Policy DM1.</p>

Respondent (with lpr ref)	Response	Council Response
	accommodation. The land has been considered under HELAA reference STR3.	No further charges to the LPR are required.
Pegasus Planning Group Ltd. For Donnington New Homes (lpr2217)	<p><i>(comments submitted under SP15 as well)</i></p> <p>Donnington New Homes are submitting a number of representations in relation to the consultation and this letter and representation relates specifically to their land interests in Hungerford, namely sites HUN7, HUN8, HUN9 and HUN10 as labelled in the Council's HELLA.</p> <p>Policy SP2 of the Emerging Draft Local Plan deals specifically with the North Wessex Downs AONB which washes over the town of Hungerford.</p> <p>It is welcomed that the Policy states that the AONB will have <i>“appropriate and sustainable growth”</i> and that <i>“Development ... will support its local communities and rural economy ....”</i>.</p> <p>Donnington New Homes are however concerned that the second paragraph of the Policy goes onto state that <i>“Planning permission will be refused for <u>major development</u> in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest”</i> (my emphasis). The third paragraph of the Policy states that <i>“in determining what constitutes major development the Council will consider whether the development, by reason of its scale, character or nature, has the potential to have a significant adverse impact on the landscape and scenic beauty of the AONB. This will include the consideration of the individual characteristics of a proposal and its context and the impact of cumulative development”</i>.</p>	<p>Comments noted.</p> <p>Sites allocated as part of the plan making process, whether through the LPR or Neighbourhood Plan, will undergo a rigorous site assessment and sustainability appraisal. No changes to the policy are considered necessary</p> <p>Support noted.</p> <p>Clarification on ‘major development’ is proposed to be included in the Glossary. No other changes to Policy SP2 are proposed.</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
	<p>Notwithstanding the above text within Policy SP2 Policy SP1 states that allocations for housing will be made for Hungerford through a Neighbourhood Development Plan.</p> <p>Hungerford is identified as a Rural Service Centre in Policy SP3.</p> <p>Policy SP15 allocates sites for residential development in the North Wessex Downs AONB at settlements that are not included within a Designated Neighbourhood Area. A Neighbourhood Area for the Parish of Hungerford was designated on 9th April 2018. No sites are therefore allocated for residential development in Hungerford in the Emerging Local Plan Review. Rather, Policy SP15 directs 55 new dwellings to Hungerford through the Neighbourhood Development Plan.</p> <p>Donnington New Homes welcomes the identification of a need for 55 new dwellings at Hungerford and for these to be delivered through the Neighbourhood Plan process. They are however concerned that Policy SP2 could be overly restrictive to the delivery of this requirement through its reference to <i>“planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest”</i>.</p> <p>The NPPF defines major development generally as being development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more (NPPF Glossary) except for the purposes of paragraph 172 and 173 of the NPPF which deal with AONBs where the definition of ‘major development’ is stated as being a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined.</p>	<p>Support noted. Disagree that the policy is overly restrictive. No changes to the wording are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>An appeal decision (PINS ref: APP/F160/W/16/3165805) dated November 2017 for 30 dwellings in the Cotswold AONB in Chipping Camden (Cotswold District Council) considered what constitutes major development in the AONB. A copy of the decision is enclosed with this letter.</p> <p>The Inspector confirmed it was common ground that there is no definition of what constitutes “major development” (paragraph 13). He continued to acknowledge that <i>“the proposal, for 30 dwellings, using the normal meaning of the word ‘major’ is capable of amounting to major development, depending on context ... (however) ... the scale of the proposal in relation to the size of the settlement would not be major, amounting to about 2.5% of the size of the town”</i> (paragraph 13).</p> <p>At the 2011 Census the Parish of Hungerford was recorded as containing 2,756 households. The proposed Neighbourhood Plan allocation of 55 dwellings would therefore amount to about 1.99% of the size of the town.</p> <p>Furthermore, HUN7 which is being promoted by Donnington New Homes could deliver circa 31 dwellings and would therefore be consistent in scale with the development referred to in the above appeal decision which was found not to constitute major development in the Green Belt. Should HUN7 come forward for development it would also allow a further smaller site to come forward for residential development in Hungerford (i.e. such as HUN9).</p> <p>Changes sought:</p> <p>In order to provide consistency with regards to development in the AONB through the Local Plan Review it is considered necessary for Policy SP2 to make it clear that the delivery of housing required</p>	<p>HUN7 is not being progressed through the LPR.</p> <p>Disagree with proposed change as indicated above. No further amendments to Policy SP15 are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>through Neighbourhood Plans (as required by Policy SP15) would not constitute major development (in principle). As currently drafted the Policy leaves consideration as to what constitutes major development down to the decision maker (i.e. the LPA) at the time an application is made. It is therefore requested that the second paragraph of Policy SP2 is amended as follows:</p> <p><i>“Development in the North Wessex Downs AONB will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape. <u>Sites will be brought forward for residential development through Policies in the Plan and through Neighbourhood Development Plans. Such sites will not be deemed to constitute major development in the AONB.</u>”</i></p> <p>The above suggested change to Policy SP2 would ensure Policy SP15 is consistent with the wider strategy of the Local Plan Review.</p>	
Turley for Commercial Estate Group (lpr2361)	<p>Support policy</p> <p>Broadly agree.</p> <p>CEG generally supports the Council's strategic objective for housing and the approach to housing delivery in so far as it seeks to provide sufficient housing to meet identified needs whilst not curtailing the delivery of housing throughout the plan period (i.e. the housing figure is neither seen as a ceiling or a cap to development). This ensures that the plan provides flexibility and largely meets the requirements of the National Planning Policy Framework (The Framework).</p> <p>The Local Development Scheme currently envisages adoption in December 2022 but there are recent experiences where the Examination process has taken considerably longer than envisaged. Given the local plan are supposed to have a 15-year</p>	<p>Comments noted.</p> <p>The land north of Newbury site has permission, and is currently under construction. The housing number of 401 dwellings has been factored into the supply when calculating the 5 year housing land supply.</p> <p>As dwellings are under construction, with houses being actively marketed, it is not considered necessary to allocate the land for residential development. The settlement boundary would be reviewed to encompass the land, and will be consulted on as part of the consultation exercise for the submission version of the Local Plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>time horizon from adoption CEG consider that this emerging Local Plan should have an end date of 2038 rather than 2037 to build in some flexibility from the outset. This would require an additional year's worth of housing land to be identified, especially on the edge of sustainable settlements.</p> <p>Concern exists, however, about the Council's rigid approach to the allocation of sites for development. In particular the heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandford Park and evidenced through consultant papers such as the 'Start to Finish' Report 2nd Edition prepared by Lichfields).</p> <p>In the absence of a Housing Trajectory within the documentation or Appendices CEG therefore reserve the right to make more detailed comments on the delivery and lead in time of strategic sites at a later stage.</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements to come forward in an appropriate manner. Directing such to sustainable settlements would accord with the current spatial strategy.</p> <p>One example of this is the land to the North of Newbury. Part of the land benefits from planning permission for up to 401 dwellings, a local centre and a primary school and work has commenced to implement that permission. There is the opportunity for further housing to occur which would capitalise upon these new social and community facilities.</p> <p>Additional land in this location was covered by the Environmental Statement (ES) which was submitted in support of the application but did not form part of the development scheme itself. The ES demonstrated that the additional land was suitable for future development to assist in meeting the Council's housing needs in a location which is sustainable and where there are limited</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>constraints to development.</p> <p>The Council's own assessment of the wider site within the HELAA (December 2020) stated that this site is well related to Newbury and that it should be considered as part of a future potential strategic site. The Council has accepted that the site is suitable for development and in positively preparing the plan should be considering the positive contribution that a flexible approach to additional housing in locations, such as North Newbury, can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Changes sought:</p> <p>Consideration should be given within Policies SP13 -15 to identifying additional sites to provide more flexibility for the plan to deliver the identified housing numbers (including up-to 2038), as a minimum, and to ensure that any delays to the delivery of large strategic sites does not adversely impact on the Council's ability to meet their housing needs.</p> <p>The contribution that the CEG's site at North Newbury can make, to both housing delivery and infrastructure provision (i.e. links between the A339 and B4009), should carry significant weight and means that it should be formally allocated for residential purposes. Such an allocation would accord with the spatial strategy and the available technical evidence concerning the site's suitability for development.</p> <p>For the avoidance of doubt, the extent of the proposed allocation is identified on the accompanying plan.</p>	
West Build Homes (lpr2138)	Westbuild broadly support the Council's approach to the delivery of housing set out within Policy SP12, but have some reservations about specific matters which are set out below.	<p>Comments noted.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Significant concern exists, however, about the Council’s over-reliance on two large strategic sites. The Council’s own experience, and that on a national level, is that strategic sites have lengthy lead-in times, and are inherently slow in delivery, and this should be reflected within the emerging plan review through the inclusion of criteria for sites not proposed for allocation to be considered, increasing the flexibility afforded to the Council and reducing the reliance upon strategic sites.</p> <p>Paragraph 6.10 of the draft emerging plan refers to paragraph 68 the National Planning Policy Framework (The Framework) and the weight that should be attributed to the benefits of using suitable sites within existing settlements for homes. What it fails to have any regard to, however, is the sub section <b>Paragraph 68(d)</b> which states that local planning authorities should:</p> <p><i>“work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes.”</i></p> <p>Westbuild contends that without reference to the part of the Framework, and the inclusion of such provisions within the proposed policies, the plan is flawed in its approach and does not fully meet the tests of soundness.</p> <p>Westbuild contends that RSA25 (land north of Southend Road, Bradfield) cannot be delivered with the vehicular access as shown, due to adverse impact on protected trees, and insufficient geometry/ width for an adopted road between the existing buildings, root protection zones and boundaries.</p> <p>Changes sought:</p> <p>Policies SP13 -15 should be amended to provide the potential for additional sites to come forward within the plan period and to</p>	<p>and a larger number of medium and smaller sites (including brownfield sites within settlement boundaries) that can deliver housing sooner.</p> <p>In reference to RSA25 the Highways Authority do not report concerns and comment that an adoptable access is achievable immediately on to Southend Road. The site promoter confirms that access is available. Policy RSA25 would ensure that the access would need to take into account the TPOs on the eastern boundary.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>ensure that any delays to the delivery of the large strategic sites is mitigated.</p> <p>Site RSA25 should be removed from SP15.</p>	
<p>Carter Planning Ltd for R L A Jones (lpr1902)</p>	<p>Object to policy.</p> <p>Policy SP15 should be amended to delete RSA22 Lynch Lane and RSA23 Newbury Road, Lambourn. The Section is entitled “Delivering Housing”. Despite being allocated in April 2017 there is no sign of either site coming forward with no planning applications being made in respect of Lynch Lane and planning permission having already been refused for Newbury Road.</p> <p>Policy RSA 22 (HSA 20 Site LAM005) Lynch Lane, Lambourn Our Clients have made representations elsewhere that the housing provision in the Plan is inadequate and extra sites should be included, in particular Site LAM007.</p> <p>However if the Inspector considers that extra sites are not required then SHLAA site LAM007 should be included instead of sites RSA22 (HSA20) or more particularly RSA 23 (HSA21 (or LAM015)), in the Draft document.</p> <p>RSA 22 has the disadvantage of being a very large site for the village to accommodate. The capacity of the site has risen arbitrarily since the 2014 Preferred Options document and yet the constraints have increased. It lies alongside an SSI/SAC and part of the site is liable to flooding from the River Lambourn which flows along the northern boundary. No work seems to have been carried out on a number of aspects including archaeology. It appears that the site capacity has arbitrarily increased by 4 units from 56 in the 2014 document to 60 in the adopted document merely so that, together with new site RSA 23 (LAM015), it tries to compensate for the unjustified omission in this version of the Draft Plan of site LAM007 which was previously included.</p> <p>The previous Summary of Lambourn Sites SA/SEA page 122 notes the negative points in relation to environmental sustainability and</p>	<p>Comments noted.</p> <p>Please see responses to Policies RSA22 and RSA23 (lpr1904 and lpr1905).</p> <p>Several sources will ensure a continuous supply of housing across the plan period. These include retained allocations in the Local Plan. The site is currently allocated in the Housing Site Allocations DPD which forms part of the existing Local Plan. Because development has not yet been built out, the allocation is being retained.</p> <p>The site LAM1 (previously LAM007) was promoted as part of the HELAA which concluded the site was ‘potentially developable in part’. Development of the lower eastern sections of the site would not harm the natural beauty of the AONB and would relate to the existing settlement pattern.</p> <p>Following the publication of the HELAA in February 2019 and the update in December 2020, further evidence for the LPR has been produced. The Level 2 Strategic Flood Risk Assessment (SFRA) published in December 2021 indicates that part of the site is at risk from groundwater emergence during a 1 in 100 year flood event. The Level 2 SFRA mentions that whilst there weren’t any reported incidences of groundwater flooding on the site during the 2013/14 flood event, this might have been because the site is grassland rather than a habited property so wasn’t reported. Groundwater emergence modelling indicates that part of the site was affected. The revised NPPF published in July 2021 now places emphases on considering “...<i>flood risk from all sources and the current and future impacts of climate change...</i>” (para 160). The NPPF is clear at para 159 that</p>

Respondent (with lpr ref)	Response	Council Response
	<p>flooding. The need for a buffer zone and the inability to develop within the flood zone appear to reduce the size and capacity of the site and not to increase it as is arbitrarily suggested (from 56 to 60) in the adopted Plan.</p> <p>The Parish Council within their response with regard to RSA 22 (LAM005) included the following key points:-</p> <p>"Environment -the site is within the AONB. The site is immediately adjacent to the River Lambourn, the corridor of which is a Site of Special Scientific Interest.</p> <p>Housing and the Community – Lambourn needs a period of consolidation to adjust to the social impact resulting from recent rapid growth.</p> <p>Industry – impact on the racehorse industry– safety of horses and riders will be affected by increased traffic generation</p> <p>Archaeology – Lambourn formed part of the parkland of Lambourn Place, and the site is believed to be a site of a Saxon palace. Any development would destroy this.</p> <p>Roads – roads are narrow, with blind bends and dangerous junctions. Inadequate footpaths and the roads are busy. Any increase in traffic will be detrimental to the safety of the road users". These matters do not appear to have been addressed.</p> <p>The previous Lambourn Site Assessments document, in its summary notes that "the Parish Council had various concerns about this site, as does the local community". Indeed this was the least favoured site for development by the residents responding to the survey.</p> <p>The Plan,s approach to the selection of sites is not justified.</p> <p>Policy RSA 23 (HSA 21 Site LAM015) Newbury Road Lambourn Policy RSA 23 should be deleted and replaced by previously preferred Option Site LAM007. RSA 23 (HSA21 or LAM015) is a very small, inflexible site and makes little contribution to housing supply (five dwellings). It appears to have been included (and the notional capacity of</p>	<p><i>"...inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future)."</i></p> <p>Lambourn Parish Council are preparing a neighbourhood plan and the Neighbourhood Area was designated in December 2018 and covers the whole of the Parish. It is the intention of the Parish Council to include allocations for residential development in the plan. It is therefore not proposed to include any new allocations in Lambourn in the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>LAM005 increased) merely so that LAM007, previously included as being acceptable, could be excluded.</p> <p>RSA 23 (HSA21 or LAM015) was not examined in the West Berks Landscape Sensitivity Assessment by Kirkham Landscape Planning.</p> <p>The reference to the site in The Lambourn Site Assessment was both cursory and inadequate. The Parish Council were not consulted (apparently it appears neither were statutory consultees). RSA 23 scores poorly when compared against the landscape criteria previously used. It forms an extension of the existing settlement boundary.</p> <p>RSA 23 (LAM015) was included in the adopted Plan at a late stage and yet has no identifiable feature to create its northern boundary which is open and on a ridge. There is no landscaped boundary. It is on a ridge and can be described as an open area on the edge of the settlement seen at the entrance to the village. It also lies close to the Medieval Village of Bockhampton.</p> <p>All these matters are causing difficulty with a current planning application for eight dwellings.</p> <p>The RSA Policies should include site LAM007 “Land between Folly Road, Rockfel Road and Stork House Drive” instead of RSA 23.</p> <p>The Draft Plans approach to the selection of sites and the review of settlement boundaries is not justified or sound.</p> <p>In other representations we found much of Policy SP 1 is unobjectionable and can be supported but objection was raised to the very last sentence. “Allocations for housing for Hungerford, Lambourn, Compton and Hermitage will be made through Neighbourhood Development Plans”. This problem is exacerbated in Paragraph 6.14 which proposes that 315 dwellings will be provided through Neighbourhood Plans. That is an abrogation of the function of this Draft Plan. Neighbourhood Plans should not be making housing allocations, that is a function of the Draft Plan, and indeed some such sites coming forward may cut across the Draft Plan. Furthermore Policy SP15 suggest that the Lambourn</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Neighbourhood Plan should provide 25 dwellings in addition to the sites already included in the Draft Plan (and which we suggest may not come forward).</p> <p>Indeed if the task of allocating housing sites is left to Neighbourhood Plans , especially in Lambourn, either that Plan may not come forward or, more likely, local residents will not want additional housing in their locality leaving the housing needs/requirement unsatisfied.</p> <p>Changes sought:</p> <p>Policy SP15 should include the SHLAA site known as LAM007 “Land between Folly Road, Rockfel Road and Stork House Drive” instead of RSA22 and RSA23.</p> <p>The Plan’s approach to the selection of sites is not justified or consistent with previous Plans. Further the detailed examination of Site RSA 22 means that it may not be delivered or may only delivered with reduced capacity. Our Clients would prefer that Site RSA 22 is omitted.</p> <p>Site RSA23 should be omitted. It has been refused planning permission and did not originally go through the rigorous consultation process or selection procedure applied to other sites such as LAM007. Its impact on the landscape was not been adequately assessed. It is further from services than LAM007 and has a number of other disadvantages.</p> <p>The inclusion of RSA23 would undermine the Plan and would mean that it is both unsound and ineffective.</p> <p>The reliance on allocations through the Neighbourhood Plan process raises questions as to whether the objectively assessed needs will be met within the plan period increasing pressures on other settlements to meet the unmet need.</p> <p>The Council should allocate all housing sites through this Draft Plan and do not leave the task to Neighbourhood Plans. Amend or delete Paragraph 6.14 and Policy SP15 “Total designated by</p>	

Respondent (with lpr ref)	Response	Council Response
	Neighbourhood Area” to delete the 100 dwellings therein and replace them with allocated sites one of which could be our Clients site “Land between Folly Road, Rockfel Road and Stork House Drive (SHLAA site reference LAM007)”.	
Pro vision for CALA Group Ltd (lpr2414)	<p><i>In context of two sites: East and West of Salisbury Road, Hungerford. Full representations attached</i></p> <p>Supporting text explains that, in the AONB, “<b>development will be modest</b>, helping to meet local needs, support the rural economy and sustain local facilities in accordance with Policy SP2” (our emphasis).</p> <p>For Hungerford, this has translated into a proposed requirement for 55 homes over the plan period. Exactly how that figure has been calculated is not clear i.e. is it a proportion of the overall growth directed to the AONB, and if so how has that proportion been justified?</p> <p>Even taking into account the assertion that needs to 2026 have been met through existing allocations, this equates to an annualised requirement of 5 dwellings for the town (taking the whole plan period, it would be even less, at 3.2 per year). In the context of an annual need across the district of 513 dwellings, this represents less than 1% of the district’s housing target.</p> <p>With a proposed allocation of 500 homes altogether in the AONB over the plan period (17 years, 2020 to 2037), including the existing</p>	<p>In determining the housing requirements for the designated neighbourhood areas, consideration has been given to the development opportunities in the HELAA, as well as the settlement hierarchy.</p> <p>The Parish of Hungerford contains the town of Hungerford and the small settlement of Eddington. Hungerford is identified as a Rural Service Centre in the settlement hierarchy. Rural Service Centres have a range of services and reasonable public transport provision meaning there are opportunities to strengthen the role in meeting the requirements of surrounding communities. Eddington is not included within the settlement hierarchy and is instead a ‘smaller village with a settlement boundaries’ therefore only suitable for limited infill development subject to the character and form of the settlement.</p> <p>Hungerford sits within the North Wessex Downs AONB, a nationally important and legally protected landscape which national planning policy is clear that great weight should be given to conserving landscape and scenic beauty in AONBs.</p> <p>There is one site allocated for 100 dwellings in the HSA DPD, and development is close to completion.</p> <p>The February 2020 HELAA identified 8 sites as having potential, and this remained the same in the December 2020 update of the HELAA. Taking the development potential of these sites into consideration alongside the placing of Hungerford within the settlement hierarchy as</p>

Respondent (with lpr ref)	Response	Council Response
	<p>allocations in the Housing Sites Allocations DPD, only around 5% of growth is be directed to this spatial area, an area which comprises three quarters of the district.</p> <p>In the context of the AONB spatial area, if including the HSA18 allocation (Land East of Salisbury Road, Hungerford), a total of 155 homes are allocated to Hungerford over the plan period. This represents 31% of the AONB apportionment.</p> <p>As the only town in the AONB (within the district), with its very good accessibility, including main line rail station, there is a case that a much greater proportion of the growth should be directed to the town to promote sustainable development, including reducing the need to travel. The evidence base underpins this point, noting that the town “is the most sustainable rural service centre” and that it “performs a significant role for a large catchment area”. And Hungerford is the only settlement in the AONB to have a designated ‘Town Centre’.</p> <p>We also note that this catchment is cross-boundary, given the proximity to Wiltshire, and address this in comments on the Duty to Cooperate below.</p> <p>Looking beyond 2026, and discounting the already committed HSA site allocations, the apportionment to Hungerford (55 homes) is still only around a third (34%).</p>	<p>well as the AONB, officers consider that a housing requirement of 55 dwellings would be appropriate.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Therefore, the draft spatial strategy is proposing not “modest”, but very modest growth, especially for main settlement in the AONB</p> <p>And this is in the context of a spatial strategy that is relying very heavily on two strategic allocations - Sandford Park (Draft Policy SP16) and North East Thatcham (draft Policy SP17). Both of which rely on significant infrastructure requirements, and will take significant time to come forward, and in the case of Sandford, have already failed to get planning permission previously for various, complicated technical reasons. While it is appropriate that the main focus of development is outside of the AONB, the extent of constraint in favour of reliance of such allocations outside the designated landscape is not supported as it is unlikely to be the most overall sustainable approach, when taking into account all three strands of sustainable development (social, economic and environmental). Noting this proposed policy approach, which appears to be inconsistent with the settlement hierarchy and we consider is not the most sustainable approach overall, it is therefore relevant to scrutinise the evidence of local need in the town, which we cover in the next section.</p> <p>Finally, in respect of the proposed spatial strategy, while we reiterate our support for the HNP process in identifying suitable sites for development, we also support the evidence base that states that, in the event that the HNP stalls (for example, fails referendum), the District Council will “pick up the site selection work and consider allocations through the LPR”.</p> <p>It is important that the LPR draft policies reflect that important point (draft Policy SP15 currently does not). However, it would also be important to recognise in the evidence</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>base, and the draft policies, that significant work has been undertaken by the Town Council, assisted by land promoters including CALA, to assess available sites. This local evidence should be the starting point if allocations are necessary through the LPR in due course.</p> <p><b>Need in Hungerford</b></p> <p>A report into development need was published in 2019 by Aecom to inform the HNP. It is reported that the Housing Needs Figure (HNF) for Hungerford is 27 net additional dwellings per year, equating to a total of 486 over the Plan period 2018 to 2036. Further, it is reported that “There is a <b>severe lack</b> of suitably affordable houses for the population of Hungerford, and <b>every effort</b> should be made to maximise AH provision going forward....” (Our emphasis).</p> <p>The Aecom report goes on to note that the HNF is an “upper-bound target that is subject to supply of suitable sites”<sup>13</sup> i.e. that supply of suitable land will be a significant factor in what is a realistic housing target for the settlement. CALA has been cooperating with the HNP process to allow for detailed assessments of available sites.</p> <p>The requirement proposed in draft Policy SP15 is 55 dwellings. That is some 431 fewer than the settlement specific assessment of need. In other words, the proposed requirement for the HNP, if adopted, is just 11% of specific need identified for the town.</p> <p>Even including the 100 homes allocated (and now being delivered) under HSA18, the shortfall is substantial at 331 homes (i.e. providing for only 32% of need).</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>It is not clear in the evidence if site availability has been a factor in the proposed housing requirement, or whether it is a top-down figure based on a proposed spatial strategy of very significant constraint to development in the AONB over the plan period.</p> <p>It would certainly be appropriate, indeed essential, for the requirement to be tested against the realistic site capacity in the town, which the HNP process is in the process of doing.</p> <p>As it stands, unless there was clear evidence that capacity was so constrained that no more than around 55 homes could be achieved, the proposed LPR will make a significant contribution to worsening housing need.</p> <p>The implication of such a policy approach is likely to be new households, for example, new families, having to leave the town, with implications for the social fabric and sustainability of the community.</p> <p>And there is evidence to strongly indicate that there is significantly greater capacity in and immediately around the town. Sites HUN12 and HUN14, for example could potentially deliver in the order of 150 homes immediately adjacent to the current settlement boundary (which is due to be reviewed in any case before the next draft of the LPR).</p> <p>Initial assessment of the sites for the HNP, and in parallel through the HELAA, has raised no insurmountable constraints to development, albeit both sites, but HUN12 (West of Salisbury Road) in particular, would require careful, landscape led master planning to mitigate impacts in the landscape. The site assessment recognises that specific landscape assessment is required to fully test the site capacities.</p> <p><b>Duty to cooperate</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>If there is indeed unmet need from neighbouring authorities, the strategy of such a high degree of constraint in the AONB is further undermined (in addition to the impact on not meeting needs arising from within the district itself).</p> <p>Turning to Hungerford specifically, as noted above, the town is relatively close to the district boundary with Wiltshire. Given the “large catchment” identified in the evidence base, the cross-boundary relationship should be factored into the spatial strategy and evidence base (including the forthcoming Duty to Cooperate Statement), which inevitably influences the future development needs. The influence of this geography is recognised in the assessment of housing need by Aecom.</p> <p><b>Sustainability Appraisal</b></p> <p>In terms of draft Policy SP15 (allocations in the AONB, it is also given a positive assessment, albeit, not as significantly positive, against SA1.</p> <p>While the policy may well score highly in other respects, it does not in terms of SA1, and so the assessment should be thoroughly reviewed in this respect if it is to stand-up to scrutiny.</p> <p>The SA may even underplay how draft Policy SP2 and SP15 actually positively help to protect the AONB from development (for example, when assessed against SA5 – Natural, built and historic environment), again indicating a review of the assessment would be appropriate.</p>	
Sovereign Housing Association (lpr2187)	<p>Support policy.</p> <p>Both the landowners and Sovereign support the identification within Policy SP 15 as well as the supporting text within paragraph 6.23 of the identification of the land adjacent to The Haven, Kintbury as a development site to come forward within the North Wessex</p>	Support noted. No further changes to the LPR are proposed.

Respondent (with lpr ref)	Response	Council Response
	Downs, where we can guarantee the delivery of the site. We fully support the special characteristics of the North Wessex Downs AONB, and that development will help support not only local needs, but also help to sustain local facilities and provide much needed housing in those villages which are capable of accommodating growth.	
Bell Cornwell LLP for Friday Street Developments Ltd (lpr2360)	<p><i>Representation promoting the allocation of land at Ash Grove, Bradfield Southend attached.</i></p> <p>Representation raises concerns about the assessment of the site, particularly with regard to landscape and the assessment of the full site area when agent has previously made clear that an allocation smaller than the whole site area would be acceptable.</p>	<p>Comments noted.</p> <p>The site was previously ruled out based on landscape advice. If Stretton Close was to remain undeveloped the site would be poorly connected to the rest of the settlement. Now that the site at Stretton Close (RSA24) has been allocated, and outline and reserved matters permission granted, RSA25 would be read alongside this site. The AONB Board comment the site would be a logical extension. Appropriate landscaping would be required in the site specific criteria.</p>
Donnington New Homes (lpr2063)	<p>Donnington New Homes are promoting land at Kiln Farm, west of B4009 and north of Hermitage Primary School and referenced within the HELAA as HER5.</p> <p>The site is approximately 5.8 Hectares (14.33 Acres) and based on the Concept Land Use Plan submitted with our call for sites submission package dated 29th September 2019, could accommodate approximately 110 dwellings.</p> <p>We welcome that the Policy states that the AONB will have “appropriate and sustainable growth” and that “Development ... will support its local communities and rural economy ....”.</p> <p>We are concerned that the second paragraph of the Policy goes onto state that “<i>Planning permission will be refused for <u>major development</u> in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest</i>” (my emphasis). The third paragraph of the Policy states that “<i>in determining what constitutes major development the Council will</i></p>	<p>The promoted site (Kiln Farm, west of B4009, and referenced within the HEELA as HER5) will not be allocated with the LPR and included in Policy SP15.</p> <p>The HEELA assessment indicated that: <i>The site does not offer a suitable location for being developed for the defined use or there are known constraints which significantly inhibit development. The site is unlikely to be found suitable for the defined use within the next 15 years.</i></p> <p>There is no further evidence before West Berkshire Council that would reverse the decision within the HEELA to exclude this site.</p> <p>The Council was informed in February 2022 that the Hermitage NDP will no longer be allocating housing sites and so the Council will be considering if there are appropriate opportunities for development as part of the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>consider whether the development, by reason of its scale, character or nature, has the potential to have a significant adverse impact on the landscape and scenic beauty of the AONB. This will include the consideration of the individual characteristics of a proposal and its context and the impact of cumulative development</i>".</p> <p>Policy SP1 states that allocations for housing will be made for Hermitage through a Neighbourhood Development Plan.</p> <p>Policy SP15 goes on to allocate sites for residential development in the North Wessex Downs AONB, to settlements that are not registered as Designated Neighbourhood Areas.</p> <p>A Neighbourhood Area for the Parish of Hermitage was designated on 26th April 2019. As a result, no sites are allocated for residential development at Hermitage in the LPR and instead, Policy SP15 directs 20 new dwellings to Hermitage through the Neighbourhood Development Plan.</p> <p>We <u>support</u> the decision to <i>identify</i> the need for 20 new dwellings at Hermitage, to be delivered through the Neighbourhood Plan process.</p> <p>Changes sought:</p> <p>In order to provide consistency with regards to development in the AONB through the Local Plan Review it's considered necessary for Policy SP2 to make it clear that the delivery of housing required through Neighbourhood Plans (as required by Policy SP15) would not constitute major development (in principle). As currently drafted the Policy leaves consideration as to what constitutes major</p>	<p>Support noted.</p> <p>Clarification is being sought on what constitutes 'major development' insofar as it cross refers to Policy SP2. Please refer to responses to comments in relation to SP2.</p> <p>The references to the Hermitage neighbourhood plan areas is proposed to be assigned a zero allocation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>development down to the decision maker (i.e. the LPA) at the time an application is made. It is therefore requested that the second paragraph of Policy SP2 is amended as follows:</p> <p><i><u>“Development in the North Wessex Downs AONB will support its local communities and rural economy in a manner commensurate with the statutory status of the AONB as a nationally valued landscape. Sites will be brought forward for residential development through Policies in the Plan and through Neighbourhood Development Plans. Such sites will not be deemed to constitute major development in the AONB. Planning permission will be refused for major development in the AONB except in exceptional circumstances, and where it can be demonstrated to be in the public interest”.</u></i> (proposed new text is underlined).</p> <p>The above suggested change to Policy SP2 would ensure Policy SP15 is consistent with the wider strategy of the Local Plan Review.</p> <p>We have taken the opportunity to prepare a revised concept plan, to deliver a scheme of a suitable form and scale that accords with the Hermitage NDP 20 dwelling requirement.</p> <p>We have written to the Hermitage NDP group on this basis and we enclose the correspondence and enclosures. This information should be used for any future HELAA updates.</p> <p>Please note that the original site area submitted to West Berkshire</p>	<p>Disagree. Refer to the council’s response to SP15. No further changes are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	Council 29th September 2019, referenced within the HELAA as HER5, remains valid for any future HELAA assessment.	
Gerald Eve for Fairhurst Estate (lpr2373)	<p>Object to policy.</p> <p>Our client owns and controls land situated to the East of Shaw Farm Road, Newbury. A site location plan of this land is included at Annex 1 (<i>attached</i>). The land would be accessed from the roundabout adjacent to the Vodafone Headquarters as an extension to the already permitted housing development, and would not rely upon vehicular access from Shaw Farm Road/Love Lane itself.</p> <p>We share the concerns of others in respect of the approach to the identification and allocation of sites for development. In particular the heavy reliance on strategic sites has the potential to delay the delivery of much needed housing, given that strategic sites are inherently slow to deliver (as witnessed with the Council's Core Strategy allocation at Sandleford Park and evidenced through background papers such as the 'Start to Finish' Report prepared by Lichfields).</p> <p>In order to provide additional flexibility and ensure that the Council does not find itself in a position of not having an up to date five year housing land supply, consideration should be given to providing additional flexibility within the plan by setting criteria for sites on the</p>	<p>Noted.</p> <p>Disagree. As at 31 March 2021, the 5 year housing land supply was 7.3 years. The council does not consider it necessary to give additional flexibility within the plan by setting criteria for sites on the edges of sustainable settlements. This approach would undermine the strategy of the plan and would not be in accordance with the evidence base to support the LPR, including the HEELA.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>edges of sustainable settlements to come forward in an appropriate manner.</p> <p>The Council's own assessment (within the HELAA (December 2020) of the wider area, within which the land is situated, stated that it is well related to Newbury and that it should be considered as part of a future potential strategic site (site reference SCD4). The Council has accepted the principle that the general location is suitable for development and, in positively preparing the plan, should be considering the positive contribution that a flexible approach to additional housing in locations such as this can make to ensuring that the plan meets its objectives. This would align with paragraph 16 (b) and the tests of soundness set out in the Framework.</p> <p>Changes sought:</p> <p>Further consideration of the whole site assessed as SCD4 within the HELAA should be undertaken. The site, as shown within SCD4, and specifically including the area as identified on the enclosed plan, merits further investigation and consideration for inclusion as a suitable site for the delivery of additional new homes.</p>	<p>No changes to the LPR are proposed.</p> <p>Disagree. Site SCD4 (Land to the north of Newbury, Newbury) was discounted in the Emerging Draft West Berkshire Local Plan Review to 2037 Site Selection Background Paper. The site should come forward for consideration for a future review of the Local Plan. The document indicated that <i>“The site is fairly well related to Newbury with its comprehensive range of services and facilities. Overall the site is likely to have a neutral effect on sustainability and the SA/SEA does not highlight any significant sustainability effects. Issues which would need to be resolved relate particularly to highways and access and further information would be required on ecology, heritage and landscape. As the site is at risk of surface water flooding attenuation measures would need to be incorporated into any development. Development would need to be avoided in the areas at risk. Development of this site should be considered as part of a future potential strategic site to the north of Newbury in order to ensure the most sustainable outcomes. Development would require access from the B4009 to the A339. A further strategic site at Newbury would be a consideration for a future review of the Local Plan.”</i></p> <p>No further amendments to the LPR are proposed.</p>
Armstrong Rigg Planning for Manor Oak Homes Ltd (lpr2424)	<p>Object to policy.</p> <p>Manor Oak Homes objects to Policy SP 15 as it will fail to meet the development needs of Lambourn. Our clients concern with the policy are threefold. Firstly, it proposes to reallocate two sites in Lambourn that have so far failed to deliver the growth needed. Secondly, the associated policies for these reallocated sites will fail to deliver the size, type and tenure of housing most needed in the</p>	<p>Comments noted.</p> <p>Please see responses to Policies RSA22 and RSA23 (lpr2423 and lpr2422).</p> <p>Several sources will ensure a continuous supply of housing across the plan period. These include retained allocations in the Local Plan. The site is currently allocated in the Housing Site Allocations DPD which</p>

Respondent (with lpr ref)	Response	Council Response
	<p>village. Finally, it relies on the emerging Lambourn Neighbourhood Plan to allocate sites for development despite clear indications that the Parish Council has no intention of doing so. In this respect, there is a clear need to allocate additional site/s in Lambourn to meet the needs of the village and are pleased to set out below how our client's site could be delivered to help meet these needs.</p> <p><b>Reallocation of Existing Sites</b></p> <p>The emerging LPR proposes to reallocate two sites for residential development that are existing allocations in the Housing Site Allocations Development Plan Document (May 2017). Manor Oak Homes does not in principle to the reallocation these sites, but any decision in this regard must be based on a thorough re-assessment of their appropriateness and deliverability: (see <i>reps on RSA23 and RSA22</i>)</p> <p><b>Failure to Deliver Size, Type and Tenure of Dwellings Needed</b></p> <p>As set out above, our client has significant concerns regarding the deliverability of the existing allocations in Lambourn and significantly their viability with respect to delivering the most pressing needs of the village in terms of small social rent dwellings tailored specifically to meet the needs of the racehorse industry.</p> <p>As set out in more detail below, our client has met with Lambourn Parish Council on two occasions to discuss their proposals for the site and during each meeting members have stressed that the key housing need in the village is for social rent dwellings that are tailored in terms of their size and type to meet the needs of younger people working in low paid jobs in the racehorse industry.</p> <p>To understand this need in more detail, our client is currently consulting with Racing Welfare as to the possibility of racing related</p>	<p>forms part of the existing Local Plan. Because development has not yet been built out, the allocation is being retained.</p> <p>These comments relate to the HELAA site LAM7. This site was assessed in the HELAA as not developable within the next 15 years. The site was found to be unsuitable because an appropriate access cannot be provided.</p> <p>Regarding the NDP, as at October 2022 the NDP steering group were undertaking site selection work with the intention of including residential allocations in the plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>affordable housing forming part of the proposed scheme. Racing Welfare is a charity supporting current and retired people from the horseracing and thoroughbred breeding community. They operate a Regional Welfare Office in Lambourn and also provide properties in the village through their housing association Racing Homes.</p> <p>Racing Welfare has confirmed that there is a distinct need in Lambourn for social housing to meet the needs of the racing community and that our client's site is considered to be a suitable location to provide housing designed to meet this need. The charity has also directed our client to the findings of their 2016 housing needs survey across the racing industry. A report on the findings of this survey is contained at Enclosure 6 which provides the following summary:</p> <p><i>“The research showed that housing is least affordable for singles, particularly young singles, and lone parents (although there are relatively few in the industry). The greatest proportions of households finding housing unaffordable are in Epsom, followed by Lambourn, then Newmarket and the South West.</i></p> <p><i>The study identified a need for short-term temporary housing for newcomers to a racing centre. This would be particularly useful for young singles.</i></p> <p><i>There is a lack of suitable shared housing for singles. The report suggested a hostel unit with both private and communal space is most suitable. The hostel accommodation at a training yard in Lambourn was cited as a successful example and highly regarded. This provides individual front doors, en-suite bedrooms and also some communal areas. This type of accommodation could help to manage some of the difficulties identified with shared housing.”</i></p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Further evidence on the desperate need for affordable housing delivery in the wider AONB area is contained in Council's Updated Housing Needs Evidence report (May 2020) prepared by Icen. This report identifies the following net affordable housing needs in the District during the plan period and demonstrates that the highest annual need is from within the AONB. <i>(table in full representation)</i> This spatial area has by far the lowest level of proposed housing delivery in the emerging LPR and it is therefore critical that each and every housing proposed housing allocation is judged on how it can help deliver affordable homes to meet local needs.</p> <p>As set out in more detail below, our client's proposals, while not proposing an affordable housing exception site, have been specifically designed to meet the needs of the racing industry which would provide a significant benefit to the community in delivering the affordable housing most critically needed in Lambourn.</p> <p><b>Reliance on Lambourn Neighbourhood Plan</b></p> <p>In our two meetings with Lambourn Parish Council to discuss our client's emerging proposals they have stated firmly that they are not proposing to allocate sites through the emerging Lambourn Neighbourhood Plan. In our first meeting on 12th October 2020, the emerging LPR had not been published, such that at this stage there was no emerging LPR policy requiring them to allocate sites for housing. Our second meeting, however, took place on 19th January 2021 after the publication of the emerging LPR. At this meeting we discussed the emerging Local Plan requirement for Lambourn Neighbourhood Plan to allocate site/s for 25 dwellings and we were advised that the Parish Council had had discussions with West Berkshire's planning policy team who told them that this requirement could be met through windfall sites during the plan period. We naturally followed this point up with policy officers at the Council who advised that this was the not the case and that they expected that the Neighbourhood Plan would allocate site/s for</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>development. We are not sure what has led to this confusion regarding the requirement for Lambourn Neighbourhood Plan to allocate site/s for 25 dwellings, but it is clear that the Parish Council has no intention of doing so.</p> <p>Changes sought:</p> <p>We have demonstrated above that there is a clear and pressing need for social rented affordable dwellings in Lambourn to meet the needs of the horseracing community. This need can only realistically be met through affordable housing contributions delivered on market housing sites and it is therefore critical, given the limited capacity of the AONB to accommodate housing growth, that development that does come forwards in Lambourn is specifically tailored to meeting these needs. We have significant concerns regarding the deliverability of the current allocations in Lambourn and more specifically their viability with respect to delivering the mix of housing most needed. It is also clear that the Lambourn Neighbourhood Plan has no intention of allocating site/s for housing. We therefore recommend that a comprehensive review of housing allocations in Lambourn is undertaken to enable fresh decision taking at a Local Plan level to choose the most suitable, sustainable and deliverable housing sites to the identified need for 90 new dwellings in the village (i.e. the total of existing and proposed allocations. In this context, we set out below our client's proposals for Land at Fairview, Greenways, Lambourn. <i>(see full reps)</i></p> <p><b>Development Options in Lambourn</b></p> <p>Lambourn's location within the North Wessex Down's AONB constrains the potential development options available to meet the village's significant needs. We recognise in this respect that no site is perfect and that choosing the most suitable location for housing</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>is a balance between the various constraints to development and the ability of the site proposed to deliver the size, type and tenure of housing most needed. In this context, we set out below an assessment of the sites available for allocation (see full representation).</p>	
<p>Turley for Richborough Estates Ltd (lpr2386)</p>	<p>Full Representation promoting allocation of land north of Silchester Road, Tadley is attached at Policy SP14.</p> <p>Draft Policy SP15 outlines the sites proposed for residential development within the North Wessex Downs AONB. Richborough Estates Ltd do not support this Policy as it is considered that allocating major residential sites in the AONB conflicts with the purposes of AONB designations, as well as conflicting with Strategic Objective 8 of the Draft Plan which outlines that the Council will continue to conserve and enhance the North Wessex Downs AONB.</p> <p>This approach is also not in compliance with the NPPF where it is outlined that great weight should be given to conserving and enhancing landscape and scenic beauty in Areas of Outstanding Natural Beauty. This view is even more prevalent in the recent Planning White</p>	<p>Refer to Council's response to SP14</p> <p>The sites referred to as land north of Silchester Road, Tadley will not be included as housing allocations in the LPR under Policy SP15. The allocation of the proposed site is not in accordance with the findings of the evidence base including the HEELA. Moreover, the site lies within the DEPZ of Aldermaston AWE, and therefore housing development would be resisted.</p> <p>Disagree. Refer to the Council's response to SP14.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Paper where the protection of places of environmental value, such as AONB's, will be at the forefront of future planning decisions.</p> <p>Richborough Estates Ltd suggest that the wording of this policy should restrict the level of development permitted in the AONB in order to avoid overdevelopment. This should include only allowing smaller scale developments which are design and landscape led to ensure there is little to no impact on the setting of the AONB.</p> <p>It is therefore considered that the six large sites listed in Policy SP15 should be removed. To replace these housing allocations Richborough Estates Ltd would encourage the allocation of Land North of Silchester Road, Tadley within Policy SP14, as this site is not located in the AONB.</p> <p>Changes sought:</p> <p>Considered that the six large sites listed in Policy SP15 should be removed. To replace these housing allocations Richborough Estates Ltd would encourage the allocation of Land North of Silchester Road, Tadley within Policy SP14, as this site is not located in the AONB.</p>	<p>RSA21 (land east of Salisbury Road) site will be removed as an allocation as planning permission nearly fully implemented.</p> <p>Disagree that all of the larger sites need to be deleted in favour of the objector's promoted site. The proposed allocation of the sites are in accordance with the LPR evidence base including the findings set out in the HEELA. There is a particularly extensive evidence for the site at the Pirbright Institute, including a Supplementary Planning Document to guide the development.</p> <p>No further changes to the LPR are proposed.</p>
Turley for Pangbourne College (lpr2351)	<p>The Council should take a proactive approach to including sites within the parish of Pangbourne in recognition of its status within the settlement hierarchy and to ensure that the needs of this part of the District are met. A thorough and comprehensive review of sites submitted to the HELAA should be undertaken, alongside engagement with stakeholders to review the assumptions currently made and establish if any of those sites are in fact suitable for development, as set out below.</p> <p>The land known as Centenary Fields (identified as site PAN3) was</p>	<p>Comments noted.</p> <p>Sites referred to as PAN3 (Centenary Fields); PAN4 (Bowden Fields); and the site referred to as The Boathouse will not be included as housing allocations in the LPR under Policy SP15. The allocation of the proposed sites are not in accordance with the findings of the evidence base including the HEELA.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>ruled out in stage 1 of the Council's assessment as it would result in harm to the natural beauty and special qualities of the AONB. This should be explored further as the information submitted at the previous Reg. 18 stage included landscape and visual assessment work which concluded that the site was sheltered from any views given the topography of the site and the boundary trees (which would be retained in any future development).</p> <p>Bowden Fields (PAN4) was ruled out for countryside and AONB reasons but it is also stated that an adoptable access cannot be achieved. We would question the origins of this statement and any testing work that has been undertaken. Pangbourne College's landholding runs to every boundary of that site, all of which abut existing highways. There is no evidence that an adoptable access cannot be achieved, quite to the contrary the work undertaken by the College shows that there are a number of options.</p> <p>The College's Boathouse itself lies within the existing settlement boundary, with half of the boat yard situated outside. The College has consistently promoted and sought an amendment to the settlement boundary to bring the whole of the site into the settlement. This could potentially facilitate the redevelopment of the facilities to provide a modern boat house alongside a small scale housing development.</p>	<p>PAN3 and PAN4 are not in sustainable locations, and are likely to have an adverse impact on the AONB, as demonstrated in the comments provided by the AONB Board. An adoptable access with appropriate visibility splays may not be possible on PAN4. There is nothing further in the representation to suggest that such issues could be overcome.</p> <p>PAN5 (The Boathouse) is within an area of Flood Risk (Flood Zones 2 and 3). Residential development is more vulnerable. There are sequentially preferable sites which have been proposed for allocation.</p> <p>No further changes proposed.</p>
Fowler Architecture & Planning Ltd (lpr2213)	<p>Object to policy.</p> <p>Policy SP15, as drafted, states that residential development in Hungerford, as a designated Neighbourhood Area for the purposes of Neighbourhood Planning, will be brought forward through the Neighbourhood Plan process.</p> <p>The neighbourhood planning process is required to allocate sites for only 55 dwellings at Hungerford across the plan period. The Representors argue that this number is not sufficient for a significant urban area. Hungerford is a highly sustainable settlement that can comfortably accommodate significantly more than this number across the plan period.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Tilehurst is to identify sites for 175 homes as part of the same process. Hungerford's population currently sits at 39% of that of Tilehurst – this is not reflected in this housing provision. The Hungerford Housing Needs Assessment carried out by AECOM in 2019 suggested that Hungerford's housing need figure was 27 new dwellings per annum. Hungerford was the highest scoring settlement in the Council's Audit and Settlement scores – it is a highly sustainable town, and the only Rural Service Centre to have a Town Centre as correctly designated in Policy SP20, that is clearly capable of accommodating more than 55 new homes across the plan period. Not only does the town have this capacity, its need is significantly greater than that proposed. On this basis we find Policy SP15 to be unsound, and the West Berkshire Local Plan Review (as drafted) to be unsound as a result.</p>	
Onnalee Cubitt (lpr2191)	<p>Support policy.</p> <p>Both the landowners and Sovereign support the identification within Policy SP 15 as well as the supporting text within paragraph 6.23 of the identification of the land adjacent to The Haven, Kintbury as a development site to come forward within the North Wessex Downs, where we can guarantee the delivery of the site. We fully support the special characteristics of the North Wessex Downs AONB, and that development will help support not only local needs, but also help to sustain local facilities and provide much needed housing in those villages which are capable of accommodating growth.</p>	<p>Policy support noted.</p> <p>The site referred to in the representation is RSA31: Land adjacent to the Haven, Kintbury. The site remains to be allocated in the LPR under Policy SP15 with a number of changes (please refer to comments under RSA31).</p> <p>No further changes to the LPR are proposed.</p>
Carter Jonas for Mr and Mrs Steljes (lpr1938)	<p>Object to policy.</p> <p>We object to the Section 8 of the Local Plan as it does not allocate the land at Hillfield, Lower Basildon for residential development.</p>	<p>Disagree. The promoted site at land at Hillfield, Lower Basildon will not be included in the LPR as an allocation under Policy SP15. The allocation of the proposed site (BAS2) is not in accordance with the findings of the evidence base including the HEELA:</p> <p>No further changes to the LPR are proposed.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Even though the settlement is one of the smaller ones in the District the boundary of the settlement is fixed which gives limited scope for future development.</p> <p>It is requested that the boundary of the settlement is extended to allow the development of the land to the north of the settlement boundary to be developed.</p> <p>Once the settlement boundary is amended to include the land at Hillfield, it is requested that the site be allocated in the Local Plan for residential development. If the site is not allocated the amended settlement boundary would enable the site to come forward as infill in accordance with Policy SP1 and SP2.</p> <p>The site is in the North Wessex Downs AONB but adjacent to the built development of Lower Basildon to the south and two residential properties to the north and is located to the west of the busy A329. As such the development of the site will conserve and enhance the special landscape qualities of the AONB and not detract from it. The proposed development of 8 dwellings will not be major development and accordingly exceptional circumstances will not be required nor will the development need to be in the public interest to justify the development.</p> <p>The land is available, and the development of the site can be delivered within the next 5 years.</p> <p>The extend of the site that is requested to be included in the settlement is shown below (<i>plan attached</i>) identified as BAS2:</p> <p>Changes sought:</p>	

<b>Respondent</b> <i>(with lpr ref)</i>	<b>Response</b>	<b>Council Response</b>
	<p>The northern boundary of the settlement boundary for Lower Basildon is amended to include the site at Hillfield (BAS2).</p> <p>Allocate the site at Hillfield for residential development of up to 8 dwellings.</p>	

## Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)

### Emerging Draft LPR Policy: SP16 Sandlesford strategic site allocation

### (Proposed Submission LPR Policy: SP16 Sandlesford strategic site allocation)

Number of responses received: 40

Respondent (with lpr ref)	Response	Council Response
<b>Internal</b>		
<b>Statutory consultees</b>		
Greenham Parish Council (lpr902)	Objections have been submitted from the Sandlesford Joint working Group. Please refer to these objections.	Comments noted. These objections will be considered under the relevant respondent.
Newbury Town Council (lpr2259)	<p>We continue to strongly oppose this policy.</p> <p>Warren Road can never be suitable as an “all vehicle” access for the whole site of upwards of 1500 dwellings and supporting local centre. If Sandlesford is ever to be built, it does need all-vehicle access roads on each of three sides: north towards Newbury town centre; east directly onto A339 for southbound traffic; and onto A343 for traffic bound for A34 in both directions. An access road in the middle of Wash Common next to two schools and two churches must be only for emergency vehicles, buses, pedestrians, and if there is ever a “Sandlesford South”, then extend site south to enable perhaps a fourth all-vehicle access to the whole site could be onto</p> <p>Andover Road south of the settlement area at Wash Water. However, this is deemed undeliverable within the Plan period. Therefore, Sandlesford as</p>	<p>Comments noted.</p> <p>Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandlesford development and dualling of the A339 between the new Sandlesford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport</p>

Respondent (with lpr ref)	Response	Council Response
	<p>described in the SPD should not be considered until an acceptable fourth access route is deliverable.</p> <p>A 'local centre' should be a business and social 'hub' not primarily retail or employment. Changing travel and working patterns indicate that families will spend much more time in their local communities and less time "at work". Therefore, large developments such as this need to make provision for larger social and all-purpose community support facilities within the site, in partnership with the local council[s]. These must be delivered much earlier in the build-out than has been the case with recent large developments such as Newbury Racecourse and North</p> <p>The Climate Emergency, the Council's Environment Strategy and other precedents (e.g. Wiltshire's recently adopted Local Plan) lead us to believe that a much greater buffer is required around ancient woodland within this site. Unless this is provided, we believe the development will be contrary to the aims of the Biodiversity policy SP11.</p> <p>Changes: We do not believe this policy should remain in the Local Plan without a complete review because it has been shown to be undeliverable even before the Climate Emergency was announced and is certainly not deliverable now unless the SPD is revised to reflect the emerging Local Plan policies.</p>	<p>modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>The term 'Local Centres' generally refers to a range of small shops of a local nature, serving a small catchment. Typically, local centres might include, amongst other shops, a small supermarket, a newsagent, a sub-post office and a pharmacy. Policy DM39 introduces a presumption in favour of the provision of new or enhanced community facilities. In addition to this the Sandford Park SPD sets out that the principal community facilities to be provided are: Primary educational facilities for the new population; an extension to Park House School sufficient for the new population; Early Years and Children's Centre provision for the new population; a space for indoor community use that may include a place of worship; library provision; and small scale retail facilities to provide at least one local shop/convenience store.</p> <p>The supporting text to Proposed Submission LPR Policy DM15 Trees Woodland and hedgerows has been amended to include: <u>'Development near ancient woodland will be treated in accordance with the most up to date joint Natural England and Forestry Commission Standing Advice. This currently advises that development proposals should have a buffer zone of at least 15 metres from the boundary of the woodland to avoid root damage. For ancient and veteran trees the buffer zone should be at least 15 times larger than the diameter of the tree. The buffer zone should be 5 metres from the edge of the tree's canopy if that area is larger than 15 times the tree's diameter. Precise buffers would need to be determined through detailed assessment and design when proposals are submitted for development. The Council will adopt a precautionary</u></p>

Respondent (with lpr ref)	Response	Council Response
		<u>approach as to what would be considered appropriate in order to ensure that any buffer fulfils the specific requirements of its location and the type of development proposed.'</u>
Shaw-cum-Donnington Parish Council (lpr210)	In bullet 4 we read the expectation of “On site renewable energy...”, how will this be achieved without a change to building regulations?	Comments noted. West Berkshire Council declared a Climate Change Emergency in 2019 and the district's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.
Basingstoke and Deane Borough Council (lpr1482)	<p>It is noted that the Plan retains the strategic site allocation at Sandleford Park adjacent to the borough boundary (Policy SP16). It is important that policies have regard to the development's wider landscape impact (as the site would be visible from Basingstoke and Deane) and the impact of additional traffic upon north Hampshire (including the B3460 through Newtown).</p> <p>BDDBC is keen to continue to engage in suitable discussions under the Duty to Cooperate, in relation to the issues set out above and those discussed at our meeting in late 2020</p>	<p>Comments noted.</p> <p>West Berkshire Council welcomes the continued commitment to work constructively on cross-boundary matters with Basingstoke and Deane Borough Council.</p>
Environment Agency (lpr1665)	We would expect a site of this scale to provide a detailed flood risk assessment with hydraulic modelling. We have provided further comments in below in the 'Level 2 SFRA section'. We expect to see a wide buffer to the River Enborne (main river) and measures to prevent contaminated run-off entering the watercourse during and after construction. The minimum buffer would be 10m but we would expect more for this greenfield site. There may be opportunities to enhance the river corridor which would contribute to biodiversity net gain. Without this wording strengthening the allocation, the local plan could be found unsound in the future.	<p>Comments noted.</p> <p>In terms of the provision of a buffer, a minimum buffer of 10 metres is being included within Proposed Submission LPR Policy DM6 Water Quality and the policy reads:</p> <p><u>' Proposals for built development will be required to be at least ten metres away from the top of the bank of the</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>There is no mention of flood risk or the requirement for a flood risk assessment which we would expect to see, due to the size of the site and the presence of a main river (Enborne).</p>	<p><u>nearest watercourse or main river providing or retaining a natural or semi-natural habitat buffer;</u></p> <p>In terms of enhancement of the river corridors, Policy SP10 Green Infrastructure has been clarified to incorporate more measure to improve the Council's blue spaces including the following insertions:</p> <ul style="list-style-type: none"> <li>• <u>protects, enhances and supports the creation of 'wet woodland' habitats, ponds, lakes, reed beds, raingardens, and floodplain meadows;</u></li> <li>• <u>makes appropriate provision to protect, enhance, improve and maintain accessible networks of blue infrastructure, including through de-culverting, back water creation, de-silting, naturalising the channel through in-channel habitat enhancements and removal of structures where appropriate;</u></li> <li>• <u>maintains and enhances natural drainage features;</u></li> <li>• <u>provides 'buffer strips' of vegetation along the banks of water courses</u></li> </ul> <p>The requirement to submit a flood risk assessment will be included within the Policy as follows –</p> <p><u>'A detailed flood risk assessment with hydraulic modelling will be required for the whole site.'</u></p> <p><a href="#">A Supplementary Planning Document</a> (SPD) for the site was adopted in September 2013.. The SPD sets out the detail to guide future development and investment.</p> <p>Various technical studies documentation were prepared to support the SPD and this includes a <a href="#">Flood Risk and Drainage Strategy</a>.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The SPD makes reference to the Environment Agency's flood risk map shows the site to lie almost entirely within Flood Zone 1 (low probability – likelihood of flooding less than 1 in 1000 annual probability of river flooding in any year) with a very small part of the site in Flood Zones 2 and 3 adjacent to the northern bank of the River Enborne on the southern boundary of the site.</p> <p>Following representations made by the Environment Agency to the Regulation 18 consultation on the emerging draft Local Plan Review, the site was subject to a <a href="#">Level 2 Strategic Flood Risk Assessment</a>.</p> <p>Section F of the SPD sets out the development principles for the site and includes a sub-section on hydrology and drainage.</p>
<b>General consultation bodies</b>		
Heritage Forum (lpr77)	<p>SP16 We have doubts about this policy in one respect. When the full 1500 dwellings are built and occupied, Warren Road will be the obvious exit for the A34 for all of them, which will cause problems. The volume of traffic will significantly interfere with the local Andover Road traffic for schools, shops, the garage, churches, and community centres. In her comments on 18/00828, Jenny Graham of Transport Policy has already made this point. A more strategic approach is needed to connect the Sandleford estate to the A34 trunk.</p> <p>Secondly, environmental interests have expressed a preference for a 50 m buffer around the ancient woodland. A recommended buffer distance should be given.</p> <p>Changes: See above.</p>	<p>Comments noted.</p> <p>Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Proposed Submission LPR Policy DM15 Trees Woodland and hedgerows is the policy mechanism for the protection of ancient woodland, this policy has been amended and strengthened following consultation and now reads:</p> <p><u>'Ancient woodland and veteran trees are irreplaceable. Development resulting in their loss or deterioration of ancient woodland or veteran trees which are irreplaceable will not be permitted be refused unless there are wholly exceptional reasons where the public benefit would clearly outweigh the loss or deterioration it accords with the exceptional reasons identified within the National Planning Policy Framework. If wholly exceptional reasons are justified a suitable compensation strategy including its delivery and ongoing upkeep will need to be secured. The scale and quality of the compensation measures required will be commensurate to the loss or deterioration of this irreplaceable habitat'.</u></p> <p>The supporting text to Proposed Submission LPR Policy DM15 Trees, Woodland and hedgerows will be amended to include:</p> <p><u>'Development near ancient woodland will be treated in accordance with the most up to date joint Natural England and Forestry Commission Standing Advice. This currently advises that development proposals should have a buffer zone of at least 15 metres from the boundary of the woodland to avoid root damage. For ancient and veteran trees the buffer zone should be at least 15 times larger than the diameter of the tree. The buffer zone should be 5 metres from the edge of the tree's canopy if that area is larger than 15 times the tree's diameter. Precise buffers would need to be determined through detailed assessment and design when proposals are submitted for</u></p>

Respondent (with lpr ref)	Response	Council Response
		development. The Council will adopt a precautionary approach as to what would be considered appropriate in order to ensure that any buffer fulfils the specific requirements of its location and the type of development proposed.'
Mid & West Berks Local Access Forum (lpr1862)	<p>MWBLAF strongly supports the provision of substantial amounts of green infrastructure as part of new developments because this will encourage people to take exercise locally, thus avoiding car use and reducing pressure on existing popular sites such as Greenham Common. It should be used as a model for other developments.</p> <p>The Forum is, however, disappointed that neither the policy nor the supporting text mention the public footpath that runs across the middle of the site. The Forum believes that such public rights of way should be maintained as distinct routes within any development, are not absorbed into the road network, and maintain their existing character.</p> <p>The policy RSA 3 has excellent wording on this point, and we recommend that equivalent wording is added to this policy.</p> <p>Changes: The Forum recommends that the following 'bullet' is added to the policy:</p> <p>Development of the site will be expected to deliver:</p> <p><b><u>The protection of the rural character of the existing Public Right of Way across the site.</u></b></p>	<p>Comments noted. Although Policy SP16 will take precedence once adopted the Sandford Park SPD provides the framework for development and identifies the public right of way that runs through the site. The Council recognise the benefits that the public right of way network has environmentally but also alongside this they aid well-being in terms of both physical and mental health. Public rights of way fall under separate legislation which means that highway authorities have a general duty 'to assert and protect the rights of the public to the use and enjoyment'. In addition the West Berkshire Council Public Rights of Way Improvement Plan will be utilised to inform development proposals and forms part of the evidence base for the Local Plan. The Council agree that rights of way have an important role and so will strengthen the green infrastructure policy (SP10) adding the following additional wording:</p> <p><u>'Development proposals must take account of existing access networks within and around the site. Opportunities should be sought to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. The addition of new connections and status upgrades to the existing rights of way network will be supported'</u>.</p>
British Horse Society (lpr849)	The Society strongly supports the provision of substantial amounts of green infrastructure as part of new developments because this will encourage	Comments noted. The Council agrees that green infrastructure is an important asset which aids physical and

Respondent (with lpr ref)	Response	Council Response
	<p>people to take exercise locally thus avoiding car use and reducing pressure on existing sites. It should be noted that many horses are kept on the urban fringe with their owners living in urban areas. Thus, where needed, provision for horses should also be made to support policy DC34.</p>	<p>mental health as well as being a facilitator for active travel. The Green Infrastructure Policy (SP10) has been revised to incorporate '<u>travel</u>' in criteria c) so it now reads:</p> <p><u>' can provide pleasant and safe 'green routes' to commute or travel on foot, cycle and horseback which help to link parts of urban areas and to the surrounding countryside along blue (water) and green corridors;'</u></p>
<p>The Woodland Trust (lpr1029)</p>	<p>Development which would result in the loss of ancient woodland, aged or veteran trees should not be permitted.</p> <p>Changes: We would like to see the following ancient woodland sites removed from any development site allocation.</p> <p>Crooks Copse ASNW (Grid reference: SU46916508)</p> <p>Slockett's Copse ASNW (Grid reference: SU46796474)</p> <p>High Wood ASNW (grid reference: SU47056464)</p> <p>Barn Copse ASNW (grid reference: SU46336474)</p> <p>Dirty Ground Copse ASNW (grid reference: SU46696447)</p> <p>Unnamed ASNW at SU46906387</p>	<p>Comments noted. Proposed Submission LPR Policy DM15 Trees Woodland and hedgerows is the policy mechanism within the Local Plan Review for the protection of ancient woodland, this policy has been amended and strengthened following consultation and now reads:</p> <p><u>'Ancient woodland and veteran trees are irreplaceable. Development resulting in their loss or deterioration of ancient woodland or veteran trees which are irreplaceable will not be permitted be refused unless there are wholly exceptional reasons where the public benefit would clearly outweigh the loss or deterioration it accords with the exceptional reasons identified within the National Planning Policy Framework. If wholly exceptional reasons are justified a suitable compensation strategy including its delivery and ongoing upkeep will need to be secured. The scale and quality of the compensation measures required will be commensurate to the loss or deterioration of this irreplaceable habitat'.</u></p> <p>The supporting text to Proposed Submission LPR Policy DM15 Trees, Woodland and hedgerows will be amended to include: <u>'Development near ancient woodland will be treated in accordance with the most up to date joint Natural England and Forestry Commission Standing Advice. This currently</u></p>

Respondent (with lpr ref)	Response	Council Response
		<p><u>advises that development proposals should have a buffer zone of at least 15 metres from the boundary of the woodland to avoid root damage. For ancient and veteran trees the buffer zone should be at least 15 times larger than the diameter of the tree. The buffer zone should be 5 metres from the edge of the tree's canopy if that area is larger than 15 times the tree's diameter. Precise buffers would need to be determined through detailed assessment and design when proposals are submitted for development. The Council will adopt a precautionary approach as to what would be considered appropriate in order to ensure that any buffer fulfils the specific requirements of its location and the type of development proposed.'</u></p>
West Berkshire Green Party (lpr1839)	<p>We are dismayed to see that Sandleford, which has proved to be undeliverable, and which contravenes SP5, SP8, SP10 and SP11, remains in the draft Local Plan. The target of 1,500 homes is incompatible with the council's environmental and biodiversity policies as it is simply not possible to fit that many properties with buffer zones necessary to protect the five areas of ancient woodland.</p> <p>It should at least be scaled back substantially too much smaller developments to the west and NE, with fewer than 500 dwellings in total. Building along the south side of Monks Lane as far as the new access road from the A339 would be consistent with existing development (Newbury College, Highwood Copse School, The Two Watermills), relatively non-controversial, and above all deliverable, without inflicting the huge environmental damage implicit in current proposals for the south and west of the site.</p> <p>We note that SP16 attempts to change the council's policy towards Warren Road, to become one of "four primary all-vehicle accesses" to the site. (The approved Core Strategy policy is for "sustainable transport", namely buses, cyclists and pedestrians only, not all vehicles, which was introduced at SPD stage.) Warren Road is immediately adjacent to one school and opposite</p>	<p>Comments noted. The principle of development on the site for up to 2000 dwellings has been established through the Core Strategy process and the site has been accepted as a location to provide a long-term urban extension which will deliver up to 2000 homes. The Core Strategy went through all stages of consultation, independent examination, and adoption by the Council.</p> <p>In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport</p>

Respondent (with lpr ref)	Response	Council Response
	<p>another and to even contemplate it as being suitable for all-vehicle access to a huge housing development, including numerous HGVs during the building stage, indicates that not only does the council not care about the health, wellbeing and safety of young people in West Berkshire, but that it has taken leave of its senses. We note that DC7 in the draft plan (air quality) refers to those “who are particularly sensitive to air pollution, such as those in schools ...” Further, SP16 fails to refer to the bridge linking the Sandleford development parcels; without the bridge, approximately two-thirds of the development could only be accessed via Warren Road. We believe that all-vehicle access via Warren Road is such a problem that it is likely to render the whole development undeliverable.</p> <p>Finally, we note that the draft plan appears to change, for no good reason, the council's policy, as adopted by the amended SPD in 2015 and since reiterated on numerous occasions, “to reflect the need for a single planning application for the site” in order that any development should be coherent, coordinated and with appropriate infrastructure.</p> <p>We call for a complete review of Sandleford because it has shown itself to be undeliverable and is even more so in the wake of the Climate Emergency and the council's emerging policies on biodiversity.</p>	<p>modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p> <p>Comments relating to the bridge are noted, the need for valley crossings (both central and north) to be included within SP16. It is acknowledged that these are included within the SPD and would assist with the desirable provision of through routes, permeability and connectivity and access to services and facilities for all.</p> <p>In relation to the requirement for the one planning application, the Sandleford Park SPD, introduced this requirement for the application, however this policy (SP16) removes this requirement but makes clear that the site must be delivered to achieve comprehensive development and ensure the timely and co-ordinated provision of infrastructure.</p>
Binfield Badger Group (lpr2185)	<p>(comments also submitted under SP17)</p> <p>I am writing on behalf the Binfield Badger Group, Berkshire to express concerns regarding the above local plan. We are a not-for-profit organisation formed in 1985, with a growing membership base across the county. The primary aims of our group are to protect and promote badger welfare and preserve their habitat across the whole of Berkshire.</p>	<p>Comments noted. Badgers and their setts (tunnels and chambers where they live) are protected by the Protection of Badgers Act 1992 and their legal protection must be complied with. Natural England's 'standing advice' for badgers is a material planning consideration for local planning authorities and must be taken into account when making planning decisions.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We provide a framework for members and supporters to help badgers, including education, talks and meetings and also conduct regular sett surveys to understand the population and health of badgers across Berkshire. We also work in conjunction with local authorities to review and provide input into local planning applications that might impact badger habitat and have previously provide d input to schemes in West Berkshire. Having reviewed the Local Plan consultation document we have concerns with the area and extent of the scheme for both North East Thatcham and Sandlesford Park.</p> <p>As the planning team at West Berkshire Council is aware, badgers are a protected species and any development must preserve badger habitat and mitigate for their existence, ensure they are not adversely impacted and have sufficient foraging ground that allows for territory movement and expansion. Both these schemes have badger activity across the sites and indeed we have previously objected to the Sandlesford Park development as active badger evidence was found during numerous sett surveys. We also have formal sett records that show badger activity both within the North East Thatcham proposed site and on its periphery.</p> <p>On behalf of the badger group, I would therefore like to express concern with the sites chosen for this proposed Local Plan development and ask that WBC take these concerns into account.</p>	<p>A <a href="#">Supplementary Planning Document</a> (SPD) for the site was adopted in March 2015. The SPD sets out detail to guide future development and investment on the site.</p> <p>Various technical studies were prepared to support the SPD and this includes a <a href="#">Habitat Survey</a> of the development area in addition to an <a href="#">Ecological Scoping and Phase 1 Habitat Survey</a> and <a href="#">Addendum</a> which considers the ecological interest of the site and assesses the nature conservation value of the area, and explores the opportunities for ecological enhancement as part of the sites future development. The results of the Surveys were discussed with the Council's Ecologist. The ecological value of the site does not prohibit its development. However, there are a number of key features which will need to be carefully considered in bringing forward development in the design, layout and future management of the site. Section F of the SPD sets out the development principles for the site and includes a sub-section on ecology and wildlife. This sets out that any planning application will need to be accompanied by a Strategic Ecological Enhancement Plan. It also identifies that all existing features of ecological value on the development site potentially affected by the development works will be maintained and adequately protected during site clearance, preparation and construction works. Details of this will be provided as part of the submission of the planning application at the outline and reserved matters stages.</p>
<b>Other stakeholders</b>		
Jonathan Alderman (lpr548)	I only support SP16's policy inclusion of the following item: "On-site renewable energy to assist in the delivery of a carbon neutral development" IF the chosen technology is capable of demonstrating its Green credentials.	Comments noted. West Berkshire Council declared a Climate Change Emergency in 2019 and the district's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action

Respondent (with lpr ref)	Response	Council Response
	<p>I do not support CHP plants burning plastic or waste wood, i.e. high CO2 emission fuel, as their feedstock.</p> <p>These types of electricity generation plants also rely on their feedstock being delivered by HGV, which could be as many as 20 HGVs daily, every day of the year during the lifetime of the plant. These HGVs are also a source of polluting emissions, which will impact on Air Quality and the health of local residents.</p> <p>Changes: The change I am seeking is that any On-site renewable energy plant must demonstrate its Green credentials, e.g. the deployment of Carbon Capture and Storage technology and be fuelled by low CO2 emitting fuel (LPG, Natural Gas or Hydrogen).</p>	<p>and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>
Alastair Jarman (lpr226)	<p>This policy removes the requirement for Warren Road to be delivered as a sustainable transport link for Sandford, I consider this to be unacceptable as the sustainability of this site will be reduced and the traffic movements and addition of pm2.5 creation and re-suspension around vulnerable receptors is against common sense, developing knowledge of health issues.</p> <p>I am pleased to see that the number of homes is to be reduced formally from 2000 to 1500 but feel the use of "approximately" is open to interpretation, I would prefer to see maximum as a limiting term.</p>	<p>Comments noted. The policy includes 4 accesses including Warren Road and states:</p> <p>'Four primary all vehicle accesses:</p> <ul style="list-style-type: none"> <li>• Two off Monks Lane</li> <li>• One through to Andover Road via Warren Road; and</li> <li>• One onto the A339'.</li> </ul> <p>The word 'approximately' is used to allow for flexibility in the design of the scheme at the planning application and so that the application can respond to local need and the individual characteristics of the site. The NPPF states that plans should ) be prepared with the objective of contributing to the achievement of sustainable development and be prepared positively, by applying the term 'maximum' it does not allow for flexibility to respond to ensure sustainable development is achieved. As the allocation has a boundary the development foot print is limited by this.</p>

Respondent (with lpr ref)	Response	Council Response
Alastair Jarman (lpr361)	<p>See more specific limits to areas to be developed, especially as many applications for this site have shown housing almost surrounding elements of the ancient woodland. I note policy DC14 refers to NPPF.</p> <p>"c) development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons<sup>58</sup> and a suitable compensation strategy exists;"</p> <p>There is also a discrepancy between SP16 and policies under the prefix RSA.</p> <p>RSA 26 states: "Provide a buffer of 15 metres to the areas of ancient woodland to the west of the site and provide appropriate buffers to the rest of the TPO woodland." Sandleford has numerous Ancient Woodlands and TPO's covering the site yet the TPO's are not reflected in SP16.</p> <p>I have noted this point in CS14 but add here for ease of reference that for ancient woodlands, the minimum buffer zone of 15m is solely to avoid root damage through direct impact. The size and type of buffer zone should vary depending on the scale, type and impact of the development. Where assessment shows other non-direct impacts are likely to extend beyond this distance, you are likely to need a larger buffer zone. For example, the effect of air pollution from development that results in a significant increase in traffic, which for Sandleford will indeed be the case as currently there is zero traffic. It is therefore not a parameter that can be decided solely upon an arboricultural survey or a housing quota. This survey cannot for example consider use of pressure washers, chemical suspension, particulate matter, streetlights, car headlights, noise, pet predation, fireworks, or prevailing wind direction into account. There are many factors that could determine an appropriate buffer size to prevent degradation of ancient woodland and habitat. It is therefore not possible to predetermine the appropriate size of any buffer, only the minimum for root damage prevention through direct impact. I believe the use of 15m has been misconstrued in several of the policies in this draft plan. Even taking note of Natural England's standing advice regarding a minimum buffer of 15m to avoid root damage, it remains unclear whether this proposal could cause loss or deterioration of the ancient woodlands irreplaceable and interconnected habitat through</p>	<p>Comments noted. Proposed Submission LPR Policy DM15 Trees Woodland and hedgerows is the policy mechanism within the Local Plan Review for the protection of ancient woodland, this policy has been amended and strengthened following consultation and now reads:</p> <p><u>'Ancient woodland and veteran trees are irreplaceable. Development resulting in their loss or deterioration of ancient woodland or veteran trees which are irreplaceable will not be permitted be refused unless there are wholly exceptional reasons where the public benefit would clearly outweigh the loss or deterioration it accords with the exceptional reasons identified within the National Planning Policy Framework. If wholly exceptional reasons are justified a suitable compensation strategy including its delivery and ongoing upkeep will need to be secured. The scale and quality of the compensation measures required will be commensurate to the loss or deterioration of this irreplaceable habitat'.</u></p> <p>The supporting text to Proposed Submission LPR Policy DM15 Trees, Woodland and hedgerows will be amended to include: <u>'Development near ancient woodland will be treated in accordance with the most up to date joint Natural England and Forestry Commission Standing Advice. This currently advises that development proposals should have a buffer zone of at least 15 metres from the boundary of the woodland to avoid root damage. For ancient and veteran trees the buffer zone should be at least 15 times larger than the diameter of the tree. The buffer zone should be 5 metres from the edge of the tree's canopy if that area is larger than 15 times the tree's diameter. Precise buffers would need to be determined through detailed assessment</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>changes in air quality or other non-direct impacts due to a lack of design detail informing proper assessment. Many of the ancient woodlands and other copse are also listed as heritage wildlife sites.</p> <p>2) There is no mention of the valley crossing contained in SP16 yet all other critical access points are identified. When / if constructed, it will change traffic flows as it will connect parcel west, and central described as the hub containing retail and commercial units to parcel north. Until built the only connection to Parcel Central will be via Warren Road alongside many sensitive receptors and historic landscape This complicates the measurement and assessment of traffic flows and pollution sources which will in turn impact on buffer zone design.</p> <p>3) I would like to see the IDP.</p> <p>4) If NPPF 175 c is not applied to Sandleford, then I would like to see greater protection for the site's irreplaceable habitats in the plan. There also need to have stronger regard of the visual impact.</p> <p>This Landscape Visual Impact Assessment, is the most accurate I have seen to date:  <a href="http://planning.westberks.gov.uk/rpp/showimage.asp?j=20/01238/OUTMAJ&amp;index=1879410">http://planning.westberks.gov.uk/rpp/showimage.asp?j=20/01238/OUTMAJ&amp;index=1879410</a></p> <p>5) I do not think it will be possible to conserve the site, this may be a genuine aspiration or optimism bias, but I do not believe it is deliverable based on all the evidence from previous applications and reports over the last 8 years with current housing numbers and land use.</p> <p>6) Warren Road must be kept as a sustainable transport link to comply with not only DC7 and DC14, but common sense and emerging evidence on sensitive receptors by the World Health Organisation. "The World Health Organization acknowledges that current evidence suggests no safe level for PM2.5."  Public Health England 11th March 2019  <a href="https://www.gov.uk/government/news/public-health-england-publishes-air-pollution-evidence-review?fbclid=IwAR3pymcshBLAF0HWJAV7BXkOhIZJJoL8QwtuHKvG3fKdH8Tk4h4uYYWHjuY">https://www.gov.uk/government/news/public-health-england-publishes-air-pollution-evidence-review?fbclid=IwAR3pymcshBLAF0HWJAV7BXkOhIZJJoL8QwtuHKvG3fKdH8Tk4h4uYYWHjuY</a>  "Now is our opportunity to create a clean air generation of children, by implementing interventions in a coordinated way. By making new</p>	<p><u>and design when proposals are submitted for development. The Council will adopt a precautionary approach as to what would be considered appropriate in order to ensure that any buffer fulfils the specific requirements of its location and the type of development proposed.'</u></p> <p>The Infrastructure Delivery Plan is one of the evidence base documents for the Local Plan Review and can be viewed on the Council's website <a href="#">here</a>.</p> <p>The policies within the NPPF must be taken into account in preparing Local Plans and it is a 'material consideration' in deciding planning applications. Policy SP11 Biodiversity and geodiversity is the policy in the Local Plan Review which will take into account paragraph 180 c) of the NPPF (2021).</p> <p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p> <p>In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane</p>

Respondent (with lpr ref)	Response	Council Response
	<p>developments clean by design we can create a better environment for everyone, especially our children.”</p> <p>The shift to Electric vehicles will be slowed due to the recent economic hit of COVID following 10 years of austerity, but even with the shift to EV, 50% of pm2.5 and finer particles are from non-exhaust emissions (NEE). The siting of two new primary schools by the major entrance points on both side of the site is inexcusable when children will be exposed to the pollution effects of queuing rush hour traffic.</p> <p>The current owner of New Warren Farm has repeatedly tried to get permission to upgrade this road since at least 2009, prior to Sandford being selected and included in the Local Plan as a development site. A total of 16 applications resulted in managing to get approval for a 4.8m road that was approved with none of the scrutiny that a major development site should be exposed to.</p> <p><a href="http://planning.westberks.gov.uk/rpp/showimage.asp?j=09/01501/FUL&amp;index=259745">http://planning.westberks.gov.uk/rpp/showimage.asp?j=09/01501/FUL&amp;index=259745</a></p> <p>“Letters of representation are sceptical about the true intentions for this road. At this stage this application must be taken on its merits. Should land to the East become available for residential development in the future, the suitability of the road for adoption should be considered at that stage.”</p> <p>In the delegated report on the refusal of 15/02300/OUTMAJ the following comment was made “There are no major access routes into the site. A public footpath (GREE/9/1) runs through the site linking Andover Road (A343) in the west with Newtown Road (A339) in the east”.</p> <p>No mention is made of Footpath 5.</p> <p>The following points that impact on amenity and visual impact should be considered regarding Warren Road:</p> <p>Warren Road is only 105m in length as shown on the definitive map and continues as public footpath 5 where it joins GREE/9/1.</p> <p>Land on which footpath 5 runs is not part of any of the property deeds or land registers of adjoining properties. Land ownership and access rights do not seem to have been addressed prior to including it as an access route in the Core Strategy. There was a comment in the transport and highways response on the 18th November 2016 as follows:</p>	<p>roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>In relation to the requirement for the one planning application, the Sandford Park SPD, introduced this requirement for the application, however this policy (SP16) removes this requirement but makes clear that the site must be delivered to achieve comprehensive development and ensure the timely and co-ordinated provision of infrastructure.</p> <p>In relation to comments regarding the provision of open space, the Sandford Park SPD still provides a framework for development and sets out the types of open spaces to be provided. This includes Country Parkland which will be located in the southern part of the site measuring approximately 82 ha / 203 acres. It will play a key role in protecting the sensitive landscape and historic significance of the southern part of the Sandford Park site in perpetuity, protecting the views when approaching Newbury.</p> <p>In terms of housing mix, a new policy is to be introduced in response to the Government’s introduction of ‘first homes’ and will be delivered as part of developer’s affordable housing contributions via s106 obligations. There will be eligibility criteria applied to this policy including a local connection criteria. This will be provided alongside other affordable housing types with a tenure split of affordable</p>

Respondent (with lpr ref)	Response	Council Response
	<p>["XXX of Donnington New Homes who stated on March 31st 2016 that "suffice to say we believe it is commercially realistic to assume that full land control will be secured by the time the above planning application is determined".]</p> <p>Footpath 5 is often referred to as a track in documentation, but its status is clearly identified as a public footpath on the West Berks definitive map. Park House School have previously requested that any footpath dissecting school facilities must be stopped up requiring a public path order.</p> <p>7) With many junctions already at capacity the ability for Sandford to generate traffic must be controlled. Whilst the housing numbers are only one element source of traffic, I feel that once a number has been decided the policy should be firm and state "maximum" not "approximately".</p> <p>8) I disagree with the supporting evidence in para 6.32, that policy GS1 requirement for a single application be deleted, the comprehensive approach will now rely on a memorandum of understanding between developers which is a statement of serious intent – agreed voluntarily by equal partners – of the commitment, resources, and other considerations that each of the parties will bring. It has moral force but does not create legal obligations. I have a letter from one developer threatening to plan the road around my property after refusing to discuss selling land. We cannot rely on morals to protect this irreplaceable habitat, rights or any other aspects or impacts on this site and surrounding area.</p> <p>The use of a memorandum of understanding between local authorities, who are subject and accountable to a code of conduct and standards in public life, is the correct use of this instrument. There are also transparency issues between developers as many dealings may be commercial in confidence and not open to public scrutiny.</p> <p>Following the Plan Review Scoping Report and accompanying Sustainability Appraisal Scoping Report in the 2018 Pro Vision for Rootes Trustees remarked, "CS3: Sandford Strategic Site Allocation. This allocation should be deleted unless the LPA is satisfied that there is robust evidence that is developable."</p> <p>This site has proved undeliverable against policies in force to date and after site selection over 8 years ago, despite 6 planning applications only one of which covered the whole site in compliance with GS1, the construction of a</p>	<p>housing contributions to be 70% social rent, 25% first homes, 5% shared ownership.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>primary school which is not intended for the use by Sandleford children, but is providing the expensive and expansive A339 Sandleford junction, and over 20 planning applications between Park Cottage and New Warren Farm many of which appear to have been raised to deliver the A343 / Warren Road access.</p> <p>SP16, deleting GS1 in favour of a MOU is attempting to plan policy around the site due to a failure to plan this site around previous policy. I think care should be taken not to weaken overall policy, transparency and accountability for one site.</p> <p>9) SP 16 says it will mitigate the increased recreational pressure on nearby sensitive wildlife sites, secure strategic biodiversity enhancements and provide a country park or equivalent area of public open space in the southern part of the site. Greenham Common is a 280-hectare site compared to around 35-hectare available as open space within the Sandleford boundary. Whilst all part of the Greenham and Crookham Plateau there is a distinct variation of habitat and topography between many of the adjacent sites and I do not believe it can be taken for granted that pressure will reduce because of additional open land at Sandleford. It may just as easily increase due to the addition footfall and pressures, created by Sandleford. When human behaviour and policy meet you do not always get the desired results.</p> <p>10) “provide a country park or equivalent area of public open space in the southern part of the site”. This seems rather loosely defined for such a sensitive site.</p> <p>11) The NPPF states “Plans should set out the contributions expected from development. This should include setting out the levels and types of affordable housing provision required”.</p> <p>SP 19 states that “In determining residential applications the Council will assess the site size, suitability and type of units to be delivered. The Council will seek a tenure split of 70% social rented and 30% for affordable home ownership, but will take into account the identified local need and the site specifics, including funding and the economics of provision. This policy is not restricted to development which falls within Use Class C3 but applies to all forms of self-contained residential development including C2 uses such as extra care housing.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Changes:</p> <ol style="list-style-type: none"> <li>1) Ensure SP16 is compliant to latest national policies, especially 175 (c), and would like to see specific limits to areas to be developed. The site must be designed around policy and best practice.</li> <li>2) The valley crossing should be contained in SP16 not only in the critical infrastructure delivery plan.</li> <li>3) I would like to see the IDP.</li> <li>4) I would like to see greater protection for our irreplaceable habitats in the plan.</li> <li>5) I do not think it will be possible to conserve the site unfortunately.</li> <li>6) If access and land rights have been resolved sufficiently to meet the 6m required width, it must be kept as a sustainable transport link to comply with not only DC7, but common sense and emerging evidence on sensitive receptors by the World Health Organisation. Warren Road should not be used for construction traffic, this will increase Pm2.5 and finer particulate matter. If it is permitted to become one of four primary access routes into the site, then it must be built to the same standard as the other three, including at least 3m shared cycle lanes. Currently Warren Road has a physical overall width limit of 10m due to historic features and private property. If it is to become an all vehicular access then it must meet the same standards and dimensions as the three other accesses, with the Local Authority taking responsibility for land purchase and not leaving developers to pressure local residents.</li> <li>7) I would like the housing limit to reflect the transport issues around Newbury in general, the policy should be firm and use the work “maximum” not “approximately” applied.</li> <li>8) Any removal of the single application must be replaced with a legally enforceable and transparent alternative.</li> <li>9) The Sandford site is enclosed by three roads and the river Enborne, all three roads are classed on the definitive map as traffic sensitive streets and the Enborne is itself an area containing protected species and habitat. I would like to see strong linkage within the plan on how and what mechanisms will manage possible conflicts between site delivery and negative traffic impacts over the 20 plus year build out. Initially the site was</li> </ol>	

Respondent (with lpr ref)	Response	Council Response
	<p>put forward for 1000 homes with 2 accesses, then changed to 2000 homes with two accesses and sustainable transport link, now 1500 homes with four all-purpose accesses. The current proposals bare no resemblance to the site at original selection.</p> <p>10) I would like to see what will be offered in the way of a country park or open space of equivalent area clarified. Especially if WBC are hoping to draw visitors away from Greenham and Crookham common SSSI. I assume the reduction of 500 homes will affect the affordability and profit on this site, and the country park seems an easy target to reduce costs.</p> <p>11) I would like Sandleford to provide affordable housing that young couples can afford to rent. I was unable to find LSP18 in this draft document set or table 4 as per SP16. On further investigation I assume this should read SP18 and Table 3?</p> <p>I would like clarification that extra care facilities which count towards affordable housing, do not reduce the number of affordable properties available for home ownership. In fact, after 8 years, I would have thought these issues could be more tightly defined within the plan for SP16 by now.</p> <p>I would like to see housing numbers, on any site, being derived from policies such as DC14 and DC7. The number of houses required to meet government housing targets or developer profits are not the correct driver for site design.</p> <p>I am pleased to see that ALL affordable homes must be carbon neutral which I assume includes any extra care homes.</p>	
Julie Knapman (lpr358)	<p>Page 61 Policy SP16 states that "Development of the site would be expected to deliver" ..."Four primary all vehicle accesses ....One through to Andover Road via Warren Road". The all vehicular Warren Road access was only introduced at SPD stage and Policy SP16 cannot bring in new policy or change existing policies without Planning Inspectorate looking at the "soundness" of the plan. The Local Plan has been submitted to the Secretary of State for independent examination by the Planning Inspectorate and any changes to the Local Plan must also be submitted. I object to the addition of the Warren Road access, after the approval of the Core Strategy, as an all-vehicle access road to the Sandleford Development due to its position next to 2 schools (Park House and Falkland Primary school) and the</p>	<p>Comments noted. The Local Plan Review (Regulation 18) Consultation is one of the stages a Local Plan must go through prior to it going to examination. Following the Regulation 18 consultation all comments received will be reviewed and amendments made to the plan where necessary. The Council will continue to build its evidence base for the Local Plan so that the plan is justified. Following this the next stage in the process is known as the Regulation 19 stage which is set out in The Town and Country Planning (Local Planning) (England) Regulations 2012. This sees another round of consultation prior to its submission to the Secretary of State and Examination.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>pollution and traffic impact on local vulnerable pedestrians, many of them children.</p> <p>It is noted that the proposed Policy DC7 Air Quality in the draft plan includes a sub item e: "it does not expose occupiers who are particularly sensitive to air pollution, such as those in schools, health care establishments or housing for older people;" Which conflicts with Policy SP16 and its attempt to make Warren Road an all vehicle access directly impacting both a primary and secondary school who are located in close proximity.</p> <p><a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/770715/clean-air-strategy-2019.pdf?fbclid=IwAR3_OcFcJYM4VNLw6veWcso6pKbrbvROk49UtPbR4uE0Xp9pXkfN7TTv3VM">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/770715/clean-air-strategy-2019.pdf?fbclid=IwAR3_OcFcJYM4VNLw6veWcso6pKbrbvROk49UtPbR4uE0Xp9pXkfN7TTv3VM</a></p> <p>"This statutory guidance recognises schools and active travel routes, amongst others, as "sensitive receptor locations"".</p> <p>The Core Strategy stated that the Warren Road access to the Sandleford Development would be a sustainable transport access. NPPF, paragraph 7 states that the purpose of the Planning system "is to contribute to the achievement of sustainable development". Policy SP16 takes away those rights to achieve sustainable development within Sandleford and the surrounding area as required by the NPPF. The planning system should be Plan-led and not Plan-amended to suit the Developer/Local Authority.</p> <p>There is no mention of the required bridge within Policy SP16, required to link central and western Sandleford development parcels to the other 3 access roads. If this bridge is not built, and there is currently no legal obligation to build this, it would result in 2/3 of the proposed housing only having the Warren Road for access.</p> <p>Page 63, states that the SPD was amended in 2015 "to reflect the need for a single planning application for the site". Policy GS 1 was introduced in 2017 and states that "Each allocated site will be masterplanned and delivered as a whole to achieve a comprehensive development" and "A single planning application will be submitted for each allocated site". It is proposed to delete this document as part of the Local Plan Review. I object to this action as Policy SP16 is incomplete in its detail, unclear and ambiguous, unlike Policy GS 1.</p>	<p>In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p> <p>Comments relating to the bridge are noted, the need for valley crossings (both central and north) to be included within SP16. It is acknowledged that these are included within the SPD and would assist with the desirable provision of through routes, permeability and connectivity and access to services and facilities for all.</p> <p>In relation to the requirement for the one planning application, the Sandleford Park SPD, introduced this</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Policy SP16 goes against NPFF Para 16d, resulting in less governance during the planning process and allowing West Berkshire Council to introduce a weaker, less detailed replacement and introducing an amendment to the Warren Road access. The intended accompanying MOU is not a legally binding document, only a statement of serious intent. The original Core Strategy was set after considering the needs and requirements of interested parties and Policy SP16, with its accompanying MOU, weakens the Democratic process as there is no right for public consultation.</p> <p>Changes: Remove the Warren Road all-vehicular access from the SPD and Policy SP16.</p>	<p>requirement for the application, however this policy (SP16) removes this requirement but makes clear that the site must be delivered to achieve comprehensive development and ensure the timely and co-ordinated provision of infrastructure.</p> <p>The Local Plan Review will go through the same production stages and processes as the Core Strategy as set out in The Town and Country Planning (Local Planning) (England) Regulations 2012. A further round of consultation will be undertaken and an examination process. Any planning application will be considered following development management procedures.</p>
Andrew Mauvis (lpr359)	<p>Page 61 Policy SP16 states that "Development of the site would be expected to deliver" ..."Four primary all vehicle accesses ....One through to Andover Road via Warren Road". The all vehicular Warren Road access was only introduced at SPD stage and Policy SP16 cannot bring in new policy or change existing policies without Planning Inspectorate looking at the "soundness" of the plan. The Local Plan has been submitted to the Secretary of State for independent examination by the Planning Inspectorate and any changes to the Local Plan must also be submitted. I object to the addition of the Warren Road access, after the approval of the Core Strategy, as an all-vehicle access road to the Sandleford Development due to its position next to 2 schools (Park House and Falkland Primary school) and the pollution and traffic impact on local vulnerable pedestrians, many of them children.</p> <p>It is noted that the proposed Policy DC7 Air Quality in the draft plan includes a sub item e: "it does not expose occupiers who are particularly sensitive to air pollution, such as those in schools, health care establishments or housing for older people;" Which conflicts with Policy SP16 and its attempt to make Warren Road an all vehicle access directly impacting both a primary and secondary school who are located in close proximity. <a href="https://assets.publishing.service.gov.uk/.../clean-air...">https://assets.publishing.service.gov.uk/.../clean-air...</a> "This statutory guidance recognises schools and active travel routes, amongst others, as "sensitive receptor locations"".</p>	<p>Comments noted. 	<p>rights to achieve sustainable development within Sandleford and the surrounding area as required by the NPPF. The planning system should be Plan-led and not Plan-amended to suit the Developer &amp; Local Authority. There is no mention of the required bridge within Policy SP16, required to link central and western Sandleford development parcels to the other 3 access roads. If this bridge is not built, and there is currently no legal obligation to build this, it would result in 2/3 of the proposed housing only having the Warren Road for access.</p> <p>Page 63, states that the SPD was amended in 2015 "to reflect the need for a single planning application for the site". Policy GS 1 was introduced in 2017 and states that "Each allocated site will be masterplanned and delivered as a whole to achieve a comprehensive development" and "A single planning application will be submitted for each allocated site". It is proposed to delete this document as part of the Local Plan Review. I object to this action as Policy SP16 is incomplete in its detail, unclear and ambiguous, unlike Policy GS 1.</p> <p>Policy SP16 goes against NPPF Para 16d, resulting in less governance during the planning process and allowing West Berkshire Council to introduce a weaker, less detailed replacement and introducing an amendment to the Warren Road access. The intended accompanying MOU is not a legally binding document, only a statement of serious intent. The original Core Strategy was set after considering the needs and requirements of interested parties and Policy SP16, with its accompanying MOU, weakens the Democratic process as there is no right for public consultation.</p> <p>Changes: All vehicle access down Warren Road to the proposed Sandleford development is unsafe and should not be allowed. Warren Road should only permit access to existing properties and pedestrian access over the existing footpath.</p>	<p>modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p> <p>Comments relating to the bridge are noted, the need for valley crossings (both central and north) to be included within SP16. It is acknowledged that these are included within the SPD and would assist with the desirable provision of through routes, permeability and connectivity and access to services and facilities for all.</p> <p>In relation to the requirement for the one planning application, the Sandleford Park SPD, introduced this requirement for the application, however this policy (SP16) removes this requirement but makes clear that the site must be delivered to achieve comprehensive development and ensure the timely and co-ordinated provision of infrastructure.</p> <p>The Local Plan Review will go through the same production stages and processes as the Core Strategy as set out in The Town and Country Planning (Local Planning) (England) Regulations 2012. A further round of consultation will be undertaken and an examination process. Any planning application will be considered following development management procedures.</p>

Respondent (with lpr ref)	Response	Council Response
Edward Schofield (lpr379)	<p>I primarily object to the change of status for the Warren Road access to all vehicle access for any Sandleford development due to all the objections that have been previously lodged. This should also explicitly exclude the use of Kendrick Road and Garden close lane to also avoid any confusion. I also think it should mention and explore the use of an access from closer to the A34 junction at Wash Water. This should be explored as this will remove the increase in traffic and protect the local community more, as well as the children at Falklands Primary School and Park House from the increased traffic.</p> <p>Page 61 Policy SP16 states that "Development of the site would be expected to deliver" ..."Four primary all vehicle accesses ....One through to Andover Road via Warren Road". The all vehicular Warren Road access was only introduced at SPD stage and Policy SP16 cannot bring in new policy or change existing policies without Planning Inspectorate looking at the "soundness" of the plan. The Local Plan has been submitted to the Secretary of State for independent examination by the Planning Inspectorate and any changes to the Local Plan must also be submitted. I object to the addition of the Warren Road access, after the approval of the Core Strategy, as an all-vehicle access road to the Sandleford Development due to its position next to 2 schools (Park House and Falkland Primary school) and the pollution and traffic impact on local vulnerable pedestrians, many of them children.</p> <p>It is noted that the proposed Policy DC7 Air Quality in the draft plan includes a sub item e: "it does not expose occupiers who are particularly sensitive to air pollution, such as those in schools, health care establishments or housing for older people;" Which conflicts with Policy SP16 and its attempt to make Warren Road an all vehicle access directly impacting both a primary and secondary school who are located in close proximity.  <a href="https://assets.publishing.service.gov.uk/.../clean-air...">https://assets.publishing.service.gov.uk/.../clean-air...</a>          "This statutory guidance recognises schools and active travel routes, amongst others, as "sensitive receptor locations"".</p> <p>The Core Strategy stated that the Warren Road access to the Sandleford Development would be a sustainable transport access. NPPF, paragraph 7 states that the purpose of the Planning system "is to contribute to the achievement of sustainable development". Policy SP16 takes away those</p>	<p>Comments noted. The Local Plan Review (Regulation 18) Consultation is one of the stages a Local Plan must go through prior to it going to examination. Following the Regulation 18 consultation all comments received will be reviewed and amendments made to the plan where necessary. The Council will continue to build its evidence base for the Local Plan so that the plan is justified.</p> <p>Following this the next stage in the process is known as the Regulation 19 stage which is set out in The Town and Country Planning (Local Planning) (England) Regulations 2012. This sees another round of consultation prior to its submission to the Secretary of State and Examination.</p> <p>In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p> <p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base</p>

Ian Dyke (lpr382)	<p>It is very unfortunate that once again WBDC are ignoring Newbury Town Council and local residents with regard to the proposal to use Warren Road as an all vehicle access to the Sandleford Development. Despite all previous very valid objections to this, and there have been many, WBDC seem, for reasons known only to themselves, to be again pursuing this in the Local</p>	<p>Comments noted. In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Plan Review. I object to this being introduced into the Review for the following reasons:</p> <ol style="list-style-type: none"> <li>1. The all vehicle Warren Road access will be next to two schools and two churches and will have a significant pollution and traffic impact on local vulnerable pedestrians many of them being school children.</li> <li>2. The Core Strategy stated that the Warren Road access to the Sandleford Development would be sustainable access only. That is, bus, cyclists and pedestrians only. NPPF, paragraph 7, states that the purpose of the Planning system is to contribute to the achievement of sustainable development. Policy SP16 takes away these rights to achieve sustainable development within Sandleford and the surrounding area as required by the NPPF.</li> <li>3. There is no mention of the required bridge within Policy SP16, required to link central and Western Sandleford Development parcels to the other three access roads. If not built, this would lead to 2/3 of the proposed housing only having Warren Road for access.</li> <li>4. Policy GS1 was introduced in 2017 to achieve a comprehensive development and a “single planning application” for each allocated site. It is now proposed to delete this requirement which I strongly object to as Policy SP16 is incomplete in detail, unclear and ambiguous. There is also a Memorandum of Understanding between the relevant parties to the development which has no legal standing and should be dismissed.</li> <li>5. There is no evidence of a Southerly access road being considered. This makes far more sense in terms of safety, traffic impact and pollution and should be explored.</li> </ol> <p>Overall, it is very disappointing that WBDC continue to pursue the Warren Road all vehicle access. As a local resident, I am extremely concerned that this has been introduced in the Local Plan Review.</p>	<p>from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. 	<p>environmental and biodiversity policies as it is simply not possible to fit that many properties with buffer zones necessary to protect the five areas of ancient woodland.</p> <p>Changes: It should at least be scaled back substantially too much smaller developments to the west and NE, with fewer than 500 dwellings in total. Building along the north side of Monks Lane as far south as the new access road from the A339 would be consistent with existing development (Newbury College, Highwood Copse School, The Two Watermills), relatively non-controversial, and above all deliverable, without inflicting the huge environmental damage implicit in current proposals for the south and west of the site.</p> <p>I note that SP16 attempts to change the council's policy towards Warren Road, to become one of “four primary all-vehicle accesses” to the site. (The approved Core Strategy policy is for “sustainable transport”, namely buses, cyclists and pedestrians only, not all vehicles, which was introduced at SPD stage.) Warren Road is immediately adjacent to one school and opposite another and to even contemplate it as being suitable for all-vehicle access to a huge housing development, including numerous HGVs during the building stage, indicates that not only does the council not care about the health, wellbeing and safety of young people in West Berkshire, but that it has taken leave of its senses. I note that DC7 in the draft plan (air quality) refers to those “who are particularly sensitive to air pollution, such as those in schools ...” Further, SP16 fails to refer to the bridge linking the Sandleford development parcels; without the bridge, approximately two-thirds of the development could only be accessed via Warren Road.</p> <p>Finally, I note that the draft plan appears to undermine the council's policy, as adopted by the amended SPD in 2015 and since reiterated on numerous occasions, “to reflect the need for a single planning application for the site” in order that any development should be coherent, coordinated and with appropriate infrastructure. In my view this demonstrates, at the very least, bad faith on the part of the council towards the residents of Wash Common.</p>	<p>preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Respondent (with lpr ref)	Response	Council Response
		and ensure the timely and co-ordinated provision of infrastructure.
David Kiff (lpr1632)	<p>SP13 and para 6.19 and SP16</p> <p>The application by Bloor Homes for planning permission to build 1000 homes at Sandleford Park was refused by West Berkshire Council in October 2020. They stated that they have been unable to find an acceptable solution to the problems with the development so that the development can be said to improve the economic, social and environmental conditions of the area. The Council listed 14 reasons for refusal ranging from a lack of a holistic approach, its impact on the environment and ancient woodland, impact on the A34 and failure to secure delivery of necessary infrastructure.</p> <p>The application fails to provide adequate certainty and confidence that the proposal will deliver the comprehensive development of the Sandleford strategic site allocation as a whole along with coordinated and timely delivery of the associated infrastructure, services and facilities necessary to mitigate its impact across the entirety of the SSA and beyond. Another reason was the failure of the development to meet the Council's aim for making the district net carbon zero by 2030, as declared in their climate emergency.</p> <p>It is considered to be an unsustainable and harmful development by failing to reduce carbon dioxide emissions. In addition, other reasons cited for refusal were potential harm to the ancient woodland on the site and the potential severe impact on the A34. Also failure to secure satisfactory planning obligations for infrastructure and mitigation measures.</p> <p>In the light of all of the above Sandleford Park Newbury is a totally unsatisfactory site for a major housing development and therefore be removed from the list of sites allocated for residential and mixed use development.</p>	<p>Comments noted. Although Policy SP16 will take precedence once adopted the Sandleford Park SPD provides the framework for development.</p> <p>West Berkshire Council declared a Climate Change Emergency in 2019 and the district's target is to become carbon neutral by 2030. The Local Plan is a key tool to build climate resilience and take action and net zero carbon modelling will inform the next stage of the Local Plan. Proposed Submission LPR Policy SP5: Responding to Climate Change and Policy DM4 Building Sustainable Homes and Businesses will be the key policy tools to achieve carbon reduction in new homes built within the District.</p>

The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p>
Graham Storey (lpr577)	<p>I am disappointed to see that Sandleford, which has proved to be undeliverable, and which contravenes SP5, SP8, SP10 and SP11, remains in the draft Local Plan. The target of 1,500 homes is incompatible with the council's environmental and biodiversity policies as it is simply not possible to fit that many properties with buffer zones necessary to protect the five areas of ancient woodland.</p> <p>Changes: It should at least be scaled back substantially too much smaller developments to the west and NE, with fewer than 500 dwellings in total. Building along the south side of Monks Lane as far south as the new access road from the A339 would be consistent with existing development (Newbury College, Highwood Copse School, The Two Watermills), relatively non-controversial, and above all deliverable, without inflicting the huge environmental damage implicit in current proposals for the south and west of the site.</p>	<p>Comments noted. In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I note that SP16 attempts to change the council's policy towards Warren Road, to become one of “four primary all-vehicle accesses” to the site. (The approved Core Strategy policy is for “sustainable transport”, namely buses, cyclists and pedestrians only, not all vehicles, which was introduced at SPD stage.) Warren Road is immediately adjacent to one school and opposite another and to even contemplate it as being suitable for all-vehicle access to a huge housing development, including numerous HGVs during the building stage, indicates that the council not care about the health, wellbeing and safety of young people in West Berkshire, We note that DC7 in the draft plan (air quality) refers to those “who are particularly sensitive to air pollution, such as those in schools ...” Further, SP16 fails to refer to the bridge linking the Sandlesford development parcels; without the bridge, approximately two-thirds of the development could only be accessed via Warren Road.</p> <p>Finally, I note that the draft plan appears to undermine the council's policy, as adopted by the amended SPD in 2015 and since reiterated on numerous occasions, “to reflect the need for a single planning application for the site” in order that any development should be coherent, coordinated and with appropriate infrastructure.</p>	<p>In regards to the four vehicular accesses, these are required as a result of further modelling work which has been undertaken since the allocation was identified in the Core Strategy. The requirement of Core Strategy policy CS3 is therefore out of date and SP16 needs to reflect the latest transport modelling as part of its evidence base which results in the four all vehicles accesses being identified in policy.</p> <p>Comments relating to the bridge are noted, the need for valley crossings (both central and north) to be included within SP16. It is acknowledged that these are included within the SPD and would assist with the desirable provision of through routes, permeability and connectivity and access to services and facilities for all.</p> <p>In relation to the requirement for the one planning application, the Sandlesford Park SPD, introduced this requirement for the application, however this policy (SP16) removes this requirement but makes clear that the site must be delivered to achieve comprehensive development and ensure the timely and co-ordinated provision of infrastructure.</p>
Nataliya Topliss (lpr806)	The development is too large for the area.	Comment noted.
Councillor Tony Vickers (lpr552)	<p>We opposed the inclusion of Sandlesford Park in the current Local Plan and whilst we accept that this cannot be removed altogether we continue to oppose this policy and support the reasons given in the responses from Newbury Town Council (NTC) and Greenham Parish Council (GPC).</p> <p>See the comments made by NTC in its response.</p> <p>In particular we note the new policy merely requires proposals for Sandlesford Park to “have regard to” to the adopted SPD and “achieve a sustainable</p>	Comments noted. Due to the hierarchy of development plan documents a Local Plan cannot require a planning application to be in accordance with a SPD as a SPD does not follow the same process as a Local Plan and is not tested through examination in public. As such the Local Plan Review wording is very deliberate in saying ‘having regard to’ so that the appropriate status of the SPD is referred to in the Local Plan Review.

Respondent (with lpr ref)	Response	Council Response
	<p>comprehensive development”. This seems to be significantly weaker than the previous policy, expressly worded in the SPD, that the whole strategic site must be delivered through a single outline planning application and built out to an agreed and binding phasing plan.</p> <p>However we note some specific improvements in the policy, notably the “expectation” of on-site renewable energy and the emphasis on 3-bedroom (or larger) homes.</p> <p>Changes: We believe that to make Sandleford Park deliverable within the new Plan Period as a strategic site will need a complete review of its extent and any new access point off the A343, in the light of other policy changes in this new Local Plan.</p>	<p>In relation to the comments on highway impact, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandleford development and dualling of the A339 between the new Sandleford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p>
<b>Landowners, site promoters and developers</b>		
ProVision for Mr & Mrs Matthew Pittard (lpr1963)	<p><i>Representation promotes the allocation of Land at Lower Way Farm, Thatcham. Full representation is attached as a response to Policy SP13</i></p> <p>Policy SP16 of the draft Local Plan confirms that Sandleford Park is allocated for a mixed-use development comprising approximately 1,500 homes. Supporting text (paragraph 6.30) confirms that “<i>Delivery of approximately 1,000 dwellings is anticipated within the plan period.</i>” Sandleford Park was allocated in the Core Strategy that was adopted in July 2012. Policy CS3 of the document explains that the site is allocated for a mixed-use development including up to 2,000 dwellings. Paragraph 5.13 of the document goes on to explain that “<i>Some flexibility in delivery is anticipated, with at least 1,000 dwellings proposed to be delivered by 2026.</i>” To date, planning permission has not been granted for any residential development at Sandleford Park. In fact, planning permission has been refused on several occasions, with the most recent refusal being in October 2020 and subject to 14 reasons for refusal, while an application submitted in 2018 (for 500 homes) remains undetermined.</p>	<p>Comments noted.</p> <p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council’s strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Without detailed evidence to demonstrate that the reasons for refusal can be overcome, the allocation of Sandleford Park for approximately 1,500 homes (with 1,000 to be delivered within the Plan-period) cannot be found sound. Even if evidence is provided to demonstrate that the site remains a suitable location for growth, based on the planning history for the site, it seems very unlikely that 1,000 homes will be delivered within the Plan-period.</p> <p>The draft Local Plan does not provide any confidence that Sandleford Park is deliverable. In particular, paragraph 6.12 sets out that <b><i>“assuming that 1,000 homes are deliverable at Sandleford Park by 2037 (with the remaining 500 in the next plan period) (our emphasis)”</i></b>.</p> <p>Furthermore, it is noteworthy that paragraph 4.9 of the Transport Assessment Report – Phase1 (December 2020) confirms that housing completions are not expected at Sandleford Park prior to 2026. In addition, the latest Annual Monitoring Report (AMR) (January 2021) confirms that <i>“Sandleford Park was previously assumed to deliver 1,000 units in the plan period, as required in Policy CS2 but, with the refusal of planning permissions in November/December 2017 and determination of new applications pending determination in 2020, the timing of delivery is more uncertain and likely to be largely in the period post 2026.”</i></p> <p>As noted above, the Council has not published a housing trajectory in support of the draft Local Plan. Therefore, to provide an indication of the timescales involved in delivering large housing sizes, it is helpful to review the second edition of Lichfield’s publication <i>“Start to Finish – What factors affect the build-out rates of large scale housing sites?”(15)</i>.</p> <p>For sites of around 1,500 dwellings, a realistic built-out rate is noted as being around 100-120 dpa (16). This means that if Sandleford Park were to be delivered at a cautionary rate of 100 dpa, first completions would need to take place around 2026/2027 to achieve 1,000 dwellings within the Plan-period. Given the site’s planning history, along with Lichfield’s finding that for similar scale sites it can take around 7 years to progress from the validation of a planning application to completion of the first dwelling<sup>17</sup>, this seems unrealistic.</p> <p>Assuming an application for 1,000 dwellings is submitted in 2022/23, first completions are unlikely to be achieved until around 2029/30. This is three</p>	<p>through all stages of consultation, examination and adoption by the Council.</p> <p>The emerging plan assumes delivery of at least 1,000 units at Sandleford Park and 1,250 at North West Thatcham by 2037. This is not considered unrealistic. Using evidence from Lichfield’s research report ‘Start to Finish’ of Feb 2020 average rates for large sites are assumed to be 160 dwellings per annum for sites of 2,000 plus and 107 for sites of 1,000 to 1,499. Using these delivery rates would entail first completions on Sandleford Park in 2027/28 to achieve delivery of the numbers assumed in the housing supply calculation. Progress will be continually monitored and adjustments made to the trajectory.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>years beyond the period needed to achieve 1,000 dwellings within the Plan-period, assuming all technical issues and previous reasons for refusal are addressed.</p> <p>In light of the above, we recommend that the allocation of Sandleford Park for development is deleted, or at the very least, the amount of housing that it is anticipated will come forward within the Plan-period is reduced significantly. Furthermore, we recommend that additional sites should be allocated for housing, focused on small / medium sized sites that can come forward quickly, particularly in the early part of the Plan-period. These should be distributed in line with the settlement hierarchy outlined in policy SP3.</p> <p>(15) <a href="https://lichfields.uk/media/5779/start-to-finish_what-factors-affect-the-build-out-rates-of-large-scalehousing-sites.pdf">https://lichfields.uk/media/5779/start-to-finish_what-factors-affect-the-build-out-rates-of-large-scalehousing-sites.pdf</a></p> <p>(16) Figure 7</p> <p>(17) Figure 4</p> <p>Changes:</p> <p>We recommend that the allocation of Sandleford Park for development is deleted, or at the very least, the amount of housing that it is anticipated will come forward within the Plan-period is reduced significantly. Furthermore, we recommend that additional sites should be allocated for housing, focused on small / medium sized sites that can come forward quickly, particularly in the early part of the Plan-period. These should be distributed in line with the settlement hierarchy outlined in policy SP3.</p>	
Wey Planning Ltd for Neville Baker Estate (lpr1274)	<p>1. It is considered that the proposed Sandleford strategic site allocation is unsound, primarily on the basis of clear evidence that the site is not deliverable or will not deliver approximately 1,000 dwellings by 2037. Furthermore, the combination of Sandleford Park and the Policy SP17 North East Thatcham strategic site allocation means the Spatial Strategy is overly focussed and overly reliant on the two sites to deliver a significant proportion of the WBLPR housing requirement to 2037 and maintain a 5 year housing supply throughout the plan period. This excessive focus is at the expense of greater flexibility and achieving an appropriate balance between urban and rural development that would better meet the local housing needs of rural</p>	<p>Comments noted, developers have options on the site.</p> <p>The principle of development on the site for up to 2000 dwellings has been established through the Core Strategy process and the site has been accepted as a location to provide a long-term urban extension which will deliver up to 2000 homes. The Core Strategy went through all stages of consultation, independent examination, and adoption by the Council.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>areas and help maintain vibrant and balanced communities, especially in the AONB. Consequently, it does not represent an appropriate strategy, taking into account reasonable alternative(s), which the Council has not adequately assessed.</p> <p>2. The Sandleford Park strategic site was first allocated in the Core Strategy in 2012 for 2,000 dwellings, with the aim of delivering at least 1,000 dwellings by 2026. However, in spite of several planning applications (4 refused, 1 pending consideration), the adoption and subsequent amendment (watering-down) of the Sandleford Park SPD and the passing of nearly 8 years, not a single dwelling has been delivered. A key reason for this is that the site is in multiple ownership and the landowners have consistently failed to work together to deliver a comprehensive scheme, even though the Council has agreed that it will consider separate planning applications in an attempt to move matters forward.</p> <p>3. There is no evidence to indicate that the landowners will work together to deliver an acceptable scheme in future and the Council is on record as saying “It is unlikely to assume the delivery of any units at Sandleford Park within this period” (31st March 2026) (Newbury Weekly News). The most recent Five Year Housing Land Supply (December 2019) confirms that the site is not anticipated to deliver any new dwellings by 2024.</p> <p>4. The planning history of the site confirms that an acceptable scheme for the site, even in outline, may not transpire and, at the very least, is a considerable way off. The most recent outline application by Bloor Homes and the Sandleford Farm Partnership (18/00764/OUTMAJ) was refused permission for 14 different reasons, including lack of a holistic and comprehensive approach, failure to secure the necessary infrastructure (on and off site), inconsistencies in the information submitted, education provision, flooding and impact on ancient woodland. These reasons for refusal amount to fundamental and even “in principle” objections to the development of the site and it remains unclear whether and when they will be overcome. Moreover, these fundamental objections cast significant (rather than reasonable) doubt about the suitability, availability and achievability of the site, as well as its true development capacity.</p> <p>5. Paragraph 6.29 of the supporting text to Policy SP16 states that the Council is confident that the site will deliver housing within the WBLPR plan</p>	<p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The emerging plan assumes delivery of at least 1,000 units at Sandleford Park and 1,250 at North East Thatcham by 2037. This is not considered unrealistic. Using evidence from Lichfield's research report ‘Start to Finish’ of Feb 2020 average rates for large sites are assumed to be 160 dwellings per annum for sites of 2,000 plus and 107 for sites of 1,000 to 1,499. Using these delivery rates would entail first completions on Sandleford Park in 2027/28 to achieve delivery of the numbers assumed in the housing supply calculation. Progress will be continually monitored and adjustments made to the trajectory.</p> <p>The spatial distribution of development stems from the overriding objective of enabling sustainable development. The LPR aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus will be on existing settlements, using the settlement hierarchy, set out in Policy SP3. This steers development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity, while protecting and enhancing the environmental assets of the District. The existing urban areas are regarded as the most suitable locations for future development by virtue of their existing access to services and facilities, thereby providing the opportunity to reduce out-commuting and the need to travel. Development in Newbury and the smaller towns of the District is seen as</p>

Respondent (with lpr ref)	Response	Council Response
	<p>period. However, the Council provides no evidence to support this confidence and does not give any indication of when the development is expected to commence or evidence of delivery rates to support its view that approx. 1,000 dwellings will be delivered by 2037. This is contrary to Paragraph 72 of the NPPF, which states that the Council should.....”d) Make a realistic assessment of likely rates of delivery, given the lead-in times for large scale sites....”</p> <p>6. Section d) of Paragraph 72 is a recognition at national level of the many obstacles which exist in relation to the effective and timely delivery of large scale housing sites and is based on evidence at the national level. However, it is also apparent from evidence at the local level that large scale housing developments in West Berkshire experience significant delays in terms of commencement and delivery rates, such as at Newbury Racecourse and Sandford Park itself.</p> <p>7. With regard to delivery, Paragraph 76 of the NPPF states that for major developments involving the provision of housing, LPA's should assess why any earlier grant of permission for a similar development on the same site did not start, to help ensure that proposals for housing development are delivered in a timely manner. There are no planning permissions for the Sandford Park site, but it follows from Paragraph 76 that the Council should properly consider the reasons why this is the case and what it means in terms of the deliverability of the site. There is no evidence that such an assessment has been undertaken.</p> <p>8. In combination, the strategic sites at Sandford and North East Thatcham are expected to deliver approx. 2,250 dwellings by 2037. This means that District-wide, they will account for nearly 50% of all new dwellings to be delivered on allocated sites (in the WBLPR and NDP's) over the plan period (4,670 dwellings) and over 70% of all new dwellings to be delivered on allocated sites in the Newbury/Thatcham urban area (3,105 dwellings). It is considered that this amounts to an undue reliance upon the two sites to deliver, which comes at considerable risk and has significant potential to undermine the Council's ability to meet the housing needs of the area and maintain a 5 year housing land supply throughout the plan period.</p> <p>9. In combination, the strategic sites at Sandford and North East Thatcham are a significant component of the urban focus of the Spatial Strategy and an</p>	<p>contributing not only to their regeneration, through provision of additional services and facilities, but also to the rural areas they serve.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>even more significant component of the focus of development on the Newbury/Thatcham urban area. Accordingly, they are major contributors to the imbalance in the overall distribution of new housing development proposed between urban and rural areas, which is not justified by evidence and will have unacceptable consequences for the North Wessex Downs AONB, particularly in relation to meeting local housing needs and maintaining vibrant and balanced communities.</p>	
<p>Pro Vision for Newbury Racecourse (lpr1683)</p>	<p>The Consultation Document identifies several sources of housing supply across the plan period. These include: retained allocations; existing commitments on unallocated sites; windfall sites; and through new allocations in the Local Plan Review and Neighbourhood Plans.</p> <p>Table 2: Housing Supply at March 2020 of the Consultation Document confirms that 4,653 dwellings have planning permission, 1,482 dwellings are allocated without permission (with a 1,000 dwellings from Sandleford Park and 482 dwellings carried forward from the HSA DPD); and a windfall allowance of 1,979 dwellings. This amounts to 8,114 dwellings – and therefore to meet the proposed requirement of 575 dpa there is a need to find a further 1,661 dwellings during the plan period.</p> <p>The Consultation Document includes the delivery of two strategic urban extensions: Sandleford Park (1,500 dwellings) and North-East Thatcham (2,500 dwellings). The Council assumes that 1,250 dwellings are deliverable at NE Thatcham within the plan period.</p> <p>It is proposed that a further 315 dwellings will be allocated via Neighbourhood Plans and 490 dwellings on newly allocated sites.</p> <p><b>Critique</b></p> <p><u>Large Strategic Sites</u></p> <p>It is anticipated that Sandleford Park and North East Thatcham will provide 1,000 and 1,250 dwellings up to 2037, respectively. The Council therefore rely greatly on the delivery of these two large strategic sites to deliver the housing need over the plan period.</p> <p><i>Sandleford Park</i></p>	<p>Comments noted. Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>The emerging plan assumes delivery of at least 1,000 units at Sandleford Park and 1,250 at North West Thatcham by 2037. This is not considered unrealistic. Using evidence from Lichfield's research report 'Start to Finish' of Feb 2020 average rates for large sites are assumed to be 160 dwellings per annum for sites of 2,000 plus and 107 for sites of 1,000 to 1,499. Using these delivery rates would entail first completions on Sandleford Park in 2027/28 to achieve delivery of the numbers assumed in the housing</p>

Respondent (with lpr ref)	Response	Council Response
	<p>The Council’s Site Selection Background Paper (December 2020) and ‘Deliverability Update’ does not refer to the latest refusal at Sandford Park regarding planning application ref: 20/01238/OUTMAJ for up to 1,000 new homes in October 2020. This follows several previous refusals since 2017. A current application is still being considered on part of the site for around 500 new homes.</p> <p>With the above in mind, the deliverability of a strategic level of development (i.e. 1,500 new homes) at Sandford Park is questioned. There appear to still be numerous issues that have not been resolved despite the first planning application for the site being submitted in 2015.</p> <p>The latest planning application was refused for some 14 reasons, including [inter alia]: failing to ensure the holistic comprehensive development of the Sandford Strategic Site Allocation; impact on the environment, protected sites, trees and several ancient woodlands; impact on the local highway network (including the A34); and failure to secure necessary infrastructure improvements via a S106 Agreement.</p> <p>The Site is not re-assessed in the Site Assessment Site Selection Background Paper (December 2020) because the Council contend that the principle has already been accepted through the adoption of the Core Strategy. However, this approach is flawed as clearly issues have developed that the Inspector at the time would not have known. Without further evidence that these issues affecting deliverability can be resolved, the inclusion of Sandford Park within the Local Plan Review is unsound.</p> <p>If additional technical evidence can demonstrate that the site is still deliverable, there are concerns regarding the expected delivery of 1,000 dwellings across the Plan Period. It is noted that the Council, at this stage, has not provided the expected rate of housing delivery over the plan period through a housing trajectory. Nevertheless, the Council do not include Sandford Park within the Council’s five-year housing land supply - and therefore first completions are not expected before the end of the current plan period (i.e. up to 2026). This is also the approach taken in the Council’s Annual Monitoring Report (January 2021) which confirms that timing of delivery of Sandford Park is “<i>likely to be largely in the period post 2026</i>” and Phase 1 Local Plan Review Transport Assessment (December 2020).</p>	<p>supply calculation. Progress will be continually monitored and adjustments made to the trajectory.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Evidence suggests that for sites of around 1,500 dwellings, a realistic average annual build out rate is between 100 dpa to 120 dpa (Source: Lichfield's Start to Finish (2nd Edition) – How Quickly to Large-Scale Housing Sites Deliver, February 2020). As such, to deliver 1,000 dwellings across the plan period, first completions would be needed from 2026/2027. As such, given that an outline application has recently been refused it seems unrealistic – particularly given the site's history - that first completions will deliver within these timescales. Indeed, evidence demonstrates that for schemes of around 1,500 dwellings, the lead-in time from validation of an application through to first completions is approximately 7 years (Source: Lichfield's Start to Finish (2nd Edition), February 2020) and, therefore, timescales may already have been missed to fully deliver the expected provision during the plan period.</p> <p>With this in mind, due to uncertainty over the delivery of the proposal it is recommended that Sandleford Park is removed from the Plan or the scale of housing provision over the plan period reduced.</p> <p>Changes: Due to uncertainty over the delivery of the proposal it is recommended that Sandleford Park is removed from the Plan or the scale of housing provision over the plan period reduced.</p>	
Southern Planning Practice for The Saunders Family (lpr1929)	We object to the proposed allocation of Sandleford Park (Policy SP16). This site has been allocated since 2006, yet the Council has refused planning permission for its residential development twice. It is therefore considered that the site should not be considered deliverable and hence should not form part of the Council's proposed housing land supply	<p>Comments noted. Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach</p>

Respondent (with lpr ref)	Response	Council Response
		continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.
Bloor Homes & Sandlesford Partnership (lpr2173)	<p>The Core Strategy allocates Sandlesford Park as a strategic allocation for development up to and beyond 2026 as part of a spatial strategy that rightly focused new development at Newbury as the main settlement in the District. The emerging Local Plan logically maintains that strategy; national planning policy continues to direct new development to locations that can achieve a sustainable pattern of development and the characteristics of the District, and the role and function of its main settlements, remain the same.</p> <p>As the Council acknowledge in the consultation document, having reviewed its evidence, "Sandlesford Park is the most appropriate location for strategic housing delivery in Newbury". Recognising that planning permission has not yet been granted for development at Sandlesford Park, the Council "is confident that the site will deliver housing within the plan period of the Local Plan Review and is actively working to ensure this".</p> <p>Bloor Homes and Sandlesford Farm Partnership agree with this and support the continued allocation of Sandlesford Park as a strategic site in the Local Plan Review.</p> <p>In the context of the sound spatial strategy described in the previous section, the Local Plan Review intends to retain the allocation of Sandlesford Park at Newbury. As the landowners and prospective developers, we support this continued allocation, which is entirely consistent with the role envisaged in the Core Strategy for Sandlesford Park to provide new housing up to and beyond 2026.</p> <p>The Interim Sustainable Appraisal acknowledges that the Sandlesford Park site allocation would contribute to the significantly positive effect on maximising housing provision (1) as these areas have the infrastructure and facilities to support sustainable growth. It further highlights that the strategic site allocation is of a sufficient scale to make a significant contribution to affordable housing and meet the needs of different sectors in the community (para 4.30).</p> <p>Policy SP16 specifies the criteria to guide development proposals at Sandlesford Park. In broad terms these are similar to those in the Core Strategy. We comment on these various criteria in the following paragraphs.</p>	<p>Support for the allocation is noted.</p> <p>In regards to housing capacity, the Council note the general support for the capacity of approximately 1,500 dwellings for the allocation.</p> <p>In regards to minerals, the Council note the consultation undertaken with the Minerals Team.</p> <p>In regards to comments on the comprehensive development, the Council note the work to date between parties to ensure a joined up approach.</p> <p>In regards to on-site renewable energy and carbon neutral development, the Council will ensure that the Local Plan reflects the latest national guidance as the document progresses through production.</p> <p>In regards to vehicular access, the Local Plan Review (LPR) Transport Assessment Report Phase 1 (2019) has informed the preparation of the Local Plan Review and has included known highway improvements that have a reasonable expectation of being delivered which includes; New access from the A339 to the Sandlesford development and dualling of the A339 between the new Sandlesford access and the Pinchington Lane roundabout. Further modelling work will continue to be undertaken as part of the LPR TA up to the Regulation 19 submission. This will include work on identifying and scoping the necessary mitigation that will be required to address areas of concern highlighted by the transport modelling outputs shown in this Phase 1 Transport Assessment.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>Housing Capacity</b> The capacity of the Site is now regarded to be approximately 1,500 dwellings. This reflects further, more detailed, design work undertaken by the prospective developers (Bloor Homes and Donnington New Homes) as evidenced in the most recent planning applications: Application 20/01238/OUTMAJ seeks permission for up to 1,000 new homes and an 80 bed extra care facility; Application 18/0828/OUTMAJ seeks permission for 440 new homes and a 60 bed extra care facility. This represents an appropriate capacity to be developed in accordance with the prevailing density assumptions in the Core Strategy, whilst providing predominantly family housing.</p> <p><b>Minerals</b> The requirement for a Minerals Resource Assessment is noted and this reflects the emerging Minerals Local Plan which is also subject to public consultation at the present time. The Site is within an area known to contain sand and gravel deposits and the Replacement Minerals Local Plan for Berkshire identifies minerals safeguarding areas which is relevant to Sandleford Park. Whilst assessments of potential minerals undertaken previously have identified the possibility that mineral resources underlie parts of the Site, prior extraction is precluded because of the extent of environmental constraints. In conjunction with the Council's Minerals Officer a strategy for incidental extraction as part of the development process is therefore favoured.</p> <p><b>Comprehensive Development</b> The respective development proposals referred to above in para 3.3 are considered to be aligned with one another and comprise the comprehensive development of the Site. The respective applicants have identified infrastructure requirements and intend either direct provision (such and land for education, the country park, the local centre, certain off-site highway works via S278) or planning obligations to provide financial contributions to</p>	<p>In regards to Infrastructure, an Infrastructure Delivery Plan has been produced to support the LPR and can be viewed <a href="#">here</a>.</p> <p>Comments on housing delivery are noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>facilitate other infrastructure provision. Together, this represents and ensures the co-ordinated and timely provision of infrastructure. It is particularly instructive that the Council acknowledge in paragraph 6.32 of the consultation document that development proposals can achieve a comprehensive development without a single planning application which is required by Policy GS1 of the Housing Site Allocations DPD and the Sandlesford Park SPD.</p> <p><b>On-site renewables and carbon neutral development</b>  We note that this criterion has been expanded from the equivalent in the Core Strategy which referred only to the generation of on-site renewables. In the Core Strategy, Policy CS15 provided a more detailed account of how the District Council wanted to secure energy efficiencies as part of new development, however, its provisions in relation to the Code for Sustainable Homes have been superseded by the change in the Government's approach to this subject matters.  By the present time, the Government has announced that it intends to improve energy efficiency standards via the Buildings Regulations and made a recent announcement in respect of this following its consultation on the Future Homes Standards in 2020. The Regulation 19 version of the Local Plan will need to be prepared in the context of the Government's intentions in this regard.</p> <p><b>Means of Vehicular Access</b>  Core Strategy Policy CS3 requires two points of access from Monks Lane, whereas the SPD refers to exploring additional points of access, referring to a connection to the A339 Newtown Road in the east and the A343 Andover Road via Warren Road to the west.  In respect of the former, planning permission exists for the construction of a new road to the south of Newbury College which would provide a vehicular link to the boundary of Sandlesford Park. The Council secured LEP funding specifically for the purpose of facilitating access to Sandlesford Park in this location. This road is currently being constructed and is expected to be open to traffic by 2023.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>In respect of the latter, planning permission exits for the widening of Warren Road to 4.8m and planning permission has been sought for a further widening to 6m.</p> <p><b>Sustainable Access</b> As with the current Core Strategy, the draft policy seeks a Sustainable transport link through the site and along Warren Road to Andover Road for pedestrians, cyclists and public transport. As set out in the preceding paragraphs the extent to which Warren Road can be widened is limited, although the Manual for Streets does recognise that whilst streets on bus routes should not generally be less than 6.0m wide, this could be reduced on short sections with good inter-visibility between opposing flows. Therefore, as the highway officer identified initially, the existing widening scheme can serve as a bus route.</p> <p><b>Infrastructure</b> The Policy refers to an Infrastructure Delivery Plan, but this is not appended to the consultation document. We reserve the right to make further representations in relation to this in due course.</p> <p><b>Housing Delivery</b> Whilst we note that the Council now consider Sandleford will be developed after 2026, with the grant of planning permission, there are no infrastructure or legal impediments to the development commencing and contributing a material supply of housing completions by 2026, and, as was the original intention of the Core Strategy, continuing beyond 2026. On this basis we believe the whole of Sandleford would be substantially complete by 2037. In its Annual Monitoring Report 2020, the Council acknowledge that Sandleford could deliver houses by 2026 (para 3.12 refers). We agree with this. We note that the HELAA 2020 records that the Site is Available and Achievable and Deliverable. The commentary relates to the presence of areas of ancient woodland and that a small part of the site is functional floodplain and Zones 2 and 3a (associated with existing watercourses). Both these features are well-known and understood and are taken into account in</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>the Concept Plan in the adopted Core Strategy and the Framework Masterplan in the Sandford SPD and the planning applications at Sandford. Neither precludes development of the site nor has any associated timing implication. With the timely grant of planning permission development could commence sooner than 2026.</p> <p>Summary We support the continued allocation of Sandford Park, which reflects and gives effect to the established spatial strategy. We agree with the Council that Sandford Park represents the most appropriate location for strategic housing delivery in Newbury. It is instructive in this context that the issues that have arisen in the context of the planning applications at Sandford are detailed matters relating to the scheme and not issues that go to the heart of the principle of development in this location. We generally agree with the amendments proposed to the site allocation policy but have drawn attention to amendments or clarifications that would be appropriate.</p>	
West Build Homes (lpr2139)	<p>Westbuild broadly support the Council's approach to the delivery of housing set out within Policy SP12, but have some reservations about specific matters which are set out below.</p> <p>Significant concern exists, however, about the Council's over-reliance on two large strategic sites. The Council's own experience, and that on a national level, is that strategic sites have lengthy lead-in times, and are inherently slow in delivery, and this should be reflected within the emerging plan review through the inclusion of criteria for sites not proposed for allocation to be considered, increasing the flexibility afforded to the Council and reducing the reliance upon strategic sites.</p> <p>Paragraph 6.10 of the draft emerging plan refers to paragraph 68 the National Planning Policy Framework (The Framework) and the weight that should be attributed to the benefits of using suitable sites within existing settlements for homes. What it fails to have any regard to, however, is the sub section Paragraph 68(d) which states that local planning authorities should: "work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes."</p>	<p>Comments noted. The LPR aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus will be on existing settlements, using the settlement hierarchy, set out in Policy SP3. This steers development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity, while protecting and enhancing the environmental assets of the District. Policy SP1: Spatial Strategy recognises that development will not just occur on large strategic sites and recognises that additional development will come forward on both large strategic sites and smaller non-strategic sites allocated in the Local Plan Review and in Neighbourhood Plans, together with infill development, including that on windfall sites within settlement boundaries.</p> <p>Paragraph 69 d) of the NPPF states:</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Westbuild contends that without reference to the part of the Framework, and the inclusion of such provisions within the proposed policies, the plan is flawed in its approach and does not fully meet the tests of soundness.</p> <p>Changes: Policies SP16 and SP17 should include be amended to include an expectation of the sub-division of large sites to allow small and medium enterprise developers to assist in delivering homes and infrastructure in a timely fashion.</p>	<p><i>'Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, and are often built-out relatively quickly. To promote the development of a good mix of sites local planning authorities should:</i></p> <p><i>d) work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes'.</i></p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can deliver infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p>
Pegasus Group for Donnington New Homes (lpr1946)	<p>On behalf of my client, Donnington New Homes, I write in response to the Council's current consultation on the draft West Berkshire Local Plan Review to 2037 (hereafter 'the Plan'). My client controls the western portion of Sandleford Park as located by existing West Berkshire Core Strategy Policy CS3. That Policy allocates approximately 134ha of land to provide a strategic housing development. Donnington New Homes has consistently promoted the land for over 10 years, demonstrating my client's undaunting commitment to its delivery. In 2018, my client submitted a planning application (ref. 18/00828/OUTMAJ) for the development of land within its control that was to be considered jointly with a corresponding application submitted by Bloor Homes and the Sandleford Farm Partnership, on the balance of the site. This submission, in response to the emerging Plan (December 2020), represents my client's continued commitment to deliver the element of Sandleford Park within its control as a sustainable, strategic</p>	<p>Comments noted.</p> <p>The red line plan identifying the site will be amended.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing allocation within the emerging Local Plan. My client supports the continued allocation of Sandleford Park through the emerging Plan and the policies within the Plan which secure the land for that purpose and wishes to comment as follows:</p> <p>Clearly my client supports this Policy including the redefined Policy boundary which includes land known as Sanfoin on the western part of the site, and Warren Road. The confirmation, through paragraph 6.32 that the HAS DPD Policy GS1 requirement for a single planning application for the whole site has been removed is welcomed. This will allow the development to come forwards in a phased but coordinated approach.</p> <p>There is an error on the red line plan identifying the site at Figure 5 as it includes the land allocated by Policy RSA2 (North of Newbury College) which is not part of the Sandleford Park allocation and should be removed from this part of the Plan.</p> <p>Changes: There is an error on the red line plan identifying the site at Figure 5 as it includes the land allocated by Policy RSA2 (North of Newbury College) which is not part of the Sandleford Park allocation and should be removed from this part of the Plan.</p>	

**Responses received to the emerging draft of the Local Plan Review (consultation December 2020 – February 2021)**

**Emerging Draft LPR Policy: SP17 North East Thatcham strategic site allocation**

**(Proposed Submission LPR Policy: SP17 North East Thatcham strategic site allocation)**

Number of responses received: **446**

*Please note that in response to the large number of objections to this site covering a range of issues important to local people, but largely around the environmental impact of the proposal and the impact on local infrastructure, the Council has taken the decision to reduce the number of dwellings on the site and to allocate it for 1500 dwellings for delivery over the plan period. This still enables a strategic level of development which can provide onsite community facilities. It is noted, that compared to a higher number of dwellings, this option may not deliver all of the education provision originally envisaged on the site, or the additional improvements to community infrastructure within Thatcham.*

Thames Water Utilities Ltd (lpr1745)	The scale of development/s in this catchment is likely to require upgrades of both the water supply network and water treatment works. It is recommended that the Developer and the Local Planning Authority liaise with Thames Water at the earliest opportunity to agree a housing phasing plan. Failure to liaise with Thames Water will increase the risk of planning conditions being sought at the application stage to control the phasing of development in order to ensure that any necessary infrastructure upgrades are delivered ahead of the occupation of development. The housing phasing plan should determine what phasing may be required to ensure development does not outpace delivery of essential network and treatment upgrades to accommodate future development/s in this catchment. The developer can	Comments noted, the developers are aware of the requirement for upgrades to the water supply network and water treatment works.  Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades.

Shaw-cum-Donnington Parish Council (lpr211)	Response from Shaw-cum-Donnington Parish Council on Local Plan Consultation SP17 North East Thatcham strategic site allocation. No comment.	Noted.
North Wessex Downs AONB (lpr1627)	<p>We have some concerns.</p> <p>A number of concerns have been allayed by reading the Thatcham Strategic Growth Study and the suggested concept of village centres which focuses the green open space and biodiversity net gain to the northern fringes which creates a degree of separation from the AONB in addition to the proposed 25 metre ancient woodland buffer. However, we would feel more comfortable if the parameters of the site and green open space were set in a masterplan rather than a policy which merely requests that the development positively respond.</p> <p>Height parameters should also be set to ensure multiple height buildings are not erected towards the upper contours which would dominate the escarpment detracting from the important skyline which forms the edge of the AONB.</p> <p>The character of Harts Hill Road and Cox's Lane transitions to a rural lane not defined by pavements and kerbs and this forms part of the urban rural transition from Thatcham to the wider countryside. This is a strong characteristic which should not become overly urbanised by an allocation, it is an important approach to the AONB and Upper Bucklebury.</p> <p>Changes:  Defined set of height parameters for buildings (zones) or a contour point above which no development shall take place or roofscape visible.</p>	<p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the</p>

Respondent (with lpr ref)	Response	Council Response
		parameters of the site, height parameters, green open space, etc.
Historic England (lpr1566)	There are a number of listed buildings in or around this area. These assets, including their settings, should be conserved. A suitable policy requirement should be added.	The draft version of the LPR will contain an updated version of the proposed allocation policy for North East Thatcham which will consider this point.
Natural England (lp1598)	This is a very large allocation in the setting of the North Wessex Downs AONB. This site is potentially acceptable in landscape terms, but must be subject to a landscape sensitivity assessment to shape the development and determine matters such as building heights. Care will have to be taken at planning stage to ensure no impact on the Thatcham Reedbeds SSSI, River Kennet SSSI and Kennet and Lambourn Floodplain SAC. A development on the scale of this allocation could have potential significant impact on these hydrological designated sites in terms of water quality and excess runoff, if mitigation measures are not implemented.	<p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an Ecology</p>

Respondent (with lpr ref)	Response	Council Response
		Strategy which will set out how priority habitats and ecological features will be protected and enhanced.
Environment Agency (lpr1666)	<p>We support the delivery of biodiversity net gain through habitat restoration and linkages. This is an opportunity to enhance the ordinary watercourses and include them in blue/green infrastructure.</p> <p>As mentioned above, there is a West Berkshire Council surface water detention basin within this site, which should be highlighted. Further schemes in this area are also planned.</p>	<p>Noted, the SP10 Green Infrastructure and SP11 Biodiversity and Geodiversity have been amended to strengthen the Council's position in regards to biodiversity net gain and habitat restoration and linkages.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an Integrated Water Supply and Drainage Strategy which will consider existing related infrastructure on the site.</p>
BBOWT (lpr942)	<p>The North East Thatcham Strategic Site Allocation is located within 1.7km of the Kennet and Lambourn Floodplain Special Area of Conservation (SAC). The size of the allocated site and its distance from the SAC would trigger the need for a Habitat Regulations Assessment (HRA) to determine whether development of the site could have any impact on the SAC. The allocated site was not considered in the Habitat Regulations Assessment of the West Berkshire Core Strategy (West Berkshire Council, 2010) and therefore there is no clear evidence that the allocation would not have a significant impact on the SAC. The site borders six LWS, all comprising woodland, the majority of which are designated as Ancient Woodland. Part of the western side of the site supports the UK Biodiversity Action Plan (UKBAP) Priority Habitat Wood-pasture and Parkland and therefore has the potential to support ancient/veteran trees. There is a significant risk of the woodland/parkland habitats being damaged, destroyed and degraded should the site be developed due to potential construction impacts and increased recreational pressure and threats from anti-social behaviour, vandalism and fly-tipping. Sites such as The Plantation LWS are at risk of being enveloped by development which would leave them isolated from the other areas of woodland. We could not find ecological surveys or assessments for the proposed allocation site that assessed the potential impact on designated sites or identified the potential for protected species to be present. Para. 158 of the NPPF requires Local Planning Authorities to base local plan policies on adequate, up-to-date and relevant evidence. As such surveys are</p>	<p>A HRA will accompany the draft version of the LPR.</p> <p>Baseline TVERC assessment of the site was undertaken and is referred to in the HELAA. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR.</p> <p>Applicants will need to have regard to all relevant policies in the Local Plan Review, including Policy SP11 Biodiversity and Geodiversity. This policy has been amended to include more detail on locally designated sites, such as LWS.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an Ecology Strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>required to inform judgements on suitability and capacity of development sites. We consider this particularly important where sites are close to designated sites such as the SAC and LWSs. The potential lack of ecological surveys would be in conflict with the NPPF and could result in allocations being found unsound. BBOWT believe that biodiversity has not been considered sufficiently in allocating this site and it is unclear how an allocation of this scale could be developed without a significant impact on biodiversity.</p> <p>Change proposed: BBOWT suggest an ecology assessment is necessary to determine the feasibility of the site allocation and the proposed number of dwellings.</p>	
Aldermaston Parish Council (lpr1057)	<p>With the huge growth (2500 dwellings) proposed for Thatcham North East, we believe consideration should be given to a new canal/river/railway crossing in the Colthrop area. Not only would this ease current congestion at Thatcham Railway Crossing, but also it would reduce the number of HGVs using the A340.</p>	<p>The Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys</p>

Respondent (with lpr ref)	Response	Council Response
		from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.
Newbury Town Council (lpr2258)	We will not comment on this in any detail but have grave reservations about the need for such a large housing development in a part of the District that is poorly connected to the wider transport network. We fear it will impact upon traffic congestion throughout the Newbury & Thatcham Plan Area and beyond and we have not seen anything in the supporting evidence to alleviate those fears. We reserve judgement until the Regulation 19 consultation stage.	Comments noted, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.
Cold Ash Parish Council (lpr1739)	The proposed THA20 development seems to be a reaction to the constraints, previously mentioned, that have been placed on potential areas for development; those being the decisions taken by West Berkshire District Council, in relation to AONB, and those set by others, in relation to AWE and flood zones.	Development in West Berkshire must consider numerous constraints, most notably the constraints posed by the North Wessex Downs AONB, AWE and the associated DEPZs and flooding. As part of the LPR, all sites promoted to the Council have been assessed in the HELAA.

Respondent (with lpr ref)	Response	Council Response
	<p>It seems quite clear that the proposed development has been settled upon in response to the strong desire to limit development in the AONB, rather than the outcome of a balanced review of options. This conclusion is arrived at due to the absence of appropriate consideration of the infrastructure that would be necessary to support such a development and the impact on the surrounding villages, and the Thatcham and Newbury transport networks. As a minimum, to make the proposals viable from a transport and travel perspective, it would require significant infrastructure improvements and mitigation to address potential traffic issues into Thatcham and Newbury, the level crossing at Thatcham Station and mitigating the impact on the surrounding parishes of Bucklebury, Cold Ash, and the A4 east and Greenham Common area.</p> <p>There are also questions to be addressed on the quality of life in such a large development. A similar scale development took place in Lower Earley, south east of Reading, in the 1980's. The resulting problems with young mother's feeling isolated during weekdays are well known to anyone who lived in the area.</p> <p>With regards to the impact of this strategic site on Cold Ash Parish this huge development so close to us could well transform our parish forever, severely impacting on quality of life and sense of our community for many of our parishioners. Important iconic views could well be lost for good. As well as increased traffic, noise and pollution, there is also likely to be increased pressure on our recreational facilities (something we have seen in recent years even without the prospect of thousands of new homes just over a mile away), which will force us to protect them and prioritise them more overtly for our parishioners.</p> <p>Therefore, given the Parish Council's views on the spatial strategy's over-protection of the AONB, then we strongly urge WBC to fundamentally rethink and scale down the strategic development described in this policy, with the bulk of the allocated housing distributed more widely and equitably across the whole of West Berkshire.</p>	<p>The principles which underpin the spatial distribution of new development stem from the overriding objective of enabling sustainable development, development that will meet the social and economic needs of the District while respecting the environmental assets of the District and meet the objective to mitigate and adapt to the effects of climate change and minimise demand for energy and other resources.</p> <p>The LPR aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus is on existing settlements, using the settlement hierarchy to steer development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity.</p> <p>Settlement boundaries help direct development to those areas where there are opportunities for infill development and for re-use of brownfield land. Further greenfield allocations are however needed, and the plan seeks to allocate a range of sites of varying sizes.</p> <p>The proposed allocation of sites takes account of the evidence from the Housing and Economic Land Availability Assessment (HELAA) and Sustainability Appraisal (SA) and are made in accordance with the settlement hierarchy, with higher levels of development at the higher levels of the hierarchy.</p> <p>The proposed strategic allocation of North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>If the size of this strategic development is not reduced then CAPC has severe reservations as to the sustainability of the proposed development and its impact on Cold Ash Parish.</p> <p>With regards to traffic, given that the WBC traffic model is incomplete, it is difficult to make definitive comments, however at this stage we would draw attention to the following points:</p> <ul style="list-style-type: none"> <li>• Current traffic is high through the parish, particularly at certain “pinch-points” such as Hermitage Road/The Ridge, and Red Shute</li> <li>• WBC traffic growth in the strategic model appears very high on the main routes through Cold Ash parish and we anticipate further significant impact on our parish from THA20.</li> <li>• We would like to see firm evidence of sustainable mitigation and be genuinely involved in such plans because we do not believe that successful mitigation will be possible without destroying the character of our settlements.</li> <li>• Our parish road network is strictly limited and not all lanes are truly bi- directional, with widths as low as 8-5.8m.</li> <li>• Only 22% of our 22.5 km of roads have any pavements, and only 10% on both sides,</li> <li>• Our parishioners living on the main thoroughfare suffer problems of noise and air</li> </ul> <p>In addition, CAPC is concerned that should this development go-ahead the promised facilities in this policy will actually be delivered. It has often been the case in the large developments that the original proposed facilities never materialise. As such we request that the policy wording be changed from “<i>Development of the site will be expected to deliver:</i>” to “<i>Development of the site <b>shall</b> deliver:</i>”</p>	<p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Thatcham Town Council (lpr1401)	<p><i>Full representation relating to north east Thatcham strategic site allocation attached to representation. This includes detailed comments and an annex which contains details of consultation with residents, including views expressed by residents.</i></p> <p>We do not agree with the selection of NE Thatcham as being the dominant site for the majority of all housing in West Berkshire when taking into account the connectivity constraints, and the forecast demand for economic development. Unless there is a very significant improvement to critical infrastructure, we believe there is a fundamental mismatch in policy in describing NE Thatcham as a sustainable development site.</p> <p>We also have serious concerns related to how the Local Plan is being prepared - in relation to the strategic growth masterplan activity, the status of the sustainability assessment used to score sites, and the failure to provide adequate and up-to-date evidence. Our comments cover the following four sections.</p> <p><b>1. The connection between the Strategic Growth Master-Plan Study and the Local Plan</b></p> <p>The Thatcham Strategic Growth Study is in essence a consultant's report that offers one possible approach to the development of North East Thatcham.</p> <p>The statement in the Local Plan that proposals should 'have regard (to the Growth Study) and positively respond' is insufficient to determine the legal status of the Strategic Growth Study, so it is unclear if any elements in the</p>	<p>The Thatcham Strategic Growth Study (TSGS) is a consultant's report commissioned by the Council. The Council has commissioned consultants to provide evidence in relation to various issues that relate to the local plan and all of these can be viewed on the Council's website.</p> <p>The TSGS has taken the HELAA as the starting point for assessing sites in Thatcham and has also had regard to the Council's policy position which is to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus is on existing settlements, using the settlement hierarchy to steer development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity.</p> <p>The Sustainability Appraisal is a supporting document to the LPR. SA is an iterative process and the report will be updated to reflect ongoing work and published alongside the consultation on the draft version of the LPR.</p> <p>In regards to baseline information within the SA, this is initially established through the SA Scoping Stage which took place in 2018 and subsequently updated as the Local Plan progresses to ensure the baseline information and the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Growth Study are binding on a future developer. Therefore, the key elements of the Strategic Growth Study must be included in the Local Plan itself.</p> <p>It is notable that many of the non-strategic sites have more detail defined within their associated RSA policies than the strategic site of NE Thatcham. For example, other sites have statements associated to access, air quality surveys, traffic calming, ecology protection, building style and visibility, protection of rights-of-way, preservation of tree-belts, limitation of built-form, landscaping measures, transport assessments that take into account different stages of growth, habitat surveys, etc. The precedent set by the non-strategic sites must follow through to SP 17 otherwise the policies are not consistent in detail.</p> <p>Therefore, it is essential that SP 17 defines the following:</p> <ul style="list-style-type: none"> <li>• It must set out the legal framework of SP 17 and its connection to the Growth Study</li> <li>• It must identify those policies from the Strategic Planning Exercise that are required to be followed and these should be elevated to the Local Plan</li> <li>• It must adopt, at a minimum, an equivalent level of detail as used for non-strategic sites, and it would be anticipated that for a strategic site the level of detail would be considerably greater.</li> </ul> <p><b>2. The connection between the Local Plan and the Sustainability Appraisal Report, and comments on the Sustainability Appraisal.</b></p> <p>We are unclear on the status of the Sustainability Appraisal (SA), in which an interim version has been published. We believe that the Sustainability Appraisal Report should be a robust and stable report as it forms the basis of site assessment and Local Plan evaluation.</p> <p>The introduction on the West Berkshire page invites comments on the SA, but we do not understand if this is a formal consultation. If so, this should be made clear. We understand that the SA does not carry any legal weight</p>	<p>scope are up to date. The interim IDP was published in October 2021 and is a separate document to the SA and follows a different process in its preparation to the SA. There is no requirement to publish an IDP with a Regulation 18 consultation version of a plan. An updated version of the IDP will be published to support the draft version of the LPR.</p> <p>It is not the first time that the SA and SEA have been completed in the same document, this process was followed for both the West Berkshire Core Strategy and the Housing Site Allocations DPD, both documents found sound through examination. West Berkshire are not alone in combining SA and SEA and this is common practice across Local Planning Authorities.</p> <p>As highlighted the SA is an iterative process and will be prepared alongside the LPR. The emerging draft LPR includes a policy that specifically covers climate change (Policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030. In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>once the Plan is approved therefore the key elements must be included in the Local Plan itself.</p> <p>The SA refers to baseline information which is used in forming the site assessment. Part of the baseline information is the Infrastructure Delivery Plan, yet this has not been published with the consultation. As a result, the SA is not supported with necessary evidence, and the appraisal of sites in the absence of the IDP is unsound.</p> <p>It is also unclear if this is the first time that a Strategic Environmental Assessment (SEA) has been subsumed within the Sustainability Appraisal by West Berkshire. We think that one of the most important issues on environmental assessment is the carbon assessment of new buildings, and their use. However, the net zero climate motion and associated environment strategy (2019) does not seem to be referenced. This appears to be an omission.</p> <p>The document must be brought up to date to reflect the net zero climate motion, and net-zero carbon requirements for 2030 as defined in other policies. Specifically, the agreed definition as stated in the West Berkshire Environment Strategy “that carbon dioxide will be reduced to a net zero level” must be referenced, and the calculations for renewable energy must be aligned and brought up to date. In addition, as noted in our response in section 4.19 the SA must also be brought up to date to reflect UK legislation following its exit from the EU.</p> <p>We note that throughout the draft Local Plan there are references to NE Thatcham as being sustainable. Because both documents (SA and Local Plan) are draft it is unclear which takes priority. We think it is essential that an approved SA is produced following a formal consultation prior to the next consultation on the Local Plan and site assessment being judged against it, otherwise the site assessment itself is without foundation and subject to challenge.</p>	<ul style="list-style-type: none"> <li>Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>SA offers a systematic and robust way for checking and improving on plans as they are being developed. It helps planning authorities to fulfil the objective of contributing to the achievement of sustainable development in preparing their plans, and thus contributes to sound plan making. The SA informs the evaluation of options and is an important part of the site selection process. It provides a key means to demonstrate the appropriateness of the emerging plan given reasonable alternatives.</p> <p>The SA will be consulted alongside the next phase of the LPR preparation.</p> <p>The SA does make an assessment in relation to traffic impact for the proposed site under SA objective 4: To promote and maximise opportunities for all forms of safe and sustainable travel. This also includes the sub-objectives 4(a): To reduce accidents and improve safety and 4(b): To increase opportunities for walking, cycling and use of public transport. The Local Transport Plan is listed as a relevant programme or plan.</p> <p>Policy SP10 Green Infrastructure has been strengthened in regards to public rights of way and the following text included: <u>‘Development proposals must take account of existing access networks within and around the site. Opportunities should be sought to protect and enhance the Public Rights of Way network within and adjacent to development proposals in line with the NPPF, having particular regard to ensuring the needs of all users have been provided throughout the year. The addition of new</u></p>

Respondent (with lpr ref)	Response	Council Response
	<p>It is essential that a formal consultation process is followed for the Sustainability Appraisal and this must be issued and completed before the next stage of the Local Plan consultation to ensure robust process in site assessment and selection.</p> <p>The following comments refers to the scoring and assessment of NE Thatcham, Appendix 4:</p> <p>In its summary statement the SA states that "NE Thatcham is sustainable because it maximises provision of social housing, self-build plots, new green infrastructure, schools, and improvements for sustainable travel." There is no reference to traffic flow or highways infrastructure, nor does the statement align with the Environment Strategy of West Berkshire for net zero carbon. It is essential that that SA fully considers a Traffic Assessment that ensures the site is deliverable and will not lead to harm to health due to air quality, or levels of congestion that cumulatively adds to a traffic load on surrounding roads that is unable to be supported with the capacity constraints.</p> <p>From our understanding the SA is assessing NE Thatcham on the basis of statements made in the Strategic Growth Study. However, this study has no legal bearing and its proposals do not form part of policy in SP 17. Therefore, we do not accept that the site assessment is legally sound.</p> <p>The SA scores NE Thatcham significantly positive (the highest rating) for supporting active lifestyles, yet the Strategic Growth Study states that playing fields will not be supported on site. We disagree that such a strategy lends itself to the highest score possible. It is important that the SA assessment process describes how it has allocated the highest rating possible on this objective.</p> <p>The SA scores NE Thatcham significantly positive (the highest rating) for the protection and enhancement of green infrastructure, and to improve the quality of the (6) rights-of-way. Yet the (6) rights of way will all be subsumed into the development and the existing rural, and countryside, environment</p>	<p><u>connections and status upgrades to the existing rights of way network will be supported.'</u></p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>will be lost. There is no reference in policy SP 17 that protects right-of-way and so we disagree with the assessment that this can lead to the highest rating possible.</p> <p>The SA states that it will bring community infrastructure commensurate to the development. This implies that no support will be given if existing infrastructure is already sub-standard which is acknowledged in the masterplan, stage 1, review. Therefore, the assessment must take into account policy SP3 that "scale will be relative to existing facilities and services". On this basis we disagree that such a development can score highly, and the SA must describe how it came to this conclusion.</p> <p>The SA scores NE Thatcham highly on enhancing biodiversity and geodiversity. The assessment (SA, Appendix 4) considers boundaries to Ancient Woodland but makes no reference to mature hedgerows that will be lost, or the much broader ecological studies that would require to be conducted prior to planning approval. In the previous (2017) application it was noted that: "No phase of development shall commence until a detailed "Ecological Mitigation and Enhancement Strategy" for that phase has been submitted to and approved in writing by the Local Planning Authority. Such Strategy shall include, but not be limited to, detailed creation &amp; management of meadows, wetlands/swales, parkland, buffer zones, and reptile areas, with monitoring undertaken annually for a five-year period, followed by further monitoring in year-seven, and year ten, with a review of the Plan after the 10th Year, and provisions for reporting the results to the Local Planning Authority." The only statement in the mitigation for this SA is that "appropriate buffers for ancient woodland would be required". This is wholly insufficient for a rural site of the scale proposed which certainly requires an ecological assessment before coming to positive conclusions on enhancing biodiversity. We disagree with its conclusion and the SA must describe how it came to this position in light of the previous requirements for mitigation and ecological assessment that were prepared in 2017 for the same area.</p> <p>The SA scores NE Thatcham neutrally with regards to "enhancing the character of the landscape". We disagree with this assessment, because a</p>	<p>LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>An Air Quality Study will inform the next stage of the LPR and will form part of its evidence base.</p> <p>Comments in the HELAA relating to the impact on the local highways network relate to a baseline position. The SA assess the site assuming that mitigation occurs.</p> <p>Emerging Draft DC2 refers to HIA to support planning applications. Should any application for development come forward on this site, it would be expected to submit an HIA as part of its supporting information.</p> <p>Technical evidence shows that a new crossing would not be required as a result of this proposed development. The council will consider the issue of a new crossing in the next version of its Local Transport Plan.</p> <p>AONBs are national landscape designations and the NPPF places great weight on conserving and enhancing these areas. The LPR takes account of this fact. The updated version of SP17 will require that existing rights of way are protected and that access to the AONB from the site is facilitated. In addition, dedicated areas of county park within the site will be accessible to the existing and future population.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>development of 2,500 dwellings on elevated land is not going to be consistent with the landscape. West Berkshire previously stated that the much smaller proposed development at Siege Cross would "would rise above the settlement to such a degree as to harm both its setting, and that of the nearby AONB". The SA must describe how it arrives at a different conclusion as to what it presented to the Secretary of State.</p> <p>The SA scores NE Thatcham neutrally with regards to air quality. The assessment makes no reference to the existing Air Quality Management Area on the A4 and the impact that increased traffic will make. The failure to account for this is in conflict with policy DC 7 which considers the cumulative effects on health from the development itself or cumulatively. The SA also states that "nitrogen dioxide have been reducing over the last 5 years" yet on the West Berkshire website it is stated that "During 2015 there were no exceedances of the annual mean, however in 2016 the annual mean NO2 concentration was exceeded at 2 sites within the Thatcham AQMA". This implies that air quality is on a worsening trend. In our view it is not credible to claim that a 2,500 development will lead to a neutral impact on air quality. It is essential that the SA must describe how it has assessed air quality, resolves the conflict with DC 7, and resolves the conflict between statements on the website and within the SA. On the basis of existing published data we disagree with the neutral rating.</p> <p>The SA scores NE Thatcham neutrally on "Will it help reduce vehicular traffic and/or congestion?". We fail to understand how the SA has come to a neutral conclusion when earlier (HELAA assessment) it is stated that "Development would have a very significant impact on the local highway network". There is a clear contradiction, and the SA must address this contradiction and describe how it came to its conclusion.</p> <p>The SA references SP5 (Climate Change) and states that the site "will be expected to help with achieving this SA objective". As we note in our response to SP 5, we do not believe the referenced policy reflects the Environment Strategy for West Berkshire. As a result, the assessment is not</p>	<p>This appears to refer to paragraph 4.6 of the SA draft report – settlement hierarchy. The settlement strategy in the LPR is based on a hierarchical approach to development as outlined in the settlement hierarchy policy.</p> <p>The focus is on existing settlements, using the settlement hierarchy to steer development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity.</p> <p>The Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation</p>

Respondent (with lpr ref)	Response	Council Response
	<p>meaningful. It is essential that the SA must refer back to the net-zero carbon definition as stated in the Environment Strategy.</p> <p>The SA scores NE Thatcham positively on its ability to "reduce West Berkshire's contribution to greenhouse gas emissions" yet there is no evidence as to how it will reduce emissions. We fail to understand how the development will reduce emissions as no reference to this is made in policy SP 17, nor in the masterplan. In the absence of any evidence, or stated policy, this statement is misleading. The SA must provide evidence on the carbon assessment that leads to this conclusion.</p> <p>The following more general comments refer to the main body of the SA:</p> <p>The sustainability assessment states that the development will bring "positive effects related to the objectives of improving health, safety and wellbeing". In preparing our response Councillors have collected over 450 direct responses from residents of which 93% value the green space and access to it through the existing right-of-way access and note that a separate residents petition has recorded 2,200 objections. The SA does not provide support as to how health, and well-being, is considered for existing residents and it does not adequately cover air quality. The evidence base does not include a health impact assessment, and in its absence, it appears that Officers are prejudging the outcome of a study that has not yet been conducted. Therefore, we do not agree with this statement, and if it to be included it must reflect the broader health impacts to align with DC 2.</p> <p>We agree with the sustainability assessment that we should be "maximising opportunities for safe and sustainable travel" and the electric main line through Thatcham is a recognised asset. However, for Thatcham the station remains difficult to access due to the crossing, has limited parking and is responsible for significant congestion. We do not agree that a strategic site of 2,500 properties can be considered without addressing improved access to, and over, the crossing. Alternative approaches for sustainable travel can be justified with a different approach, for example a distribution of smaller housing developments along the whole stretch of rail-line.</p>	<p>packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Noted, the LPR is informed by a range of evidence base documents such as the Playing Pitch Strategy. Plan's and Programmes produced by West Berkshire Council and other key stake holders are used to inform planning policy.</p> <p>The term 'residential led' refers to mix of development types, rather than residential first and other infrastructure and uses come after. Should the development go ahead, it would be phased appropriately to ensure necessary infrastructure does not outpace delivery.</p> <p>The Growth Study forms part of the evidence base for the LPR.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site, including the details of the country park.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>We note that the sustainability assessment puts great value on the AONB and its "effects on health and equality". We do not understand why an equivalent consideration is not placed on the larger population centre of Thatcham that value access to the countryside, which may have a proportionally larger benefit on population health.</p> <p>The sustainability assessment places emphasis on "efficient of land use" yet it does not address the loss of high-quality agricultural land. We do not understand how this efficiency measure has been derived.</p> <p>We note that the sustainability assessment refers to use of land for "regeneration and change, as well as encouraging infill, changes of use and other development within the settlement boundary." The proposed strategic site is neither regeneration, infill, nor within the existing settlement boundary. Therefore, we do not agree that by this definition the NE Thatcham site meets the criteria.</p> <p>We note that the sustainability assessment "sets out a presumption against development in the countryside". It is necessary that the countryside surrounding Thatcham is given equal protection, as it is both high value agricultural land and serves as accessible green space to residents in Thatcham.</p> <p>We note that the sustainability assessment states that "policy would have a significantly positive effect in terms of the reduction of climate change emissions". We do not believe this is consistent with the environment strategy of West Berkshire that "the definition that will be adopted is that carbon dioxide will be reduced to a net zero level". We seek clarification as to whether the existing environment policy of net zero is being maintained, or whether the policy in the Local Plan has redefined the definition in the environment strategy. There is no evidence in the policy for SP 17 that carbon dioxide emissions will be reduced relative to existing levels. Thatcham Town Council, with West Berkshire Council, have previously stated our ambition to migrate towards net zero emissions and it is essential</p>	<p>Comments relating to the level of detail within the Plan have been set out above in the Council response.</p> <p>A housing trajectory will be produced as the LPR progressed which will set out details of housing delivery.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>that West Berkshire develop policies that are self-consistent with their adopted Environment Strategy. It is essential that this is addressed in both the SA and the Local Plan.</p> <p>It is essential that the sustainability assessment address the above points, is a robust and stable document, is legally sound, and that the above points regarding site assessment are addressed.</p> <p><b>3. Introductory comments on the master-planning exercise for Thatcham</b></p> <p>We acknowledge the very considerable effort that has gone into producing the Thatcham Stage 1, Stage 2, and Stage 3 reports and recognise that there is pressure for more housing. There are several key issues which we believe are not addressed.</p> <p><b>3.1) Traffic Flow</b></p> <p>The problems of traffic capacity in Thatcham are well understood, and primarily exist due to geographical constraints that lead to single primary route, the A4, supporting East-West traffic.</p> <p>Alternative route that avoids the A4 require diversion through residential roads such as Lower Way, or Bowling-Green Road, which are not designed for high throughput and have limited capacity due to residential access, mini-roundabouts, and shared usage with active travel.</p> <p>North-South routes are limited to the South due to the rail-crossing, and to the North with traffic capacity constraints introduced with the chicanes at Cold-Ash.</p> <p>We have specific concerns related to the assessment of traffic in this emerging plan that we detail in the following. We also make further recommendations in policy SP 22 that requires traffic assessments over a series of time periods such as [0,5,10,17] years.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>a. The lack of historical investment in critical transport infrastructure leads to a chronic problem in the areas surrounding the proposed development including Floral Way, A4 and Pipers Way. We note that this issue is familiar to Officers from previous planning applications and are surprised it is not referenced in the Traffic Assessment.</p> <p>The previous application for Siege Cross (2017) prepared for planning consent and included the reference that "revised signage for the approach to the Floral Way roundabout from the east to encourage more through-traffic to use the Thatcham Northern Distributor Road (NDR) via Floral Way in preference to the A4."</p> <p>We appreciate there is no easy answer to an increase in traffic flow but would draw attention to the comments by residents exiting residential roads off Bowling Green Road and Floral Way that already complain of heavy traffic flows at peak time, which creates a noise nuisance and undermines health and well-being (Annex). The narrowness of Bowling Green Road has limited capacity due to residential access, mini-roundabouts, shared usage with active travel (the cycle lane is on the pavement on one side of the road only) and has been the location of a number of recent accidents.</p> <p>Therefore, the ability to act as a relief road is limited, and creates further problems for existing residents. If mitigation was used to avoid A4 congestion by routing traffic via Floral Way and Bowling Green Road the increase to traffic flow and congestion would add to noise pollution on properties that are immediately adjacent to these roads. Such an approach would be in conflict with policy DC 4.</p> <p>Without a more substantial diversion of traffic, probably a new road route that avoids Bowling Green Road, we do not think it would be appropriate to divert traffic onto Floral Way from the A4 that transits Bowling Green Road. It certainly would not be appropriate for HGV traffic and therefore remain concerned that there is no viable alternative to the A4.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>b. In the Phase 1 Traffic Assessment (Table 5.3) there is no reference to traffic flow eastbound from the junction of Floral Way to Pipers Way. In peak-period AM it is eastbound traffic to Pipers Way on the A4 (either from Newbury and environs, or locally from Thatcham) that creates congestion. A backlog of traffic arises because of congestion at Pipers Way that backs up to the exit of Floral Way/A4, and also because traffic exiting from Floral Way has to give priority to traffic on the A4. We would expect that with the new developments and the increased demand from the location of the secondary school the traffic flow and congestion is very likely to increase. The Traffic Assessment must be updated to include eastbound traffic.</p> <p>We note that in the HELAA assessment for THA20 it is stated that "Development would have a very significant impact on the local highway network. Opportunities for modal shift should be maximised. A transport assessment would also be required". The Phase 1 Traffic Flow Assessment states that there is little difference between traffic flow with the core forecast (base case) and the future forecast with the development (+2,500 houses). This inconsistency with previous statements in the HELAA indicates to us that there is a flaw in the Traffic Assessment.</p> <p>c. From our understanding of Table 5.3 it appears that traffic flow on Floral Way has not been considered. This is the main access road to the proposed development. It is a serious omission if not included and the Traffic Assessment must be updated to include this road.</p> <p>d. The illustrative map (Appendix B, Traffic Assessment) also implies there is no congestion on any of section of the A4 either side of Thatcham or approaching Newbury. There is no explanation why this is the case. The Traffic Assessment needs to be revisited, and an explanation is essential.</p> <p>e. We think it is important that the traffic assessments also take into account that the A4 through Thatcham is an essential route for blue-light services to reach the primary A&amp;E hospitals in Reading, and in Basingstoke. Ambulances for Basingstoke use the Brimpton bridge crossing as Thatcham</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>crossing is often closed with unpredictable access. We are concerned that with increased congestion on the A4, and the various demands on the A4 (primary trunk road, active travel, M4 diversion route, central route for local traffic) blue-light services will be compromised.</p> <p>From the emerging draft plan, we do not believe sufficient consideration has been given to the above points and that the evidence base is incomplete. The Traffic Assessment should consider access for emergency services that use the A4.</p> <p>f. On the access to the South and the rail crossing:</p> <p>There appears to be a failure to account for the implications of the rail-crossing, which can be shut for up to 40 minutes per hour, substantially limiting traffic movements and creating serious congestion within Thatcham resulting in queues approaching 1km in length (information as disclosed by WBC). The supporting maps in the Traffic Assessment (Appendix B-E) indicating locations of congestion omits the queuing of traffic and leads to a false and misleading impression of traffic in the area.</p> <p>This is inconsistent with the statement in the Thatcham Stage 1 review that states "long queues often forming in peak periods on both sides of the railway, which sometimes do not clear before the barriers come back down" nor the evidence on the ground that Officers will be familiar with. This is a very serious issue for the Town and the Traffic Assessment must be revised to include these known issues.</p> <p>We note that the masterplan refers to a cost/benefit analysis for a bridge that has been conducted, but this is not provided in the evidence pack. This analysis must be shared as part of the evidence base.</p> <p>We note that the dismissal of a bridge is based on assertions that it distracts from other transport modes. We disagree with this statement as the employment centres of Basingstoke are only accessible by private vehicular use. It is essential that the Traffic Assessment, and the Thatcham Strategic</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Growth Plan, address this issue and describe the other transport modes that are considered as alternative to the crossing in order to assess if this is credible.</p> <p>The dismissal of a bridge is also based on an assertion that implies new residents are unlikely to access the employment centres in Basingstoke. We disagree that new residents are less likely to use the bridge than residents in immediately adjacent areas.</p> <p>The assessment of transport must also include the capacity of car parking on the North side of the crossing (as the South side is often inaccessible due to the crossing being closed). There will be a substantial increase in demand if the station is to be encouraged, as not everybody can walk/cycle to the station from NE Thatcham. As far as we can tell, this capacity constraint hasn't been considered. Nevertheless, Thatcham Town Council have consulted with GWR on issues related to increasing car parking space to the North of the station, but no resolution has been identified due to a shortage of land.</p> <p>In our view, the lack of a proper North/South route for Thatcham means that the prospect of a bridge has to be considered to replace the crossing. It would open up employment centres in Basingstoke without having to divert commuters through the A4, and it would also make the retail park more accessible for residents. It would also enable a more holistic approach to transportation increasing access and use of the electric trains reducing reliance on personal vehicles. This is a view shared with the overwhelming majority of our residents.</p> <p>We do not believe the assertions made to justify the dismissal of a bridge are credible. In our view a new town of 2,500 properties cannot be supported without resolving this issue.</p> <p>We note the comments in the Stage 2 Thatcham master-planning exercise that adding a bridge would cost around £15mln. In our view, central</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>government funding should be sought for this development as it serves multiple districts and forms part of national infrastructure.</p> <p>We do not agree that the masterplan has addressed constraints that the level-crossing introduces on Thatcham and we do not agree that alignment with the masterplan will lead to benefits to either existing, or new, residents, of Thatcham. It is essential that the strategic plan accurately assess the demand and addresses the points above.</p> <p>We provide further comments on traffic modelling in policy SP 22.</p> <p><b>3.2) Improving services and facilities for Thatcham residents.</b></p> <p>We note that the master plan refers to the existing Local Plan (2012) Statements such as "Thatcham town centre will be a focus for regeneration, enabling the town to fulfil its role within the District's Hierarchy of Centres by improving the retail offer and enhancing the streetscape. The provision of leisure and community facilities for all ages will be improved and encouraged within the development of the new town centre."</p> <p>In the period since 2012 there has been increasing encroachment of residential development around the town centre, and the recent development by McCarthy &amp; Stone reduces space for the town-centre to expand. The remaining area of the town is within a conservation area. In our view the opportunity for 'a new town centre' as previously envisaged has been missed and the town is increasingly 'hemmed-in'.</p> <p>We acknowledge that a strategic development may release funds for investment in the area. Nevertheless, without the publication of the IDP we are unable to assess that the previously identified shortfalls will be addressed, and whether the previous commitments to town centre regeneration remain a priority.</p> <p>We also note that the Inspector's report in 2012 stated that "reference to development (on greenfield sites adjoining the settlement] addressing local</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>needs is thus misleading and needs to be more circumspect". We therefore reserve judgement to the benefits that will be delivered to the residents of Thatcham when considered against the growth in traffic, and the much-reduced access to green space.</p> <p>Therefore, we do not accept that the masterplan is sufficient justification to progress with NE Thatcham as a strategic site as the evidence base is missing key information.</p> <p><b>3.3) Leisure Access and Playing Fields</b></p> <p>The NE Thatcham Strategic Growth Report proposes that 'an additional 1ha' of playing fields at the existing Henwick Worthy sports field would contribute to the development. This site is managed by a Joint Management Committee (JMC) that have not been approached to assess whether this is feasible. It is important that the statements in the Draft Local Plan are credible and based on evidence.</p> <p>Our understanding is that there is no space for 'an additional 1ha' of playing fields, nor is there capacity for car-parking as demand frequently exceeds capacity resulting in parking on Henwick Lane and neighbouring residential roads.</p> <p>It is essential that the statement is corrected to note that availability of additional land at Henwick Worthy is made conditional on the outcome of discussions with the JMC.</p> <p>As far as we can tell, there is no provision in the master-planning work for improvement of the Kennet Leisure Centre. This facility is in need of refurbishment and appears to have been de-prioritised by West Berkshire relative to other facilities in the region such as Northcroft Leisure Centre in Newbury that has been identified for at least £4million investment.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The proposed playing field strategy for NE Thatcham should align with the emerging West Berkshire Leisure Strategy and be included in the evidence base prior to future consultation.</p> <p><b>4. Comments on the SP 17 policy including references to Strategic Growth Study (Stage 3)</b></p> <p>The following comments refer to the SP 17 policy and statements.</p> <ul style="list-style-type: none"> <li>• "is allocated for a residential-led development."</li> </ul> <p>Within the Thatcham Strategic Growth Study considerable emphasis is given to the development of local employment and the addition of office space that will reduce the requirement to travel off-site. It is unclear to us to how this would be delivered and phased, when it is a residential-led development.</p> <ul style="list-style-type: none"> <li>• "The site will be delivered to achieve a sustainable, comprehensive and landscape-led development."</li> </ul> <p>We have covered the comments about sustainability above and challenge the claim that it is sustainable when it does not consider traffic flow and its impact on surrounding roads.</p> <ul style="list-style-type: none"> <li>• "supportive of proposals which have regard, and positively respond, to the master planning work contained in the Thatcham Strategy Growth Study."</li> </ul> <p>We have covered our concerns on the status of the master planning work above. It is unclear if the Growth Study is binding, and its relation to policies in the Draft Local Plan.</p> <ul style="list-style-type: none"> <li>• "a new strategic country park"</li> </ul> <p>We note that considerable emphasis is given to this within the Strategic Growth Study which includes 19 separate references. However, it is unclear</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>to us exactly what is defined by a strategic country park and where it is located, but our understanding is that it is the area of land that is uneconomic to be developed due to location on high ground or incline. If so, these areas are existing agricultural land and unwooded and not typical of a country park which are usually associated with mature trees. It would take many years to establish the characteristics of a typical country park. If this is the case it should be stated in the strategic plan.</p> <p>Reference is made to access to the North Wessex Downs, yet the proposed development appears to subsume 6 existing rights-of-way that already provide this access. It is not apparent that the proposed location for the Country Park provides increases access to the North Wessex Downs.</p> <p>It is also stated that the country park links are strongly connected to the existing town, encouraging greater accessibility of the countryside. It is not clear to us why a country park at the edge of a new development increases accessibility for existing residents of Thatcham. The Strategic Growth Study should provide explanation to why this access is improved relative to the existing right-of-way access as 93% of our residents value the existing green space and countryside.</p> <p>We understand the desire for developers to promote a country park as it puts into use uneconomic development land, however this should not be used to justify a lack of delivery of other forms of recreational land such as playing fields. We have received no feedback from our residents that there is demand for country park for recreational use.</p> <p>We recall the inspector's previous words "reference to development (on greenfield sites adjoining the settlement] addressing local needs is thus misleading and needs to be more circumspect".</p> <ul style="list-style-type: none"> <li>• "small-scale employment space"</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>We agree that interspersed employment space is attractive and may help to reduce vehicular use. It is unclear to us if the employment space is proposed to be adjacent to Colthrop Industrial Estate or interspersed through the residential areas. It is also unclear as to who develops this infrastructure - would it be a condition of planning or would it be led by West Berkshire Council. We suggest that this is also clarified in the economic plan as it is a different approach to the current focus of Arlington and Newbury Business Park which appear to be the centre of anticipated growth.</p> <p>As we note in the introduction, we believe there is a lack of detail for this policy when compared against the non-strategic sites. A much greater level of detail is essential for a strategic site and it essential that where precedent is made for other non-strategic sites, the same level of clarity is introduced into this policy. Without such detail in SP 17, the Sustainability Appraisal itself is fundamentally flawed because it is assessed against a proposed site that does not have binding commitments. This is a significant failing in the Plan.</p> <p><b>Section 6.45</b></p> <ul style="list-style-type: none"> <li>• "Delivery of at least 1,250 dwellings is anticipated within the plan period."</li> </ul> <p>We are unclear as to the anticipated rate of development. There is a very large difference between 1,250 dwellings and the upper level of 2,500. The statement should describe the likely rate of development in order that phasing for other community assets can be assessed. It is important that Thatcham is not left waiting for 17 years before substantial benefits to town centre re-generation, leisure centre refurbishment, community infrastructure and social services is delivered.</p> <p><b>Section 6.47</b></p>	

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>"As work on the Local Plan Review progresses it will include any additional, specific, mitigation measures and infrastructure requirements."</li> </ul> <p>We agree with the Thatcham Stage 1 review that "Development would have a very significant impact on the local highway network." Without a strategic transport review that includes a bridge, and diversionary routes that avoid transiting the residential routes of Bowling Green Road we do not accept that mitigation of increased traffic flow can be accommodated without creating harm through air quality degradation, and noise pollution, to existing residents. This needs to be addressed immediately to ensure there is a credible route going forwards.</p> <p>We are concerned that a strategy that places so much reliance on a single site that has strategic infrastructure limits may ultimately be undeliverable.</p>	
Oxford and Country Planning Ltd for Bucklebury Parish Council (lpr1920)	<p>The Parish Council strongly objects to the proposed North East Thatcham Strategic Site Allocation for 2,500 dwellings (Policy SP 17). The reasons for their objections are summarised in the headings below, which are then expanded upon in the body of the letter:</p> <ul style="list-style-type: none"> <li>Harm to the setting of the North Wessex Downs AONB;</li> <li>Erosion of strategic gap between Thatcham and Bucklebury;</li> <li>Impact on the local highways network;</li> <li>Surface water flood risk;</li> <li>Impact on nature conservation;</li> <li>Harm to the setting of listed buildings; and</li> <li>Housing requirement in the light of the publication of the new standard method.</li> </ul> <p><b>Harm to the setting of the North Wessex Downs AONB</b></p> <p>The development will have a major adverse impact on the appearance of the distinctive landscape character of the land between the north of Thatcham and Bucklebury. This area makes an important contribution to the setting of the AONB boundary of which runs less than 600 metres to the north of the proposed allocation.</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>National Planning Practice Guidance (NPPG) at para 039 of the Natural Environment Guidance confirms that the Local Authorities duty of regard is relevant in considering development proposals that are situated outside AONB boundaries which might have an impact on their setting or protection. Para 042 the NPPG specially address how development within the setting of protected landscape should be dealt with. It states that <i>Land within the setting of these areas often makes an important contribution to maintaining their natural beauty, and where poorly located or designed development can do significant harm. This is especially the case where long views from or to the designated landscape are identified as important, or where the landscape character of land within and adjoining the designated area is complementary. Development within the settings of these area will therefore need sensitive handling that takes these potential impacts into account.</i> The evaluation of the North East Thatcham allocation must include a proper assessment of the potential sensitivity of the site and its impacts on setting of the AONB.</p> <p><b>Erosion of strategic gap between Thatcham and Bucklebury</b> The proposed allocation will significantly erode the open landscape which forms an important strategic gap between Thatcham and Upper Bucklebury. The existing landscape rises from the Kennet Valley quite steeply towards the North Wessex Downs and Bucklebury Common. It is a very attractive area of countryside with well-maintained and historic hedgerows, ancient trees, and well-established woodland blocks.</p> <p>The National Planning Policy Framework (NPPF) states at para 170 that <i>Planning policies and decisions should contribute to and enhance the natural local environment by (amongst other things) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services.</i></p> <p>It is important that there is a full and independent assessment of the proposed allocation on the landscape character of the area including</p>	<p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go</p>

Respondent (with lpr ref)	Response	Council Response
	<p>impacts on local identity as well as visual prominence given the site is on rising ground.</p> <p>It is noted that in the suitability conclusions in the Housing Land Availability Assessment (HELAA) that there is, <i>Concern that development would not be appropriate in the context of the existing settlement form, pattern and character of the landscape.</i></p> <p>Furthermore, the HELAA states that, <i>Development to the north of Floral Way does not conform to the current settlement pattern of Thatcham.</i> Floral Way and Bath Road form strong and well-defined boundaries between the built-up edge of Thatcham and the open countryside beyond. If this boundary is breached there will be resulting harm to the character and separate identities of Thatcham and the rural settlement of Bucklebury.</p> <p><b>Impact on the local highways network</b></p> <p>The proposed development at North East Thatcham will have a very significant impact on the local highways network. This is acknowledged in the evidence base for the site in both the HELAA (Site Ref THA20) and the Site Selection Background Paper (Appendix 4b). These impacts are highlighted for the A4, Northern Distributor Road and Thatcham town. However, the evidence base does not consider the impacts on the wider road network. The consequential increase in traffic on the two minor roads that run through the Parish is of great concern to the residents of Bucklebury. These roads provide a route from Thatcham through the two main parish centres, Upper Bucklebury and Chapel Row to Theale, Reading and M4 in one direction and through Bucklebury and Marlston villages to Hermitage and the A34/M4 junction in the other direction. These routes are already used as ‘rat runs’ for traffic seeking to avoid existing congestion problems on Floral Way and the A4 through Thatcham and Newbury. The roads through these villages are rural in nature, mostly lacking footpaths, with numerous junctions and blind bends. The inevitable increase in traffic on the roads through the Parish arising from the North East Thatcham development could create an unacceptable impact on highway safety. The absence of a detailed traffic assessment on the wider rural</p>	<p>ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to potential impact on surface water, all new development must include sustainable drainage measures, and development must be avoided on areas that are at risk of surface water flooding. Development on the site will be expected to deliver surface water management approaches that could deliver a net gain for Thatcham town. Drainage and flood attenuation works are included in the IDP.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The</p>

Respondent (with lpr ref)	Response	Council Response
	<p>network is a fundamental omission from the evidence base which risks the Local Plan being found 'unsound'.</p> <p><b>Surface water flood risk</b> There is a real risk of surface water flooding in the area being exacerbated by the development. The site is crossed by a number of natural drainage routes and ephemeral watercourses.</p> <p>It is noted in the HELAA that there are surface flow routes through the site, one of which is a major surface water flood flow. It is also noted that there is a medium risk of groundwater flooding in part of the site and there is limited potential for infiltration due to high ground water levels. These constraints may well reduce the potential developable area to accommodate extensive attenuation measures.</p> <p><b>Impact on nature conservation</b> There is likely to be considerable harm to local biodiversity resulting from the development at North East Thattham.</p> <p>It is noted in the HELAA that the Thames Valley Environmental Research Centre states that there is a <i>high risk of adverse impacts</i> on nature conservation. These include priority habitats, ancient woodland, protected species, a Site of Special Scientific Interest and Local Wildlife Sites in close proximity to the site. Much of the upper slopes are designated a Biodiversity Opportunity Area, part of the Bucklebury Plateau BOA, and the site is within a local habitat network. The BOA contains important habitats which should be retained and enhanced.</p> <p>Para 174 of the NPPF states that plans should <i>promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity</i>. The proposed allocation fails to demonstrate how these requirements will be achieved.</p>	<p>covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>The LPR is read as a whole. All LPR policies should be viewed together and not in isolation in the preparation and consideration of planning applications. Development proposals will be judged against all relevant policies. All Development Plan policies will be taken into account in determining planning applications, along with other material considerations in a proportionate manner. This includes policy DM19 Listed Buildings. The policies in the LPR do not list or cross-refer to all other policies that may be relevant.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>Harm to the setting of listed buildings</b> The scale of the proposed development could adversely impact upon the setting of the two listed buildings at Siege Cross Farm and the listed barn at Colthrop Manor.</p> <p>The NPPF states (para 190) that, <i>Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset)..... They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal.</i> In terms of potential impacts of a proposed development, the NPPF states (para 193) that, <i>great weight should be given to the asset's conservation and that (para 194) Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification.</i></p> <p>In order to make a proper judgement of the effects of the proposal on these listed buildings, a full Heritage Impact Assessment should be undertaken to inform decision making.</p> <p><b>Housing requirement in the light of the publication of the new standard method</b> (This section of the representation relates to SP12 and has been recorded as a separate representation)</p> <p><b>Conclusion</b> Bucklebury Parish Council <b>strongly objects</b> to the proposed North East Thatcham Strategic Site Allocation for 2,500 dwellings There are a number of identified negative impacts of the proposed development outlined above, which have not been given sufficient weight or full consideration in developing the Local Plan. There are conflicting conclusions regarding the site in the Council's evidence base. In the Sustainability Appraisal the summary states, <i>There are a number of positive and significant positive sustainability effects that</i></p>	<p>which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><i>developing the site would have. In contrast there are very few negative impacts.</i> However, the HELAA highlights a number of negative impacts. Indeed, in the suitability conclusions of the HELAA the overall assessment is stated as <u>suitability unknown</u>. Similarly, in the achievability section of the HELAA, the overall conclusion is <u>achievability unknown</u>. This disparity needs to be explained.</p> <p>It is clear that there are a range of factors and technical issues which require much further detailed investigation to determine whether the North East Thatcham proposal is a justified and appropriate allocation. Without a proper evidence base the Local Plan could be found 'unsound'.</p>	
Bucklebury Parish Council (lpr1688)	<p>Bucklebury Parish Council strongly OPPOSES the proposed development of up to 2500 houses at North East Thatcham (SP 17). BPC has held four public meetings to brief parishioners on the proposal. Their subsequent representations to WBC, copied to BPC, have been taken into account in making these comments.</p> <p>The main themes of our objection may be summarised as follows:</p> <p><u>Flawed housing demand analysis</u> The analysis of housing demand predicated this draft proposal relies on out-of-date information. It fails to take account of the most major medical, social and economic catastrophe to impact our lives in the last 100 years. The Covid – 19 pandemic has transformed the way people work, travel and their housing needs yet this factor is ignored in the proposals. Furthermore, taking WBC's own housing demand figures, these show a need for less than 1700 homes not the 2500 proposed.</p> <p><u>Strategic Gap</u> A tenet of past planning in West Berks has been the maintenance of strategic gaps to separate communities. Until this proposal was tabled, the land north of Floral Way has provided the gap between Thatcham and Bucklebury. The proposal all but eliminates the separation and would visually and socially break natural community boundaries. Breach of the</p>	<p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach</p>

Respondent (with lpr ref)	Response	Council Response
	<p>strategic gap has been cited by WBC to refuse planning applications in the recent past. It is incomprehensible that its loss is now proposed.</p> <p><u>Traffic</u> A development of the scale proposed would generate considerable traffic but the analysis in the proposal underestimates the volume and impact on the Parish. It is assumed that the bulk of the new traffic would use the A4, accessed via Floral Way. However, the A4 is already overloaded at peak times and new residents would look to find alternative routes. These inevitably would be through the Parish for those looking to access the A34 and the M4. The roads through these villages are ill suited to additional traffic; they are rural, single carriageway roads mostly lacking footpaths and featuring blind bends. Speeding is a well-known problem in the Parish and more cars would make a dangerous situation worse. The village roads are used by pedestrians, horses and cycles. Additional traffic makes accidents more likely and would endanger children walking to school.</p> <p><u>AONB and The Common</u> The proposed development abuts Bucklebury Common and AONB. This development would have a lasting and negative impact on these special environs. The impacts fall into two categories; those that impact the AONB directly and those resulting from the inevitable increase in visitors. The Common is protected because of its flora, fauna and its situation. It contains remnants of ancient and fragile habitats that are home to rare and protected wildlife. Importantly the plants in and bounding the AONB would suffer and the Common would be put under pressure from additional visitors. The AONB is already witnessing habitat damage from walkers, cyclists and motorised vehicles. The visitor numbers, from the proposed development, would exacerbate damage to a struggling ecology.</p> <p><u>Pollution</u> The development would generate extraneous light that would upset the life of birds and mammals; they cannot adapt and would be driven from their habitats. This light pollution would also affect the residents of Bucklebury by spoiling their night sky. The volume of homes proposed would generate</p>	<p>which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes. The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>pollution from carbon emissions and those associated with population density. The clean air of the Common would be a thing of the past. The following are the major reasons for objection of BPC and are listed against the SPs of the Local Plan.</p> <p><b>1. <u>North Wessex Downs AONB (SP 1 &amp; SP 2)</u></b> This proposal offers none of the required protections to the AONB, and in fact is active in massive development right to the AONB's boundary. By proposing it, WBC is failing in its stated Objective to protect this Nationally defined area.</p> <p>There is a certain irony that one of the two HELAA sites in Upper Bucklebury was rejected because of its potential harm to the natural beauty and special qualities of the AONB. This rejection was entirely within the protections that should be afforded to the AONB, and WBC's development hierarchy; however, instead WBC suggests that 2,500 houses a stone's throw from that same boundary will have less detrimental effect to those special qualities and natural beauty.</p> <p>There have been many pages written on THA20, but they are all Thatcham centric; very little, if anything has been put forward about the direct and devastating effect of this development on Bucklebury. WBC is required by its own Strategic Objectives to "...conserve and enhance the North Wessex Downs AONB." Strategic Objectives "represent the key delivery outcomes that the Local Plan Review (LPR) should achieve and it is against these objectives that the success of the LPR will be measured." Failing to protect the AONB means that the entire Local Plan would have in effect failed. Paragraph 4.23 of the LPR states: "The primary purpose of AONB designation, 'to conserve and enhance the natural beauty of the area area', is set out in the Countryside and Rights of Way Act 2000. .... its natural beauty is a function of the relationship between people and place over time. ...It is inevitable and appropriate that this unique landscape will continue to change and develop but it is important that this is done in a way that conserves and enhances its special qualities. Under Section 85 of the Countryside and Rights of Way Act 2000, the Council has a duty to have</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed</p>

Respondent (with lpr ref)	Response	Council Response
	<p>regard to the primary purpose of designation ... in a manner commensurate with its statutory status." WBC is reminded of this requirement; it is duty bound to protect the AONB. The provision of a country park, or a 25m buffer zone, or the measurement of sight lines from the valley floor is, quite simply, completely inadequate. Instead, the proposal considers AONB protection to involve massive traffic increases on rural roads, increased noise and pollution, removal of boundary habitats and hunting grounds for local species, and the complete eradication of dark skies.</p> <p>SP2 states "Development will respond positively to the local context, conserving and enhancing local distinctiveness, sense of place and setting of the AONB. The strong sense of remoteness, tranquility and dark night skies.... should be preserved. The conservation and enhancement of the natural beauty of the landscape will be the primary consideration in the assessment of all development proposals." The AONB would clearly be adversely affected by the proposal; whilst a wood boundary might prevent day time visibility, urban lights would blight the dark skies within the AONB that WBC is charged to protect. Setting and remoteness would be completely lost given the dramatic increase in road traffic that the proposal would generate.</p> <p>Whilst the development is not within the AONB, the sentiment is still valid; "Development....in a manner commensurate with the statutory status of the AONB as a nationally valued landscape. Planning permission will be refused for major development ...the Council will consider whether the development, by reason of its scale, character or nature, has the potential to have a significant adverse impact on the landscape and scenic beauty of the AONB. This will include the consideration of the individual characteristics of a proposal and its context and the impact of cumulative development." It is obvious that this development by its size and proximity would have a significant detrimental effect on the AONB, and WBC is therefore beholden to discount it.</p> <p>THA20 is development within the open countryside, and Policy DC1 adds further weight to its folly. Policy DC1 states: "There will be a presumption</p>	<p>development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>As part of the preparation of the LPR the council has undertaken a Settlement Boundary Review (SBR).The settlement boundary criteria make clear that boundaries will include sites allocated through the Local Plan process. North East Thatcham is proposed for allocation under policy SP17. Should the site, or any part of it, be removed from the LPR the boundary for Thatcham would be adjusted to exclude it. It is acknowledged that the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>against new development outside of adopted settlement boundaries. It goes on to say: “Planning permission <b>will not be granted</b> where a proposal harms or undermines the existing relationship of a settlement within the open countryside, where it does not enhance the character and distinctiveness of the rural area, including the special qualities and natural beauty of the landscape of the AONB or where development would have an adverse cumulative impact on the environment or highway safety.”</p> <p>9.1 states “Policy SP1 ...makes clear that only appropriate limited development in the countryside will be allowed” and is expanded in 9.2 “...land outside of settlement boundaries will be treated as open countryside where there is a presumption against new development....the conservation and enhancement of the North Wessex Downs AONB and its setting is clearly a key consideration. ... appreciation that all countryside will have some such qualities means that it needs to be protected or safeguarded. Policy DC4 states: “...In ensuring a site is available, ach for development proposals should satisfy all of the following criteria: There would be no harm to the amenity of occupants of neighbouring land and buildings.... through an unacceptable increase in pollution, including from light, Where necessary suitable mitigation measures will be put in place;”</p> <p>Obviously the neighbour of the development is the AONB, and there are no mitigations for the unacceptable increase in light pollution that the proposal would bring. As light is specified as a form of pollution, Policy DC6 is categoric: “Development which would overload available facilities and create or exacerbate problems of flooding or pollution <b>will not be permitted.</b>”</p> <p>The Thatcham Strategic Growth Study TSGS offers little assessment of the damage THA20 would cause to the AONB, apart from acknowledging that the AONB partnership has objected to it, and that there is “little intervisibility between the two if an appropriate buffer is included in any proposals.” (2.47) This hardly cover the effect the development would have on the AONB. The document goes on to say “The link with the North Wessex Downs ...is less strong” and then promotes links as a benefit for the town, with absolutely no consideration of the impact on the AONB.</p>	<p>settlement boundary is currently drawn around the whole of the proposed allocated site at North East Thatcham whilst Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’ The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. At this stage it is therefore not possible to draw the settlement boundary any tighter. As the LPR progress and more detailed work is done on the sensitivity and capacity of different parts of the site to accommodate development the boundary will be amended accordingly.</p> <p>In regards to light pollution, policy DM4: Environmental nuisance and pollution has been strengthened to ensure that all reasonable steps are taken through design, siting and technological solutions to ensure the abatement of obtrusive light to avoid sky glow, glare and light spillage, intrusion and any adverse impact to wildlife. Applicants should adhere to the guidance on lighting provided in the most up to date Institute of Lighting Professionals (ILP) guidance notes, alongside other relevant local documents including the North Wessex Downs AONB ‘A Guide to Good External Lighting’ (2021).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>WBC is well aware of the negative impact on the AONB. The Site Selection Background Paper December 2020 Table 8.2. Site CA12 (pg21) (and later CA sites) states: It is the Council’s preferred approach to allocate site THA20 as a strategic site. Due to the scale of development that could take place on THA20, it is considered that there should be no further allocations in Thatcham in the period to 2037 particularly as development of both north east and north Thatcham would result in the loss of the separate identifies of Cold Ash and Bucklebury, and would harm the setting of the AONB settlement pattern. <b>This clearly states that by developing THA20 WBC is accepting that the separate identity of Bucklebury would be lost and there would be definite harm to the AONB setting.</b></p> <p>In short, all evidence points to the inappropriate nature of this proposal. It would have a direct and irretrievable negative impact on the AONB. WBC are charged to protect the AONB, and should reconsider the positioning of THA20 as a viable site.</p> <p><b>2. AWE Aldermaston and Burghfield (SP 4)</b> It is unacceptable for only four sentences in clause 6.22 of a 250 page document to be devoted to WBC’s decision to withdraw from the proposal to build a garden town at Grazeley Green. We think it incumbent on WBC to publish the information and justify the decision to make this change. The result has caused WBC to find this alternative proposal for 2500 homes in Thatcham which has evidentially been rushed and poorly thought through. It would seem that Reading Borough Council and Wokingham District Council have not taken the same view. It is interesting to note that the press announcement was made on 11th December 2020 about the possible withdrawal over concerns from a nuclear energy emergency and a change to the DEPZ, the same day as this consultation commenced. WBC was working on alternatives long before any public awareness of problems with the Grazeley site and changes to the DEPZ.</p> <p><b>3. Climate Change (SP 5)</b> WBC have included addressing Climate change as a major objective. This is further developed in Policy SP5. However, it is noted that whilst “the</p>	<p>The updated version of the proposed allocation policy in the next published version of the LPR also requires the submission of a lighting strategy.</p> <p>The proposal for a garden town in Grazeley was located in the administrative areas of Wokingham Borough Council and West Berkshire Council with the majority of the site located in the former administrative area. Due to the legislative change which has caused emergency planning requirements around the Atomic Weapons Establishment at Burghfield to be extended, the area around Grazeley is now within this area. As a result, the Defence Nuclear Organisation, part of the Ministry of Defence, objected to the Grazeley garden town proposal within the Wokingham Local Plan and requested its removal and due to the extension of the emergency planning requirements it was also not carried forward through the West Berkshire LPR.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (Policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>principles of climate change mitigation and adaptation will be embedded into new development...” (SP5), development only ‘should’ contribute to WBC’s carbon targets. Development “will be expected” to contribute positively to carbon reduction, the plan contained in Thatcham Strategic Growth Study Stage 3 was extremely limited in the coverage of carbon neutrality and the effects of Climate Change.</p> <p>Given the scale of the development, the proposal should be expected to fully comply with the requirements of SP5. The Thatcham Stage 3 document is very sketchy on this area, and only seemed to note the inability of WBC to “... to force this in detailed building regulations.”</p> <p>Policy SP17 states that the proposed site will be expected to deliver “on site renewable energy to assist in the delivery of a carbon neutral development.” Policy DC3, 3.A requires a minimum provision of 20% energy from renewable sources. Policy DC3, 3.B states that WBC will support renewable energy applications if they are suitable for the area, are accompanied by a landscape assessment, and cause no harm to residential amenity. Given that any form of required renewable energy generation will have a highly detrimental effect on local amenity, the proposal fundamentally fails to address this requirement. There is no mention of this in the Thatcham Stage 3 document.</p> <p>Policy SP5 requires developments to provide for “...sustainable forms of vehicular and personal transport...” Given the inadequacy of the transport plan included in the proposal, it is felt that this requirement is far from being met. Thatcham’s roads are already often gridlocked at peak times , the railway station and services inadequate, and people are unlikely to walk into the town centre further applying pressure to local roads. Local schools will increase traffic pressures, and rat running onto inefficient roads will be prevalent. All of this increases carbon generation, rather than reduce it. The proposal allocates two bullet points to “Net Zero Carbon Development” and again is woefully inadequate in this area. Fundamentally, the plan fails to address the detail of how it would meet WBC’s Climate Change requirements.</p>	<p>Berkshire’s declared climate emergency and minimise the impact of all forms of travel on the environment.</p> <ul style="list-style-type: none"> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to potential impact on surface water, all new development must include sustainable drainage measures, and development must be avoided on areas that are at risk of surface water flooding. Development on the site will be expected to deliver surface water management approaches that could deliver a net gain for Thatcham town. Drainage and flood attenuation works are included in the IDP.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>4. Flood Risk (SP 6)</b> The proposal fails to meet with WBC specifications regarding Flood Risk. Policy SP6 states that:</p> <ul style="list-style-type: none"> <li>-“Development within areas of flood risk from any source of flooding, including Critical Drainage Areas and areas with a history of fluvial, groundwater or surface water flooding will only be accepted if it is demonstrated that it is appropriate at that location, and there are no suitable and available sites at a lower flood risk.”</li> <li>- “Mitigation measures should be considered as a last resort to address flood risk issues....</li> <li>- Development will only be permitted if it can be demonstrated that: ....it is demonstrated that the benefits of the development to the community outweigh the risk of flooding It would not have a detrimental impact on the flow of fluvial flood water, surface water or obstruct the run off of water due to high levels of groundwater.”</li> <li>- “When development has to be located in flood risk areas: It will be safe and not increase flood risk elsewhere;”</li> </ul> <p>5.9“...This policy aims to achieve a planning solution to flood risk management wherever possible, steering vulnerable development away from areas affected by flooding.”</p> <p>5.13 “The NPPF directs development away from areas that are liable to flood....”</p> <p>Flood risk is a significant threat to Thatcham, and so, by interpretation of WBC’s own SP6, development at Thatcham NE is not appropriate. There are available sites at lower flood risk, and so the “and” requirement is not met. Mitigations <b>may</b> be possible, but they are a last resort, and the site will increase flood risk in the town. By WBC’s own requirements, THA20 is an inappropriate site. Also, DC6 states that: “Development which would overload available facilities and create or exacerbate problems of flooding or pollution <b>will not be permitted.</b>” There can be no doubt that the introduction of 2,500 houses and associated infrastructure will exacerbate problems. Both DC6 and SP6 point to the inappropriate nature of this site. TSGS even reinforces these arguments:</p> <p>-2.48 “Flood risk and surface water drainage is a key</p>	<p>the capacity of individual components of the site in relation to individual planning proposals. The LCA will be published as part of the council’s evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a ‘masterplan’ / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. The LCA will be published as part of the council’s evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>consideration...particularly so within the town of Thatcham where extensive surface water flooding was experienced in 2007.”</p> <p>-2.51 “There is a risk of surface water flooding within the site along the natural drainage routes based on Environment Agency modelling”</p> <p>-2.52 “The extent of surface water risk to the site is highest at the north western end of the site, known as Dunston Park”</p> <p>-Box 4.2 “An essential issue to address for development at North East Thatcham is the management of surface water runoff.”</p> <p>-4.8 “Management of surface water drainage is a key concern for development on the slopes above Thatcham”</p> <p>Furthermore:</p> <p>- For a development of this size it is clear that the flood risk to the site and subsequent impact on flood risk to the downstream areas of Thatcham (designated as nationally significant ‘Flood Risk Area for surface water flood risk within the 2018 Environment Agency Preliminary Flood Risk Assessment have not been considered. The LP references the Strategic Flood Risk Assessment ( SFRA for how flood risk will be assessed for this proposal, however there is very little mention of this proposal and no known local plan site screening has been published for this proposal in the 2020 review.</p> <p>-The SFRA also states that ‘Areas at risk from surface water or locations at risk of groundwater emergence should be protected from development to ensure flow routes are not blocked.’ As outlined in the SFRA this proposal site is under lain by clay and therefore is highly susceptible to groundwater emergence. The areas downstream of the site are identified as at high risk of surface water flooding. If this development were to go ahead it would contradict what it outlined in the supporting SFRA.</p> <p>-As per the National Planning Policy, priority should be given to sustainable drainage. In the LP there is no evidence in the plans proposed of where SuDS will be placed within the development area. As it states within the West Berks SFRA, ‘flood risk should be considered at an early stage in deciding the layout and design of a site to provide an opportunity to reduce flood risk within a development ’. It is clear that this has not happened.</p>	<p>LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a ‘masterplan’ / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>The NPPF (2021) defines green infrastructure as ‘a network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity’. The Council views green infrastructure as integral to successful place-making and that the network is planned, designed and managed to: promote healthier living; lessen the impacts of climate change; improve air quality and water quality; encourage walking, cycling, horse riding and other recreational and sensory experiences; store carbon; and improve biodiversity and ecological resilience. The GI policy has been amended to strengthen West Berkshire’s position in delivering GI through the introduction of GI standards and placing more emphasis on blue spaces too.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council’s website to support the proposed submission version of the LPR, as will the individual assessments.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>- The LP states on page 64 that the proposal will incorporate Surface water management approaches that could deliver net gain for Thatcham town. There is no justification for this statement or any evidence provided to substantiate this claim.</p> <p>-From the initial look of the LP document it seems clear that flood risk for THA20 and the subsequent impact of flood risk to Thatcham has not been considered as it does not reference the TSGS study. For full transparency the information included within the TSGS is included or at least referenced within the LP to provide evidence to claims made in the LP with regard to flood risk.</p> <p>- The site of THA20 is currently a greenfield site and the development will be subject to meeting the greenfield runoff rate. WBC state new developments must limit runoff to below greenfield conditions. It is especially important at this site that the runoff rates are not under predicted. It should be noted that there are a number of factors not taken into account in the national greenfield runoff rate figure which can result in under prediction of runoff rates from a site. These include the vegetated land characteristics e.g. grassland, woodland, farmed land and the gradient of the site. Both of these are key to this proposal due to the elevation of the land proposed for development and the removal of trees which currently intercept flows of both surface and ground water. An increase in flood risk to an area that is already identified as a nationally significant flood risk area for surface water flood risk is unacceptable.</p> <p>Whilst flooding of Thatcham does not have a direct physical impact on Bucklebury Parish, to not refer to obvious shortfalls in the proposal in this regard would be remiss of BPC.</p> <p><b>5. Design Principles (SP 7)</b> Quality Development is a WBC strategic objective, which is expanded in Policy SP7. The proposal fails to describe how it will meet its WBC's objectives, mainly because it does fail to achieve WBC's stated objectives. For example, developments are expected to "...conserve...and enhance the character, appearance...of an area," "enhance the landscape character," and "contribute to local distinctiveness and sense of place." Developments should be "...sympathetic to its setting...night and day visibility...." This</p>	<p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>SP17 will be amended to include ecological networks to support climate resilience and reduce habitat fragmentation.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>proposal will further destroy any chance of dark skies and will be highly visible and intrusive from the rural areas surrounding it.</p> <p>(5.27) “New development should begin with an understanding of an area’s existing character and context “...Development should complement and enhance existing areas ...to reinforce local identity and to create a sense of place ...contributes to the character of an area...” The proposal will take rural farmland and turn it into an overwhelming urban area. This is not sympathetic development, but riding roughshod over the very characteristics that elevate West Berkshire.</p> <p>Thatcham Stage 3 (4.5) “...Thatcham has few examples of hillside development, and ...is fundamentally a linear settlement, built along the Kennet Valley...” The proposal builds up into the hills and fundamentally goes away from development that enhances the local area.</p> <p>It should be noted that WBC has a predisposition for not building into the countryside. This development will require the breaching of the Thatcham settlement boundary. As quoted in the Thatcham Stage 3 document, key principles of the WB LCA are:</p> <ul style="list-style-type: none"> <li>- Conserve and strengthen existing boundary elements</li> <li>- Retain the distinction between and individual identity of settlements</li> <li>- Conserve elements that mark a transition between settlement and countryside (eg Floral Way)</li> </ul> <p>It would appear that any amendment of the Settlement boundary to allow the development at Thatcham NE will have broken at least two of those principles.</p> <p>The proposal aims to produce 3 linked villages. This design philosophy goes against the often stated West Berkshire (including in the LCA) landscape characteristic of distinct villages, with a quantifiable gap between them. Addressing this issue in a way that is sympathetic to the local area will generate other problems (eg transport), that all point to the inadequacy of the basic plan.</p> <p><b>6.Landscape Assessment (SP 8)</b> Inadequate landscape assessment and use of higher grade agricultural land.</p>	<p>In regards to light pollution, policy DM4: Environmental nuisance and pollution has been strengthened to ensure that all reasonable steps are taken through design, siting and technological solutions to ensure the abatement of obtrusive light to avoid sky glow, glare and light spillage, intrusion and any adverse impact to wildlife. Applicants should adhere to the guidance on lighting provided in the most up to date Institute of Lighting Professionals (ILP) guidance notes, alongside other relevant local documents including the North Wessex Downs AONB ‘A Guide to Good External Lighting’ (2021).</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR also requires the submission of a lighting strategy.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government’s standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Any landscape assessment would not conclude a series of estates of new houses totalling 2500 between Upper Bucklebury and Thatcham was appropriate in terms of location, scale and design to the existing landscape. It would not enhance either the diversity or local distinctiveness of the landscape.</li> <li>• The proposed development is contrary to Bucklebury Vision, the Parish Design Statement, which states at 3G2 that the natural beauty of the landscape, visual quality and amenity of the area should be conserved and enhanced.</li> <li>• Building on some of the best and most versatile agricultural land goes against WBC's policy of focusing development on brownfield sites and low grade agricultural land.</li> <li>• In contrast to the rest of Thatcham, there is very little flat land within the site, and some areas of the site close to the northern edges have steep gradients which would be difficult to develop effectively without significant earth movement. Low gradient land is concentrated at the southern edge along the A4, although almost no parts of the site are below 2% gradient. Flat land in the north western part of the site is predominantly covered by a recently constructed surface water attenuation pond. The low gradient land at the southern edge of the site is also compromised by the presence of an oil pipeline over which no development is possible for access reasons. (TSGS)</li> <li>• A detailed skyline and impact analysis has not been undertaken, although a landscape and skyline analysis by the partnership partnership's consultants has been shared and informed this study. All proposals should be further substantiated with detailed impact assessments. (TSGS)</li> </ul> <p><b>7. Green Infrastructure (SP 10)</b> The proposal fails to meet a WBC core objective of protecting and enhancing existing landscape features and biodiversity habitats. The development would obviously require the removal of vast tracts of undeveloped green land containing mature trees and a vast hedgerow network. This would remove large areas of animal habitat, with little actual</p>	<p>available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes. The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>In relation to the matters raised in regards to transportation, a response has been provided above however to reiterate a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a</p>

Respondent (with lpr ref)	Response	Council Response
	<p>detail on how this would be matched and surpassed. Thatcham Stage 3, 2.60, does state that there would be a “net gain in biodiversity,” which is difficult to see happening in practice.</p> <p>2.62 goes on to say that “All efforts to retain such distinctive landscape features (mature trees and hedgerows) and biodiversity habitats should be made.” 2.63 acknowledges the presence of protected species, priority species and priority habitat near the site, though nothing is added as to how these would be protected, and even admits that more detailed surveys are required as the information and effects are basically incomplete, and inadequate.</p> <p>Policy SP10 states: “Development will protect and enhance existing GI assets and linkages and add to the local network for the benefit of both the natural environment.” Removal of vast tracts of hedgerow, mature trees, the butting of the development 25m away from ancient forests will not meet this requirement in any form.</p> <p>SP10 goes on to say “Depending on their location, nature and scale, all development proposals will: protect or enhance existing GI and the functions this performs, and create additional GI...” and “help to mitigate the causes of and address the impacts of climate change through measures such as sustainable drainage, minimalizing (sic) urban heating, flood risk management, and maximise GI to sequester carbon and provide cooling and insulation functions” There are no proposals to protect existing GI, and no indications of how climate change will be addressed through carbon sequestering, urban heating reduction etc.</p> <p>While the developers’ proposal provides for a “country park” and green space, this comes at a cost to our irreplaceable natural habitat, and threat to our protected and endangered species. The site would not protect and enhance what is already there, and as such fails in the requirements of WBC Strategic Objectives and enabling policies. Instead the proposal (Thatcham Stage 3 4.53) puts forward that “The site offers the potential for significant biodiversity enhancement over its current land uses” but does not specify how these would be achieved.</p>	<p>significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>Comments regarding flooding have been addressed above.</p> <p>An economic advantage of new development is that new residents can help support local shops and businesses and help to boost the vibrancy and vitality of town and local centres.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a ‘living document’ and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>It is noted that there is the potential for construction to cause some disturbance during the building phase. A LPA can use planning conditions to aid construction management.</p>

Respondent (with lpr ref)	Response	Council Response
	<p><b>8. Biodiversity (SP 11)</b> BPC strongly objects to the proposed housing development which would have a catastrophic effect on biodiversity in Bucklebury and surrounding area. Many longstanding residents live here specifically for the biodiversity. <b>The following areas which abut or overlook the proposed THA20 development will suffer:</b></p> <ul style="list-style-type: none"> <li>• North Wessex Downs Area of Outstanding Beauty. Designated exceptional landscape whose distinctive character and natural beauty are precious enough to be <b>safeguarded in the national interest.</b></li> <li>• Common land – Bucklebury Common. The Common land is unique, historical and has remained largely undisturbed through centuries, a remnant of medieval times when people relied on commons for their survival. With increased numbers of visitors during the Covid 19 crisis, and illegal use of 4 x4s, we are already struggling to prevent damage, and the proposed development would put more pressure on this precarious ecosystem.</li> <li>• Blacklands Copse – parts of which are Ancient Woodland. The ancient Parish Boundary with its ditch and bank.</li> <li>• Long Grove Copse. Ancient semi-natural woodland (OS map ref: SU56J10)</li> <li>• Big Gully. Ancient woodland (SU56J06)</li> <li>• Hartshill Copse (SU56J04) Historic environment. Record type: Monument. Late Bronze Age ironworking site. Cremation burial site and Roman ditch defined trackway.</li> <li>• The Plantation (SU56J01) – Ancient woodland.</li> </ul> <p><b>Government Habitats’ Regulations</b> Imperative Reasons of Overriding Public Interest (IROPI) where a plan or project affects a priority habitat or species. Maintaining a coherent network of protected sites with overarching conservation objectives is still required in order to: fulfil the commitment made by government to maintain environmental protections; and continue to meet our international legal obligations such as The Bern* Convention, the Oslo &amp; Paris Conventions, Bonn &amp; Ramsar Conventions.</p>	<p>Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station. Other transportation matters have been considered above.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council’s housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p> <p>Comments regarding settlement separation have been considered above.</p> <p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to</p>

Respondent (with lpr ref)	Response	Council Response
	<p>*Wildlife &amp; Countryside Act part II Nature Conservation, Countryside (&amp; National Parks) SSSIs Natural England to notify planning authority, owner(s), occupier(s) of any of that land, &amp; Secretary of State. Also, to be specified (a) the flora, fauna or geological or physio-graphical features by reason of which land is of special interest and (b) any operations appearing to Natural England to be likely to damage that flora &amp; fauna or those features. The proposal is too close to the above listed areas.</p> <p>Special Protection and Suitable Areas of Natural Greenspace are needed to increase our biodiversity, residential development needs a greater buffer between these and AONB and Common Land in an effort to protect our local wildlife.</p> <p><b>Natural England. Wildlife and habitat conservation.</b></p> <p><b>Badgers:</b> Surveys and mitigation for development projects. Survey reports and mitigation plans are required for development projects that could affect protected species. Survey for badgers: signs of setts – development site or nearby. (Bucklebury Common has badger setts). Historical or distribution records show that badgers are active in the area or suitable habitat for sett building. You cannot translocate badgers for a development site. Badgers habitat is a mixture of woodland and open country. Territory may be as small as 30ha and up to 150ha.</p> <p><b>Bats:</b> The law: not damage or destroy a breeding or resting place, obstruct access to their resting or sheltering places. Intentionally or recklessly disturb a bat while it is in a structure or place of shelter or protection. Activities that can harm: removing ‘commuting habitats’, hedgerows, water courses, woodland. Changing or removing bats’ foraging areas. (Pipistrelle bats are regularly to be seen at Burdens Heath).</p> <p><b>Hazel dormice:</b> These protected and under threat species can be affected by: disturbance, e.g. noise and light, woodland and hedgerow management, habitat removal, clearing woodland and hedgerows, habitat fragmentation and isolation. (Dormice are known to inhabit Bucklebury Common).</p> <p><b>Birds:</b> Nightjars, woodlarks, skylarks, tree pipits and stonechats as well as common species live on the Common. Ground nesting birds are significantly affected detrimentally by the presence of dogs even on leads. Barn owls,</p>	<p>provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that ‘in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy’ (paragraph 67 of the Core Strategy Inspector’s Report). As additional housing is required, and given Thatcham’s status as an ‘Urban Area’ in the development plan is it considered appropriate to consider Thatcham for housing.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>tawny owls and buzzards live and nest in the woodland and hunt in the surrounding open spaces.</p> <p><b>Plants:</b> Bluebells, orchids and other plants which grow in long-undisturbed situations show us that there are many patches of ancient woodland, contributing to Bucklebury’s biodiversity. All the above species are in the AONB and Bucklebury Common. It is incumbent upon West Berkshire Council and developers to ensure all measures, studies and licences are implemented.</p> <p><b>No178 English Nature Report</b> on the effects on wildlife of artificial lighting: Nocturnal animals and birds such as barn owls are likely to be disturbed by the presence of bright illumination. As these are already under threat, this may be significant pressure on remaining populations.</p> <p>We have a ‘dark skies’ policy in Bucklebury. The proposed development would change this aspect of our lives and have a detrimental effect on biodiversity.</p> <p><b>9. Approach to Housing Delivery (SP 12)</b> The world has changed in the last 12 months. We need to re-look at the assumptions on which plans were previously based to see if they are applicable now and if they will be relevant in the future.</p> <p><b>Housing Needs</b> The local housing needs assessment requiring 520-575 dwellings pa to be built needs to be revisited in the light of changed circumstances. This target was set before the onset of the pandemic, the focus on rebalancing the economy and the UK’s exit from the EU. We are already seeing changing working practices and higher rates of unemployment. There will be lower disposable incomes for many after tax rises to pay for the huge cost of the pandemic. The housing need methodology does not take account of the loss of the Grazeley site. Taken together all these new factors are highly likely to reduce the housing need in West Berkshire and call into question the numbers of houses required in Thatcham (THA20) to satisfy that need. Furthermore, the Government published the new standard method for assessing local housing need in December 2020. This included a spreadsheet containing the indicative figures for each local authority in the country. The figure for West Berkshire is 513 dwellings per annum.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>Housing Supply</b> The requirement was to provide a land supply for approx. 9775 houses until 2037 now 8,721 under the December 2020 calculation. According to the consultation document 8,114 have been identified excluding the proposal for NE Thatcham (THA20).</p> <p>WBC's calculations have used approximately 114 houses per annum as windfall. If our understanding is correct, over the plan period between 2006 and 2020 there have been 2900 approved sites, some 190 per annum. WBC have estimated 140 for this plan period but reduced it by the overage of approvals outstanding from the previous plan period. This would seem to be overly cautious and pessimistic and this reduces the windfall value in the WBC forecast by approximately 400 houses.</p> <p>The estimate also adjusts down the availability of housing in the Sandford Park scheme by 1/3 and it states WBC are only expecting 1000 of 1500 home provision to be built within the plan period. Why is this adjustment necessary? If this process is about land supply for properties, there is no reason to adjust.</p> <p>Only looking at these two items potentially satisfies the shortfall in total. In addition, there is a long list of sites within the HELAA of which 122 hectares is on pre-developed land and not included for development. Why is WBC looking to use new Greenfield sites when there are clearly other options available?</p> <p>There is absolutely no need for 2,500 houses to be considered when the shortfall is a maximum of 607. There are many ways of mitigating the numbers that may be required from this development.</p> <p><b>10. Large sites allocated for Housing and mixed user development (SP 13)</b> BPC strongly objects to the inclusion of SP17 as an allocated site for development in SP13. The reasons are provided throughout this document</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>but none more so than detailed in Clause 14 Siege Cross below. Here, WBC makes statements in their opposition to an application on only part of this site. The statements made by WBC then are still true now and therefore this site should not be included. The focus should not be on greenfield sites particularly where the impact on the AONB and the strategic gap between Thatcham and Upper Bucklebury is compromised and eroded to such an extent.</p> <p><b>11. Issues that impact Thatcham which will also have a detrimental effect on Bucklebury Parish (SP17)</b></p> <ul style="list-style-type: none"> <li>- <b>Traffic.</b> Congestion of traffic on the A4 and roads around it. Driving from Bucklebury down Harts Hill Road and onto Floral Way, particularly at peak times for work and to/from school will see major tailbacks as residents try to access the main roads to Thatcham, Newbury and Basingstoke. The development plan has been unsatisfactory and there is little consideration given to transport and highways, including the effect on air quality.</li> <li>- <b>Thatcham rail crossing</b> is already a problem with very long waiting times to cross the railway line and queues. This will get much worse with increased traffic.</li> <li>- <b>Parking at Thatcham station</b> is inadequate. There are already queues for parking and with a lack of public transport, people drive rather than walk, particularly in bad weather.</li> <li>- <b>Schooling.</b> Bucklebury is in the catchment area for Kennet school, which is already oversubscribed. Parishioners are concerned about the education provision being further stretched.</li> <li>- <b>Environmental impact.</b> We would see an increase in the number of walkers and visitors to Bucklebury Common. That would be difficult to manage and it would have a detrimental impact on wildlife and our environment. We would lose existing green space, views and rights of way. Footpaths up and down to the A4 would become overused and spoilt. Listed and historic buildings (Colthrop Manor and barns) and their environs would be spoilt. With so many houses nearby, we would lose the rural and village</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>feel of our community if this proposed urban development in NE Thatcham goes ahead. Many have moved to this area for that rural and village lifestyle and it is enshrined in the Bucklebury Vision statement. The viability of our rural community would be lost.</p> <p>- <b>Flooding.</b> Flooding problems would be exacerbated</p> <p>- <b>Shopping and town centre.</b> There is no commitment detailed in the plan to regenerate Thatcham town centre. There would be pressure on an already busy Thatcham town centre where many Bucklebury parishioners shop at the supermarkets, pharmacies and other outlets. Previous promises of regeneration have come to nothing.</p> <p>- <b>Medical Facilities.</b> The only two surgeries which would be able to serve the proposed development are the Bucklebury Surgery at Chapel Row and the Burdwood Surgery in Thatcham. These are both full to capacity. A new facility would need to be provided immediately but how would this be manned when GPs are in such short supply?</p> <p>- <b>Lengthy proposed construction period.</b> It would be noisy and polluting for a prolonged period of years impacting the peace and quiet of Bucklebury parishioners.</p> <p><b>12. Road Traffic (SP 17, SP 22, DC8 &amp; DC33)</b>  <b>There is extreme concern amongst parishioners who have attended our briefing meetings about the magnitude and impact of the increased traffic through Upper Bucklebury and Chapel Row as a consequence of the development.</b></p> <p>The traffic assessment for this site is seen by BPC as being woefully inadequate. There is little faith in the estimates of an increase of 12% to the East and surrounding villages and 10% to the North. In particular:</p> <ul style="list-style-type: none"> <li>• This appears to take no account of traffic from the development heading through Upper Bucklebury and Cold Ash for the A34 and</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>M4 West. All these additional vehicles would be passing through Upper Bucklebury.</p> <ul style="list-style-type: none"> <li>• The traffic estimate does not take any account of ‘rat running’ up Harts Hill and through the Parish to avoid the inevitable backups on Floral Way and the A4 at peak times.</li> <li>• There have been no improvements to the affected parts of the A4 in over 40 years. The A4 road is narrow in width and contains many junctions in a short stretch through the town centre. The number of roundabouts and traffic lights in Thatcham already holds up the east/west A4 traffic flow, additional ones for this development would cause more issues. Floral Way and the A4 are already backed up, and the inclusion of 2500 houses and 3 schools in close proximity is just going to produce gridlock.</li> <li>• The volume of traffic on the A4 travelling in both directions is already far more at peak times than it can actually support. The WBC traffic assessment shows that 62% of the trips from these properties will join the A4 and another 17% will either cross it or access part of it for local travel.</li> <li>• The route ‘to the north’ is even more problematic taking traffic along single carriageway roads along Burdens Heath and through the built up areas of Cold Ash and Curridge before reaching the A34.</li> <li>• Floral Way was meant to be the northern relief road around Thatcham, this proposal adds in effect yet another relief road further north adjacent to the AONB which is totally unacceptable. None of this impact has been considered in SP17.</li> </ul> <p>Any junction or roundabout on Harts Hill Road will encourage road users towards Upper Bucklebury along what is already a dangerous road. Harts Hill Road from Thatcham to Upper Bucklebury is characterised by a steep hill and multiple blind bends, all of which are relatively narrow and unlit in keeping with the proximity to AONB. Access to the proposed site MUST only be accessed from Floral Way.</p> <p>All this increased traffic through Bucklebury Parish will put children walking to school and parishioners walking on the parish roads where there are no</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>pavements at further risk Data from Community Speed Watch by WBC in August 2020 (Covid-19 Impacted data during summer holiday period) shows average traffic volume in one direction through Chapel Row to be in the range of 500 to 1,400 vehicles per day and average traffic volume in one direction through Broad Lane in August 2017 (summer holiday period) to be 1,300 to 2,100 vehicles per day. The TSGS Figure 3.2 suggests a profile of National traffic in England where a peak flow of 260 cars per hour produces an average flow over the day of 100 cars per hour. Table 4.1 in the same document suggests a peak flow of 5,432 vehicles per hour of which 47% are external to the development. Combination of the above numbers presented by WBC suggests an average of 2,090 cars per hour of which 980 are external. This equates to a total of 23,500 external car movements per day. 12% of this figure equates to 2,800 additional movements per day. Doubling the current known peak data for the parish to reflect out and return journeys gives 4,200 journeys – hence at best the current traffic model suggests an increase of 67% over existing known peak levels on the main route through the parish. Concerns over additional ‘rat runners’ may make this an underestimate.</p> <p>The impact on noise, vibration and air quality from this additional traffic through the Parish has not been considered in the proposal.</p> <p>BPC working with WBC regarding Community Speed Watch have found that in August 2020 and November 2019 traffic on Harts Hill, Burdens Heath and Chapel Row exceeded Association of Chief Police Officers (ACPO) limits of 25%+ of the 30mph speed limit. The impact of existing traffic is already at a critical level for the parish.</p> <p>Bucklebury Vision, the Parish Design Statement accepted by WBC, says:</p> <ul style="list-style-type: none"> <li>• 6G1. any development which creates unacceptable levels of traffic would be resisted.</li> <li>• 6G2. the reduction of vehicular traffic in order to reduce traffic on unclassified roads is supported.</li> </ul> <p>The stated 5% traffic increase to the South probably acknowledges the reluctance to use this route because of delays at the Thatcham level crossing, a 25/40 minute wait at the Railway Crossing is not uncommon. Even without such a significant increase in Thatcham's population this route</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>suffers severe congestion and improvement of this needs to be considered as part of the overall plan. A bridge over the Railway line is a clear omission from this plan as it would reduce the A4 traffic and allow access to areas of employment such as Greenham Park and Basingstoke.</p> <p>WBC has stated there will be no road improvements planned to the surrounding villages. BPC are not seeking road improvements to increase traffic flow and are looking at how traffic through the parish can be reduced in future to address the current safety concerns as currently being shared with WBC.</p> <p><i>SP22, DC8 and DC33 for rural areas state:</i></p> <ul style="list-style-type: none"> <li>• <i>SP22 – “Development that generates a transport impact will be required to mitigate any impact on local transport networks and the strategic road network.”</i></li> <li>• <i>DC8 – “To ensure it does not generate levels of traffic, parking or other environmental problems which would result in substantial harm to the character, appearance or significance of the area.”</i></li> <li>• <i>DC33 – “The redevelopment would not generate traffic of a type or amount that would result in substantial harm to local rural roads, and/or would require improvements that would adversely affect the character and nature of such roads”</i></li> <li>• <i>HELAA THA16 – “Local Highway Capacity: Unless it was improved / realigned etc., I would consider that the impact on Harts Hill Road and the Thatcham NDR would be severe. The Council's Highways Team would also be concerned regarding any increase in traffic through Upper Bucklebury.”</i></li> </ul> <p><i>HELAA THA20 – “Local Highway Capacity: This would have a very significant impact on Thatcham, the A4 and the Northern Distributor Road. To accommodate such volumes of traffic, significant improvements would be required along the NDR including many of the junctions and including the junctions onto the A4. The NDR especially would need to be widened and realigned at Heath Lane. This may not be enough. There are concerns regarding the A4 into Newbury and the A4 within Thatcham. New routes across the north of Newbury may be required to link the north of Thatcham to the A339 and M4, and feasibility of these would need to be</i></p>	

Respondent (with lpr ref)	Response	Council Response
	<p><b>13. Development in the Countryside and the ‘Strategic Gap</b></p> <p>The proposal contains numerous examples of rushed and confused thinking, where it appears that the evidence is made to fit the desired answer of a development at Thatcham. The LPR Site Selection Background Paper Para 8.11 states “ The master planning work considered all of the HELAA sites promoted in Thatcham ””, rather than considering all suitable sites within West Berkshire.</p> <p>Such a cavalier approach to trying to make the plan fit is noticeable throughout the proposal, but is spelt out quite clearly in the attitude to the Strategic Gap.</p> <p>SSBP Table 8.2. Site THA9. “There are concerns that development may reduce the open countryside between Thatcham and Newbury / Greenham, and introduce built form to south of Lower Way. The site is a buffer to development and forms part of the open character along this side of Lower Way. There is further concern that development would not be appropriate in the context of the existing settlement form, pattern and character of the landscape.”</p> <p>This is for a proposed HELAA development of 36 houses, situated beyond the natural and actual settlement boundary of Lower Way, and which would breach the strategic gap between Thatcham and Newbury.</p> <p>THA20 is a proposed development of 2500 houses, which would be situated beyond the natural and actual settlement boundary of Floral Way and the A4, and which would breach the strategic gap between Thatcham and Upper Bucklebury and the AONB. The proposed site is a buffer to development and forms part of the open character along this side of Floral Way and the A4. There is much local concern that development would not be appropriate in the context of the existing settlement form, pattern and character of the landscape.</p> <p>If fair selection criteria were applied, this is what would be expected in the description of THA20. Instead, the comments for THA20 read “In contrast there are very few negative impacts that developing the site would have. have.”</p> <p>This shows how predisposed and skewed the “analysis” that WBC is undertaking is.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Much is made of the West Berkshire characteristic of separate, defined settlements, and WBC has previously gone to great lengths to protect separate settlement identities. The Landscape Character Assessment (LCA) WH4 Detractors No 5 Decreasing separation/coalescence between settlements acknowledges: “The expansion of Thatcham and Newbury...has reduced the physical and perceptual separation between settlements...”</p> <p>LCA WH4 Landscape Strategy No 5 “Retain the distinction between and individual identity of settlements” and No 6 “Conserve elements that mark a transition between settlement and countryside” promote the requirement to maintain the “Strategic Gap”</p> <p>Policy SP3 4.34 requires that “Outside these settlements, in the countryside, a more restrictive approach to development will be taken as set out in other policies in this Plan.” Development in the countryside is limited by Policy DC1 which states “There will be a presumption against new development outside of adopted settlement boundaries” and “Planning permission will not be granted where a proposal harms or undermines the existing relationship of a settlement within the open countryside, where it does not enhance the character and distinctiveness of the rural area, including the special qualities and natural beauty of the landscape of the AONB...”</p> <p>The LPR states “Policy SP1 sets out that the principle of development is acceptable inside settlement boundaries and makes clear that only appropriate limited development in the countryside will be allowed.” Section 9.2 goes on to say “...this policy makes clear that land outside of settlement boundaries will be treated as open countryside where there is a presumption against new development... In West Berkshire, the conservation and enhancement of the North Wessex Downs AONB and its setting is clearly a key consideration...”</p> <p>There are numerous quotes within policy that require development to protect the countryside between developments for its own right, but also to maintain the gap between settlements. Policy SP3 requires “The retention of the individual identity of adjacent settlements”</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>The strategic gap between Bucklebury and Thatcham is an extremely important one. Bucklebury is a rural parish within the AONB, whilst its neighbour Thatcham is an urban town. Floral Way is the important boundary between them, and it should not be breached, otherwise their separate identities will be lost. Bucklebury Vision states that “local residents highly value the rural nature of the area in which they live and are keen to highly value the rural nature of the area in which they live and are keen to protect this for future generations to enjoy.</p> <p>All policies point to the requirement that these settlements should be distinctly separate, and maintain their own definite identities. This requirement for separate settlements is made even more important if the remote nature of the AONB is to be protected in accordance with national requirements.</p> <p>Unfortunately the THA20 would destroy this important feeling of separateness, with the virtual merging of a dense housing estate with the rural setting of Upper Bucklebury. Although there is a “country park ” strip between them, this is far too narrow and ultimately ineffective in maintaining the gap between the settlements. As Upper Bucklebury is lost into Thatcham, so too is the edge of the AONB.</p> <p>It is even more unfortunate that WBC already acknowledges that THA20 would destroy the identity of Upper Bucklebury, and with it part of the AONB setting.</p> <p>The LPR Site Selection Paper Table 8.2. Site CA12 (and later CA sites.) “It is the Council’s preferred approach to allocate site THA20 (Thatcham NE) as a strategic site. Due to the scale of development that could take place on THA20, it is considered that there should be no further allocations in Thatcham in the period to 2037 particularly as development of both north east and north Thatcham would result in the loss of the separate identifies of Cold Ash and Bucklebury, and would harm the setting of the AONB settlement pattern.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>This clearly states that, by developing THA20, WBC is acknowledging that the separate identity of Bucklebury will be lost. This is in direct contravention to the LCA, and various policies within the draft LPR. This would be devastating if the damage were just to the parish of Bucklebury, but the statement also acknowledges the damage to the setting of the AONB settlement pattern. WBC is charged with protecting the AONB and its setting, but appears to be pushing through a policy that it accepts will cause damage to the very thing it is meant to protect.</p> <p>The proposed development at THA20 actively goes against LPR policies to protect the separate identities of adjacent settlements, and WBC acknowledges it is ignoring its own policies in the Site Selection Paper. WBC also acknowledges that THA20 would be to the detriment of the AONB. This is one further example of how inappropriate THA20 is.</p> <p><b>14. Siege Cross</b>  Siege Cross is a constituent part of the THA20 proposal, making up one of the three proposed “linked villages.” It was the subject of developers’ plans in 20 15/16, but planning permission for around 500 houses was refused. It is puzzling that a site for 500 houses should be refused permission, given WBC now promotes it as part of a development five times bigger.  It may assist to reiterate some of the arguments WBC itself used to counter the Siege Cross proposal. The elements quoted are a selection of the multiple similar points successfully deployed in refusing the Siege Cross application.</p> <p>WBC Planning Officers put forward the following in the 15/00296/OUTMAJ West Berkshire Council’s Statement of Case:  1.2.3) Landscape and Visual Impact  “... The development would result in significant and demonstrable harm in terms of landscape character; settlement form; scale; identity and distinctiveness; and the historic environment. In particular:</p> <p>(c) The proposed development would result in harm to the character and</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>identity of Thatcham and erode the open landscape between Thatcham and Upper Bucklebury.</p> <p>(d) The development would have an adverse impact on the distinctive local landscape character and appearance of the landscape north of Thatcham, which contributes to the setting of the AONB the boundary of which runs some 575 metres to the north of the site.</p> <p>(e) The development would urbanise the key areas of sensitivity within the Local Landscape Character Area 14F (Colthrop Manor Plateau Edge), including: the lower slopes of an important ridge line; Big Gully, a local landmark; good views across the area and long views across the Kennet Valley; the lack of development with scattered farmsteads and minor roads; and the rural setting of the historic settlement at Siege Cross Farm.</p> <p>(f) The development would detract from the enjoyment of the character and appearance of the AONB in views from the escarpment south of the River Kennet.”</p> <p>“...the development fails to have due regard to the sensitivity of the area to change. The development is inappropriate in terms of its location over the whole site, and its scale in the context of the existing settlement form, pattern and character of Thatcham. The development also fails to conserve the historic landscape setting and rural context of Siege Cross Farm.”</p> <p>“The development is contrary to guidance in the relevant landscape character assessments, and therefore fails to protect and enhance the local identity and distinctiveness. The development would erode the identity of Thatcham as being separate to that of the surrounding rural settlements.”</p> <p>“...the application is contrary to the National Planning Policy Framework, the Planning Practice Guidance, Policies ADPP3, ADPP5, CS14 and CS19 of the West Berkshire Core Strategy (2006 2026), the relevant landscape character assessments, the North Wessex Downs AONB Management Plan (2014 2019), and the North Wessex Downs AONB Position Statement on Setting (2012).”</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>5.4 "...the Council will highlight that the appeal site is largely undeveloped land outside of the existing defined settlement boundary and within open countryside. The Council will give evidence on the weight that should be applied to individual policies, and will demonstrate the proposed development fails to comply with the National Planning Policy Framework, Policies ADPP1, ADPP3 and CS1 of the West Berkshire Core Strategy (2006 2026), Policy HSG.1 of the West Berkshire District Local Plan 1991 2006 (Saved Policies 2007) and emerging Policy C1 of the Housing Site Allocations DPD with respect to the location of new development.</p> <p>It is notable that WBC were particularly concerned about the effect of the Siege Cross development on the wider landscape, its failure to comply with National and local policies and on the AONB which "runs some 575 metres to the north..." However, in the THA20 proposed development, WBC proposes a site that abuts the AONB, and then erroneously implies that there will be no harm to it or to the wider countryside.</p> <p>WBC's Case Officer also noted in his report on Siege Cross that:</p> <p>5.9 LANDSCAPE CHARACTER AND VISUAL IMPACT</p> <p>"One of the core planning principles of the NPPF is that planning should take account of the different roles and character of different areas... recognising the intrinsic character and beauty of the countryside... The NPPF advises that the planning system should contribute to and enhance the natural and local environment by protecting and enhancing valued landscapes."</p> <p>To ensure that the detrimental impact of the Siege Cross development was given the weight it deserved in those proceedings, WBC employed a landscape expert, Bettina Kirkham DipTP BLD CMLI of Kirkham Landscape Planning to complete a landscape assessment. The result was further damning evidence of the effect of development at Siege Cross Farm:</p> <p>Landscape Assessment Summary</p> <p>"S.5 ...I set out the North Wessex Downs AONB AONB's objections to the proposed development, which I support."</p> <p>"S.7 ...the attributes of the site and its immediate setting are recognised as key features which should be conserved and enhanced in order to maintain the local character and distinctiveness of the landscape and the rural setting to Thatcham and the North Wessex Downs AONB."</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>“S.10 ...The site makes an important contribution to the setting of the AONB and to the setting of both ecological and heritage designations (Long Grove Cop se, Big Gully and Siege Cross Farm).”</p> <p>“S.11 ... it is a ‘valued’ landscape within the meaning of NPPF 109 which should be protected and enhanced... which provides acknowledged landscape benefits. The proposed development would result in significant and demonstrable harm to a valued landscape and to the intrinsic beauty and character of this landscape ...the proposed development is not environmentally sustainable contrary to NPPF para 7.”</p> <p>“S.12 ...The proposed development on the appeal site would therefore be an extensive arm into this open elevated and prominent landscape. It is clearly not a logical extension to Thatcham as it will intrude into an overwhelmingly rural landscape, which forms an intrinsic part of the wider landscape between the AONB and Thatcham, well beyond a clearly defined and established landscape boundary to the settlement.”</p> <p>“S.14 ...The value of the landscape is enhanced by the presence of historic assets in this case two Grade II listed buildings, the historic settlement of Siege Cross Farm....”</p> <p>“S.17 ... adverse effect of the development on the physical and visual setting and character of the site environment... cannot overcome the impact of the location, extent and mass and scale of the development, nor the impact on many views...consequence, the development would result in a wide range of long term major and moderate major adverse landscape and visual effects and several additional moderate adverse effects. <b>On this basis I conclude that the proposed development on the appeal site would result in significant and demonstrable harm to a valued landscape and to the intrinsic beauty and character of that landscape</b> by:</p> <ul style="list-style-type: none"> <li>• Harming the character, value and visual appearance of the site as part of the open countryside;</li> <li>• Harming the landscape and visual setting of the historic Siege Cross Farm and its Grade II listed buildings;</li> <li>• <b>Harming the setting of the North Wessex Downs Area of Outstanding Natural Beauty...</b>”</li> </ul>	

Respondent (with lpr ref)	Response	Council Response
	<p>“S.19 In conclusion, the Inspector and Secretary of State are respectfully requested to dismiss the appeal on unacceptable landscape and visual impact grounds.”</p> <p>It is abundantly clear that WBC’s own expert was categoric in the assessment of the damage that Siege Cross would cause to the local environment. This expert opinion was repeated throughout WBC’s vigorous opposition to the site. It is noted that both WBC and its expert were concerned about the harm that would be inflicted on the AONB that was half a kilometre away.</p> <p>BPC emphasise that the Siege Cross site now forms part of the THA20 proposal. However, this current proposal is 5 times the size and much closer to the AONB. The potential damage caused would be significantly greater WBC are reminded of its previous positioning regarding Siege Cross, and its vigorous defense of the countryside and the AONB. It is beholden on them to remember that previously stated position, and acknowledge the irretrievable damage that THA20 would cause to the local area and the AONB. THA20 must be recognised for what it is an irresponsible and irrevocable blight on our landscape and be discarded as a development option.</p> <p><b>15. Summary</b></p> <p>Bucklebury Parish Council has considered the strength of public opinion in the Parish against THA20. BPC OPPOSES this disproportionate development in North East Thatcham. By its own admission, WBC admits that the proposal would result in the loss of the separate identity of Bucklebury and be of harm to the AONB. Furthermore, astonishingly, WBC states that the plan has few negative aspects, but BPC’s analysis demonstrates a panoply of detrimental consequences. The strength and persuasiveness of these arguments dictate that WBC needs to undertake an urgent reappraisal of the entire plan.</p> <p>In conclusion, the proposal is disproportionately big, poorly sited and would have too great an impact on the surrounding population and environment.  <b>WE STRONGLY URGE THE PROPOSAL BE REJECTED.</b></p>	

Respondent (with lpr ref)	Response	Council Response
<p>Midgham Parish Council (lpr1330)</p>	<p>Midgham parish council wishes to strongly object to the proposed development of 2500 houses to the north and east of Thatcham. The parish would have wished to carry out a public meeting to allow members of the public to express their views but have been precluded from doing so due to COVID-19 restrictions. Nevertheless, members of the parish council have received objections from concerned constituents and the matter was discussed by the parish council on January 18 2021. The parish Council wishes to object on the following grounds.</p> <p><b>Strategic gap</b> Midgham is a small village in the countryside. It is bounded to the east by Woolhampton and to the west by Thatcham. It is essentially farmland with a small amount of housing. Woolhampton has experienced large-scale development only recently and is steadily growing in size as a village. Thatcham has developed greatly over the last 20 years and it has expanded its boundaries accordingly. There is already ribbon development on the A4 between Thatcham and Woolhampton. The planned development would abut right up to the boundary of Midgham parish and consequently Midgham would become a small village effectively sandwiched between two large conurbations. This would have a severely detrimental effect on the village as it would be in danger of being completely subsumed by those conurbations. The development would fundamentally change the rural aspect of this area.</p> <p><b>Traffic</b> Midgham would be adversely affected by a vast increase of traffic which would be generated by the new development. The A4 is the main arterial route leading to Reading and the M4 and is already very heavily used particular at peak times. This development will significantly increase the amount of traffic on the A4 and by doing so increase the level of pollution from these vehicles, both chemically and by noise. Road noise is already a significant problem. Furthermore, Thatcham station which would be the railway station serving this plan development, has a level crossing which already incurs significant tailbacks particular during peak hours. The increased traffic can only add to this.</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash, Midgham and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Furthermore, this railway line has been electrified only recently and it is likely that more people will wish to travel by train. Any increase in train frequency will increase the delays at the level crossing.</p> <p><b>Infrastructure</b> There is already considerable pressure on local school places due to the large-scale previous developments in Thatcham and capacity for new students could be a serious problem. General medical services in the area are already stretched and are likely to have considerable difficulty in coping with the large increase in population. Whilst the A4 is a major road the roadways in and around Midgham are very narrow, devoid of pavement, and in some cases single-track. It is inevitable that due to the considerable increase in traffic and the concomitant delays, these small lanes will be used as rat runs or thoroughfares as people seek to circumnavigate traffic delays. This will be dangerous, will increase pollution, and will further destroy the countryside.</p>	<p>IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
<b>General consultation bodies</b>		
Heritage Forum (lpr78)	SP17 We believe that this site lies within the 8 km buffer boundary of the AWE Aldermaston DEPZ and OCZ (see page 28 of the Local Plan Review).	Noted. The ONR has responded to this consultation to inform the Council that the Outer Consultation Zone (OCZ) for AWE Aldermaston will be amended from 8km to 5km.
Binfield Badger Group (lpr2184)	<p><i>(comments also submitted under SP16)</i> I am writing on behalf the Binfield Badger Group, Berkshire to express concerns regarding the above local plan. We are a not-for-profit organisation formed in 1985, with a growing membership base across the county. The primary aims of our group are to protect and promote badger welfare and preserve their habitat across the whole of Berkshire.</p> <p>We provide a framework for members and supporters to help badgers, including education, talks and meetings and also conduct regular sett surveys to understand the population and health of badgers</p>	Concerns noted. Preservation of badger habitat and mitigation for their existence has and will be considered as part of the ecology evidence supporting this site.

Respondent (with lpr ref)	Response	Council Response
	<p>across Berkshire. We also work in conjunction with local authorities to review and provide input into local planning applications that might impact badger habitat and have previously provide d input to schemes in West Berkshire. Having reviewed the Local Plan consultation document we have concerns with the area and extent of the scheme for both North East Thatcham and Sandlesford Park.</p> <p>As the planning team at West Berkshire Council is aware, badgers are a protected species and any development must preserve badger habitat and mitigate for their existence, ensure they are not adversely impacted and have sufficient foraging ground that allows for territory movement and expansion. Both these schemes have badger activity across the sites and indeed we have previously objected to the Sandlesford Park development as active badger evidence was found during numerous sett surveys. We also have formal sett records that show badger activity both within the North East Thatcham proposed site and on its periphery.</p> <p>On behalf of the badger group, I would therefore like to express concern with the sites chosen for this proposed Local Plan development and ask that WBC take these concerns into account.</p>	
British Horse Society (lpr850)	The Society strongly supports A network of green infrastructure which will include a new strategic country park linking Thatcham to the plateau and the AONB Active travel improvements on routes between the site, town centre and railway station Sustainable transport through routes The Society requests that it is consulted on the need for equestrian provision in this area and the need to maintain existing public rights of way and establish new ones.	Noted.
Mid and West Berkshire Local Access Forum (lpr1863)	North East Thatcham is the largest development in the draft local plan, and it affects the largest number of public rights of way. Yet there is less detail in this policy than for some of the smallest non-strategic sites – the supporting text justifies the selection of North East Thatcham, but does not give any additional information about the nature of the development. There is no	Comments noted, the Council recognise the benefits that the public right of way network has environmentally but also alongside this they aid well-being in terms of both physical and mental health. West Berkshire Council Public Rights of Way Improvement Plan which is currently being

Respondent (with lpr ref)	Response	Council Response
	<p>mention at all of public rights of way in the policy or supporting text, and the 'Thatcham Strategic Growth Study Stage 3 Report: Thatcham Future' merely mentions their existence.</p> <p>The site is crossed by two public footpaths and one public bridleway, which provide access and circular walks from Thatcham to the extensive network of public rights of way and common land in Bucklebury and Cold Ash. MWBLAF believes that these should be preserved as distinct routes (similar to THAT/8/1 in the existing Thatcham Dunston Park estate) and not absorbed into the road network of the development (as is the case for THAT/8/3). Their rural character should be preserved, which may require the planting of new hedgerows. The policy RSA 3 has excellent wording on this point, and we recommend that equivalent wording is added to this policy.</p> <p>The Forum strongly supports the following objectives: Development of the site will be expected to deliver:</p> <ul style="list-style-type: none"> <li>• Active travel improvements on routes between the site, town centre and railway station</li> <li>• Sustainable transport through routes</li> </ul> <p>The Forum supports the sentiment of the following objective: Development of the site will be expected to deliver:</p> <ul style="list-style-type: none"> <li>• A network of green infrastructure which will include a new strategic country park linking Thatcham to the plateau and the AONB</li> </ul> <p>However, the policy needs to give further explanation is needed of what is meant by 'a network of green infrastructure' and 'a new strategic country park'. While the country park might link the new development to the 'plateau', the development risks separating the current town of Thatcham from the 'plateau'.</p> <p>Given the very large number of houses proposed for this development, the Forum would emphasise the importance of considering dog walking in the design of the settlement and country park. We address this in our comments on policies DC 2 and DC 37.</p>	<p>updated will be utilised to inform development proposals and forms part of the evidence base for the Local Plan. The Council agree that rights of way have an important role in the green infrastructure network and so will strengthen the green infrastructure policy (SP10) by adding additional wording.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Changes:</p> <p>The Forum recommends that an extra item is added to the elements that development is expected to deliver:</p> <p>Development of the site will be expected to deliver:</p> <ul style="list-style-type: none"> <li>• <b><u>The protection of the rural character of the existing Public Rights of Way across the site.</u></b> The policy needs to include an explanation of what is intended by ‘a network of green infrastructure’ and ‘a new strategic country park’.</li> </ul>	
West Berkshire Green Exchange (lpr1556)	<p>We question whether the density of housing that is suggested for Thatcham is desirable in the modern world. The benefits to health, including mental health, of more active lifestyles are well-known. The proposal in this plan will deprive the existing residents of the town of public footpaths in the north east of the town, which can be used for recreation by anyone who enjoys walking, particularly if they live in the Siege Cross estate and will increase the light pollution of this segment of Thatcham Town. We do not believe that the value of these footpaths as contributors to quality of life is taken into account in the plan.</p>	<p>In regards to concerns raised in relation to the loss of a recreational resource, within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.. This will be accessible to all.</p> <p>In regards to light pollution, policy DM4: Environmental nuisance and pollution has been strengthened to ensure that all reasonable steps are taken through design, siting and technological solutions to ensure the abatement of obtrusive light to avoid sky glow, glare and light spillage, intrusion and any adverse impact to wildlife. Applicants should adhere to the guidance on lighting provided in the most up to date Institute of Lighting Professionals (ILP) guidance notes, alongside other relevant local documents including the North Wessex Downs AONB ‘A Guide to Good External Lighting’ (2021).</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR also requires the submission of a lighting strategy.</p>

Respondent (with lpr ref)	Response	Council Response
<p>The Berkshire Ornithological Club and Newbury District Ornithological Club (lpr1298)</p>	<p>Response from the Berkshire Ornithological Club attached</p> <p>Response comments on the impact of proposals on local biodiversity, matters which are considered will need to be addressed to mitigate the impact of the scheme and sets out some possible means of doing so.</p> <p>Response states that in this case the site will introduce 2500 new households almost all within 2 km of Bucklebury Common, and considers that mitigating the impact of the increased recreational pressure, and the opportunity to enhance biodiversity should form part of the approved scheme, consistent with current Local Plan Policy CS17, emerging policy SP11 and NPPF paragraphs 170 and 175.</p>	<p>Comments noted, biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p>

Respondent (with lpr ref)	Response	Council Response
		The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.
<b>Other stakeholders</b>		
Mrs Harvey (lpr1367)	<p>From: Mrs Harvey</p> <p>I am writing to object and voice my concerns about the NE Thatcham development.</p> <p>Living in Bucklebury, I am extremely concerned about the impact of building 2500 houses will have on the surrounding area. During and after completion.</p> <p>In my view this is excessive development in 'Rural Berkshire' and far too close to AONB.</p> <p>Not only will already oversubscribed local primary and secondary schools struggle. Hospitals and Dr surgeries will suffer.</p> <p>The traffic and pollution levels will increase. This will affect humans, domestic animals and wildlife.</p> <p>Over the years we have seen other developments appear in Thatcham Berkshire. There are certainly other sites available ones much more suitable to residential purposes. These would have a less negative impact to their area. Town and country.</p> <p>Thank you for acknowledgement of this objection.</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. 		and lifestyle choices will be important elements of the overall transport plan.
Chris Austin (lpr1374)	<p>Following our attendance at two meetings held by members of Bucklebury Parish Council and having studied the content of the various related planning documents, we write to outline our objection to the development of 2,500 homes within the North Thatcham area.</p> <p><b>Environment</b> The proposed development abuts Bucklebury Common and an AONB. Residents of the new developments will be drawn to the Common and will significantly increase the pressures already faced by the eco systems and wildlife that feature there. Parking on and around the Common is already exceeding capacity, with verges being used during peak periods. Whilst the development is relatively close, not all residents will walk to the Common, they're likely to drive.</p> <p><b>Traffic</b> Thatcham is already a bottleneck for traffic flowing through the town on the A4 between Newbury and Reading. By introducing a new road network with traffic calming, traffic lights and roundabouts, the impact on the flow of traffic will be significantly impacted.</p> <p>Reference is made to the close proximity of the potential development site, to Thatcham Railway Station. Whilst this may be true, the ability to get to the station during peak times is already near impossible by car. Whilst we appreciate an emphasis is made on sustainable travel, there is no requirement for residents within the development to embrace this, as a result cycle paths and pedestrian routes may be built, but in poor weather and dark winter months, residents will turn to their cars and further impact on an already congested road network.</p> <p>With congested roads in Thatcham, residents will seek out short cuts, this will undoubtedly introduce additional traffic to local roads and quiet lanes in</p>	<p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. Respondent (with lpr ref)	Response	Council Response
	<p>Bucklebury. These roads are designed with layouts and speed limits to support local traffic only.</p> <p><b>Flood risk</b> Recent flood alleviation works to the north of Thatcham have been built to protect the houses, businesses and infrastructure in the areas most severely affected by the 2007 flooding event. Whilst SUDS are being proposed within the development to manage the outflow of surface water, they are not designed to support the heavy volume of water from such a large-scale scheme. In addition to this, SUDS will release water into the relatively new flood management system and increase the risk of flooding within Thatcham once again.</p> <p><b>Wildlife</b> The impact on local eco systems and wildlife will be significant. Whilst plans identify mitigation actions and reference sustainable developments, it is abundantly clear that the development of farmland will destroy the spaces used and occupied by wildlife. The additional footfall on the Common will also impact on the wildlife.</p> <p><b>Pollution</b> The development will generate significant levels of light (even with dark sky lighting) it will upset the life of birds and mammals; they cannot adapt and will be driven from their habitats. This light pollution will also affect the residents of Bucklebury, spoiling their night sky. The volume of homes proposed will generate pollution from carbon emissions and those associated with population density. The clean air of the Common would be a thing of the past.</p> <p><b>Rail</b> Whilst Thatcham railway station is within a reasonable distance of the proposed development, there is little or no capacity for additional cars in the car parks or on-road parking. There is no reference to the improvement of</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 	<p>infrastructure that is linked to the station, without this the already creaking system will be overwhelmed.</p> <p><b>Medical</b>            Medical services in Thatcham, Bucklebury, Cold Ask and Chapel Row are all already under pressure. Whilst new services are included in the proposed scheme, there is no obligation for services to be provided prior to the completion of housing. As such, in the intervening period, new residents from the development will expect to join surgeries already at capacity. Thatcham remains a small town that is desperate for investment. By granting planning permission for this development, the local authority is devolving its responsibilities, by placing the need to provide services and infrastructure onto developers.</p> <p>Before West Berkshire Council considers further development in Thatcham, it must first demonstrate to existing residents its commitment to invest. Without this, WBC will continue to face strong opposition to applications that see the housing numbers increase significantly.</p>	<p>Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site</p>

Respondent (with lpr ref)	Response	Council Response
		would support the service provision and regeneration that Thatcham requires.
Margaret Neville (lpr1060)	<p>I have read the details of this proposal and I would like to strongly object to it on the following grounds:</p> <p>1a. <b>The increase in traffic</b> inevitably flowing up Harts Hill, through Broad Lane in Upper Bucklebury and on into Bradfield Southend, along Burden's Heath/The Ridge and beyond into Cold Ash will be extremely dangerous. These are narrow roads, many without pavements and the extra volume of traffic will inevitably result in accidents. One particularly dangerous bottle neck is around St Finian's School where parents are forced to park on the road and there are no pavements to walk their children to and from the school entrance. Passing drivers become held up and tempers fray. It's already an accident waiting to happen and will only become worse with increased traffic.</p> <p>Harts Hill is a narrow winding road. Larger vehicles are forced into the opposite carriage way to manoeuvre round bends and this again is very dangerous. We cannot allow so much more traffic to use it.</p> <p>Upper Bucklebury and Cold Ash already have traffic calming measures which cause regular bottle necks and these will become worse.</p> <p>It is unreasonable to suggest that drivers will use the A4 and the Thatcham ring road to access the A34 and M4 - indeed the most likely route north or west to those roads is either up Harts Hill and Burden's Heath or along Floral Way, up Cold Ash Hill, past the primary school and through the chicanes past Down House School. Either way, these are dangerous routes.</p> <p>Another route out will inevitably involve crossing the railway at the end of Pipers Way. It already regularly takes 10 to 20 minutes to get over that Level Crossing.</p> <p>1b. <b>Bucklebury Common is an AONB</b> and this development will have a severe detrimental impact on it. There are nightjars and nightingales (to name but two of the rare species) which breed in close proximity to the proposed houses. The habitats of these birds will be disturbed.</p> <p>More visitors will inevitably access the Common and whilst I know we all have the right to do so, unfortunately there are many who do not respect the delicate Eco structure of the area. Even letting a dog run freely can destroy the nests of nightjars and other ground nesting birds.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>In addition, there is a huge problem with joy riders going through the woods in four by fours and on motorbikes.</p> <p>I understand it is the law to provide an Environmental Impact Assessment with a plan of this scale. Please could you let me know whether this is underway or has been completed.</p> <p>These are my main objections but I would also like you to consider the following points please:</p> <ol style="list-style-type: none"> <li>2. What provision is being made for Doctors' Surgeries? Local surgeries are already overstretched and cannot cater for any more patients.</li> <li>3. Is parking going to be improved at Thatcham Station? The current car park is usually full on weekdays already (pre pandemic of course).</li> <li>4. Will there be any discussions around providing a bridge over the railway instead of the level crossing in Thatcham?</li> <li>5. What plans have been put in place for sustainable drainage? I know that Thatcham has recently had a flood relief system built but I don't know if this will cope with or even be part of the drainage for this development.</li> </ol>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p>
Holly Sparkes (lpr1062)	<p>I'm emailing in objection to the proposed plan to build 2500 houses on the farm land between Upper Bucklebury and the A4 and floral way.</p> <p>I'm in objection for a number of reasons-</p> <p>Firstly the proposed plan will lead to over development of the area- Thatcham has become extremely over developed in recent years with housing estates popping up everywhere and I believe it's important to protect the remaining rural countryside.</p> <p>Secondly it will cause the loss of the Thatcham green belt, connecting Upper Bucklebury to Thatcham and resulting in an agglomeration of housing estates.</p> <p>And finally I'm in objection due to the increase of traffic, and noise and air pollution caused by the proposed development.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green</p>

		<p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p>
Colin Heslop (lpr1063)	<p>In my view, while development is bound to continually be applied for, this site is currently a very valuable and effective boundary between two separate and very different communities namely Thatcham and Upper Bucklebury. However given that Thatcham has been designated as a development area and this site has been chosen as the preferred location, may I suggest that, as part of the approval, the tree area, that is currently shown on the plan, should be designated as common land by either a covenant or another irrevocable medium, insuring that it is unavailable for future development of any sort. Additionally there does not appear to have been an adequate consideration as to how road traffic is going to disperse from this site.</p> <p>With the current high traffic volumes travelling through Upper Bucklebury adding additional traffic that may choose the upper route to Reading and the east from this site will make Upper Bucklebury a more serious traffic zone. Additionally the increased traffic that will be heading south inevitably over the railway and canal will bring the whole A4 and Pipers way junction to a standstill, due to the increased time the level crossing is closed, and consideration should now be given to a bridge over the railway /canal linking in with a way off the new estate south and east to ameliorate this problem. Further consideration needs to be given to the additional traffic that will be heading north for the M4/A34 junction at Chieveley, with particular attention</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process. In regards to the suggestion on trees, the scheme will be landscape led it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB. It is out of the remit of the Local Plan to stipulate a covenant.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at</p>

		<p>plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>
Rachel Powell (lpr1067)	<p>I would like to register my objection to the proposed plan to develop 2500 houses on the outskirts of Thatcham.</p> <p>More than ever recently we've been educated on the impact of development and the destruction of rural countryside on the future of our planet.</p> <p>From an environmental perspective, the prospect of building these houses would be a terrible loss of a diverse range of habitats for the wildlife around that area. There are a number of red and amber listed birds, for example, whose existence would be threatened by the loss of this habitat.</p> <p>In addition, I don't believe the infrastructure of the town of Thatcham is built to support such a massive increase in town population, and the increase of traffic would cause various issues - both from an environmental and infrastructure perspective.</p>	<p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>
Roger Hills (lpr1068)	<p>I wish to register our profound objections to the application to build 2,500 new residences in Thatcham. I will keep my comments as brief as possible knowing that others have taken to print in far more detail.</p> <p>The public explanation for the application is given as the urgent need to improve the infrastructure of Thatcham. However, it is the long held belief of many that the station/level crossing/parking are unfit for purpose, issues that are not addressed in the application. Too little attention has been paid to the dramatic increase in traffic and pressure on local roads and services if permission is granted; insufficient attention has also been given to safeguarding AONB considerations. Overall, I am particularly mindful of the funding issues facing the police which have received such attention recently. Finally, the development would have significant implications for future Council Tax considerations.</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 		<p>LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p>
Nick Le Rougetel (lpr1069)	<p>I just think the local authorities intention to grant the planning of 2500 house totally out of proportion the local needs, with the government's intention of restructuring the employment and wealth of the country.</p> <p>Changes: These developments should be in the north not the overcrowded south.</p>	<p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes</p> <p>The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p>
Heather Gassor (lpr1070)	<ol style="list-style-type: none"> <li>1. The roads cannot cope with more vehicles.</li> <li>2. If a new school is built where are the staff coming from?</li> <li>3. Not enough doctors surgeries, again if a new one is built how you can staff it?</li> <li>4. More pollution.</li> <li>5. Agricultural land should be used for agriculture.</li> <li>6. All brownfield sites should be used, including properties.</li> <li>7. What is being proposed would result in THATCHAM NEW TOWN!</li> </ol>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Respondent (with lpr ref)	Response	Council Response
		<p>Development in West Berkshire must consider numerous constraints, most notably the constraints posed by the North Wessex Downs AONB, AWE and the associated DEPZs and flooding.</p> <p>As part of the LPR, all sites promoted to the Council have been assessed in the HELAA and this has concluded that there are sufficient sites to accommodate the Council's housing requirement outside of these constraints.</p> <p>The principles which underpin the spatial distribution of new development stem from the overriding objective of enabling sustainable development, development that will meet the social and economic needs of the District while respecting the environmental assets of the District and meet the objective to mitigate and adapt to the effects of climate change and minimise demand for energy and other resources.</p> <p>The LPR aims to build on the principles of the Core Strategy with regard to the spatial distribution of development. The focus is on existing settlements, using the settlement hierarchy to steer development to the most sustainable areas, with an appropriate balance between urban and rural development, in order to meet local needs and maintain vibrant and balanced communities with their own sense of identity.</p> <p>The proposed allocation of sites takes account of the evidence from the HELAA and Sustainability Appraisal (SA) and are made in accordance with the settlement hierarchy, with higher levels of development at the higher levels of the hierarchy. Thatcham lies in the top tier of the settlement hierarchy (it is an Urban Area). Urban Areas will</p>

Respondent (with lpr ref)	Response	Council Response
		<p>be the prime focus for housing and economic development.</p> <p>The proposed strategic allocation of North East Thatcham is in accordance with the spatial strategy set out in the LPR.</p>
Tim Hindle (lpr1071)	<p>Whilst I appreciate the need for WBC to build more houses in the county, a county that has a large AONB and an extensive floodplain, the choice of the north-eastern edge of Thatcham seems to me to be a particularly "heartless" decision. Thatcham is already a mere agglomeration of earlier such tag-on developments, developments that have been pushed forward with little or no thought of how to make them part of a thriving community with a "heart", a place with a centre, something more than a Waitrose, a needlework shop and a Costa's coffee stall. Adding another 2,500 more homes at the edge of this higgledy-piggledy place can only make it even more heartless. The heavy focus of the proposal on traffic flows suggests that the development is already being seen as a mere dormitory facility for other areas.</p> <p>Changes: Thatcham would be a better place if the 2,500 homes could be broken up into several units spread around the town's perimeter, and the money for infrastructure given over to decent development of the town's existing centre.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>
Melissa Neller (lpr1072)	<p>As a resident of &lt;personal information removed&gt;, I object to the building work for all those houses. I am concerned at the pressure this would put on the local doctors surgery where you already have to wait weeks sometimes for an appointment. The schools are over run (I understand I read somewhere that a new school will be build) but I still don't think it will hold enough places to cope with the demand as a new school is needed for the children already yet alone with many more this estate will bring. The public</p>	<p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>transport has been cut completely in some parts of the rural areas of west Berkshire, I'm sure this would also be an issue for people living in the houses who can't drive and need to get to the local doctors etc. We also have issues with the water and the pump that provide water to the chapel row area and I'm concerned that with this many houses it will put more demand on the water supply that we already don't have. We often have our water turned off so they can fix and maintain broken pipes, it would put pressure of that system if it was connected. There is also a huge amount of wild life in the local area, what would happen to the animals with these houses all being built on that land? The traffic is also a massive concern, when it's not covid and the lack of public transport the amount of cars on the road slows everything down from harts hill, around Francis baily school and it all backs up along joining roads. I think this would be a terrible impact on the services and residents of Bucklebury and upper Bucklebury and would thin out a lot of services that are already stretched. Please don't build more houses and out strain on the services even more, we are already so overlooked when it comes to things like doctors, public service and transport, schools, water, electricity and internet/phone services.</p>	<p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The</p>

Respondent (with lpr ref)	Response	Council Response
		<p>modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>

Respondent (with lpr ref)	Response	Council Response
Aubrey May (lpr1073)	<p>I would like to express my concerns about the proposal to build this very large development of 2500 houses on farmland adjacent to Upper Bucklebury. I have lived in &lt;personal information removed&gt; for over sixty years, and often walk to Thatcham over the fields, should this development go ahead I will be walking through a housing estate rather than the rural countryside that I have enjoyed for many years. A development of this size needs lots of services i.e. Drainage, Hospitals, Doctors and also the railway crossing at Thatcham Station is inadequate, to name a few.</p> <p>Can West Berkshire provide the services needed for such a large development? We also have the question of traffic, pollution and the disruption the building would cause.</p> <p>For the reasons stated we are against this development going ahead.</p>	<p>In regards to concerns raised in relation to the loss of a recreational resource, within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB. This will be accessible to all.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Richard Mower (lpr 1077)	I would like to strongly register my objection to the proposed full development of the above sites for the following reasons.	In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the

Respondent (with lpr ref)	Response	Council Response
	<p>The Vast majority of Upper Bucklebury residents are against this development, many have already registered their objections, however many are not aware of the application or consultation as no information has been sent out by WBC. WBC are in my opinion negligent in this process and the consultation period should be extended and all residents should be formally written to.</p> <p>It is cited in the Bucklebury vision and Bucklebury Plan to maintain a strong greenbelt between Thatcham and Upper Bucklebury. This document is approved and agreed with WBC and should be considered as supplementary planning consideration. It is not mentioned in the WBC documentation.</p> <p>It would effectively join Upper Bucklebury with Thatcham, which has all but happened at Cold Ash effectively removing the rural aspect of the area. WBC are therefore suggesting that the Parish of Bucklebury should maintain its identity but the proximity of the development is in contradiction to WBC's own intentions.</p> <p>A previous application was rejected by the secretary of state in 2017 <a href="https://www.newburytoday.co.uk/news/news/22093/very-strong-message-to-developers-after-thatcham-appeals-turned-down.html">https://www.newburytoday.co.uk/news/news/22093/very-strong-message-to-developers-after-thatcham-appeals-turned-down.html</a>. Why are WBC now considering this site in light of the previous objection, what has changed and knowing this has been refused once why have massive funds been spent thus far ?</p> <p>It is a massive over development of the Countryside in one area which consists of rolling hills and farmland. The reason stated is that 85% of West berks is AONB. WBC have previously built on AONB and AONB status can be changed with government approval, and as it allegedly the government driving this would they not be more open to changing some AONB status ? In the NWN the following statement is attributed to Hilary Cole.</p> <p>The council's executive member for housing, Hilary Cole (Con, Cold Ash and Chieveley), said: "We are very keen to work with the local community because it's such a big proposal and development for Thatcham. "We have taken a conscious decision to do this around Thatcham so it will deliver the</p>	<p>Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p> <p>There is no green belt within this area (or within the District) there will be open space maintained along the northern/north eastern part of the site.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme</p>

Respondent (with lpr ref)	Response	Council Response
	<p>infrastructure we need. “We feel that Thatcham is best placed to take a development of this size.”</p> <p>I have two specific issues to object to on these statements made. Firstly WBC have done very little if any to work with local residents – see above points and secondly Ms Cole’s statement infers that the decision is made, so why is so called consultation being held ?</p> <p>WBC and Thatcham councils have wasted a great deal of tax payers money in completing many surveys and writing an 800 page report, effectively making this a fait accompli, before going to consultation on the proposal.</p> <p>It will have a significant impact on traffic in the area and especially on the route into Thatcham and Newbury and towards the station which are already heavily congested at busy times and in the event of any minor traffic disruption.</p> <p>This will significantly impact the freight traffic using the industry site at Thatcham It will significantly increase the traffic on the back route (rat runs) which are not designed for large traffic volumes. Traffic and speeding in particular through Upper Bucklebury is of a major concern due to the primary school. With an increase in 10% this will only worsen the situation.</p> <p>It will completely surround the Crematorium at Thatcham which was, as I understand, placed there to be away from residential properties and has constraints placed on it.</p> <p>It is stated/assumed this will help the Upper Bucklebury Business – predominantly the Pub and Shop. The Pub is hardly likely to benefit as a) pub usage across the country is in decline b) the Pub at the bottom of Harts Hill cannot already sustain a business. One pub is hardly justification for a development this size. The shop is also likely to suffer as the plan indicate</p>	<p>would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that ‘in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy’ (paragraph 67 of the Core Strategy Inspector’s Report). As additional housing is required, and given Thatcham’s status as an ‘Urban Area’ in the development plan is it considered appropriate to consider Thatcham for housing.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>that shops will be included, so it is likely it would have a detrimental impact on the only shop in UB, creating more traffic.</p> <p>It is cited that there cannot be development on the Kennet flood plain, however there are multiple examples where this has already been done (most of Thatcham was originally a flood plain), this is extremely hilly land which is almost certainly as unsuitable to development as the flood plain.</p> <p>It will significantly increase the noise and light pollution to the Bucklebury Parishioners – there are no street lights in Upper Bucklebury.</p> <p>There is no evidence that this will enhance Thatcham town centre (or indeed Newbury). The development of the old Army Base by the Station didn't add any amenities and we have seen the slow decline of the town centre over the last 20 years despite the area growing.</p> <p>Schooling – this will obviously have an impact on local schools (and traffic). Current indications are that KS1 children volumes are decreasing yet the plan includes a proposal for 3 new schools. When would this be built before or after the houses ? Build it before and it will poach children from local schools, such as Upper Bucklebury which will make that unsustainable (as is happening in Newbury with the new school on the college site). Build it after and the local schools will be overwhelmed beforehand. If the development is spread across the region there is a much greater chance of the load being spread out.</p> <p>What impact will Brexit have on new residents to the area in that we have a large proportion of EU citizens already here, but this is likely to continue in future hence is the demand for housing still appropriate. ONS statistics show that in 2019 29% of mothers of babies born were not from the UK. Does there need for such extensive development therefore required.</p> <p>West Berkshire declared a climate emergency on 2 July 2019. <a href="https://www.westberks.gov.uk/media/48362/Draft-Environment-Strategy-2020-2030-Summary-document-January-2020-/pdf/WBC%20Environmental%20Strategy%20Summary%20A4%20.pdf?m=637141844400230000">https://www.westberks.gov.uk/media/48362/Draft-Environment-Strategy-2020-2030-Summary-document-January-2020-/pdf/WBC Environmental Strategy Summary A4 20.pdf?m=637141844400230000</a> WBC - Environment Strategy - with declaration of climate</p>	<p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>emergency. This will not contribute with the increased pollution from the construction traffic, increased vehicle pollution due to the inevitable congestion and so on.</p> <p>The plan suggest the provision of a “country park”. There is no budget available for.</p>	<p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council’s policy on pollution.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (Policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire’s declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Dawn Adams (lpr1080)	<p>I don't think it is an exaggeration to say I was filled with horror to learn of the plan to build a massive housing development in the NE of Thatcham through to the Bucklebury area. Is no green area safe from being concreted on? There is already terrible congestion along the A4 Bath Road and to imagine more cars turning out from huge building estates onto the main drag will just create gridlock with nobody getting anywhere faster than walking pace! It is so unsettling to buy a home in rural area and pay a premium price for that location, to then hear, that your home is under 'threat' of being swallowed up in a massive brick building jungle, of which, you would never choose to live in. There is already several new builds springing up along the A4 from Calcot/Theale right through to Newbury all adding to the stress of the area. The infrastructure is poor as it is, potholes in the road is just one example, and standards have slipped in provision for the current population, so why can it be thought a good idea to add to the problem? It is not a case of 'not in my back yard' I would want everyone, in all areas, to enjoy their green spaces, if, that is where they choose to live and make their home. The government is constantly promoting the mental health of the population of this country, by advocating that people get out into the green countryside and feel the calm of nature and open spaces, and what is happening? more and more green areas are being destroyed by building houses and industrial sites and pushing the countryside further and further away. I am afraid that the Planning Department of all councils has become the enemy of the</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 		<p>and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p>
Jeremy Lutterloch (lpr4)	Having read through the proposed plans, I have to say that whilst I am fully in favour of growth throughout the county and indeed the country, I am a little disappointed that these plans do not provide for a two way road bridge over the GWR railway, Kennet and Avon Canal and the River Kennet from North Thatcham to South Thatcham. I am sure that if the developer were to have included a road bridge within their plans then they would meet with much less opposition from residents in and around the area. Most of the residents of the proposed site would need to be either employed and/or educated. Thatcham is not a high density employment area. I would suggest	In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural

Respondent (with lpr ref)	Response	Council Response
	<p>that Reading, Newbury, Swindon and Basingstoke are the main centres for local employment with London providing further employment for commuters via the GWR Railway. The impact on both productivity and the environment by not providing a road bridge over the railway, canal and river will be disastrous. Productivity will be improved if a bridge is built because residents will not be delayed by the level crossing. The environment would benefit because vehicles will not be waiting, engines idling, at the level crossing. The proposed development could add a further 40+ more cars to the already long level crossing wait. With a minimum 4 intercity trains an hour travelling East or West plus 3 local trains an hour and daily freight trains, the waiting queues of traffic at the level crossing would be catastrophic to both the environment and the mental health of commuters. Have the local council and/or the proposal developers of the site been asked to put forward their plans on this particularly difficult issue of transportation? I understand that there have been proposals for a road bridge previously put forward to the east of Thatcham without success.</p> <p>Change proposed: The development itself is probably acceptable but a Road Bridge is an absolute necessity if these plans are to be approved I have lived in Thatcham and Newbury for the last 55 years and whilst I believe that Thatcham needs further housing and employment I do believe that it is imperative the Road Bridge be built across the railway, the river and the canal if any new residential building developments are to be approved.</p>	<p>routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>
Mark Chance (lpr7)	<p>The existing town centre and services in Thatcham do not have the facilities to support such a large development. This will drive more journeys to Newbury, Basingstoke, Reading and beyond for recreational and commuting on a transportation links which will not have capacity.</p> <p>Change proposed: The local services and town centre facilities need to be scaled up to support the current scale of housing around Thatcham. Improve North/South routes through Newbury/Thatcham, as there are limited options to cross the railway line or Kennet &amp; Avon canal. Thatcham Train crossing needs a bridge. The</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. Respondent (with lpr ref)	Response	Council Response
	A4 in its current capacity will struggle with the additional traffic coming from 2,500 dwellings heading into Newbury and onto the A339 and other road links.	
Pauline Cload (lpr9)	<p>I generally oppose this huge and extensive expansion of Thatcham, for a number of reasons - see below. 1. This is a massive and totally out of proportion proposal and would radically alter Thatcham, turning it much more into an urban sprawling town, losing its ancient village feel and drastically cutting current residents off from the surrounding countryside. The proposed building styles and densities would also be out of keeping, making the town lose its individual character, homogenous little boxes are an eye sore at this scale. 2. There are insufficient school places, shops, medical services etc to support such a huge increase in housing and population. 3. In a similar way infrastructure such as gas, water, sewerage, power are all inadequate to cope - there are already large parts of this proposed area and adjacent lands, that have brownouts, no access to mains sewerage or are totally reliant on oil for heating. Similar there are areas where mobile and internet signals are desperately poor, so adding more pressure to these is untenable. 4. Such a large series of developments would have significant and detrimental impacts on local wildlife, green spaces, trees, hedgerows etc and would risk significant changes to water management water with attendant risks of flooding for residents of Thatcham especially those on already established flood risk areas in the valley floor. 5. The roads in the area could not cope with increased traffic. The A4 is already often congested and slow through Thatcham. Travel south is heavily restricted by the railway, river and canal. Traffic from this development would be forced north onto small rural village roads such as Cold Ash Hill/Hermitage road/Red Shute and similar roads up through Bucklebury, Midgeham etc. These roads, which are often steep narrow - are totally incapable of dealing with those levels of traffic and would blight them with pollution and disturbance as people attempt to get onto the equally congested A34 / M4. It is also notable that this would be damaging to the AONB. 5. I cannot see how this proposal is in any way compatible with aims to become net zero carbon, Besides the building works, the loss of green space, the vast increase in population, the</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>traffic generated and the proposal for a wood burning power station are all very much not 'green' or in line with stated claims to reduce carbon footprint of West Berkshire.</p> <p>Change proposed: Housing should be in the scale and proportion to the existing towns, with an emphasis on smaller developments that do not swamp swathes of the countryside. More use of Brown-field sites and sites where there is already suitable access to transport and socially needed services. (or these should be properly accounted for in any expansion rather than relying on inadequate existing services. Green buffers between rural villages and towns need to be maintained and not built over wholesale or nibbled away.</p>	<p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In regards to waste water capacity, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. 		<p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire’s declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several</p>

Respondent (with lpr ref)	Response	Council Response
		<p>sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>
Lynn Hayter (lpr15)	<p>Thatcham does not need to grow any bigger. It does not need another housing development and especially one of this magnitude, and it would be very detrimental to the town and its residents on all fronts. Thatcham does need to retain the very few open and green areas that it has, it cannot afford to lose any more open countryside. The suggestion that massive housing development of this nature would lead to improved infrastructure and facilities for the town is used every time the district council wants to place big housing developments in Thatcham rather than in other parts of the district. Such improvements never materialise. The same is usually true of the social housing aspect of such developments, which usually disappears when the developers say that it is uneconomical for them to build. The site is within the OCZ AWE Aldermaston 8km Buffer. It is completely wrong to place up to 2500 homes in such an area, when there are plenty of other places in the district where they could be built.</p> <p>Change proposed: New housing allocation for the district would be better placed in more rural areas, to enable small villages to retain enough population to keep a few retail businesses alive. This would help to allow real communities to develop instead of barren groups of just a few very large properties. I believe that almost every person would jump at the opportunity to live in a real community around a village green, with a church, primary school, post office/shop &amp; a pub. Housing development should be for the benefit of the eventual occupants, not to suit the profit requirements of the developers.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. David Bridle (lpr21)	<p>Lack of commitment to enhance any adjacent existing estates for residents. The Thatcham North East allocation would need to address / mitigate the following existing and subsequent adverse impacts. There is surely great opportunity to redress some of these issues as opposed to a focus on the new site itself: 1. Telecommunications Infrastructure - already telecommunications infrastructure (e.g. mobile phone signal strength is relatively poor for a 'town'. Additional 4G &amp; 5G masts with good coverage are required. 2. Traffic volumes &amp; road safety especially outside schools! Already existing poor provision of effective vehicle speed reduction measures outside high risk sites/routes such as North Thatcham Children's Centre &amp; Park Primary on Park Lane (RG18 3BZ). Narrow pavement, no automated vehicle speed/warning signage or speed camera, no safe crossing points, ineffective speed pillows. All such roads needs to be 20MPH to change driver behaviour. (There is reference in SP other policies that new developments should not have adverse effect on the health and safety of existing communities). Higher volumes on these high risk routes will create an adverse impact. 3. The development needs to provide adequate on site children's services/centre and not increase the numbers using the existing North Thatcham Children's Centre where there is already high pedestrian/vehicle conflict/risk. No mention of this or a new doctors surgery</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Respondent (with lpr ref)	Response	Council Response
	<p>also required to avoid approx. 4000+ people having to travel through local roads to the Main A4 surgery further compounding traffic and road safety issues for local residents. 4. Construction Traffic Management plans (working with West Berks Highways) should be effective in preventing use by construction traffic of nearby residential through roads such as Park Lane. 5. Emergency Services and associated indirect noise impact - Thatcham Central and North residents already have to tolerate almost constant siren noise from predominantly ambulances using A4 to get to the Reading Hospital. Ambulances from Newbury station (the West) should use the Northern ring road to access this new development as it has the higher 40mph limit and should be facilitate faster access in and out to the Reading Hospital instead of trying to navigate an already congested Thatcham Town centre A4 bottleneck. Have SC Ambulance Service been consulted and what are their response plans re access? 6. Housing provision - affordable and social rented housing. Thatcham North already has an over-concentration of 'affordable and especially social' housing - refer to National Indices of Deprivation maps, Sovereign Housing Association maps, and house price maps for West Berkshire (e.g. Park Avenue Estate and Sagecroft Estate). There should be a balance/mix of housing provision across West Berkshire and Thatcham's already high concentration of such housing should not be compounded by additional provision of low quality / social / affordable housing - the mix should redress the balance by allocating a percentage that adjusts the mix to counter this overconcentration. 7. Areas of open space should have clear management and maintenance responsibilities clearly contracted and understood. There are many areas in Thatcham where land ownership is unclear and therefore such areas fall into disrepair. Any SUDS features would also come into this. 8. Leisure provision - North East Thatcham has very few (and very low quality) areas for leisure, especially for children. For example, Memorial Park, Sagecroft and Park Avenue estates have no/very poor provision. There is an over reliance on the 'Discovery centre' as a leisure destination. North Thatcham would benefit (as there are and will be a high proportion of young families) from creation of a high quality children's adventure play area opportunity for example in the Memorial Park. Where is the commitment to create a decent children's adventure play park in exiting North Thatcham and enhance the local club</p>	<p>impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. Respondent (with lpr ref)	Response	Council Response
	<p>facilities for example tennis? Has anyone surveyed leisure provision in the existing estates in North Thatcham? Other than a skate park there is virtually nothing and very disappointing for young families moving into this area who have to trek either all the way across the town to get to the Discovery Centre or K&amp;A canal or all the way up to Cold Ash for access to woods. 9. Cycles often use public footpaths instead of local roads - better highways management and traffic calming / management to make local residential through roads/highways safer for sustainable transport. How easily will existing residents of North Thatcham estates be able to access a new 'country park' which is mentioned? 10. Thatcham would benefit from adequate provision of a small retail centre in the NE development with appropriate parking capacity where food retailers such as Lidl / Aldi (or both) can operate. Currently everyone from East, Central and North Thatcham has to travel to East Newbury, Tesco, Lidl, Aldi (for lower cost food) increasing pressure on our already congested local road network which suffers high pollution levels, especially along the A4 Town centre and residential through roads. 11. The Town centre and immediate surrounds including local 'destinations' would benefit from better (dropped kerbs and dedicated cycling paths) for walking and cycling, as well as additional (frequent) local small bus service routes. 12. Litter. Provision of more waste bins, in and around the town centre which is already dominated by takeaway provision, leading to local residents suffering from persistent rubbish along paths and streets surrounding the town centre where Thatcham Town Council do not operate regular litter picking rotas. The bins need to be in places which are calculated at certain walking distances from shops and schools. 13. Opportunity to enhance Thatcham's appearance through enhanced biodiversity - through better management and design of small park/grass areas. There are many unkempt small roadside areas which are grass which could be planted (with local residents permitted to carry out maintenance). Such areas could be removed from grass cutting contracts saving council £ as they are often hard to access with machinery. North Thatcham's Sagecroft Estate and Park Avenue estate has such areas, often uncut, covered in litter and with no locals taking responsibility to enhance their own living environments. Thank you for considering all of the above. Thatcham's</p>	<p>The routes the ambulance service takes on emergencies is not a matter for the Local Plan, the Primary Care Trust are a statutory consultee in the Local Plan process.</p> <p>Affordable housing provision and housing mix will be provided in accordance with the relevant policy contained in the LPR.</p> <p>The maintenance of any open spaces provided will be agreed as part of the planning application process. The development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>Active travel improvements will be delivered on routes between the site, town centre and railway station.</p> <p>The proposal includes provision for local centres providing local retail facilities and small-scale employment space. It is out of the remit of the Local Plan to stipulate occupiers of the unit.</p> <p>Comments regarding rewinding road verges are noted.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>existing estates and residents seem to have been excluded from these plans yet we are being asked to support them.</p> <p>Change proposed: Please note previous comments regarding provision of services and facilities for existing local residents. New developments should be a catalyst for enhancement of a place as a whole. Thatcham has great history and potential, however it is not demonstrating its history or potential or providing adequate services for existing residents especially in North Thatcham.</p>	
Torbjorn Hultmark (lpr60)	<p>This development will due to both its size and position be devastating to the beauty and ecology of the area. The area forms part of an outstandingly rich section of Berkshire countryside both in terms of wildlife and farming heritage. Moreover, its effect on the immediately adjoining Areas of Outstanding Natural Beauty such as Blacklands, Midgham, Bucklebury Common, the Harts Hill area and areas around Cold Ash will be considerable. This is an incredibly important area and has to be preserved. Moreover, this is in an overall area that has seen an enormous increase in housing over the past decades with Thatcham growing exponentially. Traffic, pollution and the general transport and other infrastructures are already creaking at the seams. I am seeking for this proposal to be rejected in full. Quite apart from the fact that exceptional countryside such as this has to be protected due to ecology and heritage, it has to be preserved for current and future generations' health and wellbeing.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Paula McAuley (lpr79)	<p>I am writing to OPPOSE any further development in Thatcham. I have been a resident of the town for over 40 years, been schooled here and raised my family. As you can imagine I have seen a massive increase in new build homes over this time, but very little investment in any infrastructure as admitted in your own report. My objections are as follows:-</p> <p>SEWAGE/WATER Thames Water are already struggling to cope with the current population in Thatcham, and have been served notice to clean up their act. Despite the recent flood alleviation works, the ground for the proposed development is currently saturated, the A4 outside the Crematorium is frequently flooded, as are other patches along this stretch of the road, all the way to Theale. The new houses currently being built in Woolhampton are testimony to this, as water ran through the buildings during construction and the road was covered in sludge. The construction of the flood alleviation works ran over time and budget, and were shoddily completely to the point where the very residents who were to benefit from he works were fed-up, and formed a residents group. There is little appetite for further construction works in any form across the town.</p> <p>PUBLIC AMENITIES Our current leisure amenities are desperately underfunded, and building further amenities, in the new development offers nothing to existing residents. Our existing public right of way will be lost in the new development - we do not need "public green spaces for all to use" - we have the countryside. At present our library, toilets, youth services and leisure centre are desperately underfunded and barely accessible. Community halls struggle for bookings.</p> <p>ESSENTIAL SERVICES I have on several occasions, called the police to report anti-social behaviour, and am told there are no patrols in Thatcham tonight. 2500 additional homes will exacerbate this. We have no A&amp;E department at our local hospital, no maternity unit and waiting times for</p>	<p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In regards to concerns raised in relation to the loss of a recreational resource, within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB. This will be accessible to all.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a</p>

	<p>routine doctors' appointments is in some cases are 12 weeks, pre Covid. The report states a need for two primary schools, but there is no mention of a secondary school, yet 20-25% of Thatcham's children currently travel to Newbury as there aren't enough spaces. Schools struggle to recruit teachers, and we are about to close a primary school in Thatcham as no demand. ENVIRONMENT Thatcham already suffers with light pollution, the dawn chorus can be heard at 1am. The effect on rural communities are such that are Bucklebury, Woolhampton and Cold Ash boundaries will be non-existent. Thatcham Vision found residents in favour of Brown Field development. There is no commitment to net-zero carbon mentioned in the report. Please advise where can the environmental impact study be viewed? TRANSPORT Traffic is already congested at the Floral Way and Siege Cross Roundabouts right down to the train station. The area is further congested with Francis Baily school run traffic and the new Orcas which are an accident waiting to happen. HGVs travel in these areas all day, every day, due to the distribution centres in Pipers Way the addition of more housing will make this worse. Northfield Road, Park Lane and particularly Harts Hill Road will become rat-runs to avoid these roundabout. There is limited parking at the train station, and SSE staff have caused problems with residents as parking on housing estates. There is no provision for additional commuters. ECONOMY It is beggars-belief that Newbury is described as being the central hub for shopping, and will continue to be so. Whoever, wrote this clearly has no knowledge of the area at all. If you live in North or East Thatcham is it almost as quick to travel to Calcot, Reading or indeed Basingstoke and the retail offerings (and parking) are far greater. To make Newbury a central hub, the housing has to be in Newbury. Thatcham has few high quality jobs, most residents are self-employed or commute. In recent years three major banks have pulled out of our High Street, and pubs are unsustainable. The Plough has closed, and The Mill House changes hands with alarming frequency. Both main supermarkets are overpriced, (compared with, for example, Tesco) the development requires 40% affordable housing people in affordable housing do not shop in Waitrose! This development does nothing more than create a dormitory town which does nothing to integrate with the existing town. Could you please provide details on how you proposed to run affordable housing schemes? The</p>	<p>'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>In regards to light pollution, policy DM4: Environmental nuisance and pollution has been strengthened to ensure that all reasonable steps are taken through design, siting and technological solutions to ensure the abatement of obtrusive light to avoid sky glow, glare and light spillage, intrusion and any adverse impact to wildlife. Applicants should adhere to the guidance on lighting provided in the most up to date Institute of Lighting Professionals (ILP) guidance notes, alongside other relevant local documents including the North Wessex Downs AONB 'A Guide to Good External Lighting' (2021).</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR also requires the submission of a lighting strategy.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing association properties in the area are poorly constructed I have friends constantly on the phone to their housing association to rectify faults with windows and doors that don't close properly etc. Panorama recently spoke out <a href="https://www.bbc.co.uk/programmes/m000pk2b">https://www.bbc.co.uk/programmes/m000pk2b</a> I can't envisage any developer providing 40% affordable housing, without cutting corners it simply isn't financially viable unless there is a sting in the tail, or they reduce the percentage required. Finally, and probably most importantly, I believe the Government algorithms for calculating the housing requirement are currently under scrutiny.</p> <p><a href="https://www.google.co.uk/amp/s/www.bbc.co.uk/news/amp/uk-politics-55322993">https://www.google.co.uk/amp/s/www.bbc.co.uk/news/amp/uk-politics-55322993</a> Please advise if your current consultation is in line with this, takes the Pandemic into account and the loss of our town centres?</p> <p>Change proposed: Brownfield Sites would be a preferred option. A bridge over the railway line is essential. Nothing in this plan integrates the new development into existing parts of Thatcham - it's a whole new town. Infrastructure in Thatcham needs improving across the whole spectrum before this could proceed.</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
		<p>development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>All Local Plan Review Evidence Base documents can be viewed <a href="#">here</a>.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural</p>

Nina Hopkinson (lpr25)	<p>Thattham does not have the infrastructure to support any more housing. The Town Centre is not big enough to encourage the development of shops and with Newbury being so close will never attract decent size and diverse shops. The medical practices already have a higher number of patients that is recommended and there does not appear to another Doctors Surgery in the plan. There are already to many cars for the area especially near the station - the other day it took me 25 minutes to come into Thattham from Newbury at Thattham Station. As someone who was born in Thattham when it was a village I have seen it move from a lovely village to an urban sprawl and strongly believe that Thattham has already taken the brunt of housing and it is now time to STOP!! There must be other places that could take the additional housing, however I am not convinced that there is a need for any more housing in West Berkshire.</p> <p>Change proposed:</p>	<p>Thattham is an ‘Urban Area’ as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thattham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector’s report for the Core Strategy notes that Thattham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development</p>

Respondent (with lpr ref)	Response	Council Response
	<p>To not have any more housing in Thatcham! To provide the infrastructure that Thatcham disparately needs without increasing the overall size of Thatcham.</p>	<p>without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Liz Butcher (lpr110)	<p>1.Existing infrastructure is inadequate for current use and will not support the extra demands of this development. 2. Key services are already inadequate. 3. The A4 is the only major road into Thatcham East/West and is already inadequate. The level crossing in Station Road currently causes major tailbacks. The Floral Way "bypass" was created to relieve current traffic from the large Dunston Park housing development, and will be unable to cope with another 10 000 residents and their vehicles. 4. Net zero carbon levels cannot be met by 2030 as planned, and this development will make this goal completely unachievable - more cars, more heating, more concrete, more sewage. 5. If the renewable energy planned is biomass, this is problematic with poor reliability and results in woodchip having to be imported from outside the UK to provide the right quality and quantity. 6. New schools planned but may well not be needed - Parsons Down school has already been closed because of falling numbers. 7. 40% affordable housing planned - this never happens in West Berks because developers always say it is not viable when the final appeal is given. 8. Thatcham and Newbury do not need "new" country parks, this is a sop. We have plenty of green spaces for walking and cycling such as the Nature Discovery Centre, Snelsmore Common and Greenham Park.</p> <p>Change proposed:</p>	<p>Concern regarding infrastructure provision is noted. Robert Tayton (lpr239)	I have several concerns regarding the North Thatcham development. 1) The number of houses will increase the transport problems. In Upper Bucklebury there will be an increase in throughput along Broad Lane and Ridge Road. There is a primary school close by and the road is already very busy and will	Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and

Respondent (with lpr ref)	Response	Council Response
	<p>become more dangerous. Along Ridge Road there are no pavements and children unaccompanied use this road. Also the rail crossing in Thatcham is bad at the moment with very long waits sometimes. 2) Amenities - there is not enough schooling, medical availability or social amenities in the area to take the increase in population. This will cause problems social as well as medical. 3) We already have many problems on Bucklebury Common with motorbikes and 4 wheel drive cars carving up the pathways. This will increase with the increasing population. People have to live somewhere.</p> <p>Change proposed:  1) Traffic will need to be controlled to keep the speed down. It is not practical to widen roads in the A area but strict speed control across the common and along Ridge Road (long straight roads where speeding is rife) will have to be organised. The level crossing in Thatcham will need a bridge to be constructed to stop the present situation getting worse. 2) Many amenities will need to be provided. The obvious ones are medical surgery, adequate shops and schools to suit the population but you will also need to provide facilities for the youth otherwise there will be an increase in youth crime which we have seen in the past with large developments. 3) Regular policing of Bucklebury Common will be needed to stop cars and motorbikes destroying the countryside. Large fines and notices stating what will happen to people who abuse the countryside will be needed.</p>	<p>walking network to travel, including to Thatcham train station.</p> <p>Residents would make use of the newly provided education facilities on the site, which would not be expected to purposefully attract pupils from Bucklebury primary school.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. Colin Duff (lpr451)	<p>Any new development other than minor infill projects must be fit for the future and therefore such a large development such as this must at least be carbon neutral, preferably carbon negative. (3. Strategic objectives 1. Climate Change. Policy SP5) Developers' lack-lustre standard boxes must no longer be permissible. Such a large green field development appears not to be consistent with the stated section 2 context of West Berkshire being a rural area as it significantly erodes countryside. This proposed development is adjacent, possibly part of, an area known to have significant bronze and iron age significance. Therefore this must not be harmed (3. Strategic objectives 7. Heritage. Policy SP9) This proposed development will result in a significant increase of traffic onto the A4 potentially impeding emergency "blue light" response not only to the whole community but also for AWE. Part of the proposed development falls within AWE Aldermaston's OCZ, but much of its traffic will travel through the OCZ. (Policy SP4) This development incorporates part of Thatcham's existing flood defences (Dunston Park bund) so the protection this provides must not be harmed. (Policy SP6) This development will significantly increase the population of Thatcham and the town size and therefore must in a legally binding way be subject to a town strategic development plan, not just bolted on to the NE end of the town.</p> <p>Change proposed:</p>	<p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>There is no doubt that more housing, especially affordable housing, is required but this development is so large it will have a major impact on the character of the area. Any new development must have a more holistic approach fo its effect on the current town and its residents. A much smaller development is preferable. Any transport statement must be part of, and be a positive contributor to, a greater strategic plan for transport around, to and from Thatcham. Not just relate to its interface with existing roads and modes of transport. Transport to and from Thatcham is predominantly on an east-west axis and this will only make this far worse. Therefore the town needs independent access north (to the M4/A34) and south (to the A339/A34) to relieve traffic on the A4 eventually heading north or south.</p>	<ul style="list-style-type: none"> <li>Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council’s housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. 		<p>to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>
John Parascandolo (lpr380)	I would like to strongly register my objection to the proposed full development of the above sites for the following reasons. It would effectively join Upper Bucklebury with Thatcham, effectively removing the rural aspect of the area to which I moved to. It is a massive over development of the Countryside in an area which consists of rolling hills and farmland. A previous application was rejected by the secretary of state in 2017. It will have a significant impact on traffic in the area and especially on traffic using Upper Bucklebury as a cut through to avoid the congestion on the A4 (Increased by this development) to Reading. I also do not consider the traffic modelling to be accurate. It will significantly increase the noise and light	The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the

Respondent (with lpr ref)	Response	Council Response
	<p>pollution to Upper Bucklebury. This development will increase pollution during the construction and from the increased population and traffic thereafter. West Berkshire declared a climate emergency on 2 July 2019, this development contradicts this declaration. It is cited in the Bucklebury vision and Bucklebury Plan to maintain a strong greenbelt between Thatcham and Upper Bucklebury. This document is approved and agreed with WBC and should be considered as supplementary planning consideration. The plan suggests the provision of a country park. Fortunately placed on the borders to Upper Bucklebury, (no doubt in the attempt to maintain the clause for a strong greenbelt). There are no guarantees that this will be initially included or protected from housing development later. The Lack of consultation; no information has been sent out by WBC. I therefore request that the consultation period be extended, and all residents should be formally written to ensure all local views are considered.</p> <p>Change proposed: Reduction in the number of houses and proposed area especially towards Upper Bucklebury. Traffic restrictions on Harts Hill Road. Opening of route to South by provision of a bridge over railway at Thatcham Guaranteed green belt boundary between any smaller development and Upper Bucklebury.</p>	<p>separation and identity of individual settlements will be embedded into the design process.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential</p>

Respondent (with lpr ref)	Response	Council Response
		<p>delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>There is no green belt within this area (or within the District) there will be open space maintained along the northern/north eastern part of the site.</p> <p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's</p>

Respondent (with lpr ref)	Response	Council Response
		Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.
Christopher Tocher (lpr370)	<p>The changes to both Thatcham and surrounding villages which would result from the proposed strategic site allocation would negatively affect the well-being and quality of life of existing residents so significantly, I am shocked that it has been allowed to be published for public comment and review. The bias of expansion development to the north and East of Thatcham, even spread over the time period stated, would totally overwhelm the facilities relied on by the existing community, and the proposed addition of a few specific food shops, schools and playing fields would be completely inadequate for maintaining current amenities for a town of Thatcham's size, let alone improve access and assist in Thatcham becoming a thriving market town. The reality is that Thatcham is a significant commuter town, simply observing the train station platform on any weekday morning from 6am till 9am will evidence this. The parking available at the Thatcham station is inadequate now, and there is no suitable proposal for how an additional 2500 houses worth of cars and commuters would be able to access the station realistically without degrading the access or quality of the current facility for existing residents. The current road infrastructure is already not fit for the size of Thatcham, let alone adding 2500 homes without drastic improvements. The traffic queues surrounding the train Station (in every direction) due to the level crossing when trying to access South Newbury, the A34 southbound, or the M3 via Basingstoke has been a joke for decades, and gets worse every year. The time it takes to drive through the town on the A4 is shocking, putting pressure on surrounding B roads and causing minor village roads and Thatcham estates to become rat runs during morning and evening traffic spikes. Further cars which will be inevitable from such a significant development as the one proposed, and in such a targeted area, would clearly exacerbate the issue, and the few suggestions on how the strategic site allocation would address this feel at best token, and at worst, negligent.</p> <p>Change proposed:</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. David Griffiths-Eyton (lpr368)	<p>I object because I am very concerned about the impact that the development will have on traffic on local roads. The proposal states that there will be "travel improvements...appropriate vehicular accesses...sustainable transport through routes" but what does that really mean and when will it be delivered? That part of the A4 is already notoriously busy at peak times. Harts Hill Road is steep, winding and in need of repair. Cox's Lane is single lane and completely unsuited to any increase in traffic. The inevitable increase in waiting time to access/leave Floral Way and other routes will lead to more traffic using the roads to the north of the development to avoid the gridlock. Broad Lane / Burdens heath in Upper Bucklebury and other</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without</p>

Respondent (with lpr ref)	Response	Council Response
	<p>parts of the AONB will probably bear the brunt of this, making them more dangerous. There are already sections without pavement that are used by children walking to the village primary school. In addition a development of this size will require considerable increase in the availability of local amenities, particularly schools and GP surgeries. The proposal mentions plans for primary schools and one secondary but when would the secondary start accepting pupils? Kennet School is already stretched.</p> <p>Change proposed: I understand the need for housing and the fact that the AONB, flood plains and AWE place limits on WBC's options. However to build a single development of this size in one place will cause more problems than it solves and make life a misery for the current occupants of the area for a generation. Therefore I believe the development should be significantly reduced in size, for example to only one of the three proposed sections. When deciding which of the three to take forward, much more thought should be given to the level of traffic and how to mitigate its impact on the surrounding roads.</p>	<p>mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. Joe Kelly (lpr383)	<p>1. I doubt the validity of the arguments used to support the scale of proposed housing increases in West Berkshire. And my doubt is increased by the inevitable uncertainties, regarding future growth in all aspects, arising from both Brexit and the COVID-19 crisis. The long-term impact of these two major events cannot yet be properly forecast and I believe that a responsible approach to long-term planning would be to pause now and allow some passage of time (perhaps two or three years may be necessary) before making any large-scale infrastructure decisions. It would be most irresponsible for West Berkshire Council to rush ahead in this. 2. I am particularly appalled at the proposal to blight the north-east side of Thatcham and the southern border of the Bucklebury AONB with an enormous development of 2,500 houses, schools etc. This most surely makes a mockery of WBC's claimed intention to "continue to conserve and enhance the North Wessex Downs AONB" and suggests outright cynicism in its declaration that "the rural environment...adds significantly to the quality of life enjoyed by urban residents of the District and is a considerable asset for</p>	<p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the area." Furthermore, it is criminally absurd to suggest that the roads in the vicinity of this proposed development could possibly cope with the inevitable huge increase in traffic. Even in lockdown, traffic volumes through local villages remain at a marginally unacceptable level for residents, cyclists and pedestrians. Any increase in vehicle use will increase both the level of accidents and the level of road surface wear, the latter already an issue that WBC seems unable to address adequately, due presumably to lack of funds.</p> <p>Change proposed:</p> <p>1. Await the outcome of medium-to-long-term analysis of likely future growth (in population, travel requirements, business activity, education demands) post-Brexit and post -COVID before making any plans for major housing developments in West Berkshire. This would allow time also to obtain a more intelligent view than is currently prevalent, regarding the scale of road-use reduction from increased home-working and other social factors, although it needs to be borne in mind that large-scale housing developments inevitably reduce the average age of residents in an area such as this, thereby increasing proportionately the numbers going out to school and work each day. 2. Do NOT build upon the land to the north/east/west of Thatcham's Floral Way. That road forms a very recognisable urban boundary, beyond which lies the rural beauty that is so inherent a part of West Berkshire's character and a major reason for many people living here.</p>	<p>whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 		<p>ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>
Steve Davies (lpr448)	<p>I cannot find any reference to the level-crossing issue. This currently causes a lot of traffic queues at peak times and is an issue for anybody who works or shops south of Thatcham, e.g. in Basingstoke or Kingsclere. When I worked in Basingstoke it was usually necessary to divert down the A4 to Midgham/Woolhampton and then across through Tadley or Silchester. These new homes can only exacerbate the Thatcham traffic problems. Are there plans to remove the level crossing? There is also development to the south of Thatcham in Crookham which will add to the frequent traffic queues on the south side of the level crossing. There is also very limited parking around the station.</p> <p>Change proposed: Replacement of the level crossing with a bridge to the east of the station. Isolate the station and Royal Mail / industrial units by removing the current roundabout. Road would bend round to the east with a junction providing access to the station/pub/Royal Mail. Add a new roundabout providing access to the new bridge / industrial units.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. Respondent (with lpr ref)	Response	Council Response
		packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.
Lauren MacKinnon (lpr472)	<p>WBC has launched the consultation just before Xmas most people I know are unaware of the consultation. It's really important that everybody in Thatcham understands its impact to have their say. I feel the consultation has not been well publicised and has been done at a time when people are busy with Christmas and Pandemic concerns. Thatcham Town Council had no visibility of the Local Plan before its publication. For years, Thatcham has been under-provisioned for basic services. This development will bring in new developer contributions' to support the people on the new estate, but those contributions will do nothing for the rest of Thatcham.</p> <p>SEWAGE/WATER Thames Water are already struggling to cope with the current population in Thatcham. Despite the recent flood alleviation works, the ground for the proposed development is currently saturated, the A4 outside the Crematorium is frequently flooded, as are other patches along this stretch of the road, all the way to Theale. The new houses currently being built in Woolhampton had water running through the buildings during construction and the road was covered in sludge. Building more will increase the road run off and flooding risks in Thatcham. The fields and streams are already boggy/over flowing Thatcham also has a history of flooding more homes will add to this risk.</p> <p>PUBLIC AMENITIES Thatcham does not have enough doctors or other amenities for the current community, it takes several weeks to get a doctor's appointments; pharmacies always have long queues as do dentists. More homes/ people will make a broken system worse. Our existing public rights of way will be lost in the new development - we do not need public green spaces for all to use - we have the countryside. The countryside has been the main thing that has got me through lockdown, without this my mental health would have suffered greatly. The countryside is one of Thatcham's great resources, it is a meeting place for the community. Where will the children sledge, the runners, walkers and dog walkers go? Large areas of open country side make Thatcham, Thatcham. At present our library, toilets,</p>	<p>The consultation was run in accordance with the council's Statement of Community Involvement (SCI). A public consultation such as this would usually last 6 weeks but because it did go over Christmas, it ran in total for an 8 week period between 11 December 2020 and 5 February 2021.</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>youth services and leisure centre are desperately underfunded, out of date and barely accessible.</p> <p>ESSENTIAL SERVICES We have no A&amp;E department at our local hospital, no maternity unit and waiting times for routine doctors' appointments is in some cases are 12 weeks, pre Covid. What impact will there be on blue-light services that use the A4 to access Reading and Basingstoke A&amp;E hospitals? The report states a need for two primary schools, but there is no mention of a secondary school, yet 20-25% of Thatcham's children currently travel to Newbury as there aren't enough spaces. Schools struggle to recruit teachers. Therefore the development in Thatcham is ill thought out.</p> <p>ENVIRONMENT Thatcham already suffers with light pollution, The effect on rural communities are such that are Bucklebury, Woolhampton and Cold Ash boundaries will be non-existent. The countryside is the natural boundary between these locations. The enormous detrimental impact to the natural environment surrounding Thatcham and its residents. Access to wild green space is needed, the beauty of our countryside needs to be preserved. This is of great concern and is a target of the council, how can the council meet its environmental strategy with the increase of people/ cars? Where are the tree preservation orders? There are families of deer and swifts/ starlings what provision has been made for this? Please advise where can the environmental impact study be viewed? Will existing rights-of-way in Thatcham be protected in a consistent way with other sites identified? The proposal fails to make any specific requirement for the development to be net zero carbon, which is a commitment of both West Berkshire Council and Thatcham Town Council by 2030. The A4 is an air quality management area and in 2016 the annual mean NO2 was exceeded at two sites. How can you be confident that the increase in traffic from 2,500 new houses has no adverse effect on air quality in an Air Quality Management Area? How are West Berkshire policies on Climate Change, Health &amp; Wellbeing and Water Quality going to be met by such a large scale unsustainable development. West Berkshire Council unanimously declared a Climate Emergency on 2nd July 2019. This strategy has a primary target of achieving carbon neutrality by 2030. This will not be the case with the large scale development. How with this be achieved with the influx of cars the new build with bring? 'Our environmental assets will have been protected for</p>	<p>In regards to light pollution, policy DM4: Environmental nuisance and pollution has been strengthened to ensure that all reasonable steps are taken through design, siting and technological solutions to ensure the abatement of obtrusive light to avoid sky glow, glare and light spillage, intrusion and any adverse impact to wildlife. Applicants should adhere to the guidance on lighting provided in the most up to date Institute of Lighting Professionals (ILP) guidance notes, alongside other relevant local documents including the North Wessex Downs AONB 'A Guide to Good External Lighting' (2021).</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR also requires the submission of a lighting strategy.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p>

Respondent (with lpr ref)	Response	Council Response
	<p>future generations.' How with this be the case with the housing plans? The strategy states the council will maintain a high quality of life for residents and the 2036 Vision, commits to continuing to support the achievement of healthy communities and positive life outcomes for every single local resident. This will not be the case for myself and other residents due to the impact on air quality and mental wellbeing the lack of countryside will offer. As the environmental strategy states the links between an active lifestyle, good air quality, access to green and blue space and health are clear, how would such a development promote and continue to deliver these benefits? TRANSPORT The environmental strategy states the aim of reducing vehicle emissions to improve local air quality. Traffic is already congested at the Floral Way and Siege Cross Roundabouts right down to the train station. The area is further congested with Francis Baily school run traffic. HGVs travel in these areas every day, due to the distribution centres in Pipers Way the addition of more housing will make this worse. This will affect the health of residents and the environment. Pot holes are already an issue. There is no provision for additional commuters at the station, bus routes are already poor and the wait at the crossing is long causing 1 km queues. These will all increase and have a detrimental effect on the environment and residents of Thatcham if the housing is developed. The transport links are full to capacity.</p> <p>ECONOMY Thatcham has few high quality jobs, most residents are self-employed or commute. In recent years three major banks have pulled out of our High Street, and pubs are unsustainable. The Plough has closed, and The Mill House changes hands regularly this shows the lack of amenities for residents, the infrastructure is poor and cannot handle more housing. This development does nothing more than create a dormitory town which does nothing to integrate with the existing town. In previous developments in Hermitage, it has been stated that they did not want to end up like Thatcham. With village amenities but with over housing. Will the plans take into account the current Pandemic? The minimum of housing should be built in the other areas mentioned below not the maximum.</p> <p>Change proposed:</p>	<p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
	<p>Thatcham Vision found residents in favour of Brown Field development. I believe the development of brown field sites should be developed rather than new housing, as well as using empty housing stock in Newbury, Thatcham and other areas, for example more houses could be developed in Aldermaston, or north west Newbury. Burghfield/ Burghfield Common, Padworth, Greenham and Mortimer Common and Calcot areas especially have empty homes and brown field sites. The London Road Industrial Estate can take more than 500 new homes and still provide increased employment. There are other sites in need of redevelopment in Newbury where the same should be encouraged. Newbury is described as being the central hub for shopping therefore, the housing should be in Newbury.</p>	<ul style="list-style-type: none"> <li>Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go</p>

Respondent (with lpr ref)	Response	Council Response
		<p>ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p>

Respondent (with lpr ref)	Response	Council Response
		Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.
Fiona Campbell (lpr490)	<p>I do not support the proposals to build 2500 houses on land between north Thatcham and Upper Bucklebury (the Policy SP 17 "North East Thatcham Strategic Site Allocation") due to reasons given already in response to this 'event' including: the unexplored 30% allocation reduction in suitable sites for building in West Berkshire and the appalling prospect of further damage to the AONB NE of Thatcham, Bucklebury Common, the River Pang and the rural character of the area (which your plan WILL change). Bucklebury Common did not fare well during lockdown with increased people traffic and that could be taken as a trial run for increased population density. It seems likely that, despite the pandemic and current situation, employment rates are high in West Berkshire partially due to its rural character - a "considerable asset" as you say. Additionally your plan does not seem to give much mention to the increased traffic, potential flood run-off through your new build and the fact that previous 'Visions' were based on a boundary of Floral Way that this 'new Vision' (how medieval) discards. The River Pang is a chalk stream and as such is unbelievably, globally, rare and important. This LPR threatens it again.</p> <p>Change proposed: To reiterate previous comments and add my own: I hope that West Berkshire Council will: Seek a reduction from Government on the target number of homes to be built as a result of the enlargement of the DEPZs. Change your plans so that there are no new large development adjacent or almost adjacent to this or any AONB. Prioritise the entire River Pang as a conservation corridor and give it protection within your 'visions'. Describe and publish exactly what you mean by 'rural character' in 2037 (as compared with today and also 1997 - which is the year of your referenced World Commission Environment report - Our Common Future.). Link this AONB</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p>
Christina Valentine (lpr512)	<p>The proposed project of 2500 new homes is simply too large, this new plan (which is notably a much larger proposal than the previously rejected Siege cross development) will rapidly change the identity of Thatcham. Sacrificing farming land and green fields in this vast scale is short sighted and not the way forward. The land is a natural wildlife habitat to species such as greater crested newts, sparrow hawks, owls to name a few. We, together with many of the current local residents have chosen to live here to enjoy the green space surrounding us. A focus on redevelopment of brownfield sites throughout the county must first be exhausted before accepting the redevelopment of green sites and even then these should be sensitively planned to blend in rather than creating an entirely new community alongside the existing under resourced town centre.</p> <p>Change proposed: Focus on smaller developments, brown field sites as a priority. We say NO to a large scale development dramatically changing our town, sacrificing our green space, farming &amp; wildlife for future generations.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that ‘in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy’ (paragraph 67 of the Core Strategy Inspector’s Report). As additional housing is required, and given Thatcham’s status as an ‘Urban Area’ in the development plan is it considered appropriate to consider Thatcham for housing.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council’s website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology</p>

Respondent (with lpr ref)	Response	Council Response
		<p>strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>
Anthony Fenn (lpr534)	<p>I object to this proposal on the following grounds: It is outside the settlement boundary established and adopted by WBC in 2017. Thatcham has multiplied five times during my lifetime and according to WBC's own study by David Lock Associates, Thatcham compares poorly with similar towns suffering from a lack of public and commercial services. Consequently WBC recognised in its 2017 Core Plan that Thatcham's infrastructure has not kept pace with its housing growth and the settlement boundary was established to protect the character of the settlement with the presumption against development outside this area and to prevent unrestricted growth into the countryside. The Core Plan concluded that due to Thatcham's rapid expansion it required a period of consolidation and there would be no significant growth. In view of WBC's own arguments I cannot support this</p>	<p>As part of the preparation of the LPR the council has undertaken a Settlement Boundary Review (SBR).The settlement boundary criteria make clear that boundaries will include sites allocated through the Local Plan process. North East Thatcham is proposed for allocation under policy SP17. Should the site, or any part of it, be removed from the LPR the boundary for Thatcham would be adjusted to exclude it. It is acknowledged that the settlement boundary is currently drawn around the whole of the proposed allocated site at North East Thatcham whilst Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>volte-face that will destroy the character of Thatcham and put an unbearable strain on the local and surrounding infrastructure.</p> <p>Change proposed: Re-think the proposal and allocate new housing in brownfield sites throughout West Berkshire.</p>	<p>AONB.’ The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. At this stage it is therefore not possible to draw the settlement boundary any tighter. As the LPR progress and more detailed work is done on the sensitivity and capacity of different parts of the site to accommodate development the boundary will be amended accordingly.</p> <p>Thatcham is an ‘Urban Area’ as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector’s report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. Charles Cairns (lpr491)	<p>This plan represents a considerable increase in the population of Thatcham and the facilities of surrounding villages. The pressure on infrastructure, which is already under strain, is considerable. Traffic: Traffic from the development accessing the A4 will put pressure on the existing link road, Floral Way, with the potential to create bottlenecks at busy roundabouts with a concomitant tail back on the link road itself. This situation will result in motorists seeking alternative routes which in turn will increase the load on roads such as Harts Hill which is a narrow road with blind corners which already carries too much traffic. The impact on the roads through Upper Bucklebury, Cold Ash (The Ridge), and Burdens Heath will be considerable. There is already considerable pressure on The Ridge at the times for School arrival and collection; this extra traffic will increase the potential for accidents. AONB: Use of the Common is already impacting on the wildlife</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic</p>

Respondent (with lpr ref)	Response	Council Response
	<p>and the flora. Increased use will result from the additional population adjacent to it. To alleviate this stress on the natural environment it is necessary for recreational facilities to be provided within the "country park" belt. Infrastructure: Should this development proceed, the provision of the additional schools, both Primary and Secondary, must be given priority and take place in the initial phase of the construction. If the schools are not built within the first two years of the development then the increase in pupil numbers will have to be borne by the already overstretched schools of Thatcham. The inclusion of the infrastructure in the outline plan are fine words; but unless translated into action in a timely manner, no more than words. The credibility the West Berkshire Council and of future projects will be destroyed if promises are not kept.</p>	<p>by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be</p>

The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Francis Baker (lpr944)	<p>I would like to OBJECT to the NE Thatcham Development of 2500 homes you are proposing as part of the Local Plan Review 2020 -2037 Emerging Draft December 2020 document By virtue of its scale, proximity and high visibility from several approaches to the AONB and the wider landscape, the proposed extension will have a significant harmful effect upon the setting, sense of remoteness, tranquillity and dark night skies of the North Wessex Downs AONB, contrary to Policy SP2 of the WBLPR and Paragraph 172 of the NPPF. The allocation is located on land forming part of the LCA WH4: Cold Ash Woodland and Heathland Mosaic Landscape Character Area as defined by the West Berkshire Landscape Character Assessment and includes land within the designated AONB. Accordingly, development of the type and scale proposed will result in the unacceptable loss of land which is of high landscape value in its own right, contrary to Policy SP8 of the WBLPR and Paragraph 170 of the NPPF. Paragraphs 1.26 and 2.24 of the Thatcham Growth Study (Stage 3) states that an objective of the Study is to avoid coalescence of settlements. However, the proposed development will significantly reduce the physical and perceived separation between Thatcham and Upper Bucklebury and an unacceptable loss of separate identity, contrary to the objectives of the Study, the AONB Management Plan, the West Berkshire Landscape Character Assessment, WBLPR Policies SP2 and SP8 and Paragraph 172 of the NPPF. The requirement for a network of green infrastructure linking Thatcham to the plateau and the AONB will result in an unacceptable increase in urban pressures on the environmental, economic and social fabric of the AONB, its communities and rural way of life, contrary to Paragraphs 91 and 172 of the NPPF. The proposed development will have an unacceptable impact on extensive areas of ancient woodland which adjoin the allocated site, contrary to Policy SP11,</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Dc4 and DC14 and Paragraphs 170 and 175 of the NPPF. The strategic site allocations at Sandford and North East Thatcham are expected to deliver approx. 2,250 dwellings by 2037, which equates to nearly 50% of the total supply of dwellings to be delivered on all allocated sites over the plan period (4,670 dwellings). In light of the very real concerns about lead-in times and the deliverability of both sites, I believe there is an undue reliance on them. This has considerable potential to undermine the Council's ability to meet the housing needs of the area and maintain a 5 year housing supply over the plan period. The two sites also represent a significant component of the urban focus of the Spatial Strategy and are major contributors to the clear imbalance between urban and rural development, which is not justified by evidence and will have unacceptable consequences for the AONB, particularly with regard to meeting local housing need and maintaining vibrant and balanced communities.</p>	
Councillor Tony Vickers (lpr880)	<p>There is no evidence that the site can be delivered in a way that could be remotely called sustainable. The fact that Thatcham's infrastructure particularly transport - has not kept up with housing development over recent decades isn't something that an enlargement of the town of this scale can mitigate. This new development cannot be expected to fund the investment needed to make up for pre-existing deficiencies. We completely support the Thatcham Town Council response, which is extremely thorough. This development will not only result in considerable harm to the amenity of Thatcham residents; it will have a major impact on surrounding villages, because traffic generated by the development will use minor roads through Cold Ash, Brimpton, Bucklebury and Aldermaston to reach Basingstoke and the A34 / M4 main highways at peak times. The A4 in both directions is already congested and the traffic modelling done so far has been totally inadequate to show this. Yet the policy and its supporting text make almost no reference to traffic or highways infrastructure, apart from the meaningless phrase sustainable transport through routes. With almost no detail being presented, this proposal is evidently far more sketchy even than Sandford Park was at the equivalent stage in the last Plan preparation. If Thatcham has to take more housing, this is not where it should go. Other promoted sites may need to be looked at again but in all cases the traffic implications must be foremost. We realise that the late cancellation of Grazeley from the</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential</p>

	plans for both West Berkshire and Wokingham, which is linked to the extension of the AWE DEPZs, has put Thatcham NE in the frame. However we believe it cannot be the right solution. We wish the Council to prioritise the search for an alternative.	<p>delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Sites at North East Thatcham and Grazeley were promoted simultaneously for development as part of the call for sites. The Council's evidence indicated that both sites were potentially suitable for development subject to further work being done and masterplanning of <u>both</u> sites was undertaken. In producing the emerging draft version of the LPR, the Council took a cautious approach to development at Grazeley, assuming it would take place for the most part beyond the plan period. Development at North East Thatcham was assumed to come forward much sooner, with at least half in the plan period to 2037. Changes to the AWE Burghfield Detailed Emergency Planning Zone (DEPZ), resulted in the Council withdrawing support for development at Grazeley. This had no effect on proposed development at North East Thatcham which continues to be the Council's preferred site for new strategic development in the Local Plan Review.</p>
Patrick Bowring (lpr989)	Dear Sirs, I am all for much needed housing development, but this one is just too large and ill-thought out. There is simply not the infrastructure to	Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR),

Respondent (with lpr ref)	Response	Council Response
	<p>support it, whether schools, doctors, hospitals, roads, town centre and station parking, pubs and sport and leisure facilities. This development will increase the present 28,000 population of Thatcham by 25-30% (8-10,000 people), whilst bringing approximately 5,000 more cars on to the A4, Thatcham's congested roads and country roads, particularly at peak times, causing yet more traffic. Significantly, the A4 cycle lanes (cycling mentioned profusely in the draft) already looks to be a dismal failure. WBC should provide as a minimum the basic infrastructure first and only then put forward such a development proposal - not the cart before the horse! I have read the Q&amp;A section and was not re-assured by the answers given, particularly with regard to the Thatcham level crossing. If WBC does not prioritising the building of a bridge then the development should not go ahead. As it exists now, long queues encourage traffic delays and in consequence rat runs through narrow country lanes and villages, which cannot cope with more traffic. Then there is the West Berkshire Crematorium. The crematorium was built in 2006 to provide 'a quiet and rural setting' in the countryside, not 15 years later to be engulfed in the middle of a housing development. People's entrusted ashes have been interred/scattered within this peaceful 'rural' crematorium grounds and many living might consider it as a major betrayal or even sacrilege to build in any close proximity. The full planning permission on which the crematorium was granted might provide some insight? Besides this, no mention of the health risk of the crematorium is made. According to some statistics one cremation can emit as much carbon into the air (besides other serious toxins) as 3,500 passing cars! Does West Berkshire Crematorium use deNOx technology and what are its carbon emissions? Would any informed family buy a home and bring up their children in close proximity or down wind of a crematorium? I think not. No information is given in the draft. Nevertheless, I would support some smaller development subject to acceptable existing infrastructure in the Dunston Park area and down to siege Cross Farm, but no further along the A4 corridor. If such a development went ahead it would also totally destroy the present spectacular rural views from Greenham Common across the Kennet Valley.</p>	<p>which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council’s policy on pollution.</p>
Philip Teal (lpr354)	Surface Water Runoff	In relation to potential impact on surface water, all new development must include sustainable drainage measures,

Respondent (with lpr ref)	Response	Council Response
	<p>The proposed 170 hectare site is currently farmland sloping towards Floral Way and the A4 and as such this land during periods of rainfall absorbs much of this water helping to prevent the overloading of existing storm drainage systems. The Thatcham Flood Alleviation Schemes recently completed lie to the South and West of this site and therefore unlikely to fall within the catchment area of the majority of the North East Strategic Site. However, the storm waters generated by this scheme, which is far greater than other schemes already rejected for this area, from building roofs, road and hardstanding gully's etc. will need to be discharged into the existing storm sewer system. With the effects of global warming, the rainfall in the Thatcham area has been recorded as significantly increased over the past two years and this can only increase further in coming years and yet when the existing drainage systems were constructed along Floral Way some 25years ago together with connections to existing storm water systems serving other parts of Thatcham the current change in climate would not have been considered. The addition of this quantity of additional rainwater from this proposed development can only serve to surcharge the existing system to such an extent so as to significantly reduce the benefits of the Flood Alleviation Scheme. The surface water runoff from any development on this land must therefore be contained and substantial sustainable drainage schemes (SUDS) including rainwater harvesting must be incorporated as a prerequisite of any approval. Foul Water This development will undoubtedly put significant pressure on the existing foul drainage system. 2500 homes will house upwards of 7500 persons. The average foul discharge per person per day is about 150 litres which could represent a minimum 450 litres per household per day. During the peak times, especially in the morning it is possible that 25% of this discharge could occur within a 2 hour period, thereby loading the existing foul drainage system with an extra 140 cm (min) of sewage per hour from new housing stock only. Concerns must be raised as to whether the existing foul drainage will have the capacity to accept this additional future load due to issues that have already been experience with the current sewage system on the A4. Increased Traffic on the surrounding road network is already heavy especially on Floral Way during peak periods and Harts Hill is regularly used as a rat run to avoid the congestion which regularly occurs on the A4 thereby significantly increasing</p>	<p>and development must be avoided on areas that are at risk of surface water flooding. Development on the site will be expected to deliver surface water management approaches that could deliver a net gain for Thatcham town. Drainage and flood attenuation works are included in the IDP.</p> <p>In regards to waste water capacity, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However,</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the vehicular movements through the villages of Upper Bucklebury and Southend Bradfield. At peak times there are already long traffic queues at the Harts Hill Road/Floral Way and Floral Way/A4 roundabouts and the proposed development will further increase traffic through Thatcham, along the A4 to Reading and through local villages to unacceptable levels. It is understood that a road access to this development is proposed onto Harts Hill Road by way of a mini roundabout which will inevitably encourage additional vehicles to use the rural routes as opposed to the main trunk roads. Every new development results in a large number of vehicle movements and in particular where green field sites are developed, substantial quantities of spoil needs to be removed. Irrespective of how much or how little of this proposed site is developed it is essential that all spoil excavated remains on site and not taken out onto public roads. During the construction of the Flood Alleviation Scheme there were significant lorry movements on Harts Hill serving the gravel quarry which made use of this road hazardous to regular road users. Not only had these traffic movements caused the road surface to deteriorate but I personally witnessed several near misses between tipper lorries and private motor vehicles. This was particularly prevalent on the sharp bends due to the inevitability of the large vehicles having to cross the centre line of the road in order to negotiate the tight turns. These tipper lorries also dragged mud out from the quarry onto Harts Hill Road making conditions even more hazardous and it is essential that any future use of this quarry MUST be severely restricted. Construction sites demand large vehicle movements throughout the construction period and therefore Thatcham will be disrupted by the proposed works for most of the 15years over which this development is planned and by the very nature of the works mud and slurry will be brought out onto Floral Way unless it is mitigated by applying strict conditions to ensure all associated road works are complete before housing is commenced and that manned raised wheel washes are incorporated through which all vehicles must pass before encroaching onto the public highway. Construction vehicles should be prohibited from using Harts Hill Road. With the ever increasing traffic movements on Harts Hill Road, as a result of this proposed development, local traffic will inevitably try to find alternative routes which can only lead to increase traffic flows through Cold Ash and along The Ridge to Burdens</p>	<p>a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Heath, a road along which is unsuitable for a large increase in traffic flows and will cause additional safety fears for pupils attending St Finians Primary School. Healthcare The discussion document refers to additional primary schools and shopping facilities to be provided within the scheme, however there is no mention of healthcare. The nearest doctor's surgery located at the Thatcham Medical Practice on the Bath Road is already oversubscribed and has recently taken steps to relieve pressure by moving some patients to the Chapel Row and Burdwood Surgeries. Despite this and before Covid, it remained difficult to get routine appointments within 3 weeks and with additional patients coming within their catchment area this surgery will find it even more difficult to accommodate them. It is a matter of record that the NHS has an ever increasing shortage of GP's and without ensuring that additional medical facilities are provided at an early stage to serve any further Thatcham development then it would be wholly irresponsible for the Council to allow such development to proceed. There are also no NHS dentists available in the Newbury area as all books are full. These proposals will increase the Thatcham population by about 30% from its 2019 level so it therefore follows that an ever increasing Thatcham population will completely overwhelm the existing local healthcare providers with new and existing residents being unable to obtain the necessary healthcare they need. Statutory Services Whilst it is the statutory bodies responsibility to ensure that developments are provided with the necessary infrastructure, for many years the Village of Upper Bucklebury suffered from an intermittent water supply either by reduced pressure or no pressure at all but in recent months Thames Water completed the new pumping station and main to serve the village, connecting onto the existing service at the Burdens Heath crossroads. This development plan proposes housing to be constructed up the hill towards Upper Bucklebury and therefore it follows that this new main will also be required to serve at least part of the development. Concern must be raised that this will again cause supply issues to Upper Bucklebury and the surrounding area. Whilst acknowledging that there is a demand for housing in this area I cannot accept that a development of this magnitude can be anything other than detrimental to the market town of Thatcham and given my comments above I urge the Council to reconsider these proposals.</p>	<p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p>

Respondent (with lpr ref)	Response	Council Response
Maud Elliker (lpr28)	<p>I've been reading with some interest the proposed mass expansion of Thatcham by 25%. As like every other region in the UK, there is growing pressure to increase housing to accommodate an over populated country. I totally understand the need for more housing, but I think this expansion is a step far too large for the area. Firstly, increasing primary schools and another secondary school is needed, but a medical practice that can cope with the extra requirements is a must. Has anyone tried to get an appointment in Thatcham recently? Secondly, yes flood defences have been built, but that mass of concrete will cause extreme environmental damage which will increase flooding risks. Thirdly, increased housing to that extent will increase pollution. This is not going in the carbon neutral direction. By reducing incredibly valuable green spaces, (nature's lungs), will increase pollution and have a diverse effect on the community. Fourthly, green belt MUST be protected. This is our heritage and what we can pass onto future generations. By reducing it by this amount will devastate wildlife, which is being eliminated at an alarming rate by humans. But if this proposal is pushed through, more by greed and profit, rather than the impact on the entire community, surely it makes far more sense to just build a new Kennet Secondary School and sports centre, and use the land formerly the Kennet School as houses. But priority for any planning committee must be to look at all brown field sites as the Government has stated that greenfield areas should not be used. I do hope all responses will be recorded for the future impact on our community.</p>	<p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These</p>

Respondent (with lpr ref)	Response	Council Response
		<p>policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>'Green Belt' is a planning policy tool which aims to restrict urban sprawl. It is for local authorities to define and maintain Green Belt land in their local areas. There is no designated Green Belt land in West Berkshire.</p>
Helen Hedges (lpr37)	Representation submitted 6 January 2021 I wish to lodge an official objection to the horrendous plan to build 2500 homes in Thatcham making it	Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR),

Respondent (with lpr ref)	Response	Council Response
	<p>a flood risk, pollution risk, road risk and overall disaster to the countryside and overstretched infrastructure. Build at Theale by the Pangbourne/Theale roundabout in the wasteland there where the infrastructure will cater for this amount of people/cars and better access yet still in West Berkshire with minimal objection. Please confirm by return this official complaint is lodged opposing this ridiculous underhand proposal. Further representation submitted 29 January 2021 Please accept this as an objection to the underhand plan to put thousands if houses in beautiful rural land around Thatcham. I would strongly urge you to move this requirement to CHIEVELEY where there is plenty of land and the village needs an injection of more houses, facilities and infrastructure and perfect for the road links of the M4 and A34. I urge you to approve Chieveley as your housing development plan.</p> <p>Change proposed: Build at Theale by the Pangbourne/Theale roundabout in the wasteland there where the infrastructure will cater for this amount of people/cars and better access yet still in West Berkshire with minimal objection. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>
Name Supplied (lpr1267)	<p>Having been a fortunate resident 40+ years, the volume of houses being built in recent years, e.g. Kennet Heath 900 homes, has not been sustainable. The infrastructure in local schools, healthcare and facilities has not kept up with demand, as detailed in the plan at 6.36 However, in recent decades, the provision of social infrastructure has not kept pace with housing growth. Whilst I fully acknowledge the requirement for additional homes in West Berkshire, (especially affordable) Thatcham is, as detailed in the plan, viewed as a large village and does not have the infrastructure in place for even the current population, far from it! Indeed, the plan details at 6.19 The TSGS (Thatcham Strategic Growth) shows that Thatcham compares poorly to other similar centres in terms of overall service provision, including public services and commercial services. The town's self-image is of a large village, rather than as a thriving market town. Developments,</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy</p>

Respondent (with lpr ref)	Response	Council Response
	<p>including this one, promise of new additional schools never come to fruition Dunstan Park as well as on Kennet Heath to name examples. The plan details proposal for an additional secondary school, with Kennet School already in the East of Thatcham that is not where the School will be needed as far too close proximity. Land near the Hospital, by the Garden Centre roundabout, would be more central to the need allowing students to the West of Thatcham able to walk/cycle to school rather than travel by vehicle to secondary schools in Newbury. The plan details two primary schools, could this be clarified if this is one infant and one junior school? Existing primary schools in Thatcham are severely underfunded and understand that the intake for September 2021 means that all will have spaces resulting in again being underfunded. How does the council take into consideration declining birth rate in the community? And therefore, potential, subsequent requirement for vast amount of homes? There is no mention of pre-school facilities in the plan? Further objections: Sewage/Water Thames Water are already struggling to cope with the current population in Thatcham and have been served notice to clean up their act. Despite the recent flood alleviation works, the ground for the proposed development is currently saturated, the A4 outside the Crematorium is frequently flooded, as are other patches along this stretch of the road, all the way to Theale. The new houses currently being built in Woolhampton are testimony to this, as water ran through the buildings during construction and the road was covered in sludge. The construction of the flood alleviation works ran over time and budget and were shoddily completely to the point where the very residents who were to benefit from the works were fed-up and formed a resident's group. There is little appetite for further construction works in any form across the town. Will drainage studies be done on existing housing estates as to assess the impact. Even with the flood alleviation works, there is a noticeable increase in surface water when we have just a few days of rain. This will of course be further exasperated with fields being built on and climate change. ( <a href="https://www.theguardian.com/uk-news/2020/feb/17/uk-must-prepare-for-more-intense-storms-climate-scientists-say">https://www.theguardian.com/uk-news/2020/feb/17/uk-must-prepare-for-more-intense-storms-climate-scientists-say</a> ) Public Amenities The report states Strategic development in Thatcham will bring considerable benefits to the town, not only in the provision of new housing, including affordable housing, but in the provision of new schools, community</p>	<p>allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. 	<p>facilities and recreational provision. Can you please provide detail as to the Community Facilities and recreational provision that would be provided as the report does not detail this and also how in future they would be funded, particularly with the existing facilities having such limited funds and rely on charitable donations. Our current leisure amenities at Kennet Leisure Centre are desperately underfunded, and building further amenities, in the new development offers nothing to existing residents. Our existing public right of way will be lost in the new development - we do not need public green spaces for all to use - we have the countryside.</p> <p><a href="https://www.bbc.co.uk/news/health-38520092">https://www.bbc.co.uk/news/health-38520092</a> At present our library, toilets, youth services and leisure centre are desperately underfunded and barely accessible. (<a href="https://www.newburytoday.co.uk/news/news/31897/funding-pledge-to-support-thatcham-library-for-another-year.html">https://www.newburytoday.co.uk/news/news/31897/funding-pledge-to-support-thatcham-library-for-another-year.html</a> Healthcare We have no A&amp;E department at our local hospital, no maternity unit and waiting times for routine doctors appointments is in some cases are 12 weeks, pre Covid. Environment The effect on rural communities are such that are Bucklebury, Woolhampton and Cold Ash boundaries will be non-existent. Thatcham Vision found residents in favour of Brown Field development. There is no commitment to net-zero carbon mentioned in the report. Please advise where can the environmental impact study be viewed? Also, to quote the councils Environment strategy 2020-2030 document, on page 13 states "Protect our environment for future generations as one of the key elements of the Vision for the West Berkshire Environment in 2030. Additionally, on page 15, one of the Strategic Objectives to Deliver the Environment Vision is "Maintaining and enhancing our green and blue spaces and encourage people to use it. The strategy for The Path to a Greener West Berkshire in 2030 on page 21 has a key theme on Protecting and Enhancing our Natural Environment. Our existing public right of way will be lost in the new development.</p> <p>(<a href="https://www.countryliving.com/uk/wildlife/countryside/a757/reasons-to-go-for-a-walk/">https://www.countryliving.com/uk/wildlife/countryside/a757/reasons-to-go-for-a-walk/</a>) I'm intrigued as the comment made by Hilary Cole regarding the vision that less commuters will be about following the trend that Covid-19 has brought more homeworking. There are several studies that show that the decline has been brought forward by 5 years due to the pandemic, with more flexible working. Therefore there is likely to be more brownfield sites</p>	<p>flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In regards to concerns raised in relation to the loss of a recreational resource, within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB. This will be accessible to all.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>with large offices closing and the trend to towards smaller hub offices. Thus, large office complexes such as Bayer in Newbury already vacant will remain empty. Before planning on destroying the countryside should a detailed review of current empty commercial areas be conducted to ensure all potential brownfield areas are fully considered? Transport Traffic is already congested at the Floral Way and Siege Cross Roundabouts right down to the train station. Quite frequently during peak rush hour times, cars queue up Floral Way from before the Mill House roundabout and can struggle to get out from Foxglove Way onto Floral Way. The area is further congested with Francis Baily school run traffic and the new Orcas which are an accident waiting to happen. HGV's travel in these areas all day, every day, due to the distribution centres in Pipers Way the addition of more housing will make this worse. Northfield Road, Park Lane and particularly Harts Hill Road have already become rat-runs to avoid these roundabouts and the A4. The addition of such a large number of dwellings and increase in cars c3,400 based on the average of 1.4 per household (<a href="https://www.nimblefins.co.uk/number-cars-great-britain#:~:text=How%20many%20cars%20are%20there%20per%20household%20UK%3F,per%20household%20in%20the%20UK">https://www.nimblefins.co.uk/number-cars-great-britain#:~:text=How%20many%20cars%20are%20there%20per%20household%20UK%3F,per%20household%20in%20the%20UK</a>). Would heavily add to the already congested roadways in such a small area. And with their no possibility of having a bridge over the railway this will vastly increase the queues when the barrier is down, which can frequent up to 20 mins leading to queuing traffic up to the A4. There is limited parking at the train station, and SSE staff have caused problems with residents as parking on housing estates. There is no provision for additional commuters. Economy Thatcher has limited high-quality jobs; a high proportion of residents are self-employed or commute out of the area. In recent years three major banks have pulled out of our High Street, and pubs are unsustainable. The pandemic has only exasperated the problem with even fewer local amenities.</p> <p>Change proposed: Please refer to response to Q2 in line with each comment. With the forthcoming Census next month (March 2021) would it not be more prudent to wait and review the true data from that before creating the Local Plan</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p>

Respondent (with lpr ref)	Response	Council Response
	Review? Information from the census helps the government and local authorities to plan and fund local services, such as education, doctors surgeries and roads.	
Deborah Reynolds (lpr517)	<p>Response to consultation by West Berkshire Council on Emerging Draft West Berks LPR and Thatcham Growth Study Stage 3 report by David Lock Associates From Dr Debby Reynolds CB This response addresses two major documents which have been issued for consultation at the same time. It makes seven recommendations to address weaknesses in Chapters 3, 4 and 5 of the emerging Local Plan and opposes the housing allocation in SP13, especially SP17 North East Thatcham Strategic site. The SP17 proposal is disproportionately big, poorly sited and would have too great an impact on the surrounding population, infrastructure and environment. Chapter 3 Shaping West Berkshire Vision and Objectives The chapter on Our Vision and Strategic Objectives need to be strong and future proofed. The vision statement in para 3.4 is welcome and that West Berkshire's landscape in the North Wessex Downs will remain of outstanding value and its biodiversity more abundant in settlements and the surrounding countryside. However strategic objectives on Heritage, AONB and Green infrastructure do not spell out a compelling vision for nature. Written strategic objectives on nature are sadly lacking. This means the Council's plan lacks ambition for the future and demonstrates no apparent priority is attached to the natural environment, biodiversity or nature conservation It is remarkable that the clear global concerns on biodiversity, species loss, habitat loss and climate emergency, well-rehearsed in section 5, are so condensed into inanimate, inherited and purely visual aspects of our area. The council should aim do far more to respond to peoples concern that this is not only under threat globally but also imperilled by weakness in their own plans. Recommendation 1 Add in a new standalone strategic objective on Nature for Future Generations Gives a specific means to deliver the vision of abundant biodiversity across the entire area, Holds the council to account for concerns of local people on delivery of Section 5 currently called our environment and surroundings, To be measured by conservation of existing assets and the creation of new ones. Ensure the necessary means to deliver is recognised, delivered upon and funded in appraisals put forward by</p>	<p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In terms of impact on the natural environment, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability</p>

Respondent (with lpr ref)	Response	Council Response
	<p>developers. Chapter 4 Development strategy our place based approach The spatial strategy SP1 and SP2 and supporting text are important. SP1 states: Thatcham will be a focus for regeneration, for new housing and for improved provision of services and facilities. A new urban extension to the north east of the town will provide a new residential neighbourhood with supporting facilities and green infrastructure (Policy SP17). Opportunities will be taken to maintain and enhance the identity of Thatcham separate to that of Newbury and its surrounding rural settlements. However the red-lined envelope depicted in the Thatcham growth study fails to address the necessary separation and is in direct contradiction to this strategy. The separation of Newbury and surrounding rural settlements from places identified in the development strategy (e.g. Thatcham regeneration) needs to be strengthened in every aspect of Council thinking and policy.</p> <p>Recommendation 2 The LPR must step up and improve its policy, internal and external guidance on separation. The requirement for a strategic gap, to include buffer zones, with recognition of village visions prepared by Parish Councils is essential. It must ensure that sufficient budget is allocated to meaningful strategic separation by developers in their appraisals. Pre-commencement conditions must be set to enforce this. SP2 states the proposed arrangement if an application is deemed to be major development with proximity to the AONB and aspects that further consideration will take account. However the consultation on the Local Plan Review and a simultaneous consultation of a detailed growth study, which is clearly a major development, is a seriously flawed procedure. This is confusing to local people who want to express their views, gives the clear message that the parameters in the plan are already fixed and therefore one or other consultation has a predetermined outcome. In addition the time table for two such large consultations is unfair. Recommendation 3 Complete consultation on the LPR to make the much needed improvements. This should include removal of new allocations on larger sites until after consultation on specific growth studies to ensure the council, residents, developers and other stakeholders have the fairest possible consultation. This must apply to residents impacted by any new proposed SP. Spatial strategy SP3 and 4 reflect many aspect of national policy. However there is no evidence that the policy alteration associated with exclusions around AWE Burghfield or</p>	<p>Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced. The biodiversity policy and natural environment policy within the Local Plan Review has been strengthened following consultation. Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Aldermaston have been taken into account centrally, thereby updating the national allocations. Residents can rightly expect the Council to have challenged this at the highest level, including by Judicial Review, before producing a plan B such as the Thatcham development. All the materials in the review predate the dramatic alterations associated with online shopping and the COVID-19 pandemic. Therefore it is clear that the housing allocations are flawed in several respects. Recommendation 4 provide clear evidence of Up To Date national comparable figures for developable land. This must demonstrate that reassessment centrally has been undertaken, demonstrate the impact of this and COVID-19 are all accounted for in the Local plan review. Set demanding targets for conversion of brown field commercial property to residential. Chapter 5 Our environment and surroundings responding to climate change There are several important and strategic statements to emphasise here, in particular: To improve wildlife habitat and species conservation and connectivity to allow for movement in response to climate change in accordance with policy SP11 Ecological distinctiveness design proposals will create habitats and select species that are locally characteristic, taking opportunities to design wildlife habitats into the fabric of buildings and enhance wildlife connectivity in accordance with policy SP11 A landscape does not have to have a designation to be valued locally. Outside the AONB, the River Kennet, from Newbury to Reading, lies within a distinctive broad corridor of an open lowland landscape characterised by a variety of wetland habitats including wet meadow, reed bed, and flooded gravel workings. Contribute to biodiversity net gain and seek opportunities to use green infrastructure to extend wildlife corridors, particularly in urban areas and where it contributes to nature recovery networks. However the absence of the strategic priority reduces their impact and will not ensure their delivery. Recommendation 5 In addition to the new proposed Strategic Objective the Council should deliver its ambition by adding a new Chapter - The Nature Delivery Plan - to the document. This must demonstrate the design, commitment and resources it will allocate to Nature for the future generations. This is what residents of the existing and any new houses will expect. Chapter 6 Delivering housing SP 13 lists the sites for residential and mixed use in Newbury and Thatcham for sites 1 ha or more. Here it adds in NE Thatcham as SP17 for the first time. This draft</p>	<p>updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>In terms of consultation, following the Regulation 18 consultation, responses will be considered and where necessary amendments to the plan will be made. The Plan will then go through another period of consultation known as Regulation 19 consultation prior to being submitted to the Planning Inspectorate to be examined by an Independent Examiner through what is known as an Examination in Public.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing</p>

Respondent (with lpr ref)	Response	Council Response
	<p>local plan review and associated report therefore set out a huge increase in development area and house numbers. There is no justification for such an increase in allocation, and in SP17 the proposal of 2500 houses is completely disproportionate for Thatcham and surrounding areas. In the opinion of Bucklebury Parish Council the figures are flawed and therefore withdrawal for a fundamental review and meaningful justification is essential. The impact on the local setting and breach of the Floral Way boundary, objections raised by the North Wessex AONB, are not addressed. No case has been made for ribbon development and the Colthrop village concept is a completely unacceptable joining up of Midgham and Bucklebury Parishes with Thatcham and should be removed from any future considerations. Any housing allocation must demonstrate local benefits to the natural environment. The model for infrastructure provision is dependent on realising house sales, therefore is not baked-in or inevitable. A transparent, enforceable commitment to ensure fair share of profit and investments in local assets is an essential pre-commencement commitment which should be policy for any development. The level of ambition for infrastructure provision and biodiversity gain is insufficient. No budget is allocated to achieving 10% biodiversity gain in the appraisal of viability, the design features do not demonstrate any input from conservation professionals, nationally or locally. Green and biodiverse are not equivalent. The concept, beneficiaries and impact of a new strategic country park are unclear. Any future consideration of the idea must make clear that is outside the area of allocation and protected in perpetuity. If land at Colthrop village is no longer needed for farming it should be entirely devoted to biodiversity net gain and used to establish a fully functional wildlife corridor between the Kennet valley and Bucklebury heathland. Numerous aspects of the Bucklebury vision have been ignored. It appears that the views of residents on the edge of the proposed area were either not sought or not taken into account. Recommendation 6 SP13 is unacceptable and needs alteration, particularly removal of the proposed NE Thatcham line item. All the reasons are set out above and in the Bucklebury Parish Council and Thatcham Town Council submissions. SP17 North East Thatcham Strategic site allocation SP17 sets out that The Council will be supportive of proposals which have regard, and positively respond, to the master-planning work</p>	<p>needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>contained in the Thatcham Strategy Growth Study (2020). It then lists features the NE Thatcham Strategic allocation may be expected to deliver. However the residents of Bucklebury and Thatcham do not see it that way and their responses should give the Council grave cause for concern. The main objections are listed below: Flawed housing demand analysis The analysis of housing demand predicating this draft proposal relies on out-of-date information. It fails to take account of the most major medical, social and economic catastrophe to impact our lives in the last 100 years. The Covid 19 pandemic has transformed the way people work, travel and their housing needs yet this factor is ignored in the proposals. Furthermore, taking WBC's own housing demand figures, these show a need for less than 1700 homes not the 2500 proposed. Strategic Gap A tenet of past planning in West Berks has been the maintenance of strategic gaps to separate communities. Until this proposal was tabled, the land north of Floral Way has provided the gap between Thatcham and Bucklebury. The proposal all but eliminates the separation and will visually and socially break natural community boundaries. Breach of the strategic gap has been cited by WBC to refuse planning applications in the recent past. It is incomprehensible that its loss is now proposed. Traffic A development of the scale proposed will generate considerable traffic but the analysis in the proposal underestimates the volume and impact on the Parish. It is assumed that the bulk of the new traffic will use the A4, accessed via Floral Way. However, the A4 is already overloaded at peak times and new residents will look to find alternative routes. These inevitably will be through the Parish for those looking to access the A34 and the M4. The roads through these villages are ill suited to additional traffic; they are rural, single carriageway roads mostly lacking footpaths and featuring blind bends. Speeding is a well known problem in the Parish and more cars will make a dangerous situation worse. The village roads are used by pedestrians, horses and cycles. Additional traffic makes accidents more likely and will endanger children walking to school. AONB and Bucklebury Common It is clear that the proposed development to the north-east of Thatcham involving 2500 houses would have a big influence on the local wildlife. The proposed development abuts Bucklebury Common and AONB. This development would have a lasting and negative impact on these special environs. The impacts fall into</p>	<p>Local Nature Recovery Strategies (LNRS) are a flagship measure in the Environment Act 2021. Local Nature Recovery Strategies are a new system of spatial strategies for nature they will: map the most valuable existing habitat for nature; map specific proposals for creating or improving habitat for nature and wider environment goals; and agree priorities for nature's recovery. Once the Local Nature Recovery Strategy is produced for the District it will guide the delivery of biodiversity net gain and other nature recovery measures through illustrating where the most valuable existing habitats are located and will focus on habitat creation and/or improvement where it will achieve the best outcomes. These strategies will be strongly linked to the implementation of SP11.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected</p>

Respondent (with lpr ref)	Response	Council Response
	<p>two categories; those that impact the AONB directly and those resulting from the inevitable increase in visitors. The Common is protected because of its flora, fauna and its situation. It contains remnants of ancient and fragile habitats that are home to rare and protected wildlife. Importantly the plants in and bounding the AONB will suffer and the Common will be put under pressure from additional visitors. The AONB is already witnessing habitat damage from walkers, cyclists and motorised vehicles. The visitor numbers, from the proposed development, would exacerbate damage to a struggling ecology. Bucklebury Common, one of the few remaining areas of lowland heath lies just a kilometre or so to the north-east. It is well known for some special birds in particular the nightjar, but also the woodlark, tree pipit, stonechat and woodcock. These nest on the ground are very susceptible to disturbance especially by dogs. The development would put much more pressure on the heath and make successful breeding of these species much less likely. So the council's attention should focus on this impact of the proposed scheme not highlighted in the Biodiversity and Green infrastructure. Just visible at the north east edge of the plan on page 36 is the edge of Bucklebury Common, the eastern portion of which (east of the settlement of Upper Bucklebury) is an area of lowland heath, which has been restored by conservation management. This site is already subject to considerable recreational pressure. Heathland is a priority habitat identified in the Berkshire Local Nature Partnership Biodiversity Plan, and holds breeding populations of two of the priority species in the plan, Nightjar (<i>Caprimulgus europaeus</i>) and Woodlark (<i>Lullula arborea</i>). Another species on the UK's list of Red Data birds, Woodcock (<i>Scolopax rusticola</i>) also occurs, a species which has suffered a dramatic contraction in its UK breeding range (more than 50% in the 25 years to 2010) and numbers. These are ground nesting birds, vulnerable to disturbance. The wider area forms one the Berkshire's Biodiversity Opportunity Areas (BOA), known as Bucklebury Plateau (see - <a href="http://www.tverc.org/cms/sites/tverc/files/Buckleberry%20Plateau%20Description.pdf">http://www.tverc.org/cms/sites/tverc/files/Buckleberry%20Plateau%20Description.pdf</a>) As no doubt the council is aware, lowland heath is a threatened habitat important for a number of species of wildlife. Its global distribution is limited, with the UK having about 20% of the world's remaining area. About 80% of the UK's lowland heath has been lost since 1800. The Thames Basin</p>	<p>increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Heaths of north Hampshire, west Surrey and south east Berkshire are an area of Special Protection (SPA) and now benefit from planning policies requiring the provision of suitable areas of natural greenspace (SANGS) as mitigation for any new residential development within 5 km of the heathland areas. In this case the site would introduce 2500 new households almost all within 2 km of Bucklebury Common, and we consider that mitigating the impact of the increased recreational pressure, and the opportunity to enhance biodiversity should have formed part of the scheme, consistent with current Local Plan Policy CS17, emerging policy SP11 and NPPF paragraphs 170 and 175. The restored area of Bucklebury Common referred to above is currently a relatively small fragment of heathland maintained by voluntary effort. It does though form part of a larger area within the Bucklebury Plateau BOA extending to the west of Upper Bucklebury that has potential for habitat restoration as heathland. Recommendation 7 remove SP17 from the Local plan review. Conclusion In summary, I have serious concerns about the emerging draft Local Plan which can be addressed through adoption of the seven listed recommendations. Otherwise the impact on West Berkshire, Thatcham and especially the village of Upper Bucklebury will be very damaging. With increased traffic, a steady flow of visitors the consequential damage to the local environment, the character of our area would change forever and not for the better.</p>	
David Clyde (lpr132)	<p>I wanted to express my real concern about having an additional 2,500 new homes to the east of Thatcham. There are many reasons and I'll mention a few here. 1/ The impact on the traffic on the A4. All traffic would need to head to the A4 or even worse, onto Floral Way. At peak times, the queues on Floral Way and then the A4 are horrendous. This is not good for journeys but particularly air pollution as cars hardly move. 2/ The crossing over the railway. Having a level crossing in a town the size of Thatcham makes it difficult to get south with the only other option, going around it and putting larger traffic volumes in other places like Brimpton. It seems crazy that there was a bridge built over the railway in Ufton Nervet based on the small numbers that travel there and not in Thatcham. 3/ We have one secondary school in Thatcham, which is pretty full and adding an additional 2,500 houses just puts an additional strain on it. It would end up not coping with</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to</p>

Respondent (with lpr ref)	Response	Council Response
	<p>the demand and kids would have to travel further. Again not good for the pollution and environment generally. 4/ Other facilities will be stretched, GP surgeries, dentists, etc. and they are stretched as it is. 5/ Finally I'm worried about losing further green space in West Berkshire. The green space is part of the attraction of where we live and I moved here nearly 25 years ago for the space and less traffic that was in Reading. Extra building on non brown field sites makes them become a permanent urban area and takes away the space, trees, wildlife and creates many more problems than it solves.</p>	<p>the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be</p>

Respondent (with lpr ref)	Response	Council Response
		<p>important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p>
Duncan Powell (lpr355)	<p>I am writing on behalf of my whole family to voice our concern and objection to the proposed development of 2500 home in North East Thatcham. Having attended a presentation by Mr Southgate of Bucklebury Parish Council last Friday, I sense it is a done deal already as far as the Parish Council is concerned and that the parishioners were being sold the least bad option proposed by WBC and supported by the Parish Council. We are dismayed that the Parish Council seem to display so little resistance and are not leading the crusade to stop this project. We are equally dismayed that West Berkshire Council seems happy to forge ahead with this plan with little consideration for the hugely negative impact on the local communities. The timing of this consultation will not be a coincidence. I get a sense that West Berkshire Council is trying to push this project ahead by hiding it at a time when people have been taken up with Christmas period and concerns about Lockdown and Brexit. People have consequently had insufficient time to review the plans and formulate a formal response before the fast-approaching deadline. I will not accept that this is already a done deal on the basis that there is nowhere else for the housing to go. Even if this were the case and having spoken to the CPRE (Campaign for the Protection of Rural England), it would seem that West Berkshire Council could indeed object</p>	<p>In relation to the consultation taking place during the coronavirus pandemic, the Government published guidance in May 2020 with regard to planning and COVID 19: <a href="https://www.gov.uk/guidance/coronavirus-covid-19-planning-update">https://www.gov.uk/guidance/coronavirus-covid-19-planning-update</a>. This stated that “We continue to want to see Local Plans progressing through the system as a vital means for supporting economic recovery in line with the government’s aspirations to have plans in place across the country by 2023.”</p> <p>A written ministerial statement (<a href="https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720">https://questions-statements.parliament.uk/written-statements/detail/2021-01-19/hcws720</a>) published on 19 January 2021 set out the importance of work continuing to advance on Local Plans through to adoption by the end of 2023 to help ensure that the economy can rebound strongly from the pandemic.</p> <p>Changes were made to the Town and Country Planning (Local Planning) (England) Regulations 2012, under the</p>

Respondent (with lpr ref)	Response	Council Response
	<p>strongly to the housing allocation and could negotiate a reduction in the allocated numbers if suitable locations are not available. This possibility was not mentioned at our presentation. The effects of this proposal are devastating for the town of Thatcham and I imagine there will be plenty of objections from its residents, but my arguments are principally focussed on the village of Upper Bucklebury and the adverse impact on our community. Do we need it? I understand the need for development and accept that we must build more homes, but I question the need to build as many as 2500 in Thatcham, irrespective of current targets. It seems a totally disproportionate allocation in an area where so little of the land is developable due to AONB and flood plains. The plans would have been in place well before the Covid pandemic, so would it not be sensible to review the requirements given the changing nature of our demographics and working patterns since then? If the plan was to house commuters to London, who knows how many will still want to, or be required to, work in London (or in any office) post-Covid? If the work pattern continues to favour a work-from-home arrangement, then who will be coming to live in these houses? Also, with the birth rate dropping and local primary schools not filling all classes in some year groups, will we see half empty classrooms in the proposed new school(s)? It will be more likely that the school(s) will not get built at all. If, however, these new houses were purchased by keen commuters and assuming people returned to office work in London, I would be curious to see what plans are in place at the station to accommodate the hundreds of extra cars that would need to be parked there. Not everyone will be walking to the station and the facilities there would just not be adequate. Amenities New schools, together with shops and other leisure facilities, are part of the proposed plan. However, it is not clear at what stage these facilities will appear. Unless they are built first, there is the risk they will not be built at all since anyone already living in the new houses will necessarily have already found a school solution for their children. If the provision of infrastructure such as schools is dependent on house sales then we have a potential chicken and egg situation; schools will not be built until houses are sold, but houses will not be bought until there is a school built. If there is little perceived demand and with dwindling budgets at the end of the project, the schools may well not materialise.</p> <p>Impact on Upper Bucklebury It is impossible to overestimate the negative</p>	<p>Town and Country Planning (Local Planning) (England) (Coronavirus) (Amendment) Regulations 2020, to remove the need for local authorities to make hard copy documents available for public inspection for a temporary period from 16 July 2020 until 31 December 2021.</p> <p>The consultation was run in accordance with the council's Statement of Community Involvement (SCI). A public consultation such as this is would usually last 6 weeks but because it did go over Christmas, it ran in total for an 8 week period between 11 December 2020 and 5 February 2021.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>impact this development will have on the village of Upper Bucklebury. Whichever way you look at it, with the development creeping up the hill, Upper Bucklebury will all but merge with Thatcham, separated only by a small copse at the end of Long Grove. This cannot be a good thing for the identity of our village and for the peace, tranquillity, and security of our community. The new Thatcham development and Upper Bucklebury would be linked via the footpath that currently runs from Long Grove to Colthrop. This has already seen increased footfall since the pandemic and will only increase with the new development as residents choose to walk, exercise dogs, ride bikes to the countryside to the north via Upper Bucklebury. Are the residents of Long Grove expected to continue to repair and maintain their road for the benefit of non-parishioners? The inevitable increase of visitors to our village/parish and Bucklebury Common can only have a detrimental effect on our local environment. The ancient woodlands, meadows and wildlife surely need to be protected. Bucklebury Parish Council say on their website: "Loss of habitats or habitat change as a result of inappropriate management are one of the most damaging threats facing rare species in Berkshire. These habitats should be safeguarded wherever possible and appropriate advice sought on managing them to conserve the natural diversity of life and to halt the extinction of species diversity not only in Berkshire but also in the UK. "If this development were to go ahead, these precious woodlands and rare habitats would almost certainly be under threat with a substantial increase in the visitor numbers our woodlands would be a short hop for the residents of the new development compared to anywhere else in Thatcham and the surrounding area they could walk (or drive!) to. It was interesting to hear in the presentation of the estimated 12% increase in traffic heading up Harts Hill towards Upper Bucklebury. This is already significant on such a dangerous hill, but unfortunately is probably an overly conservative estimate. It will not take long before the increased congestion on the A4 and Floral Way (already congested at peak times) leads to more Rat Run traffic through our village. As well as environmental and noise concerns, many parents will be concerned for the safety of their children in the village especially as they walk to and from school. This planned development and these two issues of increased traffic and damage to the local environment in particular go completely against the Bucklebury Vision</p>	<p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>which very clearly emphasises a commitment to maximise rural conservation and protection from pollution, protect the environment for future generations to enjoy, conserve and enhance the natural beauty of the landscape, resist any development that would create unacceptable levels of traffic, and so on. Sadly, I cannot see how this new development fits in with our parish's agreed Vision. Country Park I am bemused by the idea of a proposed Country Park and have some reflections on this. Firstly, I am not sure why we need one at all. We are adjacent to vast Areas of Outstanding Natural Beauty with magnificent vistas and miles and miles of some of the most beautiful walks you could wish for. I can only think it is to make us feel better about the development by creating a natural gap between us and them. The reality is more likely that it is a steep bit of land that would be too difficult and expensive to build on, so it is turned into a country park. It would be interesting to know what this park would look like. Steep slopes do not really lend themselves to informal recreation and I would also be curious to know if budget has been allocated to maintain it long term? All discussions around the county park and its protection seem very unclear and I think more detail and commitment are needed. I am also surprised that there seems to have very little mention of biodiversity, which is surprising with a development of this magnitude. It is my understanding that with any development of this nature, there should be a percentage of net biodiversity gain. There was no mention of this at the presentation of how this would be achieved and it's hard to understand how it could given the amount of farmland that will be given over to housing and other amenities. Conclusion In summary, I would like to register my objection to these plans in the strongest terms. The impact on the village of Upper Bucklebury will be immeasurable. With increased traffic, a steady flow of visitors seeping in and the consequential damage to the local environment, the character of our peaceful village will change forever and not for the better. I have urged our Parish Council to represent the views of all parishioners to West Berkshire Council on this issue and not just accept that this is a done deal. At the same time I am urging West Berkshire Council to reconsider the development plans for Thatcham and strongly object to the allocation as you are entitled to do. Please fight the corner of your local communities and defend the Vision that they are so keen to promote.</p>	<p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further updates, is expected to be the metric specified for mandatory biodiversity net gain.</p>

Respondent (with lpr ref)	Response	Council Response
Peter Weedon (lpr366)	<p>I wish to OBJECT to the scheme on the following grounds and quote from the Stage 3 Report Thatcham Strategic Growth Study. The development is attempting to squeeze a quart into a pint pot due and is concentrating a disproportionately high area of West Berkshire Council's housing obligations into a small percentage of its total land holdings. The entirety of the site is outside of the existing settlement boundary of Thatcham, currently closely drawn along Floral Way, the A4 and Pipers Way. (2.12) The West Berkshire Landscape Character Assessment outlines a landscape strategy for WH4 (Cold Ash Woodland and Heathland Mosaic) which will inform development proposals at NE Thatcham. Key principles are: Retain the distinction between and individual identity of settlements Conserve elements that mark a transition between settlement and countryside (2.36) The development seriously undermines the green gap between Upper Bucklebury and Thatcham and will ultimately merge the two. North Wessex Downs AONB Board has stated its objection to development on all the sites that make up NE Thatcham, through the HELAA process, due to the impact on the setting of the AONB and the breaking of the Floral Way boundary. (2.47) There is a risk of surface water flooding within the site along the natural drainage routes based on Environment Agency modelling (2.51) Development at NE Thatcham breaks out of the valley bottom that has defined Thatcham's extent (4.2) It is important to note that Thatcham has few examples of hillside development, and so extending the urban grain and pattern of the immediate surroundings is unlikely to achieve a positive result. (Design Principles 4.5) The highways strategy is to direct traffic away from rat-running through Cold Ash and Bucklebury by routing vehicle traffic southwards towards the A4. (4.21) This is unlikely to be effective in practice as evidenced by the increase in traffic through Upper Bucklebury every time there is an accident/congestion on the A4. This study proposes that capital funding for the new secondary school within North East Thatcham would be 50% funded by the developers, delivered through a Section 106 agreement on developer contributions. (5.2) I seriously question West Berkshire Council's ability to fund the balance and ongoing costs of the school. As an Upper Bucklebury resident I am also concerned with the impact of: Increased light pollution no reference in the document Substantial increase</p>	<p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council</p>

	<p>in noise pollution and detrimental impact on quality of life decades of construction work Increased air pollution increase in traffic</p> <p>Change proposed: That no development should be permitted north of Floral Way to preserve the green gap between Thatcham and Upper Bucklebury.</p>	<p>is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to potential impact on surface water, all new development must include sustainable drainage measures, and development must be avoided on areas that are at risk of surface water flooding. Development on the site will be expected to deliver surface water management approaches that could deliver a net gain for Thatcham town. Drainage and flood attenuation works are included in the IDP.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation</p>

Respondent (with lpr ref)	Response	Council Response
		<p>to individual planning proposals. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p>
Paula Saunderson (lpr965)	Strongly object on Environmental issues Increasing Flood Risk to other nearby areas Highways - lack of railway bridge Air Pollution Density Travel & Traffic Plans Loss of Green fields NIMBYISM	<p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council’s policy on pollution.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council’s housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p>

Respondent (with lpr ref)	Response	Council Response
Clive Tombs	<p>The area identified under policy SP17 appears to offer the potential to deliver large scale residential development adjoining the established urban area of Thatcham and also close to the existing employment area at Colthrop.</p> <p>Change proposed: There needs to be much more emphasis placed on delivering and maintaining physical measures and service improvements, to ensure sustainable transport means are primarily used for local travel between (a) the proposed new development at North-East Thatcham (b) the established town centre and (c) Thatcham Station. As well as wide, uninterrupted, well-signed footways and cycleways, there needs to be high-quality bus services - operating to simple routes at least 30 minute frequency, with proper supporting infrastructure e.g. waiting shelters, and properly subsidised for a minimum of 5 years in order that they can be allowed to grow patronage - providing connections between the proposed new development, town centre, Hospital and Newbury (and at least allowing interchange with the core Jet Black bus service to/from Reading, if not affording direct services to Reading), and also between the development, business area/Pipers Way and Thatcham Station at least at peak times. It is important that these provisions are made and fully-funded to provide a quality service for the long-term - otherwise there is a risk of ending up with car-dominated areas such as the existing Floral Way estates where the bus connections appear to have only been delivered in a half-hearted way for a short period after those estates were built. Full consideration also needs to be given to adequate measures to fully address the likely impacts on the highway network associated with travel further afield, especially from the development (and the wider Thatcham area) to Basingstoke/M3 as well as to A34/M4. While construction of a bridge to replace the level crossing, and upgrading of the road infrastructure from east of Thatcham via Crookham Hill to the A339 may be unpalatable to some and is reportedly extremely expensive, this may be essential to allow for the level of travel demand between Thatcham and Basingstoke/M3, without the extensive delays at the current level crossing or impacting on Newbury. Completion of the Thatcham Northern Distributor Road to a consistent standard should also be brought</p>	<p>Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p> <p>In relation to the other matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). Respondent (with lpr ref)	Response	Council Response
	into consideration, rather than relying on the NDR using a sinuous, old portion of Bowling Green Road. Further, consideration should be given to whether the A4 through Newbury has sufficient capacity to carry traffic from the proposed new development through to the A339 and on to the A34/M4, or whether additional provision is required.	
Amy Brocklesby (lpr137)	I have been hearing a lot about the application for many new homes in the Thatcham area. After moving to the area just under 2 years ago I have learnt a lot around quality of life! but since moving here I have also seen the negatives to this small village! Parking is an issue every street has many cars parked all over as none of the new builds have enough parking with them every house now a days need 2 spaces most new builds only come with 1! I still to this day cannot get a dentist I call every month on and around the Thatcham/Newbury area and none Are taking patients as they are full! Doctors are also under pressure and nothing seems to be helping them out! Roads they are always busy and you always sit in a queue I've realised no matter what time of day! Postal and waste collection services are already pushed too with the amount of residents now! I think when building this many at once we really have to think about what impact on the environment and the structure already there of that can't cope and it clearly isn't now then nothing should be built until this is sorted! We really need to start considering healthy as well-being and not just £ before making decisions around building our planet won't last for ever!	Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers
Mathew Cooke (lpr867)	I'm writing to provide feedback for the NE Thatcham Development of 2500 homes you are proposing as part of the Local Plan Review 2020 -2037 Emerging Draft December 2020 document. After careful consideration I would like to object to this development proposal for a number of reasons. Inadequate Supporting Infrastructure for Scale of Development The proposal doesn't contain details of an increase in healthcare services to support +25% housing in the Thatcham area. The proposal doesn't address the strain of increased demand on Thatcham Train Station. Taking into account the fact that parking facilities at Thatcham Train Station are already insufficient to cope with current demand, there would need to be a significant	Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.

Respondent (with lpr ref)	Response	Council Response
	<p>increase in the provision of parking at the station to cope with increased demand. The road infrastructure in a number of common commuting directions from the development are not sufficient. These include: Travelling north to the A34 in the Cold Ash direction. Travelling east from the development through Upper Bucklebury, Chapel Row &amp; Bradfield (many chose to use this route instead of the A4). Travelling south across the Rail Level Crossing. Negative Impact on Surrounding Villages &amp; North Wessex Downs AONB The location of the development straddling Harts Hill Road, which includes a roundabout, will lead to a significant increase in traffic using the Harts Hill Road route: This increased traffic will negatively impact many surrounding villages including Upper Bucklebury, Cold Ash, Burdens Heath, Chapel Row and Bradfield. The current roads will not be sufficient to support this increased level of traffic. These roads already suffer with concerning levels of speeding (recent Parish Council SIPS deployment has confirmed this and the police have the figures). The increased traffic will be a safety concern for local residents, particularly children whilst walking to and from school. The houses located on Harts Hill Road and Burdens Heath in Upper Bucklebury, and The Ridge in Cold Ash, do not have a footpath outside. Increased traffic along these roads will make it significantly more dangerous for pedestrians in these areas in particular. The increased volume of traffic will impact the quality of life for the residents of the villages mentioned through increased traffic noise and disturbance. The close proximity of the development to the North Wessex Downs AONB will put increased strain on this area: It already ready suffers from significant waste issues, that would be a lot worse if not for the kind village volunteers who regularly undertake rubbish clearing days. It would also experience an increase in 4 wheeled vehicles being used illegally in the woodland that the Parish work hard to limit/prevent. The development would have a detrimental impact on the wildlife that currently lives in and enjoys the area. It will lead to a loss of the open aspect of the local neighbourhood and loss of existing countryside/rural views from a number of existing properties. This will specifically impact those properties along the lower Harts Hill Road region.</p> <p>Change proposed:</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I do understand that West Berkshire has a requirement to provide additional housing in coming years. However, I object to the scale of this development in this single location, for the points I mention above. If development of the proposed site is essential, I request the following be carefully considered: Significantly reduce the development from its current size of 2500 homes, to limit the impact on local residents by considering using additional sites across the West Berkshire area. We consider the proposal to be an unacceptably high density of homes. Concentrate the development toward the southern Colthrop land. This would concentrate the development nearer to the A4 and limit the impacts I highlight to the surrounding villages and the AONB. Ensure the development cannot be accessed from the Harts Hill Road. This would involve removal of the proposed Harts Hill Road roundabout. This is essential to limit the negative impacts of increased traffic into the surrounding villages. In addition to the above, share plans that show how you will limit the flow of traffic through the surrounding villages including Upper Bucklebury, Cold Ash, Burdens Heath, Chapel Row and Bradfield. Challenge the plans to concentrate the development in a band closer to Floral Way, in order to ensure that the development is as far away from the Wessex Down AONB as it can be. Share plans to address the infrastructure challenges I highlight above including the train station facilities and the level crossing. I would happily talk further with you if required</p>	<p>whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced. Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing</p>

Respondent (with lpr ref)	Response	Council Response
		<p>requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p> <p>Thatcham is an ‘Urban Area’ as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector’s report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green</p>

		infrastructure, active travel routes, education and community facilities, and highway improvements.
Ian and Diane Dalgarno (lpr356)	<p>We are writing to express our concern and objection to the proposed development of 2500 home in north-east Thatcham. Firstly, we feel that communication to the community on this major issue has been very poor. We only discovered the plans when a local resident posted news of the proposed development on social media and although word has since spread there has been no formal communication by the Parish Council to the local community which we would have expected given the size of this project. It would appear that West Berkshire Council is trying to push this project through the back door, hiding it at a time when people have been distracted by Christmas, Brexit and Lockdown a good time to bury bad news is an expression that springs to mind leaving residents with insufficient time to review the plans and formulate a formal response before the fast-approaching deadline. We did attend a Zoom presentation by Mr Southgate on Friday 15th January and we got the distinct impression this was a done deal as far as the Parish Council is concerned and that the residents were being sold the least bad option. We wish to register our objections to this development on the following grounds: Thatcham is already over developed with a poor supporting infrastructure Thatcham medical services are already overstretched Without a bridge over the railway any further traffic in the area will cause Thatcham to become gridlocked at peak times The development will have an extremely adverse impact on the rural community of Upper Bucklebury particularly with increased traffic flows. There will be a huge detrimental impact on wildlife and its habitats Finally, we would question the need for all these houses anyway. Presumably housing plans were developed when we were members of the EU and based on open borders no longer the case. Covid will have a detrimental effect on birth rate which is already in decline Loss of jobs and income will mean people will not have the means to buy expensive property With the closure of shops and office in town centres the opportunity should be taken to convert such properties into low cost property to rent or buy. We urge the Parish Council to do all they can to resist this unwanted and (probably unnecessary) development.</p>	<p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. Respondent (with lpr ref)	Response	Council Response
		<p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government’s standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council</p>

Respondent (with lpr ref)	Response	Council Response
		is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.
Caroline Tocher (lpr369)	<p>As recent residents of Thatcham, having moved to Midgham in December 2020, we strongly object to this proposed development. The context of the Local Development plan states that the 'rural dimension is very important in shaping the character of West Berkshire' and you acknowledge in your vision that 'the character of these rural areas [Cold Ash/Ashmore Green etc] visibly contrasts to the more urban areas of Newbury and Thatcham'. The proposed development places the rural hamlet of Midgham on the doorstep of Thatcham and will significantly alter its rural character. Having lived in both areas, the local community in Midgham feels much more localised and tight-knit than Thatcham itself, and to lose the surrounding countryside will significantly alter the local environment and character of the area. This plan contradicts the points you have raised about the context of the area in sections 2 and 3. It also contradicts the Statement in section 4 about the Eastern area that 'the individual identities of the separate settlements within this area will be maintained'. Development could be spread more evenly around Thatcham and Newbury, rather than all concentrated in this one area, leading to a huge decrease in quality of life for current residents of Midgham and Thatcham alike. As previous residents of Thatcham, and having many relatives and friends living in the town still, our objections encompass not just how the villages around Thatcham will be affected, but how the lives of current Thatcham residents will be affected too. The proposed development is effectively a suburban add on to Thatcham which will add very little for existing Thatcham residents and will take away substantially more from them. The whole premise you have given for expanding Thatcham is presented as being to aid Thatcham in becoming 'a thriving market town' by bringing 'considerable benefits to the town', and yet you haven't recommended any improvements to the town itself. Instead, you acknowledge that the new development is 'an urban extension' with 'supporting facilities'. These sound supplemental and designed to service the new areas alone. The facilities for the rest of the town, meanwhile, would remain largely unchanged. The town centre, by its historic nature, is not fit for major expansion and to do so would distinctly change the character of</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA)</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thattham itself. Pressure on Thattham Medical Centre and local dental surgeries is already high, and yet would be 25% higher with this new development. Our previous address, Fortuna Mews, is directly off of the A4. My husband and I would travel daily out of the area using this road and experience substantial delays because traffic volume was so high already. When the M4 is closed traffic becomes unbearable. The plan, however, only talks about road improvements between the new development and the town centre and railway, thereby simply increasing traffic on the rest of Thattham and Newbury's trunk roads by 25% with no plan to address this in place. There is also a significant risk that this will massively increase traffic up Harts Hill Road, through Upper Bucklebury and along through Chapel Row as people seek alternative routes to Theale and the M4 than the A4 which is inevitably going to struggle. This already happens to some degree. This road runs through the North Wessex Downs AONB and will significantly decrease the quality of life for people in these areas. Throughout the rest of the local plan you aim to minimise impact on these areas. It is, in fact, the reason given for focussing largely instead on Newbury, Thattham and the Eastern area. Finally, you talk of the benefits for the whole town brought by 'recreational facilities' including a country park, yet you are building over open countryside that Thattham residents already benefit from. By doing so, you are cutting them off from the countryside and increasing traffic as they all get in their cars to reach it. A huge benefit of living in Thattham is the easy access to open countryside and beautiful walks, no matter where you live, and this would be removed from huge swathes of the town. The whole premise of this development is to make Thattham more 'thriving' - but if any of us wanted to live in a larger urban environment, we would probably have moved to Reading instead. Thattham provides welcome affordability for the area whilst giving access to the unique area it is located in. This plan feels as if Thattham and surrounding areas are being thrown under the bus and sacrificed so that large scale developments do not need to happen in any of the regions more typically 'desirable' towns.</p> <p>Proposed change: I understand that development needs to take place, but this should and could be spread around the region's urban centres more. Increasing</p>	<p>report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thatcham by 25% is disproportionate to the changes being effected in other parts of West Berkshire. Even developments around Thatcham could occur in patches, rather than in this one block which will substantially change this side of Thatcham and Midgham Parish.</p>	
<p>Durran Heslop (lpr1044)</p>	<p>I write in respect of the proposed large housing development in North East Thatcham as detailed in your current Local Plan Review Consultation. Your invidious position regarding the need to provide more housing is well understood and your efforts to avoid the intervention of the Inspector are much appreciated. However. Thatcham has suffered enough with sprawling development and already seems to be a way over-developed "dormitory" for the wider area. In this instance I write as gravely concerned resident of Bucklebury Parish for this new proposal seeks to massively advance the township of Thatcham towards Upper Bucklebury and to the AONB which it borders. Setting aside opinion as far as possible, I would like to register my comment about what I believe are valid town planning issues which indicate against such a large development in North East Thatcham: Traffic: -The traffic forecasting in the plan already anticipates that a proportion of new traffic generated by the development will pass up Harts Hill and into Bucklebury Parish, likely most through Upper Bucklebury. -The route West towards Newbury on the A4 is significantly urbanised and congested at all but the quietest times with slow journeys owing to traffic lights, junctions and weight of traffic and little hope of improvement. -The route South over the railway is severely restricted by the level crossing. Even without such a significant increase in Thatcham's population this route suffers severe congestion and improvement of this needs to be considered as part of the overall plan. -The route East down the A4 is expected to take the bulk of the traffic but is already congested at busy times, -The closest access point to the North out of the proposed development is Harts Hill Road running straight into Bucklebury Parish. -It seems likely, therefore, that traffic to the North through Bucklebury and Cold Ash to access the A34 and M4 (at J12 &amp;13) could be considerably greater even than forecast. -Harts Hill Road from Thatcham to Upper Bucklebury is characterised by a steep hill and multiple blind bends, all of which are relatively narrow and unlit in keeping with the proximity to AONB -Adequate foot and cycle ways are lacking throughout the</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. For instance, without</p>

Respondent (with lpr ref)	Response	Council Response
	<p>route which is hazardous enough with the existing level of traffic. -Aside from the central area of Upper Bucklebury, residential roads along Burdens Heath and into Cold Ash are similarly lacking in footways. -Roads through Bucklebury Parish are wholly inadequate to support increased traffic volume and speeds. Proximity to AONB: -Whilst the plan seeks to cap the development at 100m above sea level, in contrast to Upper Bucklebury sitting at 134m, in order to limit visual impact on the AONB, there will be impacts nonetheless. -Bucklebury Common, which is public access land sitting adjacent to the proposed development, is already experiencing elevated levels of visitors including illicit vehicular access all of which is causing damage to the environment thorough inconsiderate parking, dog fouling, littering, 4x4 and motorcycle disturbance &amp; damage all of which is detrimental to the valuable natural environment including rare Heathland habitat. It can be expected that the impact of this development can only be severely detrimental to Bucklebury Common. -WBC seeks to implement a "country park" belt between the 100m cap and the land above, further detail is required to ensure that this area is adequately protected to guarantee it is safe from future development. -The country park area will require concrete plans for landscaping it so that it creates a buffer zone to attract the new residents and mitigate the anticipated growth in visitors to Bucklebury Common. There are other concerns that I hold, some of which may or may not have weight in planning terms including: -Provision of medical facilities. Whilst schools and shops are planned into the proposal, medical facilities are perhaps not so well catered for. -Provision of foot/cycle/bus ways may need to be baked into the individual planning consultations for the developments and are definitely in need of mention.. -if we aim for people to use more public transport, then surely development South of the A4 in closer proximity to the newly electrified rail provision would be preferable. -Aside from the issue of the level crossing, Thatcham Station is in danger of being wholly inadequate for the increased population. Thank you for taking my comment into consideration as part of the consultation process, I hope that the proposals as they stand can be examined in more detail, amended and improved for the greater good of both the prospective new residents, the existing residents of Thatcham and the parish of Bucklebury with it's rare and increasingly endangered rural nature.</p>	<p>mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p>
Sue Dorling (lpr372)	<p>As a resident of Upper Bucklebury I have seen this delightful village grow steadily over the 56 years that I have lived here. The building of the above houses will do irreparable damage to the environment which is a precious and much needed facility for all of us. 2500 houses will result in far more people than the area can cope with plus something in the order of another 5000 cars on the roads and more speeding through the villages which are already being used as a rat run. This will pollute the atmosphere still further. We already have damage being done to our common by 4 x 4s and parents are reluctant to let their children walk to the village school, which is already full, because it is just not safe. There can be no benefits to the people of Thatcham and the surrounding villages as overcrowding and pollution will encourage vandalism and anti social behaviour. Please think very carefully about your responsibilities to local people.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 		continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.
Bob Champion (lpr376)	<p>Siege Cross Development</p> <p>Thatcham has a population of 26,000. As part of the West Berkshire Development plan it is proposed to build 2,500 homes in one development at Siege Cross. Assuming an average occupancy of 3 per household this means an increase in population of 7,500. That would be 285 increase to the population of Thatcham. Therefore, for every 4 facilities, e.g. shops, doctors, care workers etc another 1 will be required in Thatcham. This is the weakness of the way the proposal has been put together. In context, the increase in population is roughly 2.5 times the population of Theale and 50% more than the population of Hungerford. Why Thatcham? There does not seem to be an economic strategy plan that concludes that development in Thatcham meets the economic, social and environmental objectives for West Berkshire. Two key issues driving these objectives should be the protection of Newbury Town Centre and the potential expansion of Heathrow Airport. How is West Berkshire going to respond to these challenges? Housing should follow economic activity. Just to build houses because a site is available, is poor planning. Without employment considerations there is a danger that all that is created are ghettos that do not make an area attractive to those who will invest in local business opportunities. From an environment and inward investment point of view West Berkshire does not make most of east west rail connections. Rapid connections with London, Reading, Heathrow, to the East and direct connections to Bristol in the West should be high on the agenda. Also, a frequent light rail service between a park and ride at Enborne, and Reading will offer many small/medium housing development opportunities whilst environmentally support economic growth. To support Newbury Town Centre, because of its closeness to the Motorway network Chieveley should be considered as offering housing development opportunities. To ensure those opportunities are environmentally friendly Chieveley needs a frequent express bus service to Newbury Town Centre and the Railway station. This bus would stop at the recently approved</p>	<p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that 'in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy' (paragraph 67 of the Core Strategy Inspector's Report). As additional housing is required, and given Thatcham's status as an 'Urban Area' in the development plan is it considered appropriate to consider Thatcham for housing.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>housing developments near Vodafone HQ. The light railway would offer the development of houses at Enborne adjoining the Park &amp; Ride on the A34. A development of 2,500 homes needs to be part of a cohesive strategy for the district. The Siege Cross proposal does not contain any justification as to why 2,500 houses have to be built in Thatcham. Thatcham If there are strong strategic reasons why 2,500 additional homes are required in Thatcham (which is doubtful) what alternatives to the Siege Cross development have been considered? Alternatives would be 4 or 5 separate developments of around 500 homes each around Thatcham not in close proximity of each other or at a different major site. If this was a true consultation these alternatives would be considered with the strengths and weaknesses of each coming to a preferred solution. The smaller site alternative would require possibly 2 the north of the town, one to the east, west and south. A large alternative site could be on the old Colthrop Paper mill and surrounding land. This may require flood prevention work but does offer opportunities for the construction of a bridge over the railway, canal and river; relieving the level crossing congestion. A 28% increase in local population could equate to a corresponding increase in vehicles using the level crossing with resulting delays, environmental and economic costs. This does not take account of future growth in passenger and freight railway traffic. What would the age profile of the new 7,500 occupants of Thatcham on this site? Where will they go to nursery, school, college, work, and what retirement facilities will they require? What would they expect to be on their doorstep in the new commune, what would they expect to be provided in Thatcham town centre? What would they be willing to travel further afield to? This ignores leisure and social support facilities including Health. It is essential that Thatcham does not become a dormitory commuter town. The plan therefore creates a need to attract / create 3500 to 4000 new jobs in Thatcham. Where is the proposal to create these? What sort of jobs would they be? Where would they be sited? This means that such an expansion to Thatcham would create the need for a business park. Where would this be sited? Has a science / technology park or a university campus been considered? Thatcham Town Centre will be unable to support the retail needs of such an enlarged population. There is no room for expansion. Demand may create proposals for a retail park to the east of Thatcham.</p>	<p>Employment allocations are also being considered through the LPR.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government's standard method, which has been revised</p>

Respondent (with lpr ref)	Response	Council Response
	<p>However, such a development may further damage Newbury Town Centre. Also, the Siege Cross development will mean new residents will have to travel across Thatcham to get to Newbury Town Centre. Siege Cross This development needs to be for a future way of living. It needs to reflect more working from home, with office hubs, excellent broadband facilities, whilst taking account of aim to be carbon neutral. Just putting 2,500 homes on the edge of Thatcham makes it more difficult to satisfy these objectives. Siege Cross is a hilly site. 5% of the population of West Berkshire is over age 80. In real numbers this will increase, what special facilities will be included? Will the site create mobility problems for them? Especially in icy weather. How will they be overcome? Connectivity If Thatcham is to be expanded to the extent envisaged and thrive, communication with the outside world is essential. This means technology infrastructure; road and rail connections need to be first class. North /south connectivity is currently poor. This creates east / west congestion which the growth of Thatcham will add to. Theale, Hungerford, and Marlborough all have direct access to the M4 despite much smaller populations than Thatcham without the proposed expansion. A link road will relieve congestion on A4 to the east and west. The 3 major neighbouring conurbations are Reading, Swindon and Basingstoke. A link to the M4 will provide easier journeys to the first two. Thatcham to Basingstoke to the South by road is full of obstructions. River, Canal, and Railway. A southern link road to the A339 is required. This link road could connect with a east- west road linking better with the A 34. This would relieve congestion in Newbury and bring Winchester, Southampton within easier reach. An outer ring road around Newbury and Thatcham would be created. This would create easier connections with the rest of the country whilst reducing congestion within what will, when combined with Newbury, be a large conurbation. A Link road from a new junction on the M4 near Yattendon, passing to the east of the Colthrop industrial estate crossing the railway, river and canal before connecting to the Southern connectivity described above is a must before any expansion of Thatcham can be considered. It should not be overlooked that logistics and distribution are major employers in Thatcham. Congestion is the enemy of those businesses. A development of this size needs local employment. It therefore important that the infrastructure is created to enable those businesses to</p>	<p>since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>thrive. Â The Railway whilst being a major east west connection is underused. With the correct investment it could be used to provide regular reliable environmentally friendly direct links to Bristol, Heathrow, Gatwick and London. It could also be used to provide better local links for employment and leisure in Newbury, Theale and Reading. A Parkway station should be considered where the railway crosses the A34 at Enborne. This will reduce parking demands and commuting traffic into Newbury Town centre. It would also help with Race Day congestion. The railway offers many passing points so that a frequent local service could become an environmentally strategic axis for West Berkshire. With trains running every 15 mins Park &amp; Ride facilities adjoining A34 at Enborne with possibilities for a new small village. In addition to the existing stations, a new station should be constructed close to new Racecourse bridge. This would serve the new housing and be close to Hospital. This link would offer new housing possibilities south of Colthrop with easy access to Thatcham Station. The Pedestrian route from Theale station to Calcot Retail Park should be improved. Facilities to change trains at Reading West need improvement to provide access to the new Reading Green Park station. This would create an east west public transport corridor that is environmentally friendly, encourages economic growth and opens up many potential sites for small housing opportunities that are near the stations. However, this results in an increase in train movements. This means a bridge over the Railway at Thatcham to relieve the level crossing becomes even more essential.</p> <p>Â Building the development without the necessary infrastructure to support it could lead to a reduction in employment not an increase. Conclusions The proposal to build 2,500 homes at Siege Cross is back to front. There seems no reason other than to satisfy a Government house building target. Can West Berkshire accommodate such a housing target? Only as part of a strategic economic plan that looks at what the alternative strategies are for the area, concluding the additional population / housing that it can accommodate and support. The plan will identify how Thatcham will develop. It goes without saying that additional homes will have to be built in and around Thatcham. The number and where should be determined by the strategic plan. To build 2,500 homes on one site and then try to satisfy the</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>

Respondent (with lpr ref)	Response	Council Response
	strategic requirements it creates is completely the wrong way around. Therefore I must object to the proposal.	
Gary Clarke (lpr697)	<p>Especially Thatcham SP17 A development on this sight was rejected as recently as 2017. The development is outside the centre of Thatcham and there is a serious mismatch between housing and economic strategies. A mismatch that will result in undue strain on infrastructure given the increased commuting that will be needed. This development is therefore unsustainable and inappropriate in direct conflict with the environmental goals outlined in section 3.5.</p> <p>Change proposed: A Council led plan to rejuvenate Thatcham Town Centre rather than a developer led plan to build on greenfields. Once a strong plan is in place for Thatcham then and only then can new housing in the area be considered.</p>	<p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that ‘in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy’ (paragraph 67 of the Core Strategy Inspector’s Report). As additional housing is required, and given Thatcham’s status as an ‘Urban Area’ in the development plan is it considered appropriate to consider Thatcham for housing.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Nigel Colman (lpr371)	<p>As a local resident I would like to object in the strongest possible terms to the proposed development in NE Thatcham. This proposal is on a scale that is quite frankly ridiculous and would remove such a huge area of local green space that it must be rejected outright. Furthermore, the impact on local infrastructure and associated traffic volumes would be disastrous for the local area.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. 		'living document' and will be updated regularly updated in consultation with infrastructure providers.
Susan Brown (lpr373)	<p>I strongly oppose the WBC proposal for Thatcham North East and the development of 2500 houses and associated infrastructure. This would be a total overdevelopment of the site. It virtually abuts an AONB and erodes settlement boundaries. The impact on traffic and public transport links seems not to have been considered. The A4 is already very congested, particularly during rush hour and the likelihood is that this development would not only significantly worsen the congestion, but also result in increased traffic through the various villages to the north of the A4 including Upper Bucklebury, Chapel Row and Southend Bradfield, the main cut through routes used whenever there is an issue with traffic flow on the A4. Public transport wise there is no way that Thatcham station and the other small village stations along the A4 will be able to deal with increased passenger numbers. Parking at these stations is already totally inadequate. The need for additional education placements doesn't appear to have been thought through at all. 2 primary schools and 1 secondary school, given the size of the development area, seems a rather unusual way to cater for the education issues that will arise from the development. Our current local schools are already struggling to provide adequate education due to a total lack of funding. There is nothing strategic about this approach, it is piecemeal and ill considered. There is no mention of how health care will be provided. Local surgeries are already totally overstretched and the area only has a small community hospital rather than a fully functioning medical provision. There is no way that the current NHS provision will be able to cope.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>As part of the preparation of the LPR the council has undertaken a Settlement Boundary Review (SBR).The settlement boundary criteria make clear that boundaries will include sites allocated through the Local Plan process. North East Thatcham is proposed for allocation under policy SP17. Should the site, or any part of it, be removed from the LPR the boundary for Thatcham would be adjusted to exclude it. It is acknowledged that the settlement boundary is currently drawn around the whole of the proposed allocated site at North East Thatcham whilst Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.' The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary</p>

Respondent (with lpr ref)	Response	Council Response
		<p>and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. At this stage it is therefore not possible to draw the settlement boundary any tighter. As the LPR progress and more detailed work is done on the sensitivity and capacity of different parts of the site to accommodate development the boundary will be amended accordingly.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel</p>

Respondent (with lpr ref)	Response	Council Response
		<p>and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p>
Carol Gower (lpr 375)	A very important consideration is THE WATER SUPPLY. At Burdens Heath Upper Bucklebury we still have problems with the water Pressure, particularly in the Summer. Yet more demand is worrying to say the least.	<p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p>
<p>Gary Clarke (lpr698)</p>	<p>This development changes the character of Thatcham and destroys green fields in contradiction to all current thinking on new developments. A country park is NOT countryside and is not an acceptable substitute. Traffic is already at a standstill on Floral Way and the A4 in normal rush hour times and heavy lorries using the distribution centres on Colthrop Industrial estate add to transport issues in the area. The queues and pollution at the rail crossing at Thatcham will be made worse by the new development and the ensuing increase in commuter car journeys. The residents of the new houses are not at all likely to work locally and any plan that relies on hoping that they will is unacceptable.</p> <p>Change proposed: Brownfield sites should be used first and the Council should not be adopting a developer led proposal which is in the developers favour to the detriment of Thatcham residents.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. The HELAA includes brownfield sites that the Council are aware of.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>
Stephanie Molloy (lpr1286)	<p>Objection to proposed development of 2500 houses along A4 and Floral Way at Thatcham. I strongly object to the proposal to build 2500 House along the A4 and Floral Way in Thatcham, for the following reasons: 1: Reduction in the strategic gap between the settlements of Thatcham and Upper Bucklebury. 2: This is allowing urban sprawl - is the plan to join Thatcham, Cold Ash, Upper Bucklebury, Midgham and Woolhampton into one conurbation? Adding 2,500 homes is like adding the town of Hungerford onto the side of Thatcham. What ever happened to not building on the green belt? Many years ago when I told my father I was moving to Thatcham, he said it was a lovely pretty village, surrounded by green fields. I asked him when he was last here. Oh after the war he said! When he came to our then property in Thatcham he could not believe the change and was concerned it was now just part of Newbury. This cannot happen to the rest of Thatcham and its surrounding villages, especially Upper Bucklebury and Cold Ash. 3: Infrastructure impact - Road Traffic - Thatcham is already full of traffic, not just at peak times, adding 2,500 homes, with at least one car (but more than likely two cars per household) will add a minimum of 2,500 cars to the roads. A major increase in traffic along Harts Hill, Coxs Lane, etc., and any other cut through people use as they try to get onto the A4, will be heavily impacted to the detriment of the roads themselves; lifestyles of those living on those roads and congestion not just at peak times. 4: Infrastructure Impact - Railway Crossing - This is already not fit for purpose, having been</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and</p>

Respondent (with lpr ref)	Response	Council Response
	<p>designed when there was light traffic in the area. No plan to increase any domestic dwellings in Thatcham should go ahead until the crossing situation is fixed. 5: Infrastructure Impact - Schools - The suggestion is to build 3 new schools - how many are secondary schools, as Kennet School is already full, and The Downes has changed its catchment area so young people from Upper Bucklebury can go there instead just down the road. Traffic and impact on the neighbouring village schools needs to be seriously looked at too to stop them being overwhelmed and unable to offer places to children of their own village. 6. Infrastructure Impact - Doctors - All the Doctors practices are over stretched - not just because of COVID-19 - even with the current triage and use of new technologies it is difficult to get to see a Doctor on the day you need them. This needs to be factored in, in any development plan for Thatcham. 7. Infrastructure Impact - Water and Sewage - The local system is being managed on a daily basis by Thames Water. Woolhampton is already full with no plans to increase capacity - what is the situation in Thatcham? An additional 2,500 homes will require a lot of new pipework to get it to Lower Way safely, with months (if not years) of upheaval and disruption to local residents. 8. Infrastructure Impact - Rubbish, Landfill and Recycling - We all know this will be impacted, you only have to look at the current situation. What are the plans for doing this correctly and recycling more. Fly tipping on Bucklebury Common is rife and all the good people who go common clearing or litter picking, are only able to scratch the surface as our beautiful village land is used as a rubbish dump. 9. West Berkshire declared a climate emergency on 2 July 2019.  <a href="https://www.westberks.gov.uk/media/48362/Draft-Environment-Strategy-2020-2030-Summarydocument-Â-January-2020-/pdf/WBC_Environmental_Strategy_Summary_A4_20.pdf">https://www.westberks.gov.uk/media/48362/Draft-Environment-Strategy-2020-2030-Summarydocument-Â-January-2020-/pdf/WBC_Environmental_Strategy_Summary_A4_20.pdf</a>? m=637141844400230000  WBC - Environment Strategy - with declaration of climate emergency. How will this be mitigated by increased pollution from the construction traffic, increased vehicle pollution due to the inevitable congestion and urbanisation. 10. WBC Refusal for Application 15/00296/OUTMAJ Siege Cross Farm Thatcham - The proposal to build 495 dwellings was refused by WBDC, not least for being contrary to the Development Plan, the impact it would have on Education, the Landscape and Visual impact it would have and Planning Obligations. If 495 were refused how can 2,500 be being</p>	<p>adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>considered? <a href="https://www.newburytoday.co.uk/news/news/22093/very-strongmessage-to-developers-after-thatcham-appeals-turned-down.html">https://www.newburytoday.co.uk/news/news/22093/very-strongmessage-to-developers-after-thatcham-appeals-turned-down.html</a> 11. It would effectively join Upper Bucklebury with Thatcham, which has all but happened at Cold Ash effectively removing the rural aspect of the area. This is actually stated in the WBC documentation (<a href="https://info.westberks.gov.uk/CHttpHandler.ashx?id=49836&amp;p=0">https://info.westberks.gov.uk/CHttpHandler.ashx?id=49836&amp;p=0</a>) page 22, stating particularly as development of both north east and north Thatcham would result in the loss of the separate identifies of Cold Ash and Bucklebury, and would harm the setting of the AONB settlement pattern. 12. It is a massive over development of the Countryside in one area which consists of rolling hills and farmland. The reason stated is that 85% of West Berks is AONB. WBC have previously built on AONB and AONB status can be changed with government approval, and as it allegedly the government driving this would they not be more open to changing some AONB status ? 13. It will completely surround the Crematorium at Thatcham which was placed there to be away from residential properties and has constraints placed on it. 14. Have WBC considered the reuse of brownfield sites to house these 2,500 homes? Better use of Thatcham town centre, a review of the use of property should undertaken in light of the changes that have taken place since the COVID-19 disruption. 15. Flooding - Remember 20 July 2007? Most of Thatcham was impacted as it is built on a flood plain. If you were to build on the land proposed where does all the water go? If you remember the A4, Midgham and Woolhampton were badly impacted too by this flooding. The proposal is overdevelopment of Thatcham, which is already struggling to cope. It is out of character and will have a detrimental impact for the surrounding villages, the A4 and to the town itself. There is insufficient parking in the town, limited parking at the train station and already almost full train services at peak times into London. Doctors are stretched. Floral Way is used as a way to get round the town, as it is too painful to drive through it, with all the traffic lights. This will only get worse. The surrounding countryside is full of natural beauty, fauna and flora, which should not be disturbed. Walking on the land between Upper Bucklebury and Colthrop last summer, we saw orchids and other wild flowers with plenty of bees and butterflies to feed on them. Do not be responsible for destroying this beautiful habitat. Reading the BBC News Website today, there is an</p>	<p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In regards to waste water capacity, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated</p>

	<p>article by Prof Sir Partha Dasgupta, of the University of Cambridge, who has written a review for the Government. He states: "Truly sustainable economic growth and development means recognising that our longterm prosperity relies on rebalancing our demand of nature's goods and services with its capacity to supply them. "It also means accounting fully for the impact of our interactions with nature across all levels of society. <a href="https://www.bbc.co.uk/news/science-environment-55893696">https://www.bbc.co.uk/news/science-environment-55893696</a></p>	<p>water supply and drainage strategy which will consider existing related infrastructure on the site.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>Siege Cross was refused on a number of technical issues, including being outside of the settlement boundary, the Council being able to demonstrate an up-to-date 5 year housing supply, adverse impact on education provision, adverse landscape and visual impact, and failure to provide a planning obligation to enable necessary</p>

Respondent (with lpr ref)	Response	Council Response
		<p>infrastructure and mitigation. As part of the appeal, both the Planning Inspector and the (then) Department for Communities and Local Government (DCLG) considered that, subject to mitigation, the development would be appropriate and contribute to delivering housing in a suitable location. The Inspector noted that the Core Strategy Inspector highlighted that new development might contribute to the improved infrastructure and other changes desired by the Council. The Siege Cross scheme would have the potential to provide financial support, to the benefit of educational, open space and community facilities, and investment in highways and flood control. The benefits of the scheme would not be significantly or demonstrably outweighed by adverse impacts.</p> <p>The Core Strategy Inspector (in 2012) considered that ‘in any overall review to accommodate more housing, Thatcham would be a location to be considered again for additional housing, consistent with its position in the top tier of the settlement hierarchy’ (paragraph 67 of the Core Strategy Inspector’s Report). As additional housing is required, and given Thatcham’s status as an ‘Urban Area’ in the development plan is it considered appropriate to consider Thatcham for housing.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the</p>

		<p>separation and identity of individual settlements will be embedded into the design process.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council’s housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p>
Piers Allison (lpr1955)	<p>I am writing about the Local Plan Review 2020 -2037. I am commenting in particular on the plan to build 2500 houses on land between north Thatcham and Upper Bucklebury (the Policy SP 17 "North East Thatcham Strategic Site Allocation"). I do not support your plans. It will all but join Thatcham to Bucklebury, thereby connecting a village within the AONB with the large Thatcham. It will damage the character of Bucklebury, result in increased damage to Bucklebury Common, increase usage of Bucklebury Ford with the resulting rubbish and damage to the River Pang. The development will not support your own vision and strategy to protect the AONB, with a development on its very boundary. It will degrade the AONB, so that it is becomes an Area of not quite such Outstanding Natural Beauty. Whilst your document "Local Plan Review 2020 -2037" makes some consideration for the AONB, it makes no reference to Bucklebury and 1 minor reference to Upper Bucklebury. Your document mentions no consideration to the impact of your proposed 'Thatcham extension' on Bucklebury Parish. Some specific points in your document: Thus the enlargement of the DEPZs has reduced the available West Berkshire non-AONB area by <math>54/182\% = 30\%</math>. West Berkshire Council should make representations to Government to argue for a reduced number of houses as a result of the DEPZ regulations coming in after the original demand calculations were made. The new provision should</p>	<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and</p>

Respondent (with lpr ref)	Response	Council Response
	<p>be for 6188-6842 (a reduction of 2652-2932 houses). In Policy SP4, West Berkshire is following the ONR's recommendation against development of 200 dwellings or greater from the larger Outer zone. If the reduction in available area due to that larger zone was to be considered, the number of houses in WBC's new provision should be even smaller. The DEPZs Within the section "What has happened so far?" you refer to the previous consultations conducted in 2018 and February 2020. However those were conducted before the Aldermaston and Burghfield DEPZ areas were extended, and thus the validity of those consultations is now questionable. Protection of the AONB Within your vision and strategy, you seek to protect the AONB (which I admire): "Our vision: West Berkshire's landscape in the North Wessex Downs will remain of outstanding value and its biodiversity more abundant in settlements and the surrounding countryside." "Strategic Objectives: Together with partners, to continue to conserve and enhance the North Wessex Downs AONB, with appropriate landscape-led development delivering wider environmental, economic and social benefits." However, by planning for a new development of 2500 homes, up to the very boundary of the AONB, you introduce the high risk of doing the opposite of your vision and strategic objectives. The population of the extended Thatcham will overspill into the Bucklebury area of the AONB. It will increase the damaging 4x4 traffic on Bucklebury Common, put more cars into the narrow single track lanes that wind down from the Cold Ash - Upper Bucklebury ridge into the Pang Valley, send more people down to the recreation ground and playground in Bucklebury Village, add to the numbers of people who 'play' around Bucklebury Ford and who litter the River Pang. Within your section on development INSIDE the AONB (Policy SP2), you write: "If the proposal is considered to be major development, then the second part of the policy will apply and the following factors, as set out in the policy, will be taken into account: Detrimental effects on the environment, including wildlife and cultural heritage Your Policy SP2 applies to development within the AONB. It should equally apply to development adjacent to the AONB, where the development's residents will overspill into the AONB. Whilst the houses can't move, the people will. Your plan for 2500 homes adjacent to the AONB will not protect the AONB. Previous Land Character Assessment (2002) In Policy SP8, you say that "Proposals for development should be</p>	<p>the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to the concerns on the potential impact on Bucklebury Common, the development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population).</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation</p>

Respondent (with lpr ref)	Response	Council Response
	<p>accompanied by an appropriate landscape assessment". In the supporting text, you reference the "North Wessex Downs AONB Landscape Character Assessment (2002)". That assessment (<a href="https://info.westberks.gov.uk/CHttpHandler.ashx?id=40260&amp;p=0">https://info.westberks.gov.uk/CHttpHandler.ashx?id=40260&amp;p=0</a> ) considered a development on the northern edge of Thatcham. That assessment concluded: "Conclusion and cumulative effect of all THA sites (THA011, THA014 and THA027) and the potential cumulative impact on Thatcham and Cold Ash. It is recommended that the above three sites should only be considered further as a whole, limiting development to the slopes below 95m AOD. If any one of the sites were to be developed in isolation this would result in an unacceptable level of expansion of Thatcham north of the well defined settlement boundary along Bowling Green Road and Heath Lane. In the light of modern housing along the lower slopes of Cold Ash Hill, the low visibility of those parts of the sites close to the settlement and the more suburban character of these particular areas, the recommended reduced developable areas shown in THA0011.2, THA014.2 and THA027.2 could be justified in landscape and visual terms. However it is particularly important to limit the northern expansion of this area in order to retain the separate identities of Cold Ash and Thatcham, to retain the open rural character of the open countryside between the two settlements and to prevent further intervisibility between the built forms of each settlement." Yet in your proposal to join north Thatcham to Upper Bucklebury, you may make no such equivalent consideration. Your proposal has development up to 125m AOD. You make no equivalent comment that "However it is particularly important to limit the northern expansion of this area in order to retain the separate identities of Bucklebury and Thatcham, to retain the open rural character of the open countryside between the two settlements".</p> <p>Change proposed: I trust that West Berkshire Council will: 1. Seek a reduction from Government on the target number of homes to be built as a result of the enlargement of the DEPZs. 2. Changes its plans so that there are no new large development adjacent or almost adjacent to the AONB.</p>	<p>to individual planning proposals. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government’s standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p> <p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against</p>

Respondent (with lpr ref)	Response	Council Response
		substantially higher numbers than the housing need based on the standard methodology.
Jane Halliday (lpr625)	<p>SP17 NE Thatcham. The proposed large-scale development is contrary to SP5, SP8, SP10 and SP11. Thatcham lacks the infrastructure for the existing number of properties and will not be able to cope with additional ones.</p> <p>Proposed change: Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This district would benefit from being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</p>	<p>THE LPR will form part of the Development Plan for West Berkshire and all the relevant policies contained within the document will be utilised by officers when determining planning applications.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>All sites which have been submitted to the Council for allocation have been considered. A site must be available, achievable and suitable to be allocated.</p>
Peter West (lpr720)	<p>I think Thatcham is already over-developed. Many people prefer to live in Thatcham over Newbury because it is smaller, quieter, has less bustle and less traffic away from the A4. Adding an extra 2500 dwellings would fundamentally change Thatcham for the worse. I want Thatcham to retain its 'large village' atmosphere. I also disagree with the findings of the 2020 Thatcham masterplanning study - this is the first I've heard of it. I have also commented on the Review of Settlement Boundaries at Appendix Three. These comments form part of the reasons why I am objecting to the proposed policy.</p> <p>Proposed change: I consider north east Thatcham "the area shown on the plan - is not a suitable location for strategic large scale development. It is too far away from the centre of Thatcham and will lead to large numbers of extra car journeys</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>on Floral way, Harts Hill Road and on the A4 through Thatcham. Large areas of existing housing ‘ particularly streets off Floral Way (eg Foxglove Way, Trefoil Drove, Simmons Field, Archangel Way) and streets off Falmouth Way (eg Bolingbroke Way, Ashman Rd) would be subjected to 15 years of noise and disruption from building work and roadworks. If any area of Thatcham needs to be examined for further development, it should be in the south east quadrant, south of the railway line. Because some of this land is in a flood plan, areas slightly higher up Crookham Hill - land around Highfield and Waterside copses should also be considered. development in these areas would be closer to Thatcham rail station and a similar distance to the existing town centre as the north east sector proposed housing. There would be less intrusion - building noise, roadworks etc - to existing housing. Any development plan for the south east quadrant could also deliver the one piece of infrastructure urgently needed in Thatcham - a road bridge over the railway at Thatcham Station.</p>	<p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>

Respondent (with lpr ref)	Response	Council Response
Simon Tonkyn (lpr692)	<p>1/ You state (Ref 6.36) that Thatcham has grown 5 times its size since 1951 and reflecting that the social infrastructure has not grown in synchronisation with this. I struggle to understand the logic therefore of how adding more than 2500 houses would improve the situation. Would it not make sense to resolve this for the existing housing stock before adding thousands more houses into the mix?</p> <p>2/ How exactly would on-site renewable energy assist in the delivery of a carbon neutral development. Where is the supporting evidence and surely no development by definition would deliver this outcome. Also how many additional vehicles (many not electric) would be added to the local road network further increasing emissions and pollution with potential detrimental health impacts?</p> <p>3/ You talk about appropriate vehicular accesses and sustainable transport through routes and yet even before any of this is considered traffic heading in and out of Thatcham via Thatcham station is routinely stationary for up to 40 minutes causing traffic at times to be backed up all the way to the A4. It is reasonable to assume that a significant proportion of working people living in this development would be working in locations that would make this the most likely route they would take to their place of work. This would further exacerbate the delays and pollution caused by cars and lorries leaving their engines running. There are already proven cases of deaths resulting from vehicular pollution and this proposed development would be a direct contributor to increasing rather than reducing pollution and how would this contribute to the target of carbon net zero by 2030 announced by West Berkshire Council?</p> <p>4/ The A4 between Thatcham and Theale is a well-known accident hotspot, so much so that the council have placed signs warning drivers of the dangers of the road. With more warehousing being built responding to the move away from normal retail outlets this can only get worse as more and more lorries use this road causing more congestion, more pollution and in turn more risks of accidents and risk to life. The proposed development will be at the two pinch points where all this HGV traffic enters the industrial estates and this can only increase the accident risk further and increase the dangers for pedestrians who use the existing pavements on the A4 in the area for exercise.</p>	<p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Being carbon neutral means having a balance between emitting carbon and absorbing carbon from the atmosphere in carbon sinks. Removing carbon oxide from the atmosphere and then storing it is known as carbon sequestration. In order to achieve net zero emissions, all worldwide greenhouse gas (GHG) emissions will have to be counterbalanced by carbon sequestration.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>5/ You state that there will be a biodiversity net gain. How can that possibly be the case with so much habitat destruction and the loss of existing paths and green space. Destroying an area of this size cannot possible result in a biodiversity net gain.</p> <p>6/ Once the Covid-19 pandemic restrictions are lifted traffic in the area will return to pre-pandemic levels and all the resultant traffic congestion that was there is all directions beforehand. The location of this proposed development, without large scale infrastructure improvements including a bridge over Thatcham railway crossing, will just eacerbate this. In addition the increase of traffic using Crookham Hill (which is a very narrow road) can only but increase the risk of accidents and injury.</p> <p>7/ There is no evidence I am aware of that the trend away from retail outlets in town centres is going to change. In fact the opposite is happening. Isnt it much more likely that to satisfy the demands of 2,500 more homes that instead of retail outlets and some character in Thatcham town centre it will just become larger and large supermarkets and even more soulless. In conclusion I would say that Thatcham having grown 5 times since the 50's has contributed enough to the demands for increased housing and this development further erodes the very character this seeks to enhance and should not proceed.</p> <p>Change proposed: West Berks Council have been quoted as saying that certain road improvements would not actually improve congestion rather just increase the volume of traffic thereby negating any benefit. This huge development may well be sold quickly and add several thousand more families into an area already over developed and though I admit to having no expert knowledge amd of the opinion (just like the road improvements) have no net benefit and this need could be satisfied in other locations causing less impact to peoples lives and the environment.</p>	<p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. 		<p>ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Biodiversity net gain was introduced through the NPPF and is referenced in paragraphs 174 d) and 179 b) and the Natural Environment Planning Practice Guidance (PPG) provides further explanation on how this should be done. Mandatory biodiversity net gain is now set out in the Environment Act 2021 and applies in England only through the amendment of the Town &amp; Country Planning Act (TCPA) and is due to be enforced from November 2023. The mandatory requirement is to achieve at least a 10% biodiversity net gain increase from the pre-development biodiversity value. The requirement is framed as a pre-commencement condition, meaning that the biodiversity gain condition must be discharged before development can begin. Prior to the commencement of a development, a biodiversity gain plan must be submitted to the relevant planning authority for approval. The biodiversity gains and losses of a development will be measured in 'biodiversity units', using a metric which uses habitats as a proxy for biodiversity and calculates units by taking account of the type, extent and condition of habitats. Natural England has recently published biodiversity metric which, subject to further consultation and any further</p>

Respondent (with lpr ref)	Response	Council Response
		<p>updates, is expected to be the metric specified for mandatory biodiversity net gain.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>An economic advantage of new development is that new residents can help support local shops and businesses and help to boost the vibrancy and vitality of town and local centres.</p>
Joanna Brass (lpr1241)	<p>I and my family are very concerned about the proposed development of the beautiful green belt land between Upper Bucklebury and the A4/Floral Way. A development of 2,500 houses in the green spaces of Thatcham seems unreasonable. We have two main reasons: (i) concern for the existing under-invested Thatcham town and (ii) loss of the beautiful and locally important green belt. I'll start with the green belt issue. Our first reaction to the news of the development was of complete surprise, as it runs contrary to what we understand to be the Central Government's most basic national planning policy: to preserve green belts! The fundamental aim of the policy as we understand it is to prevent urban sprawl by keeping</p>	<p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern</p>

Respondent (with lpr ref)	Response	Council Response
	<p>land permanently open. It is essential to allow the land in question, or as much of to as possible, to remain as green belt to (i) check the unrestricted sprawl of Thatcham up into the area of outstanding natural beauty and rural character that is Bucklebury Common and its surrounding area, (ii) stop Thatcham merging into Upper Bucklebury, (iii) assist in safeguarding the countryside from encroachment, (iv) preserve the setting and special character of the hamlets and small villages in the Bucklebury area, and (v) assist in urban regeneration, not just in Thatcham but also in Newbury, by encouraging the recycling of derelict and other urban land. Our decision to live in the woods near Midgham/Upper Bucklebury was heavily influenced by the rural character of the surroundings including the existing green space separating it from Thatcham (including the part that it is now proposed to build on). We enjoy it at least weekly, regularly walking our dogs on various footpaths in the vicinity. To change the area in the way proposed is entirely unacceptable. It would mean the loss of a much loved green space, visually damaging the existing landscape around the currently undeveloped side of Floral Way, it would mean the loss of a much loved rural landscape, disrespect the idea of a settlement boundary between Thatcham and Bucklebury, trigger the loss of trees, hedgerows and other vegetation that are essential for wildlife, and represent the over development of Thatcham. Our concern for Thatcham. We do not live right in Thatcham, but consider it our main town and in normal (ie not lockdown) times we are in and out of it multiple times a day. There seems to us to have been a failure over many years to invest in the Thatcham area and its most basic infrastructure - the town centre, roads, public transport, schools, GP surgeries, leisure facilities, maintained green spaces, youth facilities, care support and community centres are all under strain and all need work. These are all needed for our community to prosper and have all been neglected over a prolonged period of time. A new development will not fix any of this. Nobody who truly knows Thatcham would believe that the town could support an expansion of 2,500 new houses. The transport links were at full capacity (pre-Covid/lockdown) with terrible peak time congestion on the A4. The last thing the town needs is thousands of extra cars compounding these problems - on top of competing with the HGV's from the industrial area and distribution centres which already attract the massive lorries and the</p>	<p>and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. Respondent (with lpr ref)	Response	Council Response
	<p>pollution they bring. We note that WBC's strategy of 2012 identified that, after a period of rapid housing growth, the infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration nor significant new facilities, all we are aware of is the spending on the flood defence work; so presumably the (what seemed to us logical and sensible) conclusions of 2012 still stand? The focus in and around Thatcham should continue to be on building a strong community, and making Thatcham a safe, healthy and great place to live, where everyone has access to the services they need. The idea of a country part-type development linking Thatcham up into the surrounding AONB is a good one - although I'm not sure it is actually necessary as the walkers, cyclists and family of Thatcham are already well evident up and around the green belt and extending all the way up into the quiet lanes of Bucklebury Common on fine weekend days during lockdown. It serves as a beautiful green/rural/woodland escape for many from the urban streetscapes of existing Thatcham and accessibility does not actually seem to be much of a problem, judging by the increase in (foot) traffic. I would argue that it serves to benefit the physical and mental health of Thatcham residents as it is. Perhaps some public transport options up Harts Hill Road would help make it more accessible - in other countries they might run a street tram up into such areas on weekend days, for example. There are so many ways to make Thatcham a better place to live, without building over the very green spaces that its residents already use to escape into, or even just breathe a little more deeply as they enjoy the views from their cars along the A4 and Floral Way. I sincerely hope that sanity prevails in this matter.</p>	<p>mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. 		and lifestyle choices will be important elements of the overall transport plan.
Ian Halliday (lpr624)	<p>SP17 NE Thatcham. The proposed large-scale development is contrary to SP5, SP8, SP10 and SP11. Thatcham lacks the infrastructure for the existing number of properties and will not be able to cope with additional ones.</p> <p>Proposed change: Pursuing a redevelopment of the Colthrop industrial estate into a mixed housing/employment district similar to the LRIE proposals but with a higher weighting for housing. This district would benefit from being within walking distance of Thatcham station giving easy public transport links to Newbury and Reading/London.</p>	<p>The LPR is read as a whole. All LPR policies should be viewed together and not in isolation in the preparation and consideration of planning applications. Development proposals will be judged against all relevant policies. All Development Plan policies will be taken into account in determining planning applications, along with other material considerations in a proportionate manner. The policies in the LPR do not list or cross-refer to all other policies that may be relevant.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Tim Hall (lpr652)	<p>This is an unsustainable location.</p> <p>Proposed change: As this is unsustainable (it would, without any reasonable doubt, become an essentially car-dependent location) and especially with the declared Climate Emergency it could never be consistent with Council policy. Moreover it takes a beautiful and productive greenfield location and should not even be considered as an appropriate development location. Elsewhere I have suggested that fresh research and thinking is needed about retail and employment allocations and the potential elsewhere in built up and brownfield areas for housing.</p>	<p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<ul style="list-style-type: none"> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire’s declared climate emergency and minimise the impact of all forms of travel on the environment.</li> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council’s housing requirement development on Greenfield sites on the edge of settlements is necessary. Respondent (with lpr ref)	Response	Council Response
Louise Clarke (lpr819)	<p>The proposed development is predicated on a speculative increase in employment within the immediate area. This is unlikely and most residents will probably commute, increasing traffic on local roads. Increased traffic adds to pollution. The level crossing is a bottleneck and leads to increased air pollution as vehicles are idling and it is also damaging to local businesses. The proposed sites are all greenfield sites and these should not be developed because a) they provide habitat for native wildlife, b) access to countryside is important for the well-being of local residents, c) the separation between Thatcham, Midgham and Bucklebury Common will be eroded by development in these areas, d) increased runoff from the proposed development will add to the flooding risks for the rest of Thatcham and Midgham. The proposed 'country park' is no replacement for actual countryside. I have personally seen hares in the easternmost proposed site. These proposals seem to be developer led and don't address the needs of the current and future needs of residents. Being on the outskirts of Thatcham, they do nothing to address the need to revitalise the centre of Thatcham.</p> <p>Proposed change: Revitalisation of the centre of Thatcham should be preferred to any development on the outskirts. Brownfield sites should be used before any considerations of developing greenfield sites. The longer term effects of Brexit and the pandemic should be considered. Climate change must be addressed and all developments should reach the highest standards of sustainability, especially if they are being proposed on greenfield sites.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
David Carrier (lpr632)	<p>Our comments relate to the proposed building of 2500 houses to the north east of Thatcham. We are very opposed to this on the basis of:</p> <ol style="list-style-type: none"> <li>1. It is not sustainable as a way forward for this area, this country and indeed the world to continue to build upon our very important &amp; precious green space for ecological &amp; conservation reasons. It may be easier &amp; cheaper to do this but that does make this a right decision.</li> <li>2. It's proximity &amp; therefore impact upon the adjacent aonb. It will give rise to greater traffic flows through narrow &amp; winding lanes, increased usage of the recreation ground in Bucklebury village and more litter, misuse and damage to the ford &amp; river. In addition, it will vastly increase the number of people making use of Bucklebury Common. This is an ecologically sensitive area.</li> <li>3. This development will breach the desired gap between Thatcham &amp; Upper Bucklebury turning it into one sprawl. WBC has the maintenance of suitable gaps between developments as one of its planning policies &amp; this development would fly in the face of this. David &amp; Fiona Carrier, Bucklebury village.</li> </ol> <p>Proposed change: Every effort should be made to not build on greenfield sites but instead use brown field sites &amp; to explore the re generation of town centres which will continue to decay as shopping habits change.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity</p>

Respondent (with lpr ref)	Response	Council Response
		<p>Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p>

Respondent (with lpr ref)	Response	Council Response
Michael Morrison (lpr388)	<p>would like to register my strong objection to the NE Thatcham development (Policy SP17) which would effectively place a small town with a population the size of Hungerford to the North East of Thatcham, with only two schools, a few shops and the later arrival of a surgery. This will result in extra pressure on the already overloaded surgeries of Chapel Row and Burdwood. Hungerford has numerous shops, a library, schools, doctors surgeries, pubs and a large supermarket to serve the population there.</p> <ol style="list-style-type: none"> <li>1. Lack of publicity. I understand that a large number of the residents of Upper Bucklebury are against the development but it appears that WBC has not mailed anyone or made any attempt to contact ratepayers individually. This surely must seriously affect the validity of the consultation, as most of the local residents are still unaware of what is being proposed. I was made aware by a post on the local community facebook page only a few weeks ago. I am sure there are many many residents who have not commented, because they do not know about the plans.</li> <li>2. Flooding is a major concern, and Sue Everett, an environmental consultant who prepared that last report on flooding for the Thatcham council, said to a local resident recently (and she approved the use of this phrase in an email she sent) It would be utter madness to build on that slope Meaning the whole of the site which is on the slope' that runs down to Colthrop and Thatcham. Run off would be a serious problem and would certainly flood Thatcham and Colthrop with heavy rain, even with mitigation measures.</li> <li>3. Overdevelopment near the AONB despite national measures to preserve the countryside and its amenities</li> <li>4. The proposal makes no mention COVID and the substantial changes to housing and development requirements because of the pandemic. It rather looks like the proposal is outdated. With city centre shops closing, surely a possible solution might be to convert Newbury town centre empty retail buildings to residential? All would be within walking distance of the station, should travel be need to Reading and London.</li> <li>5. Carbon neutral. There is no stipulation that the building will comply with the latest construction and environmental standards. Namely Carbon neutral, or at least net zero emissions, and also be in line with the upcoming legislation [ due out in 2023 ] on Biodiversity Net Gain [ BNG ] Both are</li> </ol>	<p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site does form part of the setting of the AONB. The LCA will be published as part of the council's evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>hugely important and I believe that WBC have committed to carbon net zero emissions by 2030. This development will not work towards that objective at all.</p> <p>6. Wildlife will be seriously affected by such a massive intrusion into the countryside. Bats, badgers, hedgehogs, and other protected species would all be in danger.</p> <p>7. Local water supplies show very varied water pressure, even after the installation of the new Harts Hill pumping station, we have had very low pressure today here in upper Bucklebury. Surely the supply will be completely inadequate for a development of this size. The local character of the area has changed enormously over the 40 odd years I have lived in Bucklebury, This plan will further degrade the countryside and will overload water, sewage, road and rail systems. I firmly believe that it should not be approved in much the same way as the smaller development was turned down in 2017. From the Newbury Weekly News in August 2017: "The Government's decision to turn down two appeals " which would have resulted in more than 700 homes being built in Thatcham is a strong warning to developers. That was the message from West Berkshire Council's executive member for housing, Hilary Cole (Con, Chieveley), after the crucial ruling. As reported in the Newbury Weekly News, the secretary of state for communities and local government, Sajid Javid, stepped in to overturn the Planning Inspectorate's decision to approve the 495 and 225 home schemes at Siege Cross and Henwick Park. This development surely needs the same decision: Rejection. Thank you</p> <p>Proposed change: Please see my submission above. The plan needs to be reconsidered in light of all the objections and the effect COVID has and will have on the local area and its housing and transport needs.</p>	<p>With any application that would come forward on this site, the developers would be expected to submit a 'masterplan' / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p> <p>In relation to the Climate Change Emergency, The emerging draft LPR includes a policy that specifically covers climate change (policy SP5). This requires that all development should contribute to West Berkshire becoming and staying carbon neutral by 2030.</p> <p>In addition, all aspects of the local plan are targeting achieving zero carbon. For example: -</p> <ul style="list-style-type: none"> <li>• Policy SP1 (Spatial Strategy) which is the approach to where development should be located, directs development to the most sustainable locations in the district.</li> <li>• Policy SP6 (Flood Risk) directs development to areas least at risk of flood risk.</li> <li>• Policy SP22 (Transport) requires that any development that generates a transport impact will be required, amongst other things, to have regard to West Berkshire's declared climate emergency</li> </ul>

Respondent (with lpr ref)	Response	Council Response
		<p>and minimise the impact of all forms of travel on the environment.</p> <ul style="list-style-type: none"> <li>• Policy DC3 (Building Sustainable Homes and Businesses) looks at building sustainable homes and businesses,</li> </ul> <p>Any development site will have to comply with the aims and objectives of the plan.</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated</p>

Respondent (with lpr ref)	Response	Council Response
		water supply and drainage strategy which will consider existing related infrastructure on the site.
Nataliya Topliss (lpr794)	<p>The proposed 2,500 homes development is completely out of character for the area and will have adverse affect of our countryside. !70 acres of green land will be forever destroyed by West Berkshire council's plans.</p> <p>Proposed change: West Berks Council's strategy of 2012 indentified, that after a period of rapid housing growth, infrastructure in Thatcham had failed to keep pace and there should be a period for regeneration and new facilities. Since then, there has been no such regeneration so the Council's conclusions of 2012 must still stand. We need more green spaces in Thatcham. Thatcham's green spaces have been taken for housing developments.</p>	Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.
Alison and Richard Hubbard (lpr891)	<p>We would like to register our objection to the Proposal To Build 2500 Houses in NE Thatcham by 2036 Our grounds for objection are: The development proposed will create a large increase in traffic through Upper Bucklebury which will endanger pedestrians from both pollution and speeding vehicles. Broad Lane is widely used by both adults and school children in a manner which is encouraged by our government. The aim is to reduce our carbon emissions and create a cleaner healthier environment. Increased traffic flow will fly in the face of these anti pollution initiatives.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The</p>

Respondent (with lpr ref)	Response	Council Response
		modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.
Paul Dalgarno (lpr926)	I am writing to you on behalf of myself and my family to voice our utter dismay at the proposal of an additional 2,500 to be built in Thatcham and register our objection, we believe that this development is poorly conceived and appears to be being railroaded through by WBC (with even Thatcham Town Council reportedly having no visibility of the Local Plan before its publication) with an incredibly quick timeline which I am sure is not best practice for such a considerable development. I believe that this development has the potential to have a largely negative impact on the local area both in terms of environmental impact and the quality of life of the local residence. My areas of concern are as follows: Thatcham is already a dormitory town with the A4 largely solid with traffic and peak times in the very area that this development is being proposed. This development is very likely to future exacerbate the poor road network in Thatcham and does little to nothing to help the town develop some essential services. Schools: The plan incorporates provision for a new primary schools which I believe has the potential to have a negative impact on Bucklebury Primary School and the wider community, it is known that for a village to have a heart it requires a number of key features, i.e. a school, a shop and a pub, however, I can easily envisage that when two new primary schools are built within close proximity to Bucklebury, Bucklebury school will become superfluous and will likely be closed, leading to further housing development within the village and loss of village character. The local NHS health centre is already overstretched, with the development this will further stretch these services which will overspill into the surrounding area services, causing further disruption. There is nothing in this plan that will help with the impact of the increased population. The railway line, Thatcham crossing is already a major bottleneck for the town with cars regularly queuing for 20 minutes or more waiting to cross, I believe that with the addition of a further circa. 10,000	In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.

Respondent (with lpr ref)	Response	Council Response
	<p>people and their vehicles the already large queues could fill further back and potential causes further delays on the A4 and surrounding area. Type of development, according to the ONS in 2018, there were 1.6 million people aged 85 years and over; by mid 2043, this is projected to nearly double to 3.0 million. This change in population size / age does not appear to have been a consideration in terms of type of proposed housing and the needs of the local demographic. Impact on Upper Bucklebury: The traffic through the village has steadily increased with each passing year and was noticeably impacted by the opening of the Northern relief road, given that the A4 is already very busy at peak times I feel that it is inevitable that traffic through the village will increase further. The increase in traffic will have a detrimental impact on the village and, as the road has no lighting, will become increasingly dangerous to the many cyclists / pedestrians that enjoy the local area. In short, I think that this is a poorly conceived plan, and it is wholly unreasonable. I fully appreciate that housing across the county may be required, however, I do not believe that it is wise or reasonable to put a large number in one place and expand Thatcham by approx. 25%. I urge you to seriously re-consider, We personally feel that it would be far more beneficial to spread the growth evenly throughout the county rather than one large development.</p>	<p>In regards to comments raised in relation to the impact on schools, the site provides an opportunity to provide a 2.5 FE new primary school and for secondary provision, land to meet the impact of the development. Additional school provision is included in the IDP.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population). Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p> <p>Residents would make use of the newly provided education facilities on the site, which would not be expected to purposefully attract pupils from Bucklebury primary school.</p>
Sandra Parker (lpr726)	<p>I think Thatcham is already over developed. The proposed development is outside the settlement boundary. This area is open farm land which is much appreciated by local residents. This proposal will mean years of disruption, noise and pollution for local residents. The one piece of urgent infrastructure Thatcham needs is a bridge over the railway line. Not only will this development not provide this but it will make it an even bigger problem as there will be increased traffic using this route.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Proposed change: smaller developments no change to settlement boundary retain fields and open countryside</p>	<p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Elaine Pearson (lpr1198)	<p>I would like to object to the proposed NE Thatcham development of 2500 homes for a number of reasons.</p> <p>My concerns are mainly because of the large size of the development and include:</p> <ul style="list-style-type: none"> <li>• the roads being inadequate and therefore unsafe for the number of extra cars e.g. Harts Hill, which already has more than its fair share of accidents. Traffic queues at the roundabouts will be increased, particularly at peak times, and lead to dangerous tailbacks</li> <li>• the shortage of footpaths in many of the villages nearby, meaning pedestrians (including children walking to school) and cyclists will be more at risk</li> <li>• the increase in traffic over the railway and roads leading to the railway– already a gridlock at peak times</li> </ul>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• the car parking in Thatcham being very limited; it will become impossible for people wanting to use the shops and local businesses</li> <li>• the increased number of people using Thatcham station, which has no facilities</li> <li>• the impact on the nearby AONB – with litter increasing and people detrimentally affecting the wildlife areas.</li> <li>• the provision of schools not being sufficient to allow children to get their choice locally. Children around Bucklebury and Cold Ash (and even Thatcham) may have to travel much further away.</li> </ul> <p>I very much hope you will consider reducing the size of this new development and/or moving it further along the A4 towards Reading to an area where it could have a less negative impact.</p>	<p>being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>
Clive Tombs (lpr133)	<p>The area identified under policy SP17 appears to offer the potential to deliver large scale residential development adjoining the established urban area of Thatcham and also close to the existing employment area at Colthrop.</p> <p>There needs to be much more emphasis placed on delivering and maintaining physical measures and service improvements, to ensure sustainable transport means are primarily used for local travel between (a) the proposed new development at North-East Thatcham (b) the established town centre and (c) Thatcham Station. As well as wide, uninterrupted, well-signed footways and cycleways, there needs to be high-quality bus services - operating to simple routes at at least 30 minute frequency, with proper supporting infrastructure e.g. waiting shelters, and properly subsidised for a minimum of 5 years in order that they can be allowed to grow patronage - providing connections between the proposed new development, town centre, Hospital and Newbury (and at least allowing interchange with the core Jet Black bus service to/from Reading, if not affording direct services to Reading), and also between the development, business area/Pipers Way and Thatcham Station at least at peak times. It is important that these provisions are made and fully-funded to provide a quality service for the long-term - otherwise there is a risk of ending up with car-dominated areas</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p>

Respondent (with lpr ref)	Response	Council Response
		<p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p> <p>In regards to water supply, the developers are aware of the requirement for upgrades to the water supply network and water treatment works (which is identified in the Water Cycle Study).</p> <p>Should the development go ahead, it would be phased appropriately to ensure it does not outpace delivery of essential network and treatment upgrades (See IDP).</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an integrated water supply and drainage strategy which will consider existing related infrastructure on the site.</p>
Cara Shearn (lpr956)	<p>My concerns regarding the proposed Thatcham development are:</p> <ul style="list-style-type: none"> <li>- the increase in traffic through Upper Bucklebury village. The current attempts to reduce speeding traffic are ineffective. More traffic will only make walking through the village less safe and more increase noise levels.</li> <li>- the potential traffic back up at rush hour both on the A4 going into Reading and attempting to cross the level crossing.</li> <li>- the lack of any plan to address the increase in cars parking at the station as surely more people will be commuting into London especially with the current trends of people moving out of London and commuting in.</li> </ul>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential</p>

Respondent (with lpr ref)	Response	Council Response
	<p>- the infrastructure is limited with no medical centre proposed and will only benefit those who live in the new development rather than the existing community. We already have countryside to walk in and local shops.</p> <p>- Kennet school is already straining with pupil nos. So would the secondary school be built before any houses? Otherwise where will the slack be taken up.</p> <p>- This site covers the area that is supposedly safe and short enough for village children to walk to Kennet and why West Berks justified us losing the bus service to Kennet. Does West Berks continue to think it will be safe enough once it is a building site?</p> <p>- This is a huge increase to the population of Thatcham and will fundamentally change its small town feel.</p> <p>For these reasons I do not support the proposed development.</p>	<p>delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council,</p>

Mr & Mrs Kelley Hope (lpr1224)	We object on the following items:  Settlement Boundary	As part of the preparation of the LPR the council has undertaken a Settlement Boundary Review (SBR).The settlement boundary criteria make clear that boundaries will include sites allocated through the Local Plan process.

Respondent (with lpr ref)	Response	Council Response
	<p>Thattham Settlement Boundary follows Floral Way from the A4 north towards Lawrence Lane. Land to the north-east of Floral Way is currently located outside of the Settlement Boundary. West Berkshire Local Plan Review to 2036 – Regulation 18 Consultation, Policy 2, C1 Location of New Housing in the Countryside states, “a presumption in favour of development and redevelopment within settlement boundaries and a presumption against new development outside of settlement boundaries”.</p> <p>The LPA’s current Housing Site Allocations – Newbury and Thattham Spatial Area, Table 2, Site Options Considered and Rejected; THA007 Land at Harts Hill states that the site was rejected based on “rural character, site separated from built form by Floral Way, potential for flooding, high archaeological potential” and “overhead power lines”.</p> <p>As stated in Thattham Strategic Growth document instructed by the Local Authority provided by David Lock Associates, “Thattham’s historical development is affected by the surrounding relief. Apart from a small amount of development towards Henwick Park and Cold Ash, the town has remained in the valley bottom... The only submitted sites affected by relief constraints are located to the north of the town, particularly those to the north-east of Thattham”. Due to the site’s topography, any proposed development will appear overbearing to existing properties along Farmhouse Mews in both scale, mass, and bulk. Any development sited on higher ground would have direct views into existing properties.</p> <p>The Strategic Growth document further mentions that the, “land at Harts Hill Farm... are closer to the AONB boundary and higher on the slopes above Thattham, and are more constrained for development in terms of topography, landscape sensitivity and ecology.”</p> <p>Thattham’s Strategic Growth Study by David Lock Associates and Stantec for West Berkshire Council states that THA10 Land at Siege Cross Farm has previously received 2 major planning applications that were both, “refused ultimately for being outside of Local Plan, and being beyond the edge of existing settlement boundaries”. Both applications were further refused by the Secretary of State.</p> <p>Local Plan Review 2020-2037: Emerging Draft states that;</p>	<p>North East Thattham is proposed for allocation under policy SP17. Should the site, or any part of it, be removed from the LPR the boundary for Thattham would be adjusted to exclude it. It is acknowledged that the settlement boundary is currently drawn around the whole of the proposed allocated site at North East Thattham whilst Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thattham to the AONB.’ The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. As a strategic level study the LCA assessed the site as a single tract of landscape and so whilst the study makes clear that there is a variability of landscape capacity within the site boundary and that this is a constraint that should inform design, it does not assess the capacity of individual components of the site in relation to individual planning proposals. At this stage it is therefore not possible to draw the settlement boundary any tighter. As the LPR progress and more detailed work is done on the sensitivity and capacity of different parts of the site to accommodate development the boundary will be amended accordingly.</p> <p>In regards to impact on the North Wessex Downs Area of Outstanding Natural Beauty, the Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which takes account of the AONB and which will provide the context within which any proposed development would need to conform. The LCA notes that whilst there is no strong inter-visibility between the site and the AONB it does lie close to it and concludes that the site</p>

Respondent (with lpr ref)	Response	Council Response
	<p>- Policy SP 1 “Opportunities will be taken to maintain and enhance the identity of Thatcham separate to that of Newbury and its surrounding rural settlements.”</p> <p>- Policy SP 1 “The villages in the surrounding area will retain their existing role and separate identity, with settlement boundaries and Policies SP8 and DC1 ensuring that physical separation is maintained.”</p> <p>- 5.36 “The separate and distinctive identity of these individual settlements helps to define communities and is an important feature of the local character of West Berkshire... Much of the pressure for development is around the edges of settlements, which can physically lead to coalescence or introduce an increase in activity which has an urbanising effect. Despite this, a key feature of even the larger settlements is the way in which few have coalesced in recent times and so the blurring of physical distinction between places has largely been avoided. The retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character.”</p> <p>We therefore believe that Harts Hill Farm is of poor siting with regard to any proposed development, causing detrimental impact on both the historical importance of woodland, Bucklebury Plateau and AONB, alongside the segregation from Thatcham’s built form. We also believe that any development to the north-east of Thatcham will contradict the outlined policy noted above regarding separation between individual settlements, as any development will adversely amalgamate Thatcham, Bucklebury and Cold Ash. Were the LPA to amend the Settlement Boundary to include the development areas, this amendment would solely be to facilitate the proposed development, undermining the intrinsic values outlined within the LPA’s own policy.</p> <p>Countryside, Greenfield and Brownfield Sites Required under The Town and Country Planning (Brownfield Land Register) Regulations 2017, publicly available data provided by West Berkshire Council states that, when published, there were 54 brownfield sites within the district with a minimum net dwelling total of 2,841 houses across a total of 46.77 hectares. Further, as published by MHCLG on 11th November 2020, West Berkshire currently have 470 long-term empty homes, a 103% rise from 2019.</p>	<p>does form part of the setting of the AONB. The LCA will be published as part of the council’s evidence base to inform the proposed allocation.</p> <p>The updated version of the proposed allocation policy in the next published version of the LPR will set out that a landscape and visual impact assessment (LVIA) is undertaken for the site which will need to comply with the LCA. The LVIA will inform the final capacity, development, design and layout of the site.</p> <p>With any application that would come forward on this site, the developers would be expected to submit a ‘masterplan’ / visual representation, with accompanying explanatory text, to provide details in relation to matters such as the parameters of the site, height parameters, green open space, etc.</p> <p>In relation to housing requirement for the District, the local housing need (LHN) is calculated according to the government’s standard method, which has been revised since the onset of the pandemic, but has not changed for West Berkshire (other than a small increase to 513 dwellings per annum due to slightly changed housing affordability ratios published in March 2022).</p> <p>Para 61 of the 2021 NPPF states: To determine the minimum number of homes needed, strategic policies should be informed by a local housing needs assessment, conducted using the standard methodology in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>Thattham’s Strategic Growth Study for West Berkshire Council states that, “Thattham’s attractiveness as a place to live is strongly rooted in its high quality surrounding countryside”. It goes on to state, “it is important to note that Thattham has few examples of hillside development and so extending the urban grain and pattern of the immediate surroundings is unlikely to achieve a positive result”.</p> <p>Based on the previously referenced West Berkshire Local Plan Review to 2036 – Regulation 18 Consultation, Policy 2, C1 Location of New Housing in the Countryside where it states the LPA are in favour of redevelopment within settlement boundaries, alongside the brownfield and empty homes data noted above, there is insufficient reasoning to propose and accept new development at Harts Hill Farm due to the site being located within open countryside, outside of Settlement Boundary, and where the Local Authority’s existing empty and brownfield stock is in excess of the number of units proposed at Thattham. Far more appropriate sites are therefore available for redevelopment.</p> <p>Thattham Strategic Growth Study Stage 3 Report, Figure 50, Masterplan Concept also fails to depict the location of an existing Public Right of Way, walked frequently by Thattham residents. Although a footpath may be redirected under a Public Path Diversion Order governed by requirements set out in Section 119 of the Highways Act 1980, it is believed that any built form or diversion of this public footpath would be detrimental to public enjoyment, distance and views.</p> <p><b>Flooding</b> Tributaries to the River Kennet, flowing south through Thattham, have historically increased surface water run-off to a point of excess, causing the river banks to burst, flooding extensive areas of residential and agricultural land to both the north and south of the river. The Risk of Flooding from Surface Water map B2 drafted from 2018 data, denotes localised 1 in 30 year flooding along all tributary streams, especially those located to the west of Farmhouse Mews and The Spinney. Although measures have been implemented by means of the Flood Prevention Scheme to prevent future flooding to Dunston Park, existing agricultural land between Floral Way and Park Farm are periodically water-logged. Where partial percolation of</p>	<p>The Council does not consider there are exceptional circumstances to justify an alternative approach and the available evidence does not support any reduction of the local housing need figure.</p> <p>The calculation of housing need does not take account of any of the potential sources of supply. That is a separate consideration.</p> <p>The housing requirement has been expressed as a range in order to allow for flexibility and ensure that the minimum LHN is met.</p> <p>The upper end of the range has been proposed to allow for approximately 5% additional homes The use of a range helps the Council meet the objective of boosting housing supply but also ensures that the Council is not assessed for the Housing Delivery Test against substantially higher numbers than the housing need based on the standard methodology.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thattham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at</p>

Respondent (with lpr ref)	Response	Council Response
	<p>surface water delays the immediate impact on local waterways and managed drainage systems, through an extensive increase in hardstanding generated by any new development, the discharge of Surface Water will only increase in both speed and thus volume, putting the properties along the northern boundary of Floral Way at severe risk of flooding. Flood History data also notes that 1,107 properties within the Thatcham area had internal flooding, source of which was surface water. The properties along Farmhouse Mews that border the fields to the north were also constructed with land drains along the boundary line to try and prevent run-off from the fields entering the curtilage. However, gardens frequently become sodden with garden retaining walls showing signs of significant water retention. Again, this issue will only be exacerbated by an increase in hardstanding increasing the flow of surface water down the slope towards Farmhouse Mews.</p> <p>Transport The A4 is a major road connection between Reading and Newbury, with connections to the M4 at J12 and J13 respectively. Thatcham Strategic Growth Study, Stage 1 Report, Table 8 states 79% of people travelling from Thatcham and 70% travelling to Thatcham use a car, with large delivery lorries frequently travelling to and from Harrods and Forterra depots within the Colthrop Industrial Estate. This, in addition to through traffic means that the A4 is an extremely busy highway. West Berkshire Council's Local Plan Review Transport Assessment Report Phase 1, Table 5.3 outlines traffic forecasts and scenarios for the junctions close to the new development. Assuming that the data was obtained around the time that the report was dated and thus during the COVID pandemic, the information disclosed is a misrepresentation of reality. The forecast and scenario table within the Transport Assessment provides a disingenuous representation of pre-COVID congestion issues in addition to the table being void of east bound data at Bath Road – Piper's Way and Bath Road – Floral Way. During peak times pre-COVID, vehicles along Floral Way attempting to travel east bound on the A4 always experience delays far greater than 50+ seconds, with instances of congestion, not caused by accidents, exceeding 15-minute</p>	<p>junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p> <p>Housing provision must support the needs of the whole community, including the provision of both market and affordable housing, and reflect the needs of specific groups such as, but not limited to, families with children, single person households, the elderly, those households with specific needs, those wishing to build or commission their</p>

Respondent (with lpr ref)	Response	Council Response
	<p>delays and traffic backing up to Harts Hill Road roundabout. As the proposed development outlines the construction of 3no. new schools, road congestion between the core hours of 7-9am and 4-6pm will greatly increase. Thatcham Strategic Growth Study, Highway Strategy notes that traffic will be directed towards the A4, relieving the 'rat run' of traffic through Cold Ash and Bucklebury. However, historically during high congestion, Harts Hill Road becomes the main thoroughfare for many vehicles avoiding the A4 traffic. Statista Data 2017/18 states that on average there are 1.4 cars per household, therefore a development of 2,500 households will provide an increase of 3,500 cars on an already overloaded local road network. Where West Berkshire's Parking Standards are adhered to, any development with all parking spaces occupied would be greatly over the estimated figure of 3,500 cars noted above. Thatcham Strategic Growth Study also indicates that, "walking, cycling and public transport must become the natural choices for getting around", though this contradicts Stage 1 Report Table 8, noted above; reports also show that car usage has increased within West Berkshire therefore the statement is not accurate. Noted within West Berkshire Council's Local Plan Review 2020-2037, Item 4.8 "both towns have significant employment provision and Newbury provides many of the major services, including retail and leisure facilities. There is significant movement between the two towns and transport linkages, by rail and road are vital." This further contradicts the Strategic Growth Study. Additionally, although the Colthrop Industrial Estate will be within walking distance of any proposed development, the 'thriving' estate is not the sole source of employment with the majority of any new development commuting to a place of work, typically and as stated in the Strategic Growth Study, by car. The Thatcham train line is a major connection between Newbury and Reading, towards the southwest and London respectively. The line is also frequently used for freight trains, and with only a level crossing this is already a major cause for congestion throughout the day. There is no plausible location to introduce a bridge at Thatcham station therefore an excessive increase in vehicles will only further antagonise this issue. The proposal also identifies a new bus route to run immediately behind the properties of Farmhouse Mews. The gardens of Farmhouse Mews were designed and covenanted to be a sympathetic transition between residential</p>	<p>own home, gypsies, travellers and travelling showpeople and those seeking houseboat moorings. Developers will therefore need to consider housing mix in their proposals, including any local evidence of housing needs or evidence in Parish or Neighbourhood Plans which may be important considerations even for small sites, particularly in rural areas.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>built form and agricultural land beyond, as such all the properties only benefit from post and rail low level fences. Were a new road and bus route proposed, all privacy and security to the garden and rear facing rooms would be significantly compromised.</p> <p>“Fulfilling Community Objectives” The Thatcham Strategic Growth Study Phase 3 report by David Lock Associates states within its Summary of Findings, that a concept masterplan for developing north-east Thatcham has been developed building on principles established at a community representatives’ workshop. Unsure of who these representatives are and what their links are to the area, it is hard to believe such a largescale development is fulfilling community objectives. The Thatcham Town Council Liberal Democrat representative, Cllr David Lister, is strongly against the development from happening, residents who would be directly affected by the development alongside many within the Thatcham community are also strongly against the development, with a petition started to voice their objections. The development’s consultation period was launched just before Christmas but was not widely advertised, therefore many residents were unaware of the consultation or the development itself taking place. With such a short time frame to respond, it allows little time to review the documentation drafted and respond with any objections prior to the consultation deadline. Thatcham community have not been given adequate time to respond to the proposal and object accordingly, therefore it is imagined that any response received will not give a true representation of the thoughts of the residents.</p> <p>Size, Density and Tenure Stated within the Local Plan Review 2020 -2037: Emerging Draft, “residential development will contribute to the delivery of an appropriate mix of dwelling tenures, types and sizes to meet the existing and future housing needs”. Also stated within the Emerging Draft under Housing type and mix, Item 6.50, Table 3, the size in highest demand for market value properties is 3-bedroom at 40-45%, with affordable housing being 2-bedroom properties at</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>35-40%. The emerging plan also mentions that there should be a broad mix of future dwelling sizes for both market and affordable housing, however this appears to be seldom the case with recent developments within the local area. Reed Gardens in Woolhampton for example appears to have delivered 14 affordable houses, though only 2 of those properties being 2-bedroom, the highest in demand, with the remainder being 3 and 4-bedroom properties. Additionally, recent developments within Settlement Boundary could have increased density without negative impact on the development or surrounding context. As such, had recent developments delivered properties of a size to meet those highest in demand, and/or provided a density of scheme appropriate for its location within Settlement Boundary, the requirement for new housing may be fewer than the 2,500 proposed. The 2011 ONS Census states that there were 10,241 dwellings in Thatcham. The number of new units proposed at the north-east Thatcham development would mean an increase to Thatcham of nearly 25%, an excessive number that neither the infrastructure or surrounding landscape would cope with. Tull Way for example consists of only 75 properties however exceptionally low density when compared to the site's area.</p> <p>We, along with many other residents of Thatcham object to the extent of the north east Thatcham Development, specifically to those affecting the Harts Hill Road and Harts Hill Farm area. We hope that you will reconsider the proposed Housing Site Allocations and look to locating the houses required in a more appropriate, brownfield or within Settlement Boundary area, not within open countryside.</p>	
Christel Caderius van Veen (lpr966)	<p>I am writing to express my opposition to the plans to build 2500 houses in the floral way/crematorium area of Thatcham.</p> <p>Given the enormous levels of rainfall we have each year, which is increasing annually, it is irresponsible to consider developing more of the green belt land which helps to absorb this and prevent flooding, whilst there are areas which are already no longer green, and have space for housing and better infrastructure. There will be many such sites, especially given the changes Covid 19 will make to working practices. I implore you to consider alternative non green belt sites. It may be that several smaller housing developments</p>	<p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>arise instead of one huge one but isn't that more natural anyway - it will allow people to slot into existing services much easier.</p> <p>Please do not allow such a wide scale destruction of yet more of our countryside. It's not just there to be decorative, it's serves a very useful purpose, and unless you heed warnings, you won't notice until it's gone and the town floods....</p>	<p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p>
Daniel Musker (lpr969)	<p>Re: Objection to the proposed NE Thatcham housing development (Local Plan Review 2020-2037 Emerging Draft)</p> <p>As a West Berkshire Council resident and Bucklebury Parish Council (BPC) parishioner, I feel that I have been given very little notice about this significant proposed development in NE Thatcham. It was by chance that I stumbled across the plans on social media after the festive period. I am disappointed that neither WBC nor BPC have been more proactive in notifying local residents about such an important matter, and to allow for a full and timely consultation process.</p> <p>Having reviewed the publicly available information and plans for the development, as well as attending the BPC briefing from David Southgate via Zoom on 15th January 2021, I would like to outline the reasons for my objection to the proposed development below.</p> <p>Negative impact to the surrounding area</p> <ul style="list-style-type: none"> <li>• The scale of this proposed development of 2,500 homes is unacceptably high for a town the size of Thatcham and its surrounding area</li> <li>• It will negatively impact the character of rural communities in West Berkshire</li> <li>• Adversely affect the prominence of the surrounding landscape and countryside</li> </ul>	<p>In relation to consultation publicity, the consultation was widely publicised, in accordance with the council's Statement of Community Involvement (SCI), on the Council's website and in the local press and via notification emails to those registered on the Council's consultation database.</p> <p>Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>

Respondent (with lpr ref)	Response	Council Response

Respondent (with lpr ref)	Response	Council Response
	<p>bad weather can be full of water, often spilling out onto the road, making it difficult to see the edge of the ditch and the potholes. Add in that there is only one working street light along this road and a significant number of the reflective black &amp; white posts are sliding into the ditches or hit by traffic.</p> <p>Parents with young children in pushchairs, often put theirs and their childrens lives at risk when walking their children to school, as they have to walk along the road. No footpath paths. Over the last couple of years, we have seen more of the larger tractors using this road and they certainly do not take any notice of speed restrictions.</p> <p>Without question, number of houses proposed to be built in Thatcham at this one site, will certainly increase, with many drivers coming through Bucklebury and down Harts Hill. This road already presents dangers with buses and trucks trying to pass each other, especially if it on a bend.</p> <p>Currently the fields between Bucklebury and the A4, soak away a significant amount of rainfall (indeed it was this that caused the flooding in Thatcham in 2007)</p> <p>Children from the NEW housing, some of them may come to Bucklebury School, which would then add more cars being on Harts Hill, and parent parking in Blacklands Road/Berries Road could cause major problems with residents living in this area.</p> <p>As seen with other developments in Thatcham (such as Kennet Heath), I am really concerned that a development that starts off at 2,500 houses will end up being nearer 4,000 houses. With Kennet Heath, the initial plans were for 500 houses but the developers insisted that they could not complete all the infrastructure required by the council as part of the plans (i.e. pedestrian bridge over the railway) unless they could increase the number of houses built. The estate was not built to ensure that at least 2 cars per household could park off road and the majority of cars park on the road and part on the pavements. Indeed there is no dedicated parking for those living in flats. What should have been a 3 bedroom detached house with a good size</p>	<p>changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>garden is now 2 x 3 bed semi on the same plot with a tiny postage stamp of a garden.</p> <p>It's all very well saying that additional facilities (shops, doctors surgeries etc) will be built but what guarantee is there that they will actually be built. The Dunstan Park estate had provision for a new Primary School. However, it was decided that it wasn't needed and ended up with houses being built on that site instead (the area that is now Rosemary Gardens). Six years after this decision was made, there was not enough Primary school places in Thatcham for all the children living in Thatcham (2010 intake).</p> <p>Thatcham Railway Station is one of the busiest stations in Berkshire and will only get worse with additional houses. Prior to lockdown, there was insufficient parking at the station and buses are infrequent. Anyone living in Bucklebury has to drive to the Station – they do not have the option as Thatcham residents do to walk to the station. Bus services in the village are infrequent and does not stop at the Station. Unless you are parked at the station before 7am, there is not usually any space left.</p> <p>A vehicular bridge over the railway is needed, but this needs to be sited away from the current crossing and moved further east to ease the traffic in Thatcham. Even in lockdown, the queues for this crossing extend a long way down Pipers Way and Station Road (beyond the entrance to Kennet Heath) bringing this area of Thatcham to a halt when the barriers are down.</p>	
Jon Willis (lpr1013)	<p>It is very encouraging to see that this proposal is being considered as a single entity although being supported by four different developers. This is vital to ensure that the area is planned as a whole along consistent themes and that the necessary infrastructure is provided. This is unlikely to be the case if separate developers were allowed to operate independently and it is consequently very important that this joint approach is maintained. In my opinion the planning consultants have produced an excellent comprehensive analysis and report for the area, placing particular importance on environmental issues, with emphasis on water and green space management.</p>	Comments noted and suggestions welcomed.

Respondent (with lpr ref)	Response	Council Response
	<p>A particular theme of the plans is to encourage 'active travel'. This is to be strongly welcomed and much more likely to be achieved if the area is planned as a whole. Pedestrian and cycle routes must be designed to the highest quality in terms of safety and attractiveness and wherever possible key routes must be more convenient and wherever possible quicker to use than taking the car. The relationship between the layout of roads versus the layout of cycle and walking routes to and from homes is so important in this respect.</p> <p>The Transport Planning consultants have undertaken a standard methodology assessing the impact on movement and traffic using data from a number of sources. They estimate the plans will generate around 2900 internal trips and 2500 external trips in the AM peak. Using modal share information from the adjacent area of Thatcham they find 80.8% of external trips are made by mechanised modes, 10.6% by cycle or on foot and 8.3% by public transport. Trip distribution shows a predominant east west movement with only 10% of trips to the north and 5% to the south.</p> <p>The consultants have then made heroic assumptions about future travel patterns. Lockdown and the other restrictions have had a major impact on travel in the UK with the Government encouragement of home working. A pre Covid study for the DfT suggested that about 10% of the workforce would use some form of tele-working in the future but that this would have little impact on travel. However both individuals and companies now have experienced the costs (worsening personal social wellbeing) and the benefits (reduced travel time and cost for the individual, reduced office space requirement for companies) which is bound to have a permanent impact, but impossible to assess at this time. The consultants have assumed a very conservative 2.2% change in trips as result of home working. The change will depend to a large extent on the job profiles of the inhabitants and I would suggest that a higher figure of say 10% is not out of the question.</p> <p>The consultants have also made an estimate for the likely impact of the design emphasis on 'active travel' with strong encouragement for walking and cycling. It is hoped this will lead to a figure of close to 100% for all trips within the area. For trips out of the area they assume a fall of 20% in the proportion of car trips in comparison with the neighbouring area of</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Thattham. The estimates then give 66.7% using motorised modes, 16.6% by cycle and on foot (a 57% increase) and 14.2% by public transport (a 71% increase). To achieve these changes will require significant investment in services and facilities.</p> <p>Local destinations within walking/easy cycle times are Thattham town centre, Thattham station and the West Berkshire Hospital. These are the routes where of-site investment is required to make them attractive and safe. The consultants have identified a number of measures to improve road crossings and cycle ways. I would argue that the scope of these is inadequate to achieve a fundamental change in safety and quality. A much more imaginative approach is needed to make use of these routes the norm in the future.</p> <p>A 71% increase in public transport will also be difficult to achieve without investment. The consultants suggest a circular small bus service to link the town centre and the station could be introduced. This is to be welcomed but as they point out such a service will need financial start up support if the increase in public transport is to be achieved. The strong east-west movement from the site can be supported by the No.1 bus route. But this will need to be diverted closer to or within the site and quality waiting areas provided. These are best placed within the local centres.</p> <p>The work suggests only 10% of journeys will be made to the north through the AONB area and that these routes will be restricted in some form to discourage traffic. It is not clear what is envisaged but traffic calming measures similar to those in Upper Bucklebury in Chapel Row and Southend Bradfield should be considered.</p> <p>In summary the overall approach to the development proposal is to be welcomed. However to achieve the desired impacts the following are deemed essential:</p> <p>The area must continue to be planned as a single entity and the design principles strongly maintained. The area must not be allowed to be developed piece meal by individual developers.</p> <p>The emphasis on 'active travel' with high quality and safe routes within and leading to and from the area should be at the forefront of the detail design of the homes, local facilities and road layouts.</p>	

Respondent (with lpr ref)	Response	Council Response
	<p>Significant improvements to off-site pedestrian and cycle routes and secure cycle facilities at places such as the town centre and station will be required. Further work will be necessary on the appropriate bus routes and facilities and funding.</p> <p>Further understanding of the measures to minimise traffic impacts on the villages to the north is required.</p> <p>Changes:</p> <p>In summary the overall approach to the development proposal is to be welcomed. Respondent (with lpr ref)	Response	Council Response
	<p>At my local school there are problems of a quiet estate turning busy with lock down restrictions, creating lines of parents and children leaning on residents walls and rails. Having coffee meetings outside our houses long after school has started. With them blocking the residents' drives when driving and dropping off.</p> <p>I have two elderly residents who have lived there before school was built, and now not only is it weekdays, we have the traffic but weekends too, with football and slimmer world.</p> <p>Maybe you should look at turning warehouses not in use into places to live with schools and hospitals, not build further on land which is not only beautiful to look at but create a haven for wild life which needs it.</p> <p>As humans we don't think of the wild life that we need to keep for the future generations but what we need instead.</p> <p>These objections are very valid, you don't live nearby and for all of the local old and young residents. I feel you need to address certain issues.</p> <p>The other impact you have is the pollution you are creating for the poor wildlife. With older residents who have lived there for 50 to 60 years.</p> <p>I feel you need another way to create life not line pockets of land owners trying to sell land. I am looking forward to your input, on the above.</p>	<p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p>
James Plusnet (lpr1016)	<p>What provision is being made for healthcare provision to support this new community? They are already overstretched. I see nothing in the plan and maps.</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>

Respondent (with lpr ref)	Response	Council Response
Paul Weston (lpr1018)	<p>I wish to provide my opinion and confirm my objection to the enormous development proposed for North Thatcham.</p> <p>I object on several Grounds as follows:-</p> <p>Environment</p> <ul style="list-style-type: none"> <li>• The development would harm the environment surrounding Bucklebury</li> <li>• The development would cause a dramatic reduction in the visual and physical separation of North Thatcham and Bucklebury Village, with the reduction and even the loss of a rural gateway to Bucklebury.</li> <li>• The rural views from Floral Way, A4 and other areas of North Thatcham which are, much valued by the resident, will be removed</li> <li>• The development will be highly visually intrusive from many vantage points looking south</li> <li>• The development will destroy area of tranquillity and agricultural land between North Thatcham and Bucklebury.</li> <li>• I fear that the Bucklebury primary school will become surplus to requirements if they build a new primary school on this development and the Bucklebury primary school will close and be developed.</li> </ul> <p>Traffic</p> <ul style="list-style-type: none"> <li>• There will be a huge increase in the traffic flow through our village especially at peak times</li> <li>• There will be increased traffic flow on to Floral Way, and will affect the access onto the A4</li> <li>• There will be strain on the local infrastructure</li> <li>• There will be an increase in traffic into the village and to Bucklebury primary school as many North Thatcham residents send their children to the school</li> </ul> <p>Flooding</p> <ul style="list-style-type: none"> <li>• There is a proven flood risk to residents south of the application site despite the flood alleviation measure already installed.</li> </ul> <p>Sustainability</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Car dependency is likely to be very high at this location, and therefore this site fails on the sustainability criteria.</li> <li>• There are very few employers close to the site leading to the obvious increase in car usage.</li> <li>• Secondary Schools are not within walking distance.</li> <li>• Walking distance to significant services too great.</li> <li>• Public transport remains non-viable option due to limited timetable and frequency</li> </ul> <p>Alternative sites within West Berkshire</p> <ul style="list-style-type: none"> <li>• Over Development in one area is lazy planning policy and such places all the burden and the need for resources in one place and also they will become over stretched.</li> <li>• I believe that there are other more suitable sites that are already available within West Berkshire, and this is just to name a few             <ul style="list-style-type: none"> <li>○ Land at the junction of Turnpike Road and Benham Hill next to the community hospital</li> <li>○ Land around Henwick Farm off Turnpike Road</li> <li>○ Land in Theale off the high street Hoad way and M4,</li> <li>○ Theale - Lakeside, The Green</li> <li>○ Tilehurst - Land off Pincents Lane formally the golf course</li> </ul> </li> </ul>	<p>ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>Thatcham is an ‘Urban Area’ as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector’s report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p>

Respondent (with lpr ref)	Response	Council Response
		The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.
Richard and Jennifer Ainsworth (lpr1028)	<p><b>GROUND.</b> The proposals will have a severe adverse impact on the Communities and Environment within the Bucklebury parish.</p> <p><u>Traffic</u> The parish suffers from ever increasing traffic using Harts Hill though to Bradfield as an East - West rat run. There are no speed limits on most of these rural roads affected by the proposals which are already affected by speeding vehicles and subject to accidents in recent years. The scale of the development, with its schools, sports facilities and services will over time overwhelm the roads which are important as part of the rural environment.</p> <p><u>Heritage/Environment</u> The natural heritage will be blighted considering its impact on the legally protected AONB. Although the proposed sites are not within the North Wessex AOB the N.E. access roads run through Bucklebury parish and thus the AONB is adversely affected. The County Park element does not compensate for a complete change of landscape and character which exists at present e.g., open fields and agricultural land.</p> <p>With the development butting up to Long Grove the biodiversity of Bucklebury Common will be threatened. At present it is home to and is an important site for a variety of wildlife, including Night jars, Adders and Slowworms.</p> <p><u>Proximity to AWE Aldermaston</u> The designated zone is within AWE 8 km OCZ. This is set for a purpose and WBC should not be submitting such a large development for consideration.</p>	In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). 		changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.
Lyn Bliss (lpr1037)	<p>I wish to register my dismay at the proposed plan to build 2500 houses between Upper Bucklebury and the A4 and Floral Way. Those of us who live in Upper Bucklebury have chosen to live in a rural setting and do not wish to become a 'suburb' of Thatcham. In addition to that, I don't feel that the infrastructure of Thatcham could in any way support a development on such a scale. Schools in this area are already over-subscribed and facilities such as doctor's surgeries are stretched to the limit. Traffic, already a problem in Upper Bucklebury, would increase, and the resultant raised level of pollution be unacceptable. Thatcham has already had a very large increase in housing stock in the past two decades; enough is enough. Whilst I understand the need for housing, I feel that the proposed development is disproportionately large for the area and hope that the planning committee will refuse to permit it.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>- The current roads will not be sufficient to support this increased level of traffic.</li> <li>- These roads already suffer with concerning levels of speeding (recent Parish Council SIPS deployment has confirmed this and the police have the figures).</li> <li>- The increased traffic will be a safety concern for local residents, particularly children whilst walking to and from school.</li> <li>- The houses located on Harts Hill Road and Burdens Heath in Upper Bucklebury, and The Ridge in Cold Ash, do not have a footpath outside. Increased traffic along these roads will make it significantly more dangerous for pedestrians in these areas in particular.</li> <li>- The increased volume of traffic will impact the quality of life for the residents of the villages mentioned through increased traffic noise and disturbance.</li> <li>• The close proximity of the development to the North Wessex Downs AONB will put increased strain on this area: <ul style="list-style-type: none"> <li>- There is already significant waste issues, that would be a lot worse if not for the kind village volunteers who regularly undertake rubbish clearing days.</li> <li>- It would also experience an increase in 4 wheeled vehicles being used illegally in the woodland that the Parish work hard to limit/prevent.</li> <li>- The development would have a detrimental impact on the wildlife that currently lives in and enjoys the area.</li> </ul> </li> <li>• It will lead to a loss of the open aspect of the local neighbourhood and loss of existing countryside/rural views from a number of existing properties. This will specifically impact those properties along the lower Harts Hill Road region.</li> </ul> <p>Changes: I do understand that West Berkshire has a requirement to provide additional housing in coming years. However, I object to the scale of this development in this single location, for the points I mention above. If development of the proposed site is essential, I request the following be carefully considered:</p>	<p>modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p>

Respondent (with lpr ref)	Response	Council Response
	<ul style="list-style-type: none"> <li>• Significantly reduce the development from its current size of 2500 homes, to limit the impact on local residents by considering using additional sites across the West Berkshire area. We consider the proposal to be an unacceptably high density of homes.</li> <li>• Concentrate the development toward the southern Colthrop land. This would concentrate the development nearer to the A4 and limit the impacts I highlight to the surrounding villages and the AONB.</li> <li>• Ensure the development cannot be accessed from the Harts Hill Road.</li> <li>• In addition to the above, share plans that show how you will limit the flow of traffic through the surrounding villages including Upper Bucklebury, Cold Ash, Burdens Heath, Chapel Row and Bradfield.</li> <li>• Challenge the plans to concentrate the development in a band closer to Floral Way, in order to ensure that the development is as far away from the Wessex Down AONB as it can be.</li> <li>• Share plans to address the infrastructure challenges I highlight above including the train station facilities and the level crossing.</li> </ul>	
Jean & Neville Morris (lpr1041)	<p>We object to the development = pollution, loss of open space and the environment, population would be overwhelming for the area. Traffic would increase enormously, Harts Hill and the roads through the village would not be safe for all concerned.</p> <p>We want Bucklebury to stay as village, not to join the rat race of Thatcham.</p>	<p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p>

Respondent <i>(with lpr ref)</i>	Response	Council Response
		<p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p>
Chris Read (lpr1049)	<p>I would like to have my views known and taken into account for the proposed 2,500 house development NE of Thatcham.</p> <p>I am sure that other people have raised their concerns about impact to traffic on Harts Hill and Upper Bucklebury as well as the impact to environment in the area (concerns of mine as well).</p> <p>We all remember the 2007 flooding that Thatcham suffered (my wife's Nissan Almera was completely swamped on the A12 coming out of Waitrose on that day). Any development on Harts Hill will only increase this flood risk as the only major waterway for runoff is the other side of Thatcham (water will pass through the developments already in North Thatcham, Thatcham Town Centre, more housing and business estate, Kennet school, business park, station and then reach the river Kennet.)</p> <p>Changes:</p> <p>I would like to raise that the government has previously indicated it would be willing to fund a bridge over Thatcham level crossing as long as there is a development South of the Junction. I am sure it would be willing to invest its much vaunted infrastructure building budget to support a significant link to Basingstoke and the south.</p> <p>Crookham Hill and Crookham Common is an ideal area for development for the following reasons:</p>	<p>Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p> <p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham's flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>1. The inevitable impact to water runoff from Crookham Hill caused by any development can be easily be accommodate by:</p> <ul style="list-style-type: none"> <li>1.1 Kennet river</li> <li>1.2 natural drainage in the area and accommodating substrate</li> <li>1.3 rewilding of the area between Kennet River and Chamberhouse Mill Lane into marshes to slow and filter runoff</li> </ul> <p>There would therefore be the following assets created with such a development at Crookham Hill.</p> <ul style="list-style-type: none"> <li>1. Major access pinchpoint relieved at Thattham Level Crossing with a bridge funded by central government</li> <li>2. Sporting development at Crookham Athletics track</li> <li>3. Link to Thornford Park further development</li> <li>4. Opening up of further public access to Greenham Common and Brimpton Common</li> <li>5. Major rewilding benefitting around the river Kennet (south) not only benefitting wildlife but also easing flood relief for all downstream of Thattham</li> <li>6. No increase of flood risk to Thattham (no one will thank the council if, after another flood, their insurance premiums go up again).</li> <li>7. Suitable spaced development with plenty of accessible greenspace between new and existing conurbations (as opposed to Harts Hill Development which will be back to back with the other recent developments in North East Thattham).</li> </ul>	
Claire Kendall (lpr1045)	<p>I strongly object to the planning of 2500 houses being built between floral way and the crematorium in Thattham.</p> <p>We our a rural village it will cause more traffic ruin the green land and farms we can't cope with that many people in our small area, please think about the effect it will have on our villages.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without</p>

Respondent (with lpr ref)	Response	Council Response
		<p>mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p>
Sue Morgan (lpr1046)	<p>I write to object, in the strongest terms, to the above proposed development of any new housing to be built on the rural lands between Upper Bucklebury and Thatcham. Here are my main reasons:</p> <p><b>1. Building on a Flood Plain</b> The proposed site is completely inappropriate being an area of outstanding natural beauty and an important flood plain. Building houses and roads will have an adverse effect on Thatcham with the particular issue of “run-off” of water from so many house and garage rooves. I clearly remember the catastrophic flooding of lower Thatcham and Woolhampton in 2007. Expected climate change will only exacerbate that risk.</p> <p><b>2. Long term impacts of the Coronavirus pandemic are still unknown.</b> The impact of the current Covid pandemic on housing requirements is not yet known. Our demographics and working patterns will have changed and this plan needs to be shelved until the long-term impacts of Covid upon the housing requirements are better understood.</p> <p><b>3. Negative change on the identity of Upper Bucklebury as a village community</b> Upper Bucklebury will be effectively joined to Thatcham and the A4 which</p>	<p>In regards to concerns raised in relation to the risk of flooding, new flood alleviation measures would be built in to the development. There is a current planning application (as of 1st February 2022) for a basin on the corner of Floral Way and Bath Road, as part of Thatcham’s flood alleviation strategy. Flood attenuation schemes are included in the IDP.</p> <p>In relation to the plan being prepared prior to the coronavirus pandemic, the full impact of the COVID 19 pandemic will not be fully apparent for some time. The LPR is a long term strategy to 2039, during which time a review will be conducted every 5 years. The impact of changes in response to macro and local economic factors will be assessed through subsequent reviews, once such implications are realised.</p>

Respondent (with lpr ref)	Response	Council Response
	<p>will remove the rural, village feel of our community forever. Not only is the development hypocritical to the previous planning applications here which have been rejected on the grounds of “not in keeping with rural surrounds”, the proposals are contradictory to our future vision in the “Parish Plan” document. I have volunteered for Neighbourhood Watch, Bucklebury Primary School Governor and I spearheaded the project to improve the Fred Dawson Playpark in this village for more years than I care to remember. I was here when WBC needed a free Covid Helpline Service set up and co-ordinated in March 2020 to help my neighbours. Now I request that you are there for me and my love of this village, as a village.</p> <p><b>4. Lack of amenities</b> The proposal to build shops and other amenities to serve the population of the housing estate AFTER the houses are built is totally ludicrous and the wrong way round since the intervening pressure on the current amenities (and parking) will ensue. The same goes for the extra schools proposed which I think will also have a negative impact on Bucklebury Primary which has already faced funding difficulties as a small rural primary school.</p> <p><b>5. Traffic</b> The strain on traffic along Broad Lane (with the school-run cars for Bucklebury Primary School is already a problem) as well as an unacceptable increase in traffic on Burdens Heath where there is already a speeding problem. The safety of school children walking on Burdens Heath, where there is no pavement, makes this a particularly dangerous proposal.</p> <p>During a recent presentation by Mr. Southam, it was interesting to hear of the estimated 12% increase in traffic heading up Harts Hill Road and towards Upper Bucklebury. This is already significant on such a dangerous hill but is likely underestimated. The risk is that the increased congestion on the A4 and Floral Way (already an accident black-spot) leads to more ‘Rat Run’ traffic through Upper Bucklebury, Bradfield Southend, Woolhampton, Beenham and Midgham to name a few.</p> <p><b>6. Pollution and creation of environmental problems.</b> a. Any development of this rural area will result in an increase in traffic pollution which, in my view, is an irresponsible disregard to the health and safety of the local residents.</p>	<p>The development would involve a significant amount of open space which would be expected to serve the new population (and benefit the existing population). Highway works and active travel routes would assist in directing residents to using the A4/Floral Way rather than Harts Hill Road, and using an enhanced cycling and walking network to travel, including to Thatcham train station.</p> <p>Residents would make use of the newly provided education facilities on the site, which would not be expected to purposefully attract pupils from Bucklebury primary school.</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just</p>

Respondent (with lpr ref)	Response	Council Response
	<p>b. The currently proposed 'green buffer' that adjoins Long Grove is woefully inadequate.</p> <p>c. A large number of wildlife that already populate our rural surrounds – munt jack and other deer, badgers, foxes, a diverse range of birdlife as well as all the rodents and insects that form part of our biodiversity and ecological chains of predation, may be decimated or at least lose a large area of their current habitat. WBC has a clear statement on this: "Loss of habitats or habitat change as a result of inappropriate management are one of the most damaging threats facing rare species in Berkshire. These habitats should be safeguarded wherever possible and appropriate advice sought on managing them to conserve the natural diversity of life and to halt the extinction of species diversity not only in Berkshire but also in the UK. "</p> <p>d. The Floral Way boundary, formerly formally adhered to will, in effect, be broken.</p> <p><b>7. Inadequate health services to the current residents</b></p> <p>The current health services available to residents of Thatcham and the larger area are already inadequate in that there are waiting lists to become an NHS dental patient or doctor's patient. How can these over-stretched services possibly provide for new residents as well?</p> <p>In conclusion, I urge West Berkshire Council to object to any development proposals to the north and north-east of Thatcham which is unsuited in terms of infrastructure as well as geography and the transport network.</p>	<p>changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council's policy on pollution.</p> <p>Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site alongside the larger site area, is well related to the existing town of Thatcham. It is in close proximity to a range of services and facilities, including the train station. Thatcham is an urban area with a wide range of services and opportunities for employment, community and education. Development of a strategic nature at this site would support the service provision and regeneration that Thatcham requires.</p>

Respondent (with lpr ref)	Response	Council Response
Daniel Cox (lpr1047)	I am writing to you in relation to large new housing development in Thatcham. I would like to object this application due to the lack of infrastructure in the Thatcham area as well loss of rural countryside.	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p>
Sara Inskip (lpr1048)	Firstly this is massive over-development of the Thatcham area, for which infrastructure and services are already seriously lacking. There are not enough GP surgeries, dentists, schools or hospital services for the residents already in the area, so adding another small town to the edge of Thatcham seems disproportionate and will put those of us already living in the area at a huge disadvantage.	Thatcham is an 'Urban Area' as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector's report for the Core Strategy

Respondent (with lpr ref)	Response	Council Response
	<p>The area is so green and beautiful, this development would lead to a devastating loss of rural countryside and of the Thatcham green belt. The appeal of West Berkshire are our beautiful green areas and this would again be a huge loss for the current residents of the area.</p> <p>The impact on traffic around Thatcham, Newbury and the surrounding villages will be massive with the majority of the roads already unfit for the amount of traffic. This will lead to pollution, air and noise, which the current lack of again is what sets this beautiful part of the country apart from the eastern developed areas.</p> <p>I seriously hope that the above will be considered and that this development is removed from the plan.</p> <p>Changes: If housing is needed there are plenty of brownfield areas around Newbury that could be considered over and above this. Thatcham doesn't need nor have the infrastructure for more housing.</p>	<p>notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without</p>

Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In regards to the development of brownfield sites, when determining which new sites to allocate the Council are only able to consider land that is submitted to them through the HELAA. The HELAA includes brownfield sites that the Council are aware of.</p> <p>The supporting text to policy SP12 (Approach to Housing delivery) of the emerging draft LPR identifies that several sources will ensure a continuous supply of land across the plan period. These include amongst others, existing planning commitments (unallocated sites with planning permission), many of which are brownfield sites.</p> <p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be</p>

Respondent (with lpr ref)	Response	Council Response
		important to respect and enhance the character and appearance of the area.
Ben Richardson (lpr1050)	<p>I am one of a number of households on Berrys Road who objects to the new development in Thatcham.</p> <p>The loss and damage to wildlife is immeasurable, not to mention the environmental impact and strain on local services.</p> <p>I would like a full explanation as to why all the development needs to be in this one location, an area of West Berkshire that has already seen a huge amount of rapid growth. Why do you not consider a number of sites and spread the strain?</p> <p>My primary concern is for my children, the effect on our school and local roads. We moved to the area as I want them to experience rural life, not to be engulfed by a new town that is already struggling through over population.</p> <p>Changes: Spread development over a number of sites.</p>	<p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council's website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p> <p>Though delivery on a particular site can never be guaranteed, the Council closely monitors the position, annually updating the Five Year Housing Land Supply. At present the Council is able to demonstrate a supply of 7.3 years for the period to 2026.</p> <p>The Council's strategy is for a mix of sites: strategic sites such as Sandleford Park and North East Thatcham, which can delivering infrastructure, facilities and significant numbers of affordable homes and a larger number of medium and smaller sites, including brownfield sites within settlement boundaries. The strategy seeks to focus development in the more sustainable settlements of the District rather than distribute development more evenly. This approach continues that set out in the Core Strategy which went through all stages of consultation, examination and adoption by the Council.</p>

Respondent (with lpr ref)	Response	Council Response
Felix Hartley Russell (lpr1051)	<p>I am writing to object to the potential development of 2,500 houses to the North East of Thatcham.</p> <p>The area is already poorly under resourced in terms of amenities and decent infrastructure i.e schools and the pressure of 2,500 houses on this will prove catastrophic.</p> <p>The area provides an important buffer between Thatcham and Upper Bucklebury that with the development will see the two locations merge. This will put an unimaginable amount of pressure on the common and other countryside benefits nearby.</p> <p>I hope that you listen to the voices of the those that currently live in the community. I imagine there are numerous more suitable locations a development of this magnitude would be more appropriate.</p> <p>Changes: Alternative locations for development.</p>	<p>Concern regarding infrastructure provision is noted. Development which does not provide adequate and timely infrastructure will not be supported. An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p> <p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p>
Miranda Dorich (lpr1061)	<p>I am writing to object to the potential development of 2,500 houses to the North East of Thatcham.</p> <p>The area is already poorly under resourced in terms of amenities and decent infrastructure i.e schools and the pressure of 2,500 houses on this will prove catastrophic.</p> <p>The area provides an important buffer between Thatcham and Upper Bucklebury that with the development will see the two locations merge. Lack of Doctor and school facilities.</li> </ol>	<p>Thatcham is an ‘Urban Area’ as set out in the spatial strategy (for the existing Core Strategy and in the LPR), which is a prime focus for housing development, alongside Newbury and the Eastern Urban Area. The Core Strategy allowed Thatcham a period of consolidation following developments within the town, notably the former MOD site. However, the Inspector’s report for the Core Strategy notes that Thatcham should be a location to consider for additional housing, in any review to accommodate more housing. More housing is now required, and the Council, mindful of the strategic allocation at Newbury, are exploring further housing development in an Urban Area.</p> <p>The scale of the development is considered to bring about the infrastructure needed to support the development without harming the town. Benefits arise from the development, including formal and informal green infrastructure, active travel routes, education and community facilities, and highway improvements.</p> <p>The site is not within the Green Belt (there is no Green Belt in this District).</p> <p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at</p>

		<p>junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). However, a development of this nature would not be expected to go ahead without mitigation measures and improvements being made to local transport networks as addressed in the IDP and informed by updated transport modelling. The package should better accommodate the expected increase in traffic as a result of the development. The modelling outputs focus on the impacts for both morning and evening peaks. It should be noted that it is not just changes to the highway network that will form mitigation packages. Other measures to reduce vehicles journeys from the development in favour of more sustainable travel and lifestyle choices will be important elements of the overall transport plan.</p> <p>In relation to concerns regarding pollution, the LPR includes a range of policies including DM4: Environmental nuisance and pollution, DM5 Water Quality, DM6: Water Resources and Waste Water and DM7: Air Quality. These policies address concerns relating to pollution as they ensure development proposals are considered against their potential impact on contamination, air, light, water and/or noise pollution whilst aiming to help improve local environmental conditions such as air and water quality. These policies have been revised following the regulation 18 consultation to strengthen the Council’s policy on pollution.</p>

		<p>The separate and distinctive identities of Thatcham, Cold Ash and Upper Bucklebury help define those communities and it is acknowledged that should the site be developed there will be a reduction in the physical separation between them. The council is clear that the retention of these actual and perceived visual breaks remain important for the continued retention of the existing settlement form, pattern and character. To that end, any development on the site will be landscape-led and retaining and protecting the separation and identity of individual settlements will be embedded into the design process.</p>
Diane Boddy (lpr1095)	<p>This area looks very much like a greenfield area. What has happened to West Berkshire's policy against developing such sites. They applied it fiercely against Lidl's proposed store in Tadley. I hope Lidl's appeal can redress the balance.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver 'a network of green infrastructure which will include a new community park linking Thatcham to the AONB.'</p>
Becky Arnold (lpr1094)	<p>I am alarmed to hear to the plans to build more houses on the Thatcham/Bucklebury green space.</p>	<p>Policy SP1 (Spatial Strategy) of the emerging draft LPR makes it clear that in order to meet the Council's housing requirement development on Greenfield sites on the edge</p>

Respondent (with lpr ref)	Response	Council Response
	<p>I this area is a big part of my life and we have already suffered considerable green space loses in recent years to the area. In this green space we have much wildlife, nesting birds, and rare species of fungus included one not thought to exist in the south. We need to put money into redeveloping urban areas and NOT to continue to destroy our countryside I/we strongly object</p>	<p>of settlements is necessary. Sensitive design will be important to respect and enhance the character and appearance of the area.</p> <p>Within the site it is proposed to include a network of green infrastructure which will include a new community park linking Thatcham to the AONB.</p> <p>The Council is clear that development on the site will be landscape-led and has undertaken a Landscape Sensitivity and Capacity Assessment (LCA) which will provide the context within which any proposed development would need to conform. Policy SP17 notes that development will be expected to deliver ‘a network of green infrastructure which will include a new community park linking Thatcham to the AONB.’</p> <p>In relation to wildlife impact, a baseline assessment of the site was undertaken by the Thames Valley Environmental Research Centre (TVERC) and is referred to in the Housing and Economic Land Availability Assessment (HELAA), one of the LPR evidence documents. The covering report from TVERC will be published on the Council’s website to support the proposed submission version of the LPR, as will the individual assessments.</p> <p>The updated version of the proposed allocation policy will require that any application is supported by an ecology strategy which will set out how priority habitats and ecological features will be protected and enhanced.</p>
Mel Haffner (1088)	<p>I understand that West Berks council have to build new homes but there is very little suitable land to build on in our area and we are being asked to consider squashing too many homes into a small space, too close to an AONB that needs more protection as part of Rural West Berks</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic</p>

Respondent (with lpr ref)	Response	Council Response
	<ol style="list-style-type: none"> <li>1. Harts Hill is very steep, narrow and full of bends and no room for a pavement. It is completely unsuitable for the amount of extra traffic that this new housing will bring. It would be dangerous.</li> <li>2. Once at the top of the hill if the cars go left the Ridge Road will end up being used as a rat run with people trying to cut through to the A34 or right through Upper Bucklebury and Chapel Row in order to get to the M4.</li> <li>3. If the cars try going over the railway crossing at Thatcham they will be queueing for ages, already many people just turn around after they have waited a very long time.</li> <li>4. This proposed development is much too near the AONB. Bucklebury Common has seen a huge increase in visitors over the last year as people looked for places to walk during the covid crisis. This has resulted in lots of footpaths and parking spaces being churned up. There is a real problem with 4 wheel drive vehicles and off road bikes disregarding the rules and trying to ride through the woods, disturbing wild life, churning the paths up and getting stuck. With all the extra houses and people all these problems will have an even greater effect on our beautiful countryside and wild life.</li> <li>5. Locally many people go our litter picking on the common, the amount of rubbish left is astounding, increased this last year by fly tipping. The litter is a danger to wildlife and this will get worse with more cars driving past throwing items from their windows or dropping in the woods.</li> <li>6. The common is home to so much wildlife, many deer who roam freely and cross the Ridge Road, their lives and habitat will be threatened.</li> <li>7. The wonderful bird life will be threatened too, the woods and common are home to so many, including owls and nightjars. The proposed building is too close to these outstanding natural areas and once land is built on, that's it, the eco system changes.</li> </ol> <p>Please don't destroy this beautiful part of West Berkshire, there are other alternatives for housing.</p>	<p>by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). Prue Fenn (lpr1089)	I would like to place my extreme objections to the above proposal. I am absolutely speechless at your lack of concern for the local community and countryside and for keeping this area of Britain "rural".	In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic

Respondent (with lpr ref)	Response	Council Response
	<p>* The area proposed is currently beautiful open countryside with footpaths, some of which lead to the woods north of Colthrop Manor. There have been sightings of hares to the west of Cox's Lane, as I am sure you appreciate they are an endangered species.</p> <p>* There is no longer any open countryside between Thatcham and Newbury. As it is part of your plan to keep villages separate and to maintain their identity, this is a contradiction of your plan. Surely it must be essential that we preserve the countryside to the east, to ruin yet more countryside would be a tragedy.</p> <p>* Additionally not only is this plan far too large BUT it is on land which is OUTSIDE THE AGREED SETTLEMENT BOUNDARY, adopted by WBC in 2017.</p> <p>* The A4 is a hugely busy road and with an extra 2,500 houses (on average there are 2 cars per household) that would be an increase of 5,000 cars. I do not think the A4 in this area could sustain such an increase in volume. The houses along the A4 in Thatcham already struggle with the vibrations caused by the traffic, not to mention the older houses being affected by structural damage owing to the already overused road.</p> <p>* Thatcham was not built for such a huge development. It has already been overdeveloped. My family moved here in 1970 so we have seen huge changes. It has been developed way beyond what it was intended for.</p> <p>* There is also the huge problem of schools, doctors' surgeries, library etc Thatcham literally cannot sustain such a huge increase to its population and I do not see why it should. Why should Thatcham have yet more development "dumped" on it.</p>	<p>by the end of the plan period. Having said that, the TA report also acknowledges that there would be delays at junctions and the highway network on the A4 corridor and adjoining links as a result of the THA20 development, including some displacement of A4 traffic onto wider rural routes such as Upper Bucklebury. For instance, without mitigation the transport models used do show significant impacts along the A4 and Floral Way resulting in potential delays per vehicle of an extra 32 – 62% when compared to the 2036 Core Forecast (without development). An Infrastructure Delivery Plan (IDP) has been produced to support the LPR, and as part of the masterplanning work liaison has taken place with infrastructure providers. The IDP is a 'living document' and will be updated regularly updated in consultation with infrastructure providers.</p>
Fiona Sparkes (lpr1090)	<p>I'm e-mailing in objection to the proposed plan to build 2,500 houses on the farm land between Upper Bucklebury and the A4 and Floral Way. The reasons being overdevelopment in the area of outstanding natural beauty and soon we won't be able to see any lush green fields. Secondly it will cause the loss of the Thatcham green belt connecting Upper Bucklebury to Thatcham and resulting in agglomeration of housing estates. Lastly I'm objecting due to traffic congestion and noise and air pollution which will truly be a nightmare.</p>	<p>In relation to the matters raised in regards to transportation, the Phase 1 Transport Assessment (TA) report identified that there were not large swathes of the highway network identified as being potentially problematic by the end of the plan period. Jane Cobb (lpr1091)	<p>Please accept this e-mail as our objection towards the proposed development in Thatcham based on the following:-</p> <p>Significant increase in population - what provisions are being made for a Doctors surgery and hospital space, the existing of which are already at full capacity.</p> <p>Significant increase of traffic - we already have a struggling road network around the whole area, take Thatcham Train Station as a good example. The 'rat runs' the villages will be subject to will most certainly increase danger to life, be it walker, jogger, horse rider, cyclist, all of which have increased greatly since 'lockdown ' began. They are mostly single track lanes with very few passing places and blind bends. Harts Hill does not lend itself safely to more traffic with the added danger of it's blind bends and narrow width.</p> <p>Services - we have had a number of issues with our water supply and leaks over the years. Whilst there has been work done to try to improve this we</p>	<p>Concern regarding infrastructure provision is noted.
